Subjectum istud medicinæ (corpus nimirum humanum) ex omnibus, quæ natura procreavit, maxime est capax remedii; sed vicissim illud remedium maxime est obnoxium errori. Eadem namque subjecti subtilitas et varietas, ut magnam medendi facultatem præbet, sic magnam etiam aberrandi facilitatem. Quocirca quemadmodum ars ista (præsertim quo nunc habetur modo) inter præcipue conjecturales; ita inquisitio ejus reponenda est inter summe arduas et accuratas. Neque propterea cum Paracelso et alchemistis ita desipimus, ut putemus inveniri in corpore humano, quæ singulis universitatis rerum speciebus (stellis, mineralibus, et aliis) respondeant, sicut illi fabulantur, leviter et crassa Minerva traducentes emblema illud veterum (quod homo esset microcosmus, sive epitome totius mundi) ad hoc commentum suum. Verum nihilominus huc res redit, ut (quod ocepimus dicere) non inveniatur inter corpora naturalia aliquod tam multipliciter compositum, quam corpus humanum. Videmus enim herbas et plantas ex terra et aqua nutriri; animalia ex herbis et fructibus; hominem vero ex carnibus ipsorum animalium (quadrupedum, avium, piscium) etiam ex herbis, granis, fructibus, succis, et liquoribus variis, non sine multiplici commixtione, conditura, et præparatione horum corporum, priusquam homini sint in cibum. Adde quod animalibus vivendi modus sit simplicior, affectusque, qui in corpus agant, pauciores, et ad unum fere modum operantes; ubi homo locis habitationum, exercitationibus, affec-

tibus, somno, et vigiliis, vices prope infinitas variarum mutationum subit. Usque adeo verum est unam, inter res cæteras, corporis humani massam maxime fermentatam, et ex plurimis coagmentatam esse. At anima contra substantiarum est simplicissima, ut non male cecinerit ille:

— Purumque reliquit  
Æthereum sensum, atque aurâ simplicis ignem."

Unde minime est mirandum, juxta axioma illud, "Motum rerum extra locum esse rapidum, placidum in loco." Verum ut ad rem redeamus; varia ista et subtilis corporis humani compositio et fabrica effecit, ut sit instar organi musici operosi et exquisiti, quod harmonia sua facile excidit. Quare apud poëtâs, summa ratione, musica cum medicina in Apolline conjungitur; quia similis fere sit utriusque artis genius; atque in eo consistat plane medici officium, ut sciat humani corporis lyram ita tendere et pulsare, ut reddatur concentus minime discors et insuavis. Ergo demum ista subjecti inconstantia et varietas artem reddidit magis conjecturalem: ars autem tam conjecturalis cum sit, locum ampliorem dedit non solum errori, verum etiam imposturæ. Siquidem omnes aliæ propemodum artes et scientiæ virtute sua et functione, non successu aut opere, judicantur. Advocatum ipsa agendi et dicendi facultas, non exitus causæ, commendat; gubernator navis clavi tenendi peritia, non expeditionis fortuna, se probat. At medicus, et fortasse politicus, vix habent actiones aliquas proprias, quibus specimen artis et virtutis suæ liquido exhibeant; sed ab eventu præcipue honorem aut dedecus reportant, iniquissimo prorsus judicio. Quotus enim quisque novit, ægroto mortuo aut restituto, item republica stante, vel labante, utrum sit res casus, an consilii? Fit itaque sæpissime, ut impostor palmam, virtus censuram referat. Quin ea est hominum infirmitas et credulitas, ut sæpenumero agyrtam, aut sagam docto medico præponant. Quare poëtâs oculati plane et perspicaces fuisse videntur; cum Æsculapio Circem sororem dederunt, utrumque e Sole prognatum; sicut habetur in versibus, de Æsculapio Phœbigena:

" Ille repertorem medicinæ talis, et artis,  
Fulmine Phœbigenam Stygias detrusit ad undas."

Et similiter de Circe, Solis filia:

" Dives inaccessis ubi Solis filia lucis  
Urit odoratam nocturna in lumina cedrum."

Omnibus enim temporibus, fama et opinione vulgi, sagæ, et aniculæ, et impostores, medicorum quodammodo rivales fuere; et de curationum celebritate cum iisdem fere certarunt. Ex hoc die, sodes, quid sequitur? Nempè ut medici ita secum, quemadmodum Salomon in re graviore; "Si unus et stulti et meus eventus erit, quid mihi prodest, quod majorem sapientiæ dedi operam?" Equidem medicis minus succenseo, si sæpenumero vacent alicui alteri studio, quod adamant magis, quam arti suæ propriæ. Invenies etenim inter eos, poëtâs, antiquarios, criticos, rhetores, politicos, theologos, atque in iis artibus magis, quam in professione propria, eruditos. Neque hoc fit, ut arbitror, quia (ut quidam declamator

contra scientias medicis objicit) habeant quæ sibi obversentur objecta tam fœda et tristia, ut animum ad alia abducere iis omnino sit opus; (nam qui homines sint, "Nihil humani a se alienum putent") sed ob hoc ipsum, de quo nunc agimus; nempe quod arbitrentur, parum ipsis interesse, vel ad existimationem, vel ad lucrum, utrum artis suæ mediocritatem, an perfectionem in ea majorem assequantur. Morbi enim tædia, vitæ dulcedo, spei fallacia, et amicorum commendatio, efficiunt, ut homines facile in medicis qualibuscunque fiduciam collocent. Verum si quis hæc attentius perpendat, ea potius ad culpam medicorum, quam ad culpæ excusationem spectant: neque enim spem abjicere, sed vires potius intendere debuerant. Nam si cui placet observationem expergefacerere suam, et paulatim circumspicere, etiam ex exemplis obviis et familiaribus facile deprehendet, quantum obtineat imperii intellectus subtilitas et acumen, in varietatem sive materiæ, sive formæ rerum. Nil magis varium, quam hominum facies et vultus; eorum tamen discrimina infinita retinet memoria: imo pictor ex pauculis colorum testis, acie oculi usus, et vi phantasiam, et manus constantia, omnium facies, qui sunt, fuerunt, atque etiam (si coram repræsentarentur) qui futuri sunt, penicillo imitari ac describere posset. Humana voce nil magis varium; hujus tamen discrimina in singulis personis facile internoscimus: quinetiam non desunt moriones et pantomimi quidam, qui, quotquot liberit, reddere sciunt, et ad vivum exprimere. Nil magis varium, quam soni articulati, verba scilicet: via tamen inita est ea reducendi ad paucas literas alphabeti. Atque illud verissimum est, non ex eo, quod mens humana sit minus subtilis aut capax, perplexitates et acatalepsias in scientiis plerunque provenire; sed ex eo potius, quod objectum nimis in remoto collocatum sit. Sicut enim sensus, procul ab objecto dissitus, plurimum fallitur; debite appropinquatus, non multum errat; ita fit in intellectu. Solent autem homines naturam, tanquam ex præalta turri, et a longe despiciere, et circa generalia nimium occupari; quando, si descendere placuerit, et ad particularia accedere, resque ipsas attentius et diligentius inspicere, magis vera et utilis fieret comprehensio. Itaque hujus incommodi remedium, non in eo solum est, ut organum ipsum vel acuant, vel roborent, sed simul ut ad objectum propius accedant. Ideoque dubitandum non est, quin si medici, missis paulisper istis generalibus, naturæ obviam iræ vellent, compotes ejus fierent, de quo ait poeta:

"Et quoniam variant morbi, variabimus artes;  
Mille mali species, mille salutis erunt."

Quod eo magis facere debent, quia philosophiæ ipsæ, quibus innituntur medici, sive methodici, sive chemici (medicina autem in philosophia non fundata, res infirma est) parvi revera sunt. Quare si nimis generalia (licet vera forent) hoc vitium habeant, quod non bene homines ad actionem deducant; certe majus est periculum ab illis generalibus, quæ in se falsa sunt; atque, loco deducendi, seducunt.

Medicina igitur (uti perspeximus) adhuc taliter

comparata est, ut fuerit magis ostentata, quam elaborata: etiam magis elaborata, quam amplificata; cum labores in eam insumpti, potius in circulo, quam in progressu, se exercuerint. Plurima enim in ea video a scriptoribus iterata, addita pauca. Eam in tres partes dividemus, quæ tria ejus officia nominabimus. Primum est conservatio sanitatis, secundum curatio morborum, tertium prolongatio vitæ. At istud postremum, non videntur medici, tanquam partem principalem artis suæ agnovisse, verum idem reliquis duobus satis imperite immiscuisse. Putant enim si propulsentur morbi, antequam ingruant, et curentur postquam invaserint, prolongationem vitæ ultro sequi. Quod licet minimum dubium sit, tamen parum acute prospiciunt, horum utrumque ad morbos tantum pertinere, et ad eam solummodo vitæ prolongationem, quæ a morbis abbreviatur et intercipitur: atqui filum ipsam vitæ producere, ac mortem, per resolutionem simplicem, et atrophiam senilem, sensim obrepentem, ad tempus summovere, argumentum est, quod nemo ex medicis pro dignitate tractavit. Neque vero subeat animos hominum ille scrupulus, ac si hæc res, fato et divinæ providentiæ commissa, in artis officium et munus jam primum a nobis revocaretur. Providentia enim proculdubio mortes quascunque, sive ex violentia, sive ex morbis, sive ex decursu ætatis, pariter regit: neque tamen ideo præventiones et remedia excludit. Ars autem, et industria humana, naturæ et fato non imperat, sed subministrant. Verum de hac parte paulo post dicemus; hæc tantum interea præfati, ne quis tertium istud officium medicinæ cum duobus prioribus (quod fere adhuc factum est) imperite confundat.

Quod ad officium tuendæ sanitatis attinet (ex officiis prædictis medicinæ primum) multi de eo scripserunt, cum in aliis rebus satis imperite, tum nimium (ut arbitramur) delectui ciborum, minus, quam par est, quantitatis eorum tribuentes. Quin et in quantitate ipsa, tanquam philosophi morales, mediocritatem nimis laudarunt: cum et jejunia in consuetudinem versa, et victus liberalis, cui quis assueverit, melius sanitatem tueantur, quam istæ mediocritates, quæ naturam ignavam fere reddunt, neque excessus, neque indigentiam, cum opus fuerit, patientem. Exercitationum autem species, quæ in sanitate tuenda plurimum pollent, nemo ex medicis bene distinxit, aut annotavit; cum vix inveniantur aliqua inclinatio in morbum, quæ non exercitatione quadam propria corrigi possit. Morbis renum globorum lusus convenit, pulmonum sagittatio, stomachi deambulatio et gestatio, atque aliis aliæ. Verum cum hæc pars, de valetudinis conservatione, secundum totum tractata sit, defectus minores persequi non est nostri instituti.

Quod vero ad curationem morborum attinet, illa demum pars est medicinæ, in qua plurimum laboris in sumptum est, licet fructu satis tenui. Continet autem doctrinam de morbis, quibus corpus humanum subjicitur, una cum eorundem causis, symptomatibus, et medelis. In hoc secundo officio medicinæ multa sunt, quæ desiderantur: ex his pauca, sed maxime insignia, proponemus, quæ enumerasse satis duxerimus, absque aliqua ordinis aut methodi lege.

Primum est, intermissio diligentiae illius Hippocratis, utilis admodum et accurata, cui moris erat, narrativam componere casuum circa aegrotos specialium; referendo qualis fuisset morbi natura, qualis medicatio, qualis eventus. Atque hujus rei nactis nobis jam exemplum, tam proprium atque insigne, in eo scilicet viro, qui tanquam parens artis habitus est, minime opus erit exemplum aliquod forinsecum ab alienis artibus petere; veluti a prudentia jurisconsultorum, quibus nihil antiquius, quam illustriores casus, et novas decisiones, scriptis mandare; quo melius se ad futuros casus muniant et instruant. Istam proinde continuationem medicinalium narrationum desiderari video; praesertim in unum corpus cum diligentia et judicio digestam: quam tamen non intelligo ita fieri debere amplam, ut plane vulgata, et quae quotidie obviant, excipiat (id enim infinitum quiddam esset, neque ad rem) nec rursus tam angustam, ut solummodo mirabilia et stupenda (id quod a nonnullis factum est) complectatur. Multa enim in modo rei, et circumstantiis ejus, nova sunt, quae in genere ipso nova non sunt: qui autem ad observandum adjiciet animum, ei etiam, in rebus, quae vulgares videntur, multa observatu digna occurrent.

Item in disquisitionibus anatomicis fieri solet, ut quae corpori humano in universum competant, ea diligentissime, usque ad curiositatem, et in minimis quibusque, notentur: at circa varietatem, quae in diversis corporibus reperitur, medicorum diligentia fatiscit. Ideoque anatomiam simplicem luculentissime tractari assero, anatomiam comparatam desiderari statuo. Partes enim singulas recte perscrutantur homines, earumque consistentias, figuras, situs: sed illarum partium diversam in diversis hominibus figuram et conditionem minus observant. Atque hujus omissionis causam non aliam esse arbitramur, quam quod ad primam inquisitionem inspectio unius aut alterius anatomiae sufficere possit; ad posteriorem vero (quae comparativa est, et casum recipit) necesse est, ut plurimarum dissectionum attenta et perspicax observatio adhibeatur. Prior etiam res est, in qua homines docti, in praelectionibus suis et in coetu astantium, se jactare possunt: at secunda ea est, quae tacita et diutina experientia tantum acquiri potest. Illud interea minime dubium est, quod internarum partium figura et structura parum admodum externorum membrorum varietati et lineamentis cedat; quodque corda, aut jecinora, aut ventriculi, tam dissimilia sint in hominibus, quam aut frontes, aut nasi, aut aures. Atque in his ipsis differentis partium internarum reperiuntur saepius causae continentis multorum morborum: quod non attendentes medici, humores interdum minime delinquentes criminantur; cum ipsa mechanica partis alicujus fabrica in culpa sit. In quorum morborum cura, opera luditur, si adhibeantur medicinae alterantes, (quia res alterationem non recipit,) sed emendanda res est, et accommodanda, seu pallianda, per victus regimen et medicinas familiares. Similiter, ad anatomiam comparatam pertinent accuratae observationes, tam humorum omnigenum, quam vestigiorum et impressionum morborum, in corporibus variis dissectis. Etenim humores in anatomii, tanquam purgamenta et fastidia, fere praetermitti

solent, cum tamen in primis necessarium sit notare, quales et quam multiplices sint humorum differentium species (non nimium in hac re tribuendo divisionibus eorum receptis) qui in corpore humano aliquando inveniuntur; et in quibus cavitatibus et receptaculis, quilibet ipsorum sedes et nidulos suos figere potissimum soleat; quoque juvenulo aut damno; atque his similia. Itidem vestigia, et impressiones morborum, et interiorum partium ab iis laesiones et devastaciones, in diversis anatomii, cum diligentia notanda; nempe apostemata, ulcera, solutiones continuitatis, putrefactiones, exesiones, consumptiones; rursus contractiones, extensiones, convulsiones, luxationes, dislocationes, obstructiones, repletiones, tumores, una cum omnibus materiis praeternaturalibus, quae in corpore humano inveniuntur (veluti calculis, carnositatibus, tuberibus, vermibus, et hujusmodi) haec (inquam) omnia, et his similia, per eam, quam diximus, anatomiam comparatam, et multorum medicorum experimenta in unum collata, magna cum cura perquiri et componi debent. At varietas ista accidentium in anatomicis aut perfunctorie tractatur, aut silentio praeteritur.

De illo vero altero defectu circa anatomiam (nempe quod non fieri consueverit in corporibus vivis) quid attinet dicere? Res enim haec odiosa, et barbara, et a Celso recte damnata. Neque tamen illud minus verum est (quod annotatum fuit a praeis) poros complures, et meatus, et pertusiones, quae sunt ex subtilioribus, in anatomicis dissectionibus non comparere; quippe quae in cadaveribus occluduntur et latent; cum in viventibus dilatentur, et possint esse conspicui. Itaque, ut et usui consulatur simul et humanitati, non est omnino rejicienda anatomia vivorum, neque ad fortuitas chirurgicorum inspectiones (quod Celsus fecit) remittenda: cum hoc ipsum bene expediri possit per dissectionem brutorum vivorum, quae, non obstante suarum partium dissimilitudine ab humanis, huic inquisitioni, adhibito judicio, satisfacere possint.

Item in inquisitione illorum de morbis, inveniunt morbos complures, quos insanabiles decernunt, alios jam inde a principio morborum, alios post talem quampiam periodum: ita ut L. Syllae et triumvirorum proscriptiones res nihili fuerint praeter medicorum proscriptionibus, per quos tot homines iniquissimis edictis morti dedunt; quorum tamen plurimi minore cum difficultate evadunt, quam illi olim inter proscriptiones Romanas. Neque igitur dubitabo inter desiderata reponere opus aliquid de curationibus morborum, qui habentur pro insanabilibus; ut evocentur et excitentur medici aliqui egregii et magnanimi, qui huic operi, quantum largitur natura rerum, incumbant; quando hoc ipsum, "Istos morbos pronunciare insanabiles," neglectum et incuriam veluti lege sanciat, et ignorantiam ab infamia eximat.

Item ut paulo ulterius insistam: etiam plane censeo ad officium medici pertinere, non tantum ut sanitatem restituat; verum etiam ut dolores et cruciatuum morborum mitiget: neque id ipsum solummodo, cum illa mitigatio doloris, veluti symptomatis periculosi, ad convalescentiam faciat et conducat; imo vero cum abjecta prorsus omni sanitatis spe, excessum tantum praebat e vita magis lenem et placidum.

Siquidem non parva est felicitatis pars (quam sibi tantopere precari solebat Augustus Cæsar) illa euthanasia; quæ etiam observata est in excessu Antonini Pii, quando non tam mori videretur, quam dulci et alto sopore excipi. Scribitur etiam de Epicuro, quod hoc ipsum sibi procuraverit; cum enim morbus ejus haberetur pro desperato, ventriculum et sensus, meri largiore haustu et ingurgitatione obruit. Unde illud in epigrammate:

—Hinc Stygias ebrius hausit aquas,”

vino scilicet Stygii laticis amaritudinem sustulit. At nostris temporibus, medicis quasi religio est, ægrotis, postquam deplorati sint, assidere; ubi meo judicio, si officio suo, atque adeo humanitati ipsi deesse nolint, et artem ediacere et diligentiam præstare deberent, qua animam agentes facilius et mitius e vita demigrent. Hanc autem partem, inquisitionem de euthanasia exteriori (ad differentiam ejus euthanasie, quæ animæ præparationem respicit) appellamus; eamque inter desiderata reponimus.

Item in curationibus morborum illud generaliter desiderari reperio; quod medici hujusce ætatis, licet generales intentiones curationum non male persequantur, particulares tamen medicinas, quæ ad curationes morborum singulorum proprietate quadam spectant, aut non bene norunt, aut non religiose observant. Nam medici traditionum et experientie probatæ fructum magistralitatibus suis destruxerunt et sustulerunt; addendo, et demendo, et mutando, circa medicinas, prout iis libitum fuerit, et fere pharmacopœorum more quid pro quo substituendo; ita superbe imperantes medicinæ, ut medicina non amplius imperet morbo. Dempitis enim theriaca, et mithridatio, et fortasse diascordio, et confectione alkermes, et paucis aliis medicinis, ad nulla fere certa pharmaca se religiose et severe astringunt. Nam medicamenta illa, quæ in officinis prostant venalia, potius in promptu sunt ad intentiones generales, quam accomodata et propria ad curationes particulares; siquidem speciatim nullum morbum magnopere respiciunt, verum generatim ad obstructions aperiendas, concoctiones confortandas, intemperies alterandas, pertinent. Atque hinc præcipue fit, ut empirici et vetulæ sæpenumero in curandis morbis feliciter operentur, quam medici eruditi, quia medicinarum probatarum confectionem et compositionem fideliter et scrupulose retinent. Equidem memini, medicum quendam apud nos in Anglia, practica celebrem, religione prope Judæum, librorum lectione tanquam Arabem, solitum dicere: “Medici vestri Europæi sunt quidem viri docti, sed non norunt particulares curationes morborum.” Quinetiam idem ludere solebat, parum decore, dicendo; “Medicos nostros similes esse episcopis, ligandi et solvendi claves habere, et nihil amplius.” Sed ut serio quod res est dicamus; plurimum referre censemus, si medici aliqui, et eruditione et practica insigniores, opus aliquod conficiant, de medicinis probatis et experimentalibus, ad morbos particulares. Nam quod speciosa quis ratione nixus, existimet decere medicum doctum (habita ratione complexionis ægrotum, ætatis, tempestatum anni, consuetudinum et hujusmodi) potius medicinas ex tempore aptare,

quam certis aliquibus præscriptis insistere; id fallax res est et experientie non satis attribuit, judicio plus nimis. Sane, quemadmodum in republica Romana, cives erant utilissimi et optime compositi, qui aut consules populo favebant, aut tribuni in partes senatus inclinabant: ita in hac materia, de qua agimus, medicos eos probamus, qui aut in magna eruditione, traditiones experientie plurimum faciunt; aut in practica insigni, methodos et generalia artis non asperrantur. Modificationes vero medicinarum (si quando sit opus eas adhibere) potius in vehiculis earum exercendæ sunt, quam in ipso corpore medicinarum; in quo nil novandum, absque evidenti necessitate. Hanc igitur partem, quæ de medicinis authenticis et positivis tractet, desiderari statuimus: res autem est, quæ tentari non debet absque acri et severo judicio, et tanquam in synodo medicorum selectorum.

Item, inter præparationes medicinarum, mirari subit (præsertim cum medicinæ ex mineralibus a chemicis in tantum evectæ et celebratæ sint; cumque tales medicinæ tutius adhibeantur ad exteriora, quam intro sumantur) neminem adhuc inventum, qui per artem thermas naturales et fontes medicinales imitari annexus fuerit: cum tamen in confesso sit, thermas illas et fontes, virtutes suas ex venis mineralium, per quas permeant, nancisci: quinetiam, in manifestum hujus rei documentum, bene norit humana industria discernere et distinguere, per separationes quasdam, ex quo genere mineralium hujusmodi aquæ inficiantur, veluti an ex sulphure, vitriolo, chalybe, aut aliquo simili: quæ naturalis aquarum tinctura, si ad artificiosas compositiones reduci posset, fuerit in potestate hominis, et plura genera earum (prout usus postulat) efficere, et temperamentum ipsarum pro arbitrio regere. Hanc igitur partem, de imitatione naturæ in balneis artificialibus (re proculdubio et utili et in promptu) desiderari censemus.

Ne vero singula scrupulosius exequamur, quam vel instituo nostro, vel hujusce tractatus naturæ convenit, claudemus hanc partem defectus alterius cujusdam enumeratione, qui maximi nobis videtur momenti: nimirum quod medendi ratio, quæ obtinuit, sit nimis plus compendiosa, quam ut insigne aliquid aut arduum præstare possit. Etenim judicio nostro, opinio fuerit magis blanda, quam vera, si quis existimet medicamentum aliquod tam potens aut felix fieri posse, ut usus ejus simplex curationi alicui grandiori sufficiat. Mirabilis profecto foret oratio, quæ pronuntiata, aut etiam sæpius repetita, vitium aliquod animo penitus insitum aut inveteratum corrigere aut tollere possit. Longe certe abest. Verum quæ in natura eximie possunt, et pollutæ, sunt ordo, prosecutio, series, vicissitudo artificiosa. Quæ licet majus quoddam in præcipiendo judicium, majoremque in parendo constantiam requirant; tamen effectuum magnitudine abunde rem compensant. Etsi autem ex opera medicorum quotidiana, quam, invisendo, assidendo, præscribendo, ægrotis præstant, putaret quispiam, haud segniter ipsos curationem persequi, atque in eadem, certa quadam via, insistere: tamen si quis ea, quæ præscribere et ministrare soleant medici, acutius introspiciat, inveniet

pleraque vacillationis et inconstantiae plena, et quæ ex tempore excogitentur, et in mentem illis veniant, absque certo aliquo aut præviso curationis tramite. Debuerant autem etiam ab initio, post morbum bene perspectum et cognitum, seriem curandi ordinatam meditari, neque ab ea, absque gravi causa, discedere. Atque sciant pro certo medici, posse (exempli gratia) tria fortasse aut quatuor medicamenta ad morbum aliquem gravem curandum recte præscribi, quæ debito ordine et debito intervallo sumpta curationem præsentent: quorum singula, si per se tantum sumerentur, aut si ordo inverteretur, aut intervallum non servaretur, fuerint prorsus nocitura. Neque tamen id volumus, ut omnis scrupulosa et superstitiosa curandi ratio in pretio sit tanquam optima (non magis, quam omnis via arcta, via sit ad cælum) verum ut æque recta sit via, ac arcta et difficilis. Hanc autem partem, quam filum medicinale vocabimus, desiderari ponimus. Atque hæc illa sunt, quæ in doctrina medicinæ de curatione morborum desideramus: nisi quod restet unicum, quod pluris est, quam illa omnia. Desideratur nimirum philosophia naturalis vera et activa, cui medicinæ scientia inædificetur. Cæterum illa non est hujus tractatus.

Tertiam partem medicinæ, posuimus illam de prolongatione vitæ, quæ nova est, et desideratur; estque omnium nobilissima. Si enim tale aliquid inveniri possit, non versabitur tantum medicina in curationum sordibus; nec medici ipsi propter necessitatem solummodo honorabuntur, sed utique propter donum mortalibus, ex terrenis, quasi maximum, cujus poterint esse, secundum Deum, dispensatores et administrari. Licet enim mundus homini Christiano, ad terram promissionis contendenti, tanquam eremus sit; tamen in eremo ipsa proficiscentibus, alceos et vestes scilicet nostrum, quod animæ loco tegminis est) minus atteri, gratiæ divinæ munus quoddam æstimandum. Hac de re, quia est ex optimis, eamque inter desiderata posuimus, ex more nostro, et monita dabimus, et indicia, et præcepta.

Primo monemus, ex scriptoribus, circa hoc argumentum, neminem esse, qui aliquid magni, ne dicamus aliquid sani, repererit. Aristoteles certe commentarium de hoc edidit perpusillum, in quo nonnihil inest acuti: quod ipse omnia esse vult, ut solet. At recentiores tam oscitanter, et superstitiose de hoc scripserunt, ut argumentum ipsum, ob eorum vanitatem, tanquam vanum et vecors haberi cœperit.

Secundo monemus, ipsas intentiones, quæ huc spectant, medicorum, res nihili esse, et cogitationes hominum a re potius abducere, quam versus eam dirigere. Sermocinantur enim, mortem in destitutione calidi et humidi consistere: deberi itaque calorem naturalem confortari, humorem radicalem foveri: perinde ac si hæc res jusculis, aut lactociis et malvis, aut amydo, aut jujubis, aut rursus aromatibus, aut vino generoso, aut etiam spiritu vini, et oleis chemicis, confici possit. Quæ omnia obsunt potius, quam prosunt.

Tertio monemus, ut homines nugari desinant, nec tam faciles sint, ut credant, grande illud opus, quale est naturæ cursum remorari et retrovertere, posse haustu aliquo matutino, aut usu alicujus pretiosæ medicinæ, ad exitum perduci: non auro potabili,

non margaritarum essentiis, et similibus nugis: sed ut pro certo habeant, prolongationem vitæ esse rem operosam, et quæ ex compluribus remediis, atque eorum inter se connexionem idonea, constet. Neque enim quisquam ita stupidus esse debet, ut credat, quod nunquam factum est adhuc, id fieri jam posse, nisi per modos etiam nunquam tentatos.

Quarto monemus, ut homines rite animadvertant et distinguant, circa ea, quæ ad vitam sanam, et ea, quæ ad vitam longam, conferre possunt. Sunt enim nonnulla, quæ ad spirituum alacritatem, et functionum robur, et morbos arcendos, prosunt; quæ tamen de summa vitæ detrahunt, et atrophiam senilem absque morbis accelerant: sunt et alia, quæ ad prolongationem vitæ, et atrophiam senilem longius summovendam juvant: sed tamen non usurpantur absque periculo valetudinis; adeo ut qui iis utentur ad prolongationem vitæ, debeant simul incommodis occurrere, quæ alioquin ex eorum usu supervenire possint. Atque monita hactenus dedimus.

Quod ad indicia attinet; tale hujus rei (quam animo metimur) plasma est. Conservantur res et durant duobus modis: aut in identitate sua; aut per reparationem. In identitate sua, ut musca aut formica in succino; flos, aut pomum, aut lignum, in conservatoriis nivalibus; cadaver inter balsama. Per reparationem, ut in flamma, et in mechanica. Operanti ad prolongationem vitæ, utroque genere utendum est (disjuncta minus possunt) corpusque humanum conservandum, quemadmodum inanimata conservantur: ac rursus quemadmodum flamma conservatur; ac denique quadamtenus ut mechanica conservantur. Tres igitur sunt ad prolongandam vitam intentiones: retardatio consumptionis; prohibita reparationis; et renovatio ejus, quod cœpit veterascere. Consumptio fit a duabus deprædationibus: deprædatione spiritus innati; et deprædatione aëris ambientis. Prohibitio utriusque duplex: aut si agentia illa fiant minus prædatoria, aut si patientia (succis scilicet corporis) reddantur minus deprædabilia. Spiritus fit minus prædatorius, si aut substantia densetur, ut in usu opiorum et nitratorum, et in contristationibus: aut quantitate minuatur, ut in diæti Pythagoricis et monasticis: aut motu leniatur, ut in otio et tranquillitate. Aër ambiens fit minus prædatorius, si aut minus incalescat a radiis solis, ut in regionibus frigidioribus, in speluncis, in montibus, et in columnis anachoretarum: aut summoveatur a corpore; ut in cute densa, et in plumis avium, et in usu olei et unguentorum absque aromatibus. Succis corporis redduntur minus deprædabiles, si aut duri facti sint, aut roscidi sive oleosi. Duri, ut in victu aspero; vita in frigido; exercitationibus robustis; balneis quibusdam mineralibus. Roscidi, ut in usu dulcium, et abstinentia a salsis et acidis, et maxime omnium in tali mitione potus, quæ sit partium valde tenuium et subtilium, absque tamen omni acrimonia aut acedine. Reparatio fit per alimenta: alimentatio autem promovetur quatuor modis: per concoctionem viscerum ad extrusionem alimenti, ut in confortantibus viscera principalia: per excitationem partium exteriorum ad attractionem alimenti, ut in exercitationibus et frictionibus debitis, atque unctionibus quibusdam et balneis appro-

priatis : per præparationem alimenti ipsius, ut facilius se insinuet, et digestionem ipsas quadamtenus anticipet, ut in variis et artificiosis modis cibi condiendi, potus miscendi, panis fermentandi, et horum trium virtutes in unum redigendi : per confortationem ipsius ultimi actus assimilationis, ut in somno tempestivo, et applicationibus quibusdam exterioribus. Renovatio ejus, quod cœpit veterascere, fit duobus modis : vel per intenerationem habitus corporis ipsius, ut in usu malacissationum ex balneis, emplastris, et unctionibus : quæ talia sint ut imprimant, non extrahant : vel per expurgationem succi veteris, et substitutionem succi novi, ut in tempestivis et repetitis purgationibus, sanguinis missionibus, et diætiis attenuantibus, quæ florem corporis restituunt. Atque de indiciiis hæctenus.

Præcepta, quanquam ex ipsis indiciiis plurima possint deduci ; tria tamen veluti præcipua subjungere visum est. Præcipimus primo, ut prolongatio vitæ expectetur potius a diætiis statis, quam a regimine aliquo victus familiari ; aut etiam a medicamentorum particularium excellentia. Etenim, quæ tanta virtute pollent, ut naturam retrovertere valeant ; fortiora plerunque sunt, et potentiora ad alterandum, quam ut simul in aliqua medicina componi, multo minus in victu familiari interspergi possint. Superest itaque ut seriatim et regulariter, et ad tempora certa, et vicibus certis recurrentia, adhibeantur.

Secundo præcipimus, ut prolongatio vitæ expectetur potius ab operatione in spiritus, et a malacissatione partium, quam a modis alimentandi. Etenim, cum corpus humanum, ejusque fabrica (missis externis) a tribus patiatur ; spiritibus scilicet, partibus, et alimentis ; via prolongationis vitæ per alimentandi modos longa est ; atque per multas ambages et circuitus : at vitæ per operationes super spiritus, et super partes, multo breviores sunt, et quibus citius ad finem desideratum pervenitur ; eo quod spiritus subito patiantur, et a vaporibus, et ab affectibus, quæ miris modis in eos possunt : partes item, per balnea, aut unguenta, aut emplastra, quæ subitas etiam impressiones faciunt.

Tertio præcipimus, quod malacissatio partium per exterius, fieri debet, per consubstantialia, imprimantia, et ocludentia. Consubstantialia enim benevolè partium complexu libenter excipiuntur, et proprie malacissant. Imprimantia autem et virtutem malacissantium, tanquam vehicula, facilius et altius deducunt, atque ipsa partes nonnihil expandunt. Ocludentia autem, virtutem utrorumque retinent, et paulisper figunt, et perspirationem, quæ est res malacissationi opposita (quia humidum emittit) cohibent. Itaque per hæc tria (sed potius ordine disposita et succedentia, quam commixta) res absolvitur. Interim in hac parte monemus ; non eam esse intentionem malacissationis, ut nutriat partes per exterius ; sed tantum ut eas reddat magis idoneas ad nutriendum. Quicquid enim magis aridum est, minus est activum ad assimilandum. Atque de prolongatione vitæ, quæ est pars tertia medicinæ noviter ascripta, hæc dicta sint.

Veniamus ad cosmeticam, quæ certe partes habet civiles, partes rursus effæminatæ. Corporis enim munditia, et decor honestus, recte existimatur pro-

manare a modestia quadam morum, et a reverentia ; imprimis erga Deum, cujus creaturæ sumus ; tum erga societatem, in qua degimus ; tum etiam erga nosmet ipsos, quos non minus, imo magis, quam alios, revereri debemus. Verum adulterina illa decoratio, quæ fucos et pigmenta adhibet, digna certe est illis defectibus, qui eam semper comitantur ; cum non sit, aut ad fallendum satis ingeniosa, aut ad utendum satis commoda, aut ad salubritatem satis tuta et innocua. Miramur autem, pravam hanc consuetudinem fucandi, leges censorias, tam ecclesiasticas quam civiles (quæ alias in luxuriam circa vestes, aut cultus capillorum effæminatæ, admodum fuerint severæ) ita diu fugisse. Legimus certe de Jezabele, quod pigmentis faciem obliverit ; verum de Esthæra et Juditha nil tale perhibetur.

Pergamus ad athleticam : eam sensu intelligimus paulo largiori, quam accipi consuevit. Huc enim referimus quicquid versatur circa conciliandam qualemcunque (quam corpus humanum suscipit) habilitatem ; sive sit agilitatis sive tolerantia. Quarum agilitas duas habet partes, robur et velocitatem : ac tolerantia itidem duas, vel indigentiarum naturalium patientiam, vel in cruciatibus fortitudinem. Quorum omnium videmus sæpenumero exempla insignia, in practica funambulorum, in duro victu hominum quorundam barbarorum, in stupendis viribus maniacorum, et in constantia nonnullorum inter exquisita tormenta. Imo si aliqua alia reperitur facultas, qua in priorem partitionem non cadit (qualis in urinatoribus sæpe conspicitur, qui mirifice anhelitum cohibere possunt) ad hanc ipsam artem aggregari volumus. Atque quod talia fieri quandoque possint, manifestissimum est : at philosophia et inquisitio causarum circa eadem fere neglecta jacet ; hanc arbitramur ob causam, quod hominibus persuasum sit hujusmodi magisteria naturæ solummodo vel ex peculiari certorum hominum indole (quæ sub disciplinam non cadit) vel a diutina, ab annis usque puerilibus, consuetudine (quæ potius imperari, quam doceri solet) obtineri. Quod etsi verum prorsus non sit, tamen defectus hujusmodi rerum quid attinet notare ? Certamina enim Olympica jam diu cessarunt : tum etiam in ejusmodi rebus mediocritas sufficit ad usum : excellentia autem mercenariæ cuidam ostentationi fere inservit.

Postremo accedimus ad artes voluptarias. Eæ secundum sensus ipsos dispertitæ sunt : oculos oblectat præcipue pictoria, cum aliis artibus innumeris, quæ ad magnificentiam spectant, circa ædificia, hortos, vestes, vasa, calices, gemmas, et similia. Aures demulcet musica, quæ tanta vocum, spiritus, cordarum, varietate et apparatu instructa est. Olim etiam hydraulica pro coryphæis quibusdam artis ejus habitæ sunt, quæ nunc prope obsoleverunt. Atque artes, quæ ad visum aut auditum spectant, præ aliis præcipue liberales habitæ sunt : sensus hi duo magis casti : scientiæ magis eruditæ, quippe qui etiam mathematicam, veluti ancillam, in familiis suis habeant : etiam altera ad memoriam et demonstrationes, altera ad mores et affectus animi nonnihil respicit. Reliquorum sensuum oblectationes, atque artes circa ipsos, minus in honore sunt, veluti luxuriæ, quam magnificentia, propiores : unguenta, odoramenta, deliciae et cupiditatis mensarum, maxime autem inci-

tamenta libidinis, rectius censore, quam doctore, indigent. Optime sane a quibusdam annotatum est, nascentibus et crescentibus rebus publicis artes militares florere; in statu et culmine positas liberales; at ad declinationem et decasum vergentibus voluptarias. Hæc vero ætas nostra, vereor ne, tanquam in decasu felicitatis, in artes voluptarias inclinet. Quare ista missa faciamus. Cum artibus voluptariis jocularis copulo. Deceptiones siquidem sensuum inter delectationes sensuum reponendæ sunt.

Jam vero transcursus doctrinis illis circa corpus humanum (medicina, cosmetica, athletica, voluptaria) illud obiter monemus; cum in corpore humano tot res in considerationem veniant, partes, humores, functiones, facultates, accidentia: cumque (si nobis integrum esset) constitui oportuisset corpus unicum doctrinæ de corpore humano, quæ ista omnia complecteretur (simile illi doctrinæ de anima, de qua mox dicemus) tamen, ne artes nimis multiplicentur, neve veteres artium limites (plusquam necesse fuerit) transponantur, doctrinam de partibus corporis humani, de functionibus, de humoribus, de respiratione, de somno, de generatione, de fœtu et gestatione in utero, de augmentis, de pubertate, de canitie, de impinguatione, et similibus, in corpus medicinæ recipimus; licet ad officia illa tria non proprie pertineant; sed quia corpus ipsum hominis sit per omnia medicinæ subjectum. Motum autem voluntarium, et sensum, ad doctrinam de anima rejicimus; siquidem animæ partes in his duobus sunt potiores. Atque sic doctrinam, quæ circa corpus hominis versatur, quod animæ pro tabernaculo duntaxat est, claudimus.

### CAPUT TERTIUM.

*Partitio philosophiæ humanæ circa animam in doctrinam de spiraculo; et doctrinam de anima sensibili sive producta. Partitio secunda ejusdem philosophiæ in doctrinam de substantia et facultatibus animæ, et doctrinam de usu et objectis facultatum. Appendices duæ doctrinæ de facultatibus animæ: doctrina de divinatione naturalis, et doctrina de fascinatione. Distributio facultatum animæ sensibilis in motum et sensum.*

VENIAMUS ad doctrinam de anima humana; e cujus thesauris omnes cæteræ doctrinæ depromptæ sunt. Ejus duæ sunt partes; altera tractat de anima rationali, quæ divina est; altera de irrationali, quæ communis est cum brutis. Notavimus autem paulo superius (ubi de formis loquebamur) differentes illas duas animarum emanationes, quæ in prima utriusque creatione se dant conspiciendas; nimirum, quod altera ortum habuerit a spiraculo Dei, altera e matricibus elementorum. Nam de animæ rationalis generatione primitiva, ita ait Scriptura: "Formavit hominem de limo terræ, et spiravit in faciem ejus spiraculum vitæ." At generatio animæ irrationalis, sive brutorum, facta est per verba illa, "Producat aqua, Producat terra." Hæc autem anima (qualis est in homine) animæ rationali organum tantum est, atque originem habet et ipsa quoque, quemadmodum

in brutis, e limo terræ; neque enim dictum est, "Formavit corpus hominis de limo terræ," sed "Formavit hominem;" integrum scilicet hominem, excepto illo spiraculo. Quamobrem partem primam doctrinæ generalis circa animam humanam, doctrinam de spiraculo appellabimus; secundam vero, doctrinam de anima sensibili sive producta. Neque tamen, cum hactenus philosophiam solam tractemus (quippe sacram theologiam in fine operis collocavimus) partitionem istam a theologia mutuaremus, nisi etiam cum principiis philosophiæ conveniret. Plurimæ enim et maximæ sunt animæ humanæ præcellentiæ supra animas brutorum, etiam philosophantibus secundum sensum manifestæ. Ubique autem tot et tantarum invenitur excellentiarum symbolum, ibi merito semper constitui debet differentia specifica. Itaque nobis non nimium placet confusa illa et promiscua philosophorum de animæ functionibus tractatio; ac si anima humana gradu potius, quam specie, discriminata esset ab anima brutorum: non aliter, quam sol inter astra, aut aurum inter metalla.

Subjungenda est etiam partitio alia doctrinæ generalis circa animam humanam, antequam de speciebus fusius loquamur. Etenim, quæ de speciebus postea dicemus, utramque partitionem, tum illam, quam jam modo posuimus, tum istam, quam nunc proponemus, simul tractabunt. Secunda igitur partitio sit, in doctrinam de substantia et facultatibus animæ, et doctrinam de usu et objectis facultatum.

Præmissis itaque his partitionibus geminis, ad species accedamus. Doctrina de spiraculo, eademque de substantia animæ rationalis, complectitur inquisitiones illas de natura ejus; utrum nativa sit illa, an adventitia; separabilis, an inseparabilis; mortalis, an immortalis; quatenus legibus materiæ alligata, quatenus minime; et similia. Quæ vero hujus sunt generis, licet etiam in philosophia, et diligentiorum et altiorum inquisitionem subire possint, quam adhuc habetur; utcumque tamen in fine, religioni determinanda et definienda rectius transmitti censemus: aliter enim, erroribus haud paucis, et sensus illusionibus omnino exponentur. Etenim, cum substantia animæ, in creatione sua, non fuerit extracta aut deducta ex massa cæli et terræ, sed immediate inspirata a Deo; cumque leges cæli et terræ sint propria subjecta philosophiæ; quomodo possit cognitio de substantia animæ rationalis ex philosophia peti et haberi? Quinimo ab eadem inspiratione divina hauriatur, a qua substantia animæ primo emanavit.

Doctrina vero de anima sensibili, sive producta, etiam quatenus ad substantiam ejus, vere inquiritur: at ea inquisitio nobis quasi desiderari videtur. Quid enim ad doctrinam de substantia animæ faciunt, actus ultimus, et forma corporis, et hujusmodi nugæ logicæ? Anima siquidem sensibilis sive brutorum, plane substantia corporea censenda est, a calore attenuata, et facta invisibilis; aura (inquam) ex natura flammea et æreâ conflata, æris mollietie ad impressionem recipiendam, ignis vigore ad actionem vibrandam dotata; partim ex oleosis, partim ex aqueis nutrita; corpore obducta, atque in animalibus perfectis in capite præcipue locata; in ner

vis percurrans, et sanguine spirituosio arteriarum refecta et reparata; quemadmodum Bernardinus Telesius et discipulus ejus Augustinus Donius, aliqua ex parte, non omnino inutiliter, asseruerunt. Itaque de hac doctrina diligentior fiat inquisitio: eo magis, quod hæc res non bene intellecta, opiniones superstitiosas, et plane contaminatas, et dignitatem animæ humanæ pessime conculcantes, de metempsychosi et lustrationibus animarum per períodos annorum, denique de nimis propinqua animæ humanæ erga animas brutorum per omnia cognitione, peperit. Est autem hæc anima in brutis anima principalis, cujus corpus brutorum organum; in homine autem, organum tantum et ipsa animæ rationalis; et spiritus potius appellatione, quam animæ, indigitari possit. Atque de substantia animæ hactenus.

Facultates autem animæ notissimæ sunt; intellectus, ratio, phantasia, memoria, appetitus, voluntas; denique universæ illæ, circa quas versantur scientiæ logicæ et ethicæ: sed in doctrina de anima, origines ipsarum tractari debent, idque physice, prout animæ innatæ sint, et adhæreant: usus tantum ipsarum, et objecta, illis alteris artibus deputantur. Atque in hac parte nihil egregii (ut nobis videtur) adhuc repertum est; quanquam desiderari eam haud sane dixerimus. Habet etiam pars ista de facultatibus animæ appendices duas; quæ et ipsæ, quemadmodum tractantur, potius fumos nobis exhibuerunt, quam flammam aliquam lucidam veritatis: altera harum est doctrina de divinatione naturali; altera de fascinatione.

Divinationem ab antiquis, nec male, in duas partes divisam habemus; artificialem et naturalem. Artificialis ratiocinando, ex indicatione signorum, prædictionem colligit. Naturalis, ex ipsa animi præensione interna, absque signorum adminiculis, præesagit. Artificialis duplex; altera argumentatur ex causis: altera ex experimentis tantum, cæca quadam auctoritate: quæ posterior, ut plurimum, superstitiosa est; quales erant ethnicorum disciplinæ circa inspectionem extorum, volatum avium, et similia. Etiam Chaldæorum astrologia solennior, non multo melior. At artificialis divinatio utraque inter diversas scientias spargitur. Habet astrologus prædictiones suas ex situ astrorum: habet etiam medicus suas, de morte ingruente; de convalescentia; de symptomatibus morborum superventuris, ex urinis, pulsibus, aspectu ægrotorum, et similibus: habet, et politicus, suas: "O urbem venalem, et cito perituram, si emptorem invenerit!" cujus vaticinii fides non diu morata est; impleta primum in Sylla, postea in Cæsare. Hujusmodi igitur prædictiones præsentis non sunt instituti, verum ad artes proprias remitti debent. Naturalis autem divinatio, ex vi scilicet interna animi ortum habens, ea demum est, de qua nunc agitur. Hæc duplex est; altera nativa; altera per influxum. Nativa hoc nititur suppositionis fundamento; quod anima in se reducta, atque collecta, nec in corporis organa diffusa, habeat ex vi propria essentia suæ aliquam prænotionem rerum futurarum; illa vero optime cernitur in somnis, ecstasibus, confiniis mortis; rarius inter vigilandum, aut cum corpus sanum sit ac validum. Hujusmodi vero status animi procuratur fere, aut adjuvatur ex

abstinentiis, atque illis rebus, quæ animam a muneribus corporis exercendis maxime sevocant, ut sua natura absque impeditionibus exteriorum gaudere possit. Divinatio vero per influxum hoc altero suppositionis fundamento nititur; quod anima, veluti speculum, illuminationem quandam secundariam a præsentia Dei et spirituum excipiat: cui etiam idem, qui priori, status et regimen corporis confert. Eadem enim animæ sevocatio efficit, ut et sua natura impensius utatur, et divinatorum influxum sit magis susceptiva: nisi quod in divinationibus per influxum anima fervore quodam, atque tanquam numinis præsentis impatientia (quæ apud priscos sacri furoris nomine vocabatur) corripiatur: in divinatione autem nativa, quieti potius et vacationi propior sit.

Fascinatio autem est vis et actus imaginationis intensivus in corpus alterius (vim enim imaginationis super corpus proprium ipsius imaginantis superius perstrinximus). In hoc genere schola Paracelsi, et ementitæ naturalis magiæ cultores, tam fuerant immodici, ut imaginationis impetum et apprehensionem miracula patranti fidei tantum non exæquarint. Alii ad similitudinem veri propius accedentes; cum occultas rerum energias et impressiones, sensuum irradiationes, contagionum de corpore in corpus transmissiones, virtutum magneticarum delationes, acutius intuerentur; in eam opinionem devenerunt, quod multo magis a spiritu in spiritum (cum spiritus præ rebus omnibus sit, et ad agendum strenuus, et ad patiendum tener et mollis) impressiones, et delationes, et communicationes fieri poterint. Unde increbuerunt opiniones, factæ quasi populares, de genio superiori, de hominibus quibusdam infaustis et ominosis, de ictibus amoris et invidiæ, et aliæ his similes. Atque huic conjuncta est disquisitio, quomodo imaginatio intendi et fortificari possit? Quippe si imaginatio fortis tantarum sit virium, operæ pretium fuerit nosse, quibus modis eam exaltari, et seipsa majorem fieri detur? Atque hic oblique, nec minus periculose, se insinuat palliativæ quædam et defensio maximæ partis magiæ ceremonialis. Speciosus enim fuerit prætextus, ceremonias, characteres, incantationes, gesticulationes, amuleta, et similia, non ex aliquo tacito aut sacramentali cum malis spiritibus contractu vires nancisci; sed eo pertinere tantum, ut imaginatio illius, qui his utitur, roboretur et exaltetur: quemadmodum etiam in religione, usus imaginum, ad mentes hominum in rerum contemplatione defigendas, et devotionum precantium excitandam, invaluit. Attamen mea talis est sententia; etiam si detur, vim imaginationis esse utique potentem, atque insuper ceremonias vim illam intendere et roborare; posito denique, quod adhibeantur ceremoniæ ad hanc intentionem sincere, atque tanquam remedium physicum, absque aliqua vel minima cogitatione de invitandis per ipsas auxiliis spirituum: haberi nihilominus debent pro illicitis, propterea quod sententiæ illi divinæ, adversus hominem propter peccatum latæ, repugnent et recalcitent: "In sudore vultus comedes panem tuum." Siquidem magia ejus generis, egregios illos fructus, quibus Deus pretium laborem constituit, adipiscendos proponit, per paucas, easque faciles et minime operosas observantias.

Supersunt doctrinæ duæ, quæ ad facultates animæ inferioris, sive sensibilis, præcipue spectant, utpote quæ cum organis corporeis maxime communicant. Altera de motu voluntario: altera de sensu et sensibili. In priori harum, etiam alias satis jejune inquisita, unica pars fere integra deest. Etenim de officio et fabrica commoda nervorum et musculorum, et aliorum, quæ ad hunc motum requiruntur; quæque pars corporis quiescat, dum alia moveatur; tum quod hujusce motus rector, et quasi auriga sit imaginatio; adeo ut dimissa imagine, ad quam motus fertur, statim intercipiatur et sistatur motus ipse (ut cum deambulamus, si alia subeat cogitatio acris et defixa, continuo consistimus) et aliæ nonnullæ subtilitates non male in observationem et inquisitionem jam pridem venerunt. Quomodo vero compressiones, et dilatationes, et agitationes spiritus (qui proculdubio motus fons est) corpoream et crassam partium molem flectat, excitet, aut pellat, adhuc diligenter inquisitum et tractatum non est. Neque mirum, cum anima ipsa sensibilis hactenus potius pro entelechia et functione quadam habita sit, quam pro substantia. At quando jam innotuerit, ipsam esse substantiam corpoream et materiata, necesse est etiam, in quibus nixibus aura tam pusilla et tenera, corpora tam crassa et dura in motu ponere possit, inquiratur. De hac parte igitur, cum desideretur, fiat inquisitio.

At de sensu et sensibili longe uberius et diligentius adhibita est inquisitio, tam in tractatibus circa ea generalibus, quam in artibus specialibus, utpote perspectiva, musica; quam vere nihil ad institutum: quandoquidem illa tanquam desiderata ponere non liceat. Sunt tamen duæ partes nobiles et insignes, quas in hac doctrina desiderari statuimus; altera de differentia perceptionis et sensus; altera de forma lucis.

Atque differentiam inter perceptionem et sensum, bene enucleatam, debuerant philosophi tractatibus suis de sensu et sensibili præmittere, ut rem maxime fundamentalem. Videmus enim, quasi omnibus corporibus naturalibus inesse vim manifestam percipiendi: etiam electionem quandam amica amplectendi, inimica et aliena fugiendi. Neque nos de subtilioribus perceptionibus tantum loquimur, veluti cum magnes ferrum allicit; flamma ad naphtham assilit; bulla bullæ approximata coit; radiatio ab objecto albo dissilit; corpus animalis utilia assimilât, inutilia excernit; spongiæ pars (etiam super aquam elevata) aquam attrahit, aërem expellit; et hujusmodi. Etenim quid attinet talia enumerare? Nullum siquidem corpus ad aliud admotum illud immutat, aut ab illo immutatur, nisi operationem præcedat perceptio reciproca. Percipit corpus meatus, quibus se insinuat: percipit impetum alterius corporis, cui cedit: percipit amotionem alterius corporis, a quo detinebatur, cum se recipit: percipit divulsionem sui continui, cui ad tempus resistit: ubique denique est perceptio. Aër vero calidum et frigidum tam acute percipit, ut ejus perceptio sit longe subtilior, quam tactus humani; qui tamen pro calidi et frigidi norma habetur. Duplex igitur deprehenditur circa hanc doctrinam hominum culpa: alia, quod eam intactam et intractatam (cum tamen sit res nobilissima) plerumque reliquerunt: alia, quod qui huic

contemplationi forte animum adjecerunt, longius, quam par est, proveci sunt, et sensum corporibus omnibus tribuerunt; ut piaculum fere sit ramum arboris avellere, ne forte instar Polydori ingemiscat. At debuerant illi differentiam perceptionis et sensus, non tantum in comparatione sensibilium ad insensibilia, secundum corpus integrum, explorare (veluti plantarum et animalium) verum etiam in corpore ipso sensibili animadvertere, quid in causa sit, cur tot actiones expediantur, absque omni tamen sensu? Cur alimenta digerantur, egerantur; humores et succi, sursum, deorsum, ferantur; cor et pulsus vibrent; viscera, sua quæque officia, sicut officinæ, producant; et tamen hæc omnia, et complura alia, absque sensu fiant? Verum homines non satis acute, qualis sit actio sensus, viderunt, atque quod genus corporis, quæ mora, quæ conduplicatio impressionis ad hoc requirantur, ut dolor vel voluptas sequatur? Denique differentiam inter perceptionem simplicem et sensum, nullo modo nosse videntur; nec quatenus fieri possit perceptio absque sensu. Neque enim hæc verborum tantum controversia est, sed de re magni prorsus momenti. De hac igitur doctrina (ut imprimis utili, et ad plurima spectante) melius inquiratur: quandoquidem etiam circa hanc rem inscitia tantum apud nonnullos ex antiquis philosophis potuerit, ut omnibus sine discrimine corporibus animam infundi putaverint: neque enim videbant, quomodo motus cum discretionem fieri potuerit absque sensu; aut sensus adesse absque anima.

De forma lucis quod debita non facta fuerit inquisitio (præsertim cum in perspectiva strenue elaborarunt homines) stupenda quædam negligentia censeri possit. Etenim, nec in perspectiva, nec alias, aliquid de luce, quod valeat, inquisitum est. Radiationes ejus tractantur, origines minime. Sed collocatio demum perspectivæ inter mathematica, hunc ipsum defectum et alios similes peperit; quia a physicis præmature discessum est. Tractatio autem de luce, et causis ejus, in physicis rursus superstitionosa fere est, tanquam de re inter divina et naturalia media; adeo ut quidam ex Platonicis eam materia ipsa antiquiorem introduxerint. Cum enim spatium esset diffiatum, id primum lumine, postea vero corpore impletum fuisse, vanissimo commento asseruerunt: quando tamen Scripturæ sacræ, massam cœli et terræ, tenebrosam, ante lucem creatam, diserte posuerint. Quæ vero physice et secundum sensum de ea tractantur, ea statim ad radiationes descendunt, ut parum physice inquisitionis circa hanc rem extet. Debuerant autem homines contemplationes suas submittere paulisper, et quid sit corporibus omnibus lucidis commune inquirere, tanquam de forma lucis. Etenim quam immensa est corporis differentia (si ex dignitate considerentur) inter solem et lignum putridum, aut squamas etiam piscium putridas? Inquirere etiam debuerant, quid tandem in causa sit, cur aliqua ignescant, et lucem ex se jacent calefacta, alia minime? Ferrum, metalla, lapides, vitrum, ligna, oleum, sebum, ab igne, vel flammam vibrant, vel saltem rubescunt: at aqua, aër, acerrimo et tanquam furenti calore fervere facta, nihil tamen lucis adipiscuntur, nec splendent. Quod si quis hoc eo fieri putet, quod proprium sit ignis lucere, aqua

autem et aër igni omnino inimica sint; is sane nunquam per obscura noctis in aqua salsa, tempestate calida, remigavit; cum guttulas aquæ ex remorum concussione subsilientes micare et lucescere videre potuisset. Quod etiam fit in spuma maris ferventiore, quam pulmonem marinum vocant. Quid denique habent commune cum flamma et ignitis cicendulæ et luciolæ; et musca Indica, quæ cameram totam illustrat; et oculi quorundam animalium in tenebris; et saccharum inter radendum, aut frangendum; et sudor equi nocte æstuosa festinantis; et alia nonnulla? Quin et homines tam parum in hac re viderunt, ut plerique scintillas e silice aërem attritum putent. Attamen quando aër calore non ignescat, et lucem manifesto concipiat, quomodo tandem fit, ut noctuæ, et feles, et alia nonnulla ani-

malia, noctu cernant? Adeo ut ipsi aëri (quando visio absque luce non transigatur) necesse est inesse lucem aliquam nativam et genuinam, quamvis tenuem admodum et infirmam, quæ tamen sit radiis visivis hujusmodi animalium proportionata, iisque ad videndum sufficiat. Verum hujusce mali (ut plurimorum) causa est, quod homines, ex instantiis particularibus, formas naturarum communes non elicerent; id quod nos tanquam subjectum proprium metaphysicæ posuimus; quæ et ipsa physicæ, sive doctrinæ de natura, pars est. Itaque de forma et originibus lucis fiat inquisitio, eaque interim inter desiderata ponatur. Atque de doctrina circa substantiam animæ, tam rationalis quam sensibilis, cum facultatibus suis, atque de ejusdem doctrinæ appendicibus, hæc dicta sint

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER QUINTUS.

AD REGEM SUUM.

### CAPUT PRIMUM.

*Partitio doctrinæ circa usum et objecta facultatum animæ humanæ, in logicam, et ethicam. Partitio logicæ, in artes inveniendi, judicandi, retinendi, et tradendi.*

DOCTRINA circa intellectum, rex optime, atque illa altera circa voluntatem hominis, in natalibus suis tanquam gemellæ sunt. Etenim illuminationis puritas, et arbitrii libertas, simul inceperunt, simul corruerunt. Neque datur in universitate rerum, tam intima sympathia, quam illa veri et boni. Quo magis rubori fuerit viris doctis, si scientia sint tanquam angeli alati, cupiditatibus vero tanquam serpentes, qui humi reptant; circumgerentes animas, instar speculi sane, sed menstruati.

Venimus jam ad doctrinam circa usum et objecta facultatum animæ humanæ. Illa duas habet partes, easque notissimas, et consensu receptas; logicam et ethicam: nisi quod doctrinam civilem, quæ vulgo ut pars ethicæ collocatur, jam ante emancipaverimus; et in integram doctrinam de homine congregato, sive in societate, constituerimus; hic tantum de homine segregato tractantes. Logica de intellectu et ratione; ethica de voluntate, appetitu, et affectibus disserit:

altera decreta, altera actiones progignit. Verum quidem est, quod phantasia in utraque provincia, tam judiciali quam ministeriali, legati cujusdam, aut internuncii, aut procuratoris reciproci vices gerit. Nam sensus idola omnigena phantasie tradit, de quibus postea ratio judicat: at ratio vicissim idola electa et probata phantasie transmittet, priusquam fiat executio decreti. Siquidem motum voluntarium perpetuo præcedit, eumque incitat phantasia: adeo ut phantasia sit utrique tam rationi quam voluntati instrumentum commune: nisi quod Janus iste bifrons sit, et duas obvertat facies: facies enim rationem aspiciens, veritatis habet effigiem; facies autem actionem aspiciens, effigiem bonitatis: quæ tamen sint facies,

—“Quales decet esse sororum.”

Neque vero merus et nudus internuncius est phantasia; sed auctoritatem non exiguam vel accipit, vel usurpat, præter delationem simplicem mandati. Recte enim Aristoteles, “Id imperii habet anima in corpus, quod dominus in mancipium; ratio vero in phantasiam, quod in libera civitate magistratus in civem;” ad quem possit sua vice redire dominatio. Videmus enim quod in iis, quæ sunt fidei et religionis, phantasia supra ipsam rationem scandat et evehatur: non quod illuminatio divina locum habeat

in phantasia (quin potius in ipsa arce mentis et intellectus) verum quemadmodum gratia divina in virtutibus utitur motibus voluntatis; ita similiter gratia divina in illuminationibus utitur motibus phantasiæ; unde fit ut religio semper aditum sibi ac viam ad animum quæsierit per similitudines, typos, parabolas, visiones, insomnia. Rursus haud humile est regnum phantasiæ in persuasionibus, a vi eloquentiæ insinuat. Nam ubi per orationis artificia hominum animi demulcentur, inflammanur, et in quamcunque partem pertrahuntur; totum illud fit per exuscitationem phantasiæ, quæ impotens jam facta, non solum rationi insultat, verum eidem vim quodammodo facit, partim occæcando, partim extimulando. Neque tamen causa videtur, cur a partitione priore discedamus. Nam phantasia scientias fere non parit; siquidem poësis (quæ a principio phantasiæ attributa est) pro lusu potius ingenii, quam pro scientia, habenda. Potestatem autem phantasiæ in naturalibus doctrinæ de anima paulo ante assignavimus: eam vero, quam habet cum rhetorica cognationem, illi ipsi arti (de qua infra tractabimus) remitti per est.

Pars ista humanæ philosophiæ, quæ ad logicam spectat, ingeniorum plurimorum gustui ac palato minus grata est; et nihil aliud videtur, quam spinosæ subtilitatis laqueus ac tenticula. Nam sicut vere dicitur scientiam esse animi pabulum: ita in hoc pabulo appetendo et deligendo plerique palatum nacti sunt laraëitarum simile in deserto: quos cupido incessit redeundi ad ollas carniæ; mannæ autem fastidium cepit: quæ licet cibus fuerit cælestis, minus tamen sentiebatur almus et sapidus. Eodem modo (ut plurimum) illæ scientiæ placent, quæ habent infusionem nonnullam carniæ magis esulentam: quales sunt historia civilis, mores, prudentia politica, circa quas hominum cupiditates, laudes, fortunæ vertuntur et occupatæ sunt. At istud lumen siccum plurimorum mollia et madida ingenia offendit et torret. Cæterum unamquamque rem propria si placet dignitate metiri, rationales scientiæ reliquarum omnino claves sunt: atque quemadmodum manus instrumentum instrumentorum, anima forma formarum, ita et illæ, artes artium ponendæ sunt: neque solum dirigunt, sed et roborant; sicut sagittandi usus et habitus, non tantum facit ut melius quis collimet, sed ut arcum tendat fortiozem.

Artes logicæ quatuor numero sunt; divisæ ex finibus suis, in quos tendunt. Id enim agit homo in rationalibus; aut ut inveniatur, quod quæsierit: aut iudicet, quod invenerit: aut retineat, quod iudicaverit: aut tradat, quod retinuerit. Necessæ igitur est, ut totidem sint artes rationales: ars inquisitionis seu inventionis: ars examinis seu iudicii: ars onstodiæ seu memoriæ: et ars elocutionis seu traditionis. De quibus jam sigillatim dicemus.

## CAPUT SECUNDUM.

*Partitio inventivæ in inventivam artium et argumentorum: quodque prior harum (quæ eminent) desideretur. Partitio inventivæ artium in experientiam*

*literatam, et organum novum. Delineatio experientiam literatæ.*

INVENTIONIS duæ sunt species, valde profecto inter se discrepantes; una artium et scientiarum; altera argumentorum et sermonum. Priorem harum desiderari prorsus pronuncio; qui quidem talis mihi videtur esse defectus, ac si quis in inventario conficiendo bonorum alicujus defuncti ita referat; numeratæ pecuniæ nihil. Ut enim cætera omnia pecunia parantur: ita et per hanc artem reliquæ acquiruntur. Atque sicut India occidentalis nunquam nobis inventa fuisset, nisi præcessisset acus nauticæ inventio; licet regiones illæ immensæ, versoriæ motus pusillus sit; ita non est cur miretur quispiam, in artibus perlustrandis et promovendis ampliores progressus factos non esse; quandoquidem ars ipsa inveniendi et perlustrandi scientias hactenus ignoretur.

Hanc scientiæ desiderari partem plane in confesso est. Primo enim dialectica nihil proficitur, imo ne cogitat quidem, de inveniendis artibus, sive mechanicis, sive (quas vocant) liberalibus; aut etiam de illarum operibus, harum vero axiomatibus elicendis; sed quasi præteriens homines alloquitur, et dimittit, edicens, ut cuique in sua arte credant. Celsus, vir prudens, non solum medicus (licet moris sit omnibus in laudes artis propriæ effundi) graviter et ingenue, de empiricis et dogmaticis medicorum sectis loquens, fatetur; "Medicamenta et remedia prius fuisse inventa, de causis vero et rationibus posterius disceptatum; non ordine converso, causas ex natura rerum primo erutas fuisse, easque inventioni remedium præluxisse." At Plato non semel innuit "Particularia infinita esse; maxime rursus generalia minus certa documenta exhibere: medullam igitur scientiarum, qua artifex ab imperito distinguitur, in mediis propositionibus consistere, quas per singulas scientias tradidit et docuit experientia." Quin et illi, qui de primis inventoribus, aut scientiarum originibus, verba fecerunt, casum potius, quam artem, celebrarunt; atque animalia bruta, quadrupedes, aves, pisces, serpentes, magis quam homines, tanquam scientiarum doctores, introduxerunt:

"Dictamnum genitrix Cretæa carpit ab Ida,  
Puberibus caulem foliis, et flore comantem  
Purpureo: non illa feris incognita capris  
Gramina, cum tergo volucres hæseret sagittæ."  
Æneid. xii. 412.

Adeo ut minime mirum sit (cum in more apud antiquos fuerit rerum utilium inventores consecrare) apud Ægyptios, gentem priscam (cui plurimæ artes initia sua debent) templa plena fuisse simulacris brutorum; hominum vero simulacris prope vacua;

"Omnigenumque deum monstra, et latrator Anubis,  
Contra Neptunum, et Venerem, contraque Minervam, etc."  
Æneid. viii. 698.

Quod si malis, ex traditione Græcorum, artes potius hominibus ut inventoribus tribuere; haudquaquam tamen dixeris Prometheum ad ignis inventionem contemplationes adhibuisse; aut cum silicem primo percuteret, scintillas expectasse: sed casu in illud incidisse, atque (ut aiunt) furtum Jovi fecisse. Ita ut ad artium inventionem quod attinet, capræ sylvestri pro emplastris, philomelæ pro modulationibus

musicis, ibidi pro lavationibus intestinorum, operculo ollæ, quod dissiliit, pro re tormentaria, denique (ut verbo dicamus) casui aut cuivis alteri rei plus debeamus, quam dialecticæ. Nec vero multo aliter se habet modus ille inveniendi, quem recte describit Virgilius: Georg. i. 133.

“ Ut varias usus meditando extunderet artes  
Paulatim.”—

Non enim alia hic proponitur inveniendi methodus, quam ejus bruta ipsa sunt capacia, et quam crebro usurpant: nimirum attentissima circa unam rem sollicitudo, ejusque perpetua exercitatio, quas sui conservandi necessitas hujusmodi animantibus imponit. Cicero enim vere admodum; “ Usus uni rei deditus, et naturam et artem sæpe vincit.” Quare si prædicetur de hominibus,

—“ Labor omnia vincit  
Improbis, et duris urgens in rebus egestas: ”

etiam de brutis similiter quæritur,

“ Quis expedit vitæ suam Χαίρει ? ”

Corvo quis auctor fuit, ut magna siccitate lapillos immitteret arbori cavæ, ubi aquam forte conspexerit, ut surgentem laticem rostro posset attingere? Quis viam monstravit apibus, qui per aërem, tanquam vastum mare, agros floridos, licet multum ab alvearibus dissitos, solent petere, et favos suos denuo repetere? Quis formicam docuit, ut grana in colliculo suo reponenda circumroderet prius, ne reposita germinarent, et spem suam illuderent? Quod si in versu illo Virgiliano quis notet verbum illud *extundere*, quod difficultatem rei; et verbum illud *paulatim*, quod tarditatem innuit; redibimus unde profecti sumus, ad Ægyptiorum illos deos; cum hactenus homines modice rationis facultate, nequam vero officio artis, usi sint ad inventa detegenda.

Secundo, hoc ipsum, quod asserimus (si advertatur paulo diligentius) demonstrat inductionis forma, quam proponit dialectica; qua scilicet scientiarum principia inveniuntur et probentur; quæ vitiosa plane est et incompetens, et naturam tantum abest ut perficiat, ut etiam eam pervertat et detorqueat. Qui enim modum acute introspexerit, quo ros iste æthereus scientiarum, similis illi de quo loquitur poëta,

“ Aerei mellis celestia dona,”

colligatur (cum et scientiæ ipsæ ex exemplis singulis, partim naturalibus, partim artificialibus, tanquam prati floribus et horti, extrahantur) reperiet profecto animum suapte sponte, et nativa indole, inductionem solertius conficere, quam quæ describitur a dialecticis; siquidem ex nuda enumeratione particularium (ut dialectici solent) ubi non invenitur instantia contradictoria, vitiose concluditur; neque aliquid aliud hujusmodi inductio producit, quam conjecturam probabilem. Quis enim in se recipiet, cum particularia, quæ quis novit, aut quorum meminit, ex una tantum parte compareant; non delitescere aliquod, quod omnino repugnet? Perinde ac si Samuel acquievisset in illis Isai filiis, quos coram adductos videbat in domo; et minime quæsisisset

Davidem, qui in agro aberat. Atque hæc inductionis forma (si verum omnino dicendum sit) tam pinguis est et crassa, ut incredibile videatur, tam acuta et subtilia ingenia (qualia in his rebus meditationes suas exercuerunt) potuisse eam mundo obtundere; nisi illud in causa fuisset, quod opera festinata ad theorias et dogmata contendissent: particularia autem (præsertim moram in iis longiorem) ex fastu quodam et elatione animi, despexissent. Illi enim exempla, sive instantias particulares, vice licitorum aut viatorum adhibuerunt ad summovendam turbam, ut dogmatibus suis viam aperirent; nequam autem ea inde ab initio in consilium advocarunt, ut legitima fieret et matura de rerum veritate deliberatio. Certe perculserit animos pia et religiosa quædam admiratio, cum videamus eadem calcata vestigia, ad errorem ducentia, in divinis et humanis. Quemadmodum enim in divina veritate percipienda ægre quis in animum inducat, ut fiat tanquam parvulus; ita in humana perdiscenda, provecos utique, puerorum more, prima inductionum elementa adhuc legere et retrahere, res humilis existimatur et quasi contemnenda.

Tertio, si concedatur, principia scientiarum ex inductione, qua utuntur, vel sensu et experientia, recte posse constitui; certissimum est tamen, axiomata inferiora ab iis per syllogismum non posse (in rebus naturalibus, quæ participant ex materia) recte et tuto deduci. In syllogismo enim fit reductio propositionum ad principia per propositiones medias. Hæc autem sive inveniendi sive probandi forma in scientiis popularibus (veluti ethicis, politicis, legibus, et hujusmodi) locum habet: imo et in theologicis; quandoquidem Deo pro bonitate sua placuerit captui humano se accommodare: at in physicis, ubi natura opere, non adversarius argumento constringendus est, elabitur plane veritas ex manibus; propter longe majorem naturalium operationum, quam verborum subtilitatem: adeo ut succumbente syllogismo, inductionis (veræ scilicet et emendatæ) officio ubique opus sit, tam ad principia magis generalia, quam ad propositiones inferiores. Nam syllogismi ex propositionibus consistunt; propositiones ex verbis; verba notionum tessere sunt. Quare si notiones ipsæ (quæ verborum animæ sunt) male et varie a rebus abstrahantur, tota fabrica corrumpitur. Neque laboriosa vel consequentiarum argumentorum, vel veritatis propositionum examinatio, rem in integrum unquam restituet; cum error sit (ut loquuntur medici) in digestionem prima; quæ a functionibus sequentibus non rectificatur. Non igitur absque magna, et evidenti causa evenit, ut complures ex philosophis (aliqui autem eorum maxime insignes) academici fuerint et sceptici qui scientiæ humanæ et syllepsium certitudinem sustulerunt; ultra verisimilitudinem aut probabilitatem negantes eam pertingere. Inficias non iverim, visum esse nonnullis, Socratem, cum scientiæ certitudinem a se amoveret, per ironiam tantum hoc fecisse; et scientiam dissimulando simulasse: renuncians scilicet iis, quæ manifesto sciebat, ut eo modo, etiam quæ nesciebat, scire putaretur. Neque etiam in recentiore academia (quam amplexus est Cicero) illa opinio acatalepsiæ admodum sincere culta fuit. Etenim qui

eloquentia floruerunt, hanc fere sectam sibi desumpserunt, ut in utramque partem copiose disserendi gloriam assequerentur: unde a via illa recta, per quam ad veritatem pergere debuissent, tanquam ad deambulationes quasdam amœnas, animi causa institutas, deflexum est. Constat tamen, nonnullos sparsim in utraque academia (veteri et nova) multo magis inter scepticos, acatalepsiam istam simpliciter et integre tenuisse. Verum in hoc maxime ab illis peccatum est; quod sensuum perceptiones calamniabantur; unde scientias radicitus evelebant. Sensus vero, licet sæpenumero homines aut fallant, aut destituant, possint tamen multa adjuti industria ad scientias sufficere; idque non tam ope instrumentorum (licet et hæc quoque aliqua ex parte prosint) quam experimentorum ejus generis, quæ objecta subtiliora, quam pro sensus facultate, ad objecta sensu comprehensibilia producere queant. Debuerant autem potius defectum hac in parte imputasse mentis tum erroribus, tum contumaciæ (quæ rebus ipsis morigera esse recusat) et pravis demonstrationibus, et modis ratiocinandi, et concludendi, ex perceptione sensuum, perperam institutis. Hæc autem loquimur, non quo intellectui detrahatur, aut negotium totum deseratur, sed quo intellectui auxilia commoda comparentur et subministrantur, quibus rerum ardua et naturæ obscuritatem vincere possunt. Nemo enim tanta pollet manus constantia, aut etiam habitu, ut rectam lineam ducere, aut perfectum circulum circumscribere, manu libera possit; quod tamen ope regulæ, aut circini, facere in promptu est. Hæc igitur res ipsa est, quam paramus, et ingenti conatu molimur; ut scilicet mens per artem fiat rebus par; utque inveniatur ars quædam indicii et directionis, quæ cæteras artes, earumque axiomata, atque opera detegat, et in conspectum det. Hanc enim merito desiderari posuimus.

Ars ista indicii (ita enim eam appellabimus) duas habet partes: aut enim defertur indicium ab experimentis ad experimenta: aut ab experimentis ad axiomata, quæ et ipsa nova experimenta designant. Priorem harum experientiam literatam nominabimus, posteriorem vero interpretationem naturæ, sive novum organum. Prior quidem (ut alibi attigimus) vix pro arte habenda est, aut parte philosophiæ, sed pro sagacitate quadam; unde etiam eam venationem Panis (hoc nomen ex fabula mutuati) quandoque appellamus: attamen quemadmodum possit quis, in via sua, triplici modo progredi; aut cum palpat ipse in tenebris; aut cum alterius manu ducatur, ipse parum videns; aut denique cum vestigia lumine adhibito regat: similiter cum quis experimenta omnigena absque ulla serie, aut methodo tentet; ea demum mera est palpatio: cum vero nonnulla utatur in experimentando directione et ordine, perinde est, ac si manu ducatur. Atque hoc illud est, quod per experientiam literatam intelligimus: nam lumen ipsum, quod tertium fuit, ab interpretatione naturæ, sive novo organo, petendum est.

Literata experientia, sive venatio Panis, modos experimentandi tractat: eam (cum desiderari posuerimus, neque res sit plane perspicua) pro more et instituto nostro aliquatenus adumbrabimus. Modus experimentandi præcipue procedit, aut per variatio-

nem experimenti; aut per productionem experimenti; aut per translationem experimenti; aut per inversionem experimenti; aut per compulsionem experimenti; aut per applicationem experimenti; aut per copulationem experimenti; aut denique per sortes experimenti. Universa vero ista cohibita sunt citra terminos axiomatis alicujus inveniendi. Illa enim altera pars de novo organo, omnem transitionem experimentorum in axiomata, aut axiomatum in experimenta, sibi vindicat.

Variatio experimenti fit primo in materia; scilicet, quando experimentum in jam cognitum, certæ materiæ fere adhæsit; nunc vero in illis, quæ similis sunt speciei, tentetur: veluti confectio papyri in pannis linteis tantum probata est, in sericis minime (nisi forte apud Chineses) neque rursus in filaceis, compositis ex setis et pilis, ex quibus conficitur (quod vocamus) camelotum; neque denique in laneis, gossypio, et pellibus; quanquam hæc tria postrema magis esse videntur heterogenea. Itaque admisceri possint potius, quam per se utilia esse. Item insitio in arboribus fructiferis in usu est, in arboribus sylvestribus raro tentata; licet perhibeatur ulmum in ulmum insitam miras producere foliorum umbras. Insitio etiam in floribus rara admodum est, licet hoc jam cœperit fieri in rosis muscatellis, quæ rosis communibus feliciter innoculantur. Etiam variationem in parte rei, inter variationes in materia ponimus. Videmus enim, surculum in trunco arboris insitum feliciter pullulare, quam si terræ indatur. Cur non et semen cepæ capiti alterius cepæ viridis inditum, feliciter germinet, quam si nudæ terræ commissum fuerit? Atque hic radix pro trunco variatur, ut hæc res insitio quædam in radice videri possit. Variatio experimenti fit secundo in efficiente: radii solis per specula comburentia, calore ita intenduntur, ut materiam, quæ ignem facile concipiat, accendere possint: num et radii lunæ, per eadem, ad lenissimum aliquem gradum teporis actuari possunt, ut videamus, utrum corpora omnia cœlestia sint potestate calida? Item calores radios, per specula scilicet, intenduntur: num etiam calores opaci (quales sunt lapidum et metallorum antequam candeant) idem patiuntur; an potius sunt luminis in hac re partes nonnullæ? Item succinum et gagates fricata paleas trahunt; num etiam ad ignem tepefacta? Variatio experimenti fit tertio in quanto: circa quod diligens admodum est adhibenda cura, cum hoc multi circumstant errores. Credunt enim homines, aucta aut multiplicata quantitate, pro rata augeri aut multiplicari virtutem. Et hoc fere postulatur et supponunt, tanquam res sit mathematicæ ejusdem certitudinis; quod omnino falsissimum est. Globus plumbeus unius libræ a turri demissus (puta) decem pulsuum spatio, ad terram descendit: num globus duarum librarum (in quo impetus iste, motus, quem vocant, naturalis, duplicari debet) spatio quinque pulsuum terram feriet? At ille æquali fere tempore descendet, neque accelerabitur juxta rationem quanti. Item sulphuris (puta) drachma una semilibræ chalybis admixta, eam fluere faciet et colliquari: num igitur uncia sulphuris, quatuor libris chalybis, ad colliquationem sufficet? At illud non sequitur. Certum enim est, obstinationem materiæ in patiente, per quantitatem,

augeri amplius, quam activitatem virtutis in agente. Porro nimium æque fallit ac parum. Etenim in excoctionibus et depurationibus metallorum, error est familiaris, ut ad excoctionem promovendam, aut calorem fornacis, aut additamenti, quod injiciunt, molem augeant. At illa supra modum aucta operationem impediunt; propterea quod vi et acrimonia sua multum ex metallo puro in fumos vertant et asportent; ut et jactura fiat; et massa, quæ remanet, magis sit obstinata et dura. Debent igitur homines ludibrium illud mulieris Æsopi cogitare: quæ sperarat, ex duplicata mensura hordei gallinam suam duo ova quotidie parituram: at illa impinguata nullo peperit. Prorsus non tutum fuerit alicui experimento naturali confidere, nisi facta fuerit probatio, et in minore, et in majore quanto. Atque de variatione experimenti hactenus.

Productio experimenti duplex; repetitio, et extensio: nimirum, cum aut experimentum iteratur, aut ad subtilius quiddam urgetur. Repetitionis exemplum tale sit. Spiritus vini fit ex vino per distillationem unicam; estque vino ipso multo acrior et fortior: num etiam spiritus vini ipse destillatus sive sublimatus, se ipsum fortitudine æque superabit? At repetitio quoque non absque fallacia est: etenim, tum secunda exaltatio, prioris excessum non æquat; tum etiam sæpenumero per iterationem experimenti, post statum sive acmen quandam operationis, tantum abest ut progrediatur natura, ut potius relabatur. Judicium igitur in hac re adhibendum. Item argentum vivum, in linteo, aut alias in medio plumbi liquefacti, cum refrigerescere cœperit, insertum, stupefit; nec amplius fuit: num et idem argentum vivum, si sæpius immisum fuerit, ita figetur, ut fiat malleabile? Extensionis exemplum tale sit: aqua in summo posita, et pensilis facta, et per rostrum vitri oblongum in vinum dilutum immersa, separabit aquam a vino: vino in summum se paulatim recipiente, aqua in imo subsidente: num etiam, quemadmodum vinum et aqua (corpora scilicet diversa) hoc ingenio separantur, possint quoque partes vini (corporis nimirum integri) subtiliores a crassioribus separari; ut fiat tanquam destillatio, per pondus, et in summo reperiat aliquid spiritui vini proximum, sed forte delicatius? Item magnes ferrum integrum trahit: num etiam frustrum magnetis in dissolutione ferri immersum, ferrum ad se alliciet, et se ferro obducat? Item, versorium acus nauticæ se ad polos mundi applicat: num etiam eadem via et consecutione, qua cœlestia? Videlicet, ut si quis acum in contrario situ, hoc est, in puncto australi ponat, et paulisper teneat, ac deinde vim omittat: num forte acus ad septentriones se conferet, eligendo potius rotare per occidentem in situm desideratum, quam per orientem? Item, aurum argentum vivum, juxta positum, imbibit: num vero aurum recipit illud argentum vivum intra se, sine extensione molis suæ, ut fiat massa quædam ipso auro ponderosior? Item, homines memoriæ serviunt, collocando imagines personarum in locis. Num etiam idem assequuntur, missis locis, et affingendo actiones aut habitus personis? Atque de productione experimenti hactenus.

Translatio experimenti triplex: aut a natura vel

casu in artem: aut ab arte vel practica alia in aliam: aut a parte alicujus artis in partem diversam ejusdem. Translationis a natura aut casu in artem innumera sunt exempla: adeo ut omnes fere artes mechanicæ, a tenuibus initiis, natura aut casu præbitis, ortum habuerint. Adagio receptum erat, "botrum contra botrum citius maturescere:" id quod de mutuis amicitis operis et officiis increbuit. At nostri cydræ (vini scilicet ex pomis) confectores, hoc optime imitantur. Cavent enim ne poma tundantur aut exprimantur, antequam, nonnullo tempore in acervos conjecta, mutuo contactu maturerint; unde nimia potus aciditas emendetur. Item, Iridum artificiosarum imitatio ex aspersione spissa guttularum, ab iridibus naturalibus ex nube rosida, facili ductu translata est. Item, modus destillandi, vel ex alto peti, ex imbribus scilicet, aut rore; vel ex humili illo experimento guttarum, in patinis ollis aquæ bullientis superimpositis, adhærentium, desumi potuit. Tonitrua autem et fulgura imitari veritus quis esset, nisi operculum monachi illius chemici, magno impetu et fragore, subito in sublime jactum, submonuisset. Verum quo hæc res magis exemplis abundet, eo pauciora adducere opus fuerit. Debuerant autem homines, si illis utilia inquirere vacaret, naturalia opificia et operationes singulas, atente, et minutim, et ex composito intueri; et secum perpetuo, et acriter cogitare, quamnam ex ipsis ad artes transferri possit. Speculum enim artis natura: nec pauciora sunt experimenta, quæ ab arte in artem, seu a practica in practicam, transferri possunt; licet hoc rarius in usu sit. Natura enim ubique omnibus occurrit; at artes singulæ artificibus tantum propriis cognitæ sunt. Specilla ocularia ad visum debile juvenandum inventa sunt: num et comminisci quis queat aliquod instrumentum, quod auribus appensum surdastris ad audiendum juvet? Item, imbalsamationes et mel cadavera conservant; annon possit aliquid ex his in medicinam transferri, quod etiam vivis corporibus prosit? Item, sigillorum practica in cera, cæmentis, et plumbo, antiqua fuit: at hæc etiam impressioni in chartis, sive arti typographicæ, viam monstravit. Item, sal in coquinaria carnes condit, idque melius hieme, quam æstate. Annon hoc ad balnea utiliter transferri possit, eorumque temperamentum, quando opus fuerit, vel imprimendum, vel extrahendum? Item, sal in nupero experimento, de congelationibus artificialibus, magnas vires ad condensandum obtinere reperitur: annon possit hoc transferri ad condensaciones metallorum: cum jam pridem notum sit, aquas fortes, ex nonnullis salibus compositas, dejicere et præcipitare arenulas auri ex metallis aliquibus auro ipso minus densis? Item pictoria imagine memoriæ rei renovat: annon hoc tractum est in artem eam, quam vocant, memoriæ? De his in genere monitum sit; quod nihil ad imbrem quendam inventorum utilium, eorundemque novorum, veluti cœlitus deducendum, tantum valere possit, quantum, si experimenta complurium artium mechanicarum, uni homini, aut paucis, qui se invicem colloquiis acuere possint, in notitiam venerint: ut per hanc, quam dicimus, experimentorum translationem, artes se mutuo fovere, et veluti commixione radiorum accendere possint.

Quamvis enim vis rationalis per organum longe majora spondeat; attamen hæc sagacitas, per experimentiam literatam, plurima interim ex iis, quæ in proximo sunt, in genus humanum, tanquam missilia apud antiquos donativa, projiciet et sparget. Superest illa translatione de parte artis in partem diversam; quæ parum differt a translatione de arte in artem: verum quia artes nonnullæ spatia magna occupant, ut etiam translationem experientiorum ferre intra se ipsas possint, hanc etiam speciem translationis subjungere visum est: præcipue, quia magni prorsus est in nonnulla arte momenti. Plurimum enim ad artem medicinæ amplificandam profuerit, si experimenta partis illius medicinæ de curationibus morborum ad partes illas de tuenda sanitate, et prolongatione vitæ, transferantur. Si enim opiatum aliquod insigne ad spirituum, in morbo pestilenti, furibundam incensionem reprimendam suffecerit, non dubitet quispiam, quin simile aliquod, debita dosi familiare redditum, etiam incensionem eam gliscentem, et obrepentem, quæ per statem fit, aliqua ex parte frænare et retardare possit. Atque de translatione experimenti hactenus.

Inversio experimenti fit, cum contrarium ejus, quod experimento constat, probatur. Exempli gratia: calidum per specula intenditur: num etiam frigidum? Item, calidum se diffundendo, fertur tamen potius in sursum: num etiam frigidum se diffundendo, fertur magis in deorsum? Exempli gratia: accipias bacillum ferreum, illudque in uno fine calefacias; et deinde erigas ferrum, parte calefacta subtus locata; in superiore parte manu apposita, actum manum aduret; parte autem calefacta supra locata, et manu subtus, multo tardius aduret. Num etiam, si totum bacillum calefiat, et finis alter nive, vel spongia, in aqua frigida tincta, madefiat: si nix aut spongia superius locetur, num (inquam) frigus deorsum mittet citius, quam inferius locata, sursum? Item, radii solis supra album dissiliunt, supra nigrum congregantur: num etiam umbræ super nigrum disperduntur, super album congregantur? Id quod in loco tenebroso, luce per foramen exiguum tantum immissa, fieri videmus, ubi imagines rerum, quæ foras sunt, super papyrus, quæ alba est, excipiuntur, super nigram minime. Item, vena frontis ad dolorem hemicranicum inciditur: num etiam hemicranium scarificatur ad sodam? Atque de inversione experimenti hactenus.

Compulsio experimenti fit, ubi urgetur et producitur experimentum, ad annihilationem vel privationem virtutis: in reliquis enim venationibus, fera capitur tantum; at in ista, occiditur. Exemplum compulsiois tale est. Magnes ferrum trahit: urge ergo ferrum, aut urge magnetem, ut amplius non fiat attractio: veluti, num forte si magnes ustus fuerit, aut in aquis fortibus maceratus, virtutem suam deponet, aut saltem remittet? Contra, si chalybs aut ferrum in crocum martis redigantur, vel in chalybem, quem vocant præparatum, vel etiam in aqua forti solvantur, num adhuc ea alliciat magnes? Rursus. Magnes ferrum trahit per universa, quæ novimus, media; nempe si interponatur aurum, argentum, vitrum. Urge igitur aliquod medium, si fieri possit, quod virtutum intercipiat: probetur argentum vivum:

probentur oleum, gummi, carbo ignitus, et alia, quæ adhuc probata non sunt. Item, introducta sunt nuper perspicilla, quæ visibilia minuta miris modis multiplicent. Urge usum eorum, vel ad species tam pusillas, ut amplius non valeant: vel ita grandiusculas, ut confundantur. Scilicet, num poterint illa in urina clare detegere ea, quæ alias non perspicerentur? Num poterint in gemmis, ex omni parte puris et nitidis, grana aut nubeculas conspicienda dare? Num et pulviscula in sole (quæ Democrito pro atomis suis, et principiis rerum, falsissime obiciebantur) tanquam corpora grandiuscula monstrare? Num pulverem crassiusculum, ex cinnabari, et cerussa, ita ostendere distributum, ut appareant hic granula rubra, illic alba? Num rursus, imagines majores (puta faciem, oculum, etc.) in tantum multiplicatas ostendere, in quantum pulicem, aut vermiculum? Num byssum, aut hujusmodi textile linteum delicatius, et paulo apertius, ita foraminatum ostendere, ac si esset rete? Verum in compulsiois experientiorum minus moramur, quia fere extra limites experientie literatæ cadunt, et ad causas, et axiomata, et novum organum potius spectant. Ubi-cunque enim fit negativa, aut privativa, aut exclusiva; cœpit jam præberi lux nonnulla ad inventionem formarum. Atque de compulsione experimenti hactenus.

Applicatio experimenti nihil aliud est, quam ingeniosa traductio ejus, ad experimentum aliud aliquod utile. Exemplum tale sit. Corpora quæque suas habent dimensiones, sua pondera: aurum plus ponderis, minus dimensionis, quam argentum; aqua, quam vinum. Ab hoc traducitur experimentum utile, ut ex mensura impleta, et pondere excepto, possis dignoscere quantum argenti fuerit admixtum auro, vel aquæ vino. Quod fuit *Εύρηκα* illud Archimedis. Item, carnes in nonnullis cellis citius putrefiunt, quam in aliis: utile fuerit, experimentum hoc traducere ad dignoscendos aëres, magis aut minus salubres ad habitationem; ubi scilicet carnes diutius vindicentur a putredine: possit idem applicari ad revelandas salubriores aut pestilentiores tempestates anni. Verum innumera sunt ejusmodi. Evigilent modo homines: et oculos perpetuo, alias ad naturam rerum, alias ad usus humanos vertant. Atque de applicatione experimenti hactenus.

Copulatio experimenti est applicationum nexus et catena; cum, quæ singula profutura non fuissent ad usum aliquem, connexa valeant. Exempli gratia; rosas aut fructus serotinos habere cupis; hoc fiet, si gemmas præcociore avellas; idem fiet, si radices, usque ad ver adultum, denudes, et aëri exponas; at multo magis si copuletur utrumque. Item, ad refrigerandum maxime faciunt glacies, et nitrum; utrumque commixtum multo magis. Verum et hæc res per se perspicua est. Attamen fallacia ei sæpe subesse possit (ut et omnibus, ubi desunt axiomata) si copula fiet ex rebus, quæ diversis, et quasi pugnantibus modis operantur. Atque de copulatione experimenti hactenus.

Restant sortes experimenti. Hic vero experimentandi modus plane irrationalis est, et quasi furiosus; cum aliquid experiri velle animum subeat, non quia aut ratio, aut aliquod aliud experimentum te ad illud deducat, sed prorsus, quia similis res adhuc nunquam

tentata fuit. Haud tamen scio an in hac ipsa re (de qua nunc agimus) non aliquid magni lateat: si, inquam, omnem lapidem in natura moveas. Magnalia enim naturæ fere extra vias tritas et orbitas notas jacent, ut etiam absurditas rei aliquando juvet. At si ratio simul comitetur, id est, ut et manifestum sit, simile experimentum nunquam tentatum fuisse, et tamen causa subsit magna, cur tentetur; tum vero hæc res ex optimis est, et plane sinus naturæ excutit. Exempli gratia: in operatione ignis super aliquod corpus naturale, alterum horum haectenus semper evenit, ut aut aliquid evolet (veluti flamma et fumus, in combustionem vulgari) aut saltem fiat separatio partium localis, et ad nonnullam distantiam, ut in distillationem, ubi fæces subsident, vapores in receptacula, postquam luserint, congregantur. At distillationem clausam (ita enim eam vocare possumus) nemo mortalium adhuc tentavit: verisimile autem videtur vim caloris, si intra claustra corporis sua in alterando edat facinora; cum nec jactura fiat corporis, nec etiam liberatio; tum demum hunc materiæ Proteum, veluti manicis detentum, ad complures transformationes adacturam, si modo calor ita temperetur et alternetur, ut non fiat vasorum contractio. Est enim hæc res matriçi similis naturali, ubi calor operatur, nihil corporis aut emittitur aut separatur: nisi quod in matrice jungatur alimentatio; verum quatenus ad versionem eadem res videtur. Tales igitur sunt sortes experimenti.

Illud interim, circa hujusmodi experimenta monemus; ut nemo animo concidat, aut quasi confundatur, si experimenta, quibus incumbit, expectationi suæ non respondeant. Etenim quod succedit, magis complacet; at quod non succedit, sæpenumero non minus informat. Atque illud semper in animo tenendum (quod perpetuo inculcamus) experimenta lucifera etiam adhuc magis quam fructifera ambienda esse. Atque de literata experientia hæc dicta sint, quæ (ut jam ante diximus) sagacitas potius est, et odoratio quædam venatica, quam scientia. De novo organo autem silemus, neque de eo quicquam prælibamus; quoniam de eo (cum sit res omnium maxima) opus integrum (annuente favore divino) conficere nobis in animo est.

### CAPUT TERTIUM.

*Partitio inventivæ argumentorum in promptuariam et topicam. Partitio topicæ, in generalem et particularem. Exemplum topicæ particularis, in inquisitione de gravi et levi.*

INVENTIO argumentorum, inventio proprie non est. Invenire enim est ignota detegere, non ante cognita recipere aut revocare. Hujusce autem inventionis usus atque officium non aliud videtur, quam ex massa scientiæ, quæ in animo congesta et recondita est, ea, quæ ad rem aut quæstionem institutam faciunt, dextere depromere. Nam cui parum aut nihil de subjecto, quod proponitur, innotuit, ei loci inventionis non prosunt; contra, cui domi paratum est, quod ad rem adduci possit, is etiam absque arte, et locis inventionis, argumenta tandem (licet non

ita expedite et commode) reperiet et producet. Adeo ut hoc genus inventionis (sicut diximus) inventio proprie non sit; sed reductio tantum in memoriam, sive suggestio cum applicatione. Attamen, quoniam vocabulum invaluit et receptum est, vocetur sane inventio; siquidem etiam feræ alicujus venatio et inventio, non minus cum illa intra vivariorum septa indagetur, quam cum in saltibus apertis, dici possit. Missis vero verborum scrupulis, illud constat, scopum et finem hujusce rei esse promptitudinem quandam et expeditum usum cognitionis nostræ, potius quam ejusdem amplificationem aut incrementum.

Atque ut parata sit at disserendum copia, duplex ratio iniri potest. Aut ut designetur et quasi indice monstretur, ad quas partes rem indagare oporteat; atque hæc est ea, quam vocamus topicam. Aut ut jam antea composita sint, et in usum reposita argumenta, circa eas res, quæ frequentius incidunt et in disceptionem veniunt; atque hanc promptuariam nominabimus. Hæc autem posterior tanquam scientiæ pars vix dici meretur, cum in diligentia potius consistat, quam in eruditione aliqua artificiosa. Veruntamen hac in parte Aristoteles, ingenioe quidem, sed tamen damnose, sophistas sui temporis deridet, inquires: "Perinde illos facere, ac si quis calcearium professus, rationem calcei conficiendi non doceret, sed exhiberet tantum calceos complurimos, diversæ tam formæ quam magnitudinis." Attamen hic regerer liceat; calcearium, si in officina nil calceorum haberet, neque eos consueret nisi rogatus; egeum prorsus mansurum, et perpaucos inventurum emptores. Sed longe aliter Salvator noster, de divina scientia verba faciens, inquit, "Omnis scriba doctus in regno cælorum similis est homini patrifamilias, qui profert de thesauro suo nova et vetera." Videmus etiam, priscos rhetores oratoribus præcepisse, ut præsto haberent locos communes varios, jam pridem adornatos, et in utramque partem tractatos et illustratos: exempli gratia, Pro sententia legis adversus verba legis; et e contra: Pro fide argumentorum adversus testimonia; et e contra. Cicero autem ipse, longa doctus experientia, plane asserit, posse oratorem diligentem et sedulum jam præmeditata et elaborata habere, quæcunque in disceptionem venient: adeo ut in causæ ipsius actione, nihil novum, aut subitum inseri necesse fuerit, præter nomina nova, et circumstantias aliquas speciales. At Demosthenis diligentia et sollicitudo eo usque processit, ut quoniam primus ad causam aditus et ingressus ad animos auditorum præparandos plurimum virium haberet, operæ pretium putaret complura concionum et orationum exordia componere et in promptu habere. Atque hæc exempla et auctoritates merito Aristotelis opinioni præponderare possint, qui nobis auctor foret ut vestiarium cum forfice commutarem. Itaque non fuit omittenda hæc pars doctrinæ circa promptuariam, de qua hoc loco satia. Cum enim sit utriusque, tam logicæ, quam rhetoricæ communis; visum est eam hic inter logica cursum tantum perstringere; pleniorum ejus tractationem ad rhetoricam rejicientea.

Partem alteram inventivæ (nimirum topicam) partiemur in generalem, et particularem. Generalis

illa est, quæ in dialectica diligenter et abunde tractata est; ut in ejus explicatione morari non sit opus. Illud tamen obiter monendum videtur, topicam istam non tantum in argumentationibus, ubi cum aliis manum conserimus; verum et in meditationibus, cum quid nobiscum ipsi commentamur aut revolvimus, valere. Imo, neque solummodo in hoc sitam esse, ut inde fiat suggestio aut admonitio, quid affirmare, aut asserere; verum etiam quid inquirere aut interrogare debeamus. At prudens interrogatio, quasi dimidium scientiæ. Recte siquidem Plato, "Qui aliquid quærit, id ipsum, quod quærit, generali quadam notione comprehendit: aliter, qui fieri potest, ut illud, cum fuerit inventum, agnoscat?" Idcirco quo amplior et certior fuerit anticipatio nostra, eo magis directa et compendiosa erit investigatio. Iidem igitur illi loci, qui ad intellectus nostri sinus intra nos excutiendos, et congestam illic scientiam depromendam, conducent, etiam ad scientiam extrinsecus hauriendam juvabunt: ita ut si præsto fuerit quis rei gnarus et peritus, commode et prudenter de ea interrogari a nobis possit; et similiter auctores, et libri, et partes librorum, qui nos de his, quæ quærimus, edoceant et informant, utiliter deligi et evolvi.

At topica particularis ad ea, quæ dicimus, longe confert magis, et pro re fructuosissima habenda est. Illius certe mentio levis a nonnullis scriptoribus facta est; sed integre et pro rei dignitate minime tractata. Verum missum facientes vitium illud et fastum, quæ nimium diu regnarunt in scholis; videlicet, ut quæ præsto sint, infinita subtilitate persequantur; quæ paulo remotiora, ne attingant quidem: nos sane topicam particularem, tanquam rem apprime utilem, amplectimur; hoc est, locos inquisitionis et inventionis particularibus subjectis et scientiis appropriatos. Illi autem mixturæ quædam sunt ex logica et materia ipsa propria singularum scientiarum. Futilem enim esse constat, et angusti cujusdam animi, qui existimet artem de scientiis inveniendis, perfectam jam a principio, excogitari et proponi posse; eandemque postea in opere poni et exerceri debere. At certo sciant homines, artes inveniendi solidas et veras adolescere et incrementa sumere cum ipsis inventis: adeo ut cum quis primum ad percrutationem scientiæ alicujus accesserit, possit habere præcepta inventivæ nonnulla utilia: postquam autem ampliores in ipsa scientia progressus fecerit, possit etiam et debeat nova inventionis præcepta excogitare, quæ ad ulteriora eum feliciter deducant. Similis est sane hæc res viæ inîte in planitie: postquam enim viæ partem aliquam fuerimus emensi, non tantum hoc lucrati sumus, ut ad exitum itineris propius accesserimus; verum etiam ut, quod restat viæ, clarius prospiciamus: eodem modo, in scientiis, gradus itineris quisque, ea, quæ a tergo reliquit, prætervectus, etiam illa, quæ supersunt, propius dat in conspectum. Hujus autem topicæ exemplum, quoniam eam inter desiderata reponimus, subjungere visum est.

TOPICA PARTICULARIS, SIVE ARTICULI INQUISTIONIS DE GRAVI ET LEVI.

1. Inquiratur, qualia sint corpora, quæ motus gra-

vitatis sunt susceptibilia; qualia, quæ levitatis; et si quæ sint mediæ, sive adiphoræ naturæ?

2. Post inquisitionem de gravitate et levitate simplicem, procedatur ad inquisitionem comparatam; quæ nimirum ex gravibus plus, quæ minus ponderent, in eodem dimenso? Etiam, quæ ex levibus celerius ferantur in altum, quæ tardius?

3. Inquiratur de eo, quid possit et operetur quantum corporis ad motum gravitatis? Atqui videatur hoc primo aspectu quasi supervacuum; quia rationes motus debeant sequi rationes quanti. Sed res aliter se habet: nam licet in lancibus quantitas gravitatem corporis ipsius compenset (viribus corporis undique coeuntibus per repercussionem, sive resistantiam lancium vel trabis) tamen ubi parva datur resistantia (veluti in decasu corporum per aërem) quantum corporis parum valet ad incitationem descensus; cum viginti pondo plumbi et libra una, eodem fere spatio cadant.

4. Inquiratur utrum quantum corporis ita augeri possit, ut motus gravitatis prorsus deponatur; ut fit in globo terræ, qui pensilis est, non cadit? Utrum igitur possint esse aliæ massæ tam grandes, ut se ipsæ sustentent? Nam latius ad centrum terræ res fictitia est; atque omnis massa grandis motum lationis quemcunque exhorret, nisi ab alio appetitu fortiori vincatur.

5. Inquiratur de eo, quid possit et operetur resistantia corporis mediæ, vel occurrentis, ad regimen motus gravitatis? Corpus vero descendens aut penetrat et secat corpus occurrens, aut ab eo sistitur. Si penetret, fit penetratio; aut cum levi resistantia, ut in aëre; aut cum fortiori, ut in aqua. Si sistatur, sistitur aut resistantia dispari, ubi fit prægravatio, ut si lignum superponatur ceræ; aut æqua, veluti si aqua superponatur aquæ, aut lignum ejusdem generis ligno; id quod appellat schola (apprehensione quadam inani) "Non ponderare corpus nisi extra locum suum." Atque hæc omnia motum gravitatis variant: aliter enim moventur gravia in lancibus, aliter in decasu: etiam aliter (quod mirum videri possit) in lancibus pendentibus in aëre, aliter in lancibus immersis in aqua; aliter in decasu per aquam; aliter in natantibus sive vectis super aquam.

6. Inquiratur de eo, quid possit et operetur figura corporis descendens ad regendum motum gravitatis; veluti figura lata cum tenuitate, cubica, oblonga, rotunda, pyramidalis; et quando se vertant corpora, quando eadem, qua dimittuntur, positura permaneant?

7. Inquiratur de eo, quid possit et operetur continuatio et progressio ipsius casus sive descensus ad hoc, ut majori incitatione et impetu feratur; et qua proportione et quousque invalescat illa incitatio? Si quidem veteres levi contemplatione opinati sunt (cum motus naturalis sit iste) eum perpetuo augeri et intendi.

8. Inquiratur de eo, quid possit et operetur distantia aut proximitas corporis descendens a terra, ad hoc, ut celerius cadat, aut tardius, aut etiam non omnino (si modo fuerit extra orbem activitatis globi terræ; quæ Gilberti opinio fuit) atque simul de eo, quid operetur immersio corporis descendens magis in profundum terræ, aut collocatio ejusdem propius ad superficiem terræ? Etenim hæc res etiam motum variat, ut operantibus in mineris perspectum est.

9. Inquiratur de eo, quid possit et operetur differentia corporum, per quæ motus gravitatis diffunditur et communicatur: atque utrum æque communicetur per corpora mollia et porosa, ac per dura et solida: veluti si trabs lancis sit ex altera parte lingulæ lignea, ex altera argentea (licet fuerint reductæ ad idem pondus) utrum non progignat variationem in lancibus? Similiter, utrum metallum, lanæ, aut vesicæ inflatæ, superimpositum, idem ponderet, quod in fundo lancis?

10. Inquiratur de eo, quid possit et operetur in communicatione motus gravitatis distantia corporis a libramine: hoc est, cita et sera perceptio incubitus sive depressionis: veluti in lancibus; ubi altera pars trabis est longior (licet reducta ad idem pondus) an inclinet hoc ipsum lancem? Aut in tubis arcuatis, ubi longior pars certe trahet aquam, licet brevior pars (facta silicet capaciore) majus contineat pondus aquæ.

11. Inquiratur de eo, quid possit intermixtio sive copulatio corporis levis cum corpore gravi, ad elevandam corporis gravitatem, ut in pondere animalium vivorum et mortuorum?

12. Inquiratur de secretis ascensibus et descensibus partium leviorum et graviorum in uno corpore integro: unde fiant sæpe accuratæ separationes; ut in separatione vini et aquæ; in ascensione floris lactis, et similibus.

13. Inquiratur, quæ sit linea et directio motus gravitatis, et quatenus sequatur vel centrum terræ, id est, massam terræ; vel centrum corporis ipsius, id est, nixum partium ejus. Centra enim illa ad demonstrationes apta sunt, in natura nihil valent.

14. Inquiratur de comparatione motus gravitatis cum motibus aliis; quos scilicet vincat, quibus cedat? Veluti in motu (quem appellant) violento, motus gravitatis compeccitur ad tempus: etiam, cum pondus longe majus ferri ab exiguo magnete attollitur, cedit motus gravitatis motui sympathiæ.

15. Inquiratur de motu aëris, utrum feratur sursum, an sit tanquam adiaiphorus? Quod difficile est inventu, nisi per experimenta aliqua exquisita: nam emicatio aëris in fundo aquæ fit potius per plagam aquæ, quam per motum aëris, cum idem etiam fiat in ligno. Aër autem aëri commixtus nihil prodit, cum non minus levitatem exhibeat aër in aëre, quam gravitatem aqua in aqua: in bulla autem, exili obducta pellicula, ad tempus stat.

16. Inquiratur, quis sit terminus levitatis? Neque enim quemadmodum centrum terræ posuerunt centrum gravitatis, volunt (credo) ut ultima convexitas cœli sit terminus levitatis. An potius, veluti gravia videntur eousque ferri, ut decumbant, et tanquam ad immobile; ita levia eousque ferantur, ut rotari incipient, et tanquam ad motum sine termino?

17. Inquiratur quid in causa sit, cur vapores et halitus eousque in altum, ac sita est regio (quam vocant) media aëris, ferantur; cum et crassiusculæ sint materiæ, et radii solis per vices (noctu scilicet) cessent?

18. Inquiratur de regimine motus flammæ in sursum; quod eo abstrusius est, quia singulis momentis flamma perit, nisi forte in medio flammarum majorum; etenim flammæ abruptæ a continuitate sua parum durant.

19. Inquiratur de motu in sursum ipsius activitatis calidi; veluti cum calor in ferro candente citius gliscit in sursum, quam in deorsum.

Exemplum igitur topicæ particularis tale sit: illud interim, quod monere ocepimus, iterum moneamus, nempe ut homines debeant topicas particulares suas alternare, ita ut, post majores progressus aliquos in inquisitione factos, aliam et subinde aliam instituant topicam, si modo scientiarum fastigia concendere cupiant. Nos autem topicis particularibus tantum tribuimus, ut proprium opus de ipsis, in subjectis naturalibus dignioribus et obscurioribus, conficere in animo habeamus. Domini enim quæstionum sumus, rerum non item. Atque de inventiva hactenus.

#### CAPUT QUARTUM.

*Partitio artis judicandi in judicium per inductionem, et per syllogismum. Quorum prius aggregatur organo novo. Partitio prima judicii per syllogismum in reductionem rectam et inversam. Partitio secunda ejus in analyticam, et doctrinam de elenchis. Partitio doctrinæ de elenchis in elenchos sophismatum, elenchos hermenicæ, et elenchos imaginum, sive idolorum. Partitio idolorum in idola tribus, idola specus, et idola fori. Appendix artis judicandi, videlicet de analogia demonstrationum pro natura subjecti.*

TRANSEAMUS nunc ad judicium, sive artem judicandi, in qua agitur de natura probationum sive demonstrationum. In arte autem ista judicandi (ut etiam vulgo receptum est) aut per inductionem, aut per syllogismum concluditur: nam enthymemata et exempla, illorum duorum compendia tantum sunt. At quatenus ad judicium, quod fit per inductionem, nihil est, quod nos detinere debeat: uno siquidem eodemque mentis opere illud, quod quæritur, et invenitur et judicatur. Neque enim per medium aliquid res transigitur, sed immediate, eodem fere modo, quo fit in sensu. Quippe sensus, in objectis suis primariis, simul et objecti speciem arripit, et ejus veritati consentit. Aliter autem fit in syllogismo; cujus probatio immediata non est, sed per medium perficitur. Itaque alia res est inventio mediæ, alia judicium de consequentia argumenti. Nam primo discurrit mens, postea acquiescit. At inductionis formam vitiosam prorsus valere jubemus; legitimam ad novum organum remittimus. Itaque de judicio per inductionem hoc loco satis.

De illo altero per syllogismum quid attinet dicere, cum subtilissimis ingeniorum limis hæc res fere attrita sit, et in multas minutias redacta? Nec mirum, cum sit res, quæ cum intellectu humano magnam habeat sympathiam. Nam animus humanus miris modis ad hoc contendit et anhelat, ut non penalis sit, sed nanciscatur aliquid fixum et immobile, cui tanquam firmamento, in transcuribus et disquisitionibus suis, innitatur. Sane quemadmodum Aristoteles probare conatur inveniri in omni motu corporum aliquid, quod quiescit; et fabulam antiquam de Atlante, qui ipse erectus cœlum humeris sustinuit,

perleganter ad polos mundi traducit, circa quos conversiones expediuntur: similiter magno studio appetunt homines aliquem habere intra se cogitationum Atlantem, aut poles, qui intellectus fluctuationum et vertigines aliquatenus regant; timentes scilicet, ne cœlum ipsorum ruat. Itaque ad principia scientiarum constituenda præpropere festinarunt, circa quæ omnis disputationum varietas verteretur, sine periculo ruinæ et casus; nescientes profecto eum, qui certa nimis propere captaverit, in dubiis finiturum: qui autem iudicium tempestive cohibuerit, ad certa perventurum.

Manifestum est igitur, artem hanc iudicandi per syllogismum nihil aliud esse, quam reductionem propositionum ad principia per medios terminos. Principia autem consensu recepta intelliguntur, atque a quæstione eximuntur. At terminorum mediorum inventio libero ingeniorum acumini et investigationi permittitur. Est autem reductio illa duplex, directa scilicet, et inversa. Directa est, cum ipsa propositio ad ipsum principium reducitur: id quod probatio ostensiva vocatur. Inversa est, cum contradictoria propositionis reducitur ad contradictorium principii; quod vocant probationem per incommodum. Numerus vero terminorum mediorum, sive scala eorum, minuitur aut augetur, pro remotione propositionis a principio.

His positis, partiemur artem iudicii (sicut vulgo fere solet) in analyticam, et doctrinam de elenchis: altera indicat, altera cavet: analytica enim veras formas instituit de consequentiis argumentorum; a quibus si varietur, sive deflectatur, vitiosa deprehenditur esse conclusio: atque hoc ipsum in se elenchum quandam sive redargutionem continet. Rectum enim (ut dicitur) et sui index est, et obliqui. Tutissimum nihilominus est elenchos veluti monitores adhibere, quo facilius detegantur fallaciæ, iudicium alioquin illaqueaturæ. In analytica vero nihil desiderari reperimus, quin potius oneratur superfluis, quam indiget accessionibus.

Doctrinam de elenchis in tres partes dividere placet; elenchos sophismatum, elenchos hermeniarum, et elenchos imaginum sive idolorum. Doctrina de elenchos sophismatum apprime utilis est; quamvis enim pinguius fallaciarum genus, a Seneca, non in scite comparetur cum præstigatorum technis; in quibus quo pacto res geratur nescimus; aliter autem se habere rem, quam videtur, satis novimus: subtiliora tamen sophismata non solum id præstant, ut non habeat quis quod respondeat; sed et iudicium ipsum serio confundunt.

Hæc pars de elenchis sophismatum præclare tractata est ab Aristotele quoad præcepta: etiam a Platone adhuc melius, quoad exempla; neque illud tantum in persona sophistarum antiquorum (Gorgiæ, Hippia, Protagoræ, Euthydem, et reliquorum) verum etiam in persona ipsius Socratis, qui cum illud semper agat, ut nihil affirmet, sed a cæteris in medium addocta infirmet, ingeniosissime objectionum, fallaciarum, et redargutionum modos expressit. Itaque in hac parte nihil habemus, quod desideremus. Illud interim notandum; quamvis usum hujus doctrinæ probum et præcipuum in hoc posuerimus, ut redarguantur sophismata; liquido nihilominus pa-

tere, usum ejus degenerem et corruptum ad captiones et contractiones per illa ipsa sophismata struendas et concinnandas spectare. Quod genus facultatis etiam pro eximio habetur, et haud parvas affert utilitates. Licet eleganter introducta sit a quopiam illa differentia inter oratorem et sophistam; quod alter tanquam leporarius cursu prætet; alter tanquam lepus ipse flexu.

Sequuntur elenchi hermeniarum: ita enim (vocabulary potius, quam sensum ab Aristotele mutuantes) eos appellabimus. Redigamus igitur hominibus in memoriam ea, quæ a nobis de transcendentibus, et de adventitiis entium conditionibus, sive adjunctis (cum de philosophia prima ageremus) superius dicta sunt. Ea sunt, majus, minus; multum, paucum; prius, posterius; idem, diversum; potentia, actus; habitus, privatio; totum, partes; agens, patiens; motus, quies; ens, non ens; et similia. Imprimis autem meminerint et notent differentes eas, quas diximus, harum rerum contemplationes: videlicet quod possint inquiri vel physice, vel logice. Physicam autem circa eas tractationem philosophiæ primæ assignavimus. Superest logica: ea vero ipsa est res, quam in præsentī doctrinam de elenchis hermeniarum nominamus. Portio certe est hæc doctrinæ sana et bona. Hoc enim habent notiones illæ generales et communes, ut in omnibus disputationibus ubique intercurrent; adeo ut, nisi accurate, et anxio cum iudicio, bene jam ab initio distinguantur, universo disputationum lumini caliginem miris modis offusuræ sint; et eo rem fere deducturæ, ut desinant disputationes in pugnas verborum. Etenim æquivocationes, et malæ acceptiones verborum (præsertim hujus generis) sunt sophismata sophismatum. Quare etiam melius visum est istarum tractationem seorsum constituere, quam eam, vel in philosophiam primam sive metaphysicam recipere; vel ex parte analyticæ subjicere, ut Aristoteles satis confuse fecit. Deditus autem ei nomen ex usu, quia verus ejus usus est plane redargutio, et cautio circa usum verborum. Quinimo partem illam de prædicamentis, si recte instituat, circa cautiones de non confundendis aut transponendis definitionum et divisionum terminis præcipuum usum sortiri existimamus, et huc etiam referri malumus. Atque de elenchis hermeniarum hactenus.

Ad elenchos vero imaginum sive idolorum quod attinet, sunt quidem idola profundissimæ mentis humanæ fallaciæ. Neque enim fallunt in particularibus, ut cæteræ, iudicio caliginem offundendo, et tendiculas struendo; sed plane ex prædispositione mentis prava, et perperam constituta, quæ tanquam omnes intellectus anticipationes detorquet et inficit. Nam mens humana (corpore obducta et obfuscata) tantum abest ut speculo plano, æquali, et claro similis sit (quod rerum radios sincere excipiat et reflectat) ut potius sit instar speculi alicujus incantati, pleni superstitionibus et spectris. Imponuntur autem intellectui idola, aut per naturam ipsam generis humani generalem; aut per naturam cujusque individualem; aut per verba, sive naturam communicativam. Primum genus idola tribus; secundum idola specus; tertium idola fori, vocare consuevimus. Est et quartum genus, quod idola theatri appellamus, atque superinductum est a pravis theoriis, sive phi-

losophiis, et perversis legibus demonstrationum : verum hoc genus abnegari potest et deponi ; itaque illud in præsentia omitemus. At reliqua plane obdident mentem, neque prorsus evelli possunt. Igitur non est, quod quis in istis analyticam aliquam expectet ; sed doctrina de elenchis est circa ipsa idola doctrina primaria. Neque (si verum omnino dicendum sit) doctrina de idolis in artem redigi possit ; sed tantum adhibendi est, ad ea cavenda, prudentia quædam contemplativa. Horum autem tractationem plenam et subtilem ad novum organum amandamus ; pauca generaliter tantum de iis hoc loco dicturi.

Idolorum tribus exemplum tale sit. Natura intellectus humani magis afficitur affirmativis et activis, quam negativis et primitivis, cum rite et ordine æquum se utrique præbere debeat. At ille, si res quæpiam aliquando existat et teneat, fortiolem recipit de ea impressionem, quam si eadem longe pluries fallat, aut in contrarium eveniat. Id quod omnis superstitionis et vanæ credulitatis quasi radix est. Itaque recte respondit ille, qui, cum suspensa tabula in templo monstraretur eorum, qui vota solverant, quod naufragii periculum effugissent, atque interrogando premeretur, annon tum demum Neptuni numen agnosceret ? quæsit vicissim, At ubi sunt illi depicti, qui post vota nuncupata perierunt ? Atque eadem est ratio superstitionum similium, sicut in astrologicis, insomniis, ominibus, et reliquis. Alterum exemplum est hujusmodi ; Animus humanus (cum sit ipse substantia æqualis et uniformis) majorem præsupponit et affingit in natura rerum æqualitatem et uniformitatem, quam revera est. Hinc commentum mathematicorum, in cœlestibus omnia moveri per circulos perfectos, rejiciendo lineas spirales : hinc etiam fit, quod cum multa sint in natura monodica, et plena imparitatis, affingat tamen semper cogitatio humana, relativa, parallela, et conjugata ; ab hoc enim fonte elementum ignis cum orbe suo introductum est ad constituendam quaternionem cum reliquis tribus, terra, aqua, aère. Chemici autem fanaticam instruxerunt rerum universarum phalangem, inanissimo commento inveniri fingentes, in quatuor illis suis elementis (cœlo, aère, aqua, et terra) species singulas parallelas invicem et conformes. Tertium exemplum est superiori finitimum : quod homo fiat quasi norma et speculum naturæ : neque enim credibile est (si singula percurrantur et notentur) quantum agmen idolorum philosophiæ immiserit naturalium operationum ad similitudinem actionum humanarum reductio : hoc ipsum, inquam, quod putetur talia naturam facere, qualia homo facit. Neque multo meliora sunt ista, quam hæresis anthropomorphitarum, in cellis ac solitudine stupidorum monachorum orta : aut sententia Epicuri huic ipsi in paganismo respondens, qui diis humanam figuram tribuebat. At non opus fuit Velleio Epicureo interrogare, Cur Deus cœlum stellis et luminibus, tanquam ædilis, ornasset ? Nam si summus ille opifex ad modum ædilis se gessisset, in pulchrum aliquem et elegantem ordinem stellas digerere debuisset, operosis palatiorum laquearibus consimilem ; cum e contra ægre quis ostendat, in tam infinito stellarum numero figuram aliquam vel quadratam, vel triangularem, vel rectilinearem.

Tanta est harmoniæ discrepantia inter spiritum hominis et spiritum mundi.

Quod ad idola specus attinet, illa ortum habent ex propria cujusque natura et animi et corporis ; atque etiam ex educatione et consuetudine, et fortuitis rebus, quæ singulis hominibus accidunt. Pulcherrimum enim emblema est illud de specu Platonis : siquidem si quis (missa illa exquisita paraboliæ subtilitate) a prima infantia, in antro aut caverna obscura et subterranea, ad maturam usque ætatem degeret, et tunc derepente in aperta prodiret, et hunc cœli et rerum apparatus contueretur ; dubium non est, quin animum ejus subirent et perstringerent quamplurimæ miræ et absurdissimæ phantasiæ. Nos vero scilicet sub aspectu cœli degimus ; interea tamen animi in cavernis corporum nostrorum conduntur ; ut infinitas errorum et falsitatum imagines haurire necesse sit, si e specu suo raro tantum et ad breve aliquod tempus prodeant, et non in contemplatione naturæ perpetuo, tanquam sub dio, morentur. Emblematis siquidem illi de specu Platonis optime convenit parabola illa Heracliti ; quod homines scientias in mundis propriis, et non in mundo majore, quærant.

At idola fori molestissima sunt, quæ ex fœdere tacito inter homines, de verbis et nominibus impositis, se in intellectum insinuarunt. Verba autem plerunque ex captu vulgi induntur ; atque per differentias, quarum vulgus capax est, res secant ; cum autem intellectus acutior, aut observatio diligentior res melius distinguere velit, verba obstrepunt. Quod vero hujus remedium est (definitiones scilicet) in plurimis huic malo mederi nequit, quoniam et ipsæ definitiones ex verbis constant, et verba gigant verba. Etsi autem putemus verbis nostris nos imperare ; et illud facile dictu sit, Loquendum esse ut vulgus, sentiendum ut sapientes ; quin etiam vocabula artium (quæ apud peritos solum valent) huic rei satisfacere videri possint ; et definitiones (de quibus diximus) artibus præmissæ (secundum prædiantiam mathematicorum) vocabulorum pravas acceptiones corrigere valeant ; attamen hæc omnia non sufficiunt, quo minus verborum præstigiæ et incantationes plurimis modis seducant, et vim quandam intellectui faciant, et impetum suum (more Tartarorum sagittationis) retro in intellectum (unde profecta sunt) retorqueant. Quare altiore, et novo quodam remedio, ad hoc malum opus est. Verum hæc jam cursim perstringimus, interim desiderari pronuncians hanc doctrinam, quam elenchos magnos, sive de idolis animi humani natis et adventitiis, appellabimus. Ejus autem tractationem legitimam ad Organum Novum referimus.

Superest artis judicandi appendix quædam insignis, quam etiam desiderari statuimus. Siquidem Aristoteles rem notavit, modum rei nullibi persecutus est. Ea tractat, quales demonstrationes ad quales materias, sive subjecta, applicari debeant ; ut hæc doctrina tanquam judicationes judicationum contineat. Optime enim Aristoteles, Neque demonstrationes ab oratoribus, neque suasiones a mathematicis requiri debere monet. Ut si in probationis genere aberretur, judicatio ipsa non absolvatur. Quando vero sint quatuor demonstrationum genera,

vel per consensum immediatum et notiones communes, vel per inductionem, vel per syllogismum, vel per eam (quam recte vocat Aristoteles) demonstrationem in orbem (non a notioribus scilicet, sed tanquam de plano); habent hæc demonstrationes singulæ certe subjecta, et materias scientiarum, in quibus pollent; alia, a quibus excluduntur. Etenim rigor et curiositas in poscendo probationes nimium severas in aliquibus; multo magis facilitas et remissio in acquiescendo probationibus levioribus in aliis; inter ea sunt numeranda, quæ detrimenti plurimum et impedimenti scientiis attulerunt. Atque de arte iudicandi hæc dicta sint.

### CAPUT QUINTUM.

*Partitio artis retinendi sive retentivæ in doctrinam de adminiculis memoriæ, et doctrinam de memoria ipsa. Partitio doctrinæ de memoria ipsa, in prænotionem et emblema.*

ARTEM retinendi sive custodiendi in duas doctrinas partiemur: doctrinam scilicet de adminiculis memoriæ, et doctrinam de memoria ipsa. Adminiculum memoriæ plane scriptio est: atque omnino monendum quod memoria, sine hoc adminiculo, rebus prolixioribus et accuratioribus impar sit; neque ullo modo, nisi de scripto, recipi debeat. Quod etiam in philosophia inductiva, et interpretatione naturæ, præcipue obtinet: tam enim possit quis calculationes ephemeridis, memoria nuda, absque scripto, absolvere, quam interpretationi naturæ, per meditationes et vires memoriæ nativas et nudas, sufficere; nisi eidem memoriæ per tabulas ordinatas ministretur. Verum missa interpretatione naturæ, quæ doctrina nova est, etiam ad veteres et populares scientias haud quicquam fere utilius esse possit, quam memoriæ adminiculum solidum et bonum; hoc est, digestum probum et eruditum locorum communium. Neque tamen me fugit, quod relatio eorum, quæ legimus aut discimus, in locos communes damno eruditionis ab aliquibus imputetur, ut quæ lectionis cursum remoretur, et memoriam ad feriandum invitet. Attamen quoniam adulterina res est in scientiis præcoecem esse et promptum, nisi etiam solidus sis et multipliciter instructus; diligentiam et laborem in locis communibus congerendis magni prorsus rem esse usus et firmitudinis in studiis iudicamus; veluti quæ inventioni copiam subministret, et aciem iudicii in unum contrahat. Verum est tamen inter methodos et syntaxes locorum communium, quas nobis adhuc videre contigit, nullam reperiri, quæ alicujus sit pretii: quandoquidem in titulis suis faciem prorsus exhibeant magis scholæ, quam mundi, vulgares et pædagogicas adhibentes divisiones, non autem eas, quæ ad rerum medullas et interiora quovis modo penetrant.

Circa memoriam autem ipsam satis segniter et languide videtur adhuc inquisitum. Extat certe de ea ars quæpiam; verum nobis constat tum meliora præcepta de memoria confirmanda et amplianda haberi posse, quam illa ars complectitur; tum practicam illius ipsius artis meliorem institui posse, quam quæ recepta est. Neque tamen ambigimus

(si cui placet hac arte ad ostentationem abuti) quin possint præstari per eam nonnulla mirabilia et portentosa: sed nihilominus res quasi sterilis est (eo quo adhibetur modo) ad usus humanos. At illud interim ei non imputamus, quod naturalem memoriam destruat et superoneret (ut vulgo obicitur) sed quod non dextere instituta sit ad auxilia memoriæ commodanda in negotiis et rebus seriis. Nos vero hoc habemus (fortasse ex genere vitæ nostro politicæ) ut, quæ artem jactant, usum non præbent, parvi faciamus. Nam ingentem numerum nominum aut verborum semel recitatorum eodem ordine statim repetere, aut versus complures de quovis argumento extempore conficere, aut quicquid occurrit satirica aliqua similitudine perstringere, aut seria quæque in jocum vertere, aut contradictione, et cavillatione quidvis eludere, et similia (quorum in facultatibus animi haud exigua est copia; quæque ingenio et exercitatione ad miraculum usque extolli possunt) hæc certe omnia, et his similia, nos non majoris facimus, quam funambulorum et mimorum agilitates et ludicra: etenim eadem ferme res sunt; cum hæc corporis, illa animi viribus abutantur; et admirationis forsitan aliquid habeant, dignitatis parum.

Ars autem memoriæ duplici nititur intentione, prænotione et emblemate. Prænotionem vocamus abscessionem quandam investigationis infinitæ. Cum enim quis aliquid revocare in memoriam conatur, si nullam prænotionem habeat, aut perceptionem ejus, quod quærit; quærit certe et molitur, et hac illac discurrit, tanquam in infinito. Quod si certam aliquam prænotionem habeat, statim absconditur infinitum, et fit discursus memoriæ magis in vicino; ut venatio damæ intra septa. Itaque et ordo manifesto juvat memoriam. Subest enim prænotio, id quod quæritur, tale esse debere, ut conveniat cum ordine. Similiter carmina facilius discuntur memoriter, quam prosa. Si enim hæretur in aliquo verbo, subest prænotio, tale debere esse verbum, quod conveniat cum versu. Atque ista prænotio est artificialis memoriæ pars prima: nam in artificiali memoria locos habemus jam ante digestos et paratos; imagines extempore, prout res postulat, conficimus: at subest prænotio talem esse debere imaginem, qualis aliquatenus conveniat cum loco. Id, quod vellicat memoriam, et aliquo modo munit ad rem, quam quærimus. Emblema vero deducit intellectualem ad sensibile: sensibile autem semper fortius percutit memoriam, atque in ea facilius imprimitur, quam intellectualem. Adeo ut etiam brutorum memoria per sensibile excitetur, per intellectualem minime. Itaque facilius retineas imaginem venatoris leporem persequentis, aut pharmacopœi pyxides ordinantis, aut pedantii orationem habentis, aut pueri versus memoriter recitantis, aut mimi in scena agentis; quam ipsas notiones inventionis, dispositionis, elocutionis, memoriæ, actionis. Sunt et alia, quæ pertinent ad memoriam juvandam (ut modo diximus) sed ars, quæ jam habetur, ex his duobus jam præmissis consistit. Particulares autem artium defectus persequi, fuerit ab instituto nostro recedere. Igitur de arte retinendi sive custodiæ hæc dicta sint. Jam vero ad quartum membrum logicæ, quod traditionem et elocutionem tractat, ordine pervenimus.

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER SEXTUS.

AD REGEM SUUM.

## CAPUT PRIMUM.

*Partitio traditivæ in doctrinam de organo sermonis; doctrinam de methodo sermonis; et doctrinam de illustratione sermonis. Partitio doctrinæ de organo sermonis in doctrinam de notis rerum; de locutione, et de descriptione: quarum duæ posteriores grammaticam constituunt, ejusque partitiones sunt. Partitio doctrinæ de notis rerum in hieroglyphica et characteres reales. Partitio secunda grammaticæ in literariam et philosophantem. Aggregatio poeseos quoad metrum ad doctrinam de locutione. Aggregatio doctrinæ de ciphris ad doctrinam de descriptione.*

CONCEDITUR certe cuivis (rex optime) seipsum et sua ridere et ludere. Quis igitur novit, num forte opus istud nostrum non descriptum fuerit ex libro quodam veteri, reperto inter libros famosissimæ illius bibliothecæ Sancti Victoris; quorum catalogum exceperit magister Franciscus Rabelesius? Illic enim invenitur liber, cui titulus est, "Formicarium artium." Nos sane pusillum acervum pulvisculi congressimus, et sub eo complura scientiarum et artium grana condidimus, quo formicæ reptare possint, et paulatim conquescere, et subinde ad novos se labores accingere. At regum sapientissimus pigros quoscunque remittit ad formicas: nos autem pigros eos homines pronunciamus, quibus acquisitis uti tantum cordi sit; neque subinde novas scientiarum sementes et messes facere.

Accedamus nunc ad artem tradendi, sive profereudi et enunciandi ea, quæ inventa, judicata, ac in memoria reposita sunt; quam nomine generali traditivam appellabimus. Ea omnes artes circa verba et sermones complectitur. Quamvis enim ratio sermonis veluti anima sit, tamen in tractando disjungi debent ratio et sermo; non minus quam anima et corpus. Traditivam in tres partes dividemus, doctrinam circa organum sermonis, doctrinam circa methodum sermonis, et doctrinam circa sermonis illustrationem sive ornatum.

Doctrina de organo sermonis vulgo recepta, quæ

et grammatica dicitur, duplex est: altera de locutione, altera de descriptione. Recte enim Aristoteles, "Cogitationum tesserae verba, verborum literæ." Utrumque grammaticæ assignabimus. Verum ut rem altius repetamus, antequam ad grammaticam et partes ejus jam dictas veniamus, in genere de organo traditivæ dicendum est. Videntur enim esse proles quedam traditivæ aliæ, præter verba et literas. Hoc igitur plane statuendum est: quicquid scindi possit in differentias satis numerosas, ad notionum varietatem explicandam (modo differentiæ illæ sensui perceptibiles sint) fieri posse vehiculum cogitationum de homine in hominem. Nam videmus nationes linguis discrepantes commercia non male per gestus exercere; at in practica nonnullorum, qui surdi et muti usque a nativitate fuerant, et alias erant ingeniosi, miros videmus haberi inter eos et amicos suos, qui eorum gestus perdiderant, dialogos. Quinetiam notissimum fieri jam cœpit, quod in China, et provinciis ultimi orientis, in usu hodie sint characteres quidem reales, non nominales, qui scilicet nec literas, nec verba, sed res et notiones exprimunt. Adeo ut gentes complures, linguis prorsus discrepantes, sed hujusmodi characteribus (qui apud illos latius recepti sunt) consentientes, scriptis communicent: eoque, ut librum aliquem hujusmodi characteribus descriptum, quæque gens patria lingua legere et reddere possit.

Notæ igitur rerum, quæ absque ope aut medio verborum res significant, duplicis generis sunt: quarum prius genus ex congruo; alterum ad placitum significat. Prioris generis sunt hieroglyphica et gestus: posterioris vero ii, quos diximus, characteres reales. Hieroglyphicorum usus vetustus admodum, et in veneratione quadam habitus; præcipue apud Ægyptios gentem valde antiquam: adeo ut videantur hieroglyphica fuisse scriptio quædam antenata, et senior ipsis elementis literarum, nisi forte apud Hebræos. Gestus autem tanquam hieroglyphica transitoria sunt. Quemadmodum enim verba prolata volant, scripta manent; ita et hieroglyphica gestibus expressa transeunt, depicta durant. Cum enim Feriander, consultus de conservanda tyrannide, legatum astare juberet; atque ipse in horto deambulans

summitates florum eminentiorum carperet, ad eadem procerum innuens; non minus usus est hieroglyphico, quam si id in charta depinxisset. Illud interim patet, hieroglyphica et gestus semper cum re significata aliquid similitudinis habere; et emblemata quædam esse; unde eas notas rerum ex congruo nominavimus. At characteres reales nihil habent ex emblemate, sed plane surdi sunt; non minus quam ipsa elementa literarum; et ad placitum tantum effecti, consuetudine autem tanquam pacto tacito recepti. Illud interim liquet, vasta ipsorum multitudine ad scribendum opus esse: tot enim esse debent, quot sunt vocabula radicalia. Hæc igitur portio doctrinæ de organo sermonis, quæ est de notis rerum, nobis ponitur pro desiderato. Etsi autem tenuis possit videri esse ejus usus, cum verba et scriptio per literas sint organa traditivæ longe commodissima; visum est tamen nobis, veluti rei non ignobilis, aliquam hoc loco mentionem ejus facere. Tractamus enim hic, veluti numismata rerum intellectualium: nec abs re fuerit nosse, quod sicut nummi possint confici ex alia materia, præter aurum et argentum, ita et notæ rerum aliæ possint cudi, præter verba et literas.

Pergamus igitur ad grammaticam. Ea vero veluti viatoris locum erga cæteras scientias obtinet; non nobilem illum quidem, sed imprimis tamen necessarium; præsertim cum scientiæ, nostris seculis, et linguis eruditæ, non vernaculis, potissimum hauriantur. Neque tamen dignitas ejus parva censenda est, quandoquidem antidoti cujusdam vicibus fungatur contra maledictionem illam confusionis linguarum. Sane hoc agit industria humana, ut se restituat et redintegret in benedictionibus illis, quibus culpa sua exiit. Atque contra maledictionem primam generalem de sterilitate terræ, et comedendo panem suum in sudore vultus sui, reliquis artibus omnibus se munus et instruit. At contra secundam illam de confusione linguarum advocat in auxilium grammaticam. Ejus in linguis quibusque vernaculis exiguus certe usus est; in externis perdiscendis latior; amplissimus vero in illis linguis, quæ vulgares esse desierunt, et in libris tantum perpetuantur.

Grammaticam etiam bipartitam ponemus, ut alia sit literaria, alia philosophica: altera adhibetur simpliciter ad linguas, nempe ut eas quis aut celerius perdiscat, aut emendatius et purius loquatur: altera vero aliquatenus philosophiæ ministrat; qua in parte occurrit nobis, Cæsarem libros "De analogia" conscripsisse; atque dubitatio subiit, utrum illi hanc, quam dicimus, grammaticam philosophicam tractarint? Suspiciamus tamen nil admodum in illis fuisse subtilis aut sublimius, sed tantum præceptiones tradidisse de oratione casta et integra, neque a consuetudine loquendi prava, neque ab affectatione aliorum vitata et polluta; in quo genere ipse excellit. Veruntamen hac ipsa re moniti, cogitatione complexi sumus grammaticam quandam, quæ non analogiam verborum ad invicem, sed analogiam inter verba et res, sive rationem, sedulo inquirat: citra tamen eam, quæ logicæ subservit, hermeniam. Vestigia certe rationis verba sunt; itaque vestigia etiam aliquid de corpore indicant: hujus igitur rei adumbrationem quandam tenuem dabimus. Primo autem

minime probamus curiosam illam inquisitionem, quam tamen Plato vir eximius non contempsit; nimirum de impositione et originali etymologia nominum; supponendo ac si illa jam a principio ad placitum indita minime fuissent, sed ratione quadam et significanter derivata et deducta: materiam certe elegantem, et quasi ceream, quæ apte fingi et flecti possit; quoniam vero antiquitatum penetralia perscrutari videtur, etiam quodammodo venerabilem; sed nihilominus parce veram, et fructu cassam. Illa demum, ut arbitramur, foret nobilissima grammaticæ species, si quis in linguis plurimis tam eruditus quam vulgaribus eximie doctus, de variis linguarum proprietatibus tractaret; in quibus quæque excellat, in quibus deficiat, ostendens. Ita enim et linguæ mutuo commercio locupletari possint; et fiet ex iis, quæ in singulis linguis pulchra, sunt (tanquam Venus Apellis) orationis ipsius quædam formosissima imago, et exemplar quoddam insigne, ad sensus animi rite exprimendos. Atque una etiam hoc pacto capiuntur signa haud levia, sed observata digna (quod fortasse quispiam non putaret) de ingenii et moribus populorum et nationum ex linguis ipsorum. Equidem libenter audio Ciceronem notantem, quod apud Græcos desit verbum, quod Latinum illud (*ineptum*) reddat; "Propterea," inquit, "quod Græcis hoc vitium tam familiare fuit, ut illud in se ne agnoscerent quidem:" digna certe gravitate Romana censura. Quid illud, quod Græci in compositionibus verborum tanta licentia usi sunt, Romani contra magnam in hac re severitatem adhibuerunt? Plane colligat quis, Græcos fuisse artibus, Romanos rebus gerendis, magis idoneos. Artium enim distinctiones verborum compositionem fere exigunt: at res, et negotia, simpliciora verba postulant. Quin Hebræi tantum compositiones illas refugiant, ut malint metaphora abuti, quam compositionem introducere. Quinetiam verbis tam paucis et minime commixtis utuntur, ut plane ex lingua ipsa quis perspiciat, gentem fuisse illam Nazaream, et a reliquis gentibus separatam. Annon et illud observatio dignum (licet nobis modernis spiritus nonnihil retundat) antiquas linguas plenas declinationum, casuum, conjugationum, temporum, et similium fuisse; modernas his fere destitutas, plurima per præpositiones et verba auxiliaria segniter expedire. Sane facile quis conjiciat (utunque nobis ipsi placeamus) ingenia priorum sæculorum nostris fuisse multo acutiora et subtiliora. Innumera sunt ejusmodi, quæ justum volumen complere possint. Non abs re igitur fuerit grammaticam philosophantem a simplici et literaria distinguere, et desideratam ponere.

Ad grammaticam etiam pertinere judicamus omnia illa, quæ verbis quoquo modo accidunt, qualia sunt sonus, mensura, accentus. At prima illa literarum simplicium cunabula (nempe qua percussione linguæ, qua apertura oris, qua adductione labiorum, quo nisu gutturis, singularum literarum sonus generetur) ad grammaticam non pertinent, sed portio sunt doctrinæ de sonis, sub sensu et sensibili tractanda. Sonus, de quo loquimur, grammaticus, ad euphonias tantum pertinet et dysphonias. Illarum quædam communes sunt: nulla enim est lingua, quin vocalium concurrentium hiatus, aut consonantium concurren-

tium asperitates aliquatenus refugiat. Sunt et aliæ respective, quæ scilicet diversorum populorum auri- bus gratæ aut ingrati accedunt. Græca lingua diphthongis scatet; Latina longe parcius: lingua Hispanica literas tenues odit, easque statim vertit in medias: linguæ quæ ex Gothis fluxere, aspiratis gaudent: multa sunt ejusmodi: verum hæc ipsa fortasse plus satia.

At mensura verborum ingens nobis corpus artis peperit; pœsim scilicet, non quatenus ad materiam (de qua supra) sed quatenus ad stylum et figuram verborum, versas nimirum sive carmina: circa quæ ars habetur quasi pusilla; exempla accedunt grandia, et infinita. Neque tamen ars illa (quam prosodiam grammatici appellant) ad carminum genera et mensuras edocendas tantum restringi debeat: adjicienda enim sunt præcepta, quod carminum genus cuique materiæ sive subjecto optime conveniat. Antiqui heroica carmina historiis et encomiis applicaverunt; elegos querimoniis, iambos invectivis, lyricos odis et hymnis. Neque hæc prudentia recentioribus pœtis in linguis propriis defuit: illud reprehendendum, quod quidam antiquitatis nimium studiosi, linguas modernas ad mensuras antiquas (heroicas, elegiacas, sapphicas, etc.) traducere conati sunt, quas ipsarum linguarum fabrica respuit, nec minus aures exhorrent. In hujusmodi rebus sensus judicium artis præceptis præponendum, ut ait ille:

—“Cœnæ ferula nostræ  
Mallem convivis quam placuisse cocia.”

Neque vero ars est, sed artis abusus, cum illa naturam non perficiat, sed pervertat. Verum quod ad pœsim attinet (sive de fabulis, sive de metro loquamur) est illa (ut superius diximus) tanquam herba luxurians, sine semine nata, ex vigore ipsius terræ germinans. Quare ubique serpit et latissime diffusa est, ut supervacuum foret de defectibus ejus sollicitum esse. De illa igitur cura est abjicienda. Quod vero ad accentus verborum, nil opus est de re tam pusilla dicere; nisi forte illud quis notatu dignum putet; quod accentus verborum exquisite, accentus autem sententiarum neutiquam in observationem venit. Attamen illud fere universo generi humano commune est, ut vocem in fine periodi submittant, in interrogatione elevent, et alia hujusmodi non pauca. Atque de grammaticæ parte, quæ ad locutionem spectat, hactenus.

Quod ad scriptionem attinet, ea aut alphabeto vulgari perficitur (quod ubique recipitur) aut occulto et privato, de quo inter singulos convenit, quod ciphras vocant. At orthographia vulgaris etiam controversiam et quæstionem nobis peperit: utrum scilicet eadem verba scribere oporteat, quo pronunciantur, modo, an potius ex more consueto? At illa scriptio, quæ reformata videri possit (ut scilicet scriptio pronuntiationi consona sit) est ex genere inutilium subtilitatum. Nam et ipsa pronuntiatione quotidie gliascit, nec constans est; et derivationes verborum, præsertim ex linguis extraneis, prorsus obscurantur: denique cum ex more recepto scripta, morem pronuntiandi nullo modo impediunt, sed liberum relinquunt, quorsum attinet ista novatio?

Ad ciphras igitur veniendum. Earum genera

haud pauca sunt: ciphre simplices; ciphre non significantibus characteribus intermixtæ; ciphre duplices literas uno characterem complexæ; ciphre rotæ; ciphre clavis; ciphre verborum; aliæ. Virtutes autem in ciphris requirendæ tres sunt: ut sint expeditæ, non nimis operosæ ad scribendum: ut sint fidæ, et nullo modo pateant ad deciphrandum: addo denique, ut, si fieri possit, suspitione vacent. Si enim epistolæ in manus eorum devenient, qui in eos, qui scribunt, aut ad quos scribuntur, potestatem habeant, tametsi ciphra ipsa fida fit et deciphratu impossibilis, tamen subjicitur hæc res examini et quæstioni; nisi ciphra sit ejusmodi, quæ aut suspitione vacet, aut examinationem eludat. Quod vero ad elusionem examinis attinet, suppetit inventum ad hoc novum atque utile, quod cum in promptu habemus, quorsum attinet illud inter desiderata referre, sed potius id ipsum proponere? Hoc hujusmodi est; ut habeat quis duo alphabeta, unum literarum verarum, alterum non-significantium: et simul duas epistolas involvat, unam, quæ secretum deferat; alteram, qualem verisimile fuerit scribentem missurum fuisse, absque periculo tamen. Quod si quis de ciphra severe interrogetur, porrigat ille alphabetum non-significantium pro veris literis; alphabetum autem verarum literarum pro non-significantibus; hoc modo incidet examinatio in epistolam illam exteriorem, quam cum probabilem inveniet, de interiori epistola nihil suspicabitur. Ut vero suspicio omnis absit, aliud inventum subjiciemus, quod certe, cum adolescentuli essemus Parisiis, excogitavimus; nec etiam adhuc visis nobis res digna est, quæ pereat. Habet enim gradum ciphre altissimum; nimirum ut omnia per omnia significari possint: ita tamen ut scriptio, quæ involvitur, quintuplo minor sit, quam ea, cui involvitur: alia nulla omnino requiritur conditio aut restrictio. Id hoc modo fiet. Primo, universæ literæ alphabeti in duas tantummodo literas solvantur per transpositionem earum. Nam transpositio duarum literarum per locos quinque differentiis triginta duabus, multo magis viginti quatuor (qui est numerus alphabeti apud nos) sufficit. Hujus alphabeti exemplum tale est.

#### Exemplum Alphabeti Biliterarii.

<i>Manere</i>	<i>te</i>	<i>volo</i>	<i>donec venero.</i>

Apposuimus etiam exemplum aliud largius ejusdem ciphrae, scribendi omnia per omnia.

## Epistola Interior.

Ad quam delegimus epistolam Spartanam, missam olim in scytale.

"Perditæ res : Mindarus cecidit : milites esuriunt : neque hinc nos extricare, neque hic diutius manere possumus."

## Epistola Exterior.

Sumpta ex epistola prima Ciceronis, in qua epistola Spartana involvitur.

"Ego omni officio, ac potius pietate erga te, cæteris satisfacio omnibus : mihi ipse nunquam satisfacio. Tanta est enim magnitudo tuorum erga me meritorum, ut quoniam tu, nisi perfecta re, de me non conquiesci : ego, quia non idem in tua causa efficio, vitam mihi esse acerbam putem. In causa hæc sunt : Ammonius regis legatus aperte pecunia nos oppugnat. Res agitur per eosdem creditores, per quos, cum tu aderas, agebatur. Regis causa, si qui sunt, qui velint, qui pauci sunt, omnes ad Pompeium rem deferri volunt. Senatus religionis calumniam, non religione, sed malevolentia, et illius regis largitionis invidia, comprobatur, etc."

Doctrina autem de ciphris aliam secum traxit doctrinam erga ipsam relationem : illa est de deciphratione sive reseratione ciphrarum ; licet quis alphabe-

tum ciphrae aut pactum de latebra penitus ignoret. Res sane est illa laboriosa simul et ingeniosa, et arcanis principum, veluti et illa prior, dicata. Attamen præcautione solerti fieri possit inutilis ; etsi, quomodo res nunc se habent, magni prorsus sit usus. Etenim si ciphrae introductæ essent bonæ et fideles, plurimæ fuerint, quæ operam deciphratoris prorsus eluderent, et excluderent ; quæ tamen sint satis commodæ et expeditæ ad legendum aut scribendum. Verum imperitia et inscitia secretariorum et amanuensium in aulis principum tanta est, ut maxima plerumque negotia ciphris infirmis et futilibus committantur.

Interea fieri potest, ut suspicetur quispiam nos in enumeratione, et quasi censu artium, id agere, ut scientiarum copiam (quas veluti in aciem adducimus) auctæ et multiplicatæ, magis sint admirationi ; cum tamen numerus earum forte ostentari, vires tam brevi tractatu vix explicari possint. Verum nos institutum nostrum fideliter urgemus, atque in hoc globo scientiarum conficiendo, etiam insulas minores aut remotiores omitti nolumus. Neque vero (ut arbitramur) perfunctorie, licet cursim, eas artes attingimus ; sed potius nucleos et medullas ipsarum ex multa materie massa stylo acuto excerpimus. Cujus rei judicium ipsis illis, qui in hujusmodi artibus peritissimi sunt, permittimus : cum enim plerique, qui multiscii videri volunt, hoc fere habeant, ut vocabula et exteriora artium passim jactantes, illarum ignaris admirationi, magistris ludibrio sint, speramus nostra contrarium prorsus eventum habitura, ut peritissimi cujusque in artibus singulis judicium maxime detineant, cæteris minoris sint. Quod vero ad artes illas, quæ minorum quasi gentium videri possunt ; si quis existimet nos nimium quid ipsis tribuere ; circumspectat ille, et videbit, homines in provinciis suis magnos sane et celebres, cum ad metropolim aut sedem imperii forte migraverint, turbæ fere immisceri, et inferioris notæ esse : similiter mirum non est artes istas leviores, juxta artes principales et supremas collocatas, dignitate minui ; cum tamen iis, qui operam illis præcipue impenderint, res videantur utique magnæ et præclaræ. Atque de organo sermonis hæc dicta sint.

## CAPUT SECUNDUM.

*Doctrina de methodo sermonis constituitur ut pars traditivæ substantivæ et principalis : nomen ei inditur prudentiæ traditivæ. Enumerantur methodi genera diversa ; et subjunguntur eorum commoda et incommoda.*

VENIAMUS ad doctrinam de methodo sermonis. Ea ut pars dialecticæ tractari consuevit. Etiam locum in rhetorica per nomen dispositionis reperit. Verum collocatio ejus in famulatio aliarum artium in causa fuit, ut plurima, quæ ad ipsam spectant, cognitu utilia, prætermissa sint. Visum igitur est nobis doctrinam substantivam et principalem de methodo constituere, quam nomine generali prudentiam traditivæ appellamus. Itaque methodi genera (cum varia sint) enumerabimus potius, quam partiemur. Atque de unica methodo, et dichotomiis perpetuis,

nil attinet dicere: fuit enim nubecula quædam doctrinæ, quæ cito transiit: res certe simul et levis, et scientiis damnosissima. Etenim hujusmodi hominea, cum methodi suæ legibus res torqueant; et quæcunque in dichotomias illas non apte cadunt, aut omitant, aut præter naturam inflectant; hoc efficiunt, ut quasi nuclei et grana scientiarum exiliant, ipsi aridas tantum et desertas siliquas stringant. Itaque inania compendia parit hoc genus methodi, solida scientiarum destruit.

Constituatur igitur prima differentia methodi, ut sit aut magistralis, aut initiativa. Neque vero verbum initiativæ ita intelligimus, quasi hæc initia scientiarum tantum traderet, illa doctrinam integram: verum contra (vocabulum a sacris mutantes) eam dicimus methodum initiativam, quæ ipsa scientiarum mysteria recludat, et denudet. Magistralis siquidem docet; initiativa intimat: magistralis poscit, ut fides habeatur iis, quæ dicuntur; initiativa vero potius ut examen subeant: altero scientias discuntium vulgo; altera tanquam filiis scientiarum tradit; denique altera pro fine habet scientiarum (quales jam sunt) usum; altera earundem continuationem et ulteriorem progressum. Harum posterior via videtur deserta et interclusa. Ita enim adhuc scientiæ tradi consueverunt, quasi ex pacto, tam docens quam discens errores asciscere cupiant. Etenim qui docet, eo docet modo, quo maxime dictis suis fides astruatur, non quo illa commodissime examini subjiciantur: et qui discit, sibi exemplo satisfieri, non legitimam disquisitionem præstolari, expetit; ut magis sit ei cordi non dubitare, quam non errare. Ita ut et magister, amore gloriæ, infirmitatem scientiæ suæ prodere caveat, et discipulus, laboris odio, vires proprias experiri nolit. Scientia vero, quæ aliis tanquam tela pertexenda traditur, eadem methodo (si fieri possit) animo alterius est insinuanda, qua primitus inventa est. Atque hoc ipsum fieri sane potest in scientia per inductionem acquisita: sed in anticipata ista et præmatura scientia (qua utimur) non facile dicat quis, quo itinere ad eam, quam nactus est, scientiam pervenerit. Attamen sane secundum majus et minus possit quis scientiam propriam revisere, et vestigia suæ cognitionis simul et consensus remetiri; atque hoc pacto scientiam sic transplantare in animum alienum, sicut crevit in suo. Artibus enim idem usuvenit quod plantis: si planta aliqua uti in animo habeas, de radice quid fiat, nil refert: si vero transferre cupias in aliud solum, tutius est radicibus, uti, quam surculis. Sic traditio (quæ nunc in usu est) exhibet plane tanquam truncos (pulchros illos quidem) scientiarum; sed tamen absque radicibus fabro lignario certe commodos, at plantatori inutiles. Quod si, disciplinæ ut crescant, tibi cordi sit, de truncis minus sis sollicitus; ad id curam adhibe, ut radices illæ, etiam cum aliquantulo terræ adhærentis, extrahantur. Cujus quidem generis traditionis, methodus mathematicorum, in eo subjecto, similitudinem quandam habet; generatim autem non video, quod aut in usu sit, aut quod quis inquisitioni ejus dederit operam; proinde eam inter desiderata numerabimus, eamque traditionem lampadis, sive methodum ad filios appellabimus.

Sequitur aliud methodi discrimen, priori inten-

tione affine, reipsa fere contrarium. Hoc enim habet utraque methodus commune, ut vulgus auditorum a selectis separet; illud oppositum, quod prior introducit modum tradendi solito apertiorum; altera, de qua jam dicemus, occultiorum. Sit igitur discrimen tale, ut altera methodus sit exoterica, altera acroamatica. Etenim quam antiqui adhibuerunt præcipue in edendis libris differentiam; eam nos transferimus ad ipsum modum tradendi. Quinetiam acroamatica ipsa apud veteres in usu fuit, atque prudenter et cum judicio adhibita. At acroamaticum sive enigmaticum istud dicendi genus posterioribus temporibus deonestatum est a plurimis, qui eo, tanquam lumine ambiguo et fallaci, abusi sunt ad merces suas adulterinas extrudendas. Intentio autem ejus ea esse videtur, ut traditionis involucri vulgus (profaunum scilicet) a secretis scientiarum summoveatur; atque illi tantum admittantur, qui ad per manus magistrorum parabolarum interpretationem nacti sunt, aut proprio ingenii acumine et subtilitate intra velum penetrare possint.

Sequitur aliud methodi discrimen, magni prorsus ad scientias momenti; cum scilicet scientiæ traduntur, aut per aphorismos, aut methodice. Notatu enim imprimis dignum est in consuetudinem plerumque venisse, ut homines ex pauculis axiomatibus et observationibus, in quovismodo subjecto, artem constituent quasi completam et solennem, eam ingenii quibusdam commentationibus suffarcinando, exemplis illustrando, et methodo revinciendo. At illa altera traditio per aphorismos plurima secum fert commoda, ad quæ traditio methodica non attingit. Primum enim de scriptore specimen dat, utrum ille leviter et perfunctorie scientiam hauserit, an penitus imbiberit. Aphorismi enim, nisi prorsus forent ridiculi, necesse est, ut ex medullis et interioribus scientiarum conficiantur. Abscinditur enim illustratio et excursio; abscinditur varietas exemplorum; abscinditur deductio et connexio; abscinditur descriptio practicæ: ut ad materiam aphorismorum nihil relinquatur, præter copiam observationum bene amplam. Igitur ad aphorismos non sufficiet quispiam, imo de eis nec cogitabit sane, qui se neutiquam copiose et solide instructum ad scribendum perspexerit. At in methodis;

—“Tantum series juncturaque pollet;  
Tantum de medio sumptis accedit honoris;”

ut speciem artis, nescio cujus, præclare sæpenumero reportent ea, quæ, si solvantur, segregentur, et denudentur, ad nihilum fere recasura forent. Secundo, traditio methodica ad fidem et consensum valet; ad indicationes de praxi minus innuit, siquidem demonstrationem quandam in orbe præ se fert, partibus se invicem illuminantibus, ideoque intellectui satisfacit magis; quia vero actiones in vita communi sparguntur, non ordine componuntur, ideo magis iisdem conducunt etiam sparsa documenta. Postremo, aphorismi, cum scientiarum portiones quasdam et quasi frustra tantum exhibeant, invitant, ut alii etiam aliquid adjiciant et erogent; traditio vero methodica, dum scientiam integram ostentat, securos illico homines reddit, quasi jam summa adeptos.

Sequitur aliud methodi discrimen, magni et illud

quoque momenti : cum scilicet scientiæ traduntur, aut per assertiones adjectis probationibus, aut per questiones una cum determinationibus. Hanc autem posteriorem methodum si immoderatus quis persequatur, scientiarum profectui non minus illa officit, quam fortunis et progressibus exercitus cujuspiam impedimento et damno foret, si in minutis quibusque castellis aut oppidis expugnandis subinde hæreat. Etenim si quis in acie sit superior, et summæ belli sedulo incumbat, minora illa loca ultro se submittent : illud tamen inficias non ierim, urbem aliquam magnam et munitam a tergo relinquere, haudquam semper tutum esse : eodem modo, confutationibus in scientiarum traditione temperandum, iisque parce utendum : et ad hoc tantum, ut majores præoccupaciones animorum et præjudicia frangantur, minime autem ut leviores dubitationes excitentur et provocentur.

Sequitur aliud methodi discrimen, ut scilicet methodus sit subjectæ materiæ, quæ tractatur, accommodata. Alio enim modo traduntur mathematica (quæ sunt inter scientias maxime abstracta et simplicia) alio politica, quæ maxime sunt immersa et composita. Neque (ut jam diximus) methodus uniformis in materia multiformi commode se habere potest. Equidem quemadmodum topicas particulares ad inveniendum probavimus, ita et methodos particulares ad tradendum similiter aliquatenus adhiberi volumus.

Sequitur aliud methodi discrimen in tradendis scientiis cum judicio adhibendum. Illud autem regitur per informationes et anticipationes de scientia (quæ tradenda est) in animis discentium prius infusas et impressas. Aliter enim tradi debet scientia, quæ ad animos hominum nova et peregrina prorsus accedit; aliter ea, quæ opinionibus jam pridem imbibitis et receptis est affinis et familiaris. Ideoque Aristoteles Democritum sugillare cupiens, revera eum laudat: "Si," inquit, "serio disputare velimus, non sectari similitudines," etc. id vitio vertens Democrito, quod in comparisonibus esset nimis. At illi, quorum documenta in opinionibus popularibus jam sedes suas collocarunt, non aliud habent, quod agant, nisi ut disputent et probent. Illis contra, quorum dogmata opiniones populares transcendunt, gemino labore opus est: primo ut intelligantur quæ afferunt: deinde ut probentur; ita ut necessarium habeant confugere ad auxilia similitudinum et translationum, quo se captui hominum insinuent. Videmus igitur sub infantia doctrinarum seculis rudioribus, cum syllepsis illæ, quæ jam factæ sunt vulgares et tritæ, novæ fuerant et inauditæ, omnia parabolis et similitudinibus plena fuisse. Alias evenisset, ut quæ proponebantur, aut absque nota seu attentione debita transmissa, aut pro paradoxis rejecta, fuissent. Etenim regula quædam est traditivæ, quod scientia omnia, quæ anticipationibus sive præsuppositionibus non est consona, a similitudinibus et comparisonibus suppetias petere debeat.

Atque de methodorum diversis generibus hæc dicta sint : iis videlicet, quæ antehac ab aliis notata non fuerunt : nam quantum ad cæteras illas methodos, analyticam, systaticam, diæreticam, etiam crypticam, Homericam, et similes, recte sunt esse

inventæ et distributæ; neque causa videtur, cur illis immoremur.

At methodi genera hujusmodi sunt : partes autem duæ; altera de dispositione totius operis, vel argumenti libri alicujus; altera de limitatione propositionum. Etenim ad architecturam spectat, non solum fabrica totius ædificii, sed etiam efformatio et figura columnarum, trabium, et similium. Methodus vero veluti scientiarum architectura est. Atque hac in parte melius meruit Ramus, in optimis illis regulis (*καθόλου πρῶτον, κατὰ παντός, καθ' αὐτό*, etc.) renovandis, quam in unica sua methodo et dichotomiis obrudendis. Veruntamen nescio quo fato fit, ut in humanis (sicut sæpius fingunt poetæ) rebus pretiosissimis semper adhibeantur perniciosissimi quique custodes. Certe conatus Rami circa illam propositionum limam conjecit eum in epitomas illas et scientiarum vada. Auspicato enim et felicitis cujusdam genii ductu procedere oportet, qui axiomata scientiarum convertibilia facere attentaverit, et non simul ea reddiderit circularia, aut in semet recurrentia. Conatum nihilo secius Rami in hac parte utilem fuisse non inficiamus.

Supersunt duæ adhuc propositionum limitationes, præter eam ut fiant convertibiles; altera de extensione; altera de productione ipsarum. Sane habent scientiæ, si quis recte advertat, præter profunditatem, alias duas dimensiones; latitudinem scilicet ac longitudinem suam. At profunditas quidem ad ipsarum veritatem et realitatem refertur: hæc enim sunt, quæ soliditatem conferunt. Quantum ad reliquas duas, latitudo accipi et computari potest de scientia in scientiam; longitudo vero sumitur a summa propositione ad imam in eadem scientia. Altera fines et veros scientiarum terminos complectitur, ut propositiones proprie, non promiscue tractentur; et evitetur repetitio, excursio, denique confusio omnis: altera normam præscribit, quousque et ad quem particularitatis gradum propositiones scientiarum sint deducendæ. Sane dubium non est, quin aliquid exercitationi et practicæ sit relinquendum; oportet siquidem Antonini Pii vitium evitari, ne simus cymini sectores in scientiis, neve divisiones ad infima quæque multiplicemus. Itaque qualiter in hac parte nobis ipsi temperemus, inquisitione plane dignum est. Videmus enim nimium generalia (nisi deducantur) parum informare, quin potius hominum practicoꝝ ludibrio scientias exponere, cum nihilo magis ad practicam faciant, quam chorographia Ortellii universalis ad viam monstrandam, quæ Londino ducit Eboracum. Certe regulæ optimæ speculis ex metallo non inscite assimulantur, in quibus cernuntur utique imagines, sed non antequam expolita fuerint; sic juvant demum regulæ et præcepta, postquam exercitationis limam subierint. Quod si tamen, usque a principio, regulæ illæ fieri possint nitidæ, et quasi crystallinæ, id optimum factu foret, quandoquidem exercitatione assidua minus indigebunt. Atque de scientia methodi (quam prudentiam traditivæ nominavimus) hæc dicta sint.

Neque tamen illud prætermittendum, quod nonnulli, viri magis tumidi quam docti, insudarunt circa methodum quandam, legitimæ methodi nomine haud dignam, cum potius sit methodus imposturæ; quæ

tamen quibusdam ardelionibus acceptissima proculdubio fuerit. Hæc methodus ita scientiæ alicujus guttulas aspergit, ut quis sciolus specie nonnulla eruditionis ad ostentationem possit abuti. Talis fuit ars Lullii; talis typocosmia a nonnullis exarata; quæ nihil aliud fuerunt, quam vocabulorum artis cujusque massa et acervus; ad hoc, ut qui voces artis habeant in promptu, etiam artes ipsas perdidicisse existimentur. Hujus generis collectanea officinam referunt veteramentariam, ubi præsemina multa reperiuntur, sed nihil quod alicujus sit pretii.

### CAPUT TERTIUM.

*De fundamentis et officio rhetoriæ. Appendices tres rhetoriæ, quæ ad promptuariam tantummodo pertinent: colores boni et mali, tam simplicis, quam comparati: antitheta rerum: formulæ minores orationis.*

VENIMUS jam ad doctrinam de illustratione sermonis. Ea est, quæ rhetorica dicitur, sive oratoria. Scientia certe et in se egregia, et egregie a scriptoribus exulta. Eloquentia autem, si quis vere rem æstimet, sapientia proculdubio est inferior. Videmus enim, quanto intervallo hæc illam post se relinquat, in verbis quibus allocutus est Mosem Deus, cum ille munus sibi delatum, propter defectum elocutionis recusasset; "Habes Aaronem, ille erit tibi vice oratoris, tu vero ei vice Dei." At fructu, et populari existimatione, sapientia eloquentiæ cedit. Ita enim Salomon, "Sapiens corde appellabitur prudens, sed dulcis eloquio majora reperiet." Haud obscure innuens, sapientiam famam quandam et admirationem cuiquam conciliare; at in rebus gerendis, et vita communi, eloquentiam præcipue esse efficacem. Ad artis vero hujus culturam quod attinet; Aristotelis erga rhetores sui temporis æmulatio, atque Ciceronis studium acre et vehemens, illi nobilitandæ totis viribus incumbens, cum longo usu conjunctum, in causa fuerunt, ut in libris suis de hac arte conscriptis seipsos vicerint. Dein exempla illa luculentissima hujusce artis, quæ in orationibus Demosthenis et Ciceronis habentur, præceptorum acuminis et diligentiae addita, profectus ipsius geminarunt. Quare, quæ in hac arte desiderari invenimus, versabantur potius in collectionibus quibusdam, quæ tanquam pedissequæ huic arti præsto sint, quam in disciplina et usu artis ipsius. Nam etiam tum, cum promptuariæ cujusdam inter logica mentionem faceremus, uberiora ejus rei exempla in rhetoricis polliciti sumus.

Veruntamen ut, more nostro, circa radices hujus artis glebam paululum aperiamus et subigamus; rhetorica certe phantasiæ, quemadmodum dialectica intellectui, subservit. Estque, siquis altius rem penetret, officium et munus rhetoriæ non aliud, quam ut rationis dictamina phantasiæ applicet et commendet, ad excitandum appetitum et voluntatem. Regimen enim rationis impeti et perturbari videmus tribus modis: vel per illaqueationem sophismatum, quod ad dialecticam pertinet; vel per præstigijs verborum, quod ad rhetoricam; vel per affectuum

violentiam, quod ad ethicam. Quemadmodum enim in negotiis, quæ cum aliis contrahimus, vinci quis et perduci solet, vel astu, vel importunitate, vel vehementia; ita etiam in illa negotiatione interna, quam nobiscum exercemus, aut argumentorum fallacis subruimur, aut impressionum et observationum assiduitate sollicitamur, et inquietamur, aut affectuum impetu concutimur et rapimur. Neque vero tam infeliciter agitur cum natura humana, ut illæ artes et facultates ad rationem deturbandam valeant, nequam vero ad eandem roborandam et stabiliendam: verum ad hanc rem longe magis. Finis enim dialecticæ est, docere formam argumentorum, ad præsidia intellectus, non ad insidias. Finis itidem ethicæ, affectus ita componere, ut rationi militent, non autem eam invadant. Finis denique rhetoriæ, phantasiam implere observationibus et simulacris, quæ rationi suppetias ferant, non autem eam opprimant. Abusus enim artis ex obliquo tantum interveniunt, ad cavendum, non ad utendum.

Quapropter in Platone summa fuit iniquitas (licet ex non immerito erga rhetores sui temporis odio orta) cum rhetoricam inter artes voluptarias collocavit: eam similem esse dicens coquinariæ, quæ non minus cibos salubres corruperet, quam insalubres gratiores redderet, condimentorum varietate et deliciis abutens. Absit autem, ut oratio non frequentius versetur in rebus honestis ornandis, quam in turpibus oblinendis: hoc enim ubique præsto est; siquidem nemo est, quin honestius loquatur, quam aut sentiat, aut faciat. Sane a Thucydide optime notatum est, tale quidpiam solitum fuisse objici Cleoni; quod, cum semper deteriorem partem tueretur, in hoc multus esset, ut eloquentiam et sermonis gratiam carperet: probe quippe cum sciret, de rebus sordidis et indignis non posse quempiam pulchre loqui; at de rebus honestis, facillime. Eleganter enim Plato (licet jam in trivio decantetur) "virtus si conspici daretur, ingentes sui amores concitaret." At rhetorica virtutem et bonum depingit plane, et reddit quasi conspicuum. Cum enim in corporea effigie, illa sensui monstrari nequeant, superest ut per ornatum verborum, phantasiæ, representatione quantum fieri potest viva, coram sistantur. Siquidem mos Stoicorum merito derisus est a Cicerone; qui concisis et argutis sententiis et conclusionibus virtutem animis hominum imponere satagebant; quæ res parvum habet cum phantasia et voluntate consensum.

Porro, si affectus ipsi in ordinem compulsus, et rationi prorsus morigeri essent; verum est, nullum magnopere futurum persuasionum et insinuationum, quæ aditum ad mentem præbere possint, usum; sed satis fore, si res ipsæ nude et simpliciter proponantur, et probentur. Verum affectus contra, tantas secessionem faciunt; quin etiam tantas turbas et seditiones movent (secundum illud,

— "Video meliora, proboque,  
Deteriora sequor")

ut ratio prorsus in servitutem et captivitatem abrepta foret, nisi eloquentiæ Suada efficeret quo minus phantasia a partibus affectuum staret, sed potius, opera ejus, sædus ineat inter rationem et phanta-

siam, contra effectus. Notandum est enim, affectus ipsos ad bonum apparens semper ferri, atque hac ex parte aliquid habere cum ratione commune: verum illud interest; quod affectus intuentur præcipue bonum in præsentia; ratio prospiciens in longum, etiam futurum, et in summa. Ideoque cum quæ in præsentia obversentur, impleant phantasiam fortius, succumbit plerumque ratio, et subjugatur. Sed postquam eloquentia et suasionum vi effectum sit, ut futura et remota constituentur et conspiciantur tanquam præsentia, tum demum, abeunte in partes rationis phantasia, ratio fit superior.

Concludamus igitur, non deberi magis vitio verti rhetoricæ, quod deteriorem partem coonestare sciat; quam dialecticæ, quod sophismata concinnare doceat. Quis enim nescit, contrariorum eandem rationem esse, licet usu opponantur? Porro non eo tantum differt dialectica a rhetorica, quod (ut vulgo dicitur) altera instar pugni, altera instar palmæ sit (altera scilicet presse, altera fuse tractet) verum multo magis, quod dialectica rationem in suis naturalibus; rhetorica, qualis in opinionibus vulgi sita est, consideret. Prudenter igitur Aristoteles rhetoricam inter dialecticam et ethicam cum politica collocat, cum ex utrisque participet. Siquidem probationes et demonstrationes dialecticæ universis hominibus sunt communes; at probationes et suasionem rhetoricæ pro ratione auditorum variari debent; ut quis, tanquam musicus, auribus diversis se accommodans, sit demum

“Orpheus in sylvia, inter delphinas Arion.”

Quæ quidem applicatio et variatio orationis (si quis ejus perfectionem et culmen desideret) eo usque extendi debet; ut si eadem ipsa apud diversos homines sint dicenda, apud singulos tamen aliis atque aliis verbis sit utendum. Quanquam hac parte eloquentiæ (politica scilicet et negotiosa, in privatis sermonibus) maximos oratores plerumque destitui certum sit; dum ornatum et formulas elegantes orationis captantes, volubili illa applicatione, et characteribus sermonum, quibus versus singulos uti consultius foret, excidunt. Certe non abs re fuerit, circa hoc ipsum, de quo nunc dicimus, novam instituere inquisitionem, eamque nomine prudentiæ sermonis privati indigitare, atque inter desiderata reponere; rem certe, quam quo attentius quis recogitet, eo pluris faciet. Utrum vero hæc inter rhetorica an politica collocetur, haud magni refert.

Descendamus modo ad desiderata in hac arte, quæ (ut ante diximus) ejus sunt generis, ut pro appendicibus potius censeri debeant, quam pro portionibus artis ipsius, et pertinent omnia ad promptuariam. Primo igitur non invenimus, qui prudentiam illam, simul et diligentiam Aristotelis, bene persecutus sit, aut suppleverit. Hic nimirum cœpit colligere signa popularia, sive colores boni ac mali apparentis, tam simplicis quam comparati, qui sunt vere sophismata rhetorica. Sunt autem eximii usus, præsertim ad negotia, et prudentiam sermonis privati. Labores vero Aristotelis circa colores istos in tribus claudicant. Primo, quod, cum multi sint, paucos admodum recensent. Secundo, quod elenchos suos non habeant adjunctos. Tertio, quod videtur ille usum eorum

ex parte ignorasse. Usus enim eorum, non magis ad probandum, quam ad efficiendum et commovendum, subservit. Complures siquidem loquendi formulæ, quæ idem significant, varie tamen afficiunt. Nam longe fortius penetrat, quod acuminatum est, quam quod obtusum; licet in ipsa percussione vires æqualiter intentantur. Nemo est certe, qui non magis afficiatur audiens, inimici tui de hoc miros triumphos agent:

“Hoc Ithacus velit, et magno mercentur Atridæ;”

quam si simpliciter dicitur, Hoc rebus tuis incommodabit. Itaque mucrones isti, et aculei sermonum, minime sunt negligendi. Cum vero hanc rem, ut desideratam proponamus, ex consuetudine nostra, illam exemplis fulciemus: præcepta enim minus rem illustraverint.

#### EXEMPLA COLORUM BONI ET MALI TAM SIMPLICIS QUAM COMPARATI.

##### SOPHISMA I.

“Quod laudant homines et celebrant, bonum; quod vituperant et reprehendunt, malum.”

##### ELENCHUS.

Fallit sophisma quatuor modis; scilicet, aut propter ignorantiam; aut propter malam fidem; aut propter studia et factiones; aut propter ingenia laudatorum et vituperatorum. Propter ignorantiam; quid vulgi iudicium ad examen boni et mali? Melius Phocion, qui, cum populus ei præter solitum applauderet, quæsivit, num forte deliquisset? Propter malam fidem; laudantes enim et vituperantes suam rem sæpius agunt, neque loquuntur ut sentiunt.

“Laudat venales qui vult extrudere merces.”

Item, “Malum est, malum est, inquit emptor; sed cum recesserit, tum gloriabitur.” Propter factiones; cuius enim patet, consuescere homines, eos, qui suarum partium sunt, immodicis efferre laudibus, qui autem contrariarum sunt, infra meritum deprimere. Propter ingenia; alii enim natura facti sunt et compositi ad adulationem servilem; alii contra momi et tetrici; ut laudando et vituperando suis ingeniis tantum obscudent, parum de veritate solliciti.

##### SOPHISMA II.

“Quod etiam ab inimicis laudatur, magnum bonum; quod vero etiam ab amicis reprehenditur, magnum malum.”

Sophisma fundamento hoc niti videtur, quod quæ ingratis, et contra animi nostri affectum et propensionem loquimur, ea ipsa vim veritatis a nobis extorquere, facile creditur.

##### ELENCHUS.

Fallit sophisma propter astutiam, tam inimicorum, quam amicorum. Inimici enim laudes quandoque tribuunt, non invite, nec a vi veritatis coacti, sed eas tamen diligentes, quæ inimicis suis invidiam et pericula conflare possint. Itaque apud Græcos superstitionis quedam invaluit, ut crederent, si quis ab al-

terro laudaretur, animo malevolo et proposito nocendi, naribus ejus pustulam annasci solere. Fallit iterum, quia laudes interdum impertiunt inimici, tanquam præfatiunculas quasdam, ut postea liberius et malitiosius calumniarentur. Ex altera parte, fallit etiam hoc sophisma propter astutiam amicorum. Solent enim et illi vitia amicorum interdum agnoscere, et prædicare, non quod aliqua vis veritatis eos cogat, sed ea eligentes, quæ minimum amicos suos lædere possint, ac si cætera quidem viri optimi essent. Fallit iterum, quia amici quoque reprehensionibus suis (sicut de inimici laudibus diximus) tanquam præfatiunculis quibusdam utuntur, quo paulo post in laudes effusius excurrant.

## SOPHISMA III.

“Cujus privatio bona, id ipsum malum; cuius privatio mala, id ipsum bonum.”

## ELENCHUS.

Fallit sophisma duobus modis: aut propter comparisonem boni et mali; aut propter successionem boni ad bonum, aut mali ad malum. Propter comparisonem; si bonum fuerit generi humano, privari esu glandium, non sequitur quod malus ille erat; sed Dodona bona, Ceres melior. Neque, si malum fuit populo Syracusano, Dionysio seniore privari, sequitur quod Dionysius ille bonus fuerit, sed minus malus, quam junior. Propter successionem: etenim privatio boni alicujus non semper dat locum malo, sed quandoque majori bono; ut cum flos decidit, fructus succedit. Nec privatio alicujus mali dat semper locum bono, sed interdum majori malo: nam sublato inimico Clodio, Milo simul et segetem gloriæ perdidit.

## SOPHISMA IV.

“Quod bono aut malo vicinum est, id ipsum item bonum aut malum: quod vero remotum est a bono, malum; quod a malo, bonum.”

Habet hoc fere rerum natura, ut quæ natura sua conveniunt, etiam locis conveniant; quæ vero contrariæ naturæ sunt, etiam intervallis distent: cum singula, amica sibi associare, inimica summovere gaudeant.

## ELENCHUS.

Sed fallit sophisma tribus modis: primo propter destitutionem, secundo propter obscuracionem, tertio propter protectionem. Propter destitutionem; fit, ut quæ in suo genere amplissima sunt, et maxime excellent, omnia, quantum fieri potest, ad se trahant, et in vicino quæque posita destituant, ac quasi inedia conficiant. Itaque in propinquo arborum grandium virgulta nunquam læta reperies. Recte enim ille, “Divitis servi maxime servi.” Nec male cavillatus est, qui inferius famulitium in aulis principum, festorum vigiliis comparavit; quæ festa sua in proximo attingunt, ipsæ autem jejuniis addicuntur. Propter obscuracionem; etenim et hoc habent quæque in suo genere præstantissima, ut licet proxima non extenuent aut destituant, tamen obscurent et obumbrent. Quod etiam de sole notant astronomi, quod sit scilicet aspectu bonus, conjunctione et ap-

proximatu malus. Propter protectionem; nam non solum res coeunt et congregantur propter consortium, et naturæ similitudinem, sed etiam malum (præsertim in civilibus) confugit ad bonum, ut lateat et protegatur. Itaque scelerati homines petunt asyla divorum, et vitium ipsum se in virtutis umbram recipit:

“Sæpe latet vitium proximitate boni.”

Contra et bonum se aggregat ad malum, non propter consortium, sed ut illud convertat et reformet in bonum. Itaque et medici magis accedunt ad ægrotos, quam ad sanos; et Servatori nostro objectum est, quod conversaretur cum publicanis et peccatoribus.

## SOPHISMA V.

“Cui cæteræ partes, vel sectæ, secundas unanimiter deferunt (cum singulæ principatum sibi vendicent) melior reliquis videtur: nam primas quæque ex zelo videtur sumere, secundas autem ex vero et merito tribuere.”

Ita Cicero argumentatur, sectam Academicorum, quæ acatalepsiam tenuit, philosophiarum fuisse præstantissimam. “Interroga enim” inquit “Stoicum, quæ secta sit potior; ille suam cæteris anteponeat: deinde quæ secundas teneat, Academicam fatebitur. Age similiter cum Epicureo (qui Stoici vix aspectum toleraverit) postquam suam sectam collocavit in summo, collocabit Academicam in proximo.” Similiter, vacante dignitate aliqua, princeps si competitorum singulos interrogaret, quem post se potissimum commendare vellent, verisimile est, secunda illorum vota in eum, qui præcipue dignus et optime meritus fuerit, concursura.

## ELENCHUS.

Fallit sophisma propter invidiam. Solent enim homines proxime post se, et factionem suam, in eos inclinare et propendere, qui reliquorum maxime sint enerves et imbelles, quique eis minimum molestiæ exhibuerunt; in odium illorum, qui illis plurimum insultarunt aut incommodarunt.

## SOPHISMA VI.

“Cujus excellentia vel exuperantia melior, id toto genere melius.”

Huc pertinent formulæ illæ usitatæ; ne pervagetur in generalibus: conferamus particularem aliquem cum particulari, etc.

## ELENCHUS.

Videtur hoc sophisma satis nervosum; et magis dialecticum quiddam, quam rhetoricum. Attamen interdum fallit. Primo, quia sunt res haud paucæ, periculo plurimum obnoxia, quæ tamen, si evadant, cæteris antecellant. Ita ut genere sint deteriores, quia sæpius periclitantur et excidunt; individuo autem nobiliores. In hoc numero est gemma Martia, de qua Gallicum adagium: “Filius Parisiorum, et gemma mensis Martii, si ex illis evadat unus, erit instar decem aliorum.” Adeo ut in genere gemma Maii gemmæ Martii præset, sed tamen in individuo optima gemma Martii optimæ gemmæ Maii præ-

feratur. Fallit secundo; propter naturam rerum, in aliquibus generibus aut speciebus magis æqualem, in aliquibus magis inæqualem. Quemadmodum in observationem venit, climata calidiora generaliter ingenia producere acutiora; at in frigidioribus ingenia illa, quæ eminent, etiam acutissimis calidarum regionum præstare. Similiter, in exercitiis compluribus, si res duello inter singulos transigeretur, fortasse ad unam partem accederet victoria; si copiis universis, in alteram. Etenim excellentiæ et exuperantiæ casum recipiunt; at genera natura aut disciplina reguntur. Quinetiam in genera metallum lapide pretiosius; attamen adamas præcellit auro.

## SOPHISMA VII.

“Quod rem integram servat, bonum; quod sine recepto est, malum: nam se recipere non posse, impotentis genus est; potentia autem bonum.”

Hinc confirmat *Æsop* fabulam de duabus ranis; quæ, in magna siti cum aquæ ubique deficerent, deliberarunt, quid sibi demum agendum esset. Prior autem; Descendamus (inquit) in puteum profundum, neque enim verisimile est ibi aquam defuturam. Cui altera ita regerit; Quin si forte ibi quoque aqua deficiet, quomodo exinde rursus ascendere poterimus? Firmamentum autem hujus sophismatis est; quod actiones humanæ adeo sint incertæ, et periculis expositæ, ut illud optimum videatur, quod plurima habeat effugia. Huc spectant formulæ illæ, quæ in usu sunt: Obligatum plane et obstrictum te reddes: non tantum, quantum voles, sumes ex fortuna, etc.

## ELENCHUS.

Fallit sophisma primo, quia in actionibus humanis fortuna urget, ut aliquid demum decernatur. Etenim ut eleganter a quopiā dictum est; Etiam non statuere, est aliquid statuere: adeo ut sæpenu-mero consilii suspensio pluribus nos implicet necessitatibus, quam si aliquid stavissemus. Videtur autem iste morbus quidam animi, similis ei, qui reperitur in avaris: sed translatus a cupiditate retinendi opes, ad cupiditatem retinendi arbitrium et potestatem. Siquidem avarus frui non vult, ne quid detrahat de summa; ita et hujusmodi scepticus nil exequi vult, ut omnia ei sint integra. Fallit secundo, quia necessitas, et illud (quod aiunt) “jacta est alea,” stimulos addit animis; sicut inquit ille, Ceteris pareas, necessitate certe superiores estis.

## SOPHISMA VIII.

“Quod quis culpa sua contraxit, majus malum; quod ab externis imponitur, minus malum.”

Hujus rei causa est, quod morsus conscientis adversæ conduplicet: contra, consciū sibi esse, quod culpa quis vacet, magnum præbet in calamitate solatium. Itaque poetæ ea pathemata maxime exaggerant, tanquam desperationi propiora, ubi quis seipsum accuset, et discruciet:

“Seque unum clamat causamque caputque malorum.”

Contra, calamitates virorum insignium elevat et diluit innocentis et meriti conscientia. Porro cum malum ab aliis intentetur, habet quivis, quod libere conqueri possit; unde dolores sui exhalent, neque

cor suffocent: etenim iis, quæ ab injuria hominum profecta sunt, indignari solemus, aut ultionem meditari, aut denique nemesim divinam vel implorare, vel expectare: quinetiam, si a fortuna ipsa inflictum quid sit, tamen datur quædam cum fati ipsis exposulatio:

“Atque Deos, atque astra vocat crudelia mater.”

Contra, ubi quis malum aliquod sua culpa contraxerit, stimuli doloris intro vertuntur, animumque magis vulnerant et confodiunt.

## ELENCHUS.

Fallit istud sophisma, primo propter spem; quæ malorum magnum est antidotum. Etenim culpæ emendatio sæpe in nostra potestate sita est; fortunæ vero minime. Itaque *Demosthenes*, non semel cives suos hujusmodi verbis affatus est; “Quod ad præterita pessimum, id ad futura optimum est. Quid hoc tandem sit? Hoc ipsum scilicet, quod vestra incuria et culpa res vestræ male se habeant: nam si vos officio vestro per omnia perfuncti essetis, et nihilominus status vester, ut nunc, laborasset; ne spes quidem reliqua esset, eum futurum aliquando meliorem. Cum vero errores vestri in causa potissimum fuerint, confidendum plane, vos, illis emendatis, pristinum statum vestrum recuperaturos.” Similiter *Epictetus*, de gradibus tranquillitatis animi verba faciens, infimum locum illis attribuit, qui alios accusant; superiorem iis, qui seipsos; supremum vero illis, qui nec alios nec seipsos. Fallit secundo, propter insitam animis humanis superbiam; quæ ægre adducuntur homines, ut errores proprios agnoscant. Hoc vero ut evitent, patientiam adhibent longe majorem in iis malis, quæ culpa sua contraxerunt. Etenim, quemadmodum fieri videmus, ut cum culpa admissa sit, neque de auctore constiterit, supra modum excandescant homines, et tumultuentur: quod si postea in notitiam pervenerit, culpam illam ad filium, aut uxorem, aut gratiosum aliquem pertinere, statim sedantur turbæ et consulescunt: eodem modo fit, cum res aliqua accidit, propter quam necessitas incumbit culpam in nos ipsos recipiendi. Id quod in mulieribus sæpissime conspicitur, quæ, si quid infeliciter egerunt, contra consensum parentum aut amicorum, qualescunque infortunium sequatur, illud sedulo dissimulant.

## SOPHISMA IX.

“Gradus privationis major videtur, quam gradus diminutionis: et rursus gradus inceptionis major videtur, quam gradus incrementi.”

Canon est in mathematicis; nullas esse rationes nihili ad aliquid. Itaque gradus nullitatis et quidditatis, majores videntur gradibus incrementi et decrementi. Sicut monoculo durius est, unum perdere oculum, quam utrumque oculum habenti. Similiter complures liberos habenti gravius est, ultimum, qui superstes fuerit, filium amittere, quam reliquos priores. Itaque et *Sibylla*, cum duos priores libros combussisset, pretium tertii duplicavit: siquidem illius amissio gradus fuisset privationis, non diminutionis.

## ELENCHUS.

Fallit sophisma primo, propter eas res, quarum usus in sufficientia quadam, sive competentia; hoc est, quantitate determinata, consistit. Si quis enim obligetur pœnaliter ad solutionem certæ pecuniæ summæ, ad diem certum; gravius ei fuerit, nummo unico aureo carere, quam si, posito quod ille unicus parari non poterit, deessent etiam decem alii. Similiter in decoctionibus fortunarum, damnosior videtur gradus obærationis, qui primus sortem minuit; quam extremus, qui ad egestatem redigit. Huc spectant formulæ illæ usitatæ: Sera in fundo parsimonia: Parum interest, utrum nihil habeas, an quod nihil juvet, etc. Fallit secundo, propter illud principium in natura, quod corruptio unius sit generatio alterius. Adeo ut gradus ipse privationis ultimæ, minus interdum incommodet, quoniam ansam et stimulum præbet novæ alicui rationi ineundæ. Unde etiam Demosthenes sæpius conqueritur apud cives suos: "Conditiones minus utiles, et honorificas, quas a Philippo impositas subibant, nihil aliud esse, quam alimenta quædam ipsorum ignaviæ et socordiæ: ut multo iis fuisset satius illis omnino carere, propterea quod hoc pacto industria illorum melius acui possit ad alia paranda remedia." Novimus certe medicum quendam, qui, mulieribus delicatis, querentibus se male habere, sed tamen a medicamentis omnibus abhorrere, solebat dicere, non minus facete, quam morose: "Vobis omnino opus est, ut deterius valeatis, quo medicamenta, etiam quælibet, libenter toleretis." Quinetiam ipse gradus privationis, sive indigentis ultimæ, salutaris esse possit, non tantum ad excitandam industriam, verum etiam ad imperandam patientiam.

Quod ad secundum membrum hujus sophismatis, illud eodem, quo prius, fundamento (de gradibus quidditatis et nullitatis) nititur. Hinc tanta usurpantur, de initiis negotiorum, præconia:

"Dimidium facti, qui bene cœpit, habet, etc."

Hinc astrologorum superstitio, qui iudicium faciunt de dispositione aut fortuna hominis, ex momento sive articulo nativitatis aut conceptus.

## ELENCHUS.

Fallit sophisma primo, quoniam in nonnullis primæ rerum inceptions nihil aliud sunt, quam quæ Epicurus, in philosophia sua, appellat tentamenta; id est, rudimenta quædam, quæ nihili sunt, nisi iterentur aut provehantur. Itaque in hoc casu, gradus secundus dignior videtur et potentior, quam primus: quemadmodum in plaustris, equus qui penultimus est, plus confert ad motum planstri, quam primus. Etiam non inepte dici solet: Convicium regestum, illud esse, quod pugna sit reum. Prius enim fortasse prætervolaturum fuisset. Itaque prius malo principium dedit, sed posterius modum abstulit. Fallit sophisma secundo, propter dignitatem perseverantiæ; quæ in progressu, non in agressu, sita est. Etenim casus, aut natura, primum impetum progignere possunt; at affectus tantummodo maturus et iudicium, constantiam. Fallit tertio in iis rebus, quarum natura et cursus ordinarius

in contrarium rei inceptæ fertur. Ita ut prima inceptio perpetuo evacuetur, nisi vires continuantur. Quemadmodum in formulis illis usitatis dicitur; Non progredi, est regredi: et, Qui non proficit, deficit: ut in cursu in adversum montis; remigatione in adversum gurgitis: at contra, si in declivi montis motus incipiat; aut secundo flumine remigatio fiat; tum gradus inceptus longe potiores partes tenet. Porro iste color, non tantum extenditur ad gradum inceptionis, qui sit a potentia ad actum, comparatum cum gradu, qui sit ab actu ad incrementum: verum etiam ad gradum, qui sit ab impotentia ad potentiam, comparatum cum gradu, qui sit a potentia ad actum. Etenim gradus ab impotentia ad potentiam, major videtur, quam a potentia ad actum.

## SOPHISMA X.

"Quod ad veritatem refertur, majus est, quam quod ad opinionem. Modus autem, et probatio ejus, quod ad opinionem pertinet, hæc est; quod quis, si clam putaret fore, facturum non esset."

Ita pronunciant Epicurei de felicitate Stoicorum, in virtute collocata, quod similis sit felicitati histrionis in scena; qui, si a spectoribus et plausu eorum destitueretur, animis statim conderet. Itaque virtutem, per ignominiam, bonum theatrale vocant. Aliter fit in divitiis; de quibus ille:

"Populus me sibilat; at mihi plaudo."

Itidem in voluptate:

"Grata sub imo  
Gaudia corde premens, vultu simulante pudorem."

## ELENCHUS.

Fallacia hujus sophismatis subtilior paulo est; licet responsio ad exemplum, quod adducitur, facilis. Neque enim virtus eligitur propter auram popularem. Cum etiam illud præceptum sit, Ut quis maxime omnium seipsum revereat. Ita ut vir bonus idem fuerit in solitudine, idem in theatro. Licet forte intendatur virtus nonnihil per laudes, quemadmodum calor augetur per reflexionem. Sed hoc suppositionem negat, non fallaciam redarguit. Elenchus vero talis est. Dato, quod virtus (præsertim ea, quæ labores et conflictus subit) non eligeretur, nisi quod laudes et fama eam comitari soleant; hæc inde sequitur, quod appetitus et motus ad virtutem non sit præcipue propter se. Siquidem fama possit esse causa tantum impulsiva, aut sine qua non; neutiquam efficiens, aut constituens. Exempli gratia: Si duo fuerint equi, quorum unus, calcaribus non admotis, quævis haud segniter præstaret; at alter, calcaribus admotis, priorem longe superaret: posterior iste (arbitror) palmam referet, et pro equo meliore iudicabitur. Neque quenquam iudicii sani commoverit formula illa: Apage istum equum, cujus spiritus siti sunt in calcaribus. Quandoquidem enim instrumentum ordinarium equitanti sit calcar, neque ullo modo oneri aut impedimento ei sit; non minoris propterea æstimandus est equus, qui calcare incitatur: neque etiam ille alter, qui absque calcaribus mira præstet, eo ipso melior, sed delicatior tantum habendus est. Simili ratione, gloria et honor, virtuti, pro stimulis et calcaribus, suberviunt: ac licet

virtus, sine illis, paulo futura esset languidior; tamen cum semper illa præsto sint ei, etiam non invitata; nil officit, quo minus virtus propter se quoque expectatur. Itaque recte redarguitur illa positio: Nota ejus rei, quod propter opinionem, et non propter veritatem eligitur, hæc est; quod quis, si clam putaret fore, facturus non fuisset.

## SOPHISMA XI.

“Quod opera et virtute nostra partum est, majus bonum; quod ab alieno beneficio, vel ab indulgentia fortunæ delatum est, minus bonum.”

Causæ hujus rei hæ sunt. Primo propter spem de futuro. Siquidem in aliorum gratia, aut fortunæ ipsius ventis secundis, non multum inest certitudinis; propria vero industria aut virtus semper domi adsunt. Adeo ut, postquam boni quid nobis hoc modo paratum fuerit, maneant etiam eadem instrumenta in novos usus parata, quin et consuetudine et successu reddita validiora. Secundo, quia quod alieno beneficio adipiscimur, ejus etiam aliis debitor sumus: cum quæ per nos ipsi comparaverimus, nihil oneris secum trahant. Etiam si quid indulgentia divina in nos cumulaverit, retributionem quandam erga Dei bonitatem efflagitat, quod homines pravos et improbos mordet, ubi in priore genere illud prophetæ usenerit, lætantur, et exultant, “immolant plagis suis, et sacrificant reti suo.” Tertio, quia ea, quæ a virtute nostra minime perfecta sunt, nulla sequitur laus et existimatio. Quæ enim felicitatis sunt, admirationem quandam pariunt, laudem minime. Sicut ait Cicero ad Cæsarem: Quæ miremur habemus; quæ laudemus expectamus. Quarto, quia quæ industria propria acquiruntur, cum laboribus et contentione fere conjuncta sunt; quod nonnullam habet in se suavitatem: uti Salomon, “suavis cibus a venatu.”

## ELENCHUS.

At quatuor inveniantur colores oppositi, qui rem in contrariam partem inclinant, possintque esse prioribus instar elenchorum. Primo, quia felicitas videtur esse signum quoddam, et character favoris divini: et propterea tum in nobismetipsis confidentiam et alacritatem generat, tum apud alios auctoritatem et reverentiam. Felicitas autem ista etiam fortuita complectitur, ad quæ virtus ægre aspirat; veluti cum Cæsar ad navis gubernatorem, animos addendo, dixit: Cæsarem portas et fortunam ejus. Quod si dixisset, Cæsarem portas et virtutem ejus, frigidum prorsus fuisset solatium periclitanti in procella. Secundo, quia ea, quæ a virtute aut industria procedunt, sunt imitabilia, et aliis patent; cum felicitas sit res inimitabilis, et prærogativa quædam hominis individui. Itaque in genere videmus, res naturales artificialibus præponi, quia imitationem non recipiunt. Quod enim imitabile est, potentia vulgatum est. Tertio, quæ ex felicitate proveniunt, bona videntur gratuita, nec laboribus empta: at quæ virtute propria pretio veluti acquisita. Itaque eleganter Plutarchus, de rebus Timoleontis, hominis longe fortunatissimi, cum rebus Agesilai et Epaminondæ, qui uno ævo vixerunt, comparatis, dixit: Illas Homeri carminibus fuisse similes, quæ cum

alias excellant, sponte etiam fluere videantur et quasi genium sapere. Quarto, quia, quod præter spem, aut præter expectatum contingit, gratius et majore cum voluptate in hominum animos influit. Illud vero nequiquam competit iis, quæ propria cura et ambitu comparantur.

## SOPHISMA XII.

“Quod ex pluribus constat et divisibilibus, est majus, quam quod ex paucioribus, et magis unum: nam omnia per partes considerata majora videntur: quare et pluralitas partium, magnitudinem præ se fert: fortius autem operatur pluralitas partium, si ordo absit: nam inducit similitudinem infiniti, et impedit comprehensionem.”

Sophisma istud videtur etiam primo intuitu fallax, et quasi palpabile: siquidem, non pluralitas partium tantum, sed majoritas earundem, poterit constituere totum auctius. Attamen abripit hoc ipsum sophisma sæpius phantasiam; quinetiam insidiatur sensui. Etenim aspectui ipsi brevior videtur via in planitie, ubi nihil intercurrat, quod visum frangat, quam in tali tractu terræ, ubi simul conspiciuntur arbores, aut ædificia, aut aliud aliquod signum, quod spatium metiri et dividere possit. Sic homini bene nummato, postquam arcas suas et marsupia diviserit et digesserit, major etiam, quam antea, subit divitiarum phantasia. Habet etiam vim in amplificationibus, si res in plures portiones dividatur, atque singulæ seorsum tractentur. Hoc vero adhuc magis phantasiam implet, si fiat promiscue et sine ordine. Confusio enim multitudinis opinionem generat. Siquidem quæ ordine ostenduntur aut proponuntur, tum ipsa magis finita apparent, tum certum præbent argumentum, nihil esse prætermisum. At contra, quæ confuse repræsentantur, non solum in se numerosa putantur, sed et suspitioni locum relinquant, restare adhuc plura, quæ omittuntur.

## ELENCHUS.

Fallit sophisma primo, ubi quis ampliore præceperit de re aliqua opinionem, quam pro vera rei ipsius magnitudine. Etenim cum hoc fit, distributio falsam illam opinionem destruet, et rem in veritate sua, non autem cum amplificatione, monstrabit. Itaque si quis morbo aut dolore corripitur, horæ longiores ei videbuntur, absque horologio aut clepsidra, quam si iisdem mensurentur. Nam si tædium et vexatio morbi, tempus videri longius faciunt, quam revera est, at computatio temporis errorem illum corrigit, et brevis facit, quam opinio illa falsa conceperat. Etiam in planitie contra, quam superius dictum est, aliquando evenit. Licet enim visus in principio viam ostendet brevioris sensui, quia indivisa est, tamen si ex eo obrepat opinio de longe minori intervallo, quam reperitur; opinionis ejus vanæ frustratio efficiet, ut videatur demum etiam, quam revera est, productior. Itaque si quis opinioni alicujus falsæ de magnitudine rei cujuspiam velificari cupiat, caveat a distributionibus, sed rem integram utique extollat. Fallit sophisma secundo, si distributio ea distrahat, non autem simul obersetur, aut uno aspectu visum feriat. Itaque si flores in horto aliquo in plures torulos distinguantur, majoris

quantitatis speciem præbent, quam si omnes in uno toro simul crescerent; modo toruli illi oculis simul subjiciantur; aliter enim unio distributioni distractæ prævalebit. Sic reditus eorum majores videntur, quibus prædia et latifundia sua vicina aut conjuncta sunt. Nam si sparsim sita sint, non veniunt tam facile sub aspectum. Fallit sophisma tertio, propter dignitatem unitatis supra multitudinem. Omnis enim compositio, indigentiae in singulis signum est certissimum: ubi illud usu venit:

"Et quæ non prosunt singula, multa juvant."

Itaque Mariæ partes potiores; "Martha, Martha, attendis ad plurima, unum sufficit." Hinc illa fabula Æsopi de vulpe et feli. Jactabat enim vulpes, quantas artes haberet et effugia, quibus se a canibus eriperet; felis autem se unico tantum confidere auxilio dixit, utpote quæ tenuem scandendi facultatem haberet. Quod tamen reliquis illis vulpinis longe præstantius præsidium fuit: unde adagium; "Multa novit vulpes, sed felis unum magnum." Quin etiam in hujus fabulæ significatione morali idem cernitur: nam potenti et fido amico niti, plus præsidii habet, quam artes et astutiæ complurimæ.

Atque hæc exempli loco sufficient. Superest autem nobis ejusmodi colorum numerus etiam magnus, quos olim adolescentes congesimus: attamen sine illustrationibus suis, atque elenchis; quos hoc tempore concinnare non vacat: ideoque colores illos nudos, absque illustrationibus suis (cum superiores isti vestiti prodeant) proponere, minime nobis consentaneum videtur. Illud interim monemus, rem istam, qualiscunque ea videri possit, haud parvi, judicio nostro, esse pretii: utpote quæ ex philosophia prima, et ex politica, et ex rhetorica participet. Atque de signis popularibus, sive coloribus boni ac mali apparentis, tam simplicis quam comparati, hæc tunc.

Secunda collectio, quæ pertinet ad promptuariam, et desideratur, ea est, quam Cicero (ut superius in logica diximus) innuit; cum præcipit, ut in promptu habeantur loci communes in utramque partem disputati et tractati. Quales sunt, "Pro verbis legis," et "pro sententia legis," etc. Nos vero hoc præceptum etiam ad alia extendimus; ut non solum ad genus judiciale, sed etiam ad deliberativum et demonstrativum adhibeatur. Omnino hoc volumus, locos omnes, quorum frequens est usus (sive ad probationes et refutationes, sive ad suasiones et dissuasiones, sive ad laudes et vituperia spectent) meditados jam haberi, eosque ultimis ingenii viribus, et tanquam improbe, et prorsus præter veritatem, at tolli, et deprimi. Modum autem hujus collectionis, tam ad usum, quam ad breviter, optimum fore censemus, si hujusmodi loci contrahantur in sententias quasdam acutas et concisas; tanquam glomos quosdam, quorum fila in fusiorem discursum, cum res postulat, explicari possint. Atque similem quandam diligentiam in Seneca reperimus, sed in hypothesibus sive casibus. Ejus generis, cum plurima parata habeamus, aliqua ad exemplum proponere visum est. Ea autem antitheta rerum nominamus.

## EXEMPLA ANTITHETORUM.

L.

NOBILITAS.

PRO.

CONTRA.

Quibus virtus a genere penitus insita est; ii jam non mali esse nolunt, sed nequeunt.

Nobilitas laurea, qua tempus homines coronat. Antiquitatem etiam in monumentis mortuis veneramus; quanta magis in vivis?

Si nobilitatem familiarum contemas, quæ tandem erit differentia inter sobolem hominum et brutorum?

Nobilitas virtutem invidiæ subducit, gratias tradit.

Raro ex virtute nobilitas; rarius ex nobilitate virtus.

Nobiles majorum deprecatione ad veniam sepius utuntur, quam suffragatione ad honores.

Tanta solet esse industria hominum noverum, ut nobiles præ illis tanquam status videantur.

Nobiles in stadio respectant nimis sæpe: quod mali cursoris est.

II.

FORMA.

PRO.

CONTRA.

Deformes naturam ulcisci solent.

Et virtus nil aliud, quam interna forma; et forma nil aliud, quam externa virtus.

Deformes se a contemptu, per malitiam utique suam, vindicare cupiunt.

Forma virtutes splendere facit, vitia rubere.

Virtus, ut gemma nobilis, melius inseritur sine multo auro et ornato.

Quod vestis lauta deformi, hoc forma improbo.

Similiter plerunque leves sunt, quos forma ornat, et quos movet.

III.

JUVENTUS.

PRO.

CONTRA.

Primæ cogitationes et juvenum consilia, plus habent e Numine.

Senes sibi sapiunt magis; aliis et reipublicæ minus.

Si conspici daretur, magis deformat animos, quam corpora, senectus.

Senes omnia metuunt, præter Deos.

Juventus penitentia campus.

Ingenitus est juvenibus senilis auctoritatis contemptus; ut quisque suo periculo sapiat.

Tempus, ad quæ consilia non advocatur, nec rata habet.

Senibus Veneres mutantur in Gratias.

IV.

VALETUDO.

PRO.

CONTRA.

Cura valetudinis animi humilem facit, et corpori supplicem.

Sæpe convalescere, et sæpe juvenescere.

Excusatio valetudinis

## PRO.

Corpus sanum, hospes animæ est; ægrum, ergastularius.

Nil tam summas actionum promovet, quam prospera valetudo: at contra, infirma feriatur nimis.

## CONTRA.

polychresta; ad quam etiam sani confugimus.

Nimis arcto fœdere corpus animæ jungit sanitas.

Et lectus magna imperia administravit, et lectica magnos exercitus.

## V.

## UXOR ET LIBERI.

## PRO.

Charitas reipublicæ incipit a familia.

Uxor et liberi disciplina quædam humanitatis; at cœlibes tetrici et severi.

Cœlibatus et orbitas ad nil aliud conferunt, quam ad fugam.

Morti sacrificat, qui liberos non procreat.

Cætera felices, in liberis fere infortunati sunt; ne divinæ sortium appropinquent homines.

## CONTRA.

Qui uxorem duxit, et liberos suscepit, obsides fortunæ dedit.

Generare, et liberi, humana sunt; creare, et opera, divina.

Brutorum æternitas soboles; virorum fama, merita, et instituta.

Œconomicæ rationes publicas plerunque everunt.

Aliquibus fortuna Priami placuit, qui suis omnibus superstes fuit.

## VI.

## DIVITIÆ.

## PRO.

Divitias contemnunt, qui desperant.

Invidia divitiarum, virtutem effecit deam.

Dum philosophi dubitant, utrum ad virtutem an voluptatem omnia sint referenda, collige instrumenta utriusque.

Virtus per divitias vertitur in commune bonum.

Cætera bona provinciam habent administrationem, divitiæ solæ generalem.

## CONTRA.

Divitiarum magnarum vel custodia est, vel dispensatio quædam, vel fama; at nullus usus.

Annon vides lapillis, et id genus deliciis, fingi pretia, ut possit esse aliquis magnarum divitiarum usus?

Multi, dum divitiis suis omnia venalia fore crediderunt, ipsi in primis venierunt.

Non aliud divitias dixerim, quam impedimenta virtutis: nam virtuti et necessariæ sunt et graves.

Divitiæ bona ancilla, pessima domina.

## VII.

## HONORES.

## PRO.

Honores non tyrannorum (ut loquuntur) sed providentiæ divinæ calculi sunt.

Honores faciunt et vir-

## CONTRA.

Dum honores appetimus, libertatem exuimus.

Honores dant fere potestatem earum rerum, quas optima conditio

## PRO.

tutes et vitia conspicua; itaque illas provocant, hæc refrænant.

Non novit quispiam, quantum in virtutis cursu profecerit; nisi honores ei campum præbeant apertum.

Virtutis, ut rerum aliarum, rapidus motus est ad locum, placidus in loco: est autem virtutis locus honos.

## CONTRA.

est nolle, proxima non posse.

Honorum ascensus arduus, statio lubrica, regressus præceps.

Qui in honore sunt, vulgi opinionem mutuentur oportet, ut seipsos beatos putent.

## VIII.

## IMPERIA.

## PRO.

Felicitate frui, magnum bonum est; sed eam et aliis impertiri posse, adhuc majus.

Reges non hominum instar, sed astrorum sunt: nam et in singulos, et in tempora ipsa, magnum habent influxum.

Qui Dei vices gerunt, iis resistere, non tantum læsæ majestatis crimen est, sed theomachia quædam.

## CONTRA.

Quam miserum, habere nil fere, quod appetas; infinita, quæ metuas?

Qui in imperiis sunt, similes sunt corporibus cœlestibus, quæ magnam venerationem habent, requiem nullam.

Nemo humanæ sortis ad deorum convivia admittitur, nisi ad ludibrium.

## IX.

## LAUS, EXISTIMATIO.

## PRO.

Virtutis radii reflexi laudes.

Laus honor is est, ad quem liberis suffragiis pervenitur.

Honores a diversis politiis conferuntur, sed laudes ubique sunt libertatis.

Vox populi habet aliquid divinum: nam quomodo aliter tot capita in unum conspirare possint?

Ne mireris, si vulgus verius loquatur, quam honoratioribus; quia etiam tutius loquitur.

## CONTRA.

Fama deterior iudex, quam nuncia.

Quid viro bono cum saliva vulgi?

Fama veluti fluvius, levitia attollit, solida mergit. Infimarum virtutum apud vulgus laus est, mediarum admiratio, supremarum sensus nullus.

Laus magis ex ostentatione, quam ex merito; et ventosis magis accedit, quam realibus.

## X.

## NATURA.

## PRO.

Consuetudinis progressus est arithmeticus, naturæ geometricus.

## CONTRA.

Cogitamus secundum naturam; loquimur secundum præcepta; sed

## PRO.

Ut in rebus publicis se habent leges communes erga consuetudines, eodem modo in singulis se habet natura ad consuetudinem.

Consuetudo contra naturam, quasi tyrannia quædam est: et cito, ac levi occasione corrumpitur.

## CONTRA.

agimus secundum consuetudinem.

Natura pedantius quidam est, consuetudo magistratus.

## XI.

## FORTUNA.

## PRO.

Virtutes apertæ laudes pariunt, occultæ fortunas.

Virtutes officiorum laudes pariunt, facultatum fortunas.

Fortuna veluti galaxia; hoc est, nodus quarundam obscurarum virtutum, sine nomine.

Fortuna saltem ob filias suas honoranda est, confidentiam scilicet, et auctoritatem.

## CONTRA.

Stultitia unius, fortuna alterius.

In fortuna illud præcipue laudaverim, quod cum non eligat, non tæatur.

Viri magni, dum invidiam virtutum suarum declinarunt, inter fortunæ cultores reperti sunt.

## XII.

## VITA.

## PRO.

Absurdum est accidentia vitæ magis amare, quam vitam ipsam.

Præstat ad omnia, etiam ad virtutem, curriculum longum, quam breve.

Absque spatiis vitæ majoribus, nec perficere datur, nec perdicere, nec poenitere.

## CONTRA.

Philosophi dum tantum apparatus adversus mortem colligunt, ipsam magis timendam effecerunt.

Mortem homines timeant, quia nesciunt, ut pueri, tenebras.

Non invenias inter humanos affectum tam pusillum, qui, si intendatur paulo vehementius, non mortis metum superet.

Mori velle, non tantum fortis, aut miser, aut prudens, sed etiam fastidiosus potest.

## XIII.

## SUPERSTITIO.

## PRO.

Qui zelo peccant, non probandi, sed tamen amandi sunt.

Mediocritates moralibus debentur, extremitates divinis.

Superstitiosus, religiosus designatus.

## CONTRA.

Ut simiæ, similitudo cum homine, deformitatem addit: ita superstitioni, similitudo cum religione.

Quale odium est affectionis in civilibus, tale superstitionis in divinis.

## PRO.

Fabulosissima quæque portenta cujusvis religionis citius crediderim, quam hæc omnia sine Numine fieri.

## CONTRA.

Præstat nullam habere de diis opinionem, quam contumeliosam.

Non Epicuri schola, sed Stoa, veteris republicas perturbavit.

Non cadit in mentem humanam, ut sit merus atheista dogmate; sed magni hypocritæ, sunt veri atheistæ; qui sacra perpetuo contrectant, sed nunquam verentur.

## XIV.

## SUPERBIA.

## PRO.

Superbia etiam vitiis insociabilis; atque ut venenum veneno, ita haud pauca vitia superbia expelluntur.

Facilis, etiam alienis vitiis obnoxius est: superbus, tantum suis.

Superbia, si ab aliorum contemptu, ad sui contemptum ascendet, fiet demum philosophia.

## CONTRA.

Hedera virtutum ac bonorum omnium superbia.

Cætera vitia virtutibus tantum contraria; superbia sola contagiosa.

Superbia optima vitorum conditione caret, id est, latebris.

Superbus, cum cæteros contemnit, se interim negligit.

## XV.

## INGRATITUDO.

## PRO.

Crimen ingrati animi nil aliud est, quam perspicacia quædam in causam beneficii collati.

Dum grati erga quosdam esse volumus; nec cæteris justitiam præstamus, nec nobis ipsis libertatem.

Beneficii gratia eo minus reddenda est, quod de pretio non constat.

## CONTRA.

Crimen ingrati animi, non suppliciiis coercetur, sed furis permittitur.

Arctiora sunt vincula beneficiorum, quam officiorum: quare qui ingratus, etiam injustus, et omnia.

Ea est conditio humana: nemo tam publica fortuna natus est, quin privatæ et gratiæ, et vindictæ, se omnino debeat.

## XVI.

## INVIDIA.

## PRO.

Naturale est exprobrationem fortunæ suæ odisse.

Invidia in rebus publicis, tanquam salubris ostracismus.

## CONTRA.

Invidia festos dies non agit.

Nemo virtuti invidiam reconciliaverit præter mortem.

Invidia virtutes laboribus exercet, ut Juno Herculem.

## XVII.

## IMPUDICITIA.

## PRO.

Zelotypiæ debetur, quod castitas sit facta virtus.

Multa tristitia opus est, ut quis venerem rem seri- am putet.

Quid vel diætæ par- tem, vel munditiæ spe- ciem, vel superbiæ filiam, inter virtutes collocas?

Amorum, ut avium syl- vestrium, nulla proprie- tas est, sed jus possessione transfertur.

## CONTRA.

Pessima Circes trans- formatio impudicitia.

Impudicus prorsus re- verentiam sui perdidit; quod frænum est omnium vitiorum.

Omnes, ut Paris, qui formæ optionem faciunt, prudentiæ et potentiæ jacturam faciunt.

In veritatem non vul- garem incidit Alexander; cum somnum et venerem, mortis arrhabones esse dixit.

## XVIII.

## CRUDELITAS.

## PRO.

Nulla virtutum tam sæpe rea est, quam cle- mentia.

Crudelitas, si a vin- dicta est, justitia est; si a periculo, prudentia.

Qui misericordiam in- imico impertit, sibi de- negat.

Non sæpius phleboto- miæ necessariæ sunt in curationibus, quam cædes in civilibus.

## CONTRA.

Cædibus grassari, aut feræ, aut furie est.

Crudelitas viro bono semper fabulosa esse vi- detur, et fictio tragica.

## XIX.

## GLORIA VANA.

## PRO.

Qui suas laudes appetit, aliorum simul appetit utilitates.

Qui tam sobrius est, ut nihil alienum curet, vereor ne et publica ali- ena putet.

Ingenia, in quibus ali- quid inane est, facilius curam reipublicæ reci- piunt.

## CONTRA.

Gloriosi semper facti- osi, mendaces, mobiles, nimii.

Thraso Gnathonis præda.

Turpe est proco solici- tare ancillam; est autem virtutis ancilla laus.

## XX.

## JUSTITIA.

## PRO.

Imperia et politiæ, jus- titiæ tantum additamenta sunt; si enim justitia ali- ter possit exerceri, illis minime fuerit opus.

Justitiæ debetur, quod homo homini sit Deus, non lupus.

## CONTRA.

Si hoc est justum esse; Quæ tibi fieri nolis, ea alteri non facere, cle- mentia demum justitia est.

Si suum cuique tribu- endum est, certe et venia humanitati.

## PRO.

Justitia etsi vitia tol- lere non possit, tamen hoc efficit, ut non lædant.

## CONTRA.

Quid mihi æquitatem narras, cum sapienti om- nia inæqualia sint?

Considera qualis reo- rum conditio fuerit apud Romanos, et pronuncia justitiam e republica non esse.

Vulgaris ista justitia politiarum, philosophus in aula; hoc est, facit tantum ad reverentiam imperantium.

## XXI.

## FORTITUDO.

## PRO.

Nil terribile nisi ipse timor.

Nil aut in voluptate solidum, aut in virtute munitum, ubi timor in- festat.

Qui pericula apertis oculis intuetur, ut exci- piat, advertit et ut evitet.

Cæteræ virtutes nos a dominatu liberant vitio- rum; fortitudo sola a dominatu fortunæ.

## CONTRA.

Præclara virtus velle perire ut perdas.

Præclara virtus quam etiam ebrietas inducit.

Vitæ suæ prodigus, ali- enæ periculosus.

Virtus ferreæ ætatis fortitudo.

## XXII.

## TEMPERANTIA.

## PRO.

Eadem fere vis absti- nendi et sustinendi.

Uniformitates, concordiæ, et mensuræ motuum, cœlestia sunt, et charac- teres æternitatis.

Temperantia, velut friga salubria, animi vires colligit et firmat.

Exquisiti et vagi sen- sus narcoticis indigent; similiter et affectus.

## CONTRA.

Negativæ istæ virtutes non placent; nam inno- centiam præstant, non merita.

Languet mens, quæ excessibus caret.

Amo virtutes, quæ ex- cellentiam actionis indu- cunt, non hebetudinem passionis.

Cum consonantes ani- mi motus ponis, paucos ponis; nam pauperis est numerare pecus.

Ista (Non uti, ut non appetas; Non appetere, ut non timeas) pusilla- nimi sunt et diffidentis.

## XXIII.

## CONSTANTIA.

## PRO.

Basis virtutum con- stantia.

Miser est, qui qualis ipse futurus sit, non novit.

## CONTRA.

Constantia, ut janitrix morosa, multa utilia in- dicia abigit.

Æquum est, ut con-

## PRO.

Imbecillitas humani iudicii, rebus ipsis constare non potest; quare saltem sibi constat.

Etiam vitii decus aspirat constantia.

Si ad fortunæ inconstantiam accedat etiam inconstantia mentis, in quantis tenebris vivitur?

Fortuna, tanquam Proteus, si perseveres, ad formam redit.

## CONTRA.

stantia res adversas bene toleret; nam fere inducit. Stultitia brevissima optima.

## XXIV.

## MAGNANIMITAS.

## PRO.

Si animus semel generosos fines optaverit; statim non modo virtutes circumstant, sed et Numina.

Virtutes ex habitu, aut præceptis, gregales sunt; ex fine, heroicæ.

## CONTRA.

Magnanimitas est virtus poetica.

## XXV.

## SCIENTIA, CONTEMPLATIO.

## PRO.

Ea demum voluptas est secundum naturam, cujus non est satiety.

Dulcissimus prospectus in erroribus aliorum subjacentes.

Quam bonum est orbem mentis habere concentricos universo?

Omnes affectus pravi, falsæ æstimationes sunt; atque eadem sunt bonitas et veritas.

## CONTRA.

Contemplatio, speciosa inertia.

Bene cogitare, non multo melius est, quam bene somnare.

Orbem Numen curat, tu patriam.

Vir politicus etiam contemplationes serit.

## XXVI.

## LITERÆ.

## PRO.

Si de rebus minutis, libri scripti forent, vix ullus esset experientiæ usus.

Lectio est conversatio cum prudentibus; actio fere cum stultis.

Non inutiles scientiæ existimandæ sunt, quarum in se nullus est usus, si ingenia acuant, et ordinant.

## CONTRA.

In academiis discunt credere.

Quæ unquam ars docuit tempestivum artis usum?

Sapere ex regula, et ex experientia, plane contrariæ rationes sunt; ut qui alteri assuefactus sit, ad alterum sit ineptus.

Artis sæpissimæ ineptus usus est, ne sit nullus.

Hoc fere omnes academici habent, ut ex qualibet re soleant agnoscere quod sciant, et non addiscere quod nesciant.

## XXVII.

## PROMPTITUDO.

## PRO.

Opportuna prudentia non est, quæ celeris non est.

Qui cito errat, cito errorem emendat.

Qui ex composito, et non obiter prudens est, nil magni facit.

## CONTRA.

Prudentia non alte petitur, quæ præsto est.

Prudentia, ut vestis, levis, quæ expedita.

Cujus consilia non maturat deliberatio, nec prudentiam ætas.

Quæ ad breve tempus excogitantur, ad breve tempus placent.

## XXVIII.

## TACITURNITAS IN SECRETIS.

## PRO.

Taciturno nil reticetur, quia omnia tuto communicantur.

Qui facile loquitur quæ scit, loquitur et quæ nescit.

Secretis etiam mysteria debentur.

## CONTRA.

Varietas morum optime animum collocat in secreto.

Taciturnitas confessoris virtus.

Taciturno omnia reticentur, quia silentium reperditur.

Tectus, ignoto proximus.

## XXIX.

## FACILITAS.

## PRO.

Amo virum alieno affectui obnoxium, sed tamen iudicium ab obsequio revocantem.

Flexibile esse, ad naturam auri proxime accedit.

## CONTRA.

Facilitas, iudicii quædam inepta privatio.

Facilium beneficia, debita videntur; negationes, injuriæ.

Sibi gratiam habet, qui a facili aliquid impetrat.

Facilem omnes difficultates premunt; nam omnibus se implicat.

Facilis fere se recipit cum pudore.

## XXX.

## POPULARITAS.

## PRO.

Prudentibus eadem fere placent, at stultorum varietati occurrere prudentiæ est.

Colere populum, est coli.

Qui ipsi magni viri sunt, neminem unum fere habent, quem vereantur, sed populum.

## CONTRA.

Qui valde cum stultis congruit, ipse suspectus esse potest.

Qui turbæ placet, fere et turbas miscet.

Nil moderatum vulgo gratum est.

Infima assentatio est assentatio vulgi.

## XXXI.

## LOQUACITAS.

## PRO.

Qui silet, aut alios habet pro suspectis, aut suspectus est ipse sibi.

Custodiæ omnes infelices; miserrima silentii.

Silentium stultorum virtus: itaque recte ille silenti: Si prudens es, stultus es; si stultus, prudens.

Silentium, veluti nox, insidiis opportunum.

Cogitationes in profuente sanissimæ.

Silentium, solitudinis genus.

Opinionis se venditat, qui silet.

Silentium nec pravas cogitationes egerit, nec bonas distribuit.

## CONTRA.

Silentium verbis, et gratiam addit, et auctoritatem.

Silentium, veluti somnus quidam, alit prudentiam.

Silentium fermentatio cogitationum.

Stylus prudentiæ silentium.

Silentium ambit veritatem.

## XXXII.

## DISSIMULATIO.

## PRO.

Dissimulatio, compendiaria sapientia.

Non idem dicere, sed idem spectare debemus.

Etiam in animo deformis nuditas.

Dissimulatio et decori est, et præsidio.

Sepes consiliorum, dissimulatio.

Aliqui bono suo falluntur.

Qui indissimulanter omnia agit, æque decipit; nam plurimi, aut non capiunt, aut non credunt.

Indissimulatio nihil aliud, quam animi impotentia.

## XXXIII.

## AUDACIA.

## PRO.

Docet improbare, qui verecundatur.

Quod actio oratori, id audacia viro civili; primum, secundum, tertium.

Confitentem verecundiam amo, accusantem odi.

Confidentia morum animos promptius sociat.

Placet obscurus vultus, et perspicua oratio.

## CONTRA.

Audacia stultitiæ viator.

Inverecundia inutilis, nisi ad imposturam.

Confidentia, stultorum imperatrix, prudentium scurra.

Audacia est stupor quidam sensus, cum malitia voluntatis.

## XXXIV.

## CEREMONIÆ, PUNCTOS, AFFECTATIO.

## PRO.

Vultus et gestus decora moderatio, verum condimentum virtutis.

Si et in verbis vulgo paremus, quidni in habitu, et gestu?

Qui in levibus, et quotidiana consuetudine, decus non retinent, sit licet vir magnus, noris tamen hunc tantum certis horis sapere.

Virtus et prudentia sine punctis, velut peregrinæ linguæ sunt; nam vulgo non intelliguntur.

Qui vulgi sensum per congruitatem non novit, is, si nec per observationem noverit, omnium stultissimus est.

Puncti translatio sunt virtutis in linguam vernaculam.

## CONTRA.

Quid deformis, quam scenam in vitam transferre?

Ex ingenuitate decorum, ex arte odium.

Magis placent cerusatae buccæ, et calamistrata coma, quam cerusati et calamistrati mores.

Qui animum ad tam exiles observationes applicat, magnæ cogitationis capax non est.

Affectatio ingenuitatis, putredo lucens.

## XXXV.

## JOCI.

## PRO.

Oratorum ara jocus.

Qui in omnibus modestum leporem miscet, libertatem animi retinet.

Res est supra opinionem politica, facile transire a joco ad serium, a serio ad jocum.

Veritatis, alias non perventuræ, sæpe vehiculum jocus.

## CONTRA.

Istos deformitatum ac concinnitatum aucupes quis non contemnat?

Rerum magnitudinem eluere joco, improbum artificium est.

Jocos tum considera, cum risu destituti sunt.

Faceti isti fere non penetrant ultra superficiem rerum, ubi joci sedes est.

Ubi jocus ad seria momenti aliquid habet, ibi levitas puerilis est.

## XXXVI.

## AMOR.

## PRO.

Annon vides, omnes se querere? at amans solus se invenit.

Non est melior ordinatio animi, quam ex imperio affectus alicujus insignis.

Qui sapit, desiderium quærat; nam qui non aliquid insigniter appetit, ei omnia ingrata sunt, et tædio plena.

Quidni in unitate acquiescat unus?

## CONTRA.

Amori multum debet scena, nihil vita.

Nil tam vari nominis est, quam amor: nam res, aut tam stulta est, ut se nesciat, aut tam turpis, ut se fuco condat.

Odi istos monophrontistas.

Angusta admodum contemplatio amor.

## XXXVII.

## AMICITIA.

## PRO.

Eadem facit amicitia, quæ fortitudo, sed suavius.

Suave condimentum omnium bonorum amicitia.

Pessima solitudo, non veras habere amicitias.

Digna malæ fidei ultio amicitias privari.

## CONTRA.

Qui amicitias arctas copulat, novas necessitates sibi imponit.

Animi imbecilli est, partiri fortunam.

## XXXVIII.

## ADULATIO.

## PRO.

Adulatio magis ex more, quam ex malitia.

Laudando instituire, semper formula fuit debita potentioribus.

## CONTRA.

Adulatio stylus servorum.

Adulatio calx vitiorum.

Adulatio aucupii illud genus, quod similitudine vocis aves fallit.

Adulationis deformitas comica, nocumentum tragicum.

Auribus mederi difficillimum.

## XXXIX.

## VINDICTA.

## PRO.

Vindicta privata, iustitia agrestia.

Qui vim rependit, legem tantum violat, non hominem.

Utilis metus ultionis privatæ; nam leges nimium sæpe dormiunt.

## CONTRA.

Qui injuriam fecit, principium malo dedit; qui reddidit, modum abstulit.

Vindicta, quo magis naturalis, eo magis coercenda.

Qui facile injuriam reddit, is fortasse tempore, non voluntate posterior erat.

## XL.

## INNOVATIO.

## PRO.

Omnis medicina innovatio.

Qui nova remedia fugit, nova mala operitur.

Novator maximus tempus: quidni igitur tempus imitemur?

Exempla remota inepta sunt; recentia corrupta et ambitiosa.

Imperitis et conten-

## CONTRA.

Novi partus deformes sunt.

Nullus auctor placet, præter tempus.

Nulla novitas absque injuria; nam præsentia convellit.

Quæ usu obtinere, si non bona, at saltem apta inter se sunt.

Quis novator tempus

## PRO.

tiosis permittit, ut ad exempla res agant.

Sicut qui nobilitatem in familiam introducunt, digniores fere sunt posteris; ita novationes rerum plerumque præstant iis, quæ ad exempla fiunt.

Morosa morum retentio, res turbulenta est, æque ac novitas.

Cum per se res mutantur in deterius, si consilio in melius non mutantur, quis finis erit mali?

Moris servi, temporis ludibria.

## CONTRA.

imitatur, quod novationes ita insinuat, ut sensus fallant?

Quod præter spem evenit, cui prodest, minus acceptum; cui obest, magis molestatum.

## XLI.

## MORA.

## PRO.

Fortuna multa festinanti vendit, quibus morantem donat.

Dum initia rerum amplecti properamus, umbras prensamus.

Fluctuantibus rebus advertendum, inclinantis agendum.

Prima actionum Argo committenda sunt, extrema Briareo.

## CONTRA.

Occasio primum anam vasis porrigit, deinde ventrem.

Occasio instar Sibyllæ minuit oblatum, pretium auget.

Celeritas, Orci galea.

Quæ mature fiunt, iudicio fiunt; quæ sero, per ambitum.

## XLII.

## PRÆPARATIO.

## PRO.

Qui parvis copiis rem magnam aggreditur, fingit opportunitatem, ut speret.

Parvis apparatibus non fortuna, sed prudentia emitur.

## CONTRA.

Optimus terminus parandi, prima occasio agendi.

Nemo speret, se fortunam apparatu ligare posse.

Alteratio apparatus et actionis, politica sunt: distinctio tumida et infelix.

Magnus apparatus prodigus et temporis et rerum.

## XLIII.

## PRINCIPIIS OBSTARE.

## PRO.

Plura pericula fallunt, quam vincunt.

Minus operis est periculo remedium adhibere, quam progressum ejus observare et custodire.

## CONTRA.

Docet periculum progredi, qui accingitur, et periculum figit remedio.

Etiam in remediis periculorum, levia pericula subsistunt.

## PRO.

Non jam leve est periculum, si leve videatur.

## CONTRA.

Præstat cum paucis remediis, quæ invaluerunt, rem habere; quam cum minis singulorum.

## XLIV.

## CONCILIA VIOLENTA.

## PRO.

Qui lenem istam prudentiam amplectuntur, iis augmenta mali salubria sunt.

Necessitas, quæ violenta consulit, eadem exequitur.

## CONTRA.

Omne remedium violentum, prægnans novi mali.

Violenta consilia nemo dat, præter iram et metum.

## XLV.

## SUSPICIO.

## PRO.

Diffidentia, nervi prudentiæ; at suspicio medicamentum arthriticum.

Merito ejus fides suspecta est, quam suspicio labefacit.

Suspicio fragilem fidem solvit, fortem intendit.

## CONTRA.

Suspicio fidem absolvit.

- Suspicionum intemperies est mania quædam civilis.

## XLVI.

## VERBA LEGIS.

## PRO.

Non est interpretatio, sed divinatio, quæ recedit a litera.

Cum receditur a litera, judex transit in legislatorem.

## CONTRA.

Ex omnibus verbis eliciendus est sensus, qui interpretetur singula.

Pessima tyrannis lex in equuleo.

## XLVII.

## PRO TESTIBUS CONTRA ARGUMENTA.

## PRO.

Secundum oratorem, non secundum causam pronunciat, qui argumentis nititur.

Qui argumentis potius credit, quam testibus; etiam ingenio magis debet fidere, quam sensui.

Tutum foret argumentis credere, si homines nihil absurdi facerent.

Argumenta, cum sint contra testimonia, hoc præstant, ut res mira videatur, non autem ut vera.

## CONTRA.

Si testibus credendum sit contra argumenta, sufficit, tantum judicem esse non surdum.

Argumenta antidotum contra venena testimoniorum.

Iis probationibus tutissimo creditur, quæ rarissime mentiuntur.

juvenilis fructum perire: præsertim cum (si quis acutius introspiciat) semina sint, non flores. In illo autem adolescentiam plane spirant, quod sint in morali, sive demonstrativo genere, uberiora; in deliberativo, et judiciali, perpauca.

Tertia collectio, quæ pertinet ad promptuariam, atque etiam desideratur, est ea, quam vocare placet, formularum minorum. Illæ autem sunt, veluti vestibula, posticæ, ante-cameræ, re-cameræ, transitus, etc. orationis; quæ indiscriminatim omnibus subjectis competere possint. Quales sunt præfationes, conclusiones, digressiones, transitiones, promissiones, declinationes, et plurima ejusmodi. Quemadmodum enim in ædificiis, plurimum facit et ad voluptatem et ad usum, ut frontispicia, gradus, ostia, fenestræ, aditus, transitus, et hujusmodi, commode distribuuntur; eodem modo etiam in oratione fit, ut addita et interpositionis istæ (si decore et perite formentur et collocentur) plurimum tum gratiæ, tum commoditatis, unversæ orationis structuræ adjiciant. Harum formularum exemplum unum aut alterum proponemus, neque diutius iisdem immorabimur. Etsi enim sint res haud exigui usus, tamen cum nihil in his addamur de nostro, sed tantum formulas nudas, ex Demosthene, aut Cicerone, aut alio quopiam selecto auctore, describamus, inferius quiddam videntur, quam ut in eo tempus teramus.

## EXEMPLA FORMULARUM MINORUM.

## CONCLUSIO DELIBERATIVÆ.

"Sic et culpam præteritam fas erit redimere, et futuris incommodis eadem opera prospicere."

## PARTITIONIS ACCURATÆ COROLLARIUM.

"Ut omnes intelligant, nihil me et subterfugere voluisse reticendo, aut obscurare dicendo."

## TRANSITIO CUM MONITO.

"Verum hæc ita prætereamus, ut tamen intuentes et respectantes, relinquamus."

## PRÆOCCUPATIO CONTRA OPINIONEM INVETERATAM.

"Faciã, ut intelligatis in tota causa, quid res ipsa tulerit, quid error affinxerit, quid invidia conflexerit."

Hæc pauca enumerasse, ad exempla, satis fuerit; cum quibus, appendices rhetoricæ, quæ ad promptuariam spectant, concludimus.

## CAPUT QUARTUM.

*Appendices generales duæ traditivæ; critica, et pædagogica.*

SUPERSUNT duæ appendices traditivæ in genere; altera critica, altera pædagogica. Sicut enim pars traditivæ præcipua in scriptione librorum consistit, ita pars ejus relativa in librorum versatur lectione: lectio autem, vel magistrorum ope regitur, vel industria cujusque propria perficitur; atque huic rei inserviunt doctrinæ illæ, quas diximus, duæ.

Atque hæc antitheta (quæ nunc proposuimus) fortasse tanti non fuerint; sed cum jam olim parata et collecta a nobis essent, nolimus diligentia nostrâ

Ad criticam spectant, primo, auctorum probatorum limata correctio et emendata editio; quibus et ipsorum auctorum honor vindicatur, et studiosis lumen præfertur. Qua tamen in re studiis aut parum detrimenti intulit quorundam hominum diligentia temeraria. Criticis enim haud paucis mos est, ubi incidunt in quidpiam, quod non intelligunt, vitium statim in exemplari supponere. Veluti in illo loco Taciti: cum quædam colonia jus asyli apud senatum assereret, narrat Tacitus, non æquis admodum auribus, quæ ab iis proferebantur, fuisse ab imperatore et senatu audita: itaque legati, causa diffusi, bonam pecuniæ summam Tito Vinio dederunt, ut eis patrocineretur. Hoc itaque pacto res obtinuit: "tum" (inquit Tacitus) "dignitas et antiquitas coloniae valuit:" quasi argumenta, quæ antea levia videbantur, accedente pretio, novum tum pondus accepissent. At criticus quidam, non ex infimis, verbum "tum" expunxit, et "tantum" reposuit. Atque hac prava criticorum consuetudine factum est, ut (quod non nemo prudenter notavit) exemplaria maxime castigata sint sæpenumero minime omnium casta. Quinimo, ut verum dicamus, nisi critici fuerint eruditi in scientiis illis, de quibus libri ab ipsis editi tractant, periculo diligentia eorum non vacat.

Secundo ad criticam spectant, auctorum interpretatio et explicatio, commentarii, scholia, notæ, spicilia, et similia. In istiusmodi autem laboribus, pessimus ille criticorum nonnullos quasi morbus invasit, ut multa ex obscurioribus transilient, in satis vero perspicuis ad fastidium usque immorentur, et expatiantur. Scilicet, non tam illud agitur, ut auctor ipse illustretur, quam ut criticus ille multiplicem suam eruditionem, et variam lectionem, ubique arrepta occasione, ostentet. Optandum imprimis foret (licet hæc res ad traditivam principalem, non ad appendices pertineat) ut qui argumenta obscuriora et nobiliora pertractet scriptor, suas ipse explanationes subjungat; ut et textus ipse digressionibus aut explanationibus non abruptatur; et notæ a scriptoris mente non recedant. Cujusmodi quidpiam suspicamur de Theone Euclidis.

Tertio ad criticam spectat (quod etiam nomen eidem indidit) de auctoribus, quos edunt, breve aliquod iudicium interponere; et illos cum cæteris scriptoribus, qui eadem tractant, comparare; ut per huiusmodi censuram studiosi et de librorum delectu moneantur, et ad ipsam lectionem eorum instructiores accedant. Atque hoc ultimum, est criticorum tanquam cathedra, quam certe nostra ætate nobilitarunt viri nonnulli magni, majores certe, nostro iudicio, quam pro modulo criticorum.

Ad pædagogicam quod attinet, brevissimum foret dictu; Consule scholas Jesuitarum: nihil enim, quod in usum venit, his melius. Nos tamen pauca, more nostro, monebimus, tanquam spicas legentes. Omnino institutionem pueritiæ et juventutis collegiatam probamus; non in ædibus privatis; non sub ludimagistris tantum. Adest adolescentulis in collegiis æmulatio major erga æquales; adest quoque ipse vultus et aspectus virorum gravium, quod facit ad verecundiam, et teneros animos etiam a principio conformat ad exemplar: demique sunt quidem plurima educationis collegiatæ commoda. In ordine

autem et modo disciplinæ, illud imprimis consuluerim; ut caveatur a compendiis; et a præcocitate quadam doctrinæ, quæ ingenia reddat audacula et, magnos profectus potius ostendet, quam faciat. Quin et favendum nonnihil ingeniorum libertati, ut si quis, quæ ex more disciplinæ sunt, faciat, et simul tempus ad alia, in quæ propensus est, suffiretur, ne utique cohibeatur. Porro operæ pretium fuerit, diligenter animadvertere (quod fortasse adhuc fuerit non notatum) esse duos assuefaciendi, et exercendi, et præparandi ingenia modos, eosque tanquam antistrophos. Alter incipit a facilibus, et ad magis ardua paulatim deducit; alter ab initio duriora imperat et urget ut, iis obtentis, facilibus quis etiam suaviter perfungi possit. Alia enim est methodus, incipere natæ cum utribus, qui sublevant; alia, incipere saltare cum calcis ponderosis, qui aggravent. Neque facile est dictu, quantum harum methodorum prudens intermixtio conferat ad promovendas, tam animi, quam corporis facultates. Item applicatio et delectus studiorum, pro natura ingeniorum, quæ erudiantur, res est singularis et usus et iudicii: quam etiam bene et vere notatam et perspectam magistri parentibus adolescentium debent; ut de genere vitæ, cui filios suos destinant, consulere possent. Verum et illud attentius paulo observandum, non tantum in iis, ad quæ natura quisque sua fertur, longe maximos fieri profectus; sed etiam ad ea, ad quæ vitio naturæ quis maxime fuerit inhabilis, reperiri in studiis ad hoc proprie delectis remedia et curationes. Exempli gratia; si cuiquam ingenium tale sit, quale est avium, ut facile abripiatur, nec per moram (qualem oportet) intentum esse sustineat; remedium huic rei præbebunt mathematica, in quibus, si evagetur paulo mens, de integro renovanda est demonstratio. Etiam exercitorum, in erudiendo, partes liquet esse vel maximas. At illud a paucis notatum est, quod exercitorum debeat esse non solum prudens institutio, sed etiam prudens intermissio. Optime siquidem Cicero notavit, quod in exercitiis plerumque exerceri contingat, non minus vitia, quam facultates; adeo ut malus habitus quandoque simul acquiratur, et se insinuet cum bono. Itaque tutius est intermittere exercitia, et subinde repetere, quam assidue continuare et urgere. Verum de his satis. Sunt certe hæc res primo aspectu minus grandes et solennes, sed fructuosas tamen et efficaces. Quemadmodum enim in plantis, ad felicitatem vel infelicitatem ipsarum, plurimum faciunt injuriæ, aut auxilia, quæ iisdem, cum teneris fuissent, intervenerint: quemadmodum etiam incrementa illa immensa imperii Romani merito a quibusdam attribuuntur virtuti et prudentiæ sex illorum regum, qui eidem in pueritia sua veluti tutores fuerunt, aut nutriti: sic certe cultura et institutio annorum puerilium, aut teneriorum, eas habet vires, licet latentes, et minime in cujusvis observationem incurrentes, quas neque temporis diuturnitas, neque laborum assiduitas et contentio, postea, ætate maturiore, possint ullo modo æquiparare. Non abs re fuerit etiam notare, facultates vel mediocres, si in magnos viros aut res magnas inciderint, graves et insignes interdum producere effectus. Ejus rei ponemus exemplum memorabile; quod eo magis adducimus, quia Jesuitæ

eandem disciplinam non videntur aspernari, sano (ut nobis videtur) iudicio. Atque est res, quæ, si sit professoria, in famis est; verum disciplinaria facta, ex optimis est. Intelligimus autem actionem theatralem. Quippe quæ memoriam roborat; vocis et pronunciationis tonum atque efficaciam temperat; vultum et gestum ad decorum componit, fiduciam non parvam conciliat, denique oculis hominum juvenes assuefacit. Erit autem exemplum e Tacito desumptum, Vibuleni cuiusdam, olim histrionis, tunc temporis autem militantis in legionibus Pannonicis. Ille, sub excessu Augusti, seditionem moverat; ita ut Blæsus præfectus aliquos ex seditiosis in carcerem conjiceret. Milites vero, impressione facta, illos effractis carceribus liberarunt. At Vibulenus, apud milites concionabundus, sic orsus est: "Vos," inquit, "his innocentibus et miserrimis lucem et spiritum reddidistis: sed quis fratri meo vitam, quis fratrem mihi reddit? quem missum ad vos a Germanico exercitu, de communibus commodis, nocte proxima jugulavit per gladiatores suos, quos in exitium militum habet atque armat. Responde, Blæse, ubi cadaver abjeceris? Ne hostes quidem sepulturam invident. Cum oculis, cum lacrymis dolorem meum implevero, me quoque trucidari jube; dum interfectos, nullum ob scelus, sed quia utilitati legionum consuebamus, hi sepeliant." Quibus verbis invidiæ ac consternationis nimium quantum concivit; adeo ut, nisi brevi postea innotuisset nihil horum fuisse, quin etiam fratrem eum nunquam habuisse, vix a præfecto milites manus abstinuissent: ille vero rem totam, tanquam fabulam in scena peregit.

Nunc vero ad colophonem pervenimus tractatus

nostri de doctrinis rationalibus. In quibus, licet a partitionibus receptis interdum recesserimus, nemo tamen existimet, nos illas omnes improbare partitiones, quibus usi non sumus. Duplex enim nobis imponitur necessitas partitiones mutandi: una, quia hæc duo, nimirum, res natura proximas in unam classem redigere, et res ad usum promendas conjicere in unum cumulum; sine ipso et intentione, sunt omnino diversa. Exempli gratia; secretarius aliquis regis aut reipublicæ in museo chartas suas ita procul dubio distribuit, ut quæ similis sint naturæ simul componat, veluti fœdera seorsum, seorsum mandata, literas ab exteris, literas domesticas, et similia, seorsum omnia. Contra, in scrinio aliquo particulari illas simul componit, quas, licet diversi generis sunt, simul tamen usui fore existimet: sic nimirum in hoc universali scientiæ repositoio, nobis pro natura rerum ipsarum partitiones erant instituendæ: cum tamen, si particularis aliqua scientia fuisset pertractanda, partitiones fuisset secuti, usui et praxi potius accommodatas. Altera necessitas partitiones mutandi est, quia desideratorum ad scientias adjectio, et eorum cum reliquis in integrum corpus redactio, etiam per consequentiam, scientiarum ipsarum partitiones transtulit. Nam (demonstrationis gratia) esto quod artes quæ habentur, rationem habeant numeri 15, adjectis autem desideratis numeri 20. Dico quod partes numeri 15, non sunt eadem partes, quæ numeri 20. Nam partes numeri 15, sunt 3, et 5. Partes vero numeri 20, sunt 2, 4, 5, et 10. Itaque patet quod hæc aliter fieri non potuerint. Atque de scientiis logicis hæc dicta sint.

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER SEPTIMUS.

AD REGEM SUUM.

### CAPUT PRIMUM.

*Partitio ethicæ in doctrinam de exemplari, et georgica animi. Partitio exemplaris (scilicet boni) in bonum simplex, et bonum comparatum. Partitio boni simplicis, in bonum individuale, et bonum communioneis.*

PERVENTUM est (rex optime) ad ethicam, quæ voluntatem humanam intuetur et tractat. Volunta-

2 c 2

tem gubernat recta ratio, seducit bonum apparens; voluntatis stimuli affectus, ministri organa et motus voluntarii. De hac Salomon, "Ante omnia," inquit, "custodi, fili, cor tuum, nam inde procedunt actiones vitæ." In hujus scientiæ pertractatione, qui de ea scripserunt, perinde mihi fecisse videntur, ac si quis scribendi artem tradere pollicitus, pulchra tantum exhibeat exemplaria literarum tam simplicium quam copularum: de calamo vero ducendo, aut modis characteres efformandi, nihil præcipiat: ita

et isti proposuerunt nobis exemplaria bella et luculenta, atque descriptiones sive imagines accuratas, boni, virtutis, officiorum, felicitatis, tanquam vera objecta, et scopus voluntatis et appetitus humani: verum quomodo quis possit optime ad hos scopos (excellentes sane, et bene ab illis positos) collimare; hoc est, quibus rationibus et institutis animus ad illa assequenda subigi et componi possit, aut nihil præcipiant, aut perfunctorie et minus utiliter. Disseramus, quantum libuerit, virtutes morales in animo humano esse habitualiter, non naturaliter: distinguamus solenniter, inter spiritus generosos et vulgus ignobile; quod illi rationum momentis, hi præmio aut pœna, ducantur: præcipiamus ingeniose, animum humanum, ut rectificetur, instar bacilli, in contrariam partem inclinationis suæ flecti oportere: aliaque insuper huiusmodi hinc inde spargamus: longe tamen abest, ut hæc et alia id genus, absentiam rei excusent, quam modo requirimus.

Hujusce neglectus causam haud aliam esse reor, quam latentem illum scopulum, ad quem tot scientiæ naviculæ impingentes, naufragia passæ sunt: nimirum, quod fastidiant scriptores versari in rebus vulgaris et plebeiis, quæ nec satis subtiles sint ad disputandum, nec satis illustres ad orandum. Sane haud facile quis verbis assequatur, quantam calamitatem attulerit hoc ipsum, quod dicimus: quod homines ingenita superbia, et gloria vana, eas materias tractationum, eosque modos tractandi sibi delegerint, quæ ingenia ipsorum potius commendent, quam lectorum utilitatibus inserviant. Optime Seneca, "Nocet illis eloquentia, quibus non rerum facit cupiditatem, sed sui:" siquidem scripta talia esse debent, ut amores documentorum ipsorum, non doctorum excitent. Ii igitur recta incedunt via, qui de consiliis suis id prædicare possint, quod fecit Demosthenes, atque hac clausula ea concludere, "Quæ si feceritis, non oratorem duntaxat in præsentia laudabit, sed vosmet ipsos etiam, non ita multo post, statu rerum vestrarum meliore." Ego certe (rex optime) ut de meipso, quod res est, loquar, et in iis, quæ nunc edo, et in iis, quæ in posterum meditor, dignitatem ingenii et nominis mei (si qua sit) sæpius sciens et volens projicio, dum commodis humanis inserviam: quique architectus fortasse in philosophia et scientiis esse debeam, etiam operarius et bajulus, et quidvis demum fio; cum haud pauca, quæ omnino fieri necesse sit, alii autem ob innatam superbiam subterfugiant, ipse sustineam et exequar. Verum (ut ad rem redeamus) quod cepimus dicere, delegerunt sibi philosophi in ethica massam quandam materiæ splendidam et nitentem, in qua potissimum vel ingenii acumen, vel eloquentiæ vigorem venditare possint: quæ vero practicum maxime instruunt, quandoquidem tam belle ornari non possint, maxima ex parte omiserunt.

Neque tamen debuerant viri tam eximii desperasse de fortuna, simili ei, quam poëta Virgilius, et sibi spondere ausus, et revera consequutus est; qui non minorem eloquentiæ, ingenii, et eruditionis, gloriam adeptus est, in explicando observationes agriculturæ, quam Ænææ res gestas heroicas enarrando.

"Nec sum animi dubius, verbis ea vincere magnum  
Quam sit, et angustis hunc addere rebus honorem."

Certe, si seriè hominibus cordi sit, non in otio scribere, quæ per otium legantur, sed revera vitam activam instruere et subornare; georgica ista animi humani non minore in pretio apud homines haberi debeant, quam heroicæ illæ effigies virtutis, boni, et felicitatis, in quibus tam operose est insudatum.

Partiemur igitur ethicam in doctrinas principales duas; alteram de exemplari sive imagine boni; alteram de regimine et cultura animi, quam etiam partem georgica animi appellare consuevimus: illa naturam boni describit, hæc regulas de animo ad illam conformando præscribit.

Doctrina de exemplari (quæ boni naturam intuetur et describit) bonum considerat, aut simplex, aut comparatum; aut genera (inquam) boni, aut gradus. In posteriore horum, disputationes illas infinitas, et speculationes circa boni supremum gradum, quem felicitatem, beatitudinem, summum bonum vocitarunt (quæ ethnicis instar theologiæ erant) Christiana tandem fides sustulit, et missas fecit. Quemadmodum enim Aristoteles ait, "Adolescentes posse etiam beatos esse, sed non aliter quam spe;" eodem modo, a Christiana fide edocti, debemus nos omnes minorum et adolescentium loco statuere, ut non aliam felicitatem cogitemus, quam quæ in spe sita est.

Liberati igitur (bonis avibus) ab hac doctrina, tanquam de cælo ethnicorum (qua in parte proculdubio elevationem naturæ humanæ attribuerunt majorem, quam cujus illa esset capax: videmus enim quali cothurno Seneca; "Vere magnum, habere fragilitatem hominis, securitatem Dei") reliqua certe ab illis circa doctrinam exemplaris tradita, minore aut veritatis aut sobrietatis jactura, magne ex parte recipere possumus. Etenim, quod ad naturam boni positivi et simplicis spectat, illam certe pulcherrime et ad vivum, veluti in tabulis eximiis, depinxerunt; virtutum et officiorum figuras, posituras, genera, affinitates, partes, subjecta, provincias, actiones, dispensationes, diligentissime sub oculis representantes. Neque hic finis: nam hæc omnia animo humano, magno quoque argumentorum acumine et vivacitate, et suasionum dulcedine, commendarunt atque insinuarunt: quin etiam (quantum verbis præstari possit) eadem contra pravos et populares errores et insultus, fidelissime muniverunt. Quatenus vero ad naturam boni comparati, huic rei etiam nullo modo defuerunt: in constituendis trinis illis ordinibus bonorum; in collatione vitæ contemplativæ cum activa; in discriminatione virtutis cum reluctance, et virtutis jam securitatem nactæ, et confirmatæ; in conflictu et pugna honesti et utilis; in virtutum inter se libramine, nimirum cui quæque præponderet, et similibus. Adeo ut hanc partem de exemplari insigniter excultam jam esse, et antiquos in ea re mirabiles se viros præstitisse, reperiam: ita tamen, ut philosophos longo post se intervallo reliquerit pia et strenua theologorum diligentia, in officiis, et virtutibus moralibus, et casibus conscientiæ, et peccati circumscriptionibus pensitandis et determinandis exercitata.

Nihilo secus (ut ad philosophos redeamus) si illi (antequam ad populares et receptas notiones virtutis, vitii, doloris, voluptatis, et cæterorum, se applicassent) supersedissent paulisper, et radices ipsas boni et mali,

et radicum illarum fibras indagassent; ingentem, meo iudicio, lucem illis omnibus, quæ postea in inquisitionem ventura fuissent, affudissent: ante omnia, si naturam rerum non minus, quam axiomata moralia, consulissent, doctrinas suas minus prolixas, magis autem profundas reddidissent. Quod cum ab illis aut omnino omissum, aut confuse admodum tractatum fuerit, nos breviter retractabimus; et fontes ipsos rerum moralium aperire et purgare conabimur, antequam ad doctrinam de cultura animi, quam ponimus ut desideratam, perveniamus. Hoc enim (ut arbitramur) doctrinam de exemplari novis quodammodo viribus donabit.

Inditus est atque impressus unicuique rei appetitus ad duplicem naturam boni; alteram qua res totum quiddam est in seipsa: alteram, qua est pars totius alicujus majoris. Atque posterior hæc illa altera dignior est, et potentior, cum tendat ad conservationem formæ amplioris. Nominetur prima, bonum individuale, sive suitatis; posterior, bonum communionis. Ferrum sympathia particulari fertur ad magnetem: at si paulo ponderosius fuerit, amores illos deserit, et tanquam bonus civis, et amator patriæ, terram petit, regionem scilicet connaturalium suorum. Uterius paulo pergamus; corpora densa et gravia terram petunt, congregationem magnam corporum densorum: attamen, potius quam natura rerum divulsionem patiat, et detur (ut loquuntur) vacuum, corpora hujusmodi in sursum ferentur, et cessant ab officio suo erga terram, ut præsent officium suum mundo ipsi debitum. Ita quasi perpetuo obtinet, ut conservatio formæ magis communis minores appetitus in ordinem redigat. At prærogativa ista boni communionis signatur præcipue in homine, si non degeneraverit; juxta memorabile illud Pompeii Magni dictum, qui, quo tempora Romam fames premeret, annonæ importandæ præpositus, vehementissime autem ab amicis interpellatus ne mari, atroce tempestate ingruente, se committeret; illud tantum respondit, "Necesse est ut eam, non ut vivam:" adeo ut vitæ desiderium (quod in individuo maximum est) amori et fidei in rempublicam apud eam non præponderaret. Sed quid moramur? Nulla, omnibus seculis, reperta est vel philosophia, vel secta, vel religio, vel lex, aut disciplina, quæ in tantum communionis bonum exaltavit, bonum vero individuale depressit, quantum sancta fides Christiana: unde liquido pateat, unum eundemque Deum fuisse, qui creaturis leges illas naturæ, hominibus vero legem Christianam dedisset. Propterea legimus, nonnullos ex electis et sanctis viris optasse se potius erasos ex libro vitæ, quam ut salus ad fratres suos non perveniret; ecstasi quadam charitatis, et impotentis desiderio boni communionis incitati.

Hoc positum, ita ut immotum maneat et inconcussum, nonnullis ex gravissimis in morali philosophia controversiis finem imponit. Primo enim quæstionem illam determinat, de vita contemplativa activæ præferenda: idque contra sententiam Aristotelis. Omnes siquidem rationes, quæ ab illo pro contemplativa afferuntur, bonum privatam respiciunt, atque individui tantum ipsius voluptatem, aut dignitatem; quibus in rebus contemplativa palmam haud dubie reportat. Etenim contemplativa non absimilis est

comparationi, qua usus est Pythagoras, ut philosophiæ et contemplationi honorem ac decus assereret: qui ab Hierone, quisnam esset, interrogatus, respondit; Hieronem non latere (si forte unquam Olympicis certaminibus interfuisset) id ibi loci contingere, ut veniant eo alii fortunæ suæ in agonibus periculum facturi; alii vero ut mercatores, ad merces distrahendas; alii ut amicos undique confluentes convenirent, et epulis ac hilaritati indulgerent; alii denique ut cæterorum essent spectatores: se autem unum esse ex illis, qui spectandi gratia venerit. Verum homines nosse debent, in hoc humanæ vitæ theatro, Deo et angelis solum convenire, ut spectatores sint. Neque sane fieri potuit, ut hac de re dubitatio in ecclesia unquam suscitaretur (utnunque plurimis in ore fuerit dictum illud, "Pretiosa in oculis Domini mors sanctorum ejus:" ex quo loco mortem illam civilem, et instituta vitæ monasticæ et regularis atollere solebant) nisi illud etiam una subesset, quod vita illa monastica mere contemplativa non sit, verum plane in officiis ecclesiasticis versetur; qualia sunt jugis oratio, et votorum sacrificia Deo oblata; librorum item theologicorum, multo in otio, conscriptio, ad legis divinæ doctrinam propagandum: quemadmodum et Moses fecit, cum per tot dies in montis secessu moratus esset. Quinetiam Henoch, ab Adamo septimus, qui videtur fuisse princeps vitæ contemplativæ (etenim "cum Deo ambulasse" perhibetur) nihilominus ecclesiam prophetiæ libro (qui etiam a sancto Juda citatur) dotavit. Contemplativam vero quod attinet meram, et in se ipsa terminatam, quæque radios nullos, sive caloris, sive luminis, in societatem humanam diffundat, nescit eam certe theologia.

Determinat etiam quæstionem, tanta contentione agitatam, inter scholas Zenonis et Socratis ex una parte, qui felicitatem in virtute, aut sola, aut adornata (cujus semper in officiis vitæ partes potissimæ) collocarunt: et reliquas complures sectas et scholas, ex altera parte: veluti scholas Cyrenaicorum et Epicureorum; qui eam in voluptate constituerunt: virtutem autem (sicut fit in comœdiis aliquibus, ubi hera cum famula vestem mutet) plane ancillam statuerunt: utpote sine qua voluptati commode ministrari non posset: nec minus illam alteram Epicuri scholam, quasi reformatam; quæ felicitatem nihil aliud esse prædicabat, quam inimi tranquillitatem et serenitatem, a perturbationibus liberi, et vacui; ac si Jovem de solio deturbare vellent, et Saturnum cum aureo seculo reducere, quando neque æstas nec bruma fuissent, non ver, nec autumnus, sed una et æquabilis aëris temperies: denique et illam explosam Pyrrhonis et Herilli scholam, qui sitam autumaverunt felicitatem in scrupulis quibusque animi prorsus eliminandis, nullam statuentes fixam et constantem boni aut mali naturam, sed actiones pro bonis aut malis habentes, prout ex animo, motu puro et irrefracto, aut contra, cum aversatione et reluctance, prodirent; quæ tamen opinio in hæresi Anabaptistarum revixit, qui cuncta metiebantur juxta motus et instinctus spiritus, et constantiam vel vacillationem fidei. Liquet autem ista, quæ recensuimus, omnia ad privatam animorum tranquillitatem, et complacentiam, nullo modo autem ad bonum communionis, spectare.

Porro redarguit etiam philosophiam Epicteti, qui hoc utitur præsupposito; felicitatem in iis poni debere, quæ in potestate nostra sunt, ne scilicet fortunæ et casibus simus obnoxii: quasi vero non multo fuerit felicius, in rectis et generosis intentionibus, et finibus, qui publicum bonum amplectantur, successu destitui et frustrari, quam in omnibus, quæ ad privatam tantum fortunam nostram referuntur, voti perpetuo compotes fieri. Sicut Consalvus, Neapolim digito militibus indicans, generosa voce testatus est, multo sibi optatius fore, unum pedem promovendo, ad interitum certum ruere, quam unius pedis recessu, vitam in multos annos producere. Cui etiam concinit cœlestis dux et imperator, qui pronunciauit "conscientiam bonam iuge esse convivium;" quibus verbis aperte significat, mentem bonarum intentionum sibi consciam, utcumque successu careat, verius et purius, et naturæ magis consentaneum præbere gaudium, quam universum illum apparatus, quo instrui possit homo, vel ut desideris suis fruatur, vel ut animo conquescat.

Redarguit itidem philosophiæ abusum illum, circa Epicteti tempora grassari cœptum: nempe quod philosophia versa fuerit in genus quoddam vitæ professorium et tanquam in artem; quasi scilicet institutum philosophiæ esset, non ut perturbationes compescerentur et extinguerentur; sed ut causæ et occasiones ipsarum evitarentur et summoventur: ideoque particularis quædam vitæ ratio ad hoc obtinendum ineunda esset: introducendo sane tale genus sanitatis in animum, quale fuit Herodici in corpore: cujus meminit Aristoteles; illum scilicet nihil aliud per totam vitam egisse, quam ut valetudinem curaret; et proinde ab infinitis rebus abstineret, corporis interim usu quasi multatus. Ubi si hominibus officia societatis consecrari cordi sit, illa demum valetudo maxime est expetenda, quæ quaslibet mutationes et impetus quoscunque ferre et vincere queat. Eodem modo et animus ille demum vere et proprie sanus et validus censendus est, qui per plurimas et maximas tentationes et perturbationes perrumpere potest. Ita ut optime Diogenes dixisse visus sit; qui eas vires animi laudavit, "quæ non ad caute abstinendum, sed ad fortiter sustinendum valent;" quæque animi impetum, etiam in maximis præceptiis, cohibere possint; quæque (id quod in equis bene subactis laudatur) præsentent, ut brevissimo spatio, et sistere se, et vertere possint.

Postremo, redarguit idem teneritudinem quandam, et ineptitudinem ad morigerandum, in nonnullis ex antiquissimis philosophis, et maxime in veneratione habitis, notatam: qui nimis facile se a rebus civilibus subdlexerint, ut indignitatibus et perturbationibus se exuerent; atque magis, sua opinione, illibati, et tanquam sacrosancti, viverent: ubi consentaneum esset, constantiam hominis vere moralis talem fore, qualem idem Consalvus in homine militari requirebat; nimirum ut honor ejus contexeretur tanquam e tela crassiore; minimeque tam tenui, ut quidvis illud vellicare et lacerare possit.

## CAPUT SECUNDUM.

*Partitio boni individualis, vel suitatis, in bonum activum, et bonum passivum. Partitio boni passivi, in bonum conservativum, et bonum perfectivum. Partitio boni communionis, in officia generalia, et respectiva.*

REPETAMUS igitur jam et persequamur primum bonum individuale, et suitatis. Illud partiemur in bonum activum, et bonum passivum. Etenim hæc quoque differentia boni (non absimilis certe illis appellationibus, quæ Romanis in œconomicis erant familiares, promi scilicet, et condi) in universa rerum natura impressa reperitur: præcipue autem se prodit in duplici rerum creaturarum appetitu; altero, se conservandi et muniendi; altero se multiplicandi et propagandi: atque hic posterior, qui activus est, et veluti promus, potentior videtur et dignior; ille autem prior, qui passivus est, et veluti condus, inferior censi potest. Etenim in universitate rerum, natura cœlestis præcipue agens est; at natura terrestri, patiens. Etiam in delectationibus animantium, major voluptas est generandi, quam paecendi. In oraculis quoque divinis pronunciat, "Beatius esse dare, quam accipere." Quin et in vita communi, nemo invenitur ingenio tam molli et effœminato, quin plaris faciat aliquid, quod ei in votis erat, perficere, et ad exitum perducere, quam sensualitatem aliquam, aut delectamentum. Atque ista quidem boni activi pre-eminentia in immensum exaltatur, ex intuitu conditionis humanæ, quod sit et mortalis, et fortunæ actibus exposita. Nam si in voluptatibus hominum posset obtineri perpetuitas atque certitudo, magnum pretium eis accederet, propter securitatem et moram. Quandoquidem autem rem videmus huc recidere: Magni æstimamus mori tardius: et, Ne gloriæ de crastino; nescis partum diei: mirum minime est, si omni contentione feramur ad ea, quæ temporis injurias non reformident. Ea vero nulla esse possunt, præter opera nostra; sicut dicitur, "Opera eorum sequuntur eos." Est et altera præ-eminentia boni activi haud exigua, indita et sustentata ex eo affectu, qui humanæ naturæ, ut comes individuus, lateri adhæret: amor scilicet novitatis aut varietatis. Ille vero in sensuum voluptatibus (quæ boni passivi pars sunt vel maxima) angustus admodum est, nec latitudinem habet aliquam insignem: "Cogita quamdiu eadem feceris; cibus, somnus, ludus; per hunc circulum curritur. Mori velle, non tantum fortis, aut miser, aut prudens, sed etiam fastidiosus potest." At in actis vitæ nostræ, et institutis, et ambitionibus, insignis est varietas; eaque multa cum voluptate percipitur, dum inchoamus, progredimur, interquiescimus, regredimur, ut vires augeamus, appropinquamus, denique obtinemus, et huiusmodi; ut vere admodum dictum sit, vita sine proposito, languida et vaga est. Quod simul et prudentibus et stultissimis competit, ut ait Salomon; "Pro desiderio quærit cerebrosus, omnibus immiscet se." Quinetiam videmus, reges potentissimos, ad quorum nutum, quæcunque sensibus grata sunt, parari possent, nihilominus procurasse sibi interdum desi-

deria humilia et inania (quemadmodum cithara fuit Neroni, gladiatoria Commodi, Antonino aurigatio, et alia aliis) quæ tamen ipsis fuerint omni affluentia voluptatum sensualium potiora. Tanto voluptatem majorem effert, ut aliquid agamus, quam ut fruamur.

Illud interim paulo attentius notandum est, bonum activum, individuale, a bono communionis prorsus differre; quanquam nonnunquam ambo coincidunt. Quamvis enim bonum istud individuale, activum, sæpe opera beneficentiæ (quæ ex virtutibus communionis est) pariat et producat; illud tamen interest, quod illa opera ab hominibus plurimis fiant, non animo alios juvandi aut beandi, sed plane propter se, atque potentiam et amplitudinem propriam. Id quod optime cernitur, quando bonum activum in aliquid impinget, quod sit bono communionis contrarium. Siquidem gigantea illa animi conditio, qua abripiuntur magni isti orbis terrarum perturbatores (qualis fuit L. Sylla, et plurimi alii, licet in modulo longe minore) qui videntur ad hoc anhelare, ut omnes felices et ærumnosi sint, prout sibi fuerint amici, vel inimici; atque ut mundus tanquam ipsorum præferat imaginem (quæ vera est theomachia) hæc, inquam, ipsa aspirat ad bonum activum, individuale, saltem apparens; etsi a bono communionis omnium maxime recedat.

At bonum passivum partiemur, in bonum conservativum, et bonum perfectivum. Etenim inditus est unicuique rei triplex appetitus, quatenus ad bonum suitatis, sive individui. Primus, ut se conservet; secundus, ut se perficiat; tertius, ut se multiplicet sive diffundat. Atque hic postremus appetitus ad bonum activum refertur, de quo jam modo diximus. Supersunt igitur reliqua tantum duo, quæ diximus, bona: ex quibus præcellit perfectivum. Minus enim quiddam est, conservare rem in suo statu: majus vero, eandem ad naturam subliorem evehere. Reperiuntur siquidem per res universas, naturæ aliquæ nobiliores, ad quarum dignitatem et excellentiam, naturæ inferiores aspirant, veluti ad origines et fontes suos. Sic de hominibus non male cecinit ille:

“ Igneus est ollis vigor, et cœlestis origo.”

Homini enim, assumptio aut approximatio ad divinam aut angelicam naturam, est formæ suæ perfectio. Cujus quidem boni perfectivi prava et præpostera imitatio, pestis est ipsa vitæ humanæ, et turbo quidam rapidus, qui omnia abripit et subvertit. Nimirum, dum homines, exaltationis vice formalis atque essentialis, cæca ambitione advolant ad exaltationem tantummodo localem. Quemadmodum enim ægri, remedium mali sui non invenientes, de loco in locum corpus agitant et volvunt; quasi ex mutatione loci a seipsis abscedere, et internum malum effugere possint: eodem modo evenit in ambitione, ut homines, simulachro quodam falso naturæ suæ exaltandæ abrepti, nihil aliud adipiscantur, quam loci quandam celsitudinem et fastigium.

Bonum vero conservativum nihil aliud est, quam receptio et fruitio rerum naturæ nostræ congruentium. Hoc vero bonum, licet maxime sit simplex et nativum, tamen ex bonis videtur mollissimum atque infimum. Quin et hoc ipsum bonum recipit differentiam nonnullam; circa quam partim vacilla-

vit judicium hominum, partim omissa est inquisitio. Boni siquidem fruitionis, sive, quod vulgo dicitur, jucundi dignitas et commendatio, aut in sinceritate fruitionis sita est, aut in ejusdem vigore: quorum alterum inducit et præstat æqualitas; alterum autem varietas et vicissitudo: alterum minorem habet mixturam mali, alterum impressionem magis fortem et vividam boni. Cæterum, horum utrum melius, ambigitur: dein, num natura humana utrumque simul apud se retinere possit, non inquiritur.

Atque quantum ad id, de quo ambigitur, ventilari cœpit illa controversia inter Socratem et sophistam quendam. Ac Socrates quidem asserebat, Felicitatem sitam esse in animi pace constante, et tranquillitate: sophista vero in hoc, Ut quis multum appetat, et multum fruatur. Quin et ab argumentis delapsi sunt ad convicia; dicente sophista, felicitatem Socratis, stipitis vel lapidis esse felicitatem; e contra Socrate, sophistæ felicitatem, felicitatem esse scabiosæ, qui perpetuo pruriret et scalperet. Neque tamen desunt utrique sententiæ sua firmamenta. Nam Socrati assentitur vel Epicuri schola ipsa, quæ virtutis, ad felicitatem, partes esse maximas, non diffitebatur. Quod si ita sit, certo certius est, virtutis majorem esse usum in perturbationibus sedandis, quam rebus cupitis adipiscendis. Sophistæ autem nonnihil suffragari videtur assertio illa, cujus a nobis mentio modo facta est, quod videlicet bonum perfectivum bono conservativo sit superius; quippe quia cupitarum rerum adptiones naturam videantur sensim perficere: quod licet vere non faciant, tamen et motus ipse in circulo, speciem nonnullam præ se fert motus progressivi.

At secunda quæstio (num scilicet natura humana non possit et animi tranquillitatem, et fruentis vigorem, simul retinere) rite definita, priorem illam reddit otiosam et supervacaneam. Annon enim videmus, haud raro animos nonnullorum ita factos et compositos, ut voluptatibus afficiantur vel maxime cum adsint, et tamen earum jacturam non gravate ferant? Ita ut series illa philosophica, “ Non uti, ut non appetas; non appetere, ut non metuas,” videatur esse pusilli cujusdam animi, et diffidentis. Sane, doctrinæ pleræque philosophorum videntur esse paulo timidiore, et cavere hominibus plusquam natura rerum postulat. Veluti, cum mortis formidinem medendo augent. Etenim, cum nihil aliud fere vitam humanam faciant, quam mortis quandam præparationem et disciplinam, quomodo fieri possit, ut ille hostis mirum in modum non videatur terribilis, contra quem muniendi nullus sit finis? Melius poëta (ut inter ethnicos);

“ Qui finem vitæ extremum inter munera ponat Naturæ.”

Similiter et in omnibus annisi sunt philosophi animam humanam reddere nimis uniformem et harmonicam: eum motibus contrariis et extremis minime assuefaciendo. Cujus causam arbitrari fuisse, quod ipsi vitæ se privatæ dedicarent, a negotiis et aliorum obsequiis immuni et liberæ. Quin potius imitentur homines prudentiam gemmariorum; qui si forte in gemma inveniatur nubecula aliqua, aut glaciocula, quæ ita posset eximi, ut magnitudini lapidis non

nimum detrahatur, eam tollunt; aliter vero intactam eam relinquunt: pari ratione, serenitati animorum ita consulendum est, ut non destruat magnanimitas. Atque de bono individuali hactenus.

Postquam igitur de bono suitatis (quod etiam particulare, privatum, individuale, appellare solemus) jam dixerimus; repetamus bonum communionis, quod societatem intuetur. Istud nomine officii vocari consuevit: siquidem vocabulum *officii* magis proprie attribuitur animo bene disposito erga alios: vocabulum *virtutis* animo intra se recte formato et composito. Verum ista pars, primo intuitu, scientiæ civili deberi videtur: attamen, si diligentius attendas, non ita: siquidem tractat regimen et imperium uniuscujusque in seipsum, neutiquam vero in alios. Atque sicut in architectura, alia res est, postes, trabes, et cæteras ædificii partes efformare, et ad ædificandi usum præparare; alia autem, easdem ad invicem aptare et compaginare: sicut etiam in mechanicis, instrumentum aut machinam fabricare et conficere, non idem est, quod fabricatum erigere, movere, et in opere ponere: sic doctrina de conjugatione ipsa hominum in civitate, sive societate, differt ab ea, quæ eos reddit ad hujusmodi societatis commoda conformes et bene affectos.

Ista pars de officiis, etiam in duas portiones tribuitur: quarum altera tractat de officio hominis in communi: altera de officiis specialibus et respectivis, pro singulorum professione, vocatione, statu, persona, et gradu. Harum primam, satis exultant, diligenterque a veteribus et aliis explicatam, jam antea retulimus; alteram quoque, sparsim quidem tractatam, licet non in corpus aliquod integrum scientiæ digestam, reperimus. Neque tamen hoc ipsum, quod sparsim tractetur, reprehendimus; quinimo de hoc argumento per partes scribi longe consultius existimamus. Quis enim tanta fuerit vel perspicacia vel confidentia, ut de officiis peculiaribus et relativis, singulorum ordinum et conditionum, perite et ad vivum disceptare, et definire possit, aut sustineat? Tractatus autem, qui experientiam non sapiunt, sed ex notitia rerum generali et scholastica tantummodo deprompti sunt, de rebus hujusmodi, inanes plerunque evadunt et inutiles. Quamvis enim aliquando contingat, spectatorem ea animadvertere, quæ lusorem fugiant; atque jactetur proverbium quoddam magis audaculum, quam sanum, de censura vulgi circa actiones principum, "stantem in valle optime perlustrare montem;" optandum tamen imprimis esset, ut non nisi expertissimus et versatissimus quisque se hujusmodi argumentis immisceret. Hominum enim speculativorum, in materfis activis, lucubrationes, iis, qui in agendo fuerint exercitati, nihilo meliores videntur, quam dissertationes Phormionis de bellis æstimatæ sunt ab Hannibale, qui eas habuit pro somniis et deliriis. Unum duntaxat vitium illos occupat, qui de rebus ad suum munus aut artem pertinentibus libros conscribunt; quod scilicet in illis Spartiis suis orandis atque atollendis modum tenere nesciant.

In hoc genere librorum, pisculum foret, non meminisse (honoris causa) excellentissimi illius operis, a majestate tua elucubrati, "De officio regis." Scriptum enim hoc plurimos intra se cumulavit ac recon-

didit thesauros, tam conspicuos, quam occultos, theologiæ, ethicæ, et politicæ; insigni cum aspersione aliarum artium: estque, meo iudicio, inter scripta, quæ mihi perlegere contigerit, præcipue sanum et solidum. Non illud ullo loco, aut inventionis fervore æstuat, aut indiligentiæ frigore torpet aut dormitat; non vertigine aliquando corripitur, unde in ordine suo servando confundatur aut excidat: non digressionibus distrahitur, ut illa, quæ nihil ad rhombum sunt, expatiatione aliqua flexuosa complectatur: non odoramentorum aut pigmentorum fucis adulteratur; qualibus illi utuntur, qui lectorum potius delectationi, quam argumenti naturæ inserviunt: ante omnia vero, spiritu valet istud opus non minus, quam corpore, utpote quod et cum veritate optime consentiat, et ad usum sit accommodatissimum. Quinetiam vitio illo, de quo paulo ante diximus (quod, si in alio quopiam, in rege certe, et scripto de majestate regia, tolerandum fuerit) omnino caret; nempe, quod culmen et fastigium regum non immodice aut invidiose extollat; siquidem majestas tua regem non depinxit aliquem, Assyriæ aut Persiæ, gloria et externo fastu nitentem, et coruscantem: sed vere Mosem, aut Davidem, pastores scilicet populi sui. Neque vero mihi unquam memoria excidet dictum quoddam vere regium, quod in lite gravissima terminanda majestas tua, pro sacro illo, quo præditus es, spiritu ad populos regendos, pronunciavit; nimirum, "Reges juxta leges regnorum suorum gubernacula tractare, quemadmodum et Deus juxta leges naturæ: et æque raro prærogativam illam suam, quæ leges transcendit, ab illis usurpandam, ac a Deo videmus usurpari potestatem miracula patrandi." Nihilo tamen secius, ex libro illo altero, a majestate tua conscripto, "De libera monarchia," satis omnibus innotescit, non minus majestati tuæ cognitam esse et perspectam plenitudinem potestatis regiæ, atque ultimitates (ut scholastici loquuntur) jurium regalium, quam officii et muneris regii limites et cancellos. Non dubitari igitur in medium adducere librum illum, a majestatis tuæ calamo exaratum, tanquam exemplum primarium et maxime illustre tractatum de peculiaribus et respectivis officiis. Quo de libro, quæ a me jam dicta sunt, dixissem profecto, si ante annos mille a rege quopiam conscriptus fuisset. Neque vero me movet decorum illud, quod vulgo præscribitur, ne quis coram laudetur: modo laudes illæ nec modum excedant, nec intemptive, aut nulla data occasione, tribuantur. Cicero certe, in luculentissima illa oratione sua pro M. Marcello, nihil aliud agit, quam ut exhibeat tabulam quandam, singulari artificio depictam, de laudibus Cæsaris, licet coram ipso oratio illa haberetur. Quod et Plinius secundus fecit erga Trajanum. Itaque jam ad propositum revertamur.

Pertinet porro ad hanc partem de officiis respectivis vocationum, et professionum singularum, doctrina alia, tanquam priori relativa, sive opposita; nimirum de fraudibus, cautelis, imposturis, et vitiis ipsarum: siquidem deprivationes et vitia officii et virtutibus opponuntur. Neque omnino de his, in plurimis scriptis et tractatibus, ailetur: sed sæpe ad illa notanda saltem obiter excurritur. At quo tandem modo? Per satiram scilicet, et cynice

(more Luciani) potius, quam serio et graviter. Etenim, plus operæ impenditur, ut pleraque in artibus, etiam utilia et sana, maligno dente vellicentur, et ad ludibrium hominibus exponantur, quam ut quæ in iisdem corrupta sunt et vitiosa, secernantur a salubribus et incorruptis. At optime Salomon: "querenti derisori scientiam, ipsa se abscondit, sed studioso fit obviam." Quicumque enim ad scientiam accedat animo irridendi et aspernandi, inveniet proculdubio quæ cavillettur plurima, ex quibus vero doctior fiat, perpauca. Verum, tractatio hujus, de quo loquimur, argumenti, gravis et prudens, atque cum integritate quadam et sinceritate conjuncta, inter munitissima virtutis ac probitatis propugnacula videtur numeranda. Nam sicut fabulose perhibetur de basilisco, si primus quempiam conspexerit, illico hominem perimit; si quis illum prior, basiliscus perit: pari ratione, fraudes, imposturæ, et malæ artes, si quis eas prior detexerit, nocendi facultate privantur; quod si illæ prævernerit, tum vero, non alias, periculum creant. Est itaque quod gratias agamus Machiavello, et hujusmodi scriptoribus, qui aperte et indissimulanter proferunt, quid homines facere soleant, non quid debeant. Fieri enim nullo modo potest, ut conjungatur serpentina illa prudentia cum innocentia columbina, nisi quis mali ipsius naturam penitus pernoscat. Absque hoc enim dererunt virtuti sua præsidia et munimenta. Imo, neque ullo modo possit vir bonus et probus malos et improbos corrigere et emendare, nisi ipse, prout omnia malitiæ latibula et profunda exploraverit. Etenim, qui judicio plane corrupto sunt, et depravato, hoc habent, ut præsupponant honestatem in hominibus ab inscitia et simplicitate quadam morum oriri; atque ab eo tantum, quod fides habeatur concionatoribus, et pædagogis; item libris, præceptis moralibus, et iis, qui vulgo prædicantur et decantantur, sermonibus: adeo ut, nisi plane perscipiant, opiniones suas pravas, ac corrupta et detorta principia, non minus illis, qui hortantur et admonent, quam sibi ipsis, esse explorata et cognita, probitatem omnem morum et consiliorum aspèrntur; juxta oraculum illud Salomonis mirabile; "Non recipit stultus verba prudentiæ, nisi ea dixeris, quæ versantur in corde ejus." Hanc autem partem, de cautelis, et vitiis respectivis, inter desiderata numeramus: eamque nomine satiræ seriæ, sive tractatus de interioribus rerum, appellabimus.

Etiam ad doctrinam de officiis respectivis pertinent officia mutua, inter maritum et uxorem, parentes et liberos, dominum et servum: similiter leges amicitiae, et gratitudinis; nec non civiles obligationes fraternitatum, collegiorum; etiam vicinitatis, ac similitium: verum intelligatur hoc semper, illa istic tractari, non quatenus sunt partes societatis civilis (id enim ad politicam refertur) sed quatenus animi singulorum, ad illa societatis vincula tuenda, instrui et prædisponi debeant.

At doctrina de bono communione (quemadmodum et illa et individuali) bonum tractat, non tantum simpliciter, sed et comparate: quo spectat officia perpendere, inter hominem et hominem; inter casum et casum; inter privata et publica; inter tempus præsens et futurum: sicut videre est in animadver-

sione illa severa et atroci L. Bruti, contra filios suos illam a plerisque in cœlum laudibus efferrî; at alius quispiam dixit:

"Infelix, utcumque ferent ea fata minores."

Id ipsum licet intueri in cœna illa, ad quam invitati sunt M. Brutus, C. Cassius, et alii. Illic enim, cum ad animos explorandos, circa conspirationem in caput Cæsaris intentam, quæstio astute mota esset, Num licitum foret tyrannum occidere? ibant convivæ in opiniones diversas; dum alii dicerent, plane licere, quod servitus ultimum esset dierum: alii minime, quod tyrannus minus exitialis esset, quam bellum civile. Tertium autem genus, veluti ex schola Epicuri, asserbat, indignum esse prudentes periclitari pro stultis. Verum plurimi sunt casus de officiis comparatis; inter quos frequenter ille intervenit: Utrum a justitia deflectendum sit, propter salutem patriæ, aut hujusmodi aliquod insigne bonum in futuro? Circa quem Jason Thessalus dicere solebat: Aliqua sunt injuste facienda, ut multa juste fieri possint. Verum replicatio in promptu est: Auctorem præsentis justitiæ habes; sponsorem futuræ non habes. Sequantur homines, quæ in præsentia bona et justa sunt; futura divinæ providentiæ remittentes. Atque circa doctrinam de exemplari, sive de bono, hæc dicta sint.

### CAPUT TERTIUM.

*Partitio doctrinæ de cultura animi; in doctrinam de characteribus animorum; de affectibus; et de remediis, sive curationibus. Appendix doctrinæ ejusdem de congruitate inter bonum animi, et bonum corporis.*

Nunc igitur, postquam de fructu vitæ (sensu intelligimus philosophico) verba fecerimus; superest, ut de cultura animi, quæ ei debetur, dicamus: sine qua pars prior nihil aliud videtur, quam imago quædam, aut statua, pulchra quidem aspectu, sed motu et vita destituta. Cui sententiæ Aristoteles ipse disertis verbis suffragatur: "Necesse est igitur de virtute dicere, et quid sit, et ex quibus gignatur. Inutile enim fere fuerit, virtutem quidem nosse, acquirendæ autem ejus modos et vias ignorare. Non enim de virtute tantum, qua specie sit, quærendum est, sed et quomodo sui copiam faciat: utrumque enim volumus, et rem ipsam nosse, et ejus compotes fieri: hoc autem ex voto non succedet, nisi sciamus, et ex quibus, et quo modo." Verbis adeo expressis, atque etiam iterato, hanc partem inculcat; quam tamen ipse non persequitur. Hoc similiter illud est, quod Cicero Catoni juniore, veluti laudem non vulgarem, attribuit; quod scilicet philosophiam amplexus esset, non disputandi causa, ut magna pars, sed ita vivendi. Quamvis autem, pro temporum, in quibus vivimus, socordia, paucis curæ sit, ut animum sedulo colant et component, et vitæ rationem ad normam aliquam instituant (secundum illud Senecæ, "De partibus vitæ quisque deliberat; de summa nemo:" adeo ut hæc pars censeri possit supervacua) illud tamen minime nos movet, ut eam

intactam relinquamus, quin potius cum illo Hippocratis aphorismo concludimus; "Qui gravi morbo correpti, dolores non sentiunt, iis mens ægrotat." Medicina illis hominibus opus est, non solum ad curandum morbum, sed ad sensum expergefaciendum. Quod si quis objiciat, animorum curationem, theologiæ sacræ munus esse, verissimum est quod asserit; attamen philosophiam moralem in famulitium theologiæ recipi, instar ancillæ prudentis, et pedisequæ fidelis, quæ ad omnes ejus nutus præsto sit, et ministret, quid prohibeat? etenim quemadmodum in Psalmo habetur, quod "Oculi ancillæ perpetuo ad manus dominæ respiciunt;" cum tamen minime dubium sit, quin haud pauca ancillæ judicio et curæ relinquuntur; eodem modo et ethica obsequium theologiæ omnino præstare debet, ejusque præceptis morigera esse; ita tamen ut et ipsa, intra suos limites, haud pauca sana et utilia documenta continere possit.

Hanc igitur partem (quando præstantiam ejus in animo recolo) in corpus doctrinæ nondum redactam, non possum non vehementer mirari. Eam igitur, ex more nostro, cum inter desiderata collocemus, aliqua ex parte adumbrabimus.

Ante omnia igitur in hac re (sicut et in universis, quæ spectant ad practicam) ratio nobis est subducenda, quid in nostra sit potestate, quid non. In altero enim datur alteratio, in altero vero applicatio tantum. Agricolæ nullum est imperium, aut in naturam soli, aut in aëris temperies; itidem nec medico, aut in crasin et constitutionem naturalem ægri, aut in accidentium varietatem. At in cultura animi, et morbis ejus persanandis, tria in considerationem veniunt; characteres diversi dispositionum; affectus, et remedia: quemadmodum et in corporibus medicandis proponuntur illa tria; complexio, sive constitutio ægri, morbus, et curatio. Ex illis autem tribus, postremum tantum in nostra potestate situm est; priora duo non item. Verum et in illis ipsis, quæ in potestate nostra non sunt, non minus diligens facienda est inquisitio, quam in illis, quæ potestati nostræ subjiiciuntur. Etenim illorum perspicax et accurata cognitio substernenda est doctrinæ de remediis, ut eadem commodius et feliciter applicentur. Neque enim vestis corpori aptari possit, nisi mensura corporis ante excipiatur.

Primus igitur articulus doctrinæ de cultura animi versabitur circa diversos characteres ingeniorum sive dispositionum. Neque tamen loquimur de vulgaris illis propensionibus in virtutes et vitia; aut etiam in perturbationes et affectus: sed de magis intrinsicis et radicalibus. Sane subiit animum, etiam in hac parte, nonnunquam admiratio, quod a scriptoribus, tam ethicis, quam politicis, ut plurimum neglecta aut prætermissa sit; cum utrique scientiæ clarissimum luminis jubar affundere possit. In traditionibus astrologiæ non inscite omnino distincta sunt ingenia, et dispositiones hominum, ex prædominantibus planetarum; quod alii a natura facti sint ad contemplationes; alii ad res civiles; alii ad militiam; alii ad ambitum; alii ad amores; alii ad artes; alii ad genus vitæ varium. Item apud poëtas (heroicos, satiricos, tragicos, comicos) sparguntur ubique simulacra ingeniorum, licet fere cum

excessu, et præter modum veritatis. Quin et hoc ipsum argumentum, de diversis characteribus ingeniorum, est ex iis rebus, in quibus sermones hominum communes (quod valde raro, interdum tamen contingit) libris ipsis sunt prudentiores. At longe optima hujus tractatus suppellex et sylva peti debet ab historicis prudentioribus: neque tamen ab elogiis tantum, quæ sub obitum personæ alicujus illustris subnectere solent, sed multo magis ex corpore integro historiæ, quoties hujusmodi persona veluti æcanam conscendat. Illa enim intertexta imago, potior videtur descriptio, quam elogiis censura: qualis habetur apud T. Livium, Africani et Catonis majoris; apud Tacitum, Tiberii, Claudii, et Neronis; apud Herodianum, Septimii Severi; apud Philippum Comineum, Lodovici undecimi Gallorum regis; apud Franciscum Guicciardinum, Ferdinandi Hispani, Maximiliani Cæsaris, et Leonis, et Clementis, pontificum. Isti enim scriptores, harum personarum, quas sibi depingendas delegerunt, effigies quasi perpetuo intuentes, nunquam fere rerum gestarum ab ipsis mentionem faciunt, quin et aliquid insuper de natura ipsorum inspergant. Etiam nonnullæ, in quas incidimus, relationes de conclavibus pontificum, characteres de moribus cardinalium bonos exhibuerunt: sicut et literæ legatorum, de consiliariis principum. Fiat itaque ex ea, quam diximus, materia (quæ certe fertilis est et copiosa) tractatus diligens et plenus. Neque vero volumus, ut characteres isti in ethicis (ut fit apud historicos, et poëtas, et in sermonibus communibus) excipiantur, tanquam imagines civiles integræ; sed potius ut imaginum ipsarum lineæ et ductus magis simplices; quæ inter se compositæ et commixtæ quasunque effigies constituunt: quot et quales æ sunt, et quomodo inter se connexæ et subordinatæ; ut fiat tanquam artificiosa et accurata ingeniorum et animorum dissectio, atque ut dispositionum, in hominibus individuis, secreta prodantur, atque ex eorum notitia, curationum animi præcepta rectius instituantur.

Neque vero characteres ingeniorum, ex natura impressi, recipi tantum in hunc tractatum debent; sed et illi, qui alias animo imponuntur, et ætu, ætate, patria, valetudine, forma, et similibus: atque insuper illi, qui ex fortuna, veluti principum, nobilium, ignobilium, divitum, pauperum, magistratum, idiotarum, felicium, ærumnosorum, et hujusmodi. Videmus enim, Plautum miraculi loco habere, quod senex quis sit beneficus; "benignitas hujus, ut adolescentuli est." D. autem Paulus, severitatem disciplinæ erga Cretenses præcipiens ("increpa eos dure") ingenium gentis ex poëta accusat, "Cretenses semper mendaces, malæ bestię, ventres pigri." Sallustius id in regum ingeniis notat, quod apud eos frequens sit contradictoria appetere: "Plerumque regiæ voluntates, ut vehementes sunt, sic mobiles, sæpeque ipsæ sibi adversæ." Tacitus observat, honores et dignitates ingenia hominum in deterius sæpius flectere, quam in melius; "solus Vespasianus mutatus est in melius." Pindarus illud animadvertit, fortunam subitam et indulgentem, animos plerumque enervare et solvere; "sunt, qui magnam felicitatem concoquere non possunt." Psalmus innuit, facilius esse modum adhibere et

temperamentum in fortunæ statu, quam in incremento: "Divitiæ si affluant, nolite cor apponere." De similibus quibusdam observationibus ab Aristotele in Rhetoricis mentionem obiter factam non inficior, nec non in aliorum scriptis nonnullis sparsim: verum nunquam adhuc incorporatæ fuerunt in moralem philosophiam; ad quam principaliter pertinent: non minus certe quam ad agriculturam, tractatus de diversitate soli et glebæ; aut ad medicinam, tractatus de complexionibus aut habitibus corporum diversis. Id autem nunc tandem fieri oportet, nisi forte imitari velimus temeritatem empiricorum, qui iisdem utuntur medicamentis ad ægrotos omnes, cujuscunque sint constitutionis.

Sequitur doctrinam de characteribus doctrina de affectibus et perturbationibus, qui loco morborum animi sunt, ut jam dictum est. Quemadmodum enim politici prisci de democratiis dicere solebant; quod populus esset mari ipsi similis, oratores autem ventia: quia sicut mare per se placidum foret et tranquillum, nisi a ventis agitarretur et turbaretur; sic et populus esset natura sua pacatus et tractabilis, nisi a seditiosis oratoribus impelleretur et incitaretur: similiter vere affirmari possit, naturam mentis humanæ sedatam fore, et sibi constantem, si affectus, tanquam venti, non tumultuarentur, ac omnia miscerent. Et hic rursus subit nova admiratio, Aristotelem, qui tot libros de ethicis conscripsit, affectus, ut membrum ethicæ principale, in illis non tractasse; in rhetoricis autem, ubi tractandi interveniunt secundario (quatenus scilicet oratione cieri aut commoveri possint) locum illis reperisse (in quo tamen loco de iis, quantum tam paucis fieri potuit, acute et bene disseruit) nam disceptationes ejus de voluptate et dolore huic tractatui nullo modo satisfaciunt; non magis, quam qui de luce et lumine tantum scriberet, de particularium colorum natura scripsisse diceretur: siquidem voluptas et dolor erga affectus particulares ita se habent, ut lux erga colores. Meliorem certe in hoc argumento (quatenus ex his, quæ nunc extant, conjicere liceat) diligenter adhibuerunt Stoici; atamen talem, quæ potius in definitionum subtilitate, quam in tractatu aliquo pleno et fuso, consisteret. Equidem reperio etiam libellos quosdam elegantes, de nonnullis ex affectibus; veluti de ira, de inutili verecundia, et aliis paucis. Sed si verum omnino dicendum sit, doctores hujus scientiæ præcipui sunt poëtæ et historici, in quibus ad vivum depingi et disseari solet, quomodo affectus excitandi sunt et accendendi? quomodo leniendi et sopiendi? quomodo rursus continendi ac refrænandi, ne in actus erumpant? quomodo itidem se, licet compressi et occultati, prodant? quas operationes edant? quas vices subeant? qualiter sibi mutuo implicentur? qualiter inter se digladiantur et opponantur? et innumera hujus generis. Inter quos hoc ultimum plurimi est usus in moralibus et civilibus; qualiter (inquam) affectus affectum in ordinem cogat; et alterius auxilio, ad alterum subjugandum, uti liceat? Venatorum et aucupum more, qui bestiarum opera ad bestias, volucris alicujus ad volucres capiendas utuntur: quod fortasse aliter ex sese, absque brutorum auxilio, homo tam facile præstare non possit. Quin et hoc fun-

damento nititur excellens ille, et per omnia patens, usus in civilibus præmii et poenæ; quæ rerum publicarum columnæ sunt; cum affectus illi prædominantes formidinis et spei, alios omnes affectus noxios coercerent et suppriment. Etiam sicut in regimine status, non raro fit ut factio factione in officio contineatur; similiter fit et in regimine mentis interno.

Pervenimus nunc ad illa, quæ in nostra sunt potestate, quæque operantur in animum, voluntatemque et appetitum afficiunt et circumagunt; ideoque ad immutandos mores plurimum valent. Qua in parte debuerant philosophi strenue et gnaviter inquirere, De viribus et energia consuetudinis, exercitationis, habitus, educationis, imitationis, æmulationis, convictus, amicitiae, laudis, reprehensionis, exhortationis, famæ, legum, librorum, studiorum, et si quæ sunt alia. Hæc enim sunt illa, quæ regnant in moralibus; ab istis, agentibus animus patitur et disponitur; ab istis veluti ingredientibus, conficiuntur pharmaca, quæ ad conservandam et recuperandam animi sanitatem conducant, quatenus remediis humanis id præstari possit. Ex quorum numero unum aut alterum seligemus, in quibus paululum immorabimur, ut reliquis sint exemplo. De consuetudine igitur et habitu, pauca delibabimus.

Opinio illa Aristotelis plane mihi videtur angustias quasdam contemplationis, et negligentiam sapere: cum asserit in illas actiones, quæ naturales sunt, consuetudinem nihil posse: exemplo usus, quod si lapis millies projiciatur in altum, ne inclinationem quidem sponte ascendendi acquirit: quintiam quod sæpius videndo, aut audiendo, nihilo melius aut videmus, aut audimus. Quamvis enim hoc teneat in aliquibus, ubi natura est peremptoria (cujus rei causas reddere in præsentia non vacat) aliter tamen in illis fit, in quibus natura, secundum latitudinem quandam, patitur intentionem et remissionem. Sane videre potuit, chirothecam paulo arctiorem, manui sæpius inducendo, laxiorem reddi; baculum usu et mora in contrarium flexus sui naturalis incurvari, et in eodem statu paulo post durare; vocem exercitando magis fieri robustam et sonoram; frigora æstumque consuetudine tolerari; et ejusdem generis complura. Quæ quidem posteriora duo exempla propius accedunt ad rem, quam quæ ab ipso adducta sunt. Atamen, utcunque hoc se habeat, quo magis verum fuerit, tam virtutes, quam vitia, in habitu consistere; eo magis ei contendendum fuerat, ut normas præscriberet, quomodo hujusmodi habitus fuerint acquirendi aut amovendi: plurima siquidem confici possint præcepta de prudenti institutione exercitationum, animi non minus, quam corporis. Illorum paucula recensebimus.

Primum erit, ut jam a principio caveamus a pensis, vel magis arduis, vel magis pusillis, quam res postulat: nam si oneris nimium imponatur, apud ingenium mediocre bene sperandi alacritatem obtundes; apud ingenium fiduciæ plenum opinionem concitabis, qua plus sibi polliceatur, quam præstare possit; quod secum trahit socordiam. In utroque autem ingenii temperamento fiet ut experimentum expectationi non satisfaciat: id quod animum semper dejicit, et confundit. Quod si pensæ leviora

fuerint, magna inducitur, in progressionis summa, jactura.

Secundum erit, ut ad exercendam facultatem aliquam, quo habitus comparetur, duo imprimis tempora observentur: alterum, quando animus optime fuerit ad rem dispositus; alterum, quando pessime; ut ex priore, plurimum in via promoveamus: ex posteriore nodos obicesque animi contentione strenua deteramus, unde tempora media facile et placide labentur.

Tertium erit illud præceptum, cujus Aristoteles obiter meminit; "Ut totis viribus" (citra tamen vitium) "nitamur in contrarium illius, ad quod natura maxime impellimur:" sicut cum in adversum gurgitis remigamus; aut baculum incurvum, ut rectum fiat, in contrarium flectimus.

Quartum præceptum ex illo axiomate pendet, quod verissimum est; animum ad quæcunque felicius trahi et suavius, si illud, quo tendimus, in intentione operantis non sit principale, sed tanquam aliud agendo superetur; quoniam ita fert natura, ut necessitatem et imperium durum ferme oderit. Sunt et alia multa, quæ utiliter præcipi possint, de regimine consuetudinis; consuetudo enim, si prudenter et perite inducatur, fit vera (ut vulgo dicitur) altera natura: quod si imperite et fortuito administretur, erit tanquam simia naturæ, quæ nihil ad vivum imitetur, sed inscite tantum et deformiter.

Similiter si de libris, et studiis, eorumque ad mores virtute et influentia, verba facere vellemus; numnam desunt plurima præcepta et consilia fructuosa, eo spectantia? Annon unus ex patribus, magna cum indignatione, poësim appellavit "vinum dæmonum;" cum revera progignat plurimas tentationes, cupiditates et opiniones vanas? Annon prudens admodum, et digna, quæ bene perpendatur, est sententia Aristotelis, "Juvenes non esse idoneos moralis philosophiæ auditores:" quia in illis perturbationum æstus non dum sedata est, nec tempore et rerum experientia consopita? Atque ut verum dicamus, annon ideo fit, ut scriptorum priscorum præstantissimi libri et sermones (quibus ad virtutem homines efficacissime invitati sunt; tam augustam ejus majestatem omnium oculis repræsentando, quam opiniones populares, in virtutis ignominiam, tanquam habitu paratorum indutas derisui propinando) tam parum prosint ad vitæ honestatem, et mores pravos corrigendos, quia perlegi et revoli non consueverunt a viris ætate et judicio maturis, sed pueris tantum et tironibus relinquantur? Annon et hoc verum est, juvenes multo minus politicæ quam ethicæ auditores idoneos esse, antequam religione et doctrina de moribus et officiis plane imbuantur: ne forte judicio depravati et corrupti, in eam opinionem veniant, non esse rerum differentias morales veras et solidas sed omnia ex utilitate, aut successu metienda; sicut poëta canit:

"Prosperum et felix scelus virtus vocatur;"

et rursus,

"Ille crucem pretium sceleris tulit, hic diadema."

Ac poëtæ quidem hæc satirice et per indignationem loqui videntur: At libri nonnulli politici idem serio

et positive supponunt. Sic enim Machiavello dicere placet, "Quod si contigisset Cæsarem bello superatum fuisse, Catilina ipso fuisset odiosior:" quasi vero nihil interfuisset, præter fortunam solam, inter furiam quandam, ex libidine et sanguine conflata, atque animum excelsum, et inter homines naturales maxime omnium (si ambitio abfuisset) suspiciendum. Videmus etiam ex hoc ipso, quam necessarium sit, homines doctrinas pias et ethicas, antequam politicam degustent, plenis faucibus haurire: nimirum, quod qui in aulis principum, et negotiis civilibus, a teneris (ut aiunt) unguiculis innutriti sunt, nunquam fere sinceram et internam morum probitatem assequantur: quanto minus si accesserit etiam librorum disciplina? Porro, et in documentis ipsis moralibus, vel saltem aliquibus eorum, annon cautio pariter est adhibenda, ne inde fiant homines pertinaces, arrogantes, et insociabiles? Juxta illud Ciceronis de M. Catone: "Hæc bona, quæ videmus, divina et egregia, ipsius scitote esse propria: quæ nonnunquam requirimus, ea sunt omnia non a natura, sed a magistris." Sunt et axiomata alia complura, de iis, quæ a studiis et libris hominum animis ingenerantur. Verum est enim quod dicit ille, "Abeunt studia in mores:" quod pariter affirmandum de cæteris illis rebus, convictu, fama, legibus patriis, et reliquis, quas paulo ante recensuimus.

Cæterum animi quædam est cultura, quæ adhuc magis accurata et elaborata videtur, quam reliquæ. Nititur autem hoc fundamento: quod omnium mortalium animi, certis temporibus, reperiantur in statu perfectiore; aliis, in statu magis depravato. Hujus igitur culturæ intentio fuerit et institutum, ut bona illa tempora foveantur; prava vero tanquam ex calendario deleantur et expungantur. Ac bonorum quidem temporum fixatio duobus modis procuratur: votis, aut saltem constantissimis animi decretis, et observantiis, atque exercitationibus: quæ non tantum in se valent quantum in hoc, quod animum in officio et obedientia jugiter contineant. Malorum temporum obliteratio duplici itidem ratione perfici potest: redemptione aliqua, vel expiatione præteritorum, et novo vitæ instituto, veluti de integro. Verum hæc pars ad religionem plane spectare videtur; nec mirum; cum moralis philosophia vera et genuina (sicut ante dictum est) ancillæ tantum vices erga theologiam suppleat.

Quamobrem, concludemus hanc partem de cultura animi cum eo remedio, quod omnium est maxime compendiosum et summarium, et rursus maxime nobile et efficax, quo animus ad virtutem efformetur, et in statu collocetur perfectioni proximo. Hoc autem est, ut fines vitæ actionumque deligamus, et nobis ipsis proponamus, rectos et virtuti congruos; qui tamen talis sint, ut eos assequendi nobis aliquatenus suppetat facultas. Si enim hæc duo supponantur; ut et fines actionum sint honesti et boni, et decretum animi de iis assequendis et obtinendis fixum sit et constans; sequetur ut continuo vertat et efformet se animus, una opera, in virtutes omnes. Atque hæc certe illa est operatio, quæ natura ipsius opus referat, cum reliquæ, quæ diximus, videantur esse solummodo sicut opera manus. Quemadmodum enim statuarius, quando simulacrum aliquod sculpi

aut incidit, illius solummodo partis figuram effingit, circa quam manus occupata est, non autem cæterarum (veluti si faciem efformet, corpus reliquum rude permanet et informe saxum, donec ad illud quoque pervenerit) e contra vero natura, quando florem molitur, aut animal, rudimenta partium omnium simul parit et producit: eodem modo, quando virtutes habitu acquiruntur, dum temperantiæ incumbimus, ad fortitudinem, aut reliquas parum proficimus; quando autem rectis et honestis finibus nos dedicaverimus penitus et deoverimus, quæcunque fuerit virtus, quam animo nostro commendaverint et imperaverint fines illi, reperiemus nos jamdudum imbutos, et prædispositos habilitate et propensione nonnulla ad eam assequendam et exprimendam. Atque hic possit esse status ille animi, qui egregie ab Aristotele describitur; et ab eo, non virtutis, sed divinitatis cujusdam caractere insignitur. Ipsa ejus verba hæc sunt: "Immanitati autem consentaneum est, opponere eam, quæ supra humanitatem est, heroicam sive divinam virtutem." Et paulo post, "Nam ut feræ neque vitium neque virtus est, sic neque Dei. Sed hic quidem status altius quiddam virtute est; ille aliud quiddam a vitio." Plinius certe secundus, ex licentia magniloquentiæ ethnicæ, Trajani virtutem, divinæ, non tanquam imitamentum, sed tanquam exemplar, proponit, cum ait: "Opus non esse hominibus, alias ad Deos preces fundere, quam ut benignos æque et propitiosos se dominos mortalibus præstarent, ac Trajanus præstitisset." Verum hæc profanam ethnicorum jactantiam sapiunt, qui umbras quasdam corpore majores prensabant. At religio vera, et sancta fides christiana, rem ipsam petit: imprimendo animis hominum charitatem; quæ appositissime "vinculum perfectionis" appellatur, quia virtutes omnes simul colligat, et revincit. Sane elegantissime dictum est a Menandro, de amore sensuali, qui divinum illum perperam imitatur: amor melior sophista lævo, ad humanam vitam." Quibus innuit, morum decus melius ab amore efformari, quam a sophista et præceptore inepto, quem lævum appellat. Siquidem universis suis operosis regulis et præceptionibus hominem tam dextere et expedite effingere nequeat, ut se ipsum et in pretio habeat, et se belle in omnibus componat, quam amor facit. Sic proculdubio, si animus cujuspiam fervore charitatis verè incendatur, ad majorem perfectionem evehetur, quam per universam ethicam doctrinam; quæ sophistæ profecto habet rationem, si cum altera illa conferatur. Quinetiam, sicut Xenophon recte observavit, "Cæteros affectus, licet animum attollant, eum tamen distorquere et discomponere per ecstases et excessus suos: amorem vero solum, eum simul et dilatare et componere." Sic omnes aliæ humanæ, quas admiramur, dotes, dum naturam in majus exaltant, excessui interim sunt obnoxie: sola autem charitas non admittat excessum. Angeli, dum ad potentiam, divinæ parem, aspirarent, prævaricatisunt, et ceciderunt: "Ascendam et ero similis Altissimo." Homo, dum ad scientiam divinæ parem aspiraret, prævaricatus est, et lapsus: "Eritis sicut dii; scientes bonum

et malum." Verum ad similitudinem divinæ bonitatis aut charitatis aspirando, nec Angelus, nec homo, unquam in periculum venit, aut veniet. Imo ad hanc ipsam imitationem etiam invitamur: "Diligite inimicos vestros, benefacite his, qui oderunt vos, et orate pro persecutoribus et calumniatoribus vos, ut sitis filii Patris vestri, qui in cælis est, qui solem suum oriri facit super bonos et malos, et pluit super justos et injustos." Quin et in ipso archetypo naturæ divinæ, verba sic collocat religio ethnica ("optimus, maximus;") Scriptura autem sacra pronunciat; "Misericordia ejus super omnia opera ejus."

Hanc itaque moralis doctrinæ partem, de georgicis animi, jam absolvimus. In qua, si ex intuitu portionum ejus, quas perstrinximus, quis existimet, operam nostram in hoc tantummodo sitam esse, ut ea in artem seu doctrinam redigeremus, quæ ab aliis scriptoribus prætermissa sint, tanquam vulgata et obvia, et per se satis clara et perspicua; suo judicio libere utatur. Interim illud meminerit, quod ab initio monuimus, propositum a nobis esse, non rerum pulchritudinem, sed usum et veritatem sectari. Recordetur etiam paulisper commentum illud parabolæ antiquæ, de geminis Somni portis:

"Sunt geminæ Somni portæ, quarum altera fertur  
Cornea, qua veris facilis datur exitus umbris:  
Altera candenti perfecta nitens elephanto;  
Sed falsa ad cælum mittunt insomnia manes."

Insignis sane magnificentia portæ eburnæ; tamen somnia vera per corneam commeant.

Additamenti vice poni possit circa doctrinam ethicam observatio illa; inveniri nimirum relationem et congruitatem quandam, inter bonum animi, et bonum corporis. Nam sicut bonum corporis constare diximus ex sanitate, pulchritudine, robore, ac voluptate; sic animi bonum, si juxta moralis doctrinæ scita illud contemplemur, huc tendere perspicimus, ut animus reddat sanum, et a perturbationibus immunem; pulchrum, verique decoris ornamentis excultum; fortem, ac agilem ad omnia vitæ munia obeunda; denique non stupidum, sed voluptatis et solatii honesti sensum vivide retinentem. Hæc autem, sicut in corpore, ita et in animo raro simul omnia conjunguntur. Facile enim videre est multos, ingenii viribus et fortitudine animi pollentes, quos infestant tamen perturbationes; quorumque etiam moribus vix aliquid elegantiae aut venustatis aspergitur: alios, quibus abunde est in moribus elegantiae et venustatis, illis tamen non suppetit, aut probitas animi, ut velint, aut vires, ut possint recte agere: alios, animo præditos honesto, atque a vitiorum labe repurgato, qui tamen nec sibi ipsis ornameto sunt, nec reipublicæ utiles: alios, qui istorum fortasse trium compotes sunt, sed tamen Stoica quadam tristitia et stupiditate præditi, virtutis quidem actiones exercent, gaudiis non perfruuntur. Quod si contingat, ex quatuor istis duo aut tria ali-quando concurrere, rarissime tamen fit, quemadmodum diximus, ut omnia. Jam vero principale istud membrum philosophiæ humanæ, quæ hominem contemplatur, quatenus ex corpore consistit atque anima, sed tamen segregatum, et citra societatem, a nobis pertractatum est.

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER OCTAVUS.

AD REGEM SUUM.

## CAPUT PRIMUM.

*Partitio doctrinæ civilis, in doctrinam de conversatione; doctrinam de negotiis; et doctrinam de imperio, sive republica.*

VETUS est narratio, rex optime, convenisse complures philosophos solenniter, coram legato regis exteri, atque singulos pro virili parte sapientiam suam ostentasse; ut haberet legatus, quæ referret de mirabili sapientia Græcorum. Unus tamen ex eorum numero silebat, et nihil adducebat in medium: adeo ut legatus ad eum conversus diceret; "Tu vero quid habes, quod referam?" Cui ille; "Refer" inquit "regi tuo, te invenisse apud Græcos aliquem, qui tacere sciret." Equidem oblitus eram, in hac artium synopsi, artem tacendi interserere: quam tamen (quoniam plerunque desideretur) exemplo jam proprio docebo. Etenim, cum me tandem ordo rerum ad illud deduxerit, ut paulo post de arte imperii tractandum sit, cumque ad tantum regem scribam, qui perfectus adeo in ea arte sit magister, ipsamque ab incunabulis suis hausit: nec omnino immemor esse possim, qualem apud majestatem tuam locum sustinuerim: consentaneum magis existavi, me ipsum tacendo de hac re, apud majestatem tuam, quam scribendo, probare. Cicero vero, non solum artis, verum etiam eloquentiæ cujusdam, quæ in tacendo reperitur, meminit. Cum enim sermones nonnullos suos, cum alio quodam, ultro citroque habitos, in epistola quadam ad Atticum commemorasset, sic scribit: "Hoc loco, sumpsit aliquid de tua eloquentia; nam tacui." Pindarus vero (cui illud peculiare est, animos hominum inopinato, sententiola aliqua mirabili, veluti virgula divina, percutere) hujusmodi quidpiam ejaculatur: "Interdum magis afficiunt non dicta, quam dicta." In hac parte igitur, tacere, aut, quod silentio proximum est, brevis admodum esse decrevi. Verum, antequam ad artes imperii perveniam, haud pauca de aliis doctrinæ civilis portionibus sunt præmittenda.

Scientia civilis versatur circa subjectum, quod cæterorum omnium maxime est materiæ immersum:

ideoque difficillime ad axiomata reducitur. Sunt tamen nonnulla, quæ hanc difficultatem levant. Primo enim, quemadmodum Cato ille censorius de Romanis suis dicere solitus est: "Ovibus eos similes esse, quarum gregem integrum minore quis molestia ageret, quam unam aliquam: quoniam si paucas ex grege, ut rectam ineant viam, propellere possis, cæteræ ultro sequentur." Similiter, hoc quidem respectu, ethicæ munus est quodammodo illo politicæ difficilium. Secundo proponit sibi ethica, ut animus bonitate interna imbuatur, et cumuletur: at civilis scientia nihil amplius postulat præter bonitatem externam: hæc enim ad societatem sufficit. Itaque non raro accidit, ut regimen sit bonum, tempora mala: siquidem in sacra historia illud non semel occurrit (cum de regibus bonis et piis narretur) "sed adhuc populus non direxerat cor suum ad Dominum Deum patrum suorum." Itaque, et hoc quoque respectu, duriores partes sunt ethicæ. Tertio, hoc habent republicæ, ut tanquam machinæ grandiores tardius moveantur, nec sine magno molimine; unde haud tam cito labefactantur: sicut enim in Ægypto septem anni fertiles, steriles septem sustentarunt; ita in rebuspublicis priorum temporum bona institutio efficit, ut sequentium errores non statim perniciem inferant: at singulorum hominum decreta, et mores, magis subito subverti solent. Hoc denique ethicam gravat, politicæ succurrit.

Scientia civilis tres habet partes, juxta tres societatis actiones summarias; doctrinam de conversatione; doctrinam de negotiis; et doctrinam de imperio sive republica; tria siquidem sunt bona, quæ ex societate civili homines sibi parare expetunt: solamen contra solitudinem, adjumentum in negotiis, et protectio contra injurias. Suntque istæ tres prudentiæ plane inter se diversæ, et sæpenumero disjunctæ; prudentia in conversando, prudentia in negotiando, et prudentia in gubernando.

Enimvero, quod ad conversationem attinet, illa certe affectata esse non debet, at multo minus neglecta; cum prudentia in ejus moderamine, et decus quoddam morum in se ipsa præ se ferat, et ad negotia, tam publica, quam privata, commode administranda, plurimum juvet. Etenim sicut actio oratori

tanti habetur (licet sit externum quiddam) ut etiam illis alteris partibus, quæ graviore et interiore videntur, anteponatur; eodem fere modo, in viro civili, conversatio, ejusque regimen (utcumque in exterioribus occupetur) si non summum, at certe eximum locum invenit. Quale enim pondus habet vultus ipse, ejusque compositio? Recte poëta:

“— Nec vultu destrue verba tuo.”

Poterit enim quis vim orationis vultu labefactare, et plane prodere. Quin et facta, non minus quam verba, vultu pariter destrui possint, si Ciceroni credamus; qui, cum fratri affabilitatem commendaret erga provinciales, non in hoc eam potissimum sitam dixit, ut aditus præberet ad se faciles, nisi etiam vultu ipso comiter accedentes exciperet. “Nil interest habere ostium apertum, vultum clausum.” Videmus quoque Atticum, sub primum Ciceronis cum Cæsare congressum, bello adhuc fervente, diligenter et serio Ciceronem per epistolam monuisse, devultu et gestu ad dignitatem et gravitatem componendis. Quod si tantum possit oris et vultus solius moderatio, quanto magis sermo familiaris, et alia, quæ ad conversationem pertinent? Atque sane summa et compendium decori et elegantiae morum in hoc fere sita sunt, ut quasi æqua lance et propriam dignitatem et aliorum metiamur et tueamur: quod etiam non male expressit T. Livius (licet alii rei intentus) eo personæ caractere: “Ne,” inquit, “aut arrogans videar, aut obnoxius: quorum alterum est alienæ libertatis oblitus, alterum suæ.” Ex contraria vero parte, si urbanitati et elegantiae morum externæ impensius studeamus, transeunt illæ in affectationem quandam deformem et adulterinam. “Quid enim deformius quam scenam in vitam transferre?” Quinetiam, licet in excessum illum vitiosum minime prolabantur, temporis tamen nimium in hujusmodi leviculis absumitur, animusque ad curam ipsarum, magis quam oportet, deprimitur. Ideoque sicut in academiis, adolescentes literarum studiosi, ad sodalium congressibus plus satis indulgentes, moneri soleant a præceptoribus, “Amicos esse fures temporis:” sic certe assidua ista, in conversationis decorum, animi intentio, magnum gravioribus meditationibus furtum facit. Deinde, qui primas adeo in urbanitate obtinent, et ad hanc rem unam quasi nati videntur, hoc fere habent, ut sibi ipsis in illa sola complacent, et ad virtutes solidiores et celsiores vix unquam aspirant: quando e contra, qui sibi in hac parte defectus sunt conscii, decus ex bona existimatione quærent: ubi enim adest bona existimatio, omnia fere decent; ubi vero illa deficit, tum demum a commoditate morum atque urbanitate subsidium petendum est. Porro, ad res gerendas, vix gravius aut frequentius reperias impedimentum, quam hujusce decori externi curiosam nimis observationem, atque illud alterum, quod huic ipsi inservit; nimirum, anxiam temporis atque opportunitatem electionem. Egregie enim Salomon: “Qui respicit ad ventos, non seminat; qui respicit ad nubes, non metit.” Creanda siquidem nobis est opportunitas sæpius quam opperienda. Ut verbo dicamus, urbana ista morum compositio, veluti vestis animi est, et proinde vestis commoditates referre debet. Primum enim talis esse

debet, ut sit in usu communi: rursus, ut non sit nimis delicata aut sumptuosa: deinde, ita conficienda, ut si qua sit in animo virtus, eam exhibeat maxime conspicuam; si qua deformitas, eandem suppleat et occultet: postremo, et super omnia, ne sit nimis arcta, atque ita animum angustet, ut ejusdem motus in rebus gerendis cohibeat et impediat. Verum hæc pars scientiæ civilis de conversatione eleganter profecto a nonnullis tractata est, neque ullo modo tanquam desiderata reponi debet.

## CAPUT SECUNDUM.

*Partitio doctrinæ de negotiis, in doctrinam de occasionibus sparsis, et doctrinam de ambitu vitæ. Exemplum doctrinæ de occasionibus sparsis, ex parabolis aliquibus Salomonis. Præcepta de ambitu vitæ.*

DOCTRINAM de negotiis partiemur in doctrinam de occasionibus sparsis, et doctrinam de ambitu vitæ: quarum altera universam negotiorum varietatem complectitur, et vitæ communis tanquam amanuensis est; altera, ea tantam, quæ ad propriam cujusque fortunam amplificandam spectant, excerpit, et suggerit; quæ singulis pro intimis quibusdam rerum suarum tabellis aut codicillis esse possunt. Verum antequam ad species descendamus, aliquid circa doctrinam de negotiis in genere præfabimur. Doctrinam de negotiis, pro rei momento, tractavit adhuc nemo; cum magna, tam literarum, quam literatorum, existimationis jactura. Ab hac enim radice pullulat illud malum, quod notam eruditus inussit; nimirum, eruditionem et prudentiam civilem raro admodum conjungi. Etenim si quis recte advertat, ex prudentiis illis tribus, quas modo diximus ad vitam civilem spectare, illa conversationis ab eruditus fere contemnitur, tanquam servile quiddam, atque insuper meditationibus inimicum. Quod vero ad illam de republica administranda; sane si quando rerum gubernaculis admoveantur eruditi, munus suum non incommodè sustinent; verum ea promotio contingit paucis. De prudentia autem negotiandi (qua de nunc loquimur) in qua vita humana plurimum versatur, nulli omnino libri conscripti habentur; præter pauca quædam monita civilia in fasciculum unum aut alterum collecta, quæ amplitudini hujus subjecti nullo modo respondent. Etenim si libri aliqui extarent de hoc argumento, sicut de cæteris, minime dubitaverim, quin viri eruditi, aliquo experientie manipulo instructi, ineruditis, licet diutina experientia edoctos, longe superarent, et proprio illorum (quod dicitur) arcu usi, magis e longinquo ferirent.

Neque vero est cur vereamur, ne scientiæ hujus tam varia sit materia, ut sub præceptionibus non cadat: multo siquidem angustior est, quam illa reipublicæ administrandæ scientiæ; quam tamen apprime videmus exultam. Hujus generis prudentiæ apud Romanos, optimis temporibus, extitisse videntur nonnulli professores. Testatur enim Cicero moris fuisse, paulo ante sua secula, ut senatores, prudentia et rerum usu maxime celebres (Coruncanii, Curii, Lælii, et alii) statis horis in foro deambulant, ubi civibus copiam sui facerent et consule-

rentur, non de jure, sed de negotiis omnigenis: veluti de filia elocanda, sive de filio educando, sive de prædio coëmendo, de contractu, accusatione, defensione, aut alia quacunquē re, quæ in vita communi interveniat. Ex quo liquet, prudentiam quandam esse consilium dandi, etiam in negotiis privatis, ex universali rerum civilium cognitione et experientia promanantem; quæ exerceatur quidem in casibus particularibus, extrahatur autem ex generali casuum consimilium observatione. Sic enim videmus in eo libro, quem ad fratrem conscripsit Q. Cicero "De petitione consulatus" (quem unicum a veteribus habemus, quantum memini, tractatum de negotio aliquo particulari) quanquam ad consilium dandum, de re tum præsentī, potissimum spectaret, plurima tamen contineri axiomata politica, quæ non usum solum temporarium, sed normam quandam perpetuam circa electiones populares præscribant. In hoc genere autem nihil invenitur, quod ullo modo comparandum sit cum aphorismis illis, quos edidit rex Salomon; de quo testatur Scriptura "cor illi fuisse instar arenæ maris:" sicut enim arenæ maris universas orbis oras circumdant, ita et sapientia ejus omnia humana, non minus, quam divina complexa est. In aphorismis vero illis, præter alia magis theologica, reperies liquido haud pauca præcepta et monita civilia præstantissima, ex profundis quidem sapientiæ penetralibus scaturientia, atque in amplissimum varietatis campum excurrentia. Quoniam vero doctrina de occasionibus sparsis (quæ doctrinæ de negotiis portio est prior) inter desiderata reponimus, ex more nostro paulisper in illa immorabimur: atque exemplum ejusdem, ex aphorismis sive parabolis illis Salomonis desumptum, proponemus. Neque vero quis, ut arbitramur, nos merito sugillare possit, quod ex scriptoribus Sacræ Scripturæ aliquem ad sensum politicum trahamus: equidem existimo, si extarent commentarii illi Salomonis ejusdem, de natura rerum (in quibus "de omni vegetabili, a musco super murum ad cedrum Libani," itemque de animalibus, conscripsit) non illicitum esse, eos secundum sensum naturalem interpretari: quod idem nobis liceat in politicis.

EXEMPLUM PORTIONIS DOCTRINÆ DE OCCASIONIBUS  
SPARSIS, EX PARABOLIS ALIQUIBUS SALOMONIS.

PARABOLA I.

"Mollis responsio frangit iram."

EXPLICATIO.

Si incendatur ira principis vel superioris adversus te, et tuæ jam sint loquendi partes, duo præcipit Salomon: alterum ut fiat responsio, alterum ut eadem sit mollis. Prius continet tria præcepta. Primo, ut caveas a silentio tristi et contumaci: illud enim aut culpam totam in te recipit, ac si nihil habeas, quod respondere possis; aut dominum occultæ iniquitatis insimulat, ac si aures ejus, defensioni licet justæ, non paterent. Secundo, ut caveas a re comperendinanda, neque tempus aliud ad defensionem postules: hoc enim aut eandem notam inurit, quam prius (nimirum dominum tuum nimia mentis perturbatione efferri) aut plane significat, te artifi-

ciosam quandam defensionem meditari, cum in promptu nihil habeas: adeo ut optimum semper fuerit, aliquid in præsentia, et e re nata, in excusationem tui adducere. Tertio, ut fiat prorsus responsio: responsio, inquam, non mera confessio, aut mera submissio, sed aliquid apologiæ et excusationis inspergatur: neque enim aliter tutum est facere, nisi apud ingenia valde generosa et magnanima; quæ rara admodum sunt. Sequitur posteriore loco, ut responsio sit mollis, minime præfracta aut aspera.

PARABOLA II.

"Servus prudens dominabitur in filium stultum; et partietur hæreditatem inter fratres."

EXPLICATIO.

In omni familia turbata et discordi, semper exurgit aliquis servus, aut humilis amicus, præpotens, qui pro arbitro se gerat, ad litea familiæ componendas; cuique, eo nomine, et familia tota et dominus ipse sint obnoxii. Ille, si suam rem agat, familiæ mala fovet et aggravat; sin fidelis revera fuerit et integer, plurimum certe meretur: adeo ut etiam tanquam inter fratres haberi debeat, aut saltem procreationem hæreditatis accipere fiduciarium.

PARABOLA III.

"Vir sapiens, si cum stulto contenderit, sive irascatur, sive rideat, non inveniet requiem."

EXPLICATIO.

Monemur sæpius, ut congressum imparem fugiamus; eo sensu, ne cum potioribus decertemus. At haud minus utile est monitum, quod hic exhibet Salomon, Ne cum indigno contendamus. Iniqua enim prorsus sorte hæc res transigitur. Siquidem si superiores simus, nulla sequitur victoria; si superemur, magna indignitas. Neque juvat etiam, in hujusmodi contentione exercenda, si interdum veluti per jocum agamus, interdum cum fastu et contemptu. Nam quocumque nos vertamus, leviores inde efficiemur, neque commode nos explicabimus. Pessime autem fit, si hujusmodi persona, quacum contendimus (ut Salomon loquitur) aliquid affine habeat cum stulto; hoc est, si sit audaculus et temerarius.

PARABOLA IV.

"Sed et cunctis sermonibus, qui dicuntur, ne accommodes aurem tuam, ne forte audias servum tuum maledicentem tibi."

EXPLICATIO.

Vix credi possit, vitam quantum perturbet inutilis curiositas circa illas res, quæ nostra intersunt: nimirum, quando secreta illa rimari satagimus, quæ detecta et inventa ægritudinem quidem animo inferant, ad consilia autem expedienda nihil juvent. Primo enim sequitur animi vexatio et inquietudo, cum humana omnia perfidiæ et ingratitude plena sint. Adeo ut, si comparari possit speculum aliquid magicum, in quo odia et quæcunque contra nos ullibi commoventur, intueri possemus, melius nobis foret, si protinus projiceretur et collideretur. Hujusmodi enim res, veluti foliorum murmura sunt, et brevi

evanescent. Secundo curiositas illa animum suspitionibus nimis onerat; quod consiliis inimicissimum est, eaque reddit inconstantia et complicata. Tertio eadem, mala ipsa sæpiissime figit, alias prætervolatura: grave enim est conscientias hominum irritare; qui, si latere se putent, facile mutantur in melius, sin deprehensos se sentiant, malum malo pellunt. Merito igitur summæ prudentiæ tribuebatur Pompeio Magno, quod Sertorii chartas universas, nec a se perlectas, nec aliis permissas, igni protinus dedisset.

## PARABOLA V.

“Advenit veluti viator pauperies, et egestas quasi vir armatus.”

## EXPLICATIO.

Eleganter describitur in parabola, quomodo prodigis et circa rem familiarem incuriosis, superveniunt naufragia fortunarum. A principio enim pedentim et passibus lentis, instar viatoris, advenit obæratio et sortis diminutio, neque fere sentitur: At non multo post invadit egestas, tanquam vir armatus, manu scilicet tam forti et potente, ut ei amplius resisti non possit: cum apud antiquos recte dictum sit, necessitatem ex omnibus rebus esse fortissimum. Itaque viatori occurrendum, contra armatum muniendum.

## PARABOLA VI.

“Qui erudit derisorem, ipse sibi injuriam facit; et qui arguit impium, sibi maculam generat.”

## EXPLICATIO.

Congruit cum præcepto Salvatoris, ut non mittamus “margaritas nostras ante porcos.” Distinguuntur autem in hac parabola actiones præceptionis, et reprehensionis; distinguuntur itidem personæ derisoris, et impii; distinguitur postremo id, quod reponditur. In priore enim reponditur opera lusa; in posteriore etiam et macula. Cum enim quis erudit et instituit derisorem, jactura primum fit temporis; deinde et alii conatum irrident, tanquam rem vanam, et operam male collocatam; postremo derisor ipse scientiam, quam didicit, fastidio habet. At majore cum periculo transigitur res in reprehensione impii; quia non solum impius non auscultat; sed et cornua obvertit, et reprehensorem, odiosum sibi jam factum, aut confestim conviciis proscindit, aut saltem postea apud alios criminatur.

## PARABOLA VII.

“Filius sapiens lætificat patrem: filius vero stultus mœstitiæ est matri suæ.”

## EXPLICATIO.

Distinguuntur solatia atque ægritudines œconomicæ, patris videlicet et matris, circa liberos suos. Etenim filius prudens et frugi, præcipuo solatio est patri, qui virtutis pretium melius novit, quam mater; ac propterea filii sui indoli, ad virtutem propensæ, magis gratulatur: quinetiam gaudium illi fortasse affert institutum suum, quod filium tam probe educarit, illique honestatem morum, præceptis et exemplo,

impresserit. E contra mater calamitati filii plus compatitur et indolet; tum ob affectum maternum magis mollem et tenerum; tum fortasse indulgentiæ suæ conscia, qua eum corruperit et depravaverit.

## PARABOLA VIII.

“Memoria justi cum laudibus; at nomen impiorum putrescet.”

## EXPLICATIO.

Distinguitur inter famam virorum bonorum et malorum, qualis esse soleat post obitum. Viris enim bonis, extincta invidia (quæ famam eorum, dum vixerant, carpebat) nomen continuo efflorescit, et laudes magis indies invalescunt: at viris malis (licet fama eorum, per gratiam amicorum et factionis suæ hominum, ad breve tempus manserit) paulo post fastidium nominis oboritur, et postremo laudes illæ evanidæ in infamiam, et veluti in odorem gravem et tetrum, desinunt.

## PARABOLA IX.

“Qui conturbat domum suam, possidebit ventos.”

## EXPLICATIO.

Utile admodum monitum, de discordiis et turbis domesticis. Plurimi enim, ex dissidiis uxorum, aut exhæredationibus filiorum, aut mutationibus frequentibus familiæ, magna sibi spondent; ac si inde, vel animi tranquillitas, vel rerum suarum administratio felicior, sibi obventura foret. Sed plerunque abeunt spes suæ in ventos. Etenim, tum mutationes illæ, ut plurimum, non cedunt in melius; tum etiam perturbatores isti familiæ suæ, molestias varias, et ingratitude eorum, quos, aliis præteritis, adoptant et deligunt, sæpenumero experiuntur. Quin et hoc pacto rumores sibi progignunt non optimos, et famas ambiguas: neque enim male a Cicerone notatum est; Omnem famam a domesticis manare. Utrumque autem malum per ventorum possessionem eleganter a Salomone exprimitur: nam et expectationis frustratio, et rumorum suscitatio, ventis recte comparantur.

## PARABOLA X.

“Melior est finis orationis, quam principium.”

## EXPLICATIO.

Corrigit parabola errorem frequentissimum, non solum apud eos, qui verbis præcipue student, verum etiam apud prudentiores. Is est, quod homines de sermonum suorum aditu atque ingressu magis sint solliciti, quam de exitu; et accuratius exordia et præfatiunculas meditentur, quam extrema orationum. Debuerant autem nec illa negligere, et ista, ut longe potiora, præparata et digesta apud se habere; revolventes secum, et, quantum fieri potest, animo prospicientes, quis tandem exitus sermonis sit futurus, et quomodo negotia inde promoveri et maturari possint. Neque hic finis. Quinimo non epilogos tantum, et sermonum, qui ad ipsa negotia spectant, egressus meditari oportet; verum etiam et illorum sermonum cura suscipienda, quos sub ipsum discessum comode et urbane injicere possint, licet a negotio

prorsus alienos. Equidem cognovi consiliarios duos, viros certe magnos, et prudentes, et quibus onus rerum tunc præcipue incumberebat; quibus illud fuit perpetuum et proprium, ut quoties cum principibus suis de negotiis ipsorum communicarent; colloquia in rebus ad ipsa negotia spectantibus nunquam terminarent; verum semper aut ad jocum, aut aliud aliquid, quod audire erat volupe, diverticula quærent; atque, ut adagio dicitur, "sermone marinas aqua fluviali sub extremum abluerent." Neque hoc illis inter artes postremum erat.

## PARABOLA XI.

"Sicut muscæ mortuæ fetere faciunt unguentum optimum, sic hominem pretiosum sapientia et gloria, parva stultitia."

## EXPLICATIO.

Iniqua admodum et misera est conditio hominum virtute præcellentium (ut optime notat parabola) quia erroribus eorum, quantumvis levissimis, nullo modo ignoscitur. Verum, quemadmodum in gemma, valde nitida, minimum quodque granulum, aut nebulula, oculos ferit, et molestia quadam afficit; quod tamen si in gemma vitiosiore repertum foret, vix notam subiret: similiter in viris singulari virtute præditis, minima quæque vitia statim in oculos et sermones hominum incurrant, et censura perstringuntur graviore; quæ in hominibus mediocribus aut omnino laterent, aut veniam facile reperirent. Itaque viro valde prudenti parva stultitia; valde probo parvum peccatum; urbano et moribus eleganti, paululum indecori, de fama et existimatione multum detrahit. Adeo ut non pessimum foret viris egregiis, si nonnulla absurda (quod citra vitium fieri possit) actionibus suis immiscerent, ut libertatem quandam sibi retineant, et parvorum defectuum notas confundant.

## PARABOLA XII.

"Homines derisores civitatem perdunt, sapientes vero avertunt calamitatem."

## EXPLICATIO.

Mirum videri possit, quod in descriptione hominum, qui ad respublicas labefactandas et perdendas veluti natura comparati et facti sunt, delegerit Salomon characterem; non hominis superbi et insolentis; non tyrannici et crudelis; non temerarii et violenti; non impii et scelerati; non iniusti et oppressoris; non seditiosi et turbulentis; non libidinosi et voluptarii; non denique insipientis et inhabilis; sed derisoris. Verum hoc sapientia ejus regis, qui rerumpublicarum conservationes et eversiones optime norat, dignissimum est. Neque enim similis fere est pestis regnis et rebuspublicis, quam si consiliarii regum, aut senatores, quique gubernaculis rerum admoventur, sint ingenio derisores. Hujusmodi enim homines, periculorum magnitudinem, ut fortes videantur senatores, semper extenuant; iisque, qui pericula, prout par est, ponderant, veluti timidus insultant: consultant et deliberandi maturas moras, et meditata disceptationes, veluti rem oratoriam, et tædii plenam, et ad summas rerum nihil facientem,

subsannant: famam, ad quam principum consilia præcipue sunt componenda, ut salivam vulgi, et rem cito prætervolataram, contemnunt: legum vim et auctoritatem, ut reticula quædam, quibus res majores minime cohiberi debeant, nil morantur: consilia et præcautiones in longum prospicientes, ut somnia quædam, et apprehensiones melancholicas, rejiciunt: viris revera prudentibus et rerum peritis, atque magni animi et consilii, diceriis et facetiis illudunt: denique fundamenta omnia regiminis politici simul labefactant. Quod magis attendendum est, quia cuniculis et non impetu aperto, hæc res agitur: neque cepit esse inter homines (prout meretur) suspecta.

## PARABOLA XIII.

"Princeps, qui libenter præbet aures verbis mendacii, omnes servos habet improbos."

## EXPLICATIO.

Cum princeps talis fuerit, ut susurronibus, et sycophantibus absque judicio faciles et credulas aures præbeat, spirat omnino, tanquam a parte regis, aura pestilens, quæ omnes servos ejus corrumpit et inficit. Alii metus principis rimantur, eosque narrationibus fictitiis exaggerant; alii invidiam furias concitant, præsertim in optimos quosque: alii criminationibus aliorum proprias sordes et conscientias malas eluunt: alii amicorum suorum honoribus et desideriis velificant, competitores eorum calumniando et mordendo: alii fabularum argumenta, contra inimicos suos, tanquam in scena, componunt: et innumera hujusmodi. Atque hæc illi, qui ex servis principis ingenio sunt magis improbo. At illi etiam, qui natura probiores sunt et melius morati, postquam in innocentia sua parum præsidii esse senserint (quoniam princeps vera a falsis distinguere non novit) morum suorum probitatem exuunt, et ventos sulcos captant, iisque servilem in modum circumferunt. "Nil enim" ut ait Tacitus de Claudio, "tutum est apud principem, cujus animo omnia sunt tanquam indita et jussa." Atque bene Comineus: "Præstat, servum esse principis, cujus suspitionum non est finis, quam ejus, cujus credulitatis non est modus."

## PARABOLA XIV.

"Justus miseretur animæ jumentum sui; sed miser cordis impiorum crudeles."

## EXPLICATIO.

Inditus est, ab ipsa natura, homini misericordie affectus nobilis et excellens; qui etiam ad animalia bruta extenditur; quæ ex ordinatione divina ejus imperio subjiciuntur. Itaque habet ista misericordia analogiam quandam cum illa principis erga subditos. Quinetiam illud certissimum est, quod quo dignior est anima, eo pluribus compatiatur. Etenim animæ angustæ et degeneres hujusmodi res ad se nihil pertinere putant: at illa, quæ nobilior est portio universi, ex communione afficitur. Quare videmus, sub veteri lege haud pauca fuisse præcepta, non tam mere ceremonialia, quam misericordie instituta: quale fuit illud, de non comedendo carnem cum sanguine

ejus, et similia. Etiam in sectis Essæorum et Pythagoræorum, ab esu animalium omnino abstinebant. Quod etiam hodie obtinet (superstitione inviolata) apud incolas nonnullos imperii Mogollensis. Quin et Turcæ (gens licet et stirpe et disciplina crudelis et sanguinaria) brutis tamen eleemosynas largiri solent; neque animalium vexationes et torturas fieri sustinent. Verum, ne forte hæc, quæ diximus, omnis generis misericordiæ patrocinari videantur, salubriter subjungit Salomon impiorum misericordias esse crudeles. Eæ sunt, quando hominibus sceleratis et facinorosis parcitur, justitiæ gladio feriendis: crudelior enim hujusmodi misericordia, quam crudelitas ipsa. Nam crudelitas exercetur in singulos: at misericordia illa universum facinorosorum exercitum, concessa impunitate, in homines innocentes armat et immittit.

## PARABOLA XV.

“Totum spiritum suum profert stultus; at sapiens reservat aliquid in posterum.”

## EXPLICATIO.

Corrigit parabola præcipue (ut videtur) non hominum vanorum futilitatem, qui dicenda tacenda, facile proferunt: non parrhesiam illam, qua absque discrimine et judicio in omnes et omnia involant: non garrulitatem, qua ad nauseam usque aliis obtreppunt: sed vitium aliud magis occultum; nempe sermonis regimen minime omnium prudens et politicum; hoc est, cum quis ita sermonem (in colloquiis privatis) instituit, ut quæcumque in animo habeat, quæ ad rem pertinere putet, simul et tanquam uno spiritu, et oratione continuata proferat. Hoc enim plurimum negotiis officit. Siquidem primo, oratio intercesa, et per partes infusa, longe magis penetrat, quam continuata; quoniam in continuata pondus rerum non distincte et sigillatim excipitur, nec per moram nonnullam insidet, sed ratio rationem, antequam penitus insederit, expellit. Secundo, nemo tam potenti et felici eloquentia valet, ut primo sermonis impetu eum, quem alloquitur, mutum et elinguem plane reddat; quin et alter aliquid vicissim respondebit, et fortasse objiciet: tum vero accidit, ut quæ in refutationem aut replicationem reservanda fuissent, præmissa jam et antea delibata, vires suas et gratiam amiserint. Tertio, si quis ea, quæ dicenda sunt, non simul effundat, sed per partes eloquatur, aliud primo, aliud subsinde injiciens; sentiet ex ejus, quem alloquitur, vultu et responso, quomodo singula illum affecerint, quam in partem accepta fuerint; ut quæ adhuc restant dicenda, cautius aut supprimat aut excerptat.

## PARABOLA XVI.

“Si spiritus potestatem habentis ascenderit super te, locum tuum ne dimiseris; quia curatio faciet cessare magna peccata.”

## EXPLICATIO.

Præcipit parabola, quomodo se quis gerere debeat, cum iram atque indignationem principis incurrit. Præceptum duplex: primo, ut non dimittat locum suum: secundo, ut curationi, tanquam in morbo

aliquo gravi, diligenter et caute attendat. Consueverunt enim homines, postquam commotos contra se principes suos senserint, partim ex dedecoris impatientia, partim ne vulnus observando refricent, partim ut tristitiam et humilitatem eorum principes sui perspiciant, se a muneribus et functionibus suis subducere; quin etiam interdum ipsos magistratus et dignitates, quas gerunt, in principum manus restituere. At Salomon hanc medendi viam, veluti noxiam, improbat; idque summa profecto ratione. Primo enim, dedecus ipsum nimis illa publicat; unde tum inimici atque invidi audaciores fiunt ad lædendum; tum amici timidiore ad subveniendum. Secundo, hoc pacto fit, ut principis ira, quæ fortasse, si non evulgaretur, sponte conderet, magis figatur, et veluti principio jam facto hominis deturbandi, in præcipitium illius feratur. Postremo, secessus iste aliquid sapit ex malevolo, et temporibus infenso; id quod malum indignationis malo suspicionis cumulat. Ad curationem autem pertinent ista. Primo, caveat ante omnia, ne stupiditate quadam, aut etiam animi elatione, indignationem principis minime sentire, aut inde, prout debeat, affici, videatur: hoc est ut et vultum, non ad tristitiam contumacem, sed ad mœstitiam gravem atque modestam componat: et in rebus quibuscunque agendis se minus solito hilarem et lætum ostendat: quin et in rem suam erit, amici alicujus opera et sermone apud principem uti, qui quanto doloris sensu in intimis exercuerit, tempestive insinuet. Secundo, occasiones omnes vel minimas sedulo evitet, per quas aut res ipsa, quæ indignationi causam præbuit, refricetur, aut princeps denuo excandescendi, et ipsum, quacunque de causa, coram aliis objurgandi, ansam arripiat. Tertio, perquirat etiam diligenter occasiones omnes, in quibus opera ejus principi grata esse possit; ut et voluntatem promptam redimendi culpam præteritam ostendat; et princeps suus sentiat, quali tandem servo, si eum dimittat, privari se contigeret. Quarto, culpam ipsam aut sagaciter in alios transferat; aut animo illam non malo commissam esse insinuet; aut etiam malitiam illorum, qui ipsum regi detulerunt, vel rem supra modum aggravarunt, indicet. Denique in omnibus evigilet, et curationi sit intentus.

## PARABOLA XVII.

“Primus in causa sua justus: tum venit altera pars, et inquit in eum.”

## EXPLICATIO.

Prima in unaquaque causa informatio, si paulisper animo judicis insederit, altas radices agit, eumque imbuit, et occupat; adeo ut ægre elui possit, nisi aut manifesta aliqua falsitas in materia informationis, aut artificium aliquod in eadem exhibenda deprehendatur. Etenim nuda et simplex defensio, licet justa sit et præponderans, vix præjudicium informationis primæ compensare, aut libram justitiæ semel propendentem ad æquilibrium reducere per se valet. Itaque et judici tutissimum, ut nihil, quod ad merita causæ spectat, prælibetur, priusquam utraque pars simul audiantur; et defensori optimum, si judicem senserit præoccupatum, in hoc potissimum (quantum dat causa) incumbere, ut verutiam ali-

quam, et dolum malum, ab adversa parte, in iudiciis abusum adhibitum, detegat.

## PARABOLA XVIII.

"Qui delicate a pueritia nutrit servum suum, postea sentiet eum contumacem."

## EXPLICATIO.

Servandus est principibus et dominis, ex consilio Salomonis, in gratia et favore suo erga servos modus. Is triplex est. Primo, ut promoveantur per gradus, non per saltus: secundo, ut interdum assuefiant repulsæ: tertio (quod bene præcipit Machiavellus) "ut habeant præ oculis suis semper aliquid, quo ulterius aspirare possint." Nisi enim hæc fiant, reportabunt proculdubio principes, in fine, a servis suis, loco animi grati et officiosi, fastidium et contumaciam. Etenim, ex promotione subita, oritur insolentia; ex perpetua desideratorum adeptione impatientia repulsæ; denique si vota desint, deerit itidem alacritas et industria.

## PARABOLA XIX.

"Vidisti virum velocem in opere suo, coram regibus stabit, nec erit inter ignobiles."

## EXPLICATIO.

Inter virtutes, quas reges, in delectu servorum, potissimum spectant et requirunt, gratissima est præ cunctis celeritas, et in negotiis expediendis strenuitas. Viri profunda prudentia regibus suspecti, utpote qui nimium sint inspectores, et dominos suos, inscios et invito, ingenii sui viribus (tanquam machina) circumagere possint. Populares, invisi; utpote qui regum luminibus officiant, et oculos populi in se convertunt. Animosi, pro turbulentis sæpe habentur, et ultra, quam per est, ausuris. Probi, et vitæ integræ, tanquam difficiles existimantur, nec ad omnes nutus heriles apti. Denique non est virtus alia, quæ non habeat aliquam quasi umbram, qua regum animi offendantur; sola velocitas ad mandata, nihil habet, quod non placeat. Insuper, motus animorum regiorum celeres sunt, et moræ minus patientes: putant enim, se quidvis efficere posse; illud tantum deesse, ut cito fiat. Itaque ante omnia iis grata est celeritas.

## PARABOLA XX.

"Vidi cunctos viventes, qui ambulant sub sole, cum adolescente secundo, qui consurgit pro eo."

## EXPLICATIO.

Notat parabola vanitatem hominum, qui se agglomerare solent ad successores designatos principum. Radix autem hujus rei est insania illa, hominum animis penitus a natura insita; nimirum ut spes suas nimium adamant. Vix enim reperitur, qui non delectatur magis iis, quæ sperat, quam iis, quæ fruitur. Quinetiam novitas humanæ naturæ grata est, et avide expetitur. In successoribus autem principis ista duo concurrunt; spes et novitas. Innuit autem parabola idem, quod olim dictum erat; primo a Pompeio ad Syllam; postea a Tiberio de Macrone;

"plures adorare solem orientem, quam occidentem." Neque tamen imperantes multum hac re commoventur, aut eam magni faciunt, sicut nec Sylla, nec Tiberius fecit; sed ridet potius hominum levitatem, nec pugnant cum somniis: "est autem," ut aiebat ille, "spes vigilantis insomnium."

## PARABOLA XXI.

"Erat civitas parva, et pauci in ea viri; venit contra eam rex magnus, et vadavit eam, instruxitque munitiones per gyrum, et perfecta est obsidio; inventusque est in ea vir pauper et sapiens, et liberavit eam per sapientiam suam; et nullus deinceps recordatus est hominis illius pauperis."

## EXPLICATIO.

Describit parabola ingenium hominum pravum et malevolum. Ii in rebus duris, et angustia, confugiunt fere ad viros prudentes, et strenuos, licet antea contemptui habitos. Quamprimum autem tempestas transierit, ingrati demum erga conservatores suos reperiuntur. Machiavellus vero, non sine causa, instituit quæstionem, "Uter ingrator esset erga benemeritos, princeps an populus?" Sed interum utrumque ingratitudinis arguit. Attamen hoc non solum ex ingratitudinis principis aut populi oritur, sed accedit plerunque his invidia procerum, qui secreto indolent eventui, licet felici et prospero, quia ab ipsis profectus non sit: itaque et meritum hominis extenuant, et ipsum depriment.

## PARABOLA XXII.

"Iter pigrorum, quasi sepes spinarum."

## EXPLICATIO.

Elegantissime ostendit parabola, pigritiam in fine laboriosam esse. Diligentia enim, et sedula præparatio, id præstant, ut pes in aliquod offendiculum non impingat; sed ut complanetur via, antequam ineatur. At qui piger est, et omnia in extremum momentum executionis differt, necesse est, ut perpetuo, et singulis passibus, quasi per rubos et sentes incedat, qui eum subinde detineant, et impediunt. Idem observari possit etiam in familia regenda; in qua, si adhibeatur cura et providentia, omnia placide et veluti sponte procedunt, absque strepitu et tumultu: sin hæc desint, ubi major aliquis motus intervenerit, omnia simul agenda turmatim occurrunt; tumultuantur servi, ædes personant.

## PARABOLA XXIII.

"Qui cognoscit in iudicio faciem, non bene facit; iste et pro buccella panis deseret veritatem."

## EXPLICATIO.

Prudentissime notat parabola, in iudice magis perniciosam esse facilitatem morum, quam corruptelam munerum. Munera enim haudquaquam ab omnibus deferuntur; at vix ulla est causa, in qua non inveniatur aliquid, quod flectat iudicis animum, si personas respiciat. Alius enim respicietur, ut popularis; alius, ut maledicus; alius, ut dives; alius, ut gratus; alius, ut ab amico commendatus. Deni-

que omnia plena sunt iniquitatis ubi dominatur respectus personarum; et levi omnino de causa, veluti pro buccella panis, iudicium pervertetur.

## PARABOLA XXIV.

“Vir pauper calumnians pauperes, similis est imbro vehementi, in quo paratur fames.”

## EXPLICATIO.

Parabola ista antiquitus expressa et depicta fuit sub fabula hirudinis utriusque, nimirum, plenæ et vacuæ. Pauperis enim et famelici oppressio longe gravior est, quam oppressio per divitem et repletum; quippe quæ omnes exactionum technas, et omnes nummorum angulos, perquirat. Solebat hoc ipsum etiam spongiis assimilari, quæ aridæ fortiter sugunt, madidæ non item. Monitum autem utile continet, tum arga principes, ne præfecturas provinciarum, aut magistratus, viris indigentibus et obæratissimis committant; tum erga populos, ne reges suos cum nimia egestate confictari permittant.

## PARABOLA XXV.

“Fons turbatus pede, et vena corrupta, est justus cadens coram impio.”

## EXPLICATIO.

Præcipit parabola, rebus publicis ante omnia cavendum esse de iniquo et infami iudicio, in causa aliqua celebri et gravi; præsertim ubi non absolvitur innocens, sed condemnatur insons. Etenim injuriæ inter privatos grassantes, turbant quidem et polluunt latices justitiæ, sed tanquam in rivulis: verum iudicia iniqua, qualia diximus, a quibus exempla petuntur, fontes ipsos justitiæ inficiunt et inquinant. Postquam enim tribunal cesserit in partes injustitiæ, status rerum vertitur tanquam in latrocinium publicum: fitque plane, ut “homo homini sit lupus.”

## PARABOLA XXVI.

“Noli esse amicus hominis iracundo, nec ambulato cum homine furioso.”

## EXPLICATIO.

Quanto religiosius amicitiae jura inter bonos servanda et colenda sunt, tanto magis cavendum est, jam usque a principio, de prudente amicorum delectu. Atque amicorum natura et mores, quantum ad nos ipsos spectant, omnino ferendi sunt. Cum vero necessitatem nobis imponunt, qualem erga alios personam induamus et geramus, dura admodum et iniqua amicitiae conditio est. Itaque interest imprimis, ut præcipit Salomon, ad vitæ pacem, et præsidia, ne res nostras cum hominibus iracundiis, et qui facile lites et jurgia provocant aut suscipiunt, commisceamus. Istud enim genus amicorum perpetuo nos contentione et factionibus implicabit; ut aut amicitiam abrupte, aut incolumitati proprie deesse, cogamur.

## PARABOLA XXVII.

“Qui celat delictum, quærit amicitiam; sed qui altero sermone repetit, separat fœderatos.”

## EXPLICATIO.

Duplex, concordiam tractandi, et animos reconciliandi, via. Altera, quæ incipit ab amnestia; altera, quæ a repetitione injuriarum, subjungendo apologias et excusationes. Equidem memini sententiam viri admodum prudentis et politici, “Qui pacem tractat, non repetitis conditionibus dissidii, is magis animos dulcedine concordiae fallit, quam æquitate componit.” Verum Salomon, illo scilicet prudentior, in contraria opinione est; et amnestiam probat, repetitionem prohibet. Etenim in repetitione hæc insunt mala; tum quod ea sit veluti unguis in ulcere; tum quod periculum impendat a nova altercatione (siquidem de injuriarum rationibus inter partes nunquam conveniet); tum denique quod deducat rem ad apologias; at utraque pars malit videri potius offensam remisisse, quam admisisse excusationem.

## PARABOLA XXVIII.

“In omni opere bono erit abundantia; ubi autem verba sunt plurima, ibi frequenter egestas.”

## EXPLICATIO.

Separat Salomon, hac parabola, fructum laboris linguæ, et laboris manuum; quasi ex altero prove-niat egestas, ex altero abundantia. Etenim fit fere perpetuo, ut, qui multa effutiant, jactent multa, multa promittant, egeni sint, nec emolumentum capiant ex illis rebus, de quibus loquuntur. Quinetiam, ut plurimum, industrii minime sunt, aut impigri ad opera; sed tantummodo sermonibus se, tanquam vento, pas-cunt et satiant. Sane, ut poëta loquitur, “Qui silet, est firmus.” Is qui concius est, se in opere pro-ficere, sibi plaudit, et tacet: qui vero e contra concius est, auras se inanes captare, multa et mira apud alios prædicat.

## PARABOLA XXIX.

“Melior est correptio manifesta, quam amor occultus.”

## EXPLICATIO.

Reprehendit parabola mollitiem amicorum, qui amicitiae privilegio non utuntur in admonendo libere et audacter amicos, tam de erroribus, quam de periculis suis. Quid enim faciam (solet hujusmodi mollis amicos dicere) aut quo me vertam? Amo illum, quantum quis, maxime; meque, si quid illi adversi contigerit, ipsius loco libenter substituerim: sed novi ingenium ejus; si libere cum eo egero, animum illius offendam; saltem contristabo: neque tamen proficiam; atque citius eum ab amicitia mea alienabo, quam ab iis, quæ in animo fixa habet, abducam. Hujusmodi amicum, tanquam enervem et inutilem, redarguit Salomon; atque plus utilitatis ab inimico manifesto, quam ab ejus generis amico, sumi posse pronunciat. Siquidem ea fortasse audire ei contigerit ab inimico pro contumeliam, quæ amicus mussat præ nimia indulgentia.

## PARABOLA XXX.

“Prudens advertit ad gressus suos; stultus diver-tit ad dolos.”

## EXPLICATIO.

Duæ sunt prudentiæ species. Altera vera et sana; altera degener et falsa, quam Salomon stultitiæ nomine appellare non dubitat. Qui priori se dederit, viis et vestigiis propriis cavet, periculis prospiciens, meditans remedio; proborum opera utens, contra improbos se ipsum muniens; cautus inceptu, receptu non imparatus; in occasiones attentus, contra impedimenta strenuus; cum innumeris aliis, quæ ad sui ipsius actiones et gressus regendos spectant. At altera species, tota est consuta ex fallaciis et astutiis, spemque ponit omnino in aliis circumveniendis, iisdemque ad libitum effingendis. Hanc merito rejicit parabola, non tantum ut improbam, sed etiam ut stultam. Primo enim, minime est ex iis rebus, quæ in nostra sunt potestate; nec etiam aliqua constanti regula nititur: sed nova quotidie comminiscenda sunt stratagemata, prioribus fatiæcentibus et obsoletis. Secundo, qui vafri et subdoli hominis famam et opinionem semel incurrit, præcipuo se ad res gerendas instrumento prorsus privavit, hoc est, fide: itaque omnia parum votis suis consentientia experietur. Postremo, artes istæ, utcumque pulchræ videantur et complacent; attamen sæpius frustrantur; quod bene notavit Tacitus: "Consilia callida et audacia, expectatione læta, tractatu dura, eventu tristia."

## PARABOLA XXXI.

"Noli esse justus nimium, nec sapientior quam oportet; cur abripiare subito."

## EXPLICATIO.

"Sunt tempora," ut inquit Tacitus, "in quibus magna virtutibus certissimum est exitium." Atque hoc vis virtute et justitia egregia, aliquando subito, aliquando diu ante prævisum, contingit. Quod si adjungatur etiam prudentia, hoc est, ut cauti sint, et ad propriam incolumitatem evigilent, tum hoc lucrantur, ut ruina eorum subito obvieniatur ex occultis omnino et obscuris consiliis; quibus et vitetur invidia, et perniciæ ipsos imparatos adoriatur. Quod vero ad illud *nimum*, quod in parabola ponitur (quandoquidem non Periandri alicujus, sed Salomonis verba sunt ista; qui mala in hominum vitæ sæpius notat, nunquam præcipit) intelligendum est, non de virtute ipsa (in qua *nimum* non est) sed de vana ejus atque invidiosa affectatione et ostentatione. Simile quiddam innuit Tacitus de Lepido, miraculi loco ponens, quod nunquam servilis alicujus sententiæ auctor fuisset, et tamen tam sævis temporibus incolumis mansisset: "Subit," inquit, "cogitatio, utrum hæc fato regantur, an etiam sit in nostra potestate, cursum quandam tenere, inter deforme obsequium et abruptam contumaciam, medium, periculo simul et indignitate vacuum?"

## PARABOLA XXXII.

"Da sapienti occasionem, et addetur ei sapientia."

## EXPLICATIO.

Distinguit parabola inter sapientiam illam, quæ in verum habitum increverit et maturuerit, et illam,

quæ natus tantum in cerebro et conceptu, aut sermone jactatur, sed radices altas non egerit. Siquidem prior, oblata occasione, in qua exercentur, illico excitatur, accingitur, dilatatur, adeo ut se ipsa major videatur: posterior vero, quæ ante occasionem alacris erat, occasione data, fit attonita et confusa, ut etiam ipsi, qui ea se præditum arbitrabatur, in dubium vocetur; annon præceptiones de ea fuerint insomnia mera, et speculationes inanes.

## PARABOLA XXXIII.

"Qui laudat amicum voce alta, surgendo mane, erit illi loco maledictionis."

## EXPLICATIO.

Laudes moderatæ et tempestivæ, et per occasionem prolatae, famæ hominum atque etiam fortunæ plurimum conferunt; at immoderatæ et streperæ, et importune effusæ nihil prosunt; imo potius, ex sententia parabolæ, impensæ nocent. Primo enim manifesto se produnt, aut ex nimia benevolentia oriundas, aut ex composito affectatas, quo collaudatum potius falsis præconiis demereantur, quam veris attributis ornent. Secundo, laudes parvæ et modestæ invitant fere præsentem, ut ipsis etiam aliquid adjiciant; profusæ contra et immodicæ, ut aliquid demant et detrahant. Tertio (quod caput rei est) constatur illi invidia, qui nimium laudatur; cum laudes omnes nimie videantur spectare ad contumeliam aliorum, qui non minus merentur.

## PARABOLA XXXIV.

"Quomodo in aquis resplendent facies; sic corda hominum manifesta sunt prudentibus."

## EXPLICATIO.

Distinguit parabola inter mentes prudentium et cæterorum hominum; illas aquis aut speculis comparans, quæ species et imagines rerum recipiunt; cum alteræ similes sint terræ, aut lapidi impolito, in quibus nihil reflectitur. Atque eo magis apte comparatur animus hominis prudentis ad speculum; quia in speculo imago propria spectari possit, una cum imaginibus aliorum; id quod oculis ipsis sine speculo non conceditur. Quod si animus prudentis adeo capax sit, ut innumera ingenia et mores observare et internoecere possit; superest, ut detur opera, quo reddatur non minus variis applicatione, quam representatione:

"Qui sapit, innumeris moribus aptus erit."

Atque his Salomonis parabolis diutius fortasse immorati sumus, quam pro modo exempli; dignitate et rei ipsius et auctoris longius proveci.

Neque tantum in usu erat apud Hebræos, sed alibi etiam priscorum sapientibus frequentissimum: ut, si cujuspiam observatio in aliquid incidisset, quod vitæ communi conducibile fuisset, id redigeret et contraheret in brevem aliquam sententiam, vel parabolam, vel etiam fabulam. Verum, quod ad fabulas (sicut alias dictum est) illæ exemplorum vicarii et supplementa olim extiterunt: nunc quando tempora historiarum copia abundant, ad animatum scopum rectius et alacrius collimatur. At modus scribendi,

qui optime convenit argumento tam vario et multiplici (quale est tractatus de negotiis et occasionibus sparsis) aptissimus ille esset, quem delegit Machiavellus, ad tractandas res politicas; nimirum per observationes, sive discursus (ut loquuntur) super historiam et exempla. Nam scientia, quæ recenter, et quasi in conspectu nostro, ex particularibus elicitor, viam optime novit particularia denuo repetendi: atque certe ad practicam longe conducit magis, cum discursus sive disceptatio sub exemplo militat, quam cum exemplum disceptationi subjungitur. Neque enim hic ordo tantum spectatur, sed res ipsa. Cum enim exemplum statuitur tanquam disceptationis basis, universo cum circumstantiarum apparatu proponi solet, quæ discursum interdum corrigant, interdum suppleant; unde fit loco exemplaris ad imitationem, et practicam. Ubi e contra exempla, in gratiam disceptationis adducta, succincte et nude citantur, et tanquam mancipia nutus tantum disceptationis observant.

Hoc vero discriminis operæ pretium fuerit observasse; quod sicut historiæ temporum optimam præbent materiam ad discursus super politica, quales sunt illi Machiavelli; ita historiæ vitarum optime adhibentur ad documenta de negotiis: quoniam omnem occasionum et negotiorum, tam grandium quam leviorum, varietatem complectuntur. Imo reperire est basin ad præceptiones de negotiis utraque illa historia adhuc commodiorem: ea est, ut discursus fiant super epistolas, sed prudentiores, et magis serias; quales sunt illæ Ciceronis ad Atticum, et aliæ. Siquidem epistolæ magis in proximo, et ad vivum, negotia solent representare, quam vel annales, vel vitæ. Quare jam, et de materia, et de forma portionis primæ, doctrinæ de negotiis, quæ tractat occasiones sparsas, diximus, eamque inter desiderata numeramus.

Est et alia portio ejusdem doctrinæ, quæ tantum differt ab illa altera, de qua diximus, quantum sapere, et sibi sapere. Altera enim movere videtur tanquam a centro ad circumferentiam; altera tanquam a circumferentia ad centrum. Est enim prudentia quædam consilii aliis impertiendi; est vero et alia suis rebus prospiciendi: atque hæ nonnunquam conjunguntur, sæpius separantur. Multi siquidem in suis ipsorum rationibus instituendis prudentissimi sunt, qui tamen in rebus publicis administrandis, aut etiam consiliis dandis, nihil valent: formicæ similes, quæ creatura sapiens est ad sese tuendum, sed horto plane noxia. Hæc virtus sibi sapienti, Romanis ipsis, licet patriæ optimis curatoribus, non ignota fuit; unde comicus, "Nam pol sapiens sagit fortunam sibi." Quin et in adagium apud ipsos versum est, "Faber quisque fortunæ propriæ." Et Livius hæc ipsam Catoni Majori tribuit: "In hoc viro tanta vis animi et ingenii inerat, ut, quocunque loco natus esset, sibi ipse fortunam facturus videretur."

Hoc genus prudentiæ, si quis ipsum profiteatur et palam venditet, semper habitum est, non modo non politicum, verum etiam infaustum quiddam et inauspicatum: sicut in Timotheo Atheniensi observatum est: qui, postquam præclara multa facinora, in decus et commodum civitatis suæ edidisset, atque administrationis suæ (sicut tum moris erat) populo

rationem redderet; singula conclusit hæc clausula; "Atque in hac re fortunæ partes fuerunt nullæ." Contigit vero ut post id temporis nunquam ei quicquam feliciter cesserit. Sane nimis elatum hoc, et altum sapiens; eodem spectans, quo Ezechielis illud de Pharaone: "Dicit, Fluvius est meus, et ego feci memetipsum." Aut illud Habacuci prophetæ: "Exultant, et sacrificant reti suo:" aut illud etiam poetæ, de contemptore deorum Mezentio;

"Dextra mihi Deus, et telum, quod missile libro,  
Nunc adsint."—

Denique, Julius Cæsar, nunquam (quod memini) impotentiam cogitationum suarum arcanarum prodidit, nisi simili dicto: cum enim aruspex ei referret, exta reperta fuisse non bona, admurmuravit submisit: "Erunt lætiora, cum volo." Quod etiam dictum mortis suæ infortunium non diu præcessit. Verum excessus iste fiduciæ (ut diximus) res ut profana, ita semper infelix. Quapropter, viris magnis et vere sapientibus visum, successus quoslibet felicitati suæ, non virtuti aut industriæ, tribuere: nam et Sylla, felicem se, non magnum cognominavit; et Cæsar (melius quam supra) ad navis gubernatorem: "Cæsarem vehis, et fortunam ejus."

Attamen istæ sententiæ; "Faber quisque fortunæ suæ; Sapiens dominabitur astris; Invia virtuti nulla est via," ac similes; si intelligantur et adhibeantur potius pro calcaribus ad industriam, quam pro stapedibus ad insolentiam magisque ut progignant in hominibus decretorum constantiam et robur, quam arrogantiam et jactantiam, tanquam sanæ et salutaris merito habitæ sunt, ac proculdubio in pectoribus hominum magnanimorum sedem nonnullam occuparunt, eoque ut cogitationes tales quandoque ægre dissimulent. Videmus enim, Augustum Cæsarem (qui cum avunculo suo comparatus, potius ab illo diversus quam inferior fuit; sed vir certe paulo moderatior) sub finem vitæ petiisse ab amicis, qui lectum ejus circumstabant, ut, postquam expirasset, sibi plaudent; quasi conscius sibi fuisset, mimum vitæ a se commode transactum. Hæc quoque doctrinæ portio inter desiderata numeranda est: non quin in praxi, etiam nimio plus quam oportet, usurpata sit et frequentata; verum quod libri de illa silent. Quamobrem ex more nostro, sicut in priore, nonnulla ejus capita recenserebimus; eamque fabrum fortunæ, sive (ut diximus) doctrinam de ambitu vitæ nominabimus.

Ac primo quidem intuitu, novum quoddam et insolitum argumentum tractare videbor; docendo homines, quomodo fortunæ suæ fabri fieri possint; doctrinam certe, cui quisvis libenter se discipulum addixerit, donec difficultatem ejusdem habuerit perspectam. Non enim leviora sunt, aut pauciora, aut minus ardua, quæ ad fortunam comparandam requiruntur, quam quæ ad virtutem: resque est æque difficilis ac severa, fieri vere politicum, ac vere morale. At hujus doctrinæ pertractatio plurimum ad literarum, tum decus tum pondus, pertinet. Interest enim imprimis honoris literarum, ut homines isti pragmatici sciant, eruditionem haudquaquam aviculæ, qualis est lauda, similem esse, quæ in sublime ferri, et cantillando se oblectare solet; at nihil aliud: quinimo ex accipitris potius genere esse, qui

et in alto volare, ac subinde, cum visum fuerit, descendere, et prædam rapere novit. Deinde et ad perfectionem literarum hoc ipsum spectat, quia legitimæ inquisitionis vera norma est, ut nihil inveniatur in globo materiæ, quod non habeat parallelum in globo crystallino, sive intellectui. Hoc est, ut nihil veniat in practicam, cujus non sit etiam doctrina aliqua et theoria. Neque tamen literæ hanc ipsam fortunæ architecturam aliter admirantur aut æstimant, quam ut opus quoddam inferioris generis. Nemini enim, fortuna propria, pro dono esse sui, a Deo concesso, ullo modo digna retributio esse possit. Quin et non raro fit, ut viri virtutibus egregii fortunæ suæ sponte renuncient, ut rebus sublimioribus vacent. Digna tamen est fortuna, quatenus virtutis ac benemerendi organum est, sua quoque speculatione et doctrina.

Ad hanc doctrinam pertinent præcepta, nonnulla summaria, nonnulla sparsa et varia. Præcepta summaria versantur, circa veram notitiam, et aliorum et sui. Primum igitur præceptum (in quo cardo notitiæ aliorum vertitur) illud constituatur, ut procuremus nobis (quantum fieri possit) fenestram illam, quam olim requisivit Momus. Ille, cum in humani cordis fabrica tot angulos et recessus conspicatus esset, id reprehendit, quod defuisset fenestra, per quam in obscuros illos et tortuosos anfractus inspicere quis possit. Hanc autem fenestram obtinebimus, si omni sedulitate nobis informationem comparemus et procuremus, de personis, quibuscumque intercedunt negotia, particularibus; earumque ingeniis, cupiditatibus, finibus, moribus, auxiliis et adminiculis, quibus præcipue suffulciuntur et valent; et rursus, defectibus et imbecillitatibus, quaque ex parte maxime pateant et obnoxii sint; amicis, factionibus, patronis, clientelis; rursusque inimicis, invidis, competitoribus; etiam temporibus et aditibus;

(“Sola viri molles aditus et tempora noris.”)

Denique institutis et normis, quas sibi præscripserunt, et similibus. Quinetiam, non solum informatio capienda est de personis, sed insuper de actionibus particularibus, quæ de tempore in tempus in motu sunt, et tanquam sub incude; quomodo regantur et succedant, quorum studiis foveantur, a quibus oppugnentur, cujusque sint ponderis et momenti, et quid secum trahant, et hujusmodi. Etenim actiones præsentis nosse, et in se plurimum prodest; et illud insuper habet, quod absque hoc etiam personarum notitia valde futura sit fallax et erronea. Mutantur enim homines simul cum actionibus: et alii sunt dum actionibus ipsis implicantur et obsidentur; alii, postquam redierint ad ingenium. Atque hæc de rebus particularibus informationes, quæ tam ad personas, quam ad actiones, spectant, sunt tanquam propositiones minores in omni activo syllogismo. Nulla enim observationum aut axiomatum (unde conficiuntur majores propositiones politicæ) veritas aut excellentia, ad conclusionis firmamentum sufficere possit, si in minore propositione fuerit erratum. Quod vero hujusmodi notitia comparari possit, fidejussor nobis est Salomon, qui ait; “Consilium in corde viri, tanquam aqua profunda; sed vir prudens exhauriet illud.” Quamvis autem ipsa notitia non

cadat sub præceptum, quoniam individuorum est; attamen mandata de eadem elicienda utiliter depossunt.

Notitia hominum sex modis elici et hauriri potest: per vultus et ora ipsorum; per verba; per facta; per ingenia sua; per fines suos; denique per relationes aliorum. Quantum ad vultus attinet, minime nos moveat vetus adagium, “Fronti nulla fides:” licet enim hoc ipsum non perperam dictum sit, de vultus et gestus compositione externa et generari; attamen subsunt subtiliores quidam motus et labores oculorum, oris, vultus et gestus: ex quibus reseratur et patet (ut elegantur ait Q. Cicero) veluti jama quadam animi. Quis Tiberio Cæsare occulit? At Tacitus, notans characterem et modum loquendi diversum, quo usus est Tiberius in laudando apud senatum res a Germanico et a Druso gestas; de laudibus Germanici sic; “Magis in speciem adornatis verbis, quam ut penitus sentire videretur.” De laudibus Drusi sic: “Paucioribus, sed intencior et fida oratione.” Iterum Tacitus eundem Tiberium, alias etiam ut nonnihil pellucidum, notans: “in aliis,” inquit, “erat veluti eluctantium verborum; solutius vero loquebatur, quando subveniret.” Sane difficile reperitur simulationis artifex aliquis tam peritus et egregius; aut vultus aliquis ita coactus, et, ut ille loquitur, jussus; qui a sermone artificioso et simulatorio possit istas notas sejungere, quin aut sermo sit solito solutior, aut comptior, aut magis vagus et oberrans, aut magis aridus et quasi eluctans.

Ad verba hominum quod attinet, sunt quidem illa (ut de urinis loquuntur medici) meretricia. Sed isti meretricii fuci optime deprehenduntur duobus modis: cum scilicet proferuntur verba aut ex improvviso, aut in perturbatione. Sic Tiberius, cum ex Agrippinæ verbis aculeatis subito commotus esset et nonnihil abreptus, extra innatæ simulationis terminos pedem protulit; “Audita hæc,” inquit Tacitus, “ram occulti pectoris vocem elicuere; correptamque Græco versu, admonuit, ideo lædi, quia non regeret.” Quare poëta perturbationes hujusmodi non inscite appellat torturas, quod ab iis secreta sua prodere homines compellantur;

— “Vino tortus et ira.”

Ipsa sane testatur experientia, paucos admodum reperiri, qui erga arcana sua tam fidi sint, animumque gerant adeo obfirmatum, quin interdum ex iracundia; interdum ex jactantia; interdum ex intima erga amicum benevolentia; interdum ex animi imbecillitate, qui se mole cogitationum onerari amplius non sustineat; interdum denique ex alio quopiam affectu, intimas animi cogitationes revelent et communicent. Ac ante omnia sinus animi excutit, si simulatio simulationem impulerit; juxta adagium illud Hiapanorum, “Dic mendacium, et erues veritatem.”

Quin et factis ipsis, licet humani animi pignora sint certissima, non prorsus tamen fidendum, nisi diligenter atque attente pensitatis prius illorum et magnitudine et proprietate. Illud enim verissimum; fraus sibi in parvis fidem præstruit, ut majore emolumento fallat. Italus vero se ipsum in ipso stare lapide putat, ubi præco prædicat, si melius solito

tractetur, absque causa manifesta. Etenim officia ista minora homines reddunt oscitantes, et quasi consopitos tam ad cautionem, quam ad industriam: atque recte a Demosthene appellantur alimenta socordiae. Porro proprietatem et naturam nonnullorum factorum, etiam quæ beneficiorum loco habentur, subdolum et ambiguum, luculentum cernere licet ex eo, quod Antonio primo imposuit Mutianus: qui post reditum cum eo in gratiam, sed fide pessima plurimos ex Antonii amicis ad dignitates evehit: "Simul amicis ejus præfecturas et tribunatus largitur." Hoc autem astu Antonium non munivit, sed exarmavit penitus et desolavit, amicitias ejus ad se transferendo.

Certissima autem clavis, ad animos hominum reserandos, vertitur, in rimandis et pernoscendis, vel ingeniis et naturis ipsorum, vel finibus et intentionibus. Atque imbecilliores certe et simpliciores ex ingeniis; prudentiores autem et tectiores, ex finibus suis optime judicantur. Certe prudenter et facete (licet meo judicio minus vere) dictum fuit a nuntio quopiam Pontificis, sub reditu ejus a legatione apud nationem quandam, ubi tanquam ordinarius resederat. Interrogatus de delectu successoris sui, consilium dedit; ut nullo modo mitteretur aliquis, qui eximie prudens esset, sed potius mediocriter tantum; "quoniam," inquit, "ex prudentioribus nemo facile conjiciet, quid verisimile foret illius gentis homines facturos." Sane non raro intervenit ille error, et maxime familiaris est viris prudentibus, ut ex modulo ingenii proprii alios metiantur, ac prouide ultra scopum sæpius jaculentur, supponendo quod homines majora quædam meditentur, et sibi destinant, et subtilioribus technis utantur, quam quæ illorum animos unquam subierint. Quod etiam elegerunt innuit adagium Italicum, quo notatur; Nummorum, prudentiæ, fidei, semper minores inveniri rationes, quam quis putaret. Quare in levioris ingenii hominibus, quia multa absurda faciunt, capienda est conjectura potius ex propensionibus ingeniorum, quam ex destinationibus finium. Porro, principes quoque (sed longe aliam ob causam) ab ingeniis optime judicantur: privati autem ex finibus. Principes enim fastigium adepti humanorum desideriorum, nullos fere sibi propositos fines habent, ad quos, præsertim vehementer et constanter, aspirant; ex quorum finium situ et distantia, reliquarum suarum actionum possit excipi et confici directio et scala: id, quod inter alia causa est vel præcipua, ut corda eorum (quod Scriptura pronunciat) sint inscrutabilia. At privatorum nullus est, qui non sit plane veluti viator, et proficiscatur intente ad aliquam, itineris metam, ubi consistat: unde non male divinare quis poterit, quid facturis sit, aut non facturus. Si enim in ordine sit quidpiam ad finem suum, probabile est facturum: sin sit in contrarium finis, minime. Neque de finium aut ingeniorum in hominibus diversitate informatio capienda est simpliciter tantum, sed et comparate: quid scilicet prædominetur, et reliqua in ordinem cogat? Sic, ut videmus, Tigellinus, cum se Petronio Turpiliano inferiori sentiret, in voluptatibus Neroni ministrandis et prægustandis, "metus," ut ait Tacitus, "Neronis rimatus est," et hoc pacto æmulum evertit.

Ad notitiam quod attinet de hominum animis secundariam, nimirum, quæ ab aliorum relatione desumitur, breviter dicere sufficiet. Defectus et vitia didiceris optime ab inimicis: virtutes et facultates ab amicis: mores et tempora a famulis: opiniones et meditationes ab intimis familiaribus, cum quibus frequentius colloquia miscent. Fama popularis levis est, et superiorum judicia minus certa: etenim coram illis tectiores incedunt homines. Verior fama e domesticis emanat.

Verum ad inquisitionem istam universam via maxime compendiarie in tribus consistit. Primum, ut amicitias multas comparemus cum ejusmodi hominibus qui multiplicem et variam habent tam rerum, quam personarum, notitiam: imprimis vero enitendum, ut saltem singulos habeamus præsto, qui, pro negotiorum atque hominum diversitate, nos de unaquaque re certiores facere et solide informare possint. Secundo, ut prudens temperamentum et mediocritatem quandam persequamur, et in libertate sermonis, et in taciturnitate: frequentius libertatem usurpantes; at, cum res postulat, silentium. Libertas siquidem in sermone etiam alios invitat et provocat, ut pari libertate erga nos utantur; et sic multa deducit ad notitiam nostram; at taciturnitas fidem conciliat, efficitque ut ament homines secreta sua apud nos, tanquam in sinu, deponere. Tertio, is nobis paulatim acquirendus est habitus, ut, vigilante et præsertim animo, in omnibus colloquiis et actionibus simul et rem, quæ instat, geramus; et alia, quæ incidunt, observemus. Nam sicut Epictetus præcipit ut philosophus, in singulis suis actionibus, ita secum loquatur: Et hoc volo, et etiam institutum servare; sic politicus, in singulis negotiis, ita secum statuat; Et hoc volo, atque etiam aliquid, quod in futurum usui esse possit, addiscere. Itaque, qui eo sunt ingenio, ut nimium hoc agant, et toti sint in præsertim negotio, quod in manibus habent, de iis autem, quæ interveniunt, nec cogitant quidem (id quod in se agnoscit Montaneus) illi certe ministri regum aut republicarum sunt vel optimi, sed ad proprias fortunas claudicant. Interim cautio ante omnia adhibenda, ut impetum animi et alacritatem nimiam cohibeamus, ne multa sciendo, ad nos multis immiscendum feramur. Infelix enim quiddam est et temerarium, polypragmosyne. Itaque ista, quam comparandam præcipimus, notitiæ rerum et personarum varietas huc tandem redit, ut et rerum, quas suscipimus, et hominum, quorum opera utimur, magis cum judicio delectum faciamus, unde cuncta et magis dextere et magis tuto disponere et administrare sciamus.

Notitiam aliorum sequitur notitia sui. Etenim non minor diligentia adhibenda est, sed major potius, ut nos de nobis ipsis, quam de aliis, vere et accurate informemus. Quippe cum oraculum illud, "Nosce te ipsum," non tantum sit canon prudentiæ universalis, sed et in politicis præcipuum locum habeat. Optime enim homines monet S. Jacobus, eum, qui vultum in speculo consideravit, oblivisci tamen illico, qualis fuerit; ut omnino frequenti inspectione sit opus. Idque tenet etiam in politicis. Sed specula scilicet sunt diversa: nam speculum divinum, in quo nos contueri debemus, est verbum Dei: specu-

lum autem politicum, non aliud est, quam status rerum et temporum, in quibus vivimus.

Examen igitur accuratum, nec quale esse solet sui nimium amantia, instituendum est homini, de propriis facultatibus, virtutibus, et adminiculis; nec non de defectibus, inhabilitatibus, et obstaculis; ita rationem subducendo, ut hæc perpetuo in majus, illa autem minoris potius, quam revera sunt, æstimentur. Ex hujusmodi autem examine in considerationem veniant quæ sequuntur.

Prima consideratio sit, quomodo alicui homini, moribusque, et naturæ suæ, cum temporibus conveniat; quæ si inventa fuerint congrua omnibus in rebus, magis libere et solute agere, et suo ingenio uti liceat: sin sit aliqua antipathia, tum demum in universo vitæ cursu magis caute et recte est incedendum, minusque in publico versandum. Sic Tiberius fecit, qui, morum suorum sibi conscius cum seculo suo non optime convenientium, ludos publicos nunquam spectavit: quinetiam per duodecim continuos annos postremos nunquam in senatum venit: ubi contra Augustus perpetuo in oculis hominum vixit: quod et Tacitus observat; "alia Tiberio morum via." Eadem et Periclis ratio fuit.

Secunda sit consideratio, quomodo alicui conveniat cum professionibus et generibus vitæ, quæ in usu et pretio sunt, quorumque sibi delectus sit faciendus; ut si jam decretum non sit de genere vitæ, maxime aptum et ingenio suo congruum sumat: sin jam pridem id genus vitæ, ad quod minus a natura factus est, fuerit ingressus, sub prima occasione se subducatur, et novam conditionem arripiat. Id quod a Valentino Borgia videmus factum, ad vitam sacerdotalem a patre inutrito; quam tamen postea ejuravit, suo obsecutus ingenio, et vitæ militari se applicuit: quanquam principatu æque ac sacerdotio indignus, cum utrumque homo pestilens dehonestaverit.

Tertius sit consideratio, quomodo se habeat quis, comparatus ad æquales et æmulos suos, quos verisimile sit eum habiturum in fortuna sua competitores, eumque vitæ cursum teneat, in quo maxima invenitur virorum egregiorum solitudo: atque in quo probabile sit, se ipsum inter cæteros maxime posse enitere. Id quod a C. Cæsare factum est: qui ab initio orator fuit et causas egit; et in toga potissimum versabatur: cum vero vidisset, Ciceronem, Hortensium, Catulum, eloquentiæ gloria excellere, rebus vero bellicis clarum admodum neminem, præter Pompeium; destitit ab incepto, et potentiæ illi civili multum valedicere jubens, transtulit se ad artes militares et imperatorias; ex quibus summum rerum fastigium conscendit.

Quarta sit consideratio, ut naturæ suæ et ingenii rationem habeat quis in deligendis amicis ac necessariis: siquidem diversis diversum genus amicorum convenit; aliis solenne et taciturnum; aliis audax et jactabundum: et complura id genus. Certe notatu dignum est, quales fuerint amici Julii Cæsaris (Antonius, Hirtius, Pansa, Oppius, Balbus, Dolabella, Pollio, reliqui) illi scilicet jurare solebant, Ita vivente Cæsare moriar; infinitum studium erga Cæsarem præ se ferentes; erga omnes alios arrogantes et contemptores; fueruntque homines in negotiis gerendis impigri, fama et existimatione mediocres.

Quinta sit consideratio, ut caveat quis sibi ab exemplis; neque ad imitationem aliorum se inepte componat: quasi quod aliis fuerit pervium, etiam sibi patere necesse sit: neutiquam secum reputans, quantum fortasse interfuerit inter seum et illorum, quos ad exemplum sibi delegit, ingenium et mores. In quem errorem manifesto incidit Pompeius, qui, ut Cicero scriptum reliquit, toties solitus erat dicere: "Sylla potuit, ego non potero?" Qua in re vehementer sibi imposuit, cum ingenium et rationes agendi Syllæ a suis toto cælo (ut aiunt) distarent: cum alter ferox esset, violentus, quique factum in omnibus urgeret; alter gravis, legum memor, omniaque ad majestatem et famam componens; unde longe minus erat, ad perficienda quæ cogitaret, efficax et validus. Sunt et aliæ hujus generis præceptionis; verum hæc ad exemplum reliquarum sufficient.

Neque vero, nosse se ipsum, homini sufficit; sed ineunda etiam est ratio secum, quomodo se ostentare, declarare, denique flectere se, et effingere, commode et prudenter possit. Ad ostentandum se quod attinet, nihil videmus usu venire frequentius, quam ut qui virtutis habitu sit inferior, specie virtutis externa sit potior. Non parva igitur est prudentiæ prærogativa, si quis arte quadam, et decore, specimen sui apud alios exhibere possit: virtutes suas, merita, atque fortunam etiam (quod sine arrogantia aut fastidio fieri possit) commode ostentando: contra, vitia, defectus, infortunia et dedecora, artificiose occultando: illis immorans, easque veluti ad lumen obvertens; his subterfugia quærens, aut apte ea interpretando eluens; et similia. Itaque, de Mutiano, viro sui temporis prudentissimo, et ad res gerendas impigerrimo, Tacitus; "Omnium quæ dixerat, feceratque, arte quadam ostentator." Indiget certe res hæc arte nonnulla, ne tædium et contemptum pariat: ita tamen, ut ostentatio quæpiam, licet usque ad vanitatis primum gradum, vitium sit potius in ethicis, quam in politicis. Sicut enim dici solet de calumnia, Audacter calumniare, semper aliquid hæret: sic dici possit de jactantia (nisi plane deformis fuerit et ridicula) Audacter te vendita, semper aliquid hæret. Hærebit certe apud populum, licet prudentiores subrideant. Itaque existimatio parte apud plurimos, paucorum fastidium abunde compensabit. Quod si ista, de qua loquimur, sui ostentatio decenter et cum judicio regatur; exempli gratia; si nativum quendam pectoris candorem et ingenuitatem præ se ferat; aut si illis temporibus adhibeatur, vel cum pericula circumstant (ut apud viros militares in bellis) vel cum alii invidia flagrent; aut si verba quæ ad laudes proprias pertinent, tanquam aliud agenti excidiæ videantur; minimeque vel serio vel prolixè nimis iis insistatur; aut si ita quis se laudibus honestet, ut simul etiam censuris et jocis erga se non absteat; aut si denique hoc facit non sponte, sed tanquam lacescit, et aliorum insolentis et contumelii provocatus; non parvum certe hæc res existimationi hominis cumulum adjicit. Neque sane exiguus est eorum numerus, qui, cum natura sint magis solidi, et minime ventosi, atque propterea hac arte honori suo velificandi careant, moderationis suæ, nonnulla cum dignitatis jactura, dant pœnas.

Verum hujusmodi ostentationem virtutis, utcumque

aliquis infirmiore iudicio, et nimium fortasse ethica, improberit; illud nemo negarit, dandam saltem esse operam, ut virtus per incuriam iusto suo pretio non fraudetur, et minoris, quam revere est, aestimetur. Hæc vero in virtute aestimanda, pretii diminutio, tribus modis solet contingere: primo, quando quis, in rebus gerendis, se et operam suam offert et obtrudit, non vocatus aut accersitus: hujusmodi enim officia, remunerationis loco esse solet, si non repudientur. Secundo, quando quis in principio rei gerendæ viribus suis nimium abutitur; et quod sensim erat præstandum, uno impetu effundit: id quod rebus bene administratis præproperam conciliat gratiam, in fine autem satietatem inducit. Tertio, quando quis virtutis suæ fructum in laudibus, plausu, honore, gratia, sibi præbitis, nimis cito et leviter sentit, atque in iis sibi complacet: de quo prudens habetur monitum; Cave ne insuetus rebus majoribus videaris, si hæc te res parva, sicuti magna, delectat.

Defectuum enimvero sedula occultatio, minoris hautiquam momenti est, quam virtutum prudens et artificiosa ostentatio. Defectus autem occultantur et latent maxime, triplici quadam industria, et quasi tribus latebris: cautione, prætextu, et confidentia. Cautionem dicimus, quando iis rebus prudenter abstinemus, quibus pares non sumus: ubi contra ingenia audacula et inquieta se facile ingerant, sine iudicio, rebus quibus non insueverunt; et proinde defectus suos proprios publicant et quasi proclamant. Prætextum dicimus, cum sagaciter et prudenter viam nobis sternimus et munimus, qua benigna et commoda de vitis et defectibus nostris fiat interpretatio; quasi aliunde provenientes, aut alio tendentibus, quam vulgo existimatur. Etenim, de latebris vitiorum non male poëta:

“ Sæpe latet vitium proximitate boni.”

Quare, si quem defectum in nobis ipsis perceperimus, opera danda, ut personam et prætextum virtutis finitimæ mutuemur, sub cuius umbra lateat. Verbi gratia, tardo gravitas prætexenda, ignavo lenitas, et sic de cæteris. Illud etiam utile, probabilem aliquam causam obtendere, et in vulgus spargere, qua adducti, ultimas vires nostras promere refugiamus; ut quod non possimus, nolle videamur. Quod ad confidentiam attinet, impudens certe est remedium, sed tamen certissimum atque efficacissimum: nempe, ut quis ea omnino contemnere, et vilipendere se profiteatur, quæ revera assequi non possit: mercatorum prudentium more, quibus solene est et proprium, ut pretium mercium suarum attollant, aliorum deprimant. Est tamen et aliud confidentiæ genus, hoc ipso impudentius; nimirum, perfricta fronte defectus suos etiam opinioni obtrudere et venditare, quasi in iis, quibus maxime destituitur, se eminere credat: atque ut hoc facilius cæteris imponat, se in iis rebus, quibus revera plurimum pollet, fingat diffidentem; quemadmodum fieri videmus in poëtis. Poëta enim carmina sua recitante, si unum aliquem versiculum non admodum dixeris probandum, audias illico: Atque hic versus pluris mihi constitit; quam reliquorum plurimi. Tum vero alium quempiam verum adducet, quasi sibi suspectum, et de eo, quid

putes, sciscitabitur, quem satis norit, inter plurimos esse optimum, et censuræ minime obnoxium. Ante omnia vero ad hoc, quod nunc agitur, ut scilicet specimen sui quis edat coram aliis illustre, et jus suum in omnibus retineat, nil magis interesse iudico, quam ne quis, per nimiam suam naturæ bonitatem et suavitatem, se exermet, et injuriis et contumeliis exponat: quin potius in omnibus aliquos animi liberi et generosi, et non aculei minus, quam mellis, intra se gestantis, igniculos subinde emittat. Quæ quidem munita vitæ ratio, una cum prompto et parato ad se a contumeliis vindicandum animo, aliquibus ex accidente imponitur, et necessitate quadam inevitabili, propter aliquid infixum in persona aut fortuna sua; veluti fit in deformibus, et spuris, et ignominia aliqua mulctatis; unde hujusmodi homines, si virtus non desit, felices plerumque evadunt.

Quod vero ad se declarandum attinet; id alia res omnino est ab ostentatione sui, de qua diximus. Neque enim ad virtutes aut defectus hominum referitur; sed ad actiones vitæ particulares. Qua in parte nihil invenitur magis politicum, quam ut mediocritas quædam servetur, prudens et sana, in sensa animi, circa actiones particulares, aperiendo, aut reconcedendo. Licet enim profunda taciturnitas, et consiliorum occultatio, et is rerum gerendarum modus, qui omnia cæcis et (ut modernæ linguæ potius loquuntur) surdis artibus et mediis operatur, res sit et utilis, et mirabilis: tamen non raro evenit, ut (quod dicitur) dissimulatio errores pariat, qui dissimulatorem ipsum illaqueant. Nam videmus, viros politicos, maxime omnium insignes, libere et indissimulanter fines, quos peterent, palam proferre non dubitasse. Sic L. Sylla manifesto præ se tulit, “ se, omnes mortales, vel felices, vel infelices fieri cupere, prout sibi essent vel amici vel inimici.” Sic Cæsar, cum primum profectus est in Gallias, nil veritus est profiteri: “ se malle primum esse in villa obscura, quam secundum Romæ.” Idem Cæsar, cæpto jam bello, dissimulatorem minime egit, si audiamus quid Cicero de illo prædicet. “ Alter” (Cæsarem inuena) “ non recusat, sed quodammodo postulat, ut (ut est) sic appelletur, tyrannus.” Similiter videmus, in epistola quadam Ciceronis ad Atticum, quam minime fuerit Augustus Cæsar dissimulator; qui in ipso ingressu ad res gerendas, cum adhuc senatui esset in deliciis, solitus tamen erat in concionibus apud populum jurare illa formula: “ Ita parentis honores consequi liceat.” Illud autem non minus quiddam erat, quam ipsa tyrannus. Verum est, ad invidiam paululum leniendam, solitum eum simul ad statuam Julii Cæsaris, quæ in rostris posita erat, manum protendere. Homines autem ridebant, et plaudebant, et admirabantur, et inter se ita loquebantur: “ Quid hoc est? Qualis adolescens?” Sed tamen nihil malitiæ in eo suspicabantur, qui tam candide et ingenue, quod sentiret, loqueretur. Et isti quidem, quos nominavimus, prospera omnia consecuti sunt: Pompeius contra, qui ad eosdem tendebat fines, sed viis magis umbrosis et obscuris (sicut Tacitus de eo loquitur, “ Occultior, non melior.”) atque Sallustius similiter idem insimulat, “ Ore probo, animo inverecundo”) id prorsus agebat, et

innumeris technis moliebatur, ut, cupiditates suas et ambitionem alte recondendo, interim rempublicam in anarchiam et confusionem redigeret, quo illa se necessario in sinus ejus conjiceret; atque hoc pacto summa rerum ad eum deferretur, quasi invitum et renitentem. Cum vero hoc se putaret consecutum, factus consul solus (quod nunquam cuiquam contigisset) nihilo plus ad fines suos proficiebat, eo quod etiam illi, qui proculdubio eum fuissent adjuturi, quid vellet non perciperent. Adeo ut tandem coactus sit, tritam et vulgarem inire viam, ut scilicet, prætextu se Cæsari opponendi, arma et exercitum compararet. Adeo lenta, casibus obnoxia, et plerumque infelicia solent esse ea consilia, quæ profunda dissimulatione obteguntur! Qua de re idem sensisse videtur Tacitus, cum simulationis artificia tanquam inferioris subællii prudentiam constituit, præ artibus politicis: illam Tiberio, has vero Augusto Cæsari attribuens. Etenim, de Livia verba faciens, sic loquitur; quod fuisset illa "cum artibus mariti, et simulatione filii, bene composita."

Quod ad animum flectendum et effingendum attinet; totis viribus certe incumbendum, ut animus reddatur occasionibus et opportunitatibus obsequens, neque ullo modo erga eas durus aut renitens. Neque enim majus fuerit impedimentum ad res gerendas, aut fortunas hominum constituendas, quam illud; idem manebat, neque idem decebat: videlicet, cum homines iidem sint, et natura sua utantur, postquam occasionem se mutaverint. Bene itaque Livius, cum Catonem Majorem introducit, tanquam fortunæ suæ architectum peritissimum, illud subjungit; quod ei fuerit ingenium versatile. Atque hinc fit, quod ingenia gravia et solennia, et mutare nescia, plus plerumque habeant dignitatis, quam felicitatis. Hoc vero vitium in aliquibus a natura penitus insitum est, qui suoapte ingenio sunt viscosi et nodosi, et ad versandum inepti. At in aliis consuetudine obtinuit (quæ est altera natura) atque opinione quadam (quæ in animos hominum facile obrepit) ut minime mutandam sibi putent rerum gerendarum rationem, quam prius bonam et prosperam sint experti. Prudenter enim observat Machiavellus in Fabio Maximo; "Quod pristinum suum et inveteratum cunctandi et bella trahendi morem retinere mordicus voluerit, cum natura belli esset alia, et aciora postulare consilia." In aliis porro idem vitium ex inopia judicii progignitur; cum homines periodos rerum et actionum non tempestive discernant; sed tum demum se vertant, postquam opportunitas jam elapsa sit. Tale quidpiam in Atheniensibus suis redarguit Demosthenes, eos aiens esse "rusticis similes, qui in ludo gladiatorio se probantes, semper post plagam acceptam in eam partem muniendam scutum transferunt, qua percussi sunt; non prius." In aliis rursus hoc ipsum contingit, quia operam in via ea, quam semel ingressi sunt, collocatam, perdere gravantur, nec receptui canere sciunt; sed potius se occasionibus superiores fore constantia sua confidunt. Verum ista animi viscositas et renitentia, a quacunque illa tandem radice pullularit, rebus gerendis et fortunæ hominum est damnosissima: nihilque magis politicum, quam animi rotas reddere cum rotis fortunæ concentricas, et simul volubiles. Atque de

præceptis duobus summaris, circa fortunæ architecturam, hactenus. Præcepta autem sparsa haud pauca sunt; nos tamen perpauca diligemus, pro modo exempli.

Primum præceptum est; faber fortunæ amusse sua perite utatur, eamque rite applicet; hoc est, animum assuefaciat, ut rerum omnium pretium et valorem aestimet, prout ad fortunam et fines suos magis aut minus conducant; hocque curet sedulo, non perfunctorie. Mira enim res, sed verissima; inveniuntur plurimi, quorum mentis pars logica (si ita loqui liceat) est bona, mathematica pessima: videlicet, qui de rerum consequentiis satis firmiter judicant; de pretiis vero imperitissime. Hinc fit, ut alii privata et secreta cum principibus colloquia, alii auras populares, tanquam magna adepti, admittentur; cum sit utrumque sæpenumero res et invidia et periculo plena: alii autem res metiuntur ex difficultate atque opera sua in eis impensa; fieri oportere existimantes, ut quantum moverint, tantum etiam promoverint: sicut Cæsar de Catone Uticensi, veluti per ironiam, dixit, narrando, quam laboriosus fuerit et assiduus, et quasi indefatigabilis, neque tamen multum ad rem: "Omnia" (inquit) "magno studio agebat." Hinc etiam illud accidit, ut homines sapius se ipsos fallant; qui, si magni alicujus aut honorati viri opera utantur, sibi omnia prospera promittunt; cum illud verum sit, non grandisima quæque instrumenta, sed aptissima, citius et feliciter opus quodque perficere. Atque ad mathematicam veram animi informandam, operæ pretium est, illud imprimis nosse et descriptum habere, quid ad cujusque fortunam constituendam et promovendam primum statui debeat, quid secundum, et sic deinceps. Primo loco emendationem animi pono; animi enim impedimenta et nodos tollendo et complanando, citius viam fortunæ aperueris, quam fortunæ auxiliis animi impedimenta sustuleris. Secundo loco opes pono, et pecuniam: quam summo loco plurimi fortasse collocaverint, cum tanti sit ad omnia usus. Verum eam opinionem, similem ob causam abjudico, atque Machiavellus fecit in alia re, non multum ab ea discrepante. Cum enim vetus fuerit sententia, pecuniam esse nervos belli; ille contra, non alios esse nervos belli asseruit, quam nervos virorum fortium et militarium. Eodem prorsus modo vere asseri possit; nervos fortunæ, non esse pecuniam, sed potius animi vires, ingenium, fortitudinem, audaciam, constantiam, moderationem, industriam, et similia. Tertio loco colloco famam et existimationem; eo magis, quod illa æstus quosdam habeant, et tempora, quibus si non opportune utaris, difficile erit rem in integrum restituere. Ardua enim res, famam præcipitantem retrovertere. Postremo loco pono honores, ad quos certe facilior aditus per unumquodque ex illis tribus, multo magis per omnia conjuncta, datur; quam si ab honoribus auspiceris, et deinde ad reliqua perrexeris. Verum, ut in ordine rerum servando haud parum est momenti, ita non multo minus in servando ordine temporis; cujus perturbatione frequentissime peccatur, dum ad fines tum properatur, quando initia essent curanda; atque dum ad maxima quæque subito advolamus, quæ in medio posita sunt, temere transilientes.

At illud recte præcipitur; "Quod nunc instat, agamus."

Secundum præceptum est, ut caveamus, ne animi quadam magnitudine, et præfidentia, ad magis ardua, quam par est, feramur: neve in adversum fluvii remigemus. Optimum enim consilium circa fortunas hominum:

"—Fatis accede, Deisque."

Circumspiciamus in omnes partes, et observemus, quæ res pateant, quæ clausæ et obstructæ sint, quæ proclives, quæ arduæ; neque viribus nostris, ubi non patet aditus commodus, abutamur. Hoc si fecerimus, et a repulsa nos immunes præstabimus, et in negotiis singulis nimis diu non hærebimus, et moderationis laudem reportabimus, et pauciores offendemus, et denique felicitatis opinionem acquiremus; dum quæ sponte fortasse eventura fuissent, nostræ industriæ accepta ferentur.

Tertium præceptum cum proxime præcedente non nihil pugnare videri possit; licet, probe intellectum, minime. Illud hujusmodi est; ut occasiones non semper expectemus, sed eas quandoque provocemus et ducamus. Quod etiam innuit Demosthenes; magniloquentia quadam: "Et quemadmodum receptum est, ut exercitum ducat imperator, sic a cordatis viris res ipsæ ducendæ, ut quæ ipsis videntur, ea gerentur; et non ipsi persequi eventus tantum cogantur." Etenim, si diligenter attendamus, duas observabimus, easque discrepantes, species eorum, qui rebus gerendis et negotiis tractandis pares habeantur. Alii siquidem occasionibus commode sciunt uti, sed nihil ex se moluntur, aut excogitant; alii toti sunt in machinando, qui occasiones, quæ opportune incidunt, non arripiunt. Harum facultatum altera, alteri non conjuncta, manca omnino et imperfecta censenda est.

Quartum est præceptum; ut nihil suscipiamus, in quo necesse sit temporis plurimum insumere; verum ut versiculus ille aurem semper vellicet:

"Sed fugit interest, fugit irreparabile tempus."

Neque alia subest causa, cur ii, qui professionibus laboriosis, aut rebus similibus se addixerunt, veluti jureconsulti, oratores, theologi doctiores, librorum scriptores, et hujusmodi, in fortuna sua constituenda et promovenda minus sint solertes, quam quod tempore (alias scilicet insumpto) indigent ad particularia pernoscenda, opportunitates captandas, et machinas, quæ ad fortunam suam spectent, comminiscendas et meditandas. Quinetiam in aulis principum et rebus publicis eos reperias, et ad fortunam suam promovendam, et ad aliorum invadendam, maxime efficares, qui nullo publico munere funguntur; sed in hoc, de quo loquimur, ambitu vitæ perpetuo occupantur.

Quintum est præceptum; ut naturam quodammodo imitemur, quæ nihil facit frustra. Id quod factum non erit admodum difficile, si negotia nostra omnium generum perite commisceamus et contexamus. In singulis enim actionibus ita animus est instituendus et præparandus, atque intentiones nostræ aliæ aliis subternandæ et subordinandæ; ut si in aliqua re voti compotes in summo gradu fieri non possumus, in secundo tamen liceat consistere, imo vel in tertio;

quod si nec in aliqua omnino parte rei hæreere aut consistere possimus, tum vero ad alium quempiam (præter destinatum) finem operam impensam flectamus; sin nec in præsentii aliquem fructum demerere queamus, saltem aliquid ex ea extrahamus, quod in futurum prosit: si vero nihil solidi, nec in præsentii nec in futuro inde elicere detur, satagamus saltem, ut aliquid existimationi nostræ inde accrescat; et alia id genus: rationes semper a nobis ipsis exigendo, quibus constet nos fructus aliquid, plus minus, ex singulis actionibus et consiliis nostris percipisse: neque ullo modo permittendo, ut tanquam confusi ac consternati animum illico despondeamus, si forte scopum principalem non licuerit attingere. Nihil enim minus convenit viro politico, quam uni rei unice esse intentum. Qui enim hoc facit, occasionem innumerarum jactura mulctabitur; quæ rebus agendis ex obliquo intervenire solent, quæque fortasse magis fuerint propitiæ et commode ad alia quæ postea usui futura sint, quam ad ea, quæ in manibus habeamus. Ideoque bene calleamus illam regulam, "Hæc oportet facere, et illa non omittere."

Sextum est præceptum, ut nos rei alicui nimis peremptorie non astringamus: quamquam casui videatur, primo intuitu, minus obnoxia: sed semper habeamus, vel fenestram apertam ad evolandum, vel posticum aliquod secretum ad redeundum.

Septimum præceptum, est antiquum illud Biantis; modo non ad perfidiam, sed ad cautionem et moderationem adhibeatur: "Et ames tanquam inimicus futurus et oderis tanquam amaturus." Nam utilitates quasque mirum in modum, prodit et corrumpit, si quis nimium se immerserit amicitias infelicibus, molestias et turbidis odiis, aut puerilibus et futilibus æmulationibus.

Hæc exempli loco circa doctrinam de ambitu vitæ sufficient: illud enim hominibus in memoriam subinde reducendum est, longe abesse, ut adumbrationes istæ, quibus utimur in desideratis, loco justorum tractatum ponantur; sed sint solummodo tanquam schedæ aut fimbriæ, ex quibus de tela integra judicium fieri possit. Neque rursus ita desipimus, ut fortunam absque tanto, quantum diximus, molimine minime parari asseramus. Probe enim novimus, eam tanquam sponte in gremium aliquorum defluere: alii autem eam diligentia sola et assiduitate (cautione nonnulla aspersa) absque arte multa aut operosa, adipiscuntur. Verum sicut Cicero, oratorem perfectum depingens, non id vult, ut caudicis singuli tales esse debeant, aut possint; ac rursus, sicut in principe aut aulico describendo (quod nonnulli tractandum susceperunt) modulus effingitur, prorsus secundum artis perfectionem, non autem secundum practicam vulgatam: idem et nos in politico instruendo præstitimus; politico (inquam) quoad fortunam propriam.

Enimvero, illud utique monendum, præcepta, quæ circa hanc rem delegimus et proposuimus, omnia ex genere eorum esse, quæ bonæ artes vocantur. Quod enim ad malas artes attinet; si quis Machiavello se dederit in disciplinam, qui præcipit virtutem ipsam non magnopere curandam, sed tantum speciem ejus, in publicum versam: quia virtutis fama et opinio

homini adiumento sit, virtus ipsa impedimento; quique alio loco præcipit; ut homo politicus illud tanquam fundamentum prudentiæ suæ substernat, quod præsupponat, homines non recte nec tuto ad ea, quæ volumus, flecti aut adduci posse, præterquam solo metu: ideoque det operam ut omnes, quantum in se est, obnoxii sint, atque in periculis et angustiis constituti; ita ut politicus suus videatur esse, quod Itali dicunt, seminator spinarum: aut si quis axioma illud, quod a Cicerone citatur, amplecti velit: "Cadant amici, dummodo inimici intercendant;" sicut triumviri fecerunt, qui inimicorum interitum amicissimorum exitio redimebant: aut si quis L. Catilinæ imitator esse velit, ut rerumpublicarum incendiarius fiat et perturbator, quo melius in aquis turbidis piscari et fortunam suam expedire possit; "Ego" (inquit) "si in fortunis meis incendium sit excitatum, id non aqua sed ruina restinguam;" aut si quis illud Lysandri ad se transferat, qui dicere solebat; pueros placentis, viros perjuris alliciendos; cum aliis ejusdem farinae pravis ac perniciosis dogmatibus; quorum (ut fit in cæteris rebus omnibus) major est numerus, quam rectorum et sanorum: si quis (inquam) hujusmodi inquinata prudentia delectetur; non ierim inficias, eum (quandoquidem legibus charitatis et virtutis omnibus se ipsum solum, fortunæ solummodo manciparit) posse, majore compendio et celerius fortunam suam promovere. Fit vero in vita, quemadmodum et in via, ut iter brevius sit fœdus et cœnosius; neque sane, ut per viam meliorem quis incedat, multa circuitione opus est.

Tantum vero abest, ut homines ad hujusmodi artes pravas se applicare oporteat; ut potius sane (si modo sint apud se, seque sustinere valeant, neque ambitionis turbine et procella in adversum rapiantur) ante oculos proponere debeant, non solum mundi chorographiam generalem illam, quod omnia sint vanitas, et vexatio spiritus; verum etiam illam magis specialem, videlicet, quod ipsum esse, se junctum a bene esse, maledictionis loco sit; et quo grandius sit esse, eo major sit maledictio; quodque amplissimum virtutis præmium sit ipsa virtus; quemadmodum et ultimum vitii supplicium est vitium ipsum; sicut egregie poëta:

"Quæ vobis, quæ digna, viri, pro laudibus istis  
Præmia posse rear solvi? Pulcherrima primum  
Dii moresque dabunt vestri.—"

Et e contra non minus vere ille de sceleratis, "atque eum ulciscuntur mores sui." Quinetiam mortales, dum in omnes partes cogitationes suas agitant et diffundunt, ut fortunis suis recte prospectum atque consultum sit, interim in mediis illis animi transcurribus ad divina judicia et providentiam æternam oculos attollere debent; quæ sæpissime impiorum machinationes et consilia prava, licet profunda, subvertit et ad nihilum redigit; secundum illud Scripturæ, "Concepit iniquitatem, et pariet vanitatem." Imo, etsi injuriis et malis artibus abstineant; attamen hæc jugis et irrequieta anhelatio ad ardua fortunæ, absque cessatione, et quasi sine sabbato, tributum temporis nostri Deo debitum minime solvit: qui, ut videre est, facultatum nostrarum decimas, temporis autem septimas, exigit, et sibi seponit. Quorsum enim fuerit, os gerere in cœli sublimia

erectum; mentem vero humi prostratam, et pulverem, inatar serpentis, comedentem? Quod etiam ethnicos non fugit:

"Atque affigit humo divinæ particulam aure."

Quod si in hoc sibi quisquam adblandiatur, quod fortuna sua, utcumque eam malis artibus obtinuerit, recte uti decreverit; sicut de Augusto Cæsare et Septimio Severo solitum erat dici, debuisse illos, aut nunquam nasci, aut nunquam mori; tanta in ambitu fortunæ suæ patrarunt mala, tanta rursus, summa adepti, contulerunt bona: intelligat nihilominus, hanc malorum per bona compensationem post factum probari; consilium autem hujusmodi merito damuari. Abs re postremo nobis non fuerit, in cursu isto incitato et fervido versus fortunam nostram, frigidam paulisper aspergere, haustam e dicerio illo non ineleganta Caroli Quinti imperatoris, in institutionibus suis ad filium: imitari fortunam mores mulierum, quæ procos plus nimio ambientes plerumque superbe aversantur. Verum hoc ultimum remedium pertinet ad eos, quibus gustus ex morbo animi corruptus est. Innitantur potius homines lapidi illi, qui theologiæ et philosophiæ est tanquam angularis; quæ idem fere asserunt de eo, quod primum queri debeat: etenim theologia edicit; "Primum querite regnum Dei, et ista omnia adjicientur vobis." Philosophia autem simile quiddam jubet: "Primum querite bona animi, cætera aut aderunt, aut non oberunt." Quamvis autem hoc fundamentum, humanitus jactum, interdum locetur super arenas; quemadmodum videre est in M. Bruto, qui in eam vocem, sub exitum suum, prorupit:

"Te colui, virtus, ut rem: ast tu nomen inane es."

At idem fundamentum, divinitus locatum, firmatur semper in petra. Hic autem doctrinam de ambitu vitæ, et simul doctrinam generalem de negotiis, concludimus.

### CAPUT TERTIUM.

*Partitiones doctrinæ de imperio sive republica continentur; tantum aditus fit ad desiderata duo, doctrinam de proferendis finibus imperii, et doctrinam de justitia universali, sive de fontibus juris.*

VENIO jam ad artem imperii, sive doctrinam de republica administranda: sub qua etiam œconomica continetur, ut familia sub civitate. In hac parte, sicut jam antea dixi, silentium mihi imperavi. Neque tamen prorsus diffidere debui, quin possim de illa fortasse non imperite aut inutiliter disserere: utpote qui longa experientia edoctus, et per tot munerum et honorum gradus ad amplissimum regni magistratum, favore majestatis tuæ indulgentissimo, nullo merito meo, evectus fuerim; eundemque magistratum per annos quatuor integros gesserim: et, quod pluris est, majestatis tuæ mandatis et colloquiis per annos octodecim continuos assueverim (quod etiam et stipite aliquo politicum exculpere potuisset) quique etiam, inter omnes artes, plurimum temporis in historiis et legibus contriverim. Quæ omnia non

jaectantia ad posteros refero, sed quia ad literarum dignitatem nonnihil pertinere putem, quod homo quispiam, ad literas potius, quam ad aliud quicquam, natus, et ad res gerendas, nescio quo fato, contra genium suum abreptus, ad civilia tamen munera tam honorifica et ardua, sub rege prudentissimo, assumptus fuerit. Verum, si quid circa politicam posthac parturiet otium meum, erit fortasse proles, aut abortiva aut posthama. Interim, ne, scientiis omnibus jam veluti in subselliis suis collocatis, sedes hæc tam excelsa omnino vacet, decrevi duas tantum civilis scientiæ portiones, quæ ad arcana imperii non pertinent, sed sunt naturæ magis communis, ut desiderata notare; earumque, more nostro, exempla proponere.

Cum artes imperii tria officia politica complectantur; primo, ut imperium conservetur; secundo, ut beatum efficiatur et florens; tertio, ut amplificetur, finesque ejus longius proferantur: de duobus primis officiis, maxima ex parte, egregie a nonnullis tractatum est, de tertio siletur. Illud itaque inter desiderata reponemus, et more nostro exemplum ejus proponemus, eam doctrinæ partem consulem paludatum, sive doctrinam de proferendis imperii finibus, nominantes.

EXEMPLUM TRACTATUS SUMMARIUM DE PROFERENDIS FINIBUS IMPERII.

Dictum Themistocles sibi ipsi applicatum, incivile certe fuit et inflatum; sin de aliis atque in genere prolatum fuisset, prudentem sane observationem et pergravem censuram complecti videatur. Rogatus in convivio, ut citharam pulsaret, respondit, Fidibus se necire; cæterum posse oppidum parvum in magnam civitatem evehere. Ista certe verba, ad sensum politicum translata, facultates duas, multum inter se discrepantes, in iis, qui rerum gubernacula tractant, optime describunt et distinguunt. Etenim, si regum consiliarios, senatores, aliosque ad negotia publica admotos, qui usquam fuerint, attente intueamur, reperientur profecto (licet rarissime) nonnulli, qui regnum aut civitatem e parvis ampla efficere possint; fiduciam tamen sint valde imperiti: e contra autem alii quamplurimi, in cithara aut lyra (hoc est, aulicis tricis) miri artifices, qui, tantum abest, ut reipublicam amplificare possint, ut potius a natura comparati videantur ad statum reipublicæ beatum et florentem labefactandum et evertendum. Sane, artes illæ degeneres et præstigiosæ, quibus sæpenumero consiliarii, atque rerum potentes, et gratiam apud principes suos, et famam in vulgus, reportant, hæc aliud nomen merentur, quam peritiæ cujusdam fiduciarie, utpote cum sint res magis gratæ in præsens, et artificibus ipsis ornamento, quam ad rerumpublicarum, quarum sunt ministri, opes et amplitudinem utiles aut accommodæ. Occurrent proculdubio et alii consiliarii, atque reipublicæ gubernatores, minime spernendi, qui sint negotiis pares, possintque res commode administrare, easque a manifestis præcipitiis et incommodis conservare; a virtute tamen illa rerumpublicarum erectrice et amplificatrice longo intervallo absunt.

Verum, qualescunque demum fuerint operarii,

conjiciamus oculos in opus ipsum; qualis nimirum censeri debeat vera regnorum et rerumpublicarum magnitudo, et quibus artibus obtineri possit: dignum profecto argumentum, quod principes perpetuo in manibus habeant, et diligenter meditentur; quo, nec vires suas in majus æstimantes, inceptis se vanis et nimis arduis implicent; nec rursus easdem plus æquo despicientes, ad consilia pusillanima et meticulosa se demittant.

Magnitudo imperiorum, quoad molem et territorium, mensuræ subjicitur; quoad redditus, calculis. Numerus civium et capita, censu; urbium et oppidorum multitudo et amplitudo, tabulis excipi possunt: attamen non reperitur inter civilia res errori magis obnoxia, quam verum et intrinsicum excipere valorem circa vires et copias imperii alicujus. Assimilatur regnum cælorum non glandi, aut nuci alicui grandiori, sed grano sinapis, quod inter grana est minimum; quod tamen habet interim intra se proprietatem quandam et spiritum innatum, quo se et citius attollat, et latius diffundat: eodem modo invenire est regna et status ambitu quidem et regionum tractu valde ampla, quæ tamen ad fines ulterius proferendos, aut latius imperandum, sunt minus apta; alia contra, dimensione satis exigua, quæ tamen bases, in quibus maximæ monarchiæ inædificantur, esse possint.

I. Urbes munitæ, plena armamentaria, equorum propagine generosæ, currus armati, elephantum, machinæ atque tormenta bellica omnigena, et similia; sunt certe ista universa, nihil aliud, quam ovis induta pelle leonina, nisi gens ipsa stirpe sua et ingenio sit fortis et militaris. Imo, nec numerus ipse copiarum multum juvat, ubi milites imbelles sunt et ignavi. Recte enim Virgilius; "Lupus numerum pecorum non curat." Exercitus Persarum in campis Arbelæ oculis Macedonum tanquam vastum hominum pelagus subjiciebatur; adeo ut duces Alexandri, nonnihil ipso spectaculo percussi, regem interpellarent, atque ut noctu prælium committeret, ei auctores erant: quibus ille, "Nolo," inquit, "suffurari victoriam:" ea autem etiam opinione fuit facilior. Tigranes Armenius, castrametatus in quodam colle cum exercitu quadringentorum millium, cum spectaret aciem Romanorum, quæ quatuordecim millia non excessit, contra se tendentem, in dicitio illo suo sibi complacuit; "Ecce," inquit, "hominum pro legatione nimio plus quam oportet, pro pugna longe minus;" eosdem tamen, priusquam occubisset sol, satis multos ad illum infinita strage proffigandum expertus est. Innumera sunt exempla, quam sit multitudinis cum fortitudine congressus impar. Primo igitur pro re certissima et exploratissima decernatur et statuatur, quod caput omnium, quæ ad magnitudinem regni aut status spectent, sit, ut populus ipse sit stirpe et ingenio bellicosus. Atque illud magis tritum, quam verum, quod nervi belli sint pecuniæ, si desint nervi lacertorum in gente molli et effeminata. Recte enim Crosso ostentanti aurum respondit Solon: "At si quis (o rex) venerit, qui melius, quam tu, ferrum gestit, illi profecto totum hoc cedit aurum." Quare, quicumque is tandem sit princeps aut status, cujus subditi nativi et indigenæ non sint animosi et militares, potentiam suam

admodum sobrie æstimet: atque e contra principes, qui dominantur in gentes animosas et martias, norint illi satis vires suas, si sibi alias non desint. Quod attinet ad copias mercenarias (quod solet adhiberi remedium, cum copię nativæ desint) plena sunt omnia exemplis, quibus liquido patet, quod quicumque status illis innitetur, poterit fortasse pennas ad tempus breve nido majores extendere, sed defluent illæ paulo post.

2. Benedictio Judæ et Issacharis, in unum nunquam convenient: nimirum, ut eadem tribus aut gens sit simul et leonis catulus, et asinus procumbens inter sarcinas. Neque unquam fiet, ut popululus tributis oppressus, fortis existat et bellicosus. Verum est, collationes publico consensu factas, minus animos subditorum dejicere et deprimere, quam quæ ex imperio mero indicuntur. Id quod liquido videre est in tributis Germaniæ inferioris, quas excisas vocant: atque aliqua ex parte in iis, quæ subsidia nominantur apud Anglos. Etenim notandum est, sermonem jam institui de animis hominum, non de opibus. Tributis autem, quæ ex consensu conferuntur, et quæ ex imperio imponuntur, etiam eadem res sint, quoad opes exhauriendas, varie tamen omnino animos subditorum afficiunt. Statuatur igitur et hoc, populum tributis gravatum idoneum ad imperandum non esse.

3. Aspirantibus ad magnitudinem regnis et statibus, prorsus cavendum, ne nobiles et patricii, atque (quos vocamus) generosi, majorem in modum multiplicentur. Hoc enim eo rem deducit, ut plebs regni sit humilis et abjecta; et nihil aliud fere quam nobilitatem mancipia et operarii. Simile quiddam fieri videmus in sylvis cæduis; in quibus, si major, quam per est, caudicum sive arborum majorum relinquatur numerus, non renascetur sylva sincera et pura; sed major pars in vepres et dumos degenerabit. Eodem modo in nationibus, ubi numerosus justo est nobilitas, erit plebs vilis et ignava: atque eo demum res redibit, ut nec centesimum quodque caput sit ad galeam portandam idoneum: præsertim si peditatum spectes, qui exercitus plerumque est robur præcipuum; unde succedat magno populatio, vires exiguæ. Nusquam gentium, hoc, quod dico, luculentius comprobatur, quam exemplis Angliæ et Galliæ: quarum Anglia, quamvis territorio et numero incolarum longe inferior, potiores tamen partes fere semper in bellis obtinuit; hanc ipsam ob causam, quod apud Anglos coloni, et inferiores ordinis homines, militiæ habiles sint, rustici Galliæ non item. Qua in re mirabili quadam et profunda prudentia excogitatum est ab Henrico septimo Angliæ rege (id quod in "Vitæ ejus historia" fusius tractavimus) ut prædia minora, atque domus agricolationis instituerentur, quæ habeant certum eumque mediocrem agri modum annexum, qui distrahi non possit; eo fine, ut ad victum liberaliorem sufficiat; utque agricultura ab iis exerceretur, qui domini fuerint fundi, aut saltem usufructuarii, non conductitii aut mercenarii. Nam ita demum characterem illum, quo antiquam Italiam insignivit Virgilius, merebitur regio aliqua:

"Terra potens armis, atque ubere gleba."

Neque prætereunda est illa pars populi (quæ Angliæ fere est peculiaris, nec alibi, quod scio, in usu, nisi forte apud Polonos) famuli scilicet nobilium: hujus enim generis etiam inferiores, quoad peditatum, agricolis ipsis minime cedunt. Quare certissimum est, quod magnificentia et splendor ille hospitalis, atque famulitiae, et veluti satellitiæ ampla, quæ in more sunt apud nobiles et generosos in Angliæ, ad potentiam militarem apprime conducunt: ubi contra, nobilitas obscura, et magis privata, et in se reducta vitæ ratio copias militares minuit.

4. Danda est omnino opera, ut arbor ista monarchiæ, qualis fuit Nebuchadnezzaris, truncum habeat satis amplum et robustum, ad ramos suos et frondes sustentandos: hoc est, ut numerus indigenarum, ad subditos extraneos cohibendos, satis superque sufficiat. Illi igitur status ad imperii magnitudinem bene comparati sunt, qui jus civitatis facile et libenter largiuntur. Vana siquidem fuerit opinio, posse manipulum hominum, utcumque animis et consilio excellent, regiones nimio plus amplas et spatiosas imperii jugo cohibere et frænare. Id ad tempus fortasse facere possint, sed diuturnitatem hæc res non assequitur. Spartani parci fuerunt, et difficiles in cooptandis novis civibus. Unde, donec intra parvos limites dominati sunt, res eorum firmæ fuerunt et stabiles: at postquam limites suos cœpissent proferre, et latius dominari, quam ut stirps Spartanorum turbam exterorum imperio commode coercere posset, potentia eorum subito corrui. Nulla unquam respublica sinus suos ad novos cives recipiendos tam profuse laxavit, quam respublica Romana. Itaque par erat instituto tam prudenti fortuna, cum in imperium toto orbe amplissimum successerit. Moris apud eos erat jus civitatis prompte elargiri; idque in supremo gradu: hoc est, non solum jus commercii, jus connubii, jus hæreditatis; verum etiam jus suffragii, et jus petitionis, sive honorum: hocque rursus, non singulis tantum personis, sed totis familiis, imo civitatibus, et nonnunquam integris nationibus, communicarunt. Huc adde consuetudinem deducendi colonias, quibus Romanæ stirpes in solum exterum transplantabantur. Quæ duo instituta si simul componas, dices profecto non Romanos se diffudisse super universum orbem; sed contra, orbem universum se diffudisse super Romanos: quæ securissima proferendi imperii est ratio. Subit mirari sæpius imperium Hispanorum; quod tam paucis indigenis tot regna et provincias amplexari et frænare possit. Ac certe Hispaniæ ipsæ pro arboris stemmate satis grandi haberi debent, cum longe ampliore contineant regionum tractum, quam Romæ aut Spartæ, sub initiis suis contigerat. Porro, quanquam jus civitatis satis parce soleant Hispani impertire, quod proximum tamen est, faciunt; quippe qui cujuscumque nationis homines ad militiam suam ordinariam promiscue admittant: quietiam summum belli imperium haud raro ad duces natione non Hispanos deferunt. Attamen et illam ipsam videntur non ita pridem indigenarum paucitatem sensisse, eique succurrere cupiisse; ut ex pragmatica sanctione, hoc anno promulgata, cernere est.

5. Certissimum est, artes mechanicas sedentarias, quæ non sub dio, sed sub tecto exercentur, atque

manufacturas delicatas (quæ digitum, potius quam brachium, requirunt) sua natura militaribus animis esse contrarias. In universum, populi bellicosi ferri gaudent, et pericula, quam labores, minus exhorrent. Atque in hoc ingenio suo non sunt admodum reprimendi, si animos ipsorum in vigore conservare cordi nobis sit. Magno itaque adjumento Spartæ, Athenis, Romæ, aliisque antiquis rebuspublicis fuit, quod habuerint non ingenuos, sed servos plerunque, quorum laboribus istiusmodi officia expediebantur. Verum mancipiorum usus, post legem Christianam receptam, maxima ex parte abiit in desuetudinem. Huic vero rei proximum est, ut artes istæ alienigenis tantum permittantur; qui propterea alliciendi, aut saltem facile recipiendi sunt. Nativorum autem plebs ex tribus generibus hominum constare debet; nempe, ex agricolis; famulis ingenuis; et artificibus; quorum opera robur et lacertos viriles postulant; cujusmodi sunt fabri ferrarii, lapidarii, lignarii, et similes; non annumerando militiam descriptam.

6. Ante omnia ad imperii magnitudinem confert, ut gens aliqua armorum studium profiteatur, tanquam decus suam, et institutum vitæ primarium, et in præcipuo honore habitum. Quæ enim a nobis adhuc dicta sunt, ad habilitates tantum erga arma spectant: quorsum autem habilitas, si non rei ipsi incumbitur, ut producat in actum? Romulus (ut narrant, aut fingunt) postquam e vivis excesserat, illud civibus suis legavit, ut ante omnia rem militarem colerent, unde in caput orbis terrarum urbs eorum insurgeret. Imperii Spartani fabrica universa (non nimis prudenter quidem, sed diligenter tamen) ad illum finem et scopum composita est et constructa, ut cives sui belligeratores essent. Persarum et Macedonum idem erat institutum, sed non tam constans aut diuturnum. Britanni, Galli, Germani, Gothi, Saxones, Normanni, et nonnulli alii, etiam ad tempus armis se præcipue dederunt. Turcæ idem institutum, lege sua haud paululum extimulati, hodie retinent, sed magna cum militiæ suæ (ut nunc est) declinatione. In Europa Christiana, gens, quæ illud adhuc retinet et proficitur, soli sunt Hispani. Verum res est tam liquida et manifesta, unumquemque in eo proficere maxime, in quo plurimum impendit studii, ut verbis non indigeat. Satis sit innuisse, desperandum omnino alicui nationi esse, quæ non ex professo arma et militiam colat, iisque præcipue studeat et incumbat, sibi veluti ultro obtenturam insignem aliquam imperii magnitudinem: contra autem, certissimum esse temporis oraculum, nationes illas, quæ in armorum professione et studiis diutius permanserint (id quod Romani Turcæque potissimum fecere) miros in imperio amplificando facere progressus. Quin et illæ, quæ bellica gloria per unius tantummodo seculi spatium floruerunt; inde tamen, unico illo seculo, eam imperii amplitudinem asecutæ sunt, quam longo post tempore, etiam remissa illa armorum disciplina, retinuerunt.

7. Præcepto præcedenti affine est; ut status quis citatur ejusmodi legibus et consuetudinibus, quæ justas illi causas, aut saltem prætextus, arma capessendi, tanquam in promptu ministrent. Etenim, ea est insita animis hominum justitiæ apprehensio, ut bellum (quod tot sequuntur calamitates) nisi gravem

ob causam, saltem speciosam, inferre abstineant. Turcia præsto est semper, et ad nutum, belli causa; propagatio scilicet legis et sectæ suæ. Romani, quanquam pro magno decore imperatoribus apud eos fuerit, si fines imperii ipsorum protulissent, tamen ob hanc solam causam, ut fines proferrentur, nunquam bella susceperunt. Aspiranti igitur ad imperium nationi illud in more sit; ut sensum habeat vividum et acrem injuriæ alicujus, vel subditis suis limitaneis, vel mercatoribus, vel publicis ministris, illatæ; neque a prima provocatione diutius torpeat aut tardet. Item, prompta sit et alacris ad auxilia mittenda sociis suis et fœderatis: id quod perpetuum erat apud Romanos: adeo ut, si forte in populum fœderatum, cui etiam cum aliis fœdus defensivum intercederet, hostilis impressio facta esset; atque ille a plurimis suppetias peteret; Romani omnium primi semper adessent, beneficii decus nemini præripiendum relinquentes. Quod vero attinet ad bella, antiquis temporibus, propter statuum conformitatem quandam, aut correspondentiam tacitam, gesta, non video, in quo jure illa fundata sint. Talia fuerunt bella, quæ a Romanis suscepta erant ad Græciam in libertatem vindicandam: talia a Lacedæmonis et Atheniensibus, ad constituendas aut evertendas democratas et oligarchias: talia quandoque illata sunt a rebuspublicis aut principibus, sub prætextu, subditos alienos protegendi, et a tyrannide liberandi. Ad rem præsentem sufficiat, ut illud decernatur: non esse expectandam statui alicui imperii amplitudinem, nisi ad quamvis occasionem justam se armandi protinus expergiscatur.

8. Nullum omnino corpus, sive sit illud naturale sive politicum, absque exercitatione sanitatem suam tuere queat. Regno autem, aut reipublicæ, justum atque honorificum bellum loco salubris exercitationis est. Bellum civile profecto instar caloris febrilis est; at bellum externum instar caloris ex motu, qui valetudini imprimis conducit. Ex pace enim deside atque torpente et emolliuntur animi, et corrumpunt mores. Sed utunque res se habeat, quatenus ad alicujus status felicitatem, magnitudinis proculdubio interest, ut quasi semper in armis sit. Atque exercitus veteranus, perpetuo tanquam sub vexillis habitus, etsi res sit magni proculdubio sumptus et impensæ, attamen ejusmodi est, ut statui alicui quasi arbitrium rerum inter vicinos, aut saltem plurimum existimationis ad omnia conferat. Id quod insigniter cernere est in Hispanis, qui jam per annos centum et viginti exercitum veteranum, ad aliquas partes, licet non semper ad easdem, aluerunt.

9. Maris dominium, monarchiæ quædam epitome est. Cicero, de Pompeii contra Cæsarem apparatu, scribens ad Atticum: "Consilium," inquit, "Pompeii, plane Themistocleum est: putat enim, qui mari potitur, eum rerum potiri." Atque Cæsarem Pompeius proculdubio delassasset et attrivisset, nisi inani fiducia inflatus, ab illo incepto destitisset. Prælia navalia, quanti fuerint momenti, ex multis exemplis patet. Pugna ad Actium orbis imperium determinavit. Pugna ad insulas Cursolares circum in naribus Turcæ posuit. Multoties certe evenit, ut victoriæ navales finem summæ belli attulerint. Sed hoc factum est, cum alex hujusmodi præriorum

totius belli fortuna commissa est. Illud minime dubium, quod qui maris potitur dominio, in magna libertate agit, et tantum, quantum velit, de bello sumere potest: ubi contra, qui terrestribus copiis est superior, nihilominus plurimis angustiis conficitur. At hodie, atque apud nos Europæos, si unquam, aut uspiam, potentia navalis (quæ quidem huic regno Britannia in dotem cessit) summi ad rerum fastigia momenti est; tum quia pleraque Europæ regna mediterranea simpliciter non sunt, sed maxima ex parte mari cincta; tum etiam, quia utriusque Indiæ thesauri et opes imperio maris veluti accessorium quiddam existunt.

10. Bella moderna, veluti in tenebris gesta, censerī possunt, præ gloria et decore vario, quæ in homines militares, priscis temporibus, a rebus bellicis resiliere solebant. Habemus hodie, fortasse ad animos faciendos, ordines quosdam honorificos militiæ, qui tamen jam facti sunt et armis et togæ communes. Etiam in scutis gentilitiis stemmata nonnulla habemus: insuper hospitia quædam publica, militibus emeritis et mutilatis destinata, et hujusmodi. Verum, apud veteres, in locis, ubi victoriæ partæ sunt, extructa trophæa; laudationes funebres, et monumenta magnifica occubentium in bello; coronæ civiæ, militares, singulis concessæ; nomen ipsum imperatoris, quod postea reges maximi a belli ducibus mutuati sunt; redeuntium ducum, bellis prospere confectis, celebres triumphi; donativa, atque largitiones ingentes in milites, sub exercituum dimissionem: Hæc (inquam) tot et tanta fuerunt, et tam insigni splendore coruscantia, ut pectoribus mortaliū, etiam maxime conglaciatis, igniculos subdere, eaque ad bellum inflammare, poterint. Ante omnia vero mos ille triumphandi apud Romanos, non res erat ex pompa, aut spectaculum quoddam inane, sed inter prudentissima plane nobilissimaque instituta numerandus: utpote qui in se hæc tria haberet; ducum decus et gloriam; ærarii ex spoliis locupletationem; et donativa militum. Verum honor triumphi fortasse monarchiis non competit, præterquam in personis regis ipsius, aut filiorum regis. Quod etiam temporibus imperatorum Romæ obtinuit; qui honorem ipsum triumphi, sibi et filiis suis, de bellis, quæ præsentibus ipsi conficerant, tanquam peculiarem reservarunt: vestimenta autem solummodo, et insignia triumphalia, aliis ducibus indulerunt.

Verum, ut sermones hos claudamus; nemo est (ut testatur sacra Scriptura) "qui, sollicitè cogitando, potest apponere ad staturam suam cubitum unum;" in pusillo scilicet corporis humani modulo: Cæterum, in magna regnorum et rerumpublicarum fabrica imperium amplificare et fines proferre, reges penes et dominantes est. Nam prudenter introducendo leges, instituta, et consuetudines, quales jam proposuimus, et alias his similes, posteris, et seculis futuris, magnitudinis sementem fecerint. Verum ista consilia apud principes raro tractantur, sed res fortunæ plerunque committitur.

Atque hæc habuimus, quæ de proferendis imperii finibus in præsentia occurrunt. Verum quorsum ista commentatio; cum monarchia Romana futura sit inter mundanas (ut creditur) ultima? Nisi quod

nobis, instituto nostro fides, neque uspiam de via declinantibus (quandoquidem amplificatio imperii fuerit inter officia tria politices tertium) illud omnino prætermittere non licuerit. Restat jam desideratum alterum ex iis, quæ posuimus, duobus, nimirum, de justitia universali, sive de fontibus juris.

Qui de legibus scripserunt, omnes, vel tanquam philosophi, vel tanquam jurisconsulti, argumentum illud tractaverunt. Atque philosophi proponunt multa, dictu pulchra, sed ab usu remota. Jurisconsulti autem, suæ quisque patriæ legum, vel etiam Romanarum, aut Pontificiarum, placitis obnoxii et addicti, iudicio sincero non utuntur, sed tanquam vinculis sermocinantur. Certe cognitio ista ad viros civiles proprie spectat; qui optime norunt, quid ferat societas humana, quid salus populi, quid æquitas naturalis, quid gentium mores, quid rerumpublicarum formæ diversæ: ideoque possint de legibus, ex principiis et præceptis, tam æquitatis naturalis, quam politices, decernere. Quamobrem id nunc agatur, ut fontes justitiæ et utilitatis publicæ petantur, et in singulis juris partibus character quidam et idea iusti exhibeat, ad quam particularium regnorum et rerumpublicarum leges probare, atque inde emendationem moliri, quisque, cui hoc cordi erit et curæ, possit. Hujus igitur rei, more nostro, exemplum in uno titulo proponemus.

EXEMPLUM TRACTATUS DE JUSTITIA UNIVERSALI,  
SIVE DE FONTIBUS JURIS, IN UNO TITULO, PER  
APHORISMOS.

PROCEMIUM.

APHORISMUS I.

In societate civili aut lex aut vis valet. Est autem et vis quædam legem simulans: et lex nonnulla magis vim sapiens, quam æquitatem juris. Triplex est igitur iniustitiæ fons: vis mera; illaqueatio malitiosa prætextu legis; et acerbitas ipsius legis.

II.

Firmamentum juris privati tale est. Qui injuriam facit, re utilitatem aut voluptatem capit, exemplo periculum. Cæteri utilitatis aut voluptatis illius participes non sunt, sed exemplum ad se pertinere putant. Itaque facile coeunt in consensum, ut caveatur sibi per leges; ne injuriæ per vices ad singulos redeant. Quod si ex ratione temporum, et communiōne culpæ, id eveniat ut pluribus et potentioribus, per legem aliquam, periculum creetur, quam caveatur, factio solvit legem; quod et sæpe fit.

III.

At jus privatum sub tutela juris publici latet. Lex enim cavet civibus, magistratus legibus. Magistratum autem auctoritas pendet ex majestate imperii, et fabrica politiæ, et legibus fundamentalibus. Quare, si ex illa parte sanitas fuerit, et recta constitutio, leges erunt in bono usu; sin minus, partium in iis præsidii erit.

IV.

Neque tamen jus publicum ad hoc tantum spectat, ut addatur tanquam custos juri privato, ne illud

violetur, atque ut cessent injuriæ; sed extenditur etiam ad religionem, et arma, et disciplinam, et ornamenta, et opes, denique ad omnia circa bene esse civitatis.

## V.

Finis enim et scopus, quem leges intueri, atque ad quem jussiones et sanctiones suas dirigere debent, non alius est, quam ut cives feliciter degant: id fiet, si pietate et religione recte instituti; moribus honesti; armis adversus hostes externos tuti; legum auxilio adversus seditiones et privatas injurias muniti; imperio et magistratibus obsequentes; copiis et opibus locupletes et florentes fuerint. Harum autem rerum instrumenta et nervi sunt leges.

## VI.

Atque hunc finem optimæ leges assequuntur; plurimæ vero ipsarum aberrant. Leges enim mirum in modum, et maximo intervallo, inter se differunt: ut aliæ excellent, aliæ mediocriter se habeant, aliæ prorsus vitiosæ sint. Dictabimus igitur pro judicii nostri modulo quasdam tanquam legum leges; ex quibus informatio peti possit, quid in singulis legibus bene aut perperam positum aut constitutum sit.

## VII.

Antequam vero ad corpus ipsum legum particularium deveniamus; perstringemus paucis virtutes et dignitates legum in genere. Lex bona censeri possit, quæ sit intimatione certa, præcepto justa, executione commoda; cum forma politiæ congrua, et generans virtutem in subditis.

## TITULUS I.

## DE PRIMA DIGNITATE LEGUM, UT SINT CERTÆ.

## APHORISMUS VIII.

Legis tantum interest ut certa sit, ut absque hoc nec justa esse possit. "Si enim incertam vocem det tuba, quis se parabit ad bellum?" Similiter, si incertam vocem det lex, quis se parabit ad parendum? Ut moneat igitur oportet, priusquam feriat. Etiam illud recte positum est: optimam esse legem, quæ minimum relinquit arbitrio judicis: id quod certitudo ejus præstat.

## IX.

Duplex legum incertitudo; altera, ubi lex nulla præscribitur; altera, ubi ambigua et obscura. Itaque de casibus omissis a lege primo dicendum est; ut in his etiam inveniatur aliqua norma certitudinis.

## DE CASIBUS OMISSIS A LEGE.

## APHORISMUS X.

Angustia prudentiæ humanæ, casus omnes, quos tempus reperit, non potest capere. Non raro itaque se ostendunt casus omissi et novi. In hujusmodi casibus triplex adhibetur remedium, sive supplementum: vel per processum ad similia; vel per usum exemplorum, licet in legem non coaluerint; vel per jurisdictiones, quæ statuunt ex arbitrio boni

virii, et secundum discretionem sanam, sive illæ curiæ fuerint prætoriaræ, sive censoriaræ.

## DE PROCESSU AD SIMILIA, ET EXTENSIONIBUS LEGUM.

## APHORISMUS XI.

In casibus omissis deducenda est norma legis a similibus; sed caute, et cum judicio: circa quod servandæ sunt regulæ sequentes. Ratio prolifica, consuetudo sterilis esto, nec generet casus. Itaque quod contra rationem juris receptum est, vel etiam ubi ratio ejus est obscura, non trahendum est ad consequentiam.

## XII.

Bonum publicum insigne rapit ad se casus omissos. Quamobrem, quando lex aliqua reipublicæ commoda notabiliter et majorem in modum intuetur et procurat, interpretatio ejus extensiva esto, et amplianda.

## XIII.

Durum est, torquere leges, ad hoc, ut torqueant homines. Non placet igitur extendi leges penales, multo minus capitales, ad delicta nova. Quod si crimen vetus fuerit, et legibus notum, sed prosecutio ejus incidat in casum novum, a legibus non provisum; omnino recedatur a placitis juris, potiusquam delicta maneant impunita.

## XIV.

In statutis, quæ jus commune (præsertim circa ea, quæ frequenter incidunt, et diu coaluerunt) plane abrogant, non placet procedi per similitudinem ad casus omissos. Quando enim respublica tota lege diu caruerit, idque in casibus expressis; parum periculi est, si casus omissi expectent remedium a statuto novo.

## XV.

Statuta, quæ manifesto temporis leges fuere, atque ex occasionibus reipublicæ tunc invalescentibus natæ; mutata ratione temporum, satis habent, si se in propriis casibus sustinere possint: præposterum autem esset, si ad casus omissos ullo modo traherentur.

## XVI.

Consequentiarum non est consequentia; sed astiti debet extensio intra casus proximos: alioqui labetur paulatim ad dissimilia, et magis valebunt acumina ingeniorum, quam auctoritates legum.

## XVII.

In legibus et statutis brevioris styli, extensio facienda est liberius. At in illis, quæ sunt enumerativa casuum particularium, cautius. Nam ut exceptio firmat vim legis, in casibus non exceptis; ita enumeratio infirmat eam, in casibus non enumeratis.

## XVIII.

Statutum explanatorium claudit rivos statuti prioris; nec recipitur postea extensio in alterutro statuto. Neque enim facienda est super-extensio a iudice, ubi semel cœpit fieri extensio a lege.

## XIX.

Solennitas verborum et actorum non recipit extensionem ad similia. Perdit enim naturam solennis, quod transit a more ad arbitrium: et introductio novorum, corrumpit majestatem veterum.

## XX.

Proclivis est extensio legis ad casus post-natos, qui in rerum natura non fuerunt tempore legis latæ. Ubi enim casus exprimi non poterat, quia tunc nullus erat, casus omissus habetur pro expresso, si similis fuerit ratio.

Atque de extensionibus legum, in casibus omissis, hæc dicta sint: nunc de usu exemplorum dicendum.

## DE EXEMPLIS, ET USU EORUM.

## APHORISMUS XXI.

De exemplis jam dicendum est, ex quibus jus hauriendum sit, ubi lex deficit. Atque de consuetudine, quæ legis species est, deque exemplis, quæ per frequentem usum in consuetudinem transierunt, tanquam legem tacitam, suo loco dicemus. Nunc autem de exemplis loquimur, quæ raro et sparsim interveniunt, nec in legis vim coaluerunt; quando et qua cautione, norma juris ab ipsis petenda sit, cum lex deficiat.

## XXII.

Exempla a temporibus bonis et moderatis petenda sunt, non tyrannicis, aut factiosis, aut dissolutis. Hujusmodi exempla temporis partus spurii sunt; et magis nocent, quam docent.

## XXIII.

In exemplis, recentiora habenda sunt pro tutioribus. Quod enim paulo ante factum est, unde nullum sit secutum incommodum, quid ni iterum repetatur? Sed tamen minus habent auctoritatis recentia. Et si forte res in melius restitui opus sit, recentia exempla magis seculum suum sapiunt, quam rectam rationem.

## XXIV.

At vetustiora exempla caute et cum delectu recipienda: decursus siquidem ætatis multa mutat, ut quod tempore videatur antiquum, id perturbatione, et inconformitate ad præsentia, sit plane novum. Medii itaque temporis exempla sunt optima, vel etiam talis temporis, quod cum tempore corrente plurimum conveniat; quod aliquando præstat tempus remotius, magis quam in proximo.

## XXV.

Intra fines exempli, vel citra potius, se cohibeto, nec illos ullo modo excedito. Ubi enim non adest norma legis, omnia quasi pro suspectis habenda sunt: itaque ut in obscuris, minimum sequitor.

## XXVI.

Cavendum ab exemplorum fragmentis et compendiis: atque integrum exemplum, et universus ejus processus introspectendus. Si enim incivile sit,

nisi tota lege perspecta, de parte ejus judicare, multo magis hoc valere debet in exemplis; quæ ancipitis sunt usus, nisi valde quadrent.

## XXVII.

In exemplis plurimum interest, per quas manus transierint et transacta sint. Si enim apud scribas tantum, et ministros justitiæ, ex cursu curiæ, absque notitia manifesta superiorum, obtinuerint; aut etiam apud errorum magistrum populum; conculcanda sunt, et parvi facienda. Sin apud senatores, aut iudices, aut curias principales, ita sub oculis posita fuerint, ut necesse fuerit illa, approbatione judicium saltem tacita, munita fuisse, plus dignationis habent.

## XXVIII.

Exemplis, quæ publicata fuerint, utcumque minus fuerint in usu, cum tamen sermonibus et disceptionibus hominum agitata et ventilata extiterint, plus auctoritatis tribuendum: quæ vero in scriniis et archivis manserunt tanquam sepulta, et palam in oblivionem transierunt, minus. Exempla enim, sicut aquæ, in profluente sanissima.

## XXIX.

Exempla, quæ ad leges spectant, non placet ab historicis peti, sed ab actis publicis et traditionibus diligentioribus. Versatur enim infelicitas quædam inter historicos vel optimos, ut legibus et actis judicialibus non satis immorentur; aut si forte diligentiam quandam adhibuerint, tamen ab authenticis longe variant.

## XXX.

Exemplum, quod ætas contemporanea aut proxima respuit, cum casus subinde recurreret, non facile admittendum est. Neque enim tantum pro illo facit, quod homines illud quandoque usurparunt; quam contra, quod experti reliquerunt.

## XXXI.

Exempla in consilium adhibentur, non utique jubent, aut imperant. Igitur ita regantur, ut auctoritas præteriti temporis flectatur ad usum præsentis.

Atque de informatione ab exemplis, ubi lex deficit, hæc dicta sint. Jam dicendum de curiis prætoris et censoris.

## DE CURIIS PRÆTORIIS ET CENSORIIS.

## APHORISMUS XXXII.

Curis sunt et jurisdictiones, quæ statuunt ex arbitrio boni viri et discretionem sana, ubi legis norma deficit. Lex enim (ut antea dictum est) non sufficit casibus; sed ad ea, quæ plerunque accidunt, aptatur: sapientissima autem res tempus (ut ab antiquis dictum est) et novorum casuum quotidie auctor et inventor.

## XXXIII.

Interveniunt autem novi casus et in criminalibus, qui pena indigent; et in civilibus, qui auxilio. Curias, quæ ad priora illa respiciunt, censorias; quæ ad posteriora, prætorias appellamus.

## XXXIV.

Habent curiæ censoriæ jurisdictionem et potestatem, non tantum nova delicta puniendi, sed etiam pœnas a legibus constitutas pro delictis veteribus augendi, si casus fuerint odiosi et enormes, modo non sint capitales. Enorme enim, tanquam novum est.

## XXXV.

Habeant similiter curiæ prætoriæ potestatem, tam subveniendi contra rigorem legis, quam supplendi defectum legis. Si enim porrigi debet remedium ei, quem lex præterit, multo magis ei, quem vulneravit.

## XXXVI.

Curia istæ censoriæ et prætoriæ omnino intra casus enormes et extraordinarios se continent, nec jurisdictiones ordinarias invadunt; ne forte tendat res ad supplantationem legis, magis quam ad supplementum.

## XXXVII.

Jurisdictiones istæ in supremis tantum curiis resident, nec ad inferiores communicantur. Parum enim abest a potestate leges condendi, potestas eas supplendi, aut extendendi, aut moderandi.

## XXXVIII.

At curiæ illæ uni viro ne committantur, sed ex pluribus constant. Nec decreta exeant cum silentio; sed iudices sententiæ suæ rationes adducant, idque palam, atque adstante corona: ut quod ipsa potestate sit liberum, fama tamen et existimatione sit circumscriptum.

## XXXIX.

Rubricæ sanguinis ne sunt; nec de capitalibus, in quibuscunque curiis, nisi ex lege nota et certa, pronuntiatio. Indixit enim mortem Deus ipse prius; postea inflixit. Nec vita eripienda nisi ei, qui se in suam vitam peccare prius nosset.

## XL.

In curiis censoriis calculum tertium dato; ut iudicibus non imponatur necessitas, aut absolvendi, aut condemnandi; sed etiam ut "Non liquere" pronunciare possint. Etiam censoria non tantum pœna, sed et nota esto: scilicet, quæ non infligat supplicium, sed, aut in admonitionem desinat, aut reos ignominia levi, et tanquam rubore castiget.

## XLI.

In curiis censoriis, omnium magnorum criminum et scelerum actus inchoati et mediis puniuntur; licet non sequatur effectus consummatus: isque sit earum curiarum usus vel maximus: cum et severitatis intersit, initia scelerum puniri; et clementiæ, perpetrationem eorum (puniendo actus medios) intercipi.

## XLII.

Cavendum in primis, ne in curiis prætoriiis præbeatur auxilium in casibus, quos lex non tam omisit, quam pro levibus contempsit, aut pro odiosis remedio indignos iudicavit.

## XLIII.

Maxime omnium interest certitudinis legum (de qua nunc agimus) ne curiæ prætoriæ intumescant et exundent in tantum, ut prætextu rigoris legum mitigandi, etiam robur et nervos iis incidant, aut laxent; omnia trahendo ad arbitrium.

## XLIV.

Decernendi contra statutum expressum, sub ullo æquitatis prætextu, curiis prætoriiis jus ne esto. Hoc enim si fieret, iudex prorsus transiret in legislatorem, atque omnia ex arbitrio penderent.

## XLV.

Apud nonnullos receptum est, ut jurisdictio, quæ decernit secundum æquum et bonum, atque illa altera, quæ procedit secundum jus strictum, iisdem curiis deputentur: apud alios autem, ut diversis. Omnino placet curiarum separatio. Neque enim servabitur distinctio casuum, si fiat commixtio jurisdictionum: sed arbitrium legem tandem trahet.

## XLVI.

Non sine causa in usum venerat apud Romanos album prætoris, in quo præscripsit et publicavit quomodo ipse jus dicturus esset. Quo exemplo iudices in curiis prætoriiis, regulas sibi certas (quantum fieri potest) proponere, easque publice affigere debent. Etenim optima est lex, quæ minimum relinquit arbitrio iudicis; optimus iudex, qui minimum sibi.

Verum de curiis istis fusius tractabimus, cum ad locum de iudiciis veniemus; obiter tantum jam locuti de iis, quatenus expediant, et suppleant omnia a lege.

## DE RETROSPECTIONE LEGUM.

## APHORISMUS XLVII.

Est et aliud genus supplementi casuum omissorum, cum lex legem supervenit, atque simul casus omissos trahit. Id fit in legibus, sive statutis, quæ retrospectiunt, ut vulgo loquuntur: cujus generis leges raro, et magna cum cautione sunt adhibendæ: neque enim placet Janus in legibus.

## XLVIII.

Qui verba aut sententiam legis captione et fraude eludit et circumscribit, dignus est qui etiam a lege sequente innodetur. Igitur in casibus fraudis et evasionis dolosæ justum est, ut leges retrospectiunt, atque alteræ alteris in subsidiis sint; ut qui dolos meditatur et eversionem legum præsentium, saltem a futuris metuat.

## XLIX.

Leges, quæ actorum et instrumentorum veras intentiones contra formularum aut solennitatem defectus roborant et confirmant, rectissime præterita complectuntur: legis enim, quæ retrospectit, vitium vel præcipuum est, quod perturbet. At hujusmodi leges confirmatoriæ ad pacem et stabilimentum eorum, quæ transacta sunt, spectant. Cavendum tamen est, ne convellantur res judicatæ.

L.

Diligenter attendendum, ne eæ leges tantum ad præterita respicere putentur, quæ anteacta infirmant: sed et eæ, quæ futura prohibent et restringunt, cum præteritis necessario connexa. Veluti, si quæ lex artificibus aliquibus interdicit, ne mercimonia sua in posterum vendant; hæc sonat in posterum, sed operatur in præteritum: neque enim illis alia ratione victum quærere jam integrum est.

LI.

Lex declaratoria omnis, licet non habet verba de præterito, tamen ad præterita, ipsa vi declarationis, omnino trahitur. Non enim tum incipit interpretatio cum declaratur, sed efficitur tanquam contemporanea ipsi legi. Itaque leges declaratorias ne ordinato, nisi in casibus, ubi leges cum iustitia retrospicere possint.

Hic vero eam partem absolvimus, quæ tractat de incertitudine legum ubi invenitur lex nulla. Jam dicendum est de altera illa parte, ubi scilicet lex extat aliqua, sed perplexa et obscura.

## DE OBSCURITATE LEGUM.

## APHORISMUS LII.

Obscuritas legum a quatuor rebus originem ducit: vel ab accumulatione legum nimia, præsertim ad mixtis obsoletis; vel a descriptione earum ambigua, aut minus perspicua et dilucida; vel a modis enucleandi juris neglectis, aut non bene institutis; vel denique a contradictione et vacillatione iudiciorum.

## DE ACCUMULATIONE LEGUM NIMIA.

## APHORISMUS LIII.

Dicit propheta; "Pluet super eos laqueos." Non sunt autem pejores laquei, quam laquei legum, præsertim pœnalium; si numero immensæ et temporis decursu inutiles, non lucernam pedibus præbeant, sed retia potius objiciant.

LIV.

Duplex in usum venit statuti novi condendi ratio. Altera, statuta priora circa idem subjectum confirmat et roborat; dein nonnulla addit aut mutat. Altera abrogat et delet cuncta, quæ ante ordinata sunt, et de integro legem novam et uniformem substituit. Placet posterior ratio. Nam ex priore ratione, ordinationes deveniunt complicatæ et perplexæ: et quod instat agitur sane, sed corpus legum interim redditur vitiosum. In posteriore autem major certe est adhibenda diligentia, dum de lege ipsa deliberatur; et anteacta scilicet evolventa et pensitanda, antequam lex feratur: sed optime procedit per hoc legum concordia in futurum.

LV.

Erat in more apud Athenienses, ut contraria legum capita (quæ antinomias vocant) quotannis a sex viris examinarentur, et quæ reconciliari non poterant, proponerentur populo, ut de illis certum aliquid statueretur. Ad quorum exemplum ii, qui

potestatem in singulis politiis legum condendarum habent, per triennium, aut quinquennium, aut, prout videbitur, antinomias retractant. Eæ autem a viris, ad hoc delegatis, prius inspiciantur et præparentur, et demum comitiis exhibeantur; ut quod placuerit, per suffragia stabiliatur et figatur.

LVI.

Neque vero contraria legum capita reconciliandi, et omnia (ut loquuntur) salvandi, per distinctiones subtiles et quæsitæ, nimis sedula aut anxiosa esto. Ingenii enim hæc tela est: atque utcumque modestiam quandam et reverentiam præ se ferat, inter noxia tamen censenda est; utpote quæ reddat corpus universum legum varium et male consutum. Melius est prorsus ut succumbant deteriora, et meliora stent sola.

LVII.

Obsoletæ leges, et quæ abierunt in desuetudinem, non minus quam antinomias, proponantur a delegatis ex officio tollendæ. Cum enim statutum expressum regulariter desuetudine non abrogetur, fit ut ex contemptu legum obsoletarum fiat nonnulla auctoritatis jactura etiam in reliquis: et sequitur tormenti illud genus Mezentii, ut leges vivæ in complexu mortuarum perimantur. Atque omnino cavendum est a gangræna in legibus.

LVIII.

Quin et in legibus et statutis obsoletis, nec noviter promulgatis, curiis prætoriiis interim contra eas discernendi jus esto. Licet enim non male dictum sit, neminem oportere legibus esse sapientiozem, tamen intelligatur hoc de legibus, cum evigilent, non cum dormitent. Contra recentiora vero statuta (quæ juri publico nocere deprehenduntur) non utique prætoribus, sed regibus et sanctoribus consiliis, et supremis potestatibus auxilium præbendi jus esto: earum executionem per edicta aut acta suspendendo, donec redeant comitia, aut hujusmodi coetus, qui potestatem habeant eas abrogandi; ne salus populi interim periclitetur.

## DE NOVIS DIGESTIS LEGUM.

## APHORISMUS LIX.

Quod si leges aliæ super alias accumulata, in tam vasta excreverint volumina, aut tanta confusione laboraverint, ut eas de integro retractare, et in corpus sanum et habile redigere ex usu sit; id ante omne agito, atque opus ejusmodi opus heroicum esto: atque auctores talis operis inter legislatores et instauratores rite et merito numerantur.

LX.

Hujusmodi legum expurgatio, et digestum novum, quinque rebus absolvitur. Primo, omittantur obsoleta, quæ Justinianus antiquas fabulas vocat. Deinde ex antinomias recipiantur probatissimæ, aboleantur contrariæ. Tertio homoionias, sive leges quæ idem sonant, atque nil aliud sunt quam iterationes ejusdem rei, expungantur; atque una quepiam ex iis, quæ maxime est perfecta, retineatur

vice omnium. Quarto, si quæ legum nihil determinent, sed quæstiones tantum proponant, easque relinquunt indecisas, similiter facessant. Postremo, quæ verbosæ inveniuntur et nimis prolixæ, contrahantur magis in arctum.

## LXI.

Omnino vero ex usu fuerit, in novo digesto legum, leges pro jure communi receptas, quæ tanquam immemorales sunt in origine sua, atque ex altera parte statuta de tempore in tempus superaddita, seorsum digerere et componere: cum in plurimis rebus, non eadem sit, in jure dicendo, juris communis et statutorum interpretatio et administratio. Id quod fecit Trebonianus in *Digesto* et *Codice*.

## LXII.

Verum in hujusmodi legum regeneratione, atque structura nova, veterum legum atque librorum legis verba prorsus et textum retineto: licet per centones et portiones exiguas eas excerpere necesse fuerit: ea deinde ordine contextito. Etsi enim fortasse commodius, atque etiam, si ad rectam rationem respicias, melius hoc transigi posset per textum novum, quam per hujusmodi consarcinationem; tamen in legibus non tam stylus et descriptio, quam auctoritas, et hujus patronus antiquitas spectanda est. Alias videri possit hujusmodi opus scholasticum potius quiddam, et methodus, quam corpus legum imperantium.

## LXIII.

Consultum fuerit in novo digesto legum, vetera volumina non prorsus deleri et in oblivionem cedere, sed in bibliothesis saltem manere; licet usus eorum vulgaris et promiscuus prohibeatur. Etenim in causis gravioribus, non abs re fuerit, legum præteritarum mutationes, et series consulere et inspicere; ac certe solenne est, antiquitatem præsentibus aspergere. Novum autem hujusmodi corpus legum ab iis, qui in politiis singulis habent potestatem legislatoriam, prorsus confirmandum est; ne forte prætextu veteres leges digerendi, leges novæ imponantur occulto.

## LXIV.

Optandum esset, ut hujusmodi legum instaurationi illis temporibus suscipiatur, quæ antiquioribus, quorum acta et opera retractant, literis et rerum cognitione præstiterint. Quod secus in opere Justiniani evenit. Infelix res namque est, cum ex judicio et delectu ætatis minus prudentis et eruditæ antiquorum opera mutilentur et recomponantur. Veruntamen sæpe necessarium est, quod non optimum.

Atque de legum obscuritate, quæ a nimia et confusa earum accumulatione fit, hæc dicta sint. Jam de descriptione earum ambigua et obscura, dicendum.

## DE DESCRIPTIONE LEGUM PERPLEXA ET OBSCURA.

## APHORISMUS LXV.

Descriptio legum obscura oritur, aut ex loquacitate et verboitate earum; aut rursus ex brevitate

nimia; aut ex prologo legis cum ipso corpore legis pugnante.

## LXVI.

De obscuritate vero legum, quæ ex earum descriptione prava oritur, jam dicendum est. Loquacitas, quæ in perscribendo leges in usum venit, et prolixitas non placet. Neque enim, quod vult et captat, ullo modo assequitur, sed contrarium potius. Cum enim casus singulos particulares verbis appositis et propriis persequi et exprimere contendat, majorem inde sperans certitudinem; e contra quæstiones multiplices parit de verbis; ut difficilior procedat interpretatio secundum sententiam legis (quæ sanior est et verior) propter strepitum verborum.

## LXVII.

Neque propterea nimis concisa et affectata brevitatis, majestatis gratia, et tanquam magis imperatoria, probanda est; præsertim his seculis, ne forte sit lex instar regulæ Lesbæ. Mediocritas ergo assectanda est; et verborum exquirenda generalitas bene terminata; quæ licet casus comprehensos non sedulo persequatur, attamen non comprehensos satis perspicue excludat.

## LXVIII.

In legibus tamen atque edictis ordinariis et politicis, in quibus, ut plurimum, nemo jurisconsultum adhibet, sed suo sensui confidit, omnia fusius explicari debent, et ad captum vulgi, tanquam digito monstrari.

## LXIX.

Neque nobis prologi legum, qui inepti olim habiti sunt, et leges introducunt disputantes non jubentes, utique placerent, si priscos mores ferre possemus. Sed prologi isti legum plerumque (ut nunc sunt tempora) necessario adhibentur, non tam ad explicationem legis, quam instar suasionis, ad referendam legem in comitiis, et rursus ad satisfaciendum populo. Quantum fieri potest tamen prologi evitentur, et lex incipiat a jussione.

## LXX.

Intentio et sententia legis, licet ex præfationibus et præambulis (ut loquuntur) non male quandoque eliciatur; attamen latitudo aut extensio ejus ex illis minime peti debet. Sæpe enim præambulum arripit nonnulla ex maxime plausibilibus et speciosis ad exemplum, cum lex tamen multo plura spectatur; aut contra, lex restringit et limitat complura, cujus limitationis rationem in præambulo inseri non fuerit opus. Quare dimensio et latitudo legis ex corpore legis petenda: nam præambulum sæpe aut ultra aut citra cadit.

## LXXI.

Est vero genus perscribendi leges valde vitiosum. Cum scilicet casus, ad quem lex collimat, fuse exprimitur in præambulo: deinde ex vi verbi (talibus) aut hujusmodi relativi, corpus legis retro vertitur in præambulum, unde præambulum inseritur et incorporatur ipsi legi: quod et obscurum est, et minus tu-

tum; quia non eadem adhiberi consuevit diligentia in ponderandis et examinandis verbis præambuli, quæ adhibetur in corpore ipsius legis.

Hanc partem de incertitudine legum, quæ ex mala descriptione ipsarum ortum habet, fusius tractabimus, quando de interpretatione legum postea agemus. Atque de descriptione legum obscura hæc dicta sint: jam de modis enucleandi juris dicendum.

#### DE MODIS ENUCLEANDI JURIS, ET TOLLENDI AMBIGUA.

##### APHORISMUS LXXII.

Modi enucleandi juris, et tollendi dubia, quinque sunt. Hoc enim fit, aut per perscriptiones judiciorum; aut per scriptores authenticos; aut per libros auxiliares; aut per prælectiones; aut per responsa, sive consulta prudentum. Hæc omnia, si bene instituantur, præsto erunt magna legum obscuritati subsidia.

#### DE PERSCRPTIONE JUDICIORUM.

##### APHORISMUS LXXIII.

Ante omnia, judicia reddita in curiis supremis et principalibus, atque causis gravioribus, præsertim dubiis, quæque aliquid habent difficultatis aut novitatis, diligenter et cum fide excipiunt. Judicia enim anchoræ legum sunt, ut leges reipublicæ.

##### LXXIV.

Modus hujusmodi judicia excipiendi, et in scripta referendi, talis esto. Casus præcise, judicia ipsa exacte perscribito: rationes judiciorum, quas adduxerunt iudices, adjicito: casuum, ad exemplum adductorum, auctoritatem cum casibus principalibus ne commisceto: de advocatorum perorationibus, nisi quiddam in iis fuerit admodum eximium, sileto.

##### LXXV.

Personæ, quæ hujusmodi judicia excipiant, ex advocatis maxime doctis sunt, et honorarium liberale ex publico excipiunt. Iudices ipsi ab hujusmodi perscriptionibus abstinento: ne forte opinionibus propriis addicti, et auctoritate propria freti, limites referendarii transcendant.

##### LXXVI.

Judicia illa, in ordine et serie temporis, digerito; non per methodum et titulos. Sunt enim scripta ejusmodi, tanquam historiæ, aut narrationes legum. Neque solum acta ipsa, sed et tempora ipsorum, iudici prudenti lucem præbent.

#### DE SCRIPTORIBUS AUTHENTICIS.

##### APHORISMUS LXXVII.

Ex legibus ipsis, quæ jus commune constituunt; deinde, ex constitutionibus sive statutis; tertio loco, ex iudiciis perscriptis, corpus juris tantummodo constituitur. Præter illa, alia authentica, aut nulla sunt, aut parce recipiuntur.

##### LXXVIII.

Nihil tam interest certitudinis legum (de qua nunc tractamus) quam ut scripta authentica infra fines

moderatos coercerentur, et facessat multitudo enormis auctorum et doctorum in jure; unde laceratur sententia legum, iudex fit attonitus, processus immortales, atque advocatus ipse, cum tot libros perlegere et vincere non possit, compendia sectatur. Glossa fortasse aliqua bona; et ex scriptoribus classicis pauci, vel potius scriptorum paucorum paucule portiones, recipi possint pro authenticis. Reliquorum nihilominus maneat usus nonnullus in bibliothecis, ut eorum tractatus inspiciant iudices, aut advocati, cum opus fuerit: sed in causis agendis, in foro citare eos non permittitur, nec in auctoritatem transeunt.

#### DE LIBRIS AUXILIARIIBUS.

##### APHORISMUS LXXIX.

At scientiam juris, et practicam, auxiliaribus libris ne nudant, sed potius instruunt. Ii sex in genere sunt. Institutiones. De verborum significatione. De regulis juris. Antiquitates legum. Summæ. Agendi formulæ.

##### LXXX.

Præparandi sunt juvenes et novitii, ad scientiam et ardua juris altius et commodius haurienda et imbibenda, per institutiones. Institutiones illas ordine claro et perspicuo componito. In illis ipsis universum jus privatum percurrito: non alia omittendo, in aliis plus satis immorando, sed ex singulis quædam breviter delibando, ut ad corpus legum perlegendum accessuro, nil se ostendat prorsus novum, sed levi aliqua notione præceptum. Jus publicum in institutionibus ne attingito; verum illud ex fontibus ipsis hauriatur.

##### LXXXI.

Commentarium de vocabulis juris conficito. In explicatione ipsorum, et sensu reddendo, ne curiose nimis aut laboriose versator: neque enim hoc agitur, ut definitiones verborum quærantur exacte, sed explicationes tantum, quæ legendis juris libris viam aperiant faciliorem. Tractatum autem istum per literas alphabeti ne digerito. Id indicii alicui relinquito: sed collocentur simul verba, quæ circa eandem rem versantur; ut alterum alteri sit juvamento ad intelligendum.

##### LXXXII.

Ad certitudinem legum facit (si quid aliud) tractatus bonus et diligens de diversis regulis juris. Is dignus est, qui maximis ingeniis, et prudentissimis jurisconsultis committatur. Neque enim placent, quæ in hoc genere extant. Colligendæ autem sunt regulæ, non tantum notæ et vulgatæ, sed et aliæ magis subtiles et reconditæ, quæ ex legum et rerum judicatarum harmonia extrahi possint; quales in rubricis optimis quandoque inveniuntur; suntque dictamina generalia rationis, quæ per materias legis diversas percurrunt, et sunt tanquam saburra juris.

##### LXXXIII.

At singula juris scita, aut placita, non intelligantur pro regulis, ut fieri solet satis imperite. Hoc enim si reciperetur, quot leges, tot regulæ: lex enim

nil aliud, quam regula imperans. Verum eas pro regulis habeto, quæ in forma ipsa justitiæ hærent; unde, ut plurimum, per jura civilia diversarum re-  
publicarum eadem regulæ fere reperiuntur; nisi forte propter relationem ad formas politiarum variant.

## LXXXIV.

Post regulam, brevi et solido verborum complexu enunciatam, adjiciantur exempla, et decisiones casuum maxime luculentæ ad explicationem; distinctiones et exceptiones ad limitationem; cognata ad ampliacionem ejusdem regulæ.

## LXXXV.

Recte jubetur, ut non ex regulis jus sumatur; sed ex jure quod est, regula fiat: neque enim ex verbis regulæ petenda est probatio, ac si esset textus legis: regula enim legem (ut acus nautica polos) indicat, non statuit.

## LXXXVI.

Præter corpus ipsum juris, juvabit etiam antiquitates legum invisere; quibus licet evanuerit auctoritas, manet tamen reverentia. Pro antiquitatibus autem legum habeantur scripta circa leges et judicia; sive illa fuerint edita, sive non, quæ ipsum corpus legum tempora præcesserunt. Earum siquidem jactura facienda non est. Itaque ex iis utilissima quæque excerpto (multa enim inveniuntur inania et frivola) eaque in unum volumen redigito: ne antiquæ fabulæ, ut loquitur Trebonianus, cum legibus ipsis miscantur.

## LXXXVII.

Practicæ vero plurimum interest, ut jus universum digeratur ordine in locos et titulos; ad quos subito (prout dabitur occasio) recurrere quis possit, veluti in promptuarium paratum ad præsentis usus. Hujusmodi libri summarum, et ordinant sparsa, et abbreviant fusa et proluxa in lege. Cavendum autem est, ne summæ istæ reddant homines promptos ad practicam, cessatores in scientia ipsa. Earum enim officium est tale, ut ex iis recolatur jus, non perdiscatur. Summæ autem omnino magna diligentia, fide, et judicio sunt conficiendæ, ne furtum faciant legibus.

## LXXXVIII.

Formulas agendi diversas in unoquoque genere colligito. Nam et practicæ hoc interest; et certe pendunt illæ oracula et occulta legum. Sunt enim non pauca, quæ latent in legibus: at in formulis agendi, melius et fusius perspiciuntur; instar pugni et palmæ.

## DE RESPONSIS ET CONSULTIS.

## APHORISMUS LXXXIX.

Dubitationes particulares, quæ de tempore in tempore emergunt, dirimendi et solvendi aliqua ratio iniri debet. Durum enim est, ut ii, qui ab errore cavere cupiant, ducem viæ non invenient, verum ut actus ipsi periclitentur, neque sit aliquis ante rem peractam juris prænoscenti modus.

## XC.

Responsa prudentum, quæ petentibus dantur de jure, sive ab advocatis sive a doctoribus, tanta valere auctoritate, ut ab eorum sententia judici recedere non sit licitum, non placet. Jura a juratis judicibus sumunto.

## XCI.

Tentari judicia per causas et personas fictas, ut eo modo experiantur homines qualis futura sit legis norma, non placet. Deducat enim majestatem legum et pro prævaricatione quapiam censenda est. Judicia autem aliquid habere ex scena, deforme est.

## XCII.

Judicum igitur solummodo tam judicia, quam responsa et consulta sunt. Illa de litibus pendentibus; hæc de arduis juris quæstionibus in thesi. Ea consulta, sive in privatis rebus, sive in publicis, a judicibus ipsis ne poscito (id enim si fiat, judex transeat in advocatum) sed a principe, aut statu. Ab illis ad iudices demandantur. Iudices vero, tali auctoritate freti, disceptationes advocatorum, vel ab his, quorum interest, adhibitorum, vel a judicibus ipsis, si opus sit, assignatorum, et argumenta ex utraque parte, audiunt; et re deliberata jus expediunt et declarant. Consulta hujusmodi inter judicia referunt et edunt, et paræ auctoritatis sunt.

## DE PRÆLECTIONIBUS.

## APHORISMUS XCIII.

Prælectiones de jure, atque exercitationes eorum, qui juris studiis incumbunt, et operam dant, ita instituuntur et ordinantur, ut omnia tendant ad quæstiones et controversias de jure sedandas potius, quam excitandas. Ludus enim (ut nunc fit) fere apud omnes instituitur et aperitur, ad altercationes, et quæstiones de jure multiplicandas, tanquam ostentandi ingenii causa. Atque hoc vetus est malum. Etenim etiam apud antiquos gloriæ fuit, tanquam per sectas et factiones, quæstiones complures de jure magis fovere, quam extinguere. Id ne fiat, provideto.

## DE VACILLATIONE JUDICIORUM.

## APHORISMUS XCIV.

Vacillant judicia, vel propter immaturam et præfestinam sententiam; vel propter æmulationem curiarum; vel propter malam et imperitam prescriptionem judiciorum; vel propter viam præbitam ad rescissionem eorum nimis facilem et expeditam. Itaque providendum est, ut judicia emanent, matura deliberatione prius habita; atque ut curiæ se invicem reverentur; atque ut judicia perscribantur fideliter et prudenter; utque via ad rescindenda judicia, sit arcta, confragosa, et tanquam muricibus strata.

## XCV.

Si iudicium redditum fuerit de casu aliquo in aliqua curia principali, et similis casus intervenerit in alia curia, ne procedito ad iudicium, antequam fiat

consultatio in collegio aliquo iudicum majore. Judicia enim reddita si forte rescindi necesse sit, saltem sepeliuntur cum honore.

## XCVI.

Ut curiæ de jurisdictione digladiantur et conflictentur, humanum quiddam est; eoque magis, quod per ineptam quandam sententiam (quod boni et strenui sit iudicis, ampliari jurisdictionem curiæ) alatur plane ista intemperies, et calcar addatur, ubi fræno opus est. Ut vero, ex hac animorum contentione, curiæ, iudicia utrobique reddita (quæ nil ad jurisdictionem pertinent) libenter rescindant, intolerabile malum, et a regibus, aut senatu, aut politia, plane vindicandum. Pessimi enim exempli res est, ut curiæ, quæ pacem subditis præstant, inter se duella exercent.

## XCVII.

Non facilis esto aut proclivis ad iudicia rescindenda aditus per appellationes, aut impetitiones de errore, aut revisus, et similia. Receptum apud nonnullos est, ut lis trahatur ad forum superius, tanquam res integra; iudicio inde dato seposito, et plane suspensio. Apud alios vero, ut iudicium ipsum maneat in suo vigore, sed executio ejus tantum cesset. Neutrum placet, nisi curiæ, in quibus iudicium redditum sit, fuerint humiles, et inferioris ordinis: sed potius, ut et iudicium stet, et procedat ejus executio; modo cautio detur a defendente de damnis et expensis, si iudicium fuerit rescissum.

Atque hic titulus de certitudine legum, ad exemplum digesti reliqui (quod meditatur) sufficiet. Jam vero doctrinam civilem (quatenus eam nobis tractare visum est) conclusimus; atque una cum ea philosophiam humanam: sicut etiam cum philosophia humana philosophiam in genere. Tandem igitur paululum respirantes, atque ad ea, quæ prætervecti sumus, oculos retroflectentes, hunc tractatum nostrum non absimilem esse censemus sonis illis et præludiis, quæ prætentant musici, dum fides ad modulationem concinnant: quæ ipsa quidem auribus ingratum quiddam et asperum exhibent; at in causa sunt, ut quæ sequuntur omnia sint suaviora: sic nimirum nos in animum induximus, ut in cithara musarum concinanda, et ad harmoniam veram redigenda, operam navaremus, quo ab aliis postea pulsantur chordæ, meliorem digito aut plectro. Sane, cum nobis ante oculos proponamus temporum horum statum, in quibus literæ jam tertio ad mortales

videntur rediisse: et una diligenter intueamur quam variis jam nos inviserint instructæ præsiidiis et auxiliis: qualia sunt, ingeniorum nostri temporis complurium acumen et sublimitas; eximia illa monumenta scriptorum veterum, quæ veluti tot faces nobis prælucent; ars typographica, libros cujuscunque fortunæ hominibus larga manu suppeditans; oceani sinus laxati, et orbis ex omni parte peragratus, unde experimenta plurima prisca ignota comparuerunt, et ingens accessit naturali historiæ cumulus; otium, quo ingenia optima in regniis et provinciis Europæ ubique abundant, cum negotiis minus his in locis implicentur homines, quam aut Græci, propter populares status, aut propter ditionum amplitudinem Romani solebant; pax, qua fruitur hoc tempore Britannia, Hispania, Italia, etiam nunc Gallia, et aliæ regiones non paucæ; consumptio et exinanitio omnium, quæ videntur excogitari aut dici posse circa controversias religionis, quæ tot ingenia jam diu diverterunt a cæterarum artium studiis; summa et excellens majestatis tuæ eruditio, cui (tanquam Phœnici volucres) aggregant se undique ingenia; proprietas denique illa inseparabilis, quæ tempus ipsum sequitur, ut veritatem india parturiat; hæc (inquam) cum cogitamus, non possumus non in eam spem animum erigere, ut existimemus, tertiam hanc literarum periodum duas illas priores, apud Græcos et Romanos, longo intervallo superaturam; modo saltem homines, et vires suas atque defectos etiam virium suarum probe et prudenter nosse velint; atque alii ab aliis inventionis lampada, non contradictionis torres accipiant, atque inquisitionem veritatis pro incepto nobili, non pro delectamento aut ornamento putent: atque opes ac magnificentiam impendant in res solidas et eximias, non in pervulgatas et obvias. Ad labores meos quod attinet, si cui libeat in eorum reprehensione, aut sibi, aut aliis placere, veterem certe et ultimæ patientiæ petitionem exhibebunt illi: "Verbera, sed audi." Reprehendant homines, quantum libuerit, modo attendant et perpendant, quæ dicuntur. Appellatio sane legitima fuerit (licet res fortasse minus ea indigebit) si a primis cogitationibus hominum ad secundas provocetur, et ab ævo præsentis ad posteros. Veniamus nunc ad eam scientiam, qua caruerunt duæ illæ prisce temporum periodi (neque enim tanta illis felicitas concessa est) sacram dico et divinitus inspiratam theologiam, cunctorum laborum ac peregrinationum humanarum sabbatum ac portum nobilissimum.

## FRANCISCI

BARONIS DE VERULAMIO, VICE-COMITIS SANCTI ALBANI,

DE

## DIGNITATE ET AUGMENTIS SCIENTIARUM.

LIBER NONUS.

## AD REGEM SUUM.

## CAPUT PRIMUM.

*Partitiones theologiæ inspiratæ omittuntur : tantum aditus fit ad desiderata tria : doctrinam de legitimo usu rationis humanæ in divinis ; doctrinam de gradibus unitatis in civitate dei ; et emanationes scripturarum.*

JAM vero (rex optime) cum carina parva, qualis nostra esse potuit, universum ambitum, tam veteris quam novi orbis, scientiarum circumnavigaverit (quam secundis ventis et cursu, posteriorum sit judicium) quid superest, nisi ut vota, tandem perfuncti, persolvamus? At restat adhuc theologia sacra, sive inspirata. Veruntamen si eam tractare pergamus, exeundum nobis foret e navicula rationis humanæ, et transeundum in Ecclesiæ navem, quæ sola acu nautica divina pollet ad cursum recte dirigendum. Neque enim sufficient amplius stellæ philosophiæ, quæ hactenus præcipue nobis affulserunt: itaque par foret, silentium quoque in hac re colere. Quamobrem partitiones legitimas circa eam omitemus; pauca tamen, pro tenuitate nostra, etiam in hanc conferemus, loco votorum. Id eo magis facimus, quia in corpore theologiæ nullam prorsus regionem, aut tractum plane desertum aut incultum, invenimus: tanta fuit hominum diligentia in seminandis, aut tritico, aut zizaniis.

Tres igitur proponemus theologiæ appendices, quæ non de materia per theologiam informata, aut informanda, sed tantummodo de modo informationis tractent. Neque tamen circa eos tractatus (ut in reliquis consuevimus) vel exempla subjungemus, vel præcepta dabimus. Id theologis relinquemus: sunt enim illa (ut diximus) instar votorum tantum.

I. Prærogativa Dei totum hominem complectitur; nec minus ad rationem, quam ad voluntatem humanam, extenditur: ut homo scilicet in universum se abneget, et accedat Deo. Quare, sicut legi divinæ obedire tenemur, licet reluctetur voluntas; ita et verbi Dei fidem habere, licet reluctetur ratio. Etenim, si ea duntaxat credamus, quæ sunt rationi nostræ consentanea, rebus assentimur, non auctori;

quod etiam suspectæ fidei testibus præstare solemus. At fides illa, quæ Abrahamo "imputabatur ad justitiam," de hujusmodi re extitit, quam irrisui habebat Sarah: quæ in hac parte imago quædam erat rationis naturalis. Quanto igitur mysterium aliquod divinum fuerit magis absonum et incredibile; tanto plus in credendo exhibetur honoris Deo, et fit victoria fidei nobilior. Etiam et peccatores, quo magis conscientia sua gravantur, et nihilominus fidem de salute sua in Dei misericordia collocant, eo Deum majore afficiunt honore: omnis autem desperatio Deo pro contumelia est. Quinetiam, si attente rem perpendamus, dignius quiddam est credere, quam scire, qualiter nunc scimus. In scientia enim mens humana patitur a sensu, qui a rebus materiatis resiliit; in fide autem anima patitur ab anima, quæ est agens dignius. Aliter se res habet in statu gloriæ: tunc siquidem cessabit fides, atque "cognoscemus, sicut et cogniti sumus."

Concludamus igitur theologiam sacram ex verbo et oraculis Dei, non ex lumine naturæ aut rationis dictamine, hauriri debere. Scriptum est enim, "Cæli enarrant gloriam Dei:" at nusquam scriptum invenitur, "Cæli enarrant voluntatem Dei." De illa pronuntiatur, "Ad legem et testimonia, si non fecerint secundum verbum istud," etc. Neque hoc tenet tantum in grandibus illis mysteriis, de Deitate, creatione, redemptione, verum pertinet etiam ad interpretationem perfectiorem legis moralis; "Diligite inimicos vestros, benefacite his, qui oderunt vos," etc. "Ut sitis filii Patris vestri, qui in cælis est, qui pluit super justos et injustos." Quæ certe verba plausum illum merentur: "Nec vox hominem sonat." Siquidem vox est, quæ lumen naturæ superat. Quinetiam videmus poetas ethnicos, præsertim cum pathetice loquantur, expostulare non raro cum legibus et doctrinis moralibus (quæ tamen legibus divinis multo sunt indulgentiores et solutiores) ac si naturæ libertati cum malignitate quadam repugnent:

— "Et quod natura remittit,  
Invida jura negant."—

Ita Dendamis Indus ad Alexandri nuntios: "Se in-

audisse quidem aliquid de nomine Pythagoræ, et aliorum sapientum e Græcia; et credere illos fuisse viros magnos; vitio tamen illo laborasse, quod scilicet nimia in reverentia et veneratione habuissent rem quampiam fantasticam, quam legem et morem vocitabant." Quare, nec illud dubitandum, magnam partem legis moralis sublimiorem esse, quam quo lumen naturæ ascendere possit. Veruntamen quod dicitur, habere homines, etiam ex lumine et lege naturæ, notionem nonnullam virtutis, vitii, justitiæ, injuriæ, boni, mali; id verissimum est. Notandum tamen lumen naturæ duplici significatione accipi: Primo, quatenus oritur ex sensu, inductione, ratione, argumentis, secundum legis cœli ac terræ: secundo, quatenus animæ humanæ interno affulget instinctu, secundum legem conscientiæ; quæ scintilla quædam est, et tanquam reliquæ pristinæ et primitivæ puritatis. In quo posteriore sensu præcipue particeps est anima lucis nonnullius, ad perfectionem intuendam et discernendam legis moralis; quæ tamen lux non prorsus clara sit, sed ejusmodi, ut potius vitia quadamtenus redarguat, quam de officiis plene informet. Quare religio, sive mysteria spectes sive mores, pendet ex revelatione divina.

Atamen usus rationis humanæ in spiritualibus multiplex sane existit, ac late admodum patet. Neque enim sine causa est, quod Apostolus religionem appellaverit "rationalem cultum Dei." Recordetur quis ceremonias et typos veteris legis: fuerunt illæ rationales et significativæ, longe discrepantes a ceremoniis idololatriæ et magiæ, quæ tanquam surdæ et mutæ erant, nihil docentes plerunq, imo ne innuentes quidem. Præcipue Christiana fides, ut in omnibus, sic in hoc ipso eminent, quod auream servet mediocritatem circa usum rationis et disputationis (quæ rationis proles est) inter leges ethnicorum et Mahometi, quæ extrema sectantur. Religio siquidem ethnicorum fidei aut confessionis constantis nihil habebat; contra in religione Mahometi omnis disceptatio interdicta est; ita ut altera erroris vagi et multiplicis; altera vafrem cujusdam et cautæ imposturæ, faciem præ se ferat; cum sancta fides Christiana rationis usum et disputationem (sed secundum debitos fines) et recipiat, et rejiciat.

Humanæ rationis usus, in rebus ad religionem spectantibus, duplex est: alter in explicatione mysterii; alter in illationibus, quæ inde deducuntur. Quod ad mysteriorum explicationem attinet, videmus non dedignari Deum ad infirmitatem captus nostri se demittere, mysteria sua ita explicando, ut a nobis optime ea possint percipi; atque revelationes suas in rationis nostræ syllepsis et notionem veluti inoculando, atque inspirationes ad intellectum nostrum aperiendum sic accomodando, quemadmodum figura clavis aptatur figuræ seræ. Qua tamen in parte nobis ipsis deesse minime debemus: cum enim Deus ipse opera rationis nostræ in illuminationibus suis utatur; etiam nos eandem in omnes partes versare debemus, quo magis capaces simus ad mysteria recipienda et imbibenda; modo animus ad amplitudinem mysteriorum pro modulo suo dilatetur, non mysteria ad angustias animi constringantur.

Quantum vero ad illationes; nosse debemus, relinquere nobis usum rationis et ratiocinationis (quoad

mysteria) secundarium quendam et respectivum, non primitivum et absolutum. Postquam enim articuli et principia religionis jam in sedibus suis fuerint locata, ita ut a rationis examine penitus eximantur; tum demum conceditur ab illis illationes derivare ac deducere, secundum analogiam ipsorum. In rebus quidem naturalibus hoc non tenet. Nam et ipsa principia examini subjiciuntur; per inductionem, inquam, licet minime per syllogismum: atque eadem illa nullam habent cum ratione repugnantiam, ut ab eodem fonte, tum primæ propositiones, tum mediæ, deducantur. Aliter fit in religione; ubi et primæ propositiones authypostatæ sunt, atque per se subsistentes: et rursus, non reguntur ab illa ratione, quæ propositiones consequentes deducit. Neque tamen hoc fit in religione sola, sed etiam in aliis scientiis, tam gravioribus quam levioribus, ubi scilicet propositiones primariæ placita sint, non posita: siquidem et in illis rationis usus absolutus esse non potest. Videmus enim in ludis, puta schaccorum, aut similibus, primas ludi normas et leges mere positivas esse et ad placitum; quas recipi, non in disputationem vocari, prorsus oporteat: ut vero vincas et perite lusum instituas, id artificiosum est et rationale: eodem modo fit et in legibus humanis; in quibus haud paucæ sunt maximæ (ut loquuntur) hoc est, placita mera juris, quæ auctoritate magis quam ratione nituntur; neque in disceptationem veniunt: quid vero sit justissimum, non absolute, sed relative (hoc est, ex analogia illarum maximarum) id demum rationale est, et latum disputationi campum præbet. Talis igitur est secundaria illa ratio, quæ in theologia sacra locum habet, quæ scilicet fundata est super placita Dei.

Sicut vero rationis humanæ in divinis usus est duplex, ita et in eodem usu duplex excessus. Alter, cum in modum mysterii curiosius, quam par est, inquiritur. Alter, cum illationibus æqua tribuitur auctoritas, ac principiis ipsis. Nam et Nicodemi discipulus videri possit, qui pertinacius quærat: "Quomodo possit homo nasci, cum sit senex?" Et discipulus Pauli neutiquam censi possit, qui non quandoque in doctrinis suis inserat, "Ego, non dominus;" aut illud, "Secundum consilium meum:" siquidem illationibus plerisque stylus iste conveniet. Itaque nobis res salubris videtur et imprimis utilis, si tractatus instituantur sobrius et diligens, qui de usu rationis humanæ in theologicis utiliter præcipiat, tanquam divina quædam dialectica: utpote quæ futura sit instar opiatæ cujusdam medicinæ, quæ non modo speculationum, quibus schola interdum laborat, inania consopiat; verum etiam controversiarum furrores, quæ in Ecclesia tumultus cient, nonnihil mitiget. Ejusmodi tractatum inter desiderata ponimus; et Sophronem, sive de legitimo usu rationis humanæ in divinis, pominamus.

2. Interest admodum pacis Ecclesiæ, ut fœdus Christianorum, a Servatore præscriptum in duobus illis capitibus, quæ nonnihil videntur discrepantia, bene et clare explicetur: quorum alterum sic definit: "Qui non est nobiscum, est contra nos." alterum autem sic; "Qui contra nos non est, nobiscum est." Ex his liquido patet, esse nonnullos articulos, in quibus qui dissentit, extra fœdus statuendus

sit: alios vero, in quibus dissentire liceat, salvo fœdere. Vincula enim communionis Christianæ ponuntur, "Una fides, unum baptismum," etc. Non unus ritus, una opinio. Videmus quoque tunicam Salvatoris inconsutilem extitisse; vestem autem Ecclesiæ versicolore. Paleæ in arista separandæ sunt a frumento; at zizania in agro non protinus evellenda. Moses, cum certantem reperisset Ægyptium cum Israelita, non dixit, "Cur certatis?" sed gladio evaginato Ægyptium interfecit: at cum Israelitas duos certantes vidisset, quamvis fieri non potuit, ut utrique causa justa contingeret, ita tamen eos alloquitur; "Fratres estis, cur certatis?" His itaque perpensis, magni videatur res et momenti et usus esse, ut definiatur, qualia sint illa, et quantæ latitudinis, quæ ab Ecclesiæ corpore homines penitus divellant, et a communione fidelium eliminant. Quod si quis putet, hoc jam pridem factum esse, videat ille etiam atque etiam, quam sincere et moderate. Illud interim verisimile est, eum, qui pacis mentionem fecerit, reportaturum responsum illud Jehu ad nuntium "(Nunquid pax est, Jehu?) Quid tibi et paci? Transi et sequere me." Cum non pax, sed partes, plerisque cordi sint. Nobis nihilominus visum est tractatum de gradibus unitatis in civitate Dei, ut salubrem et utilem, inter desiderata reponere.

3. Cum Scripturarum sacrarum circa theologiam informandam tantæ sint partes, de earum interpretatione imprimis videndum. Neque nunc de auctoritate eas interpretandi loquimur, quæ in consensu Ecclesiæ firmatur, sed de modo interpretandi. Is duplex est: methodicus, et solutus. Etenim latices isti divini, qui aquis illis ex puteis Jacobi in infinitum præstant, similibus fere hauriuntur et exhibentur modis, quibus aquæ naturales ex puteis solent: hæ siquidem, aut sub primum haustum in cisternas recipiuntur, unde per tubos complures ad usum commode diduci possunt; aut statim in vasa infunduntur, subinde prout opus est utendæ. Atque modus ille prior methodicus theologiam nobis tandem peperit scholasticam; per quam doctrina theologica in artem, tanquam in cisternam, collecta est; atque inde axiomatum et positionum rivuli in omnes partes sunt distributi. At in interpretandi modo soluto duo interveniunt excessus. Alter, ejusmodi præsupponit in Scripturis perfectionem, ut etiam omnis philosophia ex earum fontibus peti debeat; ac si philosophia alia quævis, res profana esset et ethnica. Hæc intemperies in schola Paracelsi præcipue, nec non apud alios invaluit: initia autem ejus a Rabbinis et Cabalisticis defluerunt. Verum istiusmodi homines non id assequuntur quod volunt: neque enim honorem, ut putant, Scripturis deferunt; sed easdem potius deprimunt et polluunt. Cælum enim materiatur, et terram, qui in verbo Dei quæsi veritatis, et verbum autem meum non pertransibit") is sane transitoria inter æterna temere persequitur. Quemadmodum enim theologiam in philosophia quærere perinde est, ac si vivos quæras inter mortuos: ita e contra philosophiam in theologia quærere non aliud est, quam mortuos quærere inter vivos. Alter autem interpretandi modus (quem pro excessu sta-

tuimus) videtur primo intuitu sobrius et castus; sed tamen et Scripturas ipsas dedecorat et plurimo Ecclesiam afficit detrimento. Is est (ut verbo dicamus) quando Scripturæ divinitus inspiratæ eodem, quo scripta humana, explicantur modo. Meminisse autem oportet, Deo Scripturarum auctori duo illa patere, quæ humana ingenia fugiunt: secreta nimirum cordis, et successiones temporis. Quamobrem, cum Scripturarum dictamina talia sint, ut ad cor scribantur, et omnium seculorum vicissitudines complectantur; cum æterna et certa præscientia omnium hæresium, contradictionum, et status Ecclesiæ varii et mutabilis, tum in communi, tum in electis singulis; interpretandæ non sunt solummodo secundum latitudinem et obvium sensum loci; aut respiciendo ad occasionem, ex qua verba erant prolata; aut præcise ex contextu verborum præcedentium et sequentium; aut contemplando scopum dicti principalem; sed sic, ut intelligamus complecti eas, non solum totaliter aut collective, sed distributive, etiam in clausulis et vocabulis singulis, innumeros doctrinæ rivulos et venas, ad Ecclesiæ singulas partes, et animas fidelium, irrigandas. Egregie enim observatum est, quod responsa Salvatoris nostri, ad quæstiones non paucas ex iis, quæ proponebantur, non videntur ad rem, sed quasi impertinentia. Cujus rei causa duplex est: altera, quod cum cogitationes eorum, qui interrogabant, non ex verbis, ut nos homines solemus, sed immediate et ex sese cognovissent, ad cogitationes eorum, non ad verba respondit: altera, quod non ad eos solum locutus est, qui tunc aderant, sed ad nos etiam, qui vivimus, et ad omnis ævi ac loci homines, quibus evangelium fuerit prædicandum: quod etiam in aliis Scripturæ locis obtinet.

His itaque prælibatis, veniamus ad tractatum eum, quem desiderari statuimus. Inveniuntur profecto inter scripta theologica, libri controversiarum nimio plures; theologiæ ejus, quam diximus positivam, massa ingens: loci communes; tractatus speciales; casus conscientiæ; conciones et homiliæ; denique prolixi plurimi in libros Scripturarum commentarii. Quod desideramus autem est hujusmodi collectio scilicet succincta, sana, et cum judicio, annotationum et observationum super textus Scripturæ particulares; neutiquam in locos communes excurrendo, aut controversias persequendo, aut in artis methodum eas redigendo, sed quæ plane parsæ sint et nativæ. Res certe in concionibus doctioribus se quandoque ostendens, quæ ut plurimum non perennant; sed quæ in libros adhuc non coaluit, qui ad posteros transeant. Certe, quemadmodum vina, quæ sub primam calcationem molliter defluunt, sunt suaviora, quam quæ a torculari exprimuntur; quoniam hæc ex acino et cute uvæ aliquid sapiant: similiter salubres admodum ac suaves sunt doctrinæ, quæ ex Scripturis leniter expressis emanant, nec ad controversias aut locos communes trahuntur. Hujusmodi tractatum emanationes Scripturarum nominabimus.

JAM itaque mihi videor confecisse globum exiguum orbis intellectualis, quam potui fidelissime; una cum designatione et descriptione earum partium, quas industria et laboribus hominum, aut non con-

stanter occupatas, aut non satis excultas, invenio. Quo in opere, sicubi a sententia veterum recesserim, intelligatur hoc factum esse animo proficiendi in melius, non innovandi, aut migrandi in aliud. Neque enim mihimetipsi, aut argumento, quod in manibus habeo, constare potui, nisi plane decretum mihi fuisset aliorum inventis, quantum in me fuerit, add re, cum tamen non minus optaverim, etiam inventa mea ab aliis in posterum superari. Quam autem in hac re æquus fuerim, vel ex hoc apparet; quod opiniones meas proposuerim ubique nudas et inermes, neque alienæ libertati, per confutationes pugnaces, præjudicare contenderim. Nam in iis, quæ recte a me posita sunt, subest spes id futurum, ut si in prima lectione emergat scrupulus aut objectio, at in lectione iterata responsum se ultro sit exhibiturum: in iis vero, in quibus mihi errare contigit, certus sum nullam a me illatam esse vim

veritati, per argumenta contentiosa; quorum ea fere est natura, ut erroribus auctoritatem concilient, recte inventis derogent. Siquidem ex dubitatione error honorem acquirit; veritas patitur repulsam. Interim in mentem mihi venit responsum illud Themistoclis, qui, cum ex oppido parvo legatus quidam magna nonnulla perorasset, hominem perstrinxit; "Amice, verba tua civitatem desiderant." Certe objici mihi rectissime posse existimo, quod verba mea seculum desiderant: seculum forte integrum ad probandum; complura autem secula ad perficiendum. Attamen, quoniam etiam res quæque maxime initis suis debentur, mihi satis fuerit, seviisse posteris et Deo immortalis: cujus Numen supplex precor, per Filium suum et Servatorem nostrum, ut has, et hinc similes, intellectus humani victimas, religione, tanquam sale, respersas, et gloriæ suæ immolatas, propitius accipere dignetur.

## NOVUS ORBIS SCIENTIARUM, SIVE DESIDERATA.

### LIB. II.

ERRORES naturæ, sive historia præter-generationum.  
Vincula naturæ, sive historia mechanica.  
Historia inductiva, sive historia naturalis in ordine ad condendam philosophiam.  
Oculus Polyphemi, sive historia literarum.  
Historia ad prophetias.  
Philosophia secundum parabolas antiquas.

### LIB. III.

Philosophia prima, sive de axiomatibus scientiarum communibus.  
Astronomia viva.  
Astrologia sana.  
Continuatio problematum naturalium.  
Placita antiquorum philosophorum.  
Pars metaphysicæ de formis rerum.  
Magia naturalis, sive deductio formarum ad opera.  
Inventarium opum humanarum.  
Catalogus polychrestorum.

### LIB. IV.

Triumphus hominis, sive de summitatibus naturæ humanæ.  
Physiognomia corporis in motu.  
Narrationes medicinales.  
Anatomia comparata.  
De curatione morborum habitorum pro insanabilibus.  
De euthanasia exteriore.  
De medicinis authenticis.  
Imitatio thermarum naturalium.  
Filius medicinale.  
De prolongando curriculo vitæ.  
De substantia animæ sensibilis.  
De nixibus spiritus in motu voluntario.  
De differentiâ perceptionis et sensus.  
Radix perspectivæ, sive de forma lucis.

### LIB. V.

Experientia literata, sive venatio Panis.  
Organum novum.  
Topicæ particulares.  
Elenchi idolorum.  
De analogia demonstrationum.

### LIB. VI.

De notis rerum.  
Grammatica philosophans.  
Traditio lampadis, sive methodus ad filios.  
De prudentia sermonis privati.  
Colores boni et mali apparentis, tam simplicis, quam comparati.  
Antitheta rerum.  
Formulæ minores orationum.

### LIB. VII.

Satira seria, sive de interioribus rerum.  
Georgica animi, sive de cultura morum.

### LIB. VIII.

Amanuensis vitæ, sive de occasionibus sparsis.  
Faber fortunæ, sive de ambitu vitæ.  
Consul paludatus, sive de proferendis imperii finibus.  
Idea justitiæ universalis, sive de fontibus juris.

### LIB. IX.

Sophon, sive de legitimo usu rationis humanæ in divinis.  
Irenæus, sive de gradibus unitatis in civitate Dei.  
Utres cœlestes, sive emanationes Scripturarum.

Sequitur secunda pars INSTAURATIONIS, quæ artem ipsam interpretandi naturam, et verioris adoperationis intellectus exhibet: neque eam ipsam tamen in corpore tractatus justis; sed tantum digestam per summas, in aphorismos.

# OPERA PHILOSOPHICA.

NOVUM ORGANUM, SIVE INDICIA DE INTERPRETATIONE NATURÆ.

## PRÆFATIO.

Qui de natura, tanquam de re explorata, pronuntiare ausi sunt, sive hoc ex animi fiducia fecerint, sive ambitiose et more professorio; maximis illi philosophiam et scientias detrimentis affecere. Ut enim ad fidem faciendam validi, ita etiam ad inquisitionem extinguendam et abrumpendam efficaces fuerunt: neque virtute propria tantum profuerunt, quantum in hoc nocuerunt, quod aliorum virtutem corruerint et perdidissent. Qui autem contrariam huic viam ingressi sunt, atque nihil prorsus sciri posse asseruerunt, sive ex sophistarum veterum odio, sive ex animi fluctuatione, aut etiam ex quadam doctrinæ copia, in hanc opinionem delapsi sint, certe non contemnendas ejus rationes adduxerunt; veruntamen nec a veris initiis sententiam suam derivarunt, et, studio quodam atque affectatione proveci, prorsus modum excesserunt. At antiquiores ex Græcis (quorum scripta perierunt) inter pronuntiandi jactantium et acatalepsiæ desperationem prudentius se sustinuerunt: atque de inquisitionis difficultate, et rerum obscuritate, sæpius querimonias et indignationes miscentes, et veluti frænum mordentes, tamen propositum urgere, atque naturæ se immiscere non destiterunt: consentaneum (ut videtur) existimantes, hoc ipsum (videlicet utrum aliquid sciri possit) non disputare sed experiri: et tamen illi ipsi, impetu tantum intellectus usi, regulam non adhibuerunt, sed omnia in acri meditatione et mentis volutatione et agitatione perpetua posuerunt.

Nostra autem ratio, ut opere ardua, ita dictu facilis est. Ea enim est, ut certitudinis gradus constituamus, sensum par reductionem quandam tueamur, sed mentis opus, quod sensum subsequitur, plerumque rejiciamus; novam autem et certam viam, ab ipsis sensuum perceptionibus, menti aperiamus et muniamus. Atque hoc proculdubio viderunt et illi, qui tantas dialecticæ partes tribuerunt. Ex quo liquet, illos intellectui adminicula quæsisivisse, mentis autem processum nativum et sponte moventem, suspectum habuisse. Sed serum plane rebus perditis hoc adhibetur remedium; postquam mens ex quotidiana vitæ consuetudine, et auditionibus, et doctrinis inquinatis occupata, et venissimis idolis obsessa fuerit. Itaque ars illa dialecticæ, sero (ut diximus) cavens, neque rem ullo modo restituens, ad errores potius figendos, quam ad veritatem aperiendam valuit. Restat unica salus ac sanitas, ut opus mentis universum de integro resumatur; ac mens, jam ab ipso principio, nullo modo sibi permittatur, sed perpetuo regatur; ac res, veluti per machinas, conficiatur. Sane si homines opera mechanica nudis manibus, absque instrumentorum vi et ope, aggressi essent, quemadmodum opera intellectualia nudis fere mentis viribus tractare non dubitarunt: parvæ admodum fuissent res, quas movere et vincere potuissent, licet operas enixas, atque etiam conjunctas præstitissent. Atque si paulisper morari, atque in hoc ipsum exemplum, veluti in speculum, intueri velimus; exquiramus (si placet) si forte obeliscus aliquis, magnitudine insignis, ad triumphum vel hujusmodi magnificentiæ decus transferendus esset, atque id homines nudis manibus aggredierentur, annon hoc magnæ cujusdam esse dementiæ, spectator quispiam rei sobrius fateretur? Quod si numerum auferent operariorum, atque hoc modo se valere posse confiderent, annon tanto magis? Sin autem

delectum quendam adhibere vellent, atque imbecilliores separare, et robustis tantum et vigentibus uti, atque hinc saltem se voti compotes fore sperarent, annon adhuc eos impensius delirare diceret? Quin etiam si, hoc ipso non contenti, artem tandem athleticam consulere staterent, ac omnes deinceps manibus, et lacertis et nervis, ex arte bene unctis et medicatis adesse juberent, annon prorsus eos dare operam, ut cum ratione quadam et prudentia insanirent, clamaret? Atque homines tamen simili male sano impetu, et conspiratione inutili, feruntur in intellectualibus; dum ab ingeniorum vel multitudine et consensu, vel excellentia et acumine, magna sperant; aut etiam dialectica (quæ quædam athletica censerî possit) mentis nervos roborant; sed interim, licet tanto studio et conatu (si quis vere judicaverit) intellectum nudum applicare non desinunt. Manifestissimum autem est, in omni opere magno, quod manus hominis præstat, sine instrumentis et machinis, vires nec singulorum intendi, nec omnium coire posse.

Itaque ex his quæ diximus præmissis, statuimus duas esse res, de quibus homines plane monitos volumus, ne forte illæ eos fugiant aut prætereant. Quarum prima hujusmodi est; fieri fato quodam (ut existimamus) bono, ad extinguendas et depellendas contradictiones et tumores animorum, ut et veteribus honor et reverentia intacta et imminuta maneant, et nos destinata perficere, et tamen modestiæ nostræ fructum percipere possimus. Nam nos, si profiteamur nos meliora afferre, quam antiqui, eandem quam illi viam ingressi; nulla verborum arte efficere possimus, quin inducatur quædam ingenii, vel excellentiæ, vel facultatis comparatio sive contentio; non ea quidem illicita aut nova; (quidni enim possimus, pro jure nostro, neque eo ipso alio, quam omnium, si quid apud eos non recte inventum aut positum sit, reprehendere aut notare?) sed tamen utcumque justa aut permessa; nihilominus impar fortasse fuisset ea ipsa contentio, ob virium nostrarum modum. Verum cum per nos illud agatur, ut alia omnino via intellectui aperiatur, illis intentata et incognita, commutata jam ratio est; cessant studium et partes; nosque indicis tantummodo personam sustinemus; quod mediocris certe est auctoritatis, et fortunæ cujusdam potius, quam facultatis et excellentiæ. Atque hæc moniti species ad personas pertinet, altera ad res ipsas.

Nos siquidem de deturbanda ea, quæ nunc floret, philosophia, aut si quæ alia sit, aut erit, hæc emendatio aut auctior, minime laboramus. Neque enim officimus, quin philosophia ista recepta et aliæ id genus, disputationes alant, sermones ornent, ad professoria munera et vitæ civilis compendia adhibeantur et valeant. Quin etiam aperte significamus et declaramus, eam quam nos adducimus philosophiam, ad istas res admodum utilem non futuram. Non præsto est; neque in transitu capitur; neque ex prænotionibus intellectui blanditur; neque ad vulgi captum, nisi per utilitatem et effecta, descendet.

Sint itaque (quod felix faustumque sit utrique parti) duæ doctrinarum emanationes, ac duæ dispensationes; duæ similiter contemplantium sive philosophantium tribus ac veluti cognationes; atque illæ neutiquam inter se inimicæ aut alienæ, sed fœderatæ et mutuis auxiliis devinctæ: sit denique alia scientias colendi, alia inveniendi ratio. Atque quibus prima potior et acceptior est, ob festinationem, vel vitæ civilis rationes, vel quod illam alteram ob mentis infirmitatem capere et complecti non possint (id quod longe plurimis accidere necesse est) optamus, ut iis feliciter et ex voto succedat quod agunt; atque ut quod sequuntur teneant. Quod si cui mortalium cordi et curæ sit, non tantum inventis hæerere, atque iis uti, sed ad ulteriora penetrare; atque non disputando adversarium, sed opere naturam vincere; denique non belle et probabiliter opinari, sed certo et ostensive scire; tales, tanquam veri scientiarum filii, nobis (si videbitur) se adjungant; ut omissis naturæ atriis, quæ infiniti contriverunt, aditus aliquando ad interiora patefiat. Atque ut melius intelligamur, utque illud ipsum, quod volumus, ex nominibus impositis magis familiariter occurrat; altera ratio, sive via, "Anticipatio mentis;" altera "Interpretatio naturæ," a nobis appellari consuevit.

Est etiam quod petendum videtur. Nos certe cogitationem suscepimus, et curam adhibuimus, ut quæ a nobis proponentur, non tantum vera essent, sed etiam ad animos hominum (licet miris modis occupatos et interclusos) non incommode aut aspere accederent. Veruntamen æquum est, ut ab hominibus impetremus (in tanta præsertim doctrinarum et scientiarum restauratione,) ut qui de hisce nostris aliquid, sive ex sensu proprio, sive ex auctoritatum turba, sive ex demonstrationum formis (quæ nunc tanquam leges quædam judiciales invaluerunt) statuere aut existimare velit; ne id in transitu, et velut aliud agendo, facere se posse speret; sed ut rem pernoscatur; nostram, quam describimus et munimus, viam ipse paulatim tenet; subtilitati rerum, quæ in experientia signata est, assuescat; pravos denique, atque alte hærentes mentis habitus, tempestiva et quasi legitima mora, corrigat; atque tum demum (si placuerit) postquam in potestate sua esse ceperit, iudicio suo utatur.

# PARTIS SECUNDÆ SUMMA,

DIGESTA IN

## APHORISMOS.

### APHORISMI DE INTERPRETATIONE NATURÆ, ET REGNO HOMINIS.

#### APHORISMUS I.

Homo, naturæ minister et interpres, tantum facit et intelligit, quantum, de naturæ ordine, re vel mente observaverit; nec amplius scit, aut potest.

#### II.

Nec manus nuda, nec intellectus sibi permissus, multum valet; instrumentis et auxiliis res perficitur; quibus opus est non minus ad intellectum, quam ad manum. Atque ut instrumenta manus motum aut cient aut regunt; ita et instrumenta mentis, intellectui aut suggerunt aut cavent.

#### III.

Scientia et potentia humana in idem coincidunt, quia ignorantia causæ destituit effectum. Natura enim non nisi parendo vincitur: et quod in contemplatione instar causæ est; id in operatione instar regulæ est.

#### IV.

Ad opera nil aliud potest homo, quam ut corpora naturalia admoveat et amoveat: reliqua natura intus transigit.

#### V.

Solent se immiscere naturæ (quoad opera) mechanicus, mathematicus, medicus, alchemistæ, et magus: sed omnes (ut nunc sunt res) conatu levi, successu tenui.

#### VI.

Insanam quiddam esset, et in se contrarium, existimare ea, quæ adhuc nunquam facta sunt, fieri posse, nisi per modos adhuc nunquam tentatos.

#### VII.

Generationes mentis et manus numerosæ admodum videntur in libris et opificiis. Sed omnis ista varietas sita est in subtilitate eximia et derivationibus paucarum rerum, quæ innotuerunt; non in numero axiomatum.

#### VIII.

Etiam opera, quæ jam inventa sunt, casui debentur et experientia; magis quam scientiis: scientiæ

enim, quas nunc habemus, nihil aliud sunt, quam quædam concinnationes rerum antea inventarum; non modi inveniendi, aut designationes novorum operum.

#### IX.

Causa vero et radix fere omnium malorum in scientiis ea una est; quod dum mentis humanæ vires falso miramur et extollimus, vera ejus auxilia non quæramus.

#### X.

Subtilitas naturæ subtilitatem sensus et intellectus multis partibus superat; ut pulchræ illæ meditationes, et speculationes humanæ, et causationes, res malesana sint, nisi quod non adsit qui advertat.

#### XI.

Sicut scientiæ, quæ nunc habentur, inutiles sunt ad inventionem operum; ita et logica, quæ nunc habetur, inutilis est ad inventionem scientiarum.

#### XII.

Logica, quæ in usu est, ad errores (qui in notionibus vulgaribus fundantur) stabiliendos et figendos valet, potius quam ad inquisitionem veritatis; ut magis damnosa sit, quam utilis.

#### XIII.

Syllogismus ad principia scientiarum non adhibetur, ad media axiomata frustra adhibetur, cum sit subtilitati naturæ longe impar: assensum itaque constringit, non res.

#### XIV.

Syllogismus ex propositionibus constat, propositionis ex verbis, verba notionum tesseræ sunt. Itaque si notiones ipsæ (id quod basis rei est) confusæ sint, et temere a rebus abstractæ; nihil in iis, quæ superstruuntur, est firmitudinis: itaque spes est una in inductione vera.

#### XV.

In notionibus nil sani est, nec in logicis, nec in physicis; non *substantia*, non *qualitas*, *agere*, *pati*, ipsum *esse*, bonæ notionis sunt; multo minus *grave*, *leve*, *densum*, *tenuis*, *humidum*, *siccum*, *generatio*, *corruptio*, *atrahere*, *fugare*, *elementum*, *materiæ*, *forma*, et id genus; sed omnes phantasticæ et male terminatæ.

## XVI.

Notiones infimarum specierum, *hominis, canis, columbæ*, et prehensionum immediatarum sensus, *calidi, frigidi, albi, nigri*, non fallunt magnopere; quæ tamen ipsæ a fluxu materiæ et commissione rerum quandoque confunduntur; reliquæ omnes (quibus homines hactenus usi sunt) aberrationes sunt, nec debitis modis a rebus abstractæ et excitatæ.

## XVII.

Nec minor est libido et aberratio in constituendis axiomatibus, quam in notionibus abstrahendis; idque in ipsis principiis, quæ ab inductione vulgari pendunt. At multo major est in axiomatibus, et propositionibus inferioribus, quæ educit syllogismus.

## XVIII.

Quæ adhuc inventa sunt in scientiis, ea hujusmodi sunt, ut notionibus vulgaribus fere subiaceant: ut vero ad interiora et remotiora naturæ penetretur, necesse est ut tam notiones, quam axiomata, magis certa et munita via a rebus abstrahantur; atque omnino melior et certior intellectus adoperatio in usum veniat.

## XIX.

Duæ viæ sunt, atque esse possunt, ad inquirendam et inveniendam veritatem. Altera a sensu et particularibus advolat ad axiomata maxime generalia, atque ex iis principiis eorumque immota veritate judicat et invenit axiomata media: atque hæc via in usu est. Altera a sensu et particularibus excitat axiomata, ascendendo continenter et gradatim, ut ultimo loco perveniatur ad maxime generalia; quæ via vera est, sed intentata.

## XX.

Eandem ingreditur viam (priorem scilicet) intellectus sibi permissus, quam facit ex ordine dialecticæ. Gestit enim mens exilire ad magis generalia, ut acquiescat: et post parvam moram fastidit experientiam: sed hæc mala demum aucta sunt a dialectica ob pompas disputationum.

## XXI.

Intellectus sibi permissus, in ingenio sobrio et patiente et gravi (præsertim si a doctrinis receptis non impediatur) tentat nonnihil illam alteram viam, quæ recta est, sed exiguo profectu; cum intellectus, nisi regatur et juvetur, res inæqualis sit, et omnino inhabilis ad superandam rerum obscuritatem.

## XXII.

Utraque via orditur a sensu et particularibus, et acquiescit in maxime generalibus: sed immensum quiddam discrepant; cum altera perstringat tantum experientiam et particularia cursim; altera in iis rite et ordine versetur; altera rursus jam a principio constituat generalia quædam abstracta, et inutilia; altera gradatim exurgat ad ea quæ revera naturæ sunt notiora.

## XXIII.

Non leve quiddam interest inter humanæ mentis

idola, et divinæ mentis ideas, hoc est, inter placita quædam inania, et veras signaturas atque impressiones factas in creaturis, prout inveniuntur.

## XXIV.

Nullo modo fieri potest, ut axiomata per argumentationem constituta ad inventionem novorum operum valeant; quia subtilitas naturæ subtilitatem argumentandi multis partibus superat. Sed axiomata, a particularibus rite et ordine abstracta, nova particularia rursus facile indicant, et designant; itaque scientias reddunt activas.

## XXV.

Axiomata, quæ in usu sunt, ex tenui et manipulari experientia, et paucis particularibus, quæ ut plurimum occurrunt, fluxere; et sunt fere ad mensuram eorum facta et extensa: ut nil mirum sit, si ad nova particularia non ducant. Quod si forte instantia aliqua, non prius animadversa aut cognita, se offerat, axioma distinctione aliqua frivola salvatur, ubi emendari ipsum verius foret.

## XXVI.

Rationem humanam, qua utimur ad naturam, *anticipationes naturæ* (quia res temeraria est et præmatura) at illam rationem quæ debitis modis elicitur a rebus, *interpretationem naturæ*, docendi gratia, vocare consuevimus.

## XXVII.

*Anticipationes* satis firmæ sunt ad consensum; quandoquidem, si homines etiam insanirent ad unum modum et conformiter, illi satis bene inter se congruere possent.

## XXVIII.

Quin longe validiores sunt ad subeundum assensum *anticipationes*, quam *interpretationes*; quia ex paucis collectæ, iisque maxime quæ familiariter occurrunt, intellectum statim perstringunt, et phantasiam implent; ubi contra, *interpretationes*, ex rebus admodum variis et multum distantibus sparsim collectæ, intellectum subito percutere non possunt; ut necesse sit eas, quoad opiniones duras et absonas, fere instar mysteriorum fidei videri.

## XXIX.

In scientiis, quæ in opinionibus et placitis fundatæ sunt, bonus est usus *anticipationum* et dialecticæ; quando opus est assensum subjugare, non rea.

## XXX.

Non, si omnia omnium ætatum ingenia coierint, et labores contulerint et transmiserint, progressus magnus fieri poterit in scientiis per *anticipationes*: quia errores radicales, et in prima digestionem mentis, ab excellentia functionum et remediorum sequentium non curantur.

## XXXI.

Frustra magnum expectatur augmentum in scientiis ex superinductione et insitione novorum super vetera; sed instauratio facienda est ab imis funda-

mentis, nisi libeat perpetuo circumvolvi in orbem, cum exili et quasi contemnendo progressu.

## XXXII.

Antiquis auctoribus suus constat honos, atque adeo omnibus; quia non ingeniorum aut facultatum inducitur comparatio, sed viæ: nosque non iudicis, sed iudicis personam sustinemus.

## XXXIII.

Nullum (dicendum enim est aperte) recte fieri potest iudicium nec de via nostra, nec de iis quæ secundum eam inventa sunt, per *anticipationes* (rationem scilicet quæ in usu est) quia non postulandum est ut ejus rei iudicio stetur, quæ ipsa in iudicium vocatur.

## XXXIV.

Neque etiam tradendi aut explicandi ea, quæ adducimus, facilis est ratio; quia, quæ in se nova sunt, intelligenter tamen ex analogia veterum.

## XXXV.

Dixit Borgia de expeditione Gallorum in Italiam, eos venisse cum creta in manibus, ut diversoria notarent, non cum armis, ut perrumperent: Itidem et nostra ratio est; ut doctrina nostra animos idoneos et capaces subintret: confutationum enim nullus est usus, ubi de principiis et ipsis notionibus, atque etiam de formis demonstrationum dissentimus.

## XXXVI.

Restat vero nobis modus tradendi unus et simplex, ut homines ad ipsa particularia et eorum series et ordines adducamus; et ut illi rursus imperent sibi ad tempus abnegationem notionum, et cum rebus ipsis consuescere incipiant.

## XXXVII.

Ratio eorum, qui acatalepsiam tenuerunt, et via nostra, initiis suis quodammodo consentiunt; exitu immensum disjunguntur et opponuntur. Illi enim nihil sciri posse simpliciter asserunt; nos, non multum sciri posse in natura, ea, quæ nunc in usu est, via: verum illi exinde auctoritatem sensus et intellectus destruunt; nos auxilia iisdem excogitamus et subministramus.

## XXXVIII.

*Idola* et notiones falsæ, quæ intellectum humanum jam occuparunt, atque in eo alte hærent, non solum mentes hominum ita obsident, ut veritati aditus difficilis pateat; sed etiam dato et concessio aditu, illa rursus in ipsa instauratione scientiarum occurrent, et molesta erunt; nisi homines præmoniti, adversus ea se, quantum fieri potest, muniant.

## XXXIX.

Quatuor sunt genera *idolorum*, quæ mentes humanas obsident. Iis (docendi gratia) nomina imposuimus, ut primum genus, *idola tribus*; secundum, *idola specus*; tertium, *idola fori*; quartum, *idola theatri*, vocentur.

## XL.

Excitatio notionum et axiomatum per *inductionem* veram, est certe proprium remedium ad *idola* arcenda et summovenda; sed tamen indicatio *idolorum* magni est usus. Doctrina enim de *idolis* similiter se habet ad *interpretationem naturæ*, sicut doctrina de sophisticis elenchis ad dialecticam vulgarem.

## XLI.

*Idola tribus* sunt fundata in ipsa natura humana, atque in ipsa tribu seu gente hominum. Falso enim asseritur, sensum humanum esse mensuram rerum; quin contra, omnes perceptiones, tam sensus quam mentis, sunt ex analogia hominis, non ex analogia universi. Estque intellectus humanus instar speculi inæqualis ad radios rerum, qui suam naturam naturæ rerum immiscet, eamque distorquet et inficit.

## XLII.

*Idola specus* sunt *idola* hominis individui. Habet enim unusquisque (præter aberrationes naturæ humanæ in genere) specum sive cavernam quandam individuum, quæ lumen naturæ frangit et corrumpit, vel propter naturam cuiusque propriam et singularem; vel propter educationem et conversationem cum aliis; vel propter lectionem librorum, et auctoritates eorum quos quisque colit et miratur; vel propter differentias impressionum, prout occurrunt in animo præoccupato et prædisposito, aut in animo æquo et sedato, vel ejusmodi; ut plane spiritus humanus (prout disponitur in hominibus singulis) sit res varia, et omnino perturbata, et quasi fortuita. Unde bene Heraclitus, homines scientias quærere in minoribus mundis, et non in majore sive communi.

## XLIII.

Sunt etiam *idola* tanquam ex contractu et societate humani generis ad invicem, quæ *idola fori*, propter hominum commercium et consortium, appellamus. Homines enim per sermones sociantur; at verba ex captu vulgi imponuntur. Itaque mala et inepta verborum impositio miris modis intellectum obsidet. Neque definitiones aut explicationes, quibus homines docti se munire et vindicare in nonnullis consueverunt, rem ullo modo restituunt. Sed verba plane vim faciunt intellectui, et omnia turbant; et homines ad inanes et innumeras controversias et commenta deducunt.

## XLIV.

Sunt denique *idola*, quæ immigrarunt in animos hominum ex diversis dogmatibus philosophiarum, ac etiam ex perversis legibus demonstrationum; quæ *idola theatri* nominamus; quia quot philosophiæ receptæ aut inventæ sunt, tot fabulas productas et actas censemus, quæ mundos effecerunt factitious et scenicos. Neque de his quæ jam habentur, aut etiam de veteribus philosophiis et sectis tantum loquimur, cum complures aliæ ejusmodi fabulæ componi et concinnari possint; quandoquidem errorum prorsus diversorum causæ sint nihilominus fere communes. Neque rursus de philosophiis universalibus tantum hoc intelligimus, sed etiam de principiis et axioma-

tibus compluribus scientiarum, quæ ex traditione et fide et neglectu invaluerunt. Verum de singulis istis generibus *idolorum* fusiis et distinctius dicendum est, ut intellectui humano cautum sit.

## XLV.

Intellectus humanus ex proprietate sua facile supponit majorem ordinem et æqualitatem, in rebus, quam invenit: et cum multa sint in natura monodica et plena imparitatis, tamen affingit parallela, et correspondentia, et relativa, quæ non sunt. Hinc commenta illa, "In cœlestibus omnia moveri per circulos perfectos," lineis spiritalibus et draconibus (nisi nomine tenuis) prorsus rejectis. Hinc elementum ignis cum orbe suo introductum est ad constituendam quaternionem cum reliquis tribus, quæ subjiciuntur sensui. Etiam elementis (quæ vocant) imponitur ad placitum, decupla proportio excessus, in raritate ad invicem; et hujusmodi somnia. Neque vanitas ista tantum valet in dogmatibus, verum etiam in notionibus simplicibus.

## XLVI.

Intellectus humanus in iis quæ semel placuerunt (aut quia recepta sunt et credita, aut quia delectant) alia etiam omnia trahit ad suffragationem et consensum cum illis: et licet major sit instantiarum vis et copia, quæ occurrunt in contrarium; tamen eas aut non observat, aut contemnit, aut distinguendo summovet et rejicit, non sine magno et pernicioso præjudicio, quo prioribus illis syllepsibus auctoritas maneat inviolata. Itaque recte respondit ille, qui cum suspensa tabula in templo ei monstraretur eorum, qui vota solverant, quod naufragii periculo elapsi sint, atque interrogando premeretur, annetum quidem deorum numen agnosceret: quæsit denuo, "At ubi sint illi depicti qui post vota nuncupata perierint?" Eadem ratio est fere omnis superstitionis, ut in astrologicis, in somniis, omnibus, nemesibus, et hujusmodi; in quibus homines, delectati hujusmodi vanitatibus, advertunt eventus ubi implentur; ast ubi fallunt (licet multo frequentius) tamen negligunt et prætereunt. At longe subtilius serpit hoc malum in philosophiis et scientiis; in quibus quod semel placuit, reliqua (licet multo firmiora et potiora) inficit, et in ordinem redigit. Quinetiam licet abfuerit ea, quam diximus, delectatio et vanitas, is tamen humano intellectui error est proprius et perpetuus, ut magis moveatur et excitetur affirmativis, quam negativis; cum rite et ordine æquum se utrique præbere debeat; quin contra, in omni axiomate vero constituendo, major est vis instantiæ negativæ.

## XLVII.

Intellectus humanus illis, quæ simul et subito mentem ferire et subire possunt, maxime movetur; a quibus phantasia impleri et inflari consuevit; reliqua vero modo quodam, licet imperceptibili, ita se habere fingit et supponit, quomodo se habent pauca illa quibus mens obsidetur; ad illum vero transcursum ad instantias remotas et heterogeneas, per quas axiomata tanquam igne probantur, tardus omnino

intellectus est, et inhabilis, nisi hoc illi per duras leges et violentum imperium imponatur.

## XLVIII.

Gliscit intellectus humanus, neque consistere aut acquiescere potis est, sed ulterius petit; at frustra. Itaque incogitabile est ut sit aliquid extremum aut extimum mundi, sed semper quasi necessario occurrat ut sit aliquid ulterius. Neque rursus cogitari potest quomodo æternitas defluerit ad hunc diem: cum distinctio illa, quæ recipi consuevit, quod sit *infinitum a parte ante, et a parte post*, nullo modo constare possit; quia inde sequeretur, quod sit unum infinitum alio infinito majus, atque ut consumatur infinitum, et vergat ad finitum. Similis est subtilitas de lineis semper divisibilibus, ex impotentia cogitationis. At majore cum pernicie intervenit hæc impotentia mentis in inventione causarum: nam cum maxime universalis in natura positiva esse debeant, quemadmodum inveniuntur, neque sunt revera causabilia: tamen intellectus humanus, nescius acquiescere, adhuc appetit notiora. Tum vero, ad ulteriora tendens, ad proximiora recidit, videlicet ad causas finales; quæ sunt plane ex natura hominis, potius quam universi: atque ex hoc fonte philosophiam miris modis corruerunt. Est autem æque imperiti et leviter philosophantis, in maxime universalibus causam requirere, ac in subordinatis et subalternis causam non desiderare.

## XLIX.

Intellectus humanus luminis sicci non est; sed recipit infusionem a voluntate et affectibus; id quod generat *ad quod vult scientias*: quod enim mavult homo verum esse, id potius credit. Rejicit itaque difficilia, ob inquirendam impatientiam; sobria, quia coarctant spem; altiora naturæ, propter superstitionem; lumen experientiæ, propter arrogantiam et fastum, ne videatur mens versari in vilibus et fluxis; paradoxa, propter opinionem vulgi; denique innumeris modis, iisque interdum imperceptibilibus, affectus intellectum imbuunt et inficit.

## L.

At longe maximum impedimentum et aberratio intellectus humani provenit a stupore et incompetentia et fallacis sensuum; ut ea, quæ sensum feriunt, illis quæ sensum immediate non feriunt, licet potioribus, præponderent. Itaque contemplatio fere desinit cum aspectu; adeo ut rerum invisibilium exigua aut nulla sit observatio. Itaque omnis operatio spirituum in corporibus tangibilibus inclusorum latet, et homines fugit. Omnis etiam subtilior metaschematismus in partibus rerum crassiorum (quam vulgo alterationem vocant, cum sit revera latio per minima) latet similiter: et tamen nisi duo ista, quæ diximus, explorata fuerint et in lucem producta, nihil magni fieri potest in natura quoad opera. Rursus ipsa natura aëris communis, et corporum omnium, quæ aërem tenuitate superant (quæ plurima sunt) fere incognita est. Sensus enim per se res infirma est et aberrans; neque organa ad amplificandos sensus aut acuendos multum valent; sed omnis verior interpretatio naturæ conficitur per

instantias, et experimenta idonea et apposita; ubi sensus de experimento tantum, experimentum de natura et re ipsa iudicat.

## LI.

Intellectus humanus fertur ad abstracta propter naturam propriam; atque ea, quæ fluxa sunt, fingit esse constantia. Melius autem est naturam secare, quam abstrahere; id quod Democriti schola fecit, quæ magis penetravit in naturam quam reliquæ. Materia potius considerari debet, et ejus schematismi et metaschematismi, atque actus purus, et lex actus sive motus; formæ enim commenta animi humani sunt, nisi libeat leges illas actus formas appellare.

## LII.

Hujusmodi itaque sunt *idola* quæ vocamus *idola tribus*; quæ ortum habent aut ex æqualitate substantiæ spiritus humani; aut ex præoccupatione ejus; aut ab angustiis ejus; aut ab inquieto motu ejus; aut ab infusione affectuum; aut ab incompetentia sensuum; aut ab impressionis modo.

## LIII.

*Idola specus* ortum habent ex propria cujusque natura et animi et corporis; atque etiam ex educatione, et consuetudine, et fortuitis. Quod genus, licet sit varium et multiplex, tamen ea proponemus, in quibus maxima cautio est, quæque plurimum valent ad polluendum intellectum, ne sit purus.

## LIV.

Adamant homines scientias et contemplationes particulares; aut quia auctores et inventores se earum credunt; aut quia plurimum in illis operæ posuerunt, iisque maxime assueverunt. Hujusmodi vero homines, si ad philosophiam et contemplationes universales se contulerint, illas ex prioribus phantasiis detorquent et corrumpunt; id quod maxime conspicuum cernitur in Aristotele, qui naturalem suam philosophiam logicæ suæ prorsus mancipavit, ut eam fere inutilem et contentiosam reddiderit. Chemicorum autem genus, ex paucis experimentis fornacia, philosophiam constituerunt phantasticam, et ad pauca spectantem: quinetiam Gilbertus, postquam in contemplationibus magnetis se laboriosissime exercuisset, confinxit statim philosophiam consentaneam rei apud ipsum præpollenti.

## LV.

Maximum et velut radicale discrimen ingeniorum, quoad philosophiam et scientias, illud est; quod alia ingenia sint fortiora et aptiora ad notandas rerum differentias; alia, ad notandas rerum similitudines. Ingenia enim constantia et acuta figere contemplationes, et morari, et hæere in omni subtilitate differentiarum possunt; ingenia autem sublimia et discursiva etiam tenuissimas et catholicas rerum similitudines et agnoscunt et componunt: utrumque autem ingenium facile labitur in excessum, prensando aut gradus rerum, aut umbras.

## LVI.

Reperiuntur ingenia alia in admirationem antiqui-

tatis, alia in amorem et amplexum novitatis effusa; pauca vero ejus temperamenti sunt, ut modum tenere possint, quin aut quæ recte posita sunt ab antiqua convellant, aut ea contemnant quæ recte afferuntur a novis. Hoc vero magno scientiarum et philosophiæ detrimento fit, cum studia potius sint antiquitatis et novitatis, quam judicis: veritas autem non a felicitate temporis alicujus, quæ res varia est; sed a lumine naturæ et experientiæ, quod æternum est, petenda est. Itaque abneganda sunt ista studia; et videndum, ne intellectus ab illis ad consensum abripiatur.

## LVII.

Contemplationes naturæ et corporum in simplicitate sua intellectum frangunt et comminuunt: contemplationes vero naturæ et corporum in compositione et configuratione sua, intellectum stupefaciunt et solvunt. Id optime cernitur in schola Leucippi et Democriti, collata cum reliquis philosophiis. Illa enim ita versatur in particulis rerum, ut fabricas fere negligat; reliquæ autem ita fabricas intuentur attonitæ, ut ad simplicitatem naturæ non penetrent: itaque alternandæ sunt contemplationes istæ, et vicissim sumendæ; ut intellectus reddatur simul penetrans et capax; et evitentur ea, quæ diximus, incommoda, atque *idola* ex iis provenientia.

## LVIII.

Talis itaque esto prudentia contemplativa in arcendis et summovendis *idolis specus*; quæ aut ex prædominantia, aut ex excessu compositionis et divisionis, aut ex studiis erga tempora, aut ex objectis largis et minutis, maxime ortum habent. Generaliter autem pro suspecto habendum unicuique rerum naturam contemplanti, quicquid intellectum suum potissimum capit et detinet; tantoque major adhibenda in hujusmodi placitis est cautio, ut intellectus servetur æquus et purus.

## LIX.

At *idola fori* omnium molestissima sunt; quæ ex fœdere verborum et nominum se insinuarunt in intellectum. Credunt enim homines, rationem suam verbis imperare. Sed fit etiam ut verba vim suam super intellectum retorquant et reflectant; quod philosophiam et scientias reddidit sophisticas et inactivas. Verba autem plerumque ex captu vulgi induntur, atque per lineas, vulgari intellectui maxime conspicuas, res secant. Cum autem intellectus acutior, aut observatio diligentior, eas lineas transferre velit, ut illæ sint magis secundum naturam; verba obstrepunt. Unde fit ut magnæ et solennes disputationes hominum doctorum sæpe in controversias circa verba et nomina desinant; a quibus (ex more et prudentia mathematicorum) incipere consultius foret, easque per definitiones in ordinem redigere. Quæ tamen definitiones, in naturalibus et materiatis, huic malo mederi non possunt; quoniam et ipsæ definitiones ex verbis constant, et verba gignunt verba: adeo ut necesse sit ad instantias particulares, earumque series et ordines recurrere; ut mox dicemus, cum ad modum et rationem constituendi notiones et axiomata deventum fuerit.

## LX.

*Idola*, quæ per verba intellectui imponuntur, duorum generum sunt: aut enim sunt rerum nomina, quæ non sunt (quemadmodum enim sunt res, quæ nomine carent, per inobservationem; ita sunt et nomina, quæ carent rebus, per suppositionem phantasticam) aut sunt nomina rerum, quæ sunt, sed confusa et male terminata, et temere et inæqualiter a rebus abstracta. Prioris generis sunt, fortuna, primum mobile, planetarum orbes, elementum ignis, et hujusmodi commenta, quæ a vanis et falsis theoriis ortum habent. Atque hoc genus *idolorum* facilius ejicitur, quia per constantem abnegationem et anti-  
 quationem theoriarum exterminari possunt.

At alterum genus perplexum est, et alte hærens; quod ex mala et imperita abstractione excitatur. Exempli gratia, accipiatur aliquod verbum (*humidum*, si placet) et videamus quomodo sibi consent, quæ per hoc verbum significantur; et inveniatur verbum istud, *humidum*, nihil aliud, quam nota confusa diversarum actionum, quæ nullam constantiam aut reductionem patiuntur. Significat enim et quod circa aliud corpus facile se circumfundit; et quod in se est indeterminabile, nec consistere potest: et quod facile cedit undique; et quod facile se dividit et dispergit; et quod facile se unit et colligit; et quod facile fluit et in motu ponitur; et quod alteri corpori facile adhæret, idque madefacit; et quod facile reducit in liquidum, sive colliquatur, cum antea consisteret. Itaque cum ad hujus nominis prædicationem et impositionem ventum sit; si alia accipias, flamma humida est; si alia accipias, aër humidus non est; si alia, pulvis minutus humidus est; si alia, vitrum humidum est: ut facile appareat istam notionem ex aqua tantum, et communibus et vulgaribus liquoribus, absque ulla debita verificatione, temere abstractam esse.

In verbis autem gradus sunt quidam pravitatis et erroris. Minus vitiosum genus est nominum substantiæ alicujus, præsertim specierum infimarum, et bene deductarum (nam notio cretæ, luti, bona; terræ, mala): vitiosius genus est actionum, ut *generare, corrumpere, alterare*: vitiosissimum qualitatum (exceptis objectis sensus immediatis) ut *gravis, levis, tenuis, densi*, etc. Et tamen in omnibus istis fieri non potest, quin sint aliæ notiones aliis paulo meliores, prout in sensum humanum incidit rerum copia.

## LXI.

At *idola theatri* innata non sunt, nec occulto insinuata in intellectum; sed ex fabulis theoriarum, et perversis legibus demonstrationum, plane indita et recepta. In his autem confutationes tentare et suscipere consentaneum prorsus non est illis, quæ a nobis dicta sunt. Cum enim nec de principiis consentiamus, nec de demonstrationibus, tollitur omnis argumentatio. Id vero bono fit fato, ut antiquis suis constet honos. Nihil enim illis detrahitur, cum de via omnino quæstio sit. Claudus enim (ut dicitur) in via, antevertit cursorem extra viam. Etiam illud manifesto liquet, currenti extra viam, quo habilior sit et velocior, eo majorem contingere aberrationem.

Nostra vero inveniendi scientias ea est ratio, ut non multum ingeniorum acumeni et robori relinquatur; sed quæ ingenia et intellectus fere exæquet. Quemadmodum enim ad hoc ut linea recta fiat, aut circulus perfectus describatur, multum est in constantia et exercitatione manus, si fiat ex vi manus propria, sin autem adhibeatur regula, aut circinus, parum aut nihil; omnino similis est nostra ratio. Licet autem confutationum particularium nullus sit usus; de sectis tamen et generibus hujusmodi theoriarum non nihil dicendum est; atque etiam paulo post de signis exterioribus, quod se male habeant; et postremo de causis tantæ infelicitatis, et tam diuturni et generalis in errore consensus; ut ad vera minus difficilis sit aditus, et intellectus humanus volentius expurgetur, et *idola* dimittat.

## LXII.

*Idola theatri*, sive theoriarum, multa sunt, et multo plura esse possunt, et aliquando fortasse erunt. Nisi enim, per multa jam secula, hominum ingenia circa religionem et theologiam occupata fuissent; atque etiam politiæ civiles (præsertim monarchiæ) ab istiusmodi novitatibus, etiam in contemplationibus, essent aversæ; ut cum periculo et detrimento fortunarum suarum in illas homines incumbant, non solum præmio destituti, sed etiam contemptui, et invidiæ expositi; complures aliæ proculdubio philosophiarum et theoriarum sectæ, similes illis, quæ magna varietate olim apud Græcos floruerunt, introductæ fuissent. Quemadmodum enim super *phænomena* ætheris plura *thematata* cæli confingi possunt; similiter, et multo magis, super *phænomena* philosophiæ fundari possunt et constitui varia dogmata. Atque hujusmodi *theatri* fabulæ habent etiam illud, quod in theatro poëtarum usu venit; ut narrationes fictæ ad scenam narrationibus ex historia veris concinniores sint et elegantiores, et quales quis magis vellet.

In genere autem, in materiam philosophiæ sumitur aut multum ex paucis, aut parum ex multis; ut utrinque philosophia super experientiæ et naturalis historiæ nimis angustam basin fundata sit, atque ex paucioribus, quam par est, pronunciet. Rationale enim genus philosophantium ex experientia arripiunt varia et vulgaria, eaque neque certo comperta, nec diligenter examinata et pensitata; reliqua in meditatione atque ingenii agitatione ponunt.

Est et aliud genus philosophantium, qui in paucis experimentis sedulo et accurate elaborarunt, atque inde philosophias educere et configere ausi sunt; reliqua miris modis ad ea detorquentes.

Est et tertium genus eorum, qui theologiam et traditiones ex fide et veneratione immiscet; inter quos vanitas nonnullorum, ad petendas et derivandas scientias, a spiritibus scilicet et genis, deflexit; ita ut stirps errorum, et *philosophia falsa*, genere triplex sit: *sophistica, empirica, et superstitiosa*.

## LXIII.

Primi generis exemplum in Aristotele maxime conspicuum est, qui philosophiam naturalem dialectica sua corruptit; cum mundum ex categoriis effecerit; animæ humanæ, nobilissimæ substantiæ, genus

ex vocibus secundæ intentionis tribuerit; negotium *densi* et *rari*, per quod corpora subeunt majores et minores dimensiones sive spatia, per frigidam distinctionem actus et potentiæ transegerit; motum singulis corporibus unicum et proprium, et, si participant ex alio motu, id aliunde moveri, asseruerit, et innumera alia, pro arbitrio suo, naturæ rerum imposuerit: magis ubique sollicitus quomodo quis respondendo se explicet, et aliquid reddatur in verbis positivum, quam de interna rerum veritate; quod etiam optime se ostendit in comparatione philosophiæ ejus, ad alias philosophias, quæ apud Græcos celebrantur. Habent enim homoiomera Anaxagoræ, atomi Leucippi et Democriti, cælum et terra Parmenidis, et amicitia Empedoclis, resolutio corporum in adiaphoram naturam ignis, et replicatio eorundem ad densum Heracliti, aliquid ex philosopho naturali; et rerum naturam, et experientiam, et corpora sapiunt; ubi Aristotelis physica nihil aliud, quam dialecticæ voces plerumque sonet; quam etiam in metaphysicis sub solenniore nomine, et ut magis scilicet realis, non nominalis, retractavit. Neque illud quenquam moveat, quod in libris ejus "De animalibus," et in "Problematicis," et in aliis suis tractatibus, versatio frequens sit in experimentis. Ille enim prius decreverat, neque experientiam ad constituenda decreta et axiomata rite consuluit; sed postquam pro arbitrio suo decrevisset, experientiam ad sua placita tortam circumducit, et captivam; ut hoc etiam nomine magis accusandus sit, quam sectatores ejus moderni (scholasticorum philosophorum genus) qui experientiam omnino deseruerunt.

## LXIV.

At philosophiæ genus *empiricum* placita magis deformia et monstrosa educit, quam *sophisticum* aut rationale genus; quia non in luce notionum vulgarium (quæ licet tenuis sit et superficialis, tamen est quodammodo universalis, et ad multa pertinens) sed in paucorum experimentorum angustiis et obscuritate fundatum est. Itaque talis philosophia illi, qui in hujusmodi experimentis quotidie versantur, atque ex ipsis phantasiam contaminarunt, probabilis videtur et quasi certa: cæteris, incredibilis et vana. Cujus exemplum notabile est in chemicis, eorumque dogmatibus; alibi autem vix hoc tempore invenitur, nisi forte in philosophia Gilberti. Sed tamen circa hujusmodi philosophias cautio nullo modo præmittenda erat; quia mente jam prævidemus et auguramur, si quando homines, nostris monitis excitati, ad experientiam se serio contulerint (valere jussis doctrinis sophisticis) tum demum, propter præmaturam et præproperam intellectus festinationem, et saltum, sive volatnm ad generalia, et rerum principia, fore ut magnum ab hujusmodi philosophiis periculum immineat: cui malo etiam nunc obviam ire debemus.

## LXV.

At corruptio philosophiæ ex *superstitione*, et theologia admista, latius omnino patet, et plurimum mali infert, aut in philosophias integras, aut in earum partes. Humanus enim intellectus non minus impressionibus phantasie est obnoxius, quam im-

pressionibus vulgarium notionum. Pugnaz enim genus philosophiæ et *sophisticum* illaqueat intellectum; at illud alterum phantasticum et tumidum, et quasi poeticum, magis blanditur intellectui. Inest enim homini quædam intellectus ambitio, non minor quam voluntatis; præsertim in ingeniis altis et elevatis.

Hujus autem generis exemplum inter Græcos illucescit, præcipue in Pythagora, sed cum superstitione magis crassa et onerosa conjunctum; at periculosius et subtilius in Platone, atque ejus schola. Invenitur etiam hoc genus mali in partibus philosophiarum reliquarum, introducendo formas abstractas, et causas finales, et causas primas: omittendo sæpissime medias, et hujusmodi. Huic autem rei summa adhibenda est cautio. Pessima enim res est errorum apotheosis, et pro peste intellectus habenda est, si vanis accedat veneratio. Huic autem vanitati nonnulli ex modernis summa levitate ita indulserunt, ut in primo capitulo Geneleos, et in libro Job, et aliis Scripturis sacris, philosophiam naturalem fundare conati sint; inter *viva quærentes mortua*. Tantoque magis hæc vanitas inhibenda venit, et coercenda, quia ex divinorum et humanorum malesana admistione, non solum educitur philosophia phantastica, sed etiam religio hæretica. Itaque salutare admodum est, si mente sobria fidei tantum dentur quæ fidei sunt.

## LXVI.

Et de malis auctoritatibus philosophiarum, quæ aut in *vulgaribus notionibus*, aut in *paucis experimentis*, aut in *superstitione* fundatæ sunt, jam dictum est. Dicendum porro est et de vitiosa materia contemplationum, præsertim in philosophia naturali. Inficitur autem intellectus humanus ex intuitu eorum, quæ in artibus mechanicis fiunt, in quibus corpora per compositiones aut separationes ut plurimum alterantur; ut cogitet simile quiddam etiam in natura rerum universali fieri. Unde fluxit commentum illud elementorum, deque illorum concursu, ad constituenda corpora naturalia. Rursus, cum homo naturæ libertatem contempletur, incidit in species rerum, animalium, plantarum, mineralium; unde facile in eam labitur cogitationem, ut existimet esse in natura quasdam formas rerum primarias, quas natura educere molitur; atque reliquam varietatem ex impedimentis et aberrationibus naturæ in opere suo conficiendo, aut ex diversarum specierum conflictu, et transplantatione alterius in alteram, provenire. Atque prima cogitatio qualitates primas elementares, secunda proprietates occultas et virtutes specificas, nobis peperit; quarum utraque pertinet ad inania contemplationum compendia, in quibus acquiescit animus, et a solidioribus avertitur. At medici, in secundis rerum qualitatibus et operationibus, attrahendi, repellendi, attenuandi, inspissandi, dilatandi, astringendi, discutiendi, maturandi, et hujusmodi, operam præstant meliorem; atque, nisi ex illis duobus (quæ dixi) compendiis (qualitatibus scilicet elementaribus, et virtutibus specificis) illa altera (quæ recte notata sunt) corrumpent, reducendo illa ad primas qualitates, earumque mixturas subtiles et incommensurabiles; aut ea non producendo, cum majore et dili-

gentiore observatione, ad qualitates tertias et quartas, sed contemplationem intempestive abrumpendo; illi multo melius profecissent. Neque hujusmodi virtutes (non dico eædem, sed similes) in humani corporis medicinis tantum exquirendæ sunt; sed etiam in cæterorum corporum naturalium mutationibus.

Sed multo adhuc majore cum malo fit, quod quiescentia rerum principia, *ex quibus*, et non moventia, *per quæ* res fiunt, contemplantur et inquirant. Illa enim ad sermones, ista ad opera spectant. Neque enim vulgares illæ differentiæ motus, quæ in naturali philosophia recepta notantur, *generationis, corruptionis, augmentationis, diminutionis, alterationis, et lationis*, ullius sunt pretii. Quippe hoc sibi volunt; si corpus, alias non mutatum, loco tamen moveatur, hoc *lationem* esse; si, manente et loco et specie, qualitate mutetur, hoc *alterationem* esse; si vero ex illa mutatione moles ipsa, et quantitas corporis non eadem maneat, hoc *augmentationis et diminutionis* motum esse; si eatenus mutantur, speciem ipsam et substantiam mutant, et in alia migrant, hoc *generationem et corruptionem* esse. At ista mere popularia sunt, et nullo modo in naturam penetrant; suntque mensuræ et periodi tantum, non species motus. Innuunt enim illud, *Hucusque*, et non, *Quomodo*, vel *Ex quo fonte*. Neque enim de corporum appetitu, aut de partium eorum processu, aliquid significant; sed tantum cum motus ille rem aliter ac prius, crasso modo, sensui exhibeat, inde divisionem suam auspicantur. Etiam cum de causis motuum aliquid significare volunt, atque divisionem ex illis instituire, differentiam motus naturalis et violenti, maxima cum socordia, introducunt; quæ et ipsa omnino ex notione vulgari est; cum omnis motus violentus etiam naturalis revera sit, scilicet cum externum efficiens naturam alio modo in opere ponet, quam quo prius.

At hisce omissis, si quis (exempli gratia) observaverit, inesse corporibus appetitum contactus ad invicem, ut non patientur unitatem naturæ prorsus dirimi aut abscindi, ut vacuum detur; aut si quis dicat, inesse corporibus appetitum se recipiendi in naturalem suam dimensionem vel tensuram, ut, si ultra eam, aut citra eam, comprimantur aut distrahantur, statim in veterem sphaeram et exporrectionem suam se recuperare et remittere moliantur; aut si quis dicat, inesse corporibus appetitum congregationis ad massas connaturalium suorum, densorum videlicet versus orbem terræ, tenuiorum et rariorum versus ambitum cœli; hæc et hujusmodi vere physica sunt genera motuum. At illa altera plane logica sunt et scholastica, ut ex hac collatione eorum manifesto liquet.

Neque minus etiam malum est, quod in philosophiis et contemplationibus suis, in principiis rerum atque ultimitatibus naturæ investigandis et tractandis, opera insumatur; cum omnis utilitas et facultas operandi in mediis consistat. Hinc fit, ut abstrahere naturam homines non desinant, donec ad materiam potentialem et informem ventum fuerit; nec rursus secare naturam desinant, donec perventum fuerit ad atomum; quæ, etiamsi vera essent, tamen ad juvandas hominum fortunas parum possunt.

## LXVII.

Danda est etiam cautio intellectui, de intemperantiis philosophiarum, quoad assensum præbendum aut cohibendum; quia hujusmodi intemperantiæ videntur *idola* figere et quodammodo perpetuare, ne detur aditus ad ea summovenda.

Duplex autem est excessus; alter eorum, qui facile *pronunciant*, et scientias reddunt positivas et magistrales, alter eorum, qui *acatalepsiæ* introduxerunt, et inquisitionem vagam sine termino. Quorum primus intellectum deprimit, alter enervat. Nam Aristotelis philosophia, postquam cæteras philosophias (more Ottomanorum erga fratres suos) pugnacibus confutationibus contrucidasset, de singulis pronunciavit; et ipse rursus quæstiones ex arbitrio suo subornat, deinde conficit: ut omnia certa sint et decreta: quod etiam apud successiones suas valet, et in usu est.

At Platonis schola *acatalepsiæ* introduxit, primo tanquam per jocum et ironiam, in odium veterum sophistarum, Protagoræ, Hippiciæ, et reliquorum, qui nihil tam verebantur, quam ne dubitare de re aliqua viderentur. At nova academia *acatalepsiæ* dogmatizavit, et ex professo tenuit: quæ licet honestior ratio sit, quam *pronunciandi* licentia, cum ipsi pro se dicant, se minime confundere inquisitionem, ut Pyrrho fecit et Ephectici, sed habere quod æquantur ut probabile, licet non habeant quod teneant ut verum; tamen postquam animus humanus de veritate invenienda semel desperaverit, omnino omnia fiunt languidiora: ex quo fit, ut deflectant homines potius ad amœnas disputationes et discursus, et rerum quasdam peragrations, quam in severitate inquisitionis se sustineant. Verum quod a principio diximus, et perpetuo agimus, sensui et intellectui humano, eorumque infirmitati, auctoritas non est deroganda, sed auxilia præbenda.

## LXVIII.

Atque de *idolorum* singulis generibus, eorumque apparatu, jam diximus; quæ omnia constanti et solenni decreto sunt abneganda et renuncianda, et intellectus ab iis omnino liberandus est et expurgandus, ut non alius fere sit aditus ad regnum hominis, quod fundatur in scientiis, quam ad regnum cœlorum; "in quod, nisi sub persona infantia, intrare non datur."

## LXIX.

At prævæ demonstrationes, *idolorum* veluti munitiones quædam sunt et præsidia; æque, quas in dialecticis habemus, id fere agunt, ut mundum plane cogitationibus humanis, cogitationes autem verbis addicant et mancipent. Demonstrationes vero potentia quadam philosophiæ ipsæ sunt et scientiæ. Quales enim hæc sunt, ac prout rite aut male institutæ, tales sequuntur philosophiæ et contemplationes. Fallunt autem, et incompetentes sunt hæc, quibus utimur in universo illo processu, qui a sensu et rebus ducit ad axiomata et conclusiones. Qui quidem processus quadruplex est, et vitia ejus totidem. Primo, impressiones sensus ipsius vitiosæ sunt; sensus enim et destituit et fallit. At destitu-

tionibus substitutiones, fallaciis rectificationes debentur. Secundo, notiones ab impressionibus sensuum male abstrahuntur; et interminatæ et confusæ sunt, quas terminatas et bene finitas esse oportuit. Tertio, inductio mala est, quæ per enumerationem simplicem principia concludit scientiarum, non adhibitis exclusionibus et solutionibus, sive separationibus naturæ debitæ. Postremo, modus ille inveniendi et probandi, ut primo principia maxime generalia constituentur, deinde media axiomata ad ea applicentur et probentur, errorum mater est, et scientiarum omnium calamitas. Verum de istis, quæ jam obiter perstringimus, fusius dicemus, cum veram interpretandæ naturæ viam, absolutis istis expiationibus et expurgationibus mentis, proponemus.

## LXX.

Sed demonstratio longe optima est experientia; modo hæreat in ipso experimento. Nam si traducatur ad alia, quæ similia existimantur, nisi rite et ordine fiat illa traductio, res fallax est. At modus experiendi, quo homines nunc utuntur, cæcus est et stupidus. Itaque cum errant et vagantur nulla via certa, sed ex occurso rerum tantum consilium capiunt, circumferuntur ad multa, sed parum promouent; et quandoque gestiunt, quandoque distrahuntur; et semper inveniunt quod ulterius quærant. Fere autem ita fit, ut homines leviter et tanquam per ludum experiantur, variando paululum experimenta jam cognita; et, si res non succedat, fastidendo, et conatum deserendo. Quod si magis serio et constanter ac laboriose ad experimenta se accingant; tamen in uno aliquo experimento eruendo operam collocant; quemadmodum Gilbertus in magnete, chemici in auro. Hoc autem faciunt homines, instituto non minus imperito, quam tenui. Nemo enim alicujus rei naturam in ipsa re feliciter perscrutatur; sed amplianda est inquisitio ad magis communia.

Quod si etiam scientiam quandam et dogmata ex experimentis moliantur; tamen semper fere studio præpropere et intempestivo deflectunt ad praxin: non tantum propter usum et fructum ejusmodi praxeos; sed ut in opere aliquo novo veluti pignus sibi arripiant, se non inutiliter in reliquis versaturos: atque etiam aliis se venditent, ad existimationem meliorem comparandam de iis in quibus occupati sunt. Ita fit, ut, more Atalantæ, de via decedant ad tollendum aureum pomum; interim vero cursum interrumpant, et victoriam emittant e manibus. Verum in experientie vero curriculo, eoque ad nova opera producendo, divina prudentia omnino et ordo pro exemplari sumenda sunt. Deus autem primo die creationis lucem tantum creavit, eique operi diem integram attribuit; nec aliquid materiati operis eo die creavit. Similiter et ex omnimoda experientia, primum inventio causarum et axiomatum verorum elicienda est; et lucifera experimenta, non fructifera quærenda. Axiomata autem recte inventa et constituta praxin non strictim, sed confertim instruant; et operum agmina ac turmas post se trahunt. Verum de experiendi viis, quæ non minus quam viæ judicandi obsessæ sunt et interclusæ, postea dicemus: impræsentiarum de experientia vul-

gari, tanquam de mala demonstratione, tantum locuti. Jam vero postulat ordo rerum, ut de iis, quorum paulo ante mentionem fecimus, signis (quod philosophiæ et contemplationes in usu male se habeant) et de causis rei primo intuitu tam mirabilis et incredibilis, quædam subjungamus. Signorum enim notio præparat assensum: causarum vero explicatio tollit miraculum: quæ duo ad extirpationem idolorum ex intellectu faciliorem et clementiorem multum juvant.

## LXXI.

Scientiæ, quas habemus, fere a Græcis fluxerunt. Quæ enim scriptores Romani, aut Arabes, aut recentiores addiderunt; non multa, aut magni momenti sunt; et qualiacunque sint, fundata sunt super basin eorum quæ inventa sunt a Græcis. Erat autem sapientia Græcorum professoria, et in disputationes effusa: quod genus inquisitioni veritatis adversissimum est. Itaque nomen illud sophistarum, quod per contemptum, ab iis, qui se philosophos haberi voluerunt, in antiquos rhetores rejectum et tractum est, Gorgiam, Protagoram, Hippiam, Polum; etiam universo generi competi, Platoni, Aristoteli, Zenoni, Epicuro, Theophrasto; et eorum successoribus, Chrysippo, Carneadi, reliquis. Hoc tantum intererat; quod prius genus vagum fuerit et mercenarium, civitates circumcursando, et sapientiam suam ostentando, et mercedem exigendo; alterum vero solennius et generosius, quippe eorum qui sedes fixas habuerunt, et scholas aperuerunt, et gratis philosophati sunt. Sed tamen utrumque genus (licet cætera dispar) professorium erat, et ad disputationes rem deducebat, et sectas quasdam atque hæreses philosophiæ instituebat et propugnabat; ut essent fere doctrinæ eorum (quod non male cavillatus est Dionysius in Platonem) "Verba otiosorum senum ad imperitos juvenes." At antiquiores illi ex Græcis, Empedocles, Anaxagoras, Leucippus, Democritus, Parmenides, Heraclitus, Xenophanes, Philolaus, reliqui (nam Pythagoram, ut superstitiosum, omittimus) scholas (quod novimus) non aperuerunt; sed majore silentio, et severius et simplicius, id est, minore cum affectatione et ostentatione, ad inquisitionem veritatis se contulerunt. Itaque et melius, ut arbitramur, se gesserunt; nisi quod opera eorum a levioribus istis, qui vulgari captui et affectui magis respondent ac placent, tractu temporis extincta sint: tempore (ut fluvio) leviora et magis inflata ad nos devehente, graviora et solida mergente. Neque tamen isti a nationis vitio prorsus immunes erant; sed in ambitionem et vanitatem sectæ condendæ, et auræ popularis captandæ, nimium propendebant. Pro desperata autem habenda est veritatis inquisitio, cum ad hujusmodi inania deflectat. Etiam non omittendum videtur judicium illud, sive vaticinium potius sacerdotis Ægyptii de Græcis: "Quod semper pueri essent; neque haberent antiquitatem scientiæ, aut scientiam antiquitatis." Et certe habent id quod puerorum est; ut ad garrandum prompti sint, generare autem non possint: nam verbosa videtur sapientia eorum, et operum sterilis. Itaque ex ortu et gente philosophiæ, quæ in usu est, quæ capiuntur signa, bona non sunt.

## LXXII.

Neque multo meliora sunt signa, quæ ex natura temporis et ætatis capi possunt, quam quæ ex natura loci et nationis. Angusta enim erat et tenuis notitia per illam ætatem, vel temporis, vel orbis: quod longe pessimum est, præsertim iis qui omnia in experientia ponunt. Neque enim mille annorum historiam, quæ digna erat nomine historiarum, habebunt; sed fabulas et rumores antiquitatis. Regionum vero tractuumque mundi exiguum partem noverant; cum omnes hyperboreos, Scythas; omnes occidentales, Celtas indistincte appellarent: nil in Africa ultra citimam Æthiopiæ partem, nil in Asia ultra Gangem; multo minus novi orbis provincias, ne par auditum sane, aut famam aliquam certam et constantem, nossent; imo et plurima climata et zonæ, in quibus populi infiniti spirant et degunt, tanquam inhabitabiles ab illis pronunciata sint: quin etiam peregrinationes Democriti, Platonis, Pythagoræ, non longinquæ profecto, sed potius suburbanæ, ut magnum aliquid celebrarentur. Nostris autem temporibus, et novi orbis partes complures, et veteris orbis extrema undique innotescent; et in infinitum experientiorum cumulus excrevit. Quare si ex nativitate aut genitura tempore (astrologorum more) signa capienda sint, nil magni de istis philosophiis significari videtur.

## LXXIII.

Inter signa nullum magis certum aut nobile est, quam quod ex fructibus. Fructus enim et opera inventa, pro veritate philosophiarum vel sponsores et fidejussores sunt. Atque ex philosophiis istis Græcorum et derivationibus earum per particulares scientias, jam per tot annorum spatia, vix unum experimentum adduci potest, quod ad hominum statum levandum et juvandum spectet, et philosophiæ speculationibus ac dogmatibus vere acceptum referri possit. Idque Celsus ingenue ac prudenter fatetur; nimirum, experimenta medicinæ primo inventa fuisse, ac postea homines circa ea philosophatos esse, et causas indagasse et assignasse: non ordine inverso evenisse, ut ex philosophia et causarum cognitione, ipsa experimenta inventa aut depremta essent. Itaque mirum non erat, apud Ægyptios (qui rerum inventoribus divinitatem et consecrationem attribuerunt) plures fuisse brutorum animalium imagines, quam hominum: quia bruta animalia, per instinctus naturales, multa inventa pepererunt; ubi homines, ex sermonibus et conclusionibus rationalibus, pauca aut nulla exhibuerunt.

At chemicorum industria nonnulla peperit; sed tanquam fortuito et obiter, aut per experientiorum quandam variationem (ut mechanici solent) non ex arte aut theoria aliqua; nam ea, quam confinxerunt, experimenta magis perturbat, quam juvat. Eorum etiam, qui in magia (quam vocant) naturali versati sunt, pauca reperiuntur inventa; eaque levia, et imposturæ propiora. Quocirca, quemadmodum in religione cavetur, ut fides ex operibus monstretur; idem etiam ad philosophiam optime traducitur, ut ex fructibus indicetur, et vana habeatur quæ sterilis sit: idque eo magis, si loco fructuum uvæ et olivæ,

producat disputationum et contentionum carduos et spinas.

## LXXIV.

Capienda etiam sunt signa ex incrementis et progressibus philosophiarum et scientiarum. Quæ enim in natura fundata sunt, crescunt et augentur: quæ autem in opinione, variantur, non augentur. Itaque si istæ doctrinæ plane instar plantæ a stirpibus suis revulsæ non essent, sed utero naturæ adhærerent, atque ab eadem alerentur, id minime eventurum fuisset, quod per annos bis mille jam fieri videmus: nempe, ut scientiæ suis hæreant vestigiis, et in eodem fere statu maneat, neque augmentum aliquod memorabile sumpserint; quin potius in primo auctore maxime floruerint, et deinceps declinaverint. In artibus autem mechanicis, quæ in natura et experientiæ luce fundatæ sunt, contra evenire videmus; quæ (quamdiu placent) veluti spiritu quodam repletæ, continuo vegetant et crescunt; primo rudes, deinde commodæ, postea excultæ, et perpetuo auctæ.

## LXXV.

Etiam aliud signum capiendum est (si modo signi appellatio huic competat; cum potius testimonium sit, atque adeo testimoniorum omnium validissimum) hoc est, propria confessio auctorum, quos homines nunc sequuntur. Nam et illi, qui tanta fiducia de rebus pronunciant, tamen per intervalla cum ad se redeunt, ad querimonias de naturæ subtilitate, rerum obscuritate, humani ingenii infirmitate se convertunt. Hoc vero si simpliciter fieret, alios fortasse, qui sunt timidiore, ab ulteriori inquisitione deterrere; alios vero, qui sunt ingenio alacriori et magis fidenti, ad ulteriorem progressum acuere et incitare, possit. Verum non satis illis est, de se confiteri, sed quicquid sibi ipsis aut magistris suis incognitum, aut intactum fuerit, id extra terminos possibilis ponunt; et tanquam ex arte cognitu aut factu impossibile pronunciant: summa superbia et invidia suorum inventorum infirmitatem, in naturæ ipsius calumniam et aliorum omnium desperationem vertentes. Hinc schola Academiæ novæ, quæ *acatalepsiæ* ex professo tenuit, et homines ad sempiternas tenebras damnavit. Hinc opinio, quod formæ sive varietatibus rerum differentiæ (quæ reversæ sunt leges actus puri) inventu impossibiles sint, et ultra hominem. Hinc opiniones illæ in activa et operativa parte; calorem solis et ignis toto genere differre; ne scilicet homines putent se, per opera ignis, aliquid simile iis, quæ in natura fiunt, educere et formare posse. Hinc illud: compositionem tantum opus hominis, mistionem vero opus solius naturæ esse; ne scilicet homines sperent aliquam ex arte corporum naturalium generationem, aut transformationem. Itaque ex hoc signo homines sibi persuaderi facile patientur, ne cum dogmatibus non solum desperatis, sed etiam desperationi devotis, fortunas suas et labores misceant.

## LXXVI.

Neque illud signum prætermittendum est, quod tanta fuerit inter philosophos olim dissensio, et scholarum ipsarum varietas: quod satis ostendit, viam a

sensu ad intellectum non bene munitam fuisse, cum eadem materia philosophiæ (natura scilicet rerum) in tam vagos et multiplices errores abrepta fueret et distracta. Atque licet hisce temporibus dissensiones et dogmatum diversitates circa principia ipsa, et philosophias integras, ut plurimum extinctæ sint; tamen circa partes philosophiæ, innumeræ manent quæstiones et controversiæ; ut plane appareat, neque in philosophiis ipsis, neque in modis demonstrationum aliquid certi aut sani esse.

## LXXVII.

Quod vero putant homines, in philosophia Aristotelis magnum utique consensum esse; cum post illam editam, antiquorum philosophiæ cessaverint et exoleverint; ast apud tempora, quæ secuta sunt, nil melius inventum fuerit; adeo ut illa tam bene posita et fundata videatur, ut utrumque tempus ad se traxerit: primo, quod de cessatione antiquarum philosophiarum post Aristotelis opera edita homines cogitant, id falsum est; diu enim postea, usque ad tempore Ciceronis, et secula sequentia, manserunt opera veterum philosophorum. Sed temporibus insequentibus, ex inundatione Barbarorum in imperium Romanum, postquam doctrina humana velut naufragium perpessa esset; tum demum philosophiæ Aristotelis et Platonis, tanquam tabulæ ex materia leviori et minus solida, per fluctus temporum servatæ sunt. Illud etiam de concensu fallit homines, si acutius rem introspiciant. Verus enim consensus is est, qui ex libertate iudicii (re prius explorata) in idem conveniente consistit. At numerus longe maximus eorum, qui in Aristotelis philosophiam consenserunt, ex præiudicio et auctoritate aliorum se illi mancipavit: ut sequacitas sit potius et coitio, quam consensus. Quod si fuisset ille verus consensus et late patens, tantum abest, ut consensus pro vera et solida auctoritate haberi debeat, ut etiam violentam præsumptionem inducat in contrarium. Pessimum enim omnium est augurium, quod ex consensu capitur in rebus intellectualibus: exceptis divinis et politicis, in quibus suffragiorum jus est. Nihil enim multis placet, nisi imaginationem feriat, aut intellectum vulgarium notionum nodis astringat, ut supra dictum est. Itaque optime traducitur illud Phocionis a moribus ad intellectualia; "Ut statim se examinare debeant homines, quid erraverint aut peccaverint; si multitudo consentiat et complaudat." Hoc signum igitur ex aversissimis est. Itaque quod signa veritatis et sanitatis philosophiarum et scientiarum, quæ in usu sunt, male se habeant; sive capiantur ex originibus ipsarum, sive ex fructibus, sive ex progressibus, sive ex confessionibus auctorum, sive ex consensu; jam dictum est.

## LXXVIII.

Jam vero veniendum ad causas errorum, et tam diuturnæ in illis per tot secula moræ; quæ plurimæ sunt et potentissimæ: ut tollatur omnis admiratio, hæc, quæ adducimus, homines hucusque latuisse et fugisse; et maneat tantum admiratio, illa nunc tandem alicui mortalium in mentem venire potuisse, aut cogitationem ejuspiam subiisse; quod etiam (ut nos existimamus) felicitatis magis est ejusdem,

quam excellentis alicujus facultatis; ut potius pro temporis partu haberi debeat, quam pro partu ingenii.

Primo autem tot seculorum numerus, vere rem reputanti, ad magnas angustias recidit: nam ex viginti quinque annorum centuriis, in quibus memoria et doctrina hominum fere versatur, vix sex centuriæ seponi et excerpti possunt, quæ scientiarum feraces, earumve proventui utiles fuerunt. Sunt enim non minus temporum quam regionum eremi et vastitates. Tres enim tantum doctrinarum revolutiones et periodos recte numerari possunt: una, apud Græcos; altera, apud Romanos; ultima, apud nos, occidentales scilicet Europæ nationes: quibus singulis vix duæ centuriæ annorum merito attribui possunt. Media mundi tempora, quoad scientiarum segetem uberem aut lætam, infelicia fuerunt. Neque enim causa est ut vel Arabum vel scholasticorum mentio fiat: qui per intermedia tempora scientias potius contriverunt numerosis tractatibus, quam pondus earum auxerunt. Itaque prima causa tam pusilli in scientiis profectus, ad angustias temporis erga illas propitii rite et ordine refertur.

## LXXIX.

At secundo loco se offert causa illa magni certe per omnia momenti: ea videlicet quod per illas ipsas ætates, quibus hominum ingenia et literæ maxime vel etiam mediocriter floruerint, naturalis philosophia minimam partem humanæ operæ sortita sit. Atque hæc ipsa nihilominus pro magna scientiarum matre haberi debet. Omnes enim artes et scientiæ, ab hac stirpe revulsæ, poliuntur fortasse, et in usum effinguntur; sed nil admodum crescunt. At manifestum est, postquam Christiana fides recepta fuisset et adolevisset, longe maximam ingeniorum præstantissimorum partem ad theologiam se contulisse, atque huic rei et amplissima præmia proposita, et omnis generis adjumenta copiosissime subministrata fuisse: atque hoc theologię studium præcipue occupasse tertiam illam partem sive periodum temporis apud nos Europæos occidentales; eo magis, quod sub idem fere tempus et literæ florere, et controversiæ circa religionem pullulare, cœperint. At ævo superiori, durante periodo illa secunda, apud Romanos, potissimæ philosophorum meditationes et industria in morali philosophia (quæ ethnicis vice theologię erat) occupatæ et consumptæ fuerunt: etiam summa ingenia illis temporibus ut plurimum ad res civiles se applicuerunt, propter magnitudinem imperii Romani, quod plurimum hominum opera indigebat. At illa ætas, qua naturalis philosophia apud Græcos maxime florere visa est, particula fuit temporis minime diuturna; cum et antiquioribus temporibus septem illi, qui Sapientes nominabantur, omnes (præter Thaletem) ad moralem philosophiam et civitatem se applicuerint; et posterioribus temporibus, postquam Socrates philosophiam de cælo in terras deduxisset, adhuc magis invaluerit moralis philosophia, et ingenia hominum a naturali averterit.

At ipsissima illa periodus temporis, in qua inquisitiones de natura vigerunt, contradictionibus et novorum placitorum ambitione corrupta est, et inutilis reddita. Itaque quandoquidem per tres istas

periodos naturalis philosophia majorem in modum neglecta aut impedita fuerit, nil mirum si homines parum in ea re profecerint, cum omnino aliud egerint.

## LXXX.

Accedit et illud, quod naturalis philosophia in iis ipsis viris, qui ei incubuerint, vacantem et integrum hominem, præsertim his recentioribus temporibus, vix nacta sit; nisi forte quis monachi alicujus in cellula, aut nobilis in villula lucubrantis, exemplum adduxerit; sed facta est demum naturalis philosophia instar transitus cujusdam et pontisternii ad alia.

Atque magna ista scientiarum mater mira indignitate ad officia ancillæ detrusa est; quæ medicinæ aut mathematices operibus ministret, et rursus, quæ adolescentium immatura ingenia lavet et imbuat velut tinctura quadam prima, ut aliam postea felicius et commodius excipiant. Interim nemo expectet magnum progressum in scientiis (præsertim in parte earum operativa) nisi philosophia naturalis ad scientias particulares producta fuerit, et scientiæ particulares rursus ad naturalem philosophiam reductæ. Hinc enim fit, ut astronomia, optica, musica, plurimæ artes mechanicæ, atque ipsa medicina, atque (quod quis magis miretur) philosophia moralis et civilis, et scientiæ logicæ nil fere habeant altitudinis in profundo; sed per superficiem et varietatem rerum tantum labantur: quia, postquam particulares istæ scientiæ dispersitæ et constitutæ fuerint, a philosophia naturali non amplius aluntur; quæ ex fontibus et veris contemplationibus, motuum, radiorum, sonorum, texturæ et schematismi corporum, affectuum, et prehensionum intellectualium, novas vires et augmenta illis impartiri potuerit. Itaque minime mirum est, si scientiæ non crescant, cum a radicibus suis sint separatæ.

## LXXXI.

Rursus se ostendit alia causa potens et magna, cur scientiæ parum promoverint. Ea vero hæc est; quod fieri non possit, ut recte procedatur in curriculo, ubi ipsa meta non recte posita sit et defixa. Meta autem scientiarum vera et legitima non alia est quam ut dotetur vita humana novis inventis et copiis. At turba longe maxima nihil ex hoc sapit, sed meritoria plane est, et professoria; nisi forte quandoque eveniat, ut artifex aliquis acrioris ingenii, et gloriæ cupidus, novo alicui invento det operam; quod fere fit cum facultatum dispendio. At apud plerosque tantum abest ut homines id sibi proponant, ut scientiarum et artium massa augmentum obtineat; ut ex ea, quæ præsto est, massa nil amplius sumant aut quærant, quam quantum ad usum professorium, aut lucrum, aut existimationem, aut hujusmodi compendia convertere possint. Quod si quis ex tanta multitudine scientiam affectu ingenuo, et propter se expetat; invenietur tamen ille ipse, potius contemplationum et doctrinarum varietatem, quam veritatis severam et rigidam inquisitionem, sequi. Rursus, si alius quispiam fortasse veritatis inquisitor sit severior; tamen et ille ipse talem sibi proponet veritatis conditionem, quæ menti et intellectui satis-

faciat in redditione causarum rerum quæ jampridem sunt cognitæ; non eam, quæ nova operum pignora, et novam axiomatum lucem assequatur. Itaque, si finis scientiarum a nemine adhuc bene positus sit, non mirum est, si in iis, quæ sunt subordinata ad finem, sequatur aberratio.

## LXXXII.

Quemadmodum autem finis et meta scientiarum male posita sunt apud homines; ita rursus etiam si illa recte posita fuissent, viam tamen sibi delegerunt omnino erroneam et imperviam. Quod stupore quodam animum rite rem reputanti perculserit; non ulli mortalium curæ aut cordi fuisse, ut intellectui humano, ab ipso sensu et experientia ordinata et bene condita, via aperiretur, et muniretur; sed omnia vel traditionum caligini, vel argumentorum vertigini et turbini, vel casus et experientiæ vagæ et inconditæ undis et ambagibus, permessa esse. Atque cogitet quis sobrie et diligenter, qualis sit ea via, quam in inquisitione et inventione alicujus rei homines adhibere consueverunt. Et primo notabit proculdubio inveniendi modum simplicem et inartificiosum, qui hominibus maxime est familiaris. Hic autem non alius est, quam ut is, qui se ad inveniendum aliquid comparat et accingit, primo quæ ab aliis circa illa dicta sint, inquirat et evolvat; deinde propriam meditationem addat, atque per mentis multam agitationem spiritum suum proprium sollicitet, et quasi invocet, ut sibi oracula pandat; quæ res omnino sine fundamento est, et in opinionibus tantum volvitur.

At alius quispiam dialecticam ad inveniendum advocet, quæ nomine tenus tantum ad id quod agitur, pertinet. Inventio enim dialecticæ non est principiorum et axiomatum præcipuorum, ex quibus artes constant, sed eorum tantum, quæ illis consentanea videntur. Dialectica enim magis curiosos et importunos, et sibi negotium facessentes, eamque interpellantes de probationibus et inventionibus principiorum, sive axiomatum primorum, ad fidem, et veluti sacramentum cuilibet arti præstandum, notissimo responso rejicit.

Restat experientia mera, quæ, si occurrat, casus; si quæsitæ sit, experimentum nominatur. Hoc autem experientiæ genus nihil aliud est, quam (quod aiunt) scopæ dissolutæ, et mera palpatio, quali homines noctu utuntur, omnia pertentando, si forte in rectam viam incidere detur; quibus multo satius et consultius foret diem præstolari, aut lumen accendere, et deinde viam inire. At contra, verus experientiæ ordo primo lumen accendit, deinde per lumen iter demonstrat, incipiendo ab experientia ordinata et digesta, et minime præpostera aut erratica, atque ex ea educendo axiomata, atque ex axiomatibus constitutis rursus experimenta nova, cum nec verbum divinum in rerum massam absque ordine operatum sit.

Itaque desinant homines mirari, si spatium scientiarum non confectum sit, cum a via omnino aberraverint; relicta prorsus et deserta experientia, aut in ipsa (tanquam in labyrintho) se intrinsecando et circumcursando; cum rite institutus ordo, per experientiæ sylvas, ad aperta axiomatum tramite constanti ducat.

## LXXXIII.

Excrevit autem mirum in modum istud malum ex opinione quadam, sive æstimatione inveterata, verum tumida et damnosa; minui nempe mentis humanæ majestatem, si experimentis, et rebus particularibus sensui subjectis, et in materia determinatis, diu ac multum versetur; præsertim cum hujusmodi res ad inquirendum laboriosæ, ad meditando ignobiles, ad dicendum asperæ, ad practicam illiberales; numero infinitæ, et subtilitate tenues, esse soleant. Itaque jam tandem huc res rediit, ut via vera non tantum deserta, sed etiam interclusa et obstructa sit; fastidita experientia, nedum relicta, aut male administrata.

## LXXXIV.

Rursus vero homines a progressu in scientiis definuit, et fere incantavit reverentia antiquitatis, et virorum, qui in philosophia magni habiti sunt, auctoritas, atque deinde consensus. Atque de consensu superius dictum est.

De antiquitate autem opinio, quam homines de ipsa foveant, negligens omnino est, et vix verbo ipsi congrua. Mundi enim senium et grandævitas pro antiquitate vere habenda sunt; quæ temporibus nostris tribui debent, non juniori ætati mundi, qualis apud antiquos fuit. Illa enim ætas, respectu nostri, antiqua et major; respectu mundi ipsius, nova et minor fuit. Atque revera quemadmodum majorem rerum humanarum notitiam, et maturius judicium, ab homine sene expectamus, quam a juvene, propter experientiam, et rerum, quas vidit, et audivit, et cogitavit, varietatem et copiam; eodem modo et a nostra ætate (si vires suas nosset, et experiri et intendere vellet) majora multo quam a priscis temporibus expectari par est; utpote ætate mundi grandiore, et infinitis experimentis et observationibus aucta et cumulata.

Neque pro nihilo æstimandum, quod per longinquas navigationes et peregrinationes (quæ seculis nostris increbuerunt) plurima in natura patuerint, et reperta sint, quæ novam philosophiæ lucem immittere possint. Quin et turpe hominibus foret, si globi materialis tractus, terrarum videlicet, marium, astrorum, nostris temporibus immensum aperti et illustrati sint; globi autem intellectualis fines inter veterum inventa et angustias cohibeantur.

Auctores vero quod attinet, summæ pusillanimitatis est auctoribus infinita tribuere, auctori autem anctorum, atque adeo omnis auctoritatis, Tempori, jus suum negare. Recte enim Veritas Temporis filia dicitur, non auctoritatis. Itaque mirum non est, si fascina ista antiquitatis, et auctorum, et consensus, hominum virtutem ita ligaverint, ut cum rebus ipsis consuescere (tanquam maleficiati) non potuerint.

## LXXXV.

Neque solum admiratio antiquitatis, auctoritatis, et consensus, hominum industriam in iis, quæ jam inventa sunt, acquiescere compulit; verum etiam operum ipsorum admiratio, quorum copia jam pridem facta est humano generi. Etenim cum quis rerum varietatem, et pulcherrimum apparatus, qui

per artes mechanicas ad cultum humanum congestus et introductus est, oculis subjecerit, eo certe inclinabit, ut potius ad opulentiam humanæ admirationem, quam ad inopiæ sensum, accedat; minime advertens primitivas hominis observationes, atque naturæ operationes (quæ ad omnem illam varietatem instar animæ sunt, et primi motus) nec multas, nec alte petitas esse; cætera ad patientiam hominum tantum, et subtilem et ordinatum manus vel instrumentorum motum, pertinere. Res enim (exempli gratia) subtilis est certe et accurata, confectio horologiorum, talis scilicet, quæ cœlestia in rotis, pulsum animalium in motu successivo et ordinato, videatur imitari; quæ tamen res ex uno aut altero naturæ axiome pendet.

Quod si quis rursus subtilitatem illam intueatur, quæ ad artes liberales pertinet; aut etiam eam, quæ ad corporum naturalium præparationem per artes mechanicas spectat, et hujusmodi res suspiciat; veluti inventionem motuum cœlestium in astronomia, consentium in musica, literarum alphabeti (quæ etiam adhuc in regno Sinarum in usu non sunt) in grammatica; aut rursus in mechanicis, factorum Bacchi et Cereris, hoc est, præparationem vini et cervisiæ, panificiorum, aut etiam mensæ delictarum, et distillationum, et similium; ille quoque si secum cogitet et animum advertat, per quantos temporum circuitus (cum hæc omnia præter distillationes antiqua fuerint) hæc ad eam, quam nunc habemus culturam perducta sint, et (ut jam de horologiis dictum est) quam parum habeant ex observationibus et axiomatibus naturæ, atque quam facile, et tanquam per occasiones obvias, et contemplationes incurrentes, ista inveniri potuerint: ille (inquam) ab omni admiratione se facile liberabit, et potius humanæ conditionis miserebitur, quod per tot secula, tanta fuerit rerum et inventorum penuria et sterilitas. Atque hæc ipsa tamen, quorum nunc mentionem fecimus, inventa, philosophia et artibus intellectus antiquiora fuerunt; adeo ut (si verum dicendum sit) cum hujusmodi scientiæ rationales et dogmaticæ inceperint, inventio operum utilium desierit.

Quod si quis ab officinis ad bibliothecas se converterit, et immensam, quam videmus, librorum varietatem in admiratione habuerit, is, examinatis et diligentius introspectis ipsorum librorum materiis et contentis, obstupescet certe in contrarium; et postquam nullum dari finem repetitionibus observaverit, quamque homines eadem agant et loquantur, ab admiratione varietatis transibit ad miraculum indigentiam et paucitatem earum rerum, quæ hominum mentes adhuc tenuerunt et occuparunt.

Quod si quis ad intuendum ea, quæ magis curiosa habentur quam sana, animum submiserit, et alchemistarum aut magorum opera penitus introspexerit, is dubitabit forsitan, utrum risu, an lacrymis potius, illa digna sint. Alchemista enim spem alit æternam, atque ubi res non succedit, errores proprios reos substituit; secum accusatorie reputando, se aut artis aut auctorum vocabula non satis intellexisse; unde ad traditiones et auriculares susurros animum applicat; aut in practicæ suæ scrupulis et momentis aliquid titubatum esse; unde experimenta in infinitum repetit: ac interim cum inter experimentorum

sortes in quædam incidat, aut ipsa facie nova, aut utilitate non contemnenda, hujusmodi pignoribus animum pascit, eaque in majus ostentat et celebrat; reliqua spe sustentat. Neque tamen negandum est, alchemistas non pauca invenisse, et inventis utilibus homines donasse. Verum fabula illa non male in illos quadrat de sene, qui filius aurum in vinea defossus (sed locum se nescire simulans) legaverit; unde illi vineæ fodiendæ diligenter incubuerunt, et aurum quidem nullum repertum; sed vindemia ex ea cultura facta est uberior.

At naturalis magiæ cultores, qui per rerum sympathias et antipathias omnia expediunt, ex conjecturis otiosis et supinissimis, rebus virtutes et operationes admirabiles affinxerunt; atque si quando opera exhibuerint, ea illius sunt generis, ut ad admirationem et novitatem, non ad fructum et utilitatem accommodata sint.

In superstitiosa autem magia (si et de hac dicendum sit) illud imprimis animadvertendum est, esse tantummodo certi cujusdam et definiti generis subjecta, in quibus artes curiosæ et superstitiosæ, per omnes nationes atque ætates, atque etiam religiones, aliquid potuerint aut luserint. Itaque ista missa faciamus. Interim nil mirum est, si opinio copiæ causam inopiæ dederit.

## LXXXVI.

Atque hominum admirationi quoad doctrinas et artes, per se satis simplici et prope puerili, incrementum accessit ab eorum astu et artificio, qui scientias tractaverunt et tradiderunt. Illi enim ea ambitione et affectatione eas proponunt, atque in eum modum efformatas, ac veluti personatas, in hominum conspectum producunt, ac si illæ omni ex parte perfectæ essent, et ad exitum perductæ. Si enim methodum aspicias et partitiones, illæ prorsus omnia complecti et concludere videntur, quæ in illud subjectum cadere possunt. Atque licet membra illa male impleta, et veluti capsulæ inanes sint; tamen apud intellectum vulgarem scientiæ formam et rationem integræ præ se ferunt.

At primi et antiquissimi veritatis inquisitores, meliore fide et fato, cognitionem illam, quam ex rerum contemplatione decerpere, et in usum recondere statuebant, in *aphorismos*, sive breves, easdemque sparsas, nec methodo revinctas sententias, conjicere solebant; neque se artem universam complecti simulabant aut profitebantur. At eo, quo nunc res agit, modo, minime mirum est, si homines in iis ulteriora non quærant, quæ pro perfectis et numeris suis jam pridem absolutis traduntur.

## LXXXVII.

Etiam antiqua magnam existimationis et fidei incrementum acceperunt, ex eorum vanitate et levitate, qui nova proposuerunt; præsertim in philosophiæ naturalis parte activa et operativa. Neque enim defuerunt homines vaniloqui et phantastici, qui partim ex credulitate, partim ex impostura, genus humanum promissis onerarunt: vitæ prolongationem, senectutis retardationem, dolorum levationem, naturalium defectuum reparationem, sensuum deceptiones, affectuum ligationes et incitationes,

intellectualium facultatum illuminationes et exaltationes, substantiarum transmutationes, et motuum ad libitum roborationes et multiplicationes, aëris impressiones et alterationes, cœlestium influentiarum deductiones et procuraciones, rerum futurarum divinationes, remotarum repræsentationes, occultarum revelationes, et alia complura pollicitando et ostentando. Verum de istis largitoribus non multum aberraverit, qui istiusmodi judicium fecerit, tantum nimirum in doctrinis philosophiæ, inter horum vanitates, et veras artes, interesse, quantum inter res gestas Julii Cæsaris, aut Alexandri Magni, et res gestas Amadicii ex Gallia, aut Arthuri ex Britannia, in historiæ narrationibus intersit. Inveniuntur enim clarissimi illi imperatores revera majora gessisse, quam umbratiles isti heroës etiam fecisse fingantur; sed modis et viis scilicet actionum minime fabulosis et prodigiis. Neque propterea æquum est veræ memoriæ fidem derogari, quod a fabulis illa quandoque læsa sit et violata. Sed interim minime mirum est, si propositionibus novis (præsertim cum mentione operum) magnum sit factum præjudicium per istos impostores, qui similia tentaverunt; cum vanitatis excessus et fastidium etiam nunc omnem in ejusmodi conatibus magnanimitatem destruxerit.

## LXXXVIII.

At longe majora a pusillanimitate, et pensorum, quæ humana industria sibi proposuit, parvitate et tenuitate, detrimenta in scientias invecta sunt. Et tamen (quod pessimum est) pusillanimitas ista non sine arrogantia et fastidio se offert.

Primum enim, omnium artium illa reperitur cautela jam facta familiaris, ut in qualibet arte auctores artis suæ infirmitatem in naturæ calumniam vertant; et quod ars ipsorum non assequitur, id ex eadem arte impossibile in natura pronunciant. Neque certe damnari potest ars, si ipsa judicet. Etiam philosophia, quæ nunc in manibus est, in sinu suo posita quædam fovet, aut placita, quibus (si diligentius inquiratur) hoc hominibus omnino persuaderi volunt; nil ab arte, vel hominis opere, arduum, aut in naturam imperiosum et validum, expectari debere; ut de heterogenia caloris astri et ignis, et mistione, superius dictum est. Quæ si notentur accuratius, omnino pertinent ad humanæ potestatis circumscriptionem malitiosam, et ad quæsitam et artificiosam desperationem, quæ non solum spei auguria turbet, sed etiam omnes industriæ stimulos et nervos incidat, atque ipsius experientiæ aleas abjiciat; dum de hoc tantum solliciti sint, ut ars eorum perfecta censeatur; gloriæ vanissimæ et perditissimæ dantes operam, scilicet ut quicquid adhuc inventum et comprehensum non sit, id omnino nec inveniri, nec comprehendi posse in futurum credatur. At si quis rebus addere se, et novum aliquid reperire conetur, ille tamen omnino sibi proponet et destinabit unum aliquid inventum (nec ultra) perscrutari et eruere; ut magnetis naturam, maris fluxum et refluxum, thema cœli, et hujusmodi, quæ secreti aliquid habere videntur, et hactenus parum feliciter tractata sint: cum summæ sit imperitiæ rei alicujus naturam in se ipsa perscrutari; quandoquidem eadem natura,

quæ in aliis videtur latens et occulta, in aliis manifesta sit, et quasi palpabilis; atque in illis admirationem, in his ne attentionem quidem moveat. Ut fit in natura consistentiæ, quæ in ligno vel lapide non notatur, sed solidi appellatione transmittitur, neque amplius de fuga separationis aut solutionis continuitatis inquiritur: at in aquarum bullis eadem res videtur subtilis et ingeniosa; quæ bullæ se conjiciunt in pelliculas quasdam, in hemisphærii formam curiose effectas, ut ad momentum temporis evitetur solutio continuitatis.

Atque prorsus illa ipsa, quæ habentur pro secretis, in aliis habent naturam manifestam et communem; quæ nunquam se dabit conspiciendam, si hominum experimenta aut contemplationes in illis ipsis tantum versentur. Generaliter autem et vulgo, in operibus mechanicis habentur pro novis inventis, si quis jampridem inventa subtilius poliat, vel ornet elegantius, vel simul uniat et componat, vel cum usu commodius copulet, aut opus majore, aut etiam minore, quam fieri consuevit, mole vel volumine exhibeat, et similia.

Itaque minime mirum est, si nobilia et genere humano digna inventa in lucem extracta non sint, cum homines hujusmodi exiguis pensis et puerilibus contenti et delectati fuerint; quinetiam in iidem se magnum aliquid secutos aut assecutos putaverint.

## LXXXIX.

Neque illud prætermittendum est, quod nacta sit philosophia naturalis per omnes ætates adversarium molestum et difficilem; superstitionem nimirum, et zelum religionis cæcum et immoderatum. Etenim videre est apud Græcos, eos, qui primum causas naturales fulminis et tempestatum insuetis adhuc hominum auribus proposuerunt, impietatis in deos eo nomine damnatos: nec multo melius a nonnullis antiquorum patrum religionis Christianæ exceptos fuisse eos, qui ex certissimis demonstrationibus (quibus nemo hodie sanus contradixerit) terram rotundam esse posuerunt, atque ex consequenti antipodas esse asseruerunt.

Quinetiam, ut nunc sunt res, conditio sermonum de natura facta est durior et magis cum periculo, propter theologorum scholasticorum summas et methodos; qui cum theologiam (satis pro potestate) in ordinem redegerint, et in artis formam effinxerint, hoc insuper effecerunt, ut pugna et spinosa Aristotelis philosophia corpori religionis, plus quam par erat, immisceretur.

Eodem etiam spectant (licet diverso modo) eorum commentationes, qui veritatem Christianæ religionis ex principiis et auctoritatibus philosophorum deducere et confirmare haud veriti sunt; fidei et sensus conjugium tanquam legitimum multa pompa et solennitate celebrantes, et grata rerum varietate animos hominum permulcentes; sed integram divina humanis impari conditione permiscentes. At in hujusmodi misturis theologiæ cum philosophia, ea tantum, quæ nunc in philosophia recepta sunt, comprehenduntur; sed nova, licet in melius mutata, tantum non summoventur et exterminantur.

Denique invenias ex quorundam theologorum im-

peritia aditum alicui philosophiæ, quamvis emendatæ, pene interclusum esse. Alii siquidem simplicius subverentur, ne forte altior in naturam inquisitio ultra concessum sobrietatis terminum penetret; traduces et perperam torquentes ea, quæ, de divinis mysteriis in Scripturis sacris, adversus rimantes secreta divinita dicuntur, ad occulta naturæ, quæ nullo interdicto prohibentur. Alii callidius conjiciunt et animo versant, si media ignorentur, singula ad manum et virgulam divinam (quod religionis, ut putant, maxime interit) facilius posse referri; quod nihil aliud est, quam "Deo per mendacium gratificari" velle. Alii ab exemplo metuunt, ne motus et mutationes circa philosophiam in religionem incurrant ac desinant. Alii denique solliciti videntur, ne in naturæ inquisitione aliquid inveniri possit, quod religionem (præsertim apud indoctos) subvertat, aut saltem labefactet. At isti duo posteriores metus nobis videntur omnino sapientiam animalem sapere; ac si homines in mentis suæ recessibus et secretis cogitationibus, de firmitudine religionis, et fidei in sensum imperio, diffident ac dubitent; et propterea ab inquisitione veritatis in naturalibus periculum illis impendere metuerent. At vere rem reputanti, philosophia naturalis, post verbum Dei, certissima superstitionis medicina est; eademque probatissimum fidei alimentum. Itaque merito religioni donatur tanquam fidissima ancilla: cum altera voluntatem Dei, altera potestatem, manifestet. Neque enim erravit ille, qui dixit; "Erratis, nescientes Scripturas, et potestatem Dei:" informationem de voluntate, et meditationem de potestate, nexu individo commiscens et copulans. Interim minus mirum est si naturalis philosophiæ incrementa cohibita sint; cum religio, quæ plurimum apud animos hominum pollet, per quorundam imperitiam et zelum incautum in partem contrariam transierit, et abrepta fuerit.

## XC.

Rursus in moribus et institutis scholarum, academiæ, collegiorum, et similium conventuum, quæ doctorum hominum sedibus et eruditionis culturæ destinata sunt, omnia progressui scientiarum adversa inveniuntur. Lectiones enim et exercitia ita sunt disposita, ut aliud a consuetis haud facile cuiquam in mentem veniat cogitare aut contemplari. Si vero unus aut alter fortasse iudicii libertate uti sustinuerit, is sibi soli hanc operam imponere possit; ab aliorum autem consortio nihil capiet utilitatis. Sin et hoc toleraverit, tamen in capessenda fortuna industriam hanc et magnanimitatem sibi non levi impedimento fore experietur. Studia enim hominum in ejusmodi locis in quorundam auctorum scripta, veluti in carceres, conclusa sunt; a quibus si quis dissentiat, continuo ut homo turbidus, et rerum novarum cupidus, corripitur. At magnum certe discrimen inter res civiles et artes: non enim idem periculum a novo motu, et a nova luce. Verum in rebus civilibus mutatio etiam in melius suspecta est ob perturbationem; cum civilia auctoritate, consensu, fama et opinione, non demonstratione, nitantur. In artibus autem et scientiis, tanquam in metalli fodinis, omnia novis operibus et ulterioribus progressibus circumstrepere debent. Atque secundum rectam

rationem res ita se habet, sed interim non ita vivitur: sed ista, quam diximus, doctrinarum administratio et politia scientiarum augmenta durius premere consuevit.

## XCI.

Atque insuper licet ista invidia cessaverit; tamen satis est ad cohibendum augmentum scientiarum, quod hujusmodi conatus et industriæ præmiis careant. Non enim penes eosdem est cultura scientiarum et præmium. Scientiarum enim augmenta a magnis utique ingeniiis proveniunt; at pretia et præmia scientiarum sunt penes vulgus aut principes viros, qui (nisi raro admodum) vix mediocriter docti sunt. Quinetiam hujusmodi progressus, non solum præmiis et beneficentia hominum, verum etiam ipsa populari laude destituti sunt. Sunt enim illi supra captum maximæ partis hominum, et ab opinionum vulgarium ventis facile obruuntur et extinguuntur. Itaque nil mirum, si res illa non feliciter successerit, quæ in honore non fuit.

## XCII.

Sed longe maximum progressibus scientiarum, et novis pensis ac provinciis in iisdem suscipiendis, obstaculum deprehenditur in desperatione hominum et suppositione impossibilis. Solent enim viri prudentes et severi in hujusmodi rebus plane diffidere: naturæ obscuritatem, vitæ breviter, sensuum fallacias, iudicii infirmitatem, experientorum difficultates, et similia secum reputantes. Itaque existimant esse quosdam scientiarum, per temporum et ætatum mundi revolutiones, fluxus et refluxus; cum aliis temporibus crescant et floreat, aliis declinent et jaceant: ita tamen, ut cum ad certum quandam gradum et statum pervenerint, nil ulterius possint.

Itaque si quis majora credat aut spondeat, id putant esse cujusdam impotentis et immaturi animi; atque hujusmodi conatus, initia scilicet læta, media ardua, extrema confusa habere. Atque cum hujusmodi cogitationes eæ sint, quæ in viros graves et iudicio præstantes facile cadant; curandum revera est, ne, rei optimæ et pulcherrimæ amore capti, severitatem iudicii relaxemus aut minuamus; et sedulo videndum, quid spei affulgeat, et ex qua parte se ostendat; atque auris levioribus spei rejectis, eæ, quæ plus firmitudinis habere videntur, omnino discutendæ sunt et pensandæ. Quinetiam prudentia civilis ad consilium vocanda est et adhibenda, quæ ex præscripto diffidit, et de rebus humanis in deterius conjicit. Itaque jam et de spe dicendum est; præsertim cum nos promissores non simus, nec vim aut insidias hominum iudicis faciamus aut struamus, sed homines manu et sponte ducamus. Atque licet longe potentissimum futurum sit remedium ad spem imprimendam, quando homines ad particularia, præsertim in tabulis nostris inveniendi digesta et disposita (quæ partim ad secundam, sed multo magis ad quartam *Instauracionis* nostræ partem pertinent) adducemus; cum hoc ipsam sit non spes tantum, sed tanquam res ipsa: tamen ut omnia clementius fiant, pergendum est in instituto nostro de præparandis hominum mentibus; cuius præparationis ista ostensio spei pars est non exigua. Nam absque ea, reliqua

faciunt magis ad contristationem hominum (scilicet ut deteriorem et viliorum habeant de iis, quæ jam in usu sunt, opinionem, quam nunc habent; et suæ conditionis infortunium plus sentiant et pernoscant) quam ad alacritatem aliquam inducendam, aut industriam experiendi acuendam. Itaque conjecturæ nostræ, quæ spem in hac re faciunt probabilem, aperiendæ sunt et proponendæ; sicut Columbus fecit ante navigationem illam suam mirabilem maris Atlantici; cum rationes adduxerit, cur ipse novas terras et continentes, præter eas, quæ ante cognitæ fuerunt, inveniri posse confideret: quæ rationes licet primo rejectæ, postea tamen experimento probatæ sunt, et rerum maximarum causæ et initia fuerunt.

## XCIII.

Principium autem sumendum a Deo: hoc nimirum quod agitur, propter excellentem in ipso boni naturam, manifeste a Deo esse; qui auctor boni et pater luminum est. In operationibus autem divinis initia quæque tenuissima exitum certo trahunt. Atque quod de spiritualibus dictum est, "Regnum Dei non venit cum observatione;" id etiam in omni majore opere providentiæ divinæ evenire reperitur: ut omnia sine strepitu et sonitu placide labantur; atque res plane agatur, priusquam homines eam agi putent aut advertant. Neque omittenda est prophetia Danielis de ultimis mundi temporibus; "Multi pertransibunt, et multiplex erit scientia;" manifeste innuens et significans esse in fati, id est, in providentia, ut pertransitus mundi (qui per tot longinquas navigationes impletus plane, aut jam in opere esse videtur) et augmenta scientiarum in eandem ætatem incidant.

## XCIV.

Sequitur ratio omnium maxima ad faciendam spem; nempe ex erroribus temporis præteriti, et viarum adhuc tentatarum. Optima enim est ea reprehensio, quam de statu civili, haud prudenter administrato, quispiam his verbis complexus est: "Quod ad præterita pessimum est, id ad futura optimum videri debet. Si enim vos omnia, quæ ad officium vestrum spectant, præstitissetis; neque tamen res vestræ in meliore loco essent; ne spes quidem ulla reliqua foret, eas in melius provehi posse. Sed cum rerum vestrarum status, non a vi ipsa rerum, sed ab erroribus vestris male se habeat; sperandum est, illis erroribus missis aut correctis, magnam rerum in melius mutationem fieri posse." Simili modo, si homines per tanta annorum spatia viam veram inveniendi et colendi scientias tenuissent, nec tamen ulterius progredi potuissent, audax proculdubio et temeraria foret opinio, posse rem in ulterius provehi. Quod si in via ipsa erratum sit, atque hominum opera in iis consumpta, in quibus minime oportebat; sequitur ex eo, non in rebus ipsis difficultatem oriri, quæ potestatis nostræ non sunt; sed in intellectu humano, ejusque usu et applicatione; quæ res remedium et medicinam suscipit. Itaque optimum fuerit illos ipsos errores proponere: quot enim fuerint errorum impedimenta in præterito, tot sunt spei argumenta in futurum. Ea vero licet in his quæ superius dicta sunt, non intacta omnino fue-

rint; tamen ea etiam nunc breviter verbis nudis ac simplicibus representare visum est.

## XCv.

Qui tractaverunt scientias, aut empirici, aut dogmatici fuerunt. Empirici, formicæ more, congerunt tantum et utuntur: rationales, araneorum more, telas ex se conficiunt: apis vero ratio media est, quæ materiam ex floribus horti et agri elicit; sed tamen eam propria facultate vertit et digerit. Neque ab simile philosophiæ verum opificium est; quod nec mentis viribus tantum aut præcipue nititur, neque ex historia naturali et mechanicis experimentis præbitam materiam, in memoria integram, sed in intellectu mutatam et subactam reponit. Itaque ex harum facultatum (experimentalis scilicet et rationalis) arctiore et sanctiore fœdere (quod adhuc factum non est) bene sperandum est.

## XCVI.

Naturalis philosophia adhuc sincera non invenitur, sed infecta et corrupta: in Aristotelis schola per logicam; in Platonis schola per theologiam naturalem; in secunda schola Platonis, Procli, et aliorum, per mathematicam; quæ philosophiam naturalem terminare, non generare aut procreare debet. At ex philosophia naturali pura et impermixta meliora speranda sunt.

## XCvII.

Nemo adhuc tanta mentis constantia et rigore inventus est, ut decreverit et sibi imposuerit theorias et notiones communes penitus abolere, et intellectum abraum et æquum ad particularia de integro applicare. Itaque ratio illa humana, quam habemus, ex multa fide, et multo etiam casu, nec non ex puerilibus, quas primo hausimus, notionibus, farrago quædam est et congeries.

Quod si quis ætate matura, et sensibus integris, et mente repurgata, se ad experientiam et ad particularia de integro applicet, de eo melius sperandum est. Atque hac in parte nobis spondemus fortunam Alexandri Magni: neque quis nos vanitatis arguat, antequam exitum rei audiat, quæ ad exuendam omnem vanitatem spectat.

Etenim de Alexandro et ejus rebus gestis Æschines ita loquutus est: "Nos certe vitam mortalem non vivimus; sed in hoc nati sumus, ut posteritas de nobis portenta narret et prædicet:" perinde ac si Alexandri res gestas pro miraculo habuisset.

At ævis sequentibus Titus Livius melius rem advertit et introscepit, atque de Alexandro hujusmodi quippiam dixit, "Eum non aliud quam bene ausum vana contemnere." Atque simile etiam de nobis iudicium futuris temporibus factum iri existimamus: "Nos nil magni fecisse, sed tantum ea, quæ pro magnis habentur, minoris fecisse." Sed interim (quod jam diximus) non est spes nisi in *regeneratione* scientiarum; ut eæ scilicet ab experientia certo ordine excitentur et rursus condantur: quod adhuc factum esse aut cogitatum, nemo (ut arbitramur) affirmaverit.

## XCvIII.

Atque experientiæ fundamenta (quando ad hanc  
VOL. II. 2 0

omnino deveniendum est) aut nulla, aut admodum infirma adhuc fuerunt; nec particularium sylva et materies, vel numero, vel genere, vel certitudine, informando intellectui competens, aut ullo modo sufficiens, adhuc quæsitæ est et congesta. Sed contra homines docti (supini sane et faciles) rumores quosdam experientiæ, et quasi famas et auras ejus, ad philosophiam suam vel constituendam vel confirmandam exceperunt, atque illis nihilominus pondus legitimi testimonii attribuerunt. Ac veluti si regnum aliquod aut status non ex literis et relationibus a legatis et nuntiis fide dignis missis, sed ex urbanorum sermunculis et ex triviis consilia sua et negotia gubernaret; omnino talis in philosophiam administratio, quatenus ad experientiam, introducta est. Nil debitis modis exquisitum, nil verificatum, nil numeratum, nil appensum, nil dimensum in naturali historia reperitur. At quod in observatione indefinitum et vagum, id in informatione fallax et infidum est. Quod si cui hæc mira dictu videantur, et querelæ minus justæ propiora; cum Aristoteles tantus ipse vir, et tanti regis opibus subnixus, tam accuratam de animalibus historiam confecerit; atque alii nonnulli majore diligentia (licet strepitu minore) multa adjecerint; et rursus alii de plantis, de metallis et fossilibus, historias et narrationes copiosas conscripserint; is sane non satis attendere et perspicere videtur, quid agatur in præsentia. Alia enim est ratio naturalis historiæ, quæ propter se confecta est; alia ejus, quæ collecta est ad informandum intellectum in ordine ad condendam philosophiam. Atque hæc duæ historiæ tum aliis rebus, tum præcipue in hoc differunt; quod prima ex illis specierum naturalium varietatem, non artium mechanicarum experimenta, contineat. Quemadmodum enim in civilibus ingenium cujusque et occultus animi affectuumque sensus melius elicitur, cum quis in perturbatione ponitur, quam alias: simili modo, et occulta naturæ magis se produunt per vexationes artium, quam cum curso suo meant. Itaque tum demum bene sperandum est de naturali philosophia, postquam historia naturalis (quæ ejus basis est et fundamentum) melius instructa fuerit: ante a vero minime.

## XCIX.

Atque rursus in ipsa experimentorum mechanicorum copia, summa eorum, quæ ad intellectus informationem maxime faciunt et juvant, detegitur inopia. Mechanicus enim, de veritatis inquisitione nullo modo sollicitus, non ad alia, quam quæ operi suo subserviunt, aut animum erigit, aut manum porrigit. Tum vero de scientiarum ulteriore progressu spes bene fundabitur, cum in historiâ naturalem recipiuntur et aggregabuntur complura experimenta, quæ in se nullius sunt usus, sed ad inventionem causarum et axiomatum tantum faciunt; quæ nos *lucifera* experimenta, ad differentiam *fructiferorum*, appellare consuevimus. Illa autem miram habent in se virtutem et conditionem; hanc videlicet, quod nunquam fallant, aut frustrentur. Cum enim ad hoc adhibeantur, non ut opus aliquod efficiant, sed ut causam naturalem in aliquo reveleat, quaquaversum cadunt, intentioni æque satisfaciunt, cum quæstionem terminent.

## c.

At non solum copia major experimentorum quaerenda est, et procuranda, atque etiam alterius generis, quam adhuc factum est; sed etiam methodus plane alia, et ordo, et processus, continuandæ et provehendæ experientiæ, introducenda. Vaga enim experientia, et se tantum sequens (ut superius dictum est) mera palpatio est, et homines potius stupefacit, quam informat. At cum experientia lege certe procedet, seriatim et continenter, de scientiis aliquid melius sperari poterit.

## ci.

Postquam vero copia et materies historiæ naturalis et experientiæ talis, qualis ad opus intellectus sive ad opus philosophicum requiritur, præsto jam sit et parata; tamen nullo modo sufficit intellectus, ut in illam materiam agat sponte et memoriter; non magis quam si quis computationem alicujus ephemeridis memoriter se tenere, et superare posse speret. Atque hactenus tamen potiores meditationis partes, quam scriptiois, in inveniendis fuerunt; neque ad huc experientia literata facta est: atqui nulla nisi de scripto inventio probanda est. Illa vero in usum veniente, ab experientia, facta demum literata, melius sperandum.

## cii.

Atque insuper, cum tantus sit particularium numerus, et quasi exercitus, isque ita sparsus et diffusus, ut intellectum disgreget et confundat; de velitationibus, et levibus motibus, et transcurribus intellectus, non bene sperandum est; nisi fiat instructio et coordinatio per tabulas inveniendi idoneas, et bene dispositas, et tanquam vivas, eorum quæ pertinent ad subjectum, in quo versatur inquisitio, atque ad harum tabularum auxilia præparata et digesta mens applicetur.

## ciii.

Verum post copiam particularium, rite et ordine veluti sub oculis positorum, non statim transeundum est ad inquisitionem, et inventionem novorum particularium aut operum; aut saltem, si hoc fiat, in eo non acquiescendum. Neque enim negamus, postquam omnia omnium artium experimenta collecta et digesta fuerint, atque ad unius hominis notitiam et iudicium pervenerint; quin ex ipsa traductione experimentorum unius artis in alias, multa nova inveniri possint, ad humanam vitam et statum utilia, per istam experientiam quam vocamus literatam: sed tamen minora de ea speranda sunt; majora vero a nova luce axiomatum, ex particularibus illis certa via et regula eductorum, quæ rursus nova particularia indicent et designent. Neque enim in plano via sita est, sed ascendendo et descendendo; ascendendo primo ad axiomata, descendendo ad opera.

## civ.

Neque tamen permittendum est, ut intellectus a particularibus ad axiomata remota et quasi generalissima (qualia sunt principia, quæ vocant, artium et rerum) saliat et volet; et ad eorum immotam veri-

tatem axiomata media probet et expediat: quod adhuc factum est, prono ad hoc impetu naturali intellectus, atque etiam ad hoc ipsum per demonstrationes, quæ fiunt per syllogismum, jam pridem edocto et assuefacto. Sed de scientiis tum demum bene sperandum est, quando per scalam veram et per gradus continuos, et non intermissos, aut hiulcos, a particularibus ascenditur ad axiomata minora, et deinde ad media, alia aliis superiora, et postremo demum ad generalissima. Etenim axiomata infirma non multum ab experientia nuda discrepant. Suprema vero illa et generalissima (quæ habentur) notionalia sunt, et abstracta, et nil habent solidi. At media sunt axiomata illa vera, et solida, et viva, in quibus humanæ res et fortunæ sitæ sunt; et supra hæc quoque tandem ipsa illa generalissima; talia scilicet, quæ non abstracta sint, sed per hæc media vere limitantur.

Itaque hominum intellectui non plumæ addendæ, sed plumbum potius et pondera; ut cohibeant omnem saltum et volatum. Atque hoc adhuc factum non est; cum vero factum fuerit, melius de scientiis sperare licebit.

## cv.

In constituendo autem axiomate, forma inductionis alia, quam adhuc in usu fuit, excogitanda est; eaque non ad principia tantum (quæ vocant) probanda et invenienda, sed etiam ad axiomata minora, et media, denique omnia. Inductio enim, quæ procedit per enumerationem simplicem, res puerilis est, et precario concludit, et periculo exponitur ab instantia contradictoria, et plerumque secundum pauciora quam par est, et ex his tantummodo quæ præsto sunt, pronunciat. At *inductio*, quæ ad inventionem et demonstrationem scientiarum et artium erit utilis, naturam separare debet, per rejectiones et exclusiones debitas; ac deinde post negativas tot quot sufficiunt, super affirmativas concludere; quod adhuc factum non est, nec tentatum certe, nisi tantummodo a Platone, qui ad excutiendas definitiones et ideas, hac certe forma inductionis aliquatenus utitur. Verum ad hujus inductionis sive demonstrationis instructionem bonam et legitimam quamplurimam adhibenda sunt, quæ adhuc nullius mortalium cogitationem subiere; adeo ut in ea major sit consumenda opera, quam adhuc consumpta est in syllogismo; atque hujus inductionis auxilio, non solum ad axiomata invenienda, verum etiam ad notiones terminandas, utendum est. Atque in hac certe inductione spes maxima sita est.

## cvi.

At in axiomatibus constituendis per hanc inductionem examinatio et probatio etiam facienda est, utrum quod constituitur axioma aptatum sit tantum, et ad mensuram factum eorum particularium, ex quibus extrahitur; an vero sit amplius aut latius. Quod si sit amplius aut latius, videndum an eam suam amplitudinem et latitudinem, per novorum particularium designationem, quasi fideiussione quadam, firmet; ne vel in jam notis tantum hæreamus, vel laxiore fortasse complexu umbras et formas abstractas, non solida et determinata in materia, pren-

semus. Hæc vero cum in usum venerint, solida tum demum spes merito affulserit.

## CVII.

Atque hic etiam resumendum est, quod superius dictum est de naturali philosophia producta, et scientiis particularibus ad eam reductis, ut non fiat scissio et truncatio scientiarum; nam etiam absque hoc minus de progressu sperandum est.

## CVIII.

Atque de desperatione tollenda, et spe facienda, ex præteriti temporis erroribus valere jussis, aut rectificatis, jam dictum est. Videndum autem et si quæ alia sint, quæ spem faciant. Illud vero occurrit; si hominibus non quærentibus, et aliud agentibus, multa utilia, tanquam casu quodam, aut per occasionem, inventa sint; nemini dubium esse posse, quin iisdem quærentibus, et hoc agentibus, idque via et ordine, non impetu et desultorie, longe plura detegi necesse sit. Licet enim semel aut iterum accidere possit, ut quispiam in id forte fortuna incidat, quod magno conatu et de industria scrutantem antea fugit; tamen in summa rerum proculdubio contrarium invenitur. Itaque longe plura et meliora, atque per minora intervalla, a ratione et industria, et directione, et intentione hominum, speranda sunt, quam a casu et instinctu animalium, et hujusmodi, quæ hactenus principium inventis dederunt.

## CIX.

Etiam illud ad spem trahi possit, quod nonnulla ex his, quæ jam inventa sunt, ejus sint generis, ut, antequam invenirentur, haud facile cuiquam in mentem venisset de iis aliquid suspicari: sed plane quis illa ut impossibilia contempsisset. Solent enim homines de rebus novis, ad exemplum veterum, et secundum phantasiam ex iis præceptam et inquinatam, hariolari; quod genus opinandi fallacissimum est, quandoquidem multa ex his, quæ ex fontibus rerum petuntur, per rivulos consuetos non fluunt.

Veluti si quis, ante tormentorum igneorum inventionem, rem per effectus descripsisset, atque in hunc modum dixisset; Inventum quoddam detectum esse, per quod muri, et munitiones quæque maximæ, ex longo intervallo concuti et dejeci possint; homines sane de viribus tormentorum et machinarum, per pondera, et rotas, et hujusmodi arietationes et impulsus, multiplicandis, multa et varia secum cogitari fuissent: de vento autem igneo, tam subito et violenter se expandente et exsufflante, vix unquam aliquid alicujus imaginationi, aut phantasie, occursum fuisset; utpote cujus exemplum in proximo non vidisset, nisi forte in terræ motu, aut fulmine, quæ ut magnalia naturæ, et non imitabilia ab homine, homines statim rejecturi fuissent.

Eodem modo, si ante fili bombycini inventionem, quispiam hujusmodi sermonem injecisset; Esse quoddam fili genus inventum ad vestium et supellectilis usum, quod filum linteum aut laneum tenuitate, et nihilominus tenacitate, ac etiam splendore et mollitie, longe superaret; homines statim aut de serico aliquo vegetabili, aut de animalis alicujus pilis delicatioribus, aut de avium plumis et lanugine,

aliquid opinaturi fuissent; verum de vermibus pusilli textura, eaque tam copiosa, et se renovante, et anniverfaria, nil fuissent certe commenturi. Quod si quis etiam de vermi verbum aliquod injecisset, ludibrio certe futurus fuisset, ut qui novas aranearum operas somniaret.

Similiter, si, ante inventionem acus nauticæ, quispiam hujusmodi sermonem intulisset; Inventum esse quoddam instrumentum, per quod cardines et puncta cæli exacte capi et dignosci possint; homines statim de magis exquisita fabricatione instrumentorum astronomicorum, ad multa et varia, per agitationem phantasie, discursuri fuissent; quod vero aliquid inveniri possit, cujus motus cum cælestibus tam bene conveniret, atque ipsum tamen ex cælestibus non esset, sed tantum substantia lapidea aut metallica; omnino incredibile visum fuisset. Atque hæc tamen, et similia, per tot mundi ætates, homines latuerunt, nec per philosophiam, aut artes rationales inventa sunt, sed casu, et per occasionem; suntque illius (ut diximus) generis, ut ab iis, quæ antea cognita fuerunt, plane heterogenea et remotissima sint, ut prænotio aliqua nihil prorsus ad illa conducere potuisset.

Itaque sperandum omnino est, esse adhuc in naturæ sinu multa excellentis usus recondita, quæ nullam cum jam inventis cognitionem habent aut parallelismum; sed omnino sita sunt extra vias phantasie; quæ tamen adhuc inventa non sunt; quæ proculdubio per multos seculorum circuitus et ambages, et ipsa quandoque prodibunt, sicut illa superiora prodierunt; sed per viam, quam nunc tractamus, propere, et subito, et simul representari et anticipari possunt.

## CX.

Attamen conspiciuntur et alia inventa ejus generis, quæ fidem faciant, posse genus humanum nobilia inventa, etiam ante pedes posita, præterire, et transillire. Utunque enim pulveris tormentarii, vel fili bombycini, vel acus nauticæ, vel sacchari, vel papyri, vel similibus inventa, quibusdam rerum et naturæ proprietatibus niti videantur; at certe imprimendi artificium nil habet, quod non sit apertum et fere obvium. Et nihilominus homines, non advertentes, literarum modulos difficiliter scilicet collocari, quam literæ per motum manus scribantur; sed hoc interesse, quod literarum moduli, semel collocati, infinitis impressionibus, literæ autem per manum exaratæ, unicæ tantum scriptioni sufficient; aut fortasse iterum non advertentes, atramentum ita inspissari posse, ut tingat, non fluat; præsertim literis resupinatis, et impressione facta desuper; hoc pulcherrimo invento (quod ad doctrinarum propagationem tantum facit) per tot secula caruerunt.

Solet autem mens humana, in hoc inventionis curriculo, tam læva sæpenumero et male composita esse, ut primo diffidat, et paulo post se contemnat; atque primo incredibile ei videatur, aliquid tale inveniri posse; postquam autem inventum sit, incredibile rursus videatur, id homines tamdiu fugere potuisse. Atque hoc ipsum ad spem rite trahitur; superesse nimirum adhuc magnum inventorum cumulum, qui non solum ex operationibus incognitis

eruedis, sed et ex jam cognitis transferendis, et componendis, et applicandis, per eam, quam diximus experientiam literatam, deduci possit.

## CXI.

Neque illud omittendum ad faciendam spem; reputent (si placet) homines infinitas ingenii, temporis, facultatum expensas, quas homines in rebus et studiis longe minoris usus et pretii collocant; quorum pars quota si ad sana et solida verteretur, nulla non difficultas superari possit. Quod idcirco adjungere visum est, quia plane fatemur historiæ naturalis et experimentalis collectionem, qualem animo metimur, et qualis esse debet, opus esse magnum, et quasi regium, et multæ operæ atque impensæ.

## CXII.

Interim particularium multitudinem nemo reformidet, quin potius hoc ipsum ad spem revocet. Sunt enim artium et naturæ particularia *phænomena*, manipuli instar, ad ingenii commenta, postquam ab evidentia rerum disjuncta et abstracta fuerint. Atque hujus viæ exitus in aperto est, et fere in propinquo; alterius exitus nullus, sed implicatio infinita. Homines enim adhuc parvam in experientia moram fecerunt, et eam leviter perstrinxerunt, sed in meditationibus et commentationibus ingenii infinitum tempus contriverunt. Apud nos vero si esset præsto quispiam, qui de facto naturæ ad interrogata responderet, paucorum annorum esset inventio causarum et scientiarum omnium.

## CXIII.

Etiam nonnihil hominibus spei fieri posse putamus ab exemplo nostro proprio; neque jactantiæ causa hoc dicimus, sed quod utile dictu sit. Si qui diffidant, me videant, hominem, inter homines ætatis meæ civilibus negotiis occupatissimum, nec firma admodum valetudine (quod magnum habet temporis dispendium) atque in hac re plane protopirum, et vestigia nullius secutum, neque hæc ipsa cum ullo mortalium communicantem; et tamen veram viam constanter ingressum, et ingenium rebus submittentem, hæc ipsa aliquatenus (ut existimamus) provexisse: et deinceps videant, quid ab hominibus otio abundantibus, atque a laboribus consociatis, atque a temporum successione, post hæc indicia nostra expectandum sit; præsertim in via, quæ non singulari solummodo pervia est (ut fit in via illa rationali) sed ubi hominum labores et operæ (præsertim quantum ad experientiæ collectam) optime distribui, et deinde componi possint. Tum enim homines vires suas nosse incipient, cum non eadem infiniti, sed alia alii præstabunt.

## CXIV.

Postremo, etiamsi multo infirmior et obscurior aura spei ab *ista nova continente* spiraverit; tamen omnino experendum esse (nisi velimus animi esse plane abstracti) statuimus. Non enim res pari periculo non tentatur, et non succedit; cum in illo, ingentis boni; in hoc, exiguæ humanæ operæ jactura vertatur. Verum ex dictis, atque etiam ex non dictis, visum est nobis, spei abunde subesse, non tantum

homini strenuo ad experiendum, sed etiam prudenti et sobrio ad credendum.

## CXV.

Atque de desperatione tollenda, quæ inter causas potentissimas ad progressum scientiarum remorandum et inhibendum fuit, jam dictum est: atque simul sermo de signis et causis errorum, et inertiae, et ignorantiae, quæ invaluit, absolutus est; præsertim cum subtiliores causæ, et quæ in judicium populare aut observationem non incurrunt, ad ea, quæ de *idolis* animi humani dicta sunt, referri debeant.

Atque hic simul pars destruens *Instaurationis* nostræ claudi debet, quæ perficitur tribus redargutionibus; redargutione nimirum *humanæ rationis nativæ*, et sibi permisæ; redargutione *demonstrationum*; et redargutione *theoriarum*, sive philosophiarum et doctrinarum, quæ receptæ sunt. Redargutio vero earum talis fuit, qualis esse potuit; videlicet per signa et evidentiæ causarum; cum confutatio alia nulla a nobis (qui et de principiis, et de demonstrationibus, ab aliis dissentimus) adhiberi poterit.

Quocirca tempus est, ut ad ipsam artem et normam *interpretandi naturam* veniamus; et tamen nonnihil restat, quod prævertendum est. Cum enim in hoc primo *aphorismorum* libro illud nobis propositum sit, ut tam ad intelligendum, quam ad recipiendum ea, quæ sequuntur, mentes hominum præparentur; expurgata jam, et abrasa, et æquata mentis area, sequitur ut mens sistatur in positione bona, et tanquam aspectu benevolo, ad ea quæ proponemus. Valet enim in re nova ad præjudicium, non solum præoccupatio fortis opinionis veteris, sed et præceptio sive præfiguratio falsa rei, quæ affertur. Itaque conabimur efficere, ut habeantur bonæ et veræ, de iis quæ adducimus, opiniones, licet ad tempus tantummodo, et tanquam usurariæ, donec res ipsa pernoscat.

## CXVI.

Primo itaque postulandum videtur, ne existiment homines, nos, more antiquorum Græcorum, aut quorundam novorum hominum, Telesii, Patricii, Severini, sectam aliquam in philosophia condere velle: neque enim hoc agimus, neque etiam multum interesse putamus ad hominum fortunas, quales quis opiniones abstractas de natura et rerum principiis habeat: neque dubium est, quin multa hujusmodi, et vetera revocari, et nova introduci possint; quemadmodum et complura themata cæli supponi possunt, quæ cum *phænomenis* sat bene conveniunt, inter se tamen dissentiunt.

At nos de hujusmodi rebus opinabilibus, et simul inutilibus, non laboramus. At contra nobis constitutum est experiri, an revera potentiae et amplitudinis humanæ firmiora fundamenta jacere, ac fines in latius proferre possimus. Atque licet sparsim, et in aliquibus subjectis specialibus, longe veriora habeamus, et certiora (ut arbitramur) atque etiam magis fructuosa, quam quibus homines adhuc utuntur (quæ in quintam *Instaurationis* nostræ partem congestimus) tamen theoriam nullam universalem, aut integram proponimus. Neque enim huic rei tempus adhuc adesse videtur. Quin nec spem habemus vite

producendæ, ad sextam *Instaurationis* partem (quæ philosophiæ, per legitimam naturæ interpretationem inventæ, destinata est) absolvendam; sed satis habemus, si in mediis sobrie et utiliter nos geramus, atque interim semina veritatis sincerioris in posteros spargamus, atque initiis rerum magnarum non desimus.

## CXVII.

Atque quemadmodum sectæ conditores non sumus; ita nec operum particularium largitores aut promissores. Attamen possit aliquis hoc modo occurrere; quod nos, qui tam sæpe operum mentionem faciamus, et omnia eo trahamus, etiam operum aliquorum pigra exhibeamus. Verum via nostra et ratio (ut sæpe perspicue diximus, et adhuc dicere juvat) ea est; ut non opera ex operibus, sive experimenta ex experimentis (ut empirici) sed ex operibus et experimentis causas et axiomata, atque ex causis et axiomatibus rursus nova opera et experimenta (ut legitimi naturæ interpretes) extrahamus.

Atque licet in tabulis nostris inveniendi (ex quibus quarta pars *Instaurationis* consistit) atque etiam exemplis particularium (quas in secunda parte adduximus) atque insuper in observationibus nostris super historiam (quæ in tertia parte operis descripta est) quivis vel mediocris perspicaciæ et solertiæ, complurium operum nobilium indicationes et designationes ubique notabit; ingenue tamen fatemur, historiam naturalem, quam adhuc habemus, aut ex libris, aut ex inquisitione propria, non tam copiosam esse et verificatam, ut legitimæ interpretationi satisfacere aut ministrare possit.

Itaque si quis ad mechanica sit magis aptus et paratus, atque sagax ad venanda opera, ex conversatione sola cum experimentis, ei permittimus et relinquimus illam industriam, ut ex historia nostra et tabulis multa, tanquam in via, decerpit et applicet ad opera, ac veluti fœnus recipiat ad tempus, donec sors haberi possit. Nos vero, cum ad majora contendamus, moram omnem præproperam et præmaturam in istiusmodi rebus, tanquam Atalantæ pilas (ut sæpius solemus dicere) damnamus. Neque enim aurea poma pueriliter affectamus, sed omnia in victoria cursus artis super naturam ponimus; neque muscum aut segetem herbidam demetere festinamus, sed messem tempestivam expectamus.

## CXVIII.

Occurret etiam alicui proculdubio, postquam ipsam historiam nostram et inventionis tabulas perlegerit, aliquid in ipsis experimentis minus certum, vel omnino falsum; atque propterea secum fortasse reputabit, fundamentis et principiis falsis et dubiis inventa nostra niti. Verum hoc nihil est; necesse enim est, talia sub initiis evenire. Simile enim est ac si in scriptione aut impressione, una forte litera, aut altera, perperam posita aut collocata sit; id enim legentem non multum impedire solet, quandoquidem errata ab ipso sensu facile corriguntur. Ita etiam cogitent homines, multa in historia naturali experimenta falso credi et recipi posse; quæ paulo post a causis et axiomatibus inventis facile expunguntur et rejiciuntur. Sed tamen verum est, si in historia naturali, et experimentis, magna, et crebra,

et continua fuerint errata, illa nulla ingenii aut artis felicitate corrigi, aut emendari posse. Itaque si in historia nostra naturali, quæ tanta diligentia et severitate, et fere religione, probata et collecta est, aliquid in particularibus quandoque subsit falsitatis aut erroris; quid tandem de naturali historia vulgari, quæ præ nostra tam negligens est et facilis, dicendum erit? aut de philosophia et scientiis super hujusmodi arenas (vel syrtes potius) ædificatis? Itaque hoc, quod diximus, neminem moveat.

## CXIX.

Occurrent etiam in historia nostra et experimentis plurimæ res; primo leves et vulgatæ, deinde viles et illiberales, postremo nimis subtiles ac mere speculativæ, et quasi nullius usus: quod genus rerum hominum studia avertere et alienare possit.

Atque de istis rebus, quæ videntur vulgatæ, illud homines cogitent; solere sane eos adhuc nihil aliud agere, quam ut eorum, quæ rara sunt, causas ad ea, quæ frequenter fiunt, referant et accommodent; at ipsorum, quæ frequenter eveniunt, nullas causas inquirent, sed ea ipsa recipiant tanquam concessa et admissa.

Itaque non ponderis, non rotationis cœlestium, non caloris, non frigoris, non luminis, non duri, non mollis, non tenuis, non densi, non liquidi, non consistentis, non animati, non inanimati, non similis, non dissimilis, nec demum organici causas quærent; sed, illis tanquam pro evidentibus et manifestis receptis, de cæteris, rebus, quæ non tam frequenter et familiariter occurrunt, disputant et judicant.

Nos vero, qui satis scimus, nullum de rebus raris aut notabilibus iudicium fieri posse, multo minus res novas in lucem protrahi, absque vulgariis rerum causis, et causarum causis rite examinatis et repertis; necessario ad res vulgarissimas in historiam nostram recipiendas compellimur. Quinetiam nil magis philosophiæ officisse deprehendimus, quam quod res, quæ familiares sunt, et frequenter occurrunt, contemplationem hominum non moventur et detineant, sed recipiantur obiter, neque earum causæ quæri soleant; ut non sæpius requiratur informatio de rebus ignotis, quam attentio in notis.

## CXX.

Quod vero ad rerum utilitatem attinet, vel etiam turpitudinem, quibus (ut ait Plinius) honos præfandus est; eæ res, non minus quam lautissimæ et pretiosissimæ, in historiam naturalem recipiendæ sunt. Neque propterea polluitur naturalis hystória: Sol enim æque palatia et cloacas ingreditur, neque tamen polluitur. Nos autem non capitolium aliquod aut pyramidem hominum superbiæ dedicamus aut condimus, sed templum sanctum ad exemplar mundi in intellectu humano fundamus. Itaque exemplar sequimur. Nam quicquid essentia dignum est, id etiam scientia dignum; quæ est essentia imago. At vilia æque subsistunt, ac lauta. Quinetiam, ut e quibusdam putridis materiis, veluti musco et zibetho, aliquando optimi odores generantur; ita et ab instantiis vilibus et sordidis quandoque eximia lux et informatio emanant. Verum de hoc nimis multa; cum hoc genus fastidii sit plane puerile et effœminatium.

## CXXI.

At de illo omnino magis accurate dispiciendum: Quod plurima in historia nostra captui vulgari, aut etiam cuivis intellectui (rebus præsentibus assuefacto) videbuntur curiosæ ejusdam et inutilis subtilitatis. Itaque de hoc ante omnia et dictum et dicendum est. Hoc scilicet; Nos, jam sub initiis et ad tempus, tantum *lucifera* experimenta, non fructifera quærere; ad exemplum creationis divinæ, quod sæpius diximus, quæ primo die lucem tantum produxit, eique soli unum integrum diem attribuit, neque illo die quicquam materiati operis immiscuit.

Itaque si quis istiusmodi res nullius esse usus putet, idem cogitat ac si nullum etiam lucis esse usum censeat, quia res scilicet solida aut materiata non sit. Atque revera dicendum est, simplicium naturarum cognitionem bene examinatam et definitam instar lucis esse; quæ ad universa operum penetralia aditum præbet; atque tota agmina operum et turmas, et axiomatum nobilissimorum fontes, potestate quadam complectitur, et post se trahit; in se tamen non ita magni usus est. Quin et literarum elementa per se et separatim nihil significant, nec alicujus usus sunt; sed tamen ad omnis sermonis compositionem et apparatus instar materiæ primæ sunt. Etiam semina rerum, potestate valida, usu (nisi in processu suo) nihili sunt. Atque lucis ipsius radii dispersi, nisi coeant, beneficium suum non impertuntur.

Quod si quis subtilitatibus speculativis offendatur; quid de scholasticis viris dicendum erit, qui subtilitatibus immensum indulserunt? Quæ tamen subtilitates in verbis, aut saltem vulgaribus notionibus (quod tantundem valet) non in rebus aut natura, consumptæ fuerunt; atque utilitatis expertes erant, non tantum in origine, sed etiam in consequentiis; tales autem non fuerunt, ut haberent in præsens utilitatem nullam, sed per consequens infinitam; quales sunt eæ, de quibus loquimur. Hoc vero sciant homines pro certo, omnem subtilitatem disputationem et discursum mentis, si adhibeatur tantum post axiomata inventa, seram esse et præposteram; et subtilitatis tempus verum ac proprium, aut saltem præcipuum, versari in pensitanda experientia, et inde constituendis axiomatibus: nam illa altera subtilitas naturam prensat et captat, sed nunquam apprehendit aut capit. Et verissimum certe est, quod de occasione sive Fortuna dici solet, si transferratur ad naturam: videlicet, "eam a fronte comatam, ab occipio calvam esse."

Denique de contemptu, in naturali historia, rerum aut vulgarium, aut vilium, aut nimis subtilium, et in originibus suis inutilium, illa vox mulierculæ ad tumidum principem, qui petitionem ejus, ut rem indignam et majestate sua inferiorem, abjecisset, pro oraculo sit; "Desine ergo rex esse:" quia certissimum est, imperium in naturam, si quis hujusmodi rebus, ut nimis exilibus et minutis, vacare nolit, nec obtineri nec geri posse.

## CXXII.

Occurrit etiam et illud; mirabile quiddam esse et durum, quod nos omnes scientias atque omnes

auctores simul, ac veluti uno ictu et impetu, summoveamus; idque non assumpto aliquo ex antiquis in auxilium et præsidium nostrum, sed quasi viribus propriis.

Nos autem scimus, si minus sincera fide agere voluissemus, non difficile fuisse nobis, ista, quæ afferuntur, vel ad antiqua secula ante Græcorum tempora (cum scientiæ de natura magis fortasse, sed tamen majore cum silentio, floruerint; neque in Græcorum tubas et fistulas adhuc incidissent) vel etiam (per partes certe) ad aliquos ex Græcis ipsis referre, atque astipulationem et honorem inde petere; more novorum hominum, qui nobilitatem sibi ex antiqua aliqua prosapia, per genealogiarum favores, astruunt et affingunt. Nos vero, rerum evidentia freti, omnem commenti et imposturæ conditionem rejicimus, neque ad id quod agitur plus interesse putamus, utrum, quæ jam inveniuntur, antiquis olim cognita, et per rerum vicissitudines et secula occidentia et orientia sint; quam hominibus curæ esse debere, utrum novus orbis fuerit insula illa Atlantis, et veteri mundo cognita; an nunc primum reperta. Rerum enim inventio a naturæ luce petenda, non ab antiquitatis tenebris repetenda est.

Quod vero ad universalem istam reprehensionem attinet, certissimum est vere rem reputanti, eam et magis probabilem esse, et magis modestam, quam si facta fuisset ex parte. Si enim in primis notionibus errores radicati non fuissent, fieri non potuisset, quin nonnulla recte inventa, alia perperam inventa correxissent. Sed cum errores fundamentales fuerint, atque ejusmodi, ut homines potius res neglexerint ac præterierint, quam de illis pravum aut falsum iudicium fecerint; minime mirum est, si homines id non obtinerint, quod non egerint; nec ad metam pervenerint, quam non posuerint aut collocarint; neque viam emensi sint, quam non ingressi sint aut tenuerint.

Atque insolentiam rei quod attinet; certe si quis manus constantia atque oculi vigore lineam magis rectam, aut circulum magis perfectum se describere posse, quam alium quempiam, sibi assumat; inducitur scilicet facultatis comparatio: quod si quis asserat, se adhibita regula, aut circumducto circino, lineam magis rectam, aut circulum magis perfectum posse describere, quam aliquem alium vi sola oculi et manus; is certe non admodum jactator fuerit. Quin hoc, quod dicimus, non solum in hoc nostro conatu primo et inceptivo locum habet; sed etiam pertinet ad eos, qui huic rei posthac incumbunt. Nostra enim via inveniendi scientias exæquat fere ingenia, et non multum excellentiæ eorum relinquit: cum omnia per certissimas regulas et demonstrationes transigat. Itaque hæc nostra (ut sæpe diximus) felicitatis ejusdam sunt potius, quam facultatis, et potius temporis partus quam ingenii. Est enim certe casus aliquis non minus in cogitationibus humanis, quam in operibus et factis.

## CXXIII.

Itaque dicendum de nobis ipsis quod ille per jocum dixit, præsertim cum tam bene rem secet: "Fieri non potest ut idem sentiant, qui aquam et qui vinum bibant." At cæteri homines, tam veteres

quam novi, liquorem hiberunt crudum in scientiis, tanquam aquam vel sponte ex intellectu manantem, vel per dialecticam tanquam per rotas ex puteo haustam: At nos liquorem bibimus et propinamus ex infinitis confectum uvis, iisque maturis et tempestivis, et per racemos quosdam collectis ac decerpitis; et subinde in torculari pressis, ac postremo in vase repurgatis et clarificatis. Itaque nil mirum, si nobis cum aliis non conveniat.

## CXXIV.

Occurret proculdubio et illud: nec metam aut scopum scientiarum a nobis ipsis (id quod in aliis reprehendimus) verum et optimum præfixum esse. Esse enim contemplationem veritatis, omni operum utilitate et magnitudine digniorem et celsiorem: longam vero istam et sollicitam moram in experientia et materia, et rerum particularium fluctibus, mentem veluti humo affigere, vel potius in Tartarum quoddam confusionis et perturbationis dejicere; atque abstractæ sapientiæ serenitate et tranquillitate (tanquam a statu multo diviniore) arcere et summovere. Nos vero huic rationi libenter assentimur; et hoc ipsum, quod innunt ac præoptant, præcipue atque ante omnia agimus. Etenim verum exemplar mundi in intellectu humano fundamus, quale invenitur, non quale cuiquam sua propria ratio digtaverit. Hoc autem perfici non potest, nisi facta mundi dissectione atque anatomia diligentissima. Modulos vero ineptos mundorum et tanquam simiolas, quas in philosophiis phantasie hominum extruxerunt omnino dissipandas edicimus. Sciant itaque homines (id quod superius diximus) quantum intersit inter humanæ mentis *idola* et divinæ mentis ideas. Illa enim nihil aliud sunt quam abstractiones ad placitum: hæ autem sunt vera signacula Creatoris super creaturas, prout in materia per lineas veras et exquisitas imprimuntur et terminantur. Itaque ipsissimæ res sunt (in hoc genere) veritas et utilitas: atque opera ipsa pluris facienda sunt, quatenus sunt veritatis pignora, quam propter vitæ commoda.

## CXXV.

Occurret fortasse et illud: nos tanquam actum agere; atque antiquos ipsos eandem, quam nos, viam tenuisse. Itaque verisimile putabit quispiam etiam nos, post tantum motum et molitionem, deventuros tandem ad aliquam ex illis philosophiis, quæ apud antiquos valuerunt. Nam et illos in meditationum suarum principiis vim et copiam magnam exemplorum et particularium paravisse; atque in commentarios per locos et titulos digressisse; atque inde philosophias suas et artes confecisse, et postea, re comperta, pronuntiassse; et exempla ad fidem et docendi lumen sparsim addidisse; sed particularium notas, et codicillos ac commentarios suos in lucem edere, supervacuum et molestum putasse: ideoque fecisse quod in ædificando fieri solet; nempe post ædificii structuram, machinas et scalas a conspectu amovisse. Neque aliter factum esse credere certe oportet. Verum nisi quis omnino oblitus fuerit eorum, quæ superius dicta sunt, huic objectione (aut scrupulo potius) facile respondebit. Formam

enim inquirendi et inveniendi apud antiquos et ipsi profiteamur, et scripta eorum præ se ferunt. Ea autem non alia fuit, quam ut ab exemplis quibusdam et particularibus (additis notionibus communibus, et fortasse portione nonnulla ex opinionibus receptis, quæ maxime plauerunt) ad conclusiones maxime generales sive principia scientiarum advolarent; ad quorum veritatem immotam et fixam, conclusiones inferiores per media educerent ac probarent; ex quibus artem constituebant. Tum demum si nova particularia et exempla mota essent et adducta, quæ placitis suis refragarentur; illa aut per distinctiones, aut per regularum suarum explanationes, in ordinem subtiliter redigebant; aut demum per exceptiones grosso modo summovebant: at rerum particularium non refragantium causas ad illa principia sua laboriose et pertinaciter accommodabant. Verum nec historia naturalis et experientia illa erat, quam fuisse oportebat (longe certe abest); et ista advolatio ad generalissima, omnia perdidit.

## CXXVI.

Occurret et illud; nos, propter inhibitionem quandam pronunciandi, et principia certe ponendi, donec per medios gradus ad generalissima rite perventum sit, suspensionem quandam iudicii tueri, atque ad *acatalepsiam* rem deducere. Nos vero non *acatalepsiam*, sed *eucatalepsiam* meditatur et proponimus: sensui enim non derogamus, sed ministramus; et intellectum non contemnimus, sed regimus. Atque melius est scire quantum opus sit, et tamen nos non penitus scire putare; quam penitus scire nos putare, et tamen nil eorum, quæ opus est, scire.

## CXXVII.

Etiam dubitabit quispiam potius quam objiciet; utrum nos de naturali tantum philosophia, an etiam de scientiis reliquis, logicis, ethicis, politicis, secundum viam nostram perficiendis, loquamur. At nos certe de universis hæc, quæ dicta sunt, intelligimus: atque quemadmodum vulgaris logica, quæ regit res per syllogismum, non tantum ad naturales, sed ad omnes scientias pertinet; ita et nostra, quæ procedit *per inductionem*, omnia complectitur. Tam enim historiam et tabulas inveniendi conficimus de ira, metu, et verecundia, et similibus; ac etiam de exemplis rerum civilium: nec minus de motibus mentalibus memoriæ, compositionis et divisionis, iudicii, et reliquorum; quam de calido et frigido, aut luce, aut vegetatione, aut similibus. Sed tamen cum nostra ratio *interpretandi*, post historiam præparatam et ordinatam, non mentis tantum motus et discursus (ut logica vulgaris) sed et rerum naturam intueatur; ita mentem regimus, ut ad rerum naturam se, aptis per omnia modis, applicare possit. Atque propterea multa et diversa in doctrina *interpretationis* præcipimus, quæ ad subjecti, de quo inquirimus, qualitatem et conditionem, modum inveniendi nonnulla ex parte applicant.

## CXXVIII.

At illud de nobis ne dubitare quidem fas sit; utrum nos philosophiam et artes et scientias, quibus

utimur, destruere et demoliri cupiamus: contra enim, earum et usum et cultum et honores libenter amplectimur. Neque enim ullo modo officimus, quin istæ, quæ invaluerunt, et disputationes alant, et sermones ornent, et ad professoria munera ac vitæ civilis compendia adhibeantur et valeant; denique tanquam numismata quedam, consensu inter homines recipiantur. Quinetiam significamus aperte ea, quæ nos adducimus, ad istas res non multum idonea futura; cum ad vulgi captum deduci omnino non possint, nisi per effecta et opera tantum. At hoc ipsum, quod de affectu nostro et bona voluntate erga scientias receptas dicimus, quam vere profiteamur, scripta nostra in publicum edita (præsertim libri "De Progressu Scientiarum") fidem faciant. Itaque id verbis amplius vincere non conabimur. Illud interim constanter et diserte monemus; his modis, qui in usu sunt, nec magnos in scientiarum doctrinis et contemplatione progressus fieri, nec illas ad amplitudinem operum deduci posse.

## CXIX.

Superest ut de finis excellentia pauca dicamus. Ea si prius dicta fuissent, votis similia videri potuissent: sed spe jam facta, et iniquis præjudiciis sublatis, plus fortasse ponderis habebunt. Quod si nos omnia perfecissemus et plane absolvissemus, nec alios in partem et consortium laborum subinde vocarem: etiam ab huiusmodi verbis abstinuissemus, ne acciperentur in prædicationem meriti nostri. Cum vero aliorum industria acuenda sit, et animi excitandi atque accendendi; consentaneum est, ut quedam hominibus in mentem redigamus.

Primo itaque, videtur inventorum nobilium introductio inter actiones humanas longe primas partes tenere; id quod antiqua secula iudicaverunt. Ea enim inventoribus divinos honores tribuerunt: iis autem, qui in rebus civilibus merebantur (quales erant urbium et imperiorum conditores, legislatores, patriarum a diuturnis malis liberatores, tyrannidum debellatores, et his similes) heroum tantum honores decreverunt. Atque certe si quis ea recte conferat, iustum hoc prisca seculi iudicium reperiet. Etenim inventorum beneficia ad universum genus humanum pertinere possunt; civilia ad certas tantummodo hominum sedes: hæc etiam non ultra paucas ætates durant; illa quasi perpetuis temporibus. Atque status emendatio in civilibus non sine vi et perturbatione plerumque procedit: at inventa beant, et beneficium deferunt absque alicujus injuria aut tristitia.

Etiam inventa quasi novæ creationes sunt, et divinatorum operum imitamenta, ut bene cecinit ille:

Primum frugiferos fœtus mortalibus ægris  
Dididerunt quondam præstanti nomine Athenæ:  
Et recreaverunt vitam, legesque rogarunt.

LUCRET. l. vi. 1.

Atque videtur notatu dignum in Salomone; quod cum imperio, auro, magnificentia operum, satellitio, famulitio, classe insuper, et nominis claritate, ac summa hominum admiratione floreret; tamen nihil horum delegerit sibi ad gloriam, sed ita pronuncia-verit: "Gloriam Dei esse, celare rem; gloriam regis, investigare rem."

Rursus (si placet) reputet quispiam, quantum

intersit inter hominum vitam in excultissima quæpiam Europæ provincia, et in regione aliqua novæ Indiæ maxime fera et barbara: ea tantum differre existimabit, ut merito *hominem homini deum esse*, non solum propter auxilium et beneficium, sed etiam per status comparationem, recte dici possit. Atque hoc non solum, non cœlum, non corpora; sed artes præstant.

Rursus, vim et virtutem et consequentias rerum inventarum notare juvat: quæ non in aliis manifestis occurrent, quam in illis tribus, quæ antiquis incognitæ; et quarum primordia, licet recentia, obscura et ingloria sunt: artis nimirum imprimendi, pulveris tormentarii, et acus nauticæ. Hæc enim tria, rerum faciem et statum in orbe terrarum mutaverunt: primum, in re literaria: secundum, in re bellica: tertium, in navigationibus; unde innumera rerum mutationes secutæ sunt, ut non imperium aliquod, non secta, non stella majorem efficaciam et quasi influxum super res humanas exercuisse videatur, quam ista mechanica exercuerunt.

Præterea non abs re fuerit, tria hominum ambitionis genera et quasi gradus distinguere. Primum eorum, qui propriam potentiam in patria sua amplificare cupiunt; quod genus vulgare est et degener. Secundum eorum, qui patriæ potentiam et imperium inter humanum genus amplificare nituntur; illud plus certe habet dignitatis, cupiditatis haud minus. Quod si quis humani generis ipsius potentiam et imperium in rerum universitatem instaurare et amplificare conetur; ea proculdubio ambitio (si modo ita vocanda sit) reliquis et sanior est et augustior. Hominis autem imperium in res, in solis artibus et scientiis ponitur: naturæ enim non imperatur, nisi pando.

Præterea, si unius alicujus particularis inventi utilitas ita homines affecerit, ut eum, qui genus humanum universum beneficio aliquo devincire potuerit, homine majorem putaverint; quanto celsius videbitur tale aliquid invenire, per quod alia omnia expeditè inveniri possint? Et tamen (ut verum omnino dicamus) quemadmodum, luci magnam habemus gratiam, quod per eam vias inire, artes exercere, legere, nos invicem dignoscere possimus, et nihilominus ipsa visio lucis res præstantior est et pulchrior, quam multiplex ejus usus: ita certe ipsa contemplatio rerum, prout sunt, sine superstitione aut impostura, errore aut confusione, in se ipsa magis digna est, quam universus inventorum fructus.

Postremo siquis depravationem scientiarum et artium ad malitiam et luxuriam, et similia, objecerit; id neminem moveat. Illud enim de omnibus mundanis bonis dici potest, ingenio, fortitudine, viribus, forma, divitiis, luce ipsa, et reliquis. Recuperet modo genus humanum jus suum in naturam, quod ei ex dotatione divina competit; et detur ei copia: usum vero recta ratio et sana religio gubernabit.

## CXXX.

Jam vero tempus est, ut artem ipsam *interpretandi* naturam proponamus: in qua licet nos utilisima et verissima præcepisse arbitremur; tamen necessitatem ei absolutam (ac si absque ea nil agi

possit) aut etiã perfectionem non attribuimus. Etenim in ea opinione sumus; si justam naturæ et experientiæ historiam præsto haberent homines, atque in ea sedulo versarentur; sibi que duas res imperare possent; unam, ut receptas opiniones et notiones deponerent; alteram, ut mentem a generalissimis et proximis ab illis, ad tempus cohiberent; fore ut etiã vi propria et genuina mentis, absque alia arte, in formam nostram *interpretandi* incidere

possent. Est enim *interpretatio* verum et naturale opus mentis, demptis iis, quæ obstant: sed tamen omnia certe per nostra præcepta erunt magis in pro-cinctu et multo firmiora.

Neque tamen illis nihil addi posse affirmamus: sed contra, nos, qui mentem respicimus, non tantum in facultate propria, sed quatenus copulatur cum rebus; artem inveniendi cum inventis adolescere posse, statuere debemus.

## LIBER SECUNDUS

# APHORISMORUM,

DE

## INTERPRETATIONE NATURÆ, SIVE DE REGNO HOMINIS.

### APHORISMUS I.

SUPER datum corpus novam naturam, sive novas naturas generare et superinducere, opus et intentio est humanæ potentiæ. Datæ autem naturæ formam, sive differentiam veram, sive naturam naturantem, sive fontem emanationis (ista enim vocabula habemus, quæ ad indicationem rei proxime accedunt) invenire, opus et intentio est humanæ scientiæ. Atque his operibus primariis subordinantur alia opera duo secundaria et inferioris notæ; priori, transformatio corporum concretorum de alio in aliud, intra terminos *possibiles*; posteriori, inventio, in omni generatione et motu, *latentis processus* continuati ab efficiente manifesto, et materia manifesta, usque ad formam inditam; et inventio similiter *latentis schematismi* corporum quiescentium et non in motu.

### II.

Quam infeliciter se habeat scientia humana, quæ in usu est, etiã ex illis liquet, quæ vulgo asseruntur. Recte ponitur; "Vere scire, esse per causas scire." Etiã non male constituuntur causæ quatuor; materia, forma, efficiens, et finis. At ex his causis finalis tantum abest ut prosit, ut etiã scientias corrumpat, nisi in hominis actionibus. Formæ inventio habetur pro desperata. Efficiens vero, et materia (quales quærentur et recipiuntur, remotæ scilicet, absque *latenti processu* ad formam) res perfunctoriæ sunt et superficiales, et nihili fere ad scientiam veram et activam. Neque tamen oblitus sumus, nos superius notasse et correxisse errorem mentis humanæ, in deferendo formas primas essentiæ. Licet enim in natura nihil vere existat præter corpora individua, edentia actus puros individuos ex lege; in doctrinis tamen, illa ipsa lex, ejusque inquisitio, et inventio, atque explicatio, pro fundamento est tam ad sciendum quam ad operandum. Eam autem *le-*

*gem*, ejusque *paragraphos*, formarum nomine intelligimus; præsertim cum hoc vocabulum invaluerit, et familiariter occurrat.

### III.

Qui causam alicujus naturæ (veluti albedinis aut caloris) in certis tantum subjectis novit; ejus scientia imperfecta est. Et qui effectum super certas tantum materias (inter eas, quæ sunt susceptibiles) inducere potest; ejus potentia pariter imperfecta est. At qui efficientem et materialem causam tantummodo novit (quæ causæ fluxæ sunt, et nihil aliud, quam vehicula et causæ formam deferentes in aliquibus) is ad nova inventa, in materia aliquatenus simili et præparata, pervenire potest; sed rerum terminos altius fixos non movet. At qui formas novit, is naturæ unitatem in materiis dissimillimis complectitur; itaque quæ adhuc facta non sunt, qualia nec naturæ vicissitudines, neque experimentales industriæ, neque casus ipse, in actum unquam perduxissent, neque cogitationem humanam subitura fuissent; detegere et producere potest. Quare ex formarum inventione sequitur contemplatio vera et operatio libera.

### IV.

Licet viæ ad potentiam, atque ad scientiam humanam, conjunctissimæ sint et fere eadem; tamen propter perniciosam et inveteratam consuetudinem versandi in abstractis, tutius omnino est ordiri et excitare scientias ab iis fundamentis, quæ in ordine sunt ad partem activam, atque ut illa ipsa partem contemplativam signet et determet. Videndum itaque est ad aliquam naturam super corpus datum generandam et superinducendam, quale quis præceptum, aut qualem quis directionem aut deductionem maxime optaret; idque sermone simplici et minime abstruso.

Exempli gratia; si quis argento cupiat superinducere flavum colorem auri, aut augmentum ponderis (servatis legibus materiæ) aut lapidi alicui non diaphano diaphaneitatem, aut vitro tenacitatem, aut corpori alicui non vegetabili vegetationem; videndum (inquam) est, quale quis præceptum aut deductionem potissimum sibi dari exoptet. Atque primo, exoptabit aliquis proculdubio sibi monstrari aliquid hujusmodi, quod opera non frustret, neque experimento fallat. Secundo, exoptabit quis aliquid sibi præscribi, quod ipsum non astringat et coërceat ad media quædam, et modos quosdam operandi particulares. Fortasse enim destituetur, nec habebit facultatem et commoditatem talia media comparandi et procurandi. Quod si sint et alia media, et alii modi (præter illud præceptum) progignendæ talis naturæ; ea fortasse ex iis erunt quæ sunt in operantis potestate; a quibus nihilominus per angustias præcepti excludetur, nec fructum capiet. Tertio, optabit aliquid sibi monstrari, quod non sit æque difficile, ac illa ipsa operatio, de qua inquiritur, sed propius accedat ad praxin.

Itaque de præcepto vero et perfecto operandi pronunciatum erit tale; "Ut sit certum, liberum, et disponens, sive in ordine ad actionem." Atque hoc ipsum idem est cum inventione formæ veræ. Etenim forma naturæ alicujus talis est, ut, ea posita, natura data infallibiliter sequatur. Itaque adest perpetuo, quando natura illa adest, atque eam universaliter affirmat, atque inest omni. Eadem forma talis est, ut ea amota, natura data infallibiliter fugiat. Itaque abest perpetuo, quando natura illa abest, eamque perpetuo abnegat, atque inest soli. Postremo, forma vera talis est, ut naturam datam ex fonte aliquo essentialiter deducat, quæ inest pluribus, et notior est naturæ (ut loquuntur) quam ipsa forma. Itaque de axioma vero et perfecto sciendi pronunciatum et præceptum tale est; "Ut inveniatur natura alia, quæ sit cum natura data convertibilis, et tamen sit limitatio naturæ notioris instar generis veri." Ista autem duo pronuntiata, activum et contemplativum, res eadem sunt; et quod in operando utilissimum, id in sciendo verissimum.

## v.

At præceptum sive axioma de transformatione corporum, duplicis est generis. Primum intuetur corpus, ut turmam sive conjugationem naturarum simplicium, ut in auro hæc conveniunt; quod sit flavum; quod sit ponderosum, ad pondus tale; quod sit malleabile, aut ductile, ad extensionem talem; quod non fiat volatile, nec deperdat de quanto suo per ignem; quod fluat fluore tali; quod separetur et solvatur modis talibus; et similiter de cæteris naturis, quæ in auro concurrunt. Itaque hujusmodi axioma rem deducit ex formis naturarum simplicium. Nam qui formas et modos novit superinducendi flavi, ponderis, ductilis, fixi, fluoris, solutionum, et sic de reliquis, et eorum graduationes et modos; videbit et curabit, ut ista conjungi possint in aliquo corpore, unde sequatur transformatio in aurum. Atque hoc genus aperiendi pertinet ad actionem primariam. Eadem enim est ratio generandi naturam unam aliquam simplicem, et plures; nisi quod arctetur magis

et restringatur homo in operando, si plures requirantur. propter difficultatem tot naturas coadunandi; quæ non facile conveniunt, nisi per vias naturæ tritas et ordinarias. Utcunque tamen dicendum est, quod iste modus operandi (qui naturas intuetur simplices, licet in corpore concreto) procedat ex iis, quæ in natura sunt constantia, et æterna, et catholica, et latas præbeat potentiæ humanæ vias, quales (ut nunc sunt res) cogitatio humana vix capere aut repræsentare possit.

At secundum genus axiomatis (quod a *latentis processus* inventionem pendet) non per naturas simplices procedit, sed per concreta corpora, quemadmodum in natura inveniuntur cursu ordinario. Exempli gratia, in casu ubi fit inquisitio, ex quibus initiis, et quo modo, et quo processu, aurum, aut aliud quodvis metallum, aut lapis generetur, a primis menstruis aut rudimentis suis, usque ad mineram perfectam: aut similiter, quo processu herbæ generentur, a primis concretionibus succorum in terra, aut a seminibus, usque ad plantam formatam, cum universa illa successione motus, et diversis et continuatis naturæ nixibus; similiter, de generatione ordinatim explicata animalium, ab initu ad partum; et similiter de corporibus aliis.

Enimvero neque ad generationes corporum tantum spectat hæc inquisitio, sed etiam ad alios motus et opificia naturæ. Exempli gratia; in casu ubi fit inquisitio de universa serie et continuatis actionibus alimentandi, a prima receptione alimenti ad assimilationem perfectam; aut similiter de motu voluntario in animalibus, a prima impressione imaginationis et continuatis nixibus spiritus, usque ad flexiones et motus artuum; aut de explicato motu linguæ, et laborum, et instrumentorum reliquorum, usque ad editionem vocum articulatarum. Nam hæc quoque spectant ad naturas concretas, sive collegiatis et in fabrica; et intuentur veluti consuetudines naturæ particulares et speciales, non leges fundamentales et communes, quæ constituunt formas. Veruntamen omnino fatendum est rationem istam videri expeditiorem, et magis sitam in propinquo; et spem injicere magis, quam illam primariam.

At pars operativa similiter, quæ huic parti contemplativæ respondet, operationem extendit et promovet, ab iis, quæ ordinario in natura inveniuntur, ad quædam proxima, aut a proximis non admodum remota; sed altiores et radicales operationes super naturam pendent utique ab axiomatibus primariis. Quinetiam ubi non datur homini facultas operandi, sed tantum sciendi, ut in cælestibus (neque enim conceditur homini operari in cælestia, aut ea immutare, aut transformare) tamen inquisitio facti ipsius, sive veritatis rei, non minus quam cognitio causarum et consensuum, ad primaria illa et catholica axioma de naturis simplicibus (veluti de natura rotationis spontanæ, attractionis sive virtutis magneticæ, et aliorum complurium, quæ magis communia sunt, quam ipsa cælestia) refertur. Neque enim speret aliquis terminare quæstionem, utrum in motu diurno revera terra aut cælum rotet; nisi naturam rotationis spontanæ prius comprehenderit.

## VI.

*Latens autem processus*, de quo loquimur, longe alia res est, quam animis hominum (qualiter nunc obsidentur) facile possit occurrere. Neque enim intelligimus mensuras quasdam, aut signa, aut scilicet processus, in corporibus spectabiles; sed plane processum continuatum, qui maxima ex parte sensum fugit.

Exempli gratia; in omni generatione et transformatione corporum, inquirendum, quid deperdat et evolet, quid maneat, quid accedat; quid dilatetur, quid contrahatur; quid uniat, quid separetur; quid continuetur, quid abscindatur; quid impellat, quid impediatur; quid dominetur, quid succumbat; et alia complura.

Neque hic rursus, hæc tantum in generatione aut transformatione corporum quærenda sunt; sed et in omnibus aliis alterationibus et motibus similiter inquirendum, quid antecedit, quid succedat; quid sit incitatus, quid remissus; quid motum præbeat, quid regat; et hujusmodi. Ista vero omnia scientiis (quæ nunc pinguissima Minerva, et prorsus inhabili, contexuntur) incognita sunt et intacta. Cum enim omnis actio naturalis per minima transigatur, aut saltem per illa, quæ sunt minima, quam ut sensum feriant; nemo se naturam regere aut vertere posse speret, nisi illa debito modo comprehenderit et noverit.

## VII.

Similiter, inquisitio et inventio *latentis schematismi* in corporibus res nova est; non minus quam inventio *latentis processus* et formæ. Versamur enim plane adhuc in atriis naturæ, neque ad interiora paramus aditum. At nemo corpus datum nova natura dotare, vel in novum corpus feliciter et apposite transmutare potest, nisi corporis alterandi aut transformandi bonam haberit notitiam. In modos enim vanos incurret, aut saltem difficiles et perversos, nec pro corporis natura, in quod operatur. Itaque ad hoc etiam via plane est aperienda et munienda.

Atque in anatomia corporum organicorum (qualia sunt hominis et animalium) opera sane recte et utiliter insumitur, et videtur res subtilis, et scrutinium naturæ bonum. At hoc genus anatomie spectabile est, et sensui subjectum, et in corporibus tantum organici locum habet. Verum hoc ipsum obvium quiddam est et in promptu situm, præ anatomia vera *schematismi latentis* in corporibus, quæ habentur pro similaribus; præsertim in rebus specificatis, et earum partibus, ut ferri, lapidis; et partibus similaribus plantæ, animalis, veluti radices, folii, floris, carnis, sanguinis, ossis, etc. At etiam in hoc genere non prorsus cessavit industria humana; hoc ipsum enim innuit separatio corporum similarium per distillationes, et alios solutionum modos, ut dissimilaritas compositi per congregationem partium homogenearum appareat. Quod etiam ex usu est, et facit ad id quod querimus; licet sæpius res fallax sit: quia complures naturæ separationi imputantur et attribuantur, ac si prius substitissent in composito; quas revera ignis et calor, et alii modi apertionum de

novo induunt, et superinducunt. Sed et hæc quoque parva pars est operis, ad inveniendum *schematismum* verum in composito; qui *schematismus* res est longe subtilior, et accuratior, et ab operibus ignis potius confunditur, quam eruitur et elucecit.

Itaque facienda est corporum separatio et solutio; non per ignem certe, sed per rationem et *inductionem* veram, cum experimentis auxiliariis; et per comparisonem ad alia corpora, et reductionem ad naturas simplices, et earum formas, quæ in composito conveniunt et complicantur; et transeundum plane a Vulcano ad Minervam, si in animo sit veras corporum texturas et *schematismos* (unde omnis occulta atque, ut vocant, specifica proprietas et virtus in rebus pendet; unde etiam omnis potentis alterationis et transformationis norma educitur) in lucem protrahere.

Exempli gratia; inquirendum, quid sit in omni corpore spiritus, quid essentiae tangibilis; atque ille ipse spiritus, utrum sit copiosus et turgeat, an jejunos et paucos; tenuis aut crassior; magis æreus aut igneus; acris aut deses; exilis aut robustus; in progressu aut in regressu; abscissus aut continuatus; consentiens cum externis et ambientibus, aut dissentiens, etc. Et similiter, essentia tangibilis (quæ non pauciores recipit differentias, quam spiritus) atque ejus villi et fibræ, et omnimoda textura. Rursus autem collocatio spiritus per corpoream molem, ejusque pori, meatus, venæ, et cellulæ, et rudimenta sive tentamenta corporis organici, sub eadem inquisitionem cadunt. Sed et in his quoque, atque adeo in omni *latentis schematismi* inventionem, lux vera et clara ab axiomatibus primariis immittitur, quæ certe caliginem omnem et subtilitatem discutit.

## VIII.

Neque propterea res deducetur ad atomum, qui præsupponit vacuum et materiam non fluxam (quorum utrumque falsum est) sed ad particulas veras, quales inveniuntur. Neque rursus est, quod exhorreat quisquam istam subtilitatem, ut inexplicabilem; sed contra, quo magis vergit inquisitio ad naturas simplices, eo magis omnia erunt sita in plano et perspicuo; translato negotio a multiplici in simplex; et ab incommensurabili ad commensurabile; et a surdo ad computabile; et ab infinito et vago ad definitum et certum; ut fit in elementis literarum, et tonis concentuum. Optime autem cedit inquisitio naturalis, quando physicum terminatur in mathematico. At rursus multitudinem aut fractiones nemo reformidet: in rebus enim quæ per numeros transiguntur, tam facile quis posuerit aut cogitaverit millenarium, quam unum; aut millesimam partem unius, quam unum integrum.

## IX.

Ex duobus generibus axiomatum, quæ superius posita sunt, oritur vera divisio philosophiæ et scientiarum; translatis vocabulis receptis (quæ ad indicationem rei proxime accedunt) ad sensum nostrum. Videlicet, ut inquisitio *formarum*, quæ sunt (ratione certe, et sua lege) æternæ et immobiles, et constituat *metaphysicam*; inquisitio vero *efficientis*, et *materiæ*, et *latentis processus*, et *latentis schematismi* (quæ

omnia cursum naturæ communem et ordinarium, non leges fundamentales et æternas respiciunt) constituat *physicam*; atque his subordinentur similiter practicæ duæ; *physicæ mechanica*; *metaphysicæ* (perpurgato nomine) *magia*, propter latas ejus vias, et majus imperium in naturam.

## X.

Posito itaque doctrinæ scopo, pergendum ad præcepta; idque ordine minime perverso aut perturbato. Atque indicia de *interpretatione naturæ* complectuntur partes in genere duas; primam, de educendis aut excitandis axiomatibus ab experientia; secundam, de deducendis aut derivandis experimentis novis ab axiomatibus. Prior autem trifariam dividitur; in tres nempe ministraciones; ministracionem ad sensum; ministracionem ad memoriam; et ministracionem ad mentem sive rationem.

Primo enim paranda est *historia naturalis* et *experimentalis*, sufficiens et bona; quod fundamentum rei est; neque enim fingendum aut excogitandum, sed inveniendum, quid natura faciat, aut ferat.

*Historia* vero *naturalis* et *experimentalis* tam varia est et sparsa, ut intellectum confundat et disgreget, nisi sistatur et comparet ordine idoneo. Itaque formandæ sunt *tabulæ* et *co-ordinationes instantiarum*, tali modo et instructione, ut in eas agere possit intellectus.

Id quoque licet fiat; tamen intellectus sibi permissus, et sponte movens, incompetens est et inhabilis ad officium axiomatum, nisi regatur et muniatur. Itaque tertio, adhibenda est *inductio* legitima et vera, quæ ipsa *clavis* est *interpretationis*. Incipiendum autem est a fine, et retro pergendum ad reliqua.

## XI.

Inquisitio formarum sic procedit; super naturam datam primo facienda est *comparentia ad intellectum omnium instantiarum* notarum, quæ in eadem natura conveniunt, per materias licet dissimillimas. Atque hujusmodi collectio facienda est historice, absque contemplatione præfestina, aut subtilitate aliqua majore. Exempli gratia; in inquisitione de forma calidi.

## INSTANTIÆ CONVENIENTES IN NATURA CALIDI.

1. Radii solis, præsertim æstate et meridie.
2. Radii solis reflexi et constipati, ut inter montes, aut per parietes, et maxime omnium in speculis comburentibus.
3. Meteora ignita.
4. Fulmina comburentia.
5. Eructationes flammaram ex cavis montium, etc.
6. Flamma omnis.
7. Ignita solida.
8. Balnea calida naturalia.
9. Liquida ferventia aut calefacta.
10. Vapores et fumi ferventes, atque aër ipse, qui fortissimum et furentem suscipit calorem, si concludatur; ut in reverberatoriis.
11. Tempestates aliquæ sudæ per ipsam constitutionem aëris, non habita ratione temporis anni.

12. Aër conclusus et subterraneus in cavernis nonnullis, præsertim hieme.
13. Omnia villosa, ut lana, pelles animalium, et plumagines, habent nonnihil teporis.
14. Corpora omnia, tam solida quam liquida, et tam densa quam tenuia (qualis est ipse aër) igni ad tempus approximata.
15. Scintillæ ex silice et chalybe per fortem percussionem.
16. Omne corpus fortitur attritum, ut lapis, lignum, pannus, etc. adeo ut temones, et axes rotarum, aliquando flammam concipiant; et mos excitandi ignis apud Indos occidentales fuerit per attritionem.
17. Herbæ virides et humidæ simul conclusæ et contrusæ, ut rosæ, pisæ in corbibus; adeo ut fœnum, si repositum fuerit madidum, sæpe concipiat flammam.
18. Calx viva, aqua aspersa.
19. Ferrum, cum primo dissolvitur per aquas fortes in vitro, idque absque ulla admotione ad ignem; et stannum similiter, etc. sed non adeo intense.
20. Animalia, præsertim et perpetuo per interiora; licet in insectis calor ob parvitatem corporis non deprehendatur ad tactum.
21. Fimus equinus, et hujusmodi excrementa animalium recentia.
22. Oleum forte sulphuris et vitrioli exequitur opera caloris, in linteo adurendo.
23. Oleum origani, et hujusmodi, exequitur opera caloris in adurendis ossibus dentium.
24. Spiritus vini fortis et bene rectificatus exequitur opera caloris; adeo ut si albumen ovi in eum injiciatur, concreseat et albeascat, fere in modum albuminis cocti; et panis injectus torrefiat et incrustetur, ad modum panis tostii.
25. Aromata et herbæ calidæ, ut dracunculus, nasturtium vetus, etc. licet ad manum non sint calida (nec integra, nec pulveres eorum) tamen ad linguam et palatum parum masticata, percipiuntur calida, et quasi adurentia.
26. Acetum forte, et omnia acida, in membro ubi non sit epidermis, ut in oculo, lingua, aut aliqua alia parte vulnerata, et cute detecta, dolorem cient, non multum discrepantem ab eo, qui inducitur a calido.
27. Etiam frigora acria et intensa inducunt sensum quandam ustionis:

“Nam Boreæ penetrabile frigus adurit.”

## 28. Alia.

Hanc *Tabulum essentialis et presentis* appellare consuevimus.

## XII.

Secundo, facienda est *comparentia* ad intellectum *instantiarum*, quæ natura data privantur; quia forma (ut dictum est) non minus abesse debet, ubi natura data abest; quam adesse, ubi adest. Hoc vero infinitum esset in omnibus.

Itaque subjungenda sunt negativa affirmativis, et privationes insipientiæ tantum in illis subjectis, quæ sunt maxime cognata illis alteris, in quibus natura

data inest et comparet. Hanc *tabulam declinationis* sive *absentiae in proximo* appellare consuevimus.

INSTANTIAE IN PROXIMO, QUAE PRIVANTUR NATURA CALIDI.

Ad instantiam iam affirmativam. Instantia lae negativa vel subiectivo.

1. Lunae et stellarum, et cometarum radii, non inveniuntur calidi ad tactum: quietiam observari solent acerrima frigora in pleniluniis. At stellae fixae majores, quando sol eas subit, aut iis approximatur, existimantur fervores solis augere et intendere; ut fit, cum sol sistitur in leone, et diebus canicularibus.

Ad 2am.

2. Radii solis in media (quam vocant) regione aëris non calefaciunt; cujus ratio vulgo non male redditur; quia regio illa nec satis appropinquat ad corpus solis, unde radii emanant, nec etiam ad terram, unde reflectuntur. Atque hoc liquet ex fastigiis montium (nisi sint praëalti) ubi nives perpetuo durant. Sed contra notatum est a nonnullis, quod in cacumine Picus de Tenariph, atque etiam in Andis Peruviae, ipsa fastigia montium nive destituta sint; nivibus jacentibus tantum inferius in ascensu. Atque insuper aër illis ipsis verticibus montium deprehenditur minime frigidus, sed tenuis tantum et acer; adeo ut in Andis pungat et vulneret oculos per nimiam acrimoniam, atque etiam pungat os ventriculi, et inducat vomitum. Atque ab antiquis notatum est, in vertice Olympi tantam fuisse aëris tenuitatem, ut necesse fuerit illis, qui eo ascenderant, secum deferre spongas aceto et aqua madefactas, easque ad os et nares subinde apponere; quia aër ob tenuitatem non sufficiebat respirationi. In quo vertice etiam relatum est, tantam fuisse serenitatem et tranquillitatem a pluviiis, et nivibus, et ventis; ut sacrificantibus literæ descriptæ digito in cineribus sacrificiorum super aram Jovis, manerent in annum proximum absque ulla perturbatione. Atque etiam hodie ascendentes ad verticem Picus de Tenariph, eo vadunt noctu et non interdiu; et paulo post ortum solis monentur et excitantur a ducibus suis, ut festinent descendere, propter periculum (ut videtur) a tenuitate aëris, ne solvat spiritus et suffocet.

Ad instantiam iam affirmativam.

3. Reflexio radiorum solis, in regionibus prope circulos polares, admodum debilis et inefficax invenitur in calore; adeo ut Belgæ, qui hibernarunt in Nova Zembla, cum expectarent navis suae liberationem et deobstructionem a glaciali mole (quæ eam obsederat) per initia mensis Julii spe sua frustrati sint, et coacti scaphæ se committere. Itaque radii solis directi videntur parum posse, etiam super terram planam; nec reflexi etiam, nisi multiplicentur et uniantur; quod fit cum sol magis vergit ad perpendicularum; quia tum incidentia radiorum facit angulos acutiores; ut lineæ radiorum sint magis in propinquo: ubi contra in magnis obliquitatibus solis anguli sunt valde obtusi, et proinde lineæ radiorum magis

distantes. Sed interim notandum est, multas esse posse operationes radiorum solis, atque etiam ex natura calidi, quæ non sunt proportionatæ ad tactum nostrum; adeo ut respectu nostri non operantur usque ad calefactionem, sed respectu aliorum nonnullorum corporum exequantur opera calidi.

4. Fiat hujusmodi experimentum. Accipiat speculum fabricatum contra ac fit in speculis comburentibus; et interponatur inter manum et radios solis; et fiat observatio, utrum minuatur calorem solis, quemadmodum speculum comburens eundem auget et intendit. Manifestum est enim quoad radios opticos, prout fabricatur speculum in densitate inæquali respectu medii et laterum, ita apparere simulacra magis diffusa, aut magis contracta. Itaque idem videndum in calore.
5. Fiat experimentum diligenter, utrum per specula comburentia, fortissime et optime fabricata, radii lunæ possint excipi et colligi in aliquem vel minimum gradum teporis. Is vero gradus teporis, si fortasse nimis subtilis et debilis fuerit, ut ad tactum percipi et deprehendi non possit; configendum erit ad vitra illa, quæ indicant constitutionem aëris calidam aut frigidam; ita ut radii lunæ per speculum comburens incidant et jaciantur in summitatem vitri hujusmodi; atque tum notetur, si fiat depressio aquæ per teporem.
6. Practicetur etiam vitrum comburens super calidum, quod non sit radiosum aut luminosum; ut ferri et lapidis calefacti, sed non igniti; aut aquæ ferventis, aut similium: et notetur, utrum fiat augmentum et intentio calidi, ut in radiis solis.
7. Practicetur etiam speculum comburens in flamma communi.
8. Cometarum (si et illos numerare inter meteora libuerit) non deprehenditur constans aut manifestus effectus in augendis ardoribus anni, licet siccitates sæpius inde sequi notatæ sint. Quietiam trabes, et columnæ lucidæ, et chasmata, et similia, apparent sæpius temporibus hibernis, quam æstivis; et maxime per intensissima frigora, sed conjuncta cum siccitatibus. Fulmina tamen et coruscationes et tonitrua raro eveniunt hieme, sed sub tempus magnorum fervorum. At stellæ (quas vocant) cadentes, existimantur vulgo magis constare ex viscosa aliqua materia splendida et accensa, quam esse naturæ igneæ fortioris. Sed de hoc inquiretur ulterius.
9. Sunt quædam coruscationes, quæ præbent lumen, sed non urunt: esse vero semper fiunt sine tonitru.
10. Eructationes et eruptiones flammarum inveniuntur non minus in regionibus frigidis, quam calidis; ut in Islandia et Greenlandia: quemadmodum et arbores per regiones frigiditas magis sunt quandoque inflammabiles, et magis picæ ac resinosæ, quam per regiones calidas: ut fit in abiete, pinu, et reliquis: verum in quali situ et natura soli hujus-

modi eruptiones fieri soleant, ut possimus *affirmativæ* subjungere *negativam*, non satis quæsitum est.

Ad 6am. 11. Omnis flamma perpetuo est calida magis aut minus, neque omnino subjungitur *negativa*. Et tamen referunt ignem fatuum (quem vocant) qui etiam aliquando impingitur in parietem, non multum habere caloris; fortasse instar flammæ spiritus vini, quæ clemens et lenis est. Sed adhuc lenior videtur ea flamma, quæ in nonnullis historiis fidis et gravibus invenitur apparuisse circa capita et comas puerorum et virginum; quæ nullo modo comas adurebat, sed molliter circum eas trepidabat. Atque certissimum est, circa equum in itinere sudantem, noctu et suda tempestate, apparuisse quandoque coruscationem quandam absque manifesto calore. Atque paucis abhinc annis notissimum est, et pro miraculo quasi habitum, gremiale cujusdam puellæ paulo motum aut fricatum coruscasse; quod fortasse factum est ob alumen aut sales, quibus gremiale tinctum erat, paulo crassius hærentia et incrustata, et ex fricatione fracta. Atque certissimum est, saccharum omne, sive conditum (ut vocant) sive simplex, modo sit durius, in tenebris fractum aut cultello scalptum coruscare. Similiter aqua marina et salsa, noctu interdum invenitur remis fortiter percussa coruscare. Atque etiam in tempestatibus spuma maris fortiter agitata noctu coruscat; quam coruscationem Hispani pulmonem marinum vocant. De illa flamma autem, quam antiqui nautæ vocabant Castorem et Pollucem, et moderni Focum Sancti Ermi, qualem calorem habeat, non satis quæsitum est.

Ad instantiam 7am affirmativam.

12. Omne ignitum ita ut vertatur in ruborem igneum, etiam sine flamma perpetuo calidum est; neque huic *affirmativæ* subjungitur *negativa*; sed quod in proximo est, videtur esse lignum putre; quod splendet noctu, neque tamen deprehenditur calidum: et squamæ piscium putrescentes, quæ etiam splendent noctu, nec inveniuntur ad tactum calidæ; neque etiam corpus cicindelæ aut muscæ (quam vocant luciolum) calidum ad tactum deprehenditur.

Ad 8am. 13. De balneis calidis, in quo situ et natura soli emanare soleant, non satis quæsitum est: itaque non subjungitur *negativa*.

Ad 9am. 14. Liquidis ferventibus subjungitur *negativa* ipsis liquidi in natura sua. Nullum enim invenitur liquidum tangibile, quod sit in natura sua et maneat constanter calidum; sed superinducitur ad tempus tantum calor, ut natura ascititia; adeo ut quæ potestate et operatione sunt maxime calida, ut spiritus vini, olea aromatum chemica, etiam olea vitrioli et sulphuris, et similia, quæ paulo post adurunt, ad primum tactum sint frigida. Aqua autem balneorum naturalium, excepta in vas aliquod, et separata a fontibus suis, defervescit perinde ac aqua igne calefacta. At verum est corpora oleosa ad tactum paulo minus esse frigida, quam

aquea; ut oleum minus quam aqua, sericum minus quam linteum. Verum hoc pertinet ad *Tabulam graduum* de frigido.

15. Similiter vaporis fervido subjungitur *negativa* naturæ ipsius vaporis, qualis apud nos invenitur. Etenim exhalationes ex oleosis, licet facile inflammabiles, tamen non inveniuntur calidæ, nisi a corpore calido recenter exhalaverint.

Ad 10am. 16. Similiter aëri ipsi ferventi subjungitur *negativa* natura aëris ipsius. Neque enim invenitur apud nos aër calidus; nisi fuerit aut conclusus, aut attritus, aut manifeste calefactus a sole, igne, aut aliquo alio corpore calido.

Ad 11am. 17. Subjungitur *negativa* tempestatum frigidarum magis, quam pro ratione temporis anni, quæ eveniunt apud nos flante Euro et Borea: quemadmodum et contrariæ tempestatates eveniunt flante Austro et Zephyro. Etiam inclinatio ad pluviam (præsertim temporibus hiemalibus) comitatur tempestatem tepidam: at gelu contra frigidam.

Ad 12am. 18. Subjungitur *negativa* aëris conclusi in cavernis tempore æstivo. At de aëre concluso omnino diligentius inquirendum. Primo enim non absque causa in dubitationem venit, qualis sit natura aëris, quatenus ad calidum et frigidum in natura sua propria. Recipit enim aër calidum manifesto ex impressione cælestium; frigidum autem fortasse ab expiratione terræ; et rursus in media (quam vocant) regione aëris, a vaporibus frigidis et nivibus: ut nullum judicium fieri possit de aëris natura per aërem, qui foras est et sub dio, sed verius foret judicium per aërem conclusum. Atqui opus est etiam, ut aër concludatur in tali vase et materia, quæ nec ipsa imbuat aërem calido vel frigido ex vi propria, nec facile admittat vim aëris extranei. Fiat itaque experimentum per ollam figuralem multiplici corio obductam ad muniendam ipsam ab aëre extraneo, facta mora per tres aut quatuor dies in vase bene occluso: deprehensio autem fit post apertionem basis, vel per manum, vel per vitrum graduum ordine applicatum.

Ad 13am. 19. Subest similiter dubitatio, utrum tepor in lana, et pellibus, et plumis, et hujusmodi, fiat ex quodam exili calore inherente, quatenus excernuntur ab animalibus; aut etiam ob pinguedinem quandam et oleositatem, quæ sit naturæ congruæ cum tepore; vel plane ob conclusionem et fractionem aëris, ut in articulo præcedente dictum est. Videtur enim omnis aër, abscissus a continuitate aëris forinseci, habere nonnihil teporis. Itaque fiat experimentum in fibrosis, quæ sunt ex lino; non ex lana, aut plumis, aut serico, quæ excernuntur ab animalibus. Notandum est etiam, omnes pulveres (ubi manifesto includitur aër) minus esse frigidos, quam corpora integra ipsorum: quemadmodum etiam existimamus, omnem spumam (utpote quæ aërem contineat) minus esse frigidam, quam liquorem ipsam.

- Ad 14am. 20. Huic non subjungitur *negativa*. Nihil enim reperitur apud nos sive tangibile, sive spiritale, quod admotum igni non excipiat calorem. In eo tamen differunt, quod alia excipiant calorem citius, ut aër, oleum, et aqua; alia tardius, ut lapis et metalla. Verum hoc pertinet ad *tabulam graduum*.
- Ad 15am. 21. Huic instantiæ non subjungitur *negativa* alia, quam ut bene notetur, non excitari scintillas ex silice et chalybe, aut alia aliqua substantia dura, nisi ubi excutiuntur minutæ aliquæ ex ipsa substantia lapidis vel metalli; neque aërem attritum unquam per se generare scintillas, ut vulgo putant: quin et ipsæ illæ scintillæ ex pondere corporis igniti magis vergunt deorsum, quam sursum, et in extinctione redeunt in quandam fuliginem corpoream.
- Ad 16am. 22. Existimamus huic instantiæ non subjungi *negativam*. Nullum enim invenitur apud nos corpus tangibile, quod non ex attritione manifesto caleat; adeo ut veteres somniarent non in esse cœlestibus aliam viam aut virtutem calefaciendi, nisi ex attritione aëris per rotationem rapidam et incitamentum. Verum in hoc genere ulterius inquirendum est, utrum corpora, quæ emittantur ex machinis (qualia sunt pilæ ex tormentis) non ex ipsa percussione contrahant aliquem gradum caloris; adeo ut, postquam deciderint, inveniantur nonnihil calida. At aër motus magis infrigidat, quam calefacit; ut in ventis, et foliis, et flatu oris contracti. Verum hujusmodi motus non est tam rapidus, ut excitet calorem; et fit secundum totum, non per particulas; ut mirum non sit, si non generet calorem.
- Ad instantiam 17am. affirmativam. 23. Circa hanc instantiam facienda est inquisitio diligentior. Videntur enim herbæ et vegetabilia viridia et humida aliquid habere in se occulti caloris. Ille vero calor tam tenuis est, ut in singulis non percipiatur ad tactum: verum postquam illa adunata sint et conclusa, ut spiritus ipsorum non expiret in aërem, sed se invicem foveat; tum vero oritur calor manifestus, et nonnunquam flamma in materia congrua.
- Ad 18am. 24. Etiam circa hanc instantiam diligentior facienda est inquisitio. Videtur enim calx viva, aqua aspersa, concipere calorem, vel propter unionem caloris, qui antea distrahebatur (ut ante dictum est de herbis conclusis) vel ob irritationem et exasperationem spiritus ignei ab aqua, ut fiat quidam conflictus et antiperistasis. Utra vero res sit in causa, facilius apparebit, si loco aquæ immittatur oleum. Olenum enim æque ac aqua valet ad unionem spiritus inclusi, sed non ad irritationem. Etiam faciendum est experimentum latius tam in cineribus et calcibus diversorum corporum, quam per immissionem diversorum liquorum.
- Ad 19am. 25. Huic instantiæ subjungitur *negativa* aliorum metallorum, quæ sunt magis mollia et fluxa. Et enim bracteolæ auri, solutæ in liquorem per aquam regis, nullum dant calorem ad tactum in dissolutione: neque similiter plumbum in aqua forti. Neque etiam ar-

- gentum vivum (ut memini) sed argentum ipsum parum excitat caloris, atque etiam cuprum (ut memini) sed magis manifesto stannum, atque omnium maxime ferrum et chalybs; quæ non solum fortem excitant calorem in dissolutione, sed etiam violentam ebullitionem. Itaque videtur calor fieri per conflictum, cum aquæ fortes penetrant et fodiunt, et divellunt partes corporis, et corpora ipsa resistunt. Ubi vero corpora facilius cedunt, vix excitat calor.
26. Caroli animalium nulla subjungitur *negativa*, nisi insectorum (ut dictum est) ob parvitatem corporis. Etenim in piscibus collatis ad animalia terrestria magis notatur gradus caloris, quam privatio. In vegetabilibus autem et plantis nullus percipitur gradus caloris ad tactum, neque in lacrymis ipsorum, neque in medullis recenter apertis. At in animalibus magna reperitur diversitas caloris, tum in partibus ipsorum (alius est enim calor circa cor, alius in cerebro, alius circa externa) tum in accidentibus eorum, ut in exercitatione vehementi, et febribus.
27. Huic instantiæ vix subjungitur *negativa*. Quinetiam excrementa animalium non recentia manifeste habent calorem potentialem, ut cernitur in impinguatione soli.
28. Liquores (sive aquæ vocentur, sive olea) qui habent magnam et intensam acrimoniam, exequantur opera caloris in divulsione corporum, atque adustione post aliquam moram; sed tamen ad ipsum tactum manus non sunt calidi ab initio. Operantur autem secundum analogiam et poros corporis, cui adjunguntur. Aqua enim regis aurum solvit, argentum minime: at contra, aqua fortis argentum solvit, aurum minime: neutrum autem solvit vitrum; sic de cæteris.
29. Fiat experimentum spiritus vini in lignis, ac etiam in butyro, aut cera, aut pice; si forte per calorem suum ea aliquatenus liquefaciat. Etenim instantia vicissima quarta ostendit potestatem ejus imitativam caloris in incrustationibus: itaque fiat similiter experimentum in liquefactionibus. Fiat etiam experimentum per vitrum graduum sive calendare, quod concavum sit in summitate sua per exterius; et immittatur in illud concavum exterius spiritus vini bene rectificatus, cum operculo, ut melius contineat calorem suum; et notetur utrum per calorem suum faciat aquam descendere.
30. Aromata, et herbæ acres ad palatum, multo magis sumptæ interius, percipiuntur calida. Videndum itaque in quibus aliis materiis exequantur opera caloris. Atque referunt nautæ, cum cumuli et massæ aromatum diu conclusæ subito aperiuntur, periculum instare illis, qui eas primo agitant et extrahunt, a febribus et inflammationibus spiritus. Similiter fieri poterit experimentum, utrum pulveres hujusmodi aromatum aut herbarum non arefaciant laridum et carnem suspensam super ipsos, veluti fumus ignis.
31. Acrimonia sive penetratio inest tam frigidis, qualia sunt acetum et oleum

Ad 20am.

Ad 21am.

Ad 22am,  
et 23am.

Ad 24am.

Ad 25am.

Ad 26am.

vitrioli, quam calidus, qualia sunt oleum origani, et similia. Itaque similiter et in animatis cient dolorem, et in non animatis divellunt partes et consumunt. Neque huic instantiæ subjungitur *negativa*. Atque in animatis nullus reperitur dolor, nisi cum quodam sensu caloris.

Ad instantiam  
27am affirmam.  
viam.

32. Communes sunt complures actiones et calidi et frigidi, licet diversa admodum ratione. Nam et nives puerorum manus videntur paulo post urere; et frigora tuentur carnes a putrefactione, non minus quam ignis; et calores contrahunt corpora in minus, quod faciunt et frigida. Verum hæc et similia opportunius est referre ad inquisitionem de frigido.

### XIII.

Tertio facienda est *comparentia ad intellectum* instantiarum, in quibus natura, de qua fit inquisitio, inest secundum magis et minus; sive facta comparatione incrementi et decrementi in eodem subjecto, sive facta comparatione ad invicem in subjectis diversis. Cum enim forma rei sit ipsissima res; neque differat res a forma aliter, quam differunt apparatus et existens, aut exterius et interius, aut in ordine ad hominem et in ordine ad universum; omnino sequitur, ut non recipiatur aliqua natura pro vera forma, nisi perpetuo decrescat, quando natura ipsa decrescet, et similiter perpetuo augeatur, quando natura ipsa augeatur. Hanc itaque tabulam, *Tabulam graduum* sive *Tabulam comparativæ* appellare consuevimus.

#### TABULA GRADUUM, SIVE COMPARATIVÆ IN CALIDO.

Primo itaque dicemus de iis, quæ nullum prorsus gradum caloris habent ad tactum; sed videntur habere potentialem tantum quandam calorem, sive dispositionem et præparationem ad calidum. Postea demum descendemus ad ea, quæ sunt actu sive ad tactum calida, eorumque fortitudines et gradus.

1. In corporibus solidis et tangibilibus non invenitur aliquid quod in natura sua calidum sit originaliter. Non enim lapis aliquis, non metallum, non sulphur, non fossile aliquod, non lignum, non aqua, non cadaver animalis, inveniuntur calida. Aquæ autem calidæ in balneis videntur caleferi per accidens, sive per flammam aut ignem subterraneum, qualis ex *Ætna* et montibus aliis compluribus evomitur; sive ex conflictu corporum, quemadmodum calor fit in ferri et stanni dissolutionibus. Itaque gradis caloris in inanimatis, quatenus ad tactum humanum, nullus est; veruntamen illa gradu frigoris differunt: non enim æque frigidum est lignum ac metallum. Sed hoc pertinet ad tabulam graduum in frigido.
2. Attamen quoad potentiales calores et præparationes ad flammam, complura inveniuntur inanimata admodum disposita, ut sulphur, naphtha, petroleum.
3. Quæ antea incaluerunt, ut fœmus equinus ex animali, aut calx, aut fortasse cinis, aut fuligo ex igne, reliquias latentes quasdam caloris prioris

retinent. Itaque sunt quædam distillationes et separationes corporum, per sepulturam in fimo equino; atque excitatur calor in calce per asperionem aquæ; ut jam dictum est.

4. Inter vegetabilia non invenitur aliqua planta sive pars plantæ (veluti lacryma aut medulla) quæ sit ad tactum humanum calida. Sed tamen (ut superius dictum est) herbæ virides conclusæ calescunt; atque ad interiorem tactum, veluti ad palatum, aut ad stomachum, aut etiam ad exteriores partes post aliquam moram (ut in emplastris et unguentis) alia vegetabilia inveniuntur calida, alia frigida.
5. Non invenitur in partibus animalium, postquam fuerint mortuæ aut separatæ, aliquid calidum ad tactum humanum. Nam neque fœmus equinus ipse, nisi fuerit conclusus et sepultus, calorem retinet. Sed tamen omnis fœmus habere videtur calorem potentialem, ut in agrorum impinguatione. Et similiter, cadavera animalium hujusmodi habent latentem et potentialem calorem; adeo ut in cæmeteris, ubi quotidie fiunt sepulturae, terra calorem quandam occultum colligat, qui cadaver aliquod recenter impositum consumit longe citius, quam terra pura. Atque apud orientales traditur inveniri textile quoddam tense et molle, factum ex avium plumagine, quod vi innata butyrum solvat et liquefaciat, in ipso leviter involutum.
6. Quæ impinguant agros, ut fœmi omnis generis, creta, arena maris, sal, et similia, dispositionem nonnullam habent ad calidum.
7. Omnis putrefactio in se rudimenta quædam exilis caloris habet, licet non hucusque, ut ad tactum percipiatur. Nam nec ea ipsa, quæ putrefacta solvuntur in animalcula, ut caro, caseus, ad tactum percipiuntur calida; neque lignum putre, quod noctu splendet, deprehenditur ad tactum calidum. Calor autem in putridis quandoque æ prodit per odores tetros et fortes.
8. Primus itaque caloris gradus ex iis, quæ ad tactum humanum percipiuntur calida, videtur esse calor animalium, qui bene magnam habet gradum latitudinem; nam infimus gradus (ut in insectis) vix ad tactum deprehenditur; summus autem gradus vix attingit ad gradum caloris radiorum solis in regionibus et temporibus maxime ferventibus; neque ita acris est, quin tolerari possit a manu. Et tamen referunt de Constantio, aliisque nonnullis, qui constitutionis et habitus corporis admodum sicci fuerunt, quod acutissimis febribus correpti ita incaluerint, ut manum admotam aliquantulum urere visi sint.
9. Animalia, ex motu et exercitatione, ex vino et epulis, ex venere, ex febribus ardentibus, et ex dolore, augentur calore.
10. Animalia in accessibus febrium intermittentium, a principio, frigore et horrore corripuntur; sed paulo post majorem in modum incalescunt; quod etiam faciunt a principio in causonibus, et febribus pestilentialibus.
11. Inquiratur ulterius de calore comparato in diversis animalibus, veluti piscibus, quadrupedibus, serpentibus, avibus; atque etiam secundum spe-

- cies ipsorum, ut in leone, milvio, homine: nam ex vulgari opinione, pisces per interiora minus calidi sunt, aves autem maxime calidæ; præsertim columbæ, accipitres, struthiones.
12. Inquiratur ulterius de calore comparato in eodem animali secundum partes et membra ejus diversa. Nam lac, sanguis, sperma, ova, inveniuntur gradu modico tepida, et minus calida quam ipsa caro exterior in animali, quando movetur aut agitur. Qualis vero gradus sit caloris in cerebro, stomacho, corde, et reliquis, similiter adhuc non est quæsitum.
  13. Animalia omnia, per hiemem et tempestates frigidas, secundum exterius frigent; sed per interiora etiam magis esse calida existimantur.
  14. Calor cœlestium etiam in regione calidissima, atque temporibus anni et diei calidissimis, non eum gradum caloris obtinet, qui vel lignum aridissimum, vel stramen, vel etiam linteum ustum incendat aut adurat, nisi per specula comburentia roboretur; sed tamen e rebus humidis vaporem excitare potest.
  15. Ex traditione astronomorum ponuntur stellæ aliæ magis, aliæ minus calidæ. Inter planetas enim post Solem ponitur Mars calidissimus; deinde Jupiter, deinde Venus; ponuntur autem tanquam frigidi, Luna, et deinde omnium maxime Saturnus. Inter fixas autem ponitur calidissimus Sirius; deinde Cor leonis sive Regulus; deinde Canicula, &c.
  16. Sol magis calefacit, quo magis vergit ad perpendicularum sive zenith; quod etiam credendum est de aliis planetis, pro modulo suo caloris; exempli gratia, Jovem magis apud nos calefacere, cum positus sit sub Cancro, aut Leone, quam sub Capricorno, aut Aquario.
  17. Credendum est, solem ipsum et planetas reliquos magis calefacere in perigæis suis, propter propinquitatem ad terram, quam in apogæis. Quod si eveniat, ut in aliqua regione sol sit simul in perigæo, et propius ad perpendicularum; necesse est, ut magis calefaciat, quam in regione ubi sol sit similiter in perigæo, sed magis ad obliquum. Adeo ut comparatio exaltationis planetarum notari debeat, prout ex perpendicularo aut obliquitate participet, secundum regionum varietatem.
  18. Sol etiam, et similiter reliqui planetæ, calefacere magis existimantur, cum sint in proximo ad stellæ fixas majores; veluti cum Sol ponitur in Leone, magis vicinus fit Cordi leonis, Caudæ leonis, et Spicæ virginis, et Sirio et Caniculæ, quam cum ponitur in Cancro; ubi tamen magis sistitur ad perpendicularum. Atque credendum est, partes cœli majorem infundere calorem (licet ad tactum minime perceptibilem) quo magis ornate sint stellis, præsertim majoribus.
  19. Omnino calor cœlestium augetur tribus modis; videlicet ex perpendicularo, ex propinquitate sive perigæo, et ex conjunctione sive consortio stellarum.
  20. Magnum omnino invenitur intervallum inter calorem animalium, ac etiam radiorum cœlestium (prout ad nos deferuntur) atque flammam, licet lenissimam, atque etiam ignita omnia, atque insuper liquores, aut ærem ipsum, majorem in modum ab igne calefactum. Etenim flamma spiritus vini, præsertim rara, nec constipata, tamen potis est stramen, aut linteum, aut papyrus incendere; quod nunquam faciet calor animalis vel solis, absque speculis comburentibus.
  21. Flammæ autem et ignitorum plurimi sunt gradus in fortitudine et debilitate caloris. Verum de his nulla est facta diligens inquisitio; ut necesse sit ista leviter transmittere. Videtur autem ex flammis illa ex spiritu vini esse mollissima; nisi forte ignis fatuus, aut flammæ, seu coruscationes ex sudoribus animalium, sint molliores. Hanc sequi opinamur flammam ex vegetabilibus levibus et porosis, ut stramine, scirpis, et foliis arefactis; a quibus non multum differre flammam ex pilis aut plumis. Hanc sequitur fortasse flamma ex lignis, præsertim iis, quæ non multum habent ex resina aut pice; ita tamen ut flamma ex lignis, quæ parva sunt mole (quæ vulgo colligantur in fasciculos) lenior sit, quam quæ fit ex truncis arborum et radicibus. Id quod vulgo experiri licet in fornacibus, quæ ferrum excoquant, in quibus ignis ex fasciculis et ramis arborum non est admodum utilis. Hanc sequitur (ut arbitramur) flamma ex oleo, et sevo, et cera, et hujusmodi oleosis et pinguibus, quæ sunt sine magna acrimonia. Fortissimus autem calor reperitur in pice et resina; atque adhuc magis in sulphure, et caphura, et naphtha, et petroleo, et salibus (postquam materia cruda eruperit) et in horum compositionibus, veluti pulvere tormentario, igne Græco (quem vulgo ignem ferum vocant) et diversis ejus generibus, quæ tam obstinatam habent calorem, ut ab aquis non facile extinguantur.
  22. Existimamus etiam flammam, quæ resultat ex nonnullis metallis imperfectis, esse valde robustam et acrem. Verum de istis omnibus inquiratur ulterius.
  23. Videtur autem flamma fulminum potentiorum has omnes flammæ superare; adeo ut ferrum ipsum perfectum aliquando colliqverit in guttas; quod flammæ illæ alteræ facere non possunt.
  24. In ignitis autem diversi sunt etiam gradus caloris, de quibus etiam non facta est diligens inquisitio. Calorem maxime debilem existimamus esse ex linteo usto, quali ad flammæ excitationem uti solemus; et similiter ex ligno illo spongioso, aut funiculis arefactis, qui ad tormentorum accensionem adhibentur. Post hunc sequitur carbo ignitus ex lignis et anthracibus, atque etiam ex lateribus ignitis, et similibus. Ignitorum autem vehementissime calida existimamus esse metalla ignita, ut ferrum, et cuprum, et cætera. Verum de his etiam facienda est ulterior inquisitio.
  25. Inveniuntur ex ignitis nonnulla longe calidiora, quam nonnullæ ex flammis. Multo enim calidius est et magis adurens ferrum ignitum, quam flamma spiritus vini.
  26. Inveniuntur etiam ex illis, quæ ignita non sunt, sed tantum ab igne calefacta, sicut aquæ ferven-

- tes, et aër conclusus in reverberatoris, nonnulla, quæ superant calore multa ex flammis ipsis et ignitis.
27. Motus auget calorem; ut videre est in follibus et flatu; adeo ut duriora ex metallis non solvantur aut liqueant per ignem mortuum aut quietum, nisi flatu excitetur.
28. Fiat experimentum per specula comburentia, in quibus (ut memini) hoc fit; ut si speculum ponatur (exempli gratia) ad distantiam spithamæ ab objecto combustibili, non tantopere incendat aut adurat, quam si positum fuerit speculum (exempli gratia) ad distantiam semispithamæ, et gradatim et lente trahatur ad distantiam spithamæ. Conus tamen et unio radiorum eadem sunt, sed ipse motus auget operationem caloris.
29. Existimantur incendia illa, quæ fiunt flante vento forti, majores progressus facere adversus ventum, quam secundum ventum; quia scilicet flamma resilit motu pernicioso, vento remittente, quam procedit, vento impellente.
30. Flamma non emicat aut generatur, nisi detur aliquid concavi in quo flamma movere possit et ludere; præterquam in flammis flatuosis pulveris tormentarii, et similibus, ubi compressio et incarceration flammæ auget ejus furorem.
31. Incus per malleum calescit admodum; adeo ut si incus fuerit laminæ tenuioris, existimemus illam per fortes et continuos ictus mallei posse rubescere, ut ferrum ignitum; sed de hoc fiat experimentum.
32. At in ignitis, quæ sunt porosa, ita ut detur spatium ad exercendum motum ignis, si cohibeatur hujusmodi motus per compressionem fortem, statim extinguitur ignis; veluti cum linteum ustum, aut filum ardens candelæ aut lampadis, aut etiam carbo aut pruna ardens, comprimitur per pressorium, aut pedis conculcationem, aut hujusmodi, statim cessant operationes ignis.
33. Approximatio ad corpus calidum auget calorem, pro gradu approximationis; quod etiam fit in lumine: nam quo propius collocatur objectum ad lumen, eo magis est visibile.
34. Unio calorum diversorum auget calorem, nisi facta sit commistio corporum. Nam focus magnus et focus parvus in eodem loco, nonnihil invicem augent calorem; at aqua tepida immissa in aquam ferventem refrigerat.
35. Mora corporis calidi auget calorem. Etenim calor perpetuo transiens et emanans commisceatur cum calore præinexistente, adeo ut multiplicet calorem. Nam focus non æque calefacit cubiculum per moram semi-horæ, ac si idem focus duret per horam integram. At hoc non facit lumen; etenim lampas aut candela, in aliquo loco posita, non magis illuminat per moram diurnam, quam statim ab initio.
36. Irritatio per frigidum ambiens, auget calorem; ut in focis videre est per gelu acre. Quod existimamus fieri non tantum per conclusionem et contractionem caloris, quæ est species unionis; sed per exasperationem; veluti cum aër aut baculum violenter comprimitur aut flectitur, non ad punctum loci prioris resilit, sed ulterius in contrarium.
- Itaque fiat diligens experimentum, per baculum vel simile aliquid impissum in flammam, utrum ad latera flammæ non uratur citius, quam in medio flammæ.
37. Gradus autem in susceptione caloris sunt complures. Atque primo omnium notandum est, quam parvus et exilis calor, etiam ea corpora, quæ caloris minime omnium sunt susceptiva, immutat tamen et nonnihil calefaciat. Nam ipse calor manus globulum plumbi aut alienjus metalli paulisper detentum nonnihil calefacit. Adeo facile, et in omnibus transmittitur et excitatur calor, corpore nullo modo ad apparentiam immutato.
38. Facillime omnium corporum apud nos et excipit et remittit calorem aër: quod optime cernitur in vitris calendaribus. Eorum confectio est talis; Accipiat vitrum ventre concavo, collo tenui et oblongo; resupinetur et demittatur hujusmodi vitrum, ore deorsum verso, ventre sursum, in aliud vasculum vitreum ubi sit aqua, tangendo fundum vasculi illius recipientis, extremo ore vitri immissi; et incumbat paululum vitri immissi colulum ad os vitri recipientis, ita ut stare possit; quod ut commodius fiat, apponatur parum cere ad os vitri recipientis, ita tamen ut non penitus obturetur os ejus, ne ob defectum aëris succedentis impediatur motus, de quo jam dicetur, qui est admodum facilis et delicatus.
- Oportet autem ut vitrum demissum, antequam inseratur in alterum, calefiat ad ignem a parte superiori, ventre scilicet. Postquam autem fuerit vitrum illud collocatum, ut diximus, recipiet et contrahet se aër (qui dilatatus erat per calefactionem) post moram sufficientem pro extinctione illius ascititii caloris, ad talem extensionem sive dimensionem, qualis erit aëris ambientis aut communis tunc temporis, quando immittitur vitrum; atque attrahet aquam in sursum ad hujusmodi mensuram. Debet autem appendi charta angusta et oblonga, et gradibus (quot libuerit) interstincta. Videbis autem, prout tempestas diei incalescit aut frigescit, aërem se contrahere in angustius per frigidum, et extendere se in latius per calidum; id quod conspicietur per aquam ascendentem quando contrahitur aër, et descendentem sive depressam quando dilatatur aër. Sensus autem aëris, quatenus ad calidum et frigidum, tam subtilis est et exquisitus, ut facultatem tactus humani multum superet; adeo ut solis radius aliquis, aut calor anhelitus, multo magis calor manus, super vitri summitatem positus, statim deprimat aquam manifesto. Attamen existimamus, spiritum animalium magis adhuc exquisitum sensum habere calidi et frigidi, nisi quod a mole corporea impediatur et hebetetur.
39. Post aërem existimamus corpora esse maxime sensitiva caloris ea, quæ a frigore recenter immutata sint et compressa, qualia sunt nix, et glacies; ea enim leni aliquo tempore solvi incipiunt et colliquari. Post illa sequitur fortasse argentum vivum. Post illud sequuntur corpora pingua, ut oleum, butyrum, et similia; deinde lignum; deinde aqua. Postremo lapides et metalla,

quæ non facile calefiunt, præsertim interius. Illa tamen calorem semel susceptum diutissime retinent; it aut later, aut lapis, aut ferrum ignitum, in pelvim aquæ frigidæ immissum et demersum, per quartam partem horæ (plus minus) retineat calorem, ita ut tangi non possit.

40. Quo minor est corporis moles, eo citius per corpus calidum approximatum incalescit; id quod demonstrat omnem calorem apud nos esse corpori tangibili quodammodo adversum.
41. Calidum, quatenus ad sensum et tactum humanum, res varia est et respectiva; adeo ut aqua tepida, si manus frigore occupetur, sentiatur esse calida; sin manus incaluerit, frigida.

## XIV.

Quam inopes simus historiæ, quivis facile advertet, cum in *tabulis* superioribus, præterquam quod loco historiæ probatæ et instantiarum certarum nonnullam traditiones et relationes inseramus (semper tamen adjecta dubiæ fidei et auctoritatis nota) sæpenumero etiam hisce verbis, *Fiat experimentum, vel Inquiratur ulterius, uti cogamur.*

## XV.

Atque opus et officium harum trium tabularum, *Comparentiam instantiarum ad intellectum* vocare consuevimus. Facta autem *comparentia*, in opere ponenda est ipsa *inductio*. Inveniendæ enim, super *comparentiam* omnium et singularum instantiarum, natura talis, quæ cum natura data perpetuo adit, absit; atque crescat, et decrescat; sitque (ut superius dictum est) limitatio naturæ magis communis. Hoc si mens jam ab initio facile tentet affirmative (quod sibi permissa semper facere solet) occurrunt phantasmata, et opinabilia, et notionalia male terminata, et axiomata quotidie emendanda; nisi libeat (scholarum more) pugnare pro falsis. Ea tamen proculdubio erunt meliora aut pravora, profacultate et robore intellectus qui operatur. At omnino Deo (formarum inditori et opifici) aut fortasse angelis et intelligentiis competit, formas per affirmationem immediate nosse, atque ab initio contemplationem. Sed certe supra hominem est; cui tantum conceditur, procedere primo per *negativas*, et postremo loco desinere in *affirmativas*, post omnimodam exclusionem.

## XVI.

Itaque naturæ faciendæ est prorsus solutio et separatio; non per ignem certe, sed per mentem, tanquam ignem divinum. Est itaque *inductionis* veræ opus primum (quatenus ad inveniendæ formas) *rejectionis* sive *exclusivæ* naturarum singularum, quæ non inveniuntur in aliqua instantia, ubi natura data adest; aut inveniuntur in aliqua instantia, ubi natura data abest; aut inveniuntur in aliqua instantia crescere, cum natura data decrescat; aut decrescere, cum natura data crescat. Tum vero post *rejectionem* et *exclusivam* debitis modis factam, secundo loco (tanquam in fundo) manebit (abeuntibus in fumum opinionibus volatilibus) forma affirmativa, solida, et vera, et bene terminata. Atque hoc breve dictu est, sed per multas ambages ad hoc pervenitur. Nos

autem nihil fortasse ex iis, quæ ad hoc faciunt, prætermittemus.

## XVII.

Cavendum autem est, et monendum quasi perpetuo, ne cum tantæ partes formis videntur a nobis tribui, trahantur ea, quæ dicimus, ad formas eas, quibus hominum contemplationes et cogitationes hactenus assueverunt.

Primo enim, de formis copulatis, quæ sunt (ut diximus) naturarum simplicium conjugia ex cursu communi universi, ut leonis, aquilæ, rosæ, auri, et hujusmodi, impræsentiarum non loquimur. Tempus enim erit de iis tractandi, cum ventum fuerit ad *latentes processus* et *latentes schematismos*, eorumque inventionem, prout reperiuntur in substantiis (quas vocant) seu naturis concretis.

Rursus vero non intelligantur ea, quæ dicimus (etiam quatenus ad naturas simplices) de formis et ideis abstractis, aut in materia non determinatis, aut male determinatis. Nos enim cum de formis loquimur, nil aliud intelligimus, quam leges illas et determinationes actus puri, quæ naturam aliquam simplicem ordinant et constituunt; ut calorem, lumen, pondus, in omnimoda materia et subjecto susceptibili. Itaque eadem res est forma calidi aut forma luminis, et lex calidi sive lex luminis; neque vero a rebus ipsis et parte operativa unquam nos abstrahimus aut recedimus. Quare cum dicimus (exempli gratia) in inquisitione formæ caloræ, "Rejice tenuitatem," aut "Tenuitas non est ex forma caloræ;" idem est ac si dicamus, "Potest homo superinducere calorem in corpus densum;" aut contra, "Potest homo auferre aut arcere calorem a corpore tenui."

Quod si cuiquam videantur etiam formæ nostræ habere nonnihil abstracti, quod misceant et conjungant heterogenia (videntur enim valde esse heterogenea calor cœlestium, et ignis; rubor fixus in rosa, aut similibus; et apparens in iride, aut radiis opalii, aut adamantis; mors ex summersione, ex crematione, ex punctura gladii, ex apoplexia, ex atrophia; et tamen conveniunt ista in natura calidi, ruboris, mortis) is se habere intellectum norit, consuetudine et integralitate rerum, et opinionibus captum et detentum. Certissimum enim est, ista, utcumque heterogenea at aliena, coire in formam, sive legem eam quæ ordinat calorem, aut ruborem, aut mortem; nec emancipari posse potentiam humanam, et liberari a naturæ cursu communi, et expandi et exaltari ad efficientiam novam, et modos operandi novos, nisi per revelationem et inventionem hujusmodi formarum; et tamen post istam unionem naturæ, quæ est res maxime principalis, de naturæ divisionibus et venis, tam ordinariis, quam interioribus et verioribus, suo loco postea dicetur.

## XVIII.

Jam vero proponendum est exemplum *exclusionis* sive *rejectionis* naturarum, quæ per *tabulas comparentiæ* reperiuntur non esse ex forma calidi; illud interim monendo, non solum sufficere singulas *tabulas* ad *rejectionem* alicujus naturæ, sed etiam unamquamque ex instantiis singularibus in illis contentis. Manifestum enim est ex iis quæ dicta sunt, omnem

*instantiam contradictoriam* destruere opinabile de forma. Sed nihilominus quandoque, perspicuitatis causa, et ut usus *tabularum* clarius demonstretur, *exclusivam* duplicamus aut repetimus.

EXEMPLUM EXCLUSIVÆ, SIVE REJECTIONIS NATURARUM A FORMA CALIDI.

1. Per radios solis, rejice naturam elementarem.
2. Per ignem communem, et maxime per ignes subterraneos (qui remotissimi sunt, et plurimum intercluduntur a radiis cœlestibus) rejice naturam cœlestem.
3. Per calefactionem omnigenum corporum (hoc est, mineralium, vegetabilium, partium exteriorum animalium, aquæ, olei, aëris, et reliquorum) ex approximatione sola ad ignem, aut aliud corpus calidum; rejice omnem varietatem, sive subtiliorem texturam corporum.
4. Per ferrum et metalla ignita, quæ calefaciunt alia corpora, nec tamen omnino pondere aut substantia minuuntur; rejice inditionem sive mixturam substantiæ alterius calidi.
5. Per aquam ferventem, atque aërem, atque etiam per metalla, et alia solida calefacta, sed non usque ad ignitionem sive ruborem; rejice lucem aut lumen.
6. Per radios lunæ et aliarum stellarum (excepto sole) rejice etiam lucem et lumen.
7. Per comparativam ferri igniti et flammæ spiritus vini (ex quibus ferrum ignitum plus habet calidi et minus lucidi, flamma autem spiritus vini plus lucidi et minus calidi) rejice etiam lucem et lumen.
8. Per aurum et alia metalla ignita, quæ densissimi sunt corporis secundum totum; rejice tenuitatem.
9. Per aërem, qui invenitur ut plurimum frigidus, et tamen manet tenuis; rejice etiam tenuitatem.
10. Per ferrum ignitum, quod non intumescit mole, sed manet intra eandem dimensionem visibilem; rejice motum localem, aut expansivum, secundum totum.
11. Per dilatationem aëris in vitris calendariis et similibus, qui movetur localiter et expansive manifeste, neque tamen colligit manifestum augmentum caloris; rejice etiam motum localem, aut expansivum secundum totum.
12. Per facilem tepefactionem omnium corporum, absque aliqua destructione aut alteratione notabili; rejice naturam destructivam, aut inditionem violentam alicujus naturæ novæ.
13. Per consensum et conformitatem operum similium, quæ eduntur a calore et a frigore; rejice motum tam expansivum quam contractivum, secundum totum.
14. Per accensionem caloris ex attritione corporum; rejice naturam principalem. Naturam principalem vocamus eam, quæ positiva reperitur in natura, nec causatur a natura præcedente.

Sunt et aliæ naturæ; neque enim tabulas conficimus perfectas, sed exempla tantum.

Omnis et singulæ naturæ prædictæ non sunt ex

forma calidi. Atque ab omnibus naturis prædictis liberatur homo in operatione super calidum.

XIX.

Atque in *exclusiva* jacta sunt fundamenta *inductionis* veræ, quæ tamen non perficitur donec sistatur in affirmativa. Neque vero ipsa *exclusiva* ullo modo perfecta est, neque adeo esse potest sub initiis. Est enim *exclusiva* (ut plane liquet) *rejectionis* naturarum simplicium. Quod si non habeamus adhuc bonas et veras notiones naturarum simplicium, quomodo rectificari potest *exclusiva*? At nonnullæ ex prædictis (veluti notio naturæ elementaris, notio naturæ cœlestis, notio tenuitatis) sunt notiones vagæ, nec bene terminatæ. Itaque nos, qui nec ignari sumus, nec oblitii, quantum opus aggrediamur (vis. ut faciamus intellectum humanum rebus et naturæ parem) nullo modo acquiescimus in his, quæ adhuc præcepimus; sed et rem in ulterius provehimus, et fortiora auxilia in usum intellectus machinamur et ministramus; quæ nunc subjungemus. Et certe in *interpretatione naturæ* animus omnino taliter est præparandus et formandus, ut et sustineat se in gradibus debitis certitudinis, et tamen cogitet (præsertim sub initiis) ea, quæ adsunt, multum pendere ex iis, quæ supersunt.

XX.

Attamen quia citius emergit veritas ex errore, quam ex confusione, utile putamus, ut fiat permissio intellectui, post tres tabulas *comparentiæ primæ* (quales posuimus) factas et pensitatas, accingendi se et tentandi opus *interpretationis naturæ* in affirmativa; tam ex instantiis tabularum, quam ex iis, quæ alias occurrunt. Quod genus tentamenti, *permissionem intellectus*, sive *interpretationem inchoatam*, sive *vindemiationem primam* appellare consuevimus.

VINDEMIATIO PRIMA DE FORMA CALIDI.

Animadvertendum autem est, formam rei inesse (ut ex iis, quæ dicta sunt, plane liquet) instantiis universis et singulis, in quibus res ipsa inest; aliter enim forma non esset: itaque nulla plane dari potest *instantia* contradictoria. Attamen longe magis conspicua invenitur forma et evidens in aliquibus *instantiis*, quam in aliis; in iis videlicet, ubi minus cohibita est natura formæ, et impedita, et redacta in ordinem, per naturas alias. Hujusmodi autem instantias, *elucescentias*, vel *instantias ostensivas* appellare consuevimus. Pergendum itaque est ad *vindemiationem ipsam primam* de forma calidi.

Per universas et singulas *instantias*, natura, cujus limitatio est calor, videtur esse motus. Hoc autem maxime ostenditur in flamma, quæ perpetuo movetur; et in liquoribus ferventibus aut bullientibus, qui etiam perpetuo moventur. Atque ostenditur etiam in incitatione sive incremento caloris facto per motum; ut in folliibus et ventis: de quo vide *Instant. 29. Tab. 3.* Atque similiter in aliis modis motus: de quibus vide *Instant. 28. et 31. Tab. 3.* Rursus ostenditur in extinctione ignis et caloris per omnem fortem compressionem, quæ frænât et cessare facit

motum: de qua vide *Instant. 30. et 32. Tab. 3.* Ostenditur etiam in hoc, quod omne corpus destruitur, aut saltem insigniter alteratur, ab omni igne et calore forti ac vehementi. Unde liquido constat, fieri a calore tumultum, et perturbationem, et motum acrem, in partibus internis corporis; qui sensim vergit ad dissolutionem.

Intelligatur hoc, quod diximus de motu (nempe, ut sit instar generis ad calorem) non quod calor generet motum, aut quod motus generet calorem (licet et hæc in aliquibus vera sint) sed quod ipsissimus calor, sive *quid ipsum* caloris sit motus, et nihil aliud: limitatus tamen per *differentias*, quas mox subjungemus, postquam nonnullas cautiones adjecerimus ad evitandum æquivocum.

Calidum ad sensum, res respectiva est, et in ordine ad hominem, non ad universum; et ponitur recte ut effectus caloris tantum in spiritum animalem: quinetiam in seipso res varia est, cum idem corpus (prout sensus prædisponitur) inducat perceptionem tam calidi quam frigidi: ut patet per *Instant. 41. Tab. 3.*

Neque vero communicatio caloris, sive natura ejus transitiva, per quam corpus ad motum corpori calido incalescit, confundi debet cum forma calidi. Aliud enim est calidum; aliud calefactivum. Nam per motum attritionis inducitur calor absque aliquo calido præcedente, unde excluditur calefactivum a forma calidi. Atque etiam ubi calidum efficitur per approximationem calidi, hoc ipsum non fit ex forma calidi; sed omnino pendet a natura altiore et magis communi; viz. ex natura assimilationis sive multiplicationis sui: de qua faciendâ est separatim inquisitio.

At notio ignis plebeia est, et nihil valet: composita enim est ex concursu, qui fit calidi et lucidi in aliquo corpore; ut in flamma communi, ex corporibus accensis usque ad ruborem.

Remoto itaque omni æquivoco, veniendum jam tandem est ad *differentias* veras, quæ limitant motum, et constituunt eum in formam calidi.

Prima igitur *differentia* ea est, quod calor sit motus *expansivus*, per quem corpus nititur ad dilatationem sui, et recipiendi se in majorem sphaeram sive dimensionem, quam prius occupaverat. Hæc autem *differentia* maxime ostenditur in flamma; ubi fumus sive halitus pinguis manifesto dilatatur et aperit se in flammam.

Ostenditur etiam in omni liquore fervente, qui manifesto intumescit, insurgit, et emittit bullas; atque urget processum expandendi se, donec vertatur in corpus longe magis extensum et dilatatum, quam sit ipse liquor; viz. in vaporem, aut fumum, aut aërem.

Ostenditur etiam in omni ligno et combustibili; ubi fit aliquando exudatio, at semper evaporatio.

Ostenditur etiam in colliquatione metallorum; quæ (cum sint corporis compactissimi) non facile intumescunt et se dilatant: sed tamen spiritus eorum, postquam fuerit in se dilatatus, et majorem adeo dilatationem concupierit, tradit plane et agit partes crassiores in liquidum. Quod si etiam calor

fortius intendatur, solvit et vertit multum ex iis in volatile.

Ostenditur etiam in ferro aut lapidibus; quæ licet non liquefiant aut fundantur, tamen emolliuntur: quod etiam fit in baculis ligni, quæ calefacta paululum in cineribus calidis fiunt flexibilia.

Optime autem cernitur iste motus in aëre, qui per exiguum calorem se dilatat continuo et manifesto: ut per *Instant. 38. Tab. 3.*

Ostenditur etiam in natura contraria frigidi. Frigus enim omne corpus contrahit et cogit in angustius; adeo ut per intensa frigora clavi excidant ex parietibus, æra dissiliant, vitrum etiam calefactum et subito positum in frigido dissiliat et frangatur. Similiter aër per levem in frigidationem recipit se in angustius: ut per *Instant. 38. Tab. 3.* Verum de his fusiùs dicetur in inquisitione de frigido.

Neque mirum est, si calidum et frigidum edant complures actiones communes (de quo vide *Instant. 32. Tab. 2.*) cum inveniantur duæ ex sequentibus *differentiis* (de quibus mox dicemus) quæ competunt utrique naturæ; licet in hac *differentia* (de qua nunc loquimur) actiones sint ex diametro oppositæ: calidum enim dat motum expansivum et dilatantem, frigidum autem dat motum contractivum et coëuntem.

Secunda *differentia* est modificatio prioris; hæc videlicet, quod calor sit motus *expansivus* sive versus circumferentiam: hac lege tamen, ut una feratur corpus sursum. Dubium enim non est, quin sint motus complures mixti. Exempli gratia: sagitta aut spiculum simul et progrediendo rotat, et rotando progreditur. Similiter et motus caloris simul est et expansivus, et latio in sursum.

Hæc vero *differentia* ostenditur in forcipe, aut bacillo ferreo immisso in ignem: quia si immittatur perpendiculariter, tenendo manum superius, cito manum adurit; sin ex latere aut inferius, omnino tardius.

Conspicua etiam est in *distillationibus* per descensorium; quibus utuntur homines ad flores delicatiores, quorum odores facile evanescent. Nam hoc reperit industria, ut collocent ignem non subter sed supra, ut adurat minus. Neque enim flamma tantum vergit sursum, sed etiam omne calidum.

Fiat autem experimentum hujus rei in contraria natura frigidi; viz. utrum frigus non contrahat corpus descendendo deorsum; quemadmodum calidum dilatat corpus ascendendo sursum. Itaque adhibeantur duo bacilla ferrea, vel duo tubi vitrei, quoad cætera pares; et calefiant non nihil; et ponatur spongia cum aqua frigida, vel nix, subter unam, et similiter super alteram. Existimamus enim celeriore fore refrigerationem ad extremitates in eo bacillo, ubi nix ponitur supra, quam in eo, ubi nix ponitur subter: contra ac fit in calido.

Tertia *differentia* ea est; ut calor sit motus, non expansivus uniformiter secundum totum, sed expansivus per particulas minores corporis; et simul cohibitus, ut repulsus, et reverberatus; adeo ut

induat motum alternativum, et perpetuo trepidantem, et tentantem, et nitentem, et ex repercussione irritatum; unde furor ille ignis et caloris ortum habet.

Ista vero *differentia* ostenditur maxime in flamma et liquoribus bullientibus; quæ perpetuo trepidant, et in parvis portionibus tument, et rursus subsidunt.

Ostenditur etiam in iis corporibus, quæ sunt tam duræ compagis, ut calefacta aut ignita non intumescant, aut dilatentur mole; ut ferrum ignitum, in quo calor est acerrimus.

Ostenditur etiam in hoc, quod per frigidissimas tempestates focus ardeat acerrime.

Ostenditur etiam in hoc, quod cum extenditur aër in vitro calendari absque impedimento aut repulsione, uniformiter scilicet et æqualiter; non percipiatur calor. Etiam in ventis conclusis, licet erumpant vi maxima, tamen non percipitur calor insignis; quia scilicet motus fit secundum totum, absque motu alternante in particulis. Atque ad hoc fiat experimentum, utrum flamma non urat acrius versus latera, quam in medio flammæ.

Ostenditur etiam in hoc, quod omnis ustio transigatur per minutos poros corporis, quod uritur; adeo ut ustio subruat, et penetret, et focidet, et stimulet: perinde ac si essent infinitæ cuspides acus. Itaque ex hoc illud etiam fit, quod omnes aquæ fortes (si proportionatæ sint ad corpus, in quod agunt) edant opera ignis, ex natura sua corrodeute et pungente.

Atque ista differentia (de qua nunc dicimus) communis est cum natura frigidi; in quo cohibetur motus contractivus, per renitentiam expandendi; quemadmodum in calido cohibetur motus expansivus, per renitentiam contrahendi.

Itaque sive partes corporis penetrent versus interius, sive penetrent versus exterius, similis est ratio; licet impar admodum sit fortitudo: quia non habemus hic apud nos in superficie terræ aliquid, quod sit impense frigidum: Vide *Instant. 27. Tab. 9.*

Quarta *differentia* est modificatio prioris: hæc scilicet, quod modus ille stimulationis aut penetrationis debeat esse nonnihil rapidus et minime lentus; atque fiat etiam per particulas, licet minutas; tamen non ad extremam subtilitatem, sed quasi majusculas.

Ostenditur hæc *differentia* in comparatione operum quæ edit ignis, cum iis quæ edit tempus sive ætas. Ætas enim sive tempus arefacit, consumit, subruit, et incinerat, non minus quam ignis; vel potius longe subtilius: sed quia motus ejusmodi est lentus admodum, et per particulas valde exiles, non percipitur calor.

Ostenditur etiam in comparatione dissolutionum ferri et auri. Aurum enim dissolvitur absque calore excitato; ferrum autem cum vehementi excitatione caloris, licet simili fere intervallo quoad tempus. Quia scilicet in auro, ingressus aquæ separationis est clemens, et subtiliter insinuans, et cessio partium auri facilis: at in ferro, ingressus

est asper, et cum conflictu, et partes ferri habent obstinationem majorem.

Ostenditur etiam aliquatenus in gangrænis nonnullis et mortificationibus carniū; quæ non excitant magnum calorem aut dolorem, ob subtilitatem putrefactionis.

Atque hæc sit *prima vindemiatio* sive *interpretatio inchoata* de forma calidi, facta per *permissionem intellectus*.

Ex *vindemiatione* autem ista *prima*, forma sive definitio vera caloris (ejus, qui est in ordine ad universum, non relativus tantummodo ad sensum) talis est, brevi verborum complexu. *Calor est motus expansivus, cohibitus, et nitens per partes minores. Modificatur autem expansio; ut expandendo in ambitum, nonnihil tamen inclinet versus superiora. Modificatur autem et nixus ille per partes: ut non sit omnino segnis, sed incitatus, et cum impetu nonnullo.*

Quod vero ad operativam attinet, eadem res est. Nam designatio est talis. *Si in aliquo corpore naturali poteris excitare motum ad se dilatandum aut expandendum; eumque motum ita reprimere et in severtere, ut dilatatio illa non procedat æqualiter, sed partim obtineat, partim retrudatur; proculdubio generabis calidum: non habita ratione, sive corpus illud sit elementare (ut loquuntur) sive imbutum a cælestibus; sive luminosum, sive opacum; sive tenue, sive densum; sive localiter expansum, sive intra claustra dimensionis primæ contentum; sive vergens ad dissolutionem, sive manens in statu; sive animal, sive vegetabile, sive minerale; sive aqua, sive oleum, sive aër, aut aliqua alia substantia quæcunque susceptiva motus prædicti. Calidum autem ad sensum res eadem est: sed cum analogia, qualis competit sensui. Nunc vero ad ulteriora auxilia procedendum est.*

## xxi.

Post *tabulas comparantiæ primæ*, et *rejectionem* sive *exclusivam*, necnon *vindemiationem primam* factam secundam eas; pergendum est ad reliqua auxilia intellectus, circa *interpretationem naturæ*, et *inductionem* veram ac perfectam. In quibus proponendis, ubi opus erit tabulis, procedemus super calidum et frigidum; ubi autem opus erit tantum exemplis paucioribus, procedemus per alia omnia: ut nec confundatur inquisitio, et tamen doctrina veretur minus in angusto.

Dicemus itaque primo loco, de *prærogativis instantiarum*: secundo, de *adminiculis inductionis*: tertio, de *rectificatione inductionis*: quarto, de *variatione inquisitionis pro natura subjecti*: quinto, de *prærogativis naturarum* quatenus ad inquisitionem; sive de eo quod inquirendum est prius et posterius: sexto, de *terminis inquisitionis*, sive de *synopsi omnium naturarum* in universo: septimo, de *deductione ad praxin*, sive de eo quod est in ordine ad hominem: octavo, de *parascensis ad inquisitionem*: postremo autem, de *scala ascensoria et descensoria axiomatum*.

## XXII.

Inter *prærogativas instantiarum*, primo proponemus *instantias solitarias*. Eæ autem sunt solitariae, quæ exhibent naturam, de qua fit inquisitio, in talibus subjectis, quæ nil habent commune cum aliis subjectis, præter illam ipsam naturam; aut rursus quæ non exhibent naturam, de qua fit inquisitio, in talibus subjectis, quæ sunt similia per omnia cum aliis subjectis, præterquam in illa ipsa natura. Manifestum enim est, quod hujusmodi instantiæ tollant ambages, atque accelerent et roborent *exclusivam*; adeo ut paucae ex illis sint instar multarum.

Exempli gratia: si fiat inquisitio de natura *coloris*, *instantiæ solitariae* sunt prismata, gemmæ crystallinae, quæ reddunt colores, non solum in se, sed exterius supra parietem; item rores, etc. Istæ enim nil habent commune cum coloribus fixis in floribus, gemmis coloratis, metallis, lignis, etc. præter ipsum colorem. Unde facile colligitur, quod color nil aliud sit, quam modificatio imaginis lucis immisissæ et receptæ: in priore genere, per gradus diversos incidentiæ; in posteriore, per texturas et schematicismos varios corporis. Istæ autem *instantiæ sunt solitariae* quatenus ad similitudinem.

Rursus in eadem inquisitione, venæ distinctæ albi et nigri in marmoribus, et variegationes colorum in floribus ejusdem speciei, sunt *instantiæ solitariae*. Album enim et nigrum marmoris, et maculæ albi et purpurei in floribus caryophylli, conveniunt fere in omnibus præter ipsum colorem. Unde facile colligitur colorem non multum rei habere cum naturis alicujus corporis intrinsecis, sed tantum situm esse in positura partium crassiori et quasi mechanica. Istæ autem *instantiæ sunt solitariae*, quatenus ad discrepantiam. Utrumque autem genus, *instantias solitarias* appellare consuevimus; aut *ferinas*, sumpto vocabulo ab astronomis.

## XXIII.

Inter *prærogativas instantiarum*, ponemus secundo loco *instantias migrantes*. Eæ sunt, in quibus natura inquisita migrat ad generationem, cum prius non existeret; aut contra migrat ad corruptionem, cum prius existeret. Itaque in utraque antistrophe, instantiæ tales sunt semper geminæ; vel potius una instantia in motu, sive transitu, producta ad periodum adversam. At hujusmodi instantiæ non solum accelerant et roborant *exclusivam*, sed etiam compellunt *affirmativam*, sive formam ipsam in angustum. Necessæ est enim ut forma rei sit quippiam, quod per hujusmodi *migrationem* indatur; aut contra per hujusmodi *migrationem* tollatur et destruat. Atque licet omnis exclusio promoveat *affirmativam*, tamen hoc magis directe fit in subjecto eodem, quam in diversis. Forma autem (ut ex omnibus, quæ dicta sunt, manifesto liquet) prodens se in uno, dicit ad omnia: quo autem simplicior fuerit *migratio*, eo magis habenda est instantia in pretio. Præterea *instantiæ migrantes* magni sunt usus ad partem operativam; quia cum proponant formam copulatam cum efficiente aut privante, perspicue designant praxin in aliquibus; unde facilis etiam est transitus ad proxima. Subest tamen in illis nonnihil peri-

culi, quod indiget cautione; hoc videlicet, ne formam nimis retrahant ad efficientem, et intellectum perfundant, vel saltem perstringant falsa opinione de forma, ex intuitu efficientis. Efficiens vero semper ponitur nil aliud esse, quam vehiculum, sive deferens formæ. Verum huic rei, per *exclusivam* legitime factam, facile adhibetur remedium.

Proponendum itaque est jam exemplum *instantiæ migrantis*. Sit natura inquisita, candor sive albedo: *instantia migrans* ad generationem est vitrum integrum, et vitrum pulverisatum. Similiter, aqua simplex, et aqua agitata in spumam. Vitrum enim integrum, et aqua simplex, diaphana sunt, non alba: at vitrum pulverisatum, et aqua in spuma, alba, non diaphana. Itaque querendum, quid accideret ex ista *migratione* vitro aut aquæ. Manifestum enim est, formam albedinis deferri et invehi per istam contusionem vitri, et agitationem aquæ. Nihil autem reperitur accessisse, præter comminutionem partium vitri et aquæ, et aëris insertionem. Neque vero parum profectum est ad inveniendam formam albedinis, quod corpora duo per se diaphana, sed secundum magis et minus (aër scilicet et aqua, aut aër et vitrum) simul posita per minutas portiones, exhibeant albedinem, per refractionem inæqualem radiorum lucis.

Verum hac in re proponendum est etiam exemplum periculi et cautionis, de quibus diximus. Nimirum facile hic occurret intellectui ab hujusmodi efficientibus depravato, quod ad formam albedinis aër semper requiratur: aut quod albedo generatur tantum per corpora diaphana; quæ omnino falsa sunt, et per multas exclusiones convicta. Quin potius apparebit (misso aëre et hujusmodi) corpora omnino æqualia (secundum portiones opticas) dare diaphanum; corpora vero inæqualia, per texturam simplicem, dare album; corpora inæqualia secundum texturam compositam, sed ordinatam, dare reliquos colores, præter nigrum; corpora vero inæqualia per texturam compositam, sed omnino inordinatam et confusam, dare nigrum. Itaque de *instantia migrante* ad generationem in natura inquisita albedinis, ppositum est jam exemplum. *Instantia* autem *migrans* ad corruptionem in eadem natura albedinis, est spuma dissoluta, aut nix dissoluta: exiit enim albedinem, et induit diaphanum aqua, postquam fit integrale sine aëre.

Neque vero illud ullo modo prætermittendum est, quod sub *instantiis migrantibus* comprehendendi debeant non tantum illæ quæ migrant ad generationem et privationem; sed etiam illæ quæ *migrant* ad majorationem et minorationem; cum illæ etiam tendant ad inveniendam formam, ut per definitionem formæ superius factam, et *tabulum graduum* manifesto liquet. Itaque papyrus, quæ sicca cum fuerit, alba est; at madefacta (excluso aëre, et recepta aqua) minus alba est, et magis vergit ad diaphanum; similem habet rationem cum instantiis supradictis.

## XXIV.

Inter *prærogativas instantiarum*, tertio loco ponemus *instantias ostensivas*, de quibus in *vindemiatione prima de calido* mentionem fecimus; quas etiam *elucescentias* sive *instantias liberatas* et *prædomi-*

*nantes*, appellare consuevimus. Eæ sunt, quæ ostendunt naturam inquisitam nudam et substantivam, atque etiam in exaltatione sua, aut summo gradu potentiae suæ; emancipatam scilicet, et liberatam ab impedimentis, vel saltem per fortitudinem suæ virtutis dominantem super ipsa, eaque supprimentem et coercentem. Cum enim omne corpus suscipiat multas naturarum formas copulatas et in concreto, fit ut alia aliam retundat, deprimat, frangat, et liget; unde obscurantur formæ singulæ. Inveniuntur autem subjecta nonnulla, in quibus natura inquisita præ aliis est in suo vigore; vel per absentiam impedimenti, vel per prædominantiam virtutis. Hujusmodi autem *instantiæ* sunt maxime *ostensivæ* formæ. Verum et in his ipsis instantiis adhibenda est cautio, et cohibendus impetus intellectus. Quicquid enim ostentat formam, eamque trudit, ut videatur occurrere intellectui, pro suspecto habendum est, et recurrendum ad *exclusivam* severam et diligentem.

Exempli gratia; sit natura inquisita, calidum. *Instantia ostensiva* motus expansionis, (quæ, ut superius dictum est, portio est præcipua formæ calidi,) est vitrum calendare aëris. Etenim flamma, licet manifesto exhibeat expansionem; tamen propter momentaneam extinctionem non ostendit progressum expansionis. Aqua autem fervens, propter facilem transitionem aquæ in vaporem et aërem, non tam bene ostendit expansionem aquæ in corpore suo. Rursus ferrum igitum, et similia, tantum abest ut progressum ostendant, ut contra per retusionem et fractionem spiritus, per partes compactas et crassas (quæ domant et prænant expansionem) ipsa expansio non sit omnino conspicua ad sensum. At vitrum calendare clare ostendit expansionem in aëre, et conspicuam, et progredientem, et durantem, neque transeuntem.

Rursus, exempli gratia; sit natura inquisita, pondus. *Instantia ostensiva* ponderis est argentum vivum. Omnia enim superat pondere magno intervallo, præter aurum; quod non multo gravius est. At præstantior instantia est ad indicandam formam ponderis argentum vivum, quam aurum; quia aurum solidum est et consistens, quod genus referri videtur ad densum; at argentum vivum liquidum est, et turgens spiritu, et tamen multis partibus exuperat gravitate diamantem, et ea quæ putantur solidissima. Ex quo ostenditur, formam gravis, sive ponderosi, dominari simpliciter in copia materiæ, et non in arcta compage.

## XXV.

Inter prærogativas instantiarum ponemus quarto loco *instantias clandestinas*, quas etiam *instantias crepusculi* appellare consuevimus. Eæ sunt veluti oppositæ *instantiis ostensivis*. Exhibent enim naturam inquisitam in infima virtute, et tanquam in incunabulis et rudimentis suis; tentantem, et tanquam primo experientem, sed sub contraria natura latentem, et subactam. Sunt autem hujusmodi *instantiæ* magni omnino momenti ad inveniendas formas; quia sicut *ostensivæ* ducunt facile ad differentias, ita *clandestinæ* ducunt optime ad genera: id est, ad naturas illas communes, quarum naturæ inquisitæ nihil aliud sunt quam limitationes.

Exempli gratia; sit natura inquisita, consistens, sive se determinans; cujus contrarium est liquidum, sive fluens. *Instantiæ clandestinæ* sunt illæ, quæ exhibent gradum nonnullum debilem et infimum consistentis in fluido; veluti bulla aquæ, quæ est tanquam pellicula quædam consistens et determinata, facta ex corpore aquæ. Similiter stillicidia, quæ, si adfuerit aqua quæ succedat, producunt se in filum admodum tenue, ne discontinuetur aqua; at si non detur talis copia aquæ, quæ succedere possit, cadit aqua in guttis rotundia, quæ est figura, quæ optime aquam sustinet contra discontinuationem. At in ipso temporis articulo, cum desinit filum aquæ; et incipit descensus in guttis, resilit ipsa aqua sursum ad evitandam discontinuationem. Quin in metallis, quæ cum funduntur sunt liquida, sed magis tenacia, recipiunt se sæpe guttæ liquefactæ sursum, atque ita hærent. Simile quoddam est in instantia speculorum puerilium, quæ solent facere pueruli in scirpis ex saliva, ubi cernitur etiam pellicula consistens aquæ. At multo melius se ostendit hoc ipsum in altero illo ludico puerili; quando capiunt aquam, per saponem factam paulo tenaciorem, atque inflant eam per calamum cavum, atque inde formant aquam, tanquam in castellum bullarum; quæ per interpositionem aëris inducit consistentiam, eo usque ut se projici nonnihil patiatur absque discontinuatione. Optime autem cernitur hoc in spuma et nive, quæ talem induunt consistentiam, ut fere secari possint; cum tamen sint corpora formata ex aëre et aqua, quæ utraque sunt liquida. Quæ omnia non obscure innuunt, liquidum et consistens esse notiones tantum plebeias, et ad sensum; inesse autem revera omnibus corporibus fugam et evitacionem se discontinuandi; eam vero in corporibus homogeneis (qualis sunt liquida) esse debilem et infirmam; in corporibus vero, quæ sunt composita ex heterogeneis, magis esse vividam et fortem; propterea quod admotio heterogenei constringit corpora; at subintratio homogenei solvit et relaxat.

Similiter, exempli gratia; sit natura inquisita, attractio sive coitio corporum. *Instantia* circa formam ejus *ostensiva* maxime insignis est, magnes. Contraria autem natura attrahenti est, non attrahens; licet in substantia simili. Veluti ferrum, quod non attrahit ferrum, quemadmodum nec plumbum plumbum, nec lignum lignum, nec aquam aqua. *Instantia* autem *clandestina* est magnes ferro armatus, vel potius ferrum in magnete armato. Nam ita fert natura, ut magnes armatus in distantia aliqua non trahat ferrum fortius, quam magnes non armatus. Verum si admoveatur ferrum, ita ut tangat ferrum in magnete armato, tunc magnes armatus longe majus pondus ferri sustinet, quam magnes simplex et inermis; propter similitudinem substantiæ ferri versus ferrum; quæ operatio erat omnino *clandestina*, et latens in ferro, antequam magnes accessisset. Itaque manifestum est formam coitionis esse quippiam, quod in magnete sit vividum et robustum, in ferro debile et latens. Itidem, notatum est sagittas parvas ligneas absque cuspidate ferrea, emissas ex sclopetis grandibus, altius penetrare in materiam ligneam (puta latera navium, aut similia) quam easdem sagittas ferro acuminatas, propter similitu-

dinem substantiæ ligni ad lignum, licet hoc ante in ligno latuerit. Itidem, licet ær æræm, aut aqua aquam, manifesto non trahat in corporibus integris; tamen bulla approximata bullæ, facilius dissolvit bullam, quam si bulla illa altera abesset, ob appetitum coitionis aquæ cum aqua, et æris cum æræ. Atque hujusmodi *instantiæ clandestinæ* (quæ sunt usus nobilissimi, ut dictum est) in portionibus corporum parvis et subtilibus maxime se dant conspicendas: quia massæ rerum majores sequuntur formas magis catholicas, et generales; ut suo loco dicitur.

## XXVI.

Inter prærogativas instantiarum ponemus quinto loco *instantias constitutivas*, quas etiam *manipulares* appellare consuevimus. Eæ sunt, quæ constituunt unam speciem naturæ inquisitæ tanquam formam minorem. Cum enim formæ legitimæ (quæ sunt semper convertibiles cum naturis inquisitis) lateant in profundo, nec facile inveniantur; postulat res et infirmitas humani intellectus, ut formæ particulares, quæ sunt congregativæ *manipulorum* quorundam instantiarum (neutiquam vero omnium) in notionem aliquam communem, non negligantur, verum diligentius notentur. Quicquid enim unit naturam, licet modis imperfectiis, ad inventionem formarum viam sternit. Itaque instantiæ, quæ ad hoc utiles sunt, non sunt contemnendæ potestatis, sed habent nonnullam prærogativam.

Verum in his diligens est adhibenda cautio, ne intellectus humanus, postquam complures ex istis formis particularibus adinvenerit, atque inde partitiones sive divisiones naturæ inquisitæ confecerit; in illis omnino acquiescat, atque ad inventionem legitimam formæ magnæ se non accingat; sed præsupponat, naturam velut a radicibus esse multiplicem et divisam, atque ulteriorem naturæ unionem, tanquam rem supervacue subtilitatis, et vergentem ad merum abstractum, fastidiat et rejiciat.

Exempli gratia; sit natura inquisita, memoria, sive excitans et adjuvans memoriam. *Instantiæ constitutivæ* sunt; ordo, sive distributio, quæ manifesto juvat memoriam. Item loci in memoria artificiali; qui aut possunt esse loci secundum proprium sensum, veluti janua, angulus, fenestra, et similia; aut possunt esse personæ familiares et notæ; aut possunt esse quidvis ad placitum (modo in ordine certo ponantur) veluti animalia, herbæ; etiam verba, literæ, characteres, personæ historicæ, et cætera; licet nonnulla ex his magis apta sint et commoda, alia minus. Hujusmodi autem loci memoriam insigniter juvant, eamque longe supra vires naturales exaltant. Item carmina facilius hærent, et discuntur memoriter, quam prosa. Atque ex isto *manipulo* trium instantiarum, videlicet ordinis, locorum artificialis memoriæ, et versuum, constituitur species una auxilii ad memoriam. Species autem illa, *abscissio infansit* recte vocari possit. Cum enim quis aliquid reminisci aut revocare in memoriam nititur; si nullam prænotionem habeat aut perceptionem ejus quod querit; querit certe et molitur, et hac illac discurret, tanquam in infinito. Quod si certam aliquam prænotionem habeat; statim abscinditur infinitum; et fit discursus memoriæ magis in vicino. In tribus

autem illis instantiis, quæ superius dictæ sunt, prænotio perspicua est et certa. In prima videlicet debet esse aliquid, quod congruat cum ordine: In secunda debet esse imago, quæ relationem aliquam habeat, sive convenientiam ad illa loca certa: In tertia debent esse verba, quæ cadant in versum. Atque ita abscinditur infinitum. Aliæ autem instantiæ dabunt hanc alteram speciem, ut quicquid deducat intellectuale ad ferendum sensum (quæ ratio etiam præcipue viget in artificiali memoria) juvet memoriam. Aliæ instantiæ dabunt hanc alteram speciem; ut quæ faciunt impressionem in affectu forti, incutientes scilicet metum, admirationem, pudorem, delectationem, juvent memoriam. Aliæ instantiæ dabunt hanc alteram speciem, ut quæ maxime imprimuntur a mente pura, et minus præoccupata ante vel post; veluti quæ discuntur in pueritia, aut quæ commentamur ante somnum, etiam primæ quæque rerum vices; magis hæreant in memoria. Aliæ instantiæ dabunt hanc alteram speciem, ut multitudo circumstantiarum, sive ansarum, juvet memoriam; veluti scriptio per partes non continuatas, lectio, sive recitatio voce alta. Aliæ denique instantiæ dabunt hanc alteram speciem; ut quæ expectantur, et attentionem excitant, melius hæreant, quam quæ prætervolant. Itaque si scriptum aliquid vices perlegeris, non tam facile illud memoriter discas, quam si illud legas decies, tentando interim illud recitare, et ubi deficit memoria, inspiciendo librum. Ita ut sint veluti sex formæ minores eorum, quæ juvant memoriam; videlicet abscissio infiniti; deductio intellectualis ad sensibile; impressio in affectu forti; impressio in mente pura; multitudo ansarum; præ-expectatio.

Similiter, exempli gratia; sit natura inquisita, gustus, sive gustatio. *Instantiæ*, quæ sequuntur, sunt *constitutivæ*: videlicet, quod qui non olfactant, sed sensu eo a natura destituti sunt, non percipiant, aut gustu distinguant cibum rancidum aut putridum; neque similiter alliatum, aut rosatum, aut hujusmodi. Rursus, illi, qui per accidens nares habent per descensum rheumatis obstructas, non discernunt aut percipiunt aliquid putridum aut rancidum, aut aqua rosacea inspersum. Rursus, qui afficiuntur hujusmodi rheumate, si in ipso momento, cum aliquid foetidum aut odoratum habent in ore, sive palato, emungant fortiter; in ipso instanti manifestam perceptionem habent rancidi vel odorati. Quæ instantiæ dabunt et constituent hanc speciem, vel partem potius gustus; ut sensus gustationis ex perte nihil aliud sit, quam olfactus interior, transiens et descendens a narium meatibus superioribus in os et palatum. At contra, salsum, et dulce, et acre, et acidum, et austerum, et amarum, et similia; hæc (inquam) omnia æque sentiunt illi, in quibus olfactus deest, aut obturatur, ac quisquam alius: ut manifestum sit, sensum gustus esse compositum quiddam ex olfactu interiori, et tactu quodam exquisito; de quo nunc non est dicendi locus.

Similiter, exempli gratia; sit natura inquisita, communicatio qualitatis, absque commistione substantiæ. Instantia lucis dabet vel constituet unam speciem communicationis; calor vero et magnes, alteram. Communicatio enim lucis est tanquam

momentanea, et statim perit, amota luce originali. At calidum et virtus magnetica, postquam transmissa fuerint, vel potius excitata in alio corpore, hærent et manent ad tempus non parvum, amoto primo movente.

Denique magna est omnino prærogativa *instantiarum constitutarum*; ut quæ plurimum faciant et ad definitiones (præsertim particulares) et ad divisiones, sive partitiones naturarum; de quo non male dixit Plato, "Quod habendus sit tanquam pro Deo, qui definire et dividere bene sciat."

## XXVII.

Inter prærogativas instantiarum ponemus sexto loco *instantias conformes sive proportionatas*; quas etiam *parallelas*, sive *similitudines physicas*, appellare consuevimus. Eæ vero sunt, quæ ostendunt similitudines et conjugationes rerum, non in formis minoribus (quod faciunt *instantiæ constitutivæ*) sed plane in concreto. Itaque sunt tanquam primi et infimi gradus ad unionem naturæ. Neque constituunt aliquid axioma statim ab initio; sed indicant et observant tantum quendam consensum corporum. Attamen licet non multum promoveant ad invenendas formas; nihilominus magna cum utilitate revelant partium universi fabricam, et in membris ejus exercent veluti anatomiam quandam; atque proinde veluti manu-ducunt interdum ad axiomata sublimia et nobilia; præsertim illa, quæ ad mundi configurationem pertinent, potius quam ad naturas et formas simplices.

Exempli gratia; *instantiæ conformes* sunt, quæ sequuntur: speculum, et oculus; et similiter fabrica auris, et loca reddentia echo. Ex qua conformitate, præter ipsam observationem similitudinis, quæ ad multa utilis est, proclive est insuper colligere et formare illud axioma, videlicet, organa sensuum et corpora, quæ pariunt reflexiones ad sensus, esse similis naturæ. Rursus ex hoc ipso admonitus intellectus, non ægre insurgit ad axioma quoddam altius et nobilius. Hoc nimirum; nihil interesse inter consensum sive sympathias corporum sensu præditorum, et inanimatorum sine sensu, nisi quod in illis accedat spiritus animalis ad corpus ita dispositum; in his autem absit. Adeo ut quot sint consensus in corporibus inanimatis, tot possint esse sensus in animalibus, si essent perforationes in corpore animato, ad discursum spiritus animalis in membrum rite dispositum, tanquam in organum idoneum. Et rursus, quot sint sensus in animalibus, tot sint proculdubio motus in corpore inanimato, ubi spiritus animalis abfuerit; licet necesse sit multo plures esse motus in corporibus inanimatis, quam sensus in animatis, propter paucitatem organorum sensus. Atque hujus rei ostendit se exemplum valde manifestum in doloribus. Etenim cum sint plura genera doloris in animalibus, et tanquam varii illius characteres (veluti alius est dolor ustionis, alius frigoris intensi, alius puncturæ, alius compressionis, alius extensionis, et similibus) certissimum est, omnia illa, quoad motum, inesse corporibus inanimatis; veluti ligno, aut lapidi, cum uritur, aut per gelu constringitur, aut pungitur, aut scinditur, aut flectitur, aut tunditur; et sic de aliis: licet non subintrent sensus, propter absentiam spiritus animalis.

Item *instantiæ conformes* (quod mirum fortasse dictu) sunt radices et rami plantarum. Omne enim vegetabile intumescit, et extrudit partes in circumferentiam, tam sursum quam deorsum. Neque alia est differentia radicum et ramorum, quam quod radix includatur in terra, et rami exponantur aëri et soli. Si quis enim accipiat ramum tenerum et vegetem arboris, atque illum reflectat in aliquam terræ particulam, licet non cohæreat ipsi solo, gignit statim non ramum, sed radicem. Atque vice versa, si terra ponatur superius, atque ita obstruatur lapide, aut aliqua dura substantia, ut planta cohibeatur, nec possit frondescere sursum, edet ramos in aërem deorsum.

Item *instantiæ conformes* sunt gummi arborum, et pleræque gemmæ rupium. Utraque enim nil aliud sunt, quam exudationes et percolationes succorum: in primo genere scilicet, succorum ex arboribus; in secundo, ex saxis; unde gignitur claritudo et splendor in utrisque, per percolationem nimirum tenuem et accuratam. Nam inde fit etiam, quod pili animalium non sint tam pulchri, et tam vividus coloris, quam avium plumæ complures; quia succi non tam delicate percolantur per cutem, quam per calamum.

Item *instantiæ conformes* sunt, scrotum in animalibus masculis; et matrix in femellis. Adeo ut nobilis illa fabrica, per quam sexus differunt (quatenus ad animalia terrestria) nil aliud videatur esse, quam secundum exterius et interius; vi scilicet majore caloris genitalia in sexu masculo protrudent in exterius, ubi in femellis nimis debilis est calor, quam ut hoc facere possit; unde accidit, quod contineantur interius.

Item *instantiæ conformes* sunt pinnae piscium, et pedes quadrupedum, aut pedes et alæ volucrum, quibus addidit Aristoteles quatuor volumina in motu serpentum. Adeo ut in fabrica universi, motus viventium plerumque videatur expediri per quaterniones utrumque sive flexionum.

Item dentes in animalibus terrestribus, et rostra in avibus, sunt *instantiæ conformes*: unde manifestum est in omnibus animalibus perfectis fluere duram quandam substantiam versus os.

Item non absurda est similitudo et conformitas illa, ut homo sit tanquam planta inversa. Nam radix nervorum et facultatum animalium, est caput; partes autem seminales sunt infimæ, non computatis extremitatibus biliarum et brachiorum. At in planta, radix (quæ instar capitis est) regulariter infimo loco collocatur; semina autem supremo.

Denique illud omnino præcipiendum est, et sæpius monendum; ut diligentia hominum in inquisitione et congerie naturalis historiarum deinceps mutetur plane, et vertatur in contrarium ejus, quod nunc in usu est. Magna enim hucusque, atque adeo curiosa fuit hominum industria, in notanda rerum varietate, atque explicandis accuratis animalium, herbarum, et fossilium differentis; quarum pleræque magis sunt lusus naturæ, quam seriæ alicujus utilitatis versus scientias. Faciant certe hujusmodi res ad delectationem, atque etiam quandoque ad praxin; verum ad introspectendam naturam parum, aut nihil. Itaque convertenda plane est opera ad inquirendas et notandas rerum similitudines et analogas, tam in in-

tegralibus, quam partibus: illæ enim sunt, quæ naturam ununt, et constituere scientias incipiunt.

Verum in his omnino est adhibenda cautio gravis et severa; ut accipiantur pro *instantiis conformibus* et *proportionalis* illæ, quæ denotant similitudines (ut ab initio diximus) physicas; id est, reales et substantiales, et immersas in natura; non fortuitas et ad speciem; multo minus superstitionas aut curiosas, quales naturalis magiæ scriptores (homines levisimi, et in rebus tam seriis, quales nunc agimus, vix nominandi) ubique ostentant; magna cum vanitate et desipientia inanes similitudines et sympathias rerum describentes, atque etiam quandoque affingentes.

Verum his missis, etiam in ipsa configuratione mundi in majoribus, non sunt negligendæ *instantiæ conformes*; veluti Africa, et regio Peruviana, cum continente se porrigente usque ad fretum Magellanicum. Utraque enim regio habet similes isthmos, et similia promontoria, quod non temere accidit.

Item novus et vetus orbis; in eo quod utriusque orbis versus septentriones lati sunt, et exporrecti; versus austrum autem angustæ et acuminati.

Item *instantiæ conformes* nobilissimæ sunt, frigora intensa in media (quam vocant) aeris regione; et ignes acerrimi, qui sæpe reperiuntur erumpentes ex locis subterraneis; quæ duæ res sunt ultimitates et extrema; naturæ scilicet frigidi versus ambitum cœli, et naturæ calidi versus viscera terræ; per antipristerasin, sive rejectionem naturæ contrariæ.

Postremo autem in axiomatibus scientiarum, notatu digna est *conformitas instantiarum*. Veluti tropus rhetoricæ, qui dicitur *præter expectatum*, conforme est tropo musicæ, qui vocatur *declinatio cadentiæ*. Similiter, postulatum mathematicum, ut *quæ eidem tertio æqualia sunt, etiam inter se sint æqualia*, conforme est cum fabrica syllogismi in logica; qui unit ea, quæ conveniunt in medio. Denique multum utilis est in quamplurimis sagacitas quædam in conquiritendis et indagandis conformitatibus, et similitudinibus physicis.

## XXVIII.

Inter *prærogativas instantiarum*, ponemus septimo loco *instantias monodicas*; quas etiam *irregulares*, sive *heteroclitas* (sumpto vocabulo a Grammaticis) appellare consuevimus. Eæ sunt, quæ ostendunt corpora in concreto; quæ videntur esse extravagantia, et quasi abrupta in natura, et minime convenire cum aliis rebus ejusdem generis. Etenim *instantiæ conformes* sunt similes alterius; at *instantiæ monodicae* sunt sui similes. Usus vero *instantiarum monodicarum* est talis, qualis est *instantiarum clandestinarum*; viz. ad evendendam et uniendam naturam ad inveniendâ genera, sive communes naturas, limitandas postea per differentias veras. Neque enim desistendum ab inquisitione, donec proprietates et qualitates, quæ inveniuntur in hujusmodi rebus, quæ possunt censerî pro miraculis naturæ, reducantur et comprehendantur sub aliqua forma sive lege certa: ut irregularitas sive singularitas omnis reperiatur pendere ab aliqua forma communi; miraculum vero illud sit tandem solummodo in differentis accuratis, et gradu, et concursu raro, et non in ipsa specie:

ubi nunc contemplationes hominum non procedant ultra, quam ut ponant hujusmodi res pro secretis et magnalibus naturæ, et tanquam incausabilibus, et pro exceptionibus regularum generalium.

Exempla *instantiarum monodicarum* sunt, sol et luna, inter astra; magnes, inter lapides; argentum vivum, inter metalla; elephas, inter quadrupedes; sensus veneris, inter genera tactus; odor venaticus in canibus, inter genera olfactus. Etiam S litera apud grammaticos, habetur pro monodica; ob facilem compositionem, quam sustinet cum consonantibus, aliquando duplicibus, aliquando triplicibus; quod nulla alia litera facit. Plurimi autem faciendæ sunt hujusmodi instantiæ, quia accunt et vivificant inquisitionem, et medentur intellectui depravato a consuetudine, et ab iis quæ fiunt plerumque.

## XXIX.

Inter *prærogativas instantiarum*, ponemus loco octavo *instantias deviantes*; errores scilicet naturæ, et vaga, ac monstra: ubi natura declinat et deflectit a cursu ordinario. Differunt enim errores naturæ ab *instantiis monodicis* in hoc, quod *monodicae* sint miracula specierum, at errores sint miracula individuum. Similis autem fere sunt usus; quia rectificunt intellectum adversus consueta, et revelant formas communes. Neque enim in his etiam desistendum ab inquisitione, donec inveniatur causa hujusmodi declinationis. Veruntamen causa illa non exurgit ad formam aliquam proprie, sed tantum ad *latentem processum* ad formam. Qui enim vias naturæ noverit, is *deviationes* etiam facilius observabit. At rursus, qui *deviationes* noverit, is accuratius vias describet.

Atque in illo differunt etiam ab *instantiis monodicis*, quod multo magis instruant praxin et operativam. Nam novas species generare arduum admodum foret; at species notas variare, et inde rara multa ac inusitata producere, minus arduum. Facilis autem transitus est a miraculis naturæ ad miracula artis. Si enim deprehendatur semel natura in variatione sua, ejusque ratio manifesta fuerit, expeditum erit eo deducere naturam per artem, quo per casum aberraverit. Neque solum eo, sed et aliorum; cum errores ex una parte monstrant et aperiant viam ad errores et deflexiones undequaque. Hic vero exemplis non est opus, propter eorundem copiam. Facienda enim est congeries sive historia naturalis particularis omnium monstrorum, et parvum naturæ prodigiosorum; omnis denique novitatis, et raritatis, et inconsueti in natura. Hoc vero faciendum est cum severissimo delectu, ut constet fides. Maxime autem habenda sunt pro suspectis, quæ pendent quomodocunque a religione; ut prodigia Livii: nec minus, quæ inveniuntur in scriptoribus magiæ naturalis, aut etiam alchemiæ, et hujusmodi hominibus; qui tanquam proci sunt et amatores fabularum. Sed depromenda sunt illa ex gravi et fida historia, et auditionibus certis.

## XXX.

Inter *prærogativas instantiarum*, ponemus loco nono *instantias limitantes*; quas etiam *participia* vocare consuevimus. Eæ vero sunt, quæ exhibent

species corporum tales, quæ videntur esse compositæ ex speciebus duabus, vel rudimenta inter speciem unam et alteram. Hæ vero instantiæ inter *instantius monodicas* sive *heteroclitas* recte numerari possunt: sunt enim in universitate rerum raræ et extraordinariæ. Sed tamen ob dignitatem seorsum tractandæ et ponendæ sunt; optime enim indicant compositionem et fabricam rerum, et innuunt causas numeri et qualitatis specierum ordinarium in universo, et deducunt intellectum ab eo quod est, ad id quod esse potest.

Harum exempla sunt: muscus, inter putredinem et plantam; cometæ nonnulli, inter stellas et metæora ignita; pisces volantes, inter aves et pisces; vespertiliones, inter aves et quadrupedes; etiam

“ Simia quam similis, turpissima bestia, nobis; ”

et partus animalium biformes, et commixti ex speciebus diversis; et similia.

### XXXI.

Inter *prærogativas instantiarum* ponemus decimo loco *instantias potestatis*, sive *fascium* (sumpto vocabulo ab insignibus imperii) quas etiam *ingenia*, sive *manus hominis*, appellare consuevimus. Eæ sunt opera maxime nobilia et perfecta, et tanquam ultima in unaquaque arte. Cum enim hoc agatur, præcipue ut natura pareat rebus et commodis humanis; consentaneum est prorsus, ut opera, quæ jampridem in potestate hominis fuerunt (quasi provinciæ antea occupatæ et subactæ) notentur et numerentur; præsertim ea, quæ sunt maxime enucleata et perfecta; propterea quod ab istis proclivior et magis ipi propinquo sit transitus ad nova et hactenus non inventa. Si quis enim ab horum contemplatione attenta propositum acriter et strenue urgere velit; fiet certe, ut aut producat illa paulo longius, aut deflectat illa ad aliquid, quod finitimum est; aut etiam applicet et transferat illa ad usum aliquem nobiliorem.

Neque hic finis. Verum quemadmodum ab operibus naturæ raris et inconsuetis erigitur intellectus, et elevatur ad inquirendas et inveniendas formas, quæ etiam illorum sunt capaces: ita etiam in operibus artis egregiis et admirandis hoc usu-venit. Idque multo magis; quia modus efficiendi et operandi hujusmodi miracula artis, manifestus ut plurimum est; cum plerumque in miraculis naturæ sit magis obscurus. Attamen in his ipsis cautio est adhibenda vel maxime; ne depriment scilicet intellectum, et eum quasi humo affigant.

Periculum enim est, ne per hujusmodi opera artis, quæ videntur velut summitates quædam et fastigia industriæ humanæ, reddatur intellectus attonitus et ligatus, et quasi maleficiatus quoad illa; ita ut cum aliis consuescere non possit, sed cogitet nihil ejus generis fieri posse, nisi eadem via, qua illa effecta sunt, accedente tantummodo diligentia majore, et præparatione magis accurata.

Contra illud ponendum est pro certo: vias et modos efficiendi res et opera, quæ adhuc reperta sunt et notata, res esse plerumque pauperulas, atque omnem potentiam majorem pendere, et ordine derivari a fontibus formarum, quarum nulla adhuc inventa est.

Itaque (ut alibi diximus) qui de machinis et arietibus, quales erant apud veteres, cogitasset; licet hoc fecisset obnixè, atque ætatem in eo consumpisset; nunquam tamen incidisset in inventum tormentorum igneorum operantium per pulverem pyrium. Neque rarsus, qui in lanificiis et serico vegetabili observationem suam et meditationem collocasset, unquam per ea reperisset naturam vermis aut serici bombycini.

Quocirca omnia inventa, quæ censeri possunt magis nobilia (si animum advertas) in lucem prodire, nullo modo per pusillas enucleationes et extensiones artium, sed omnino per casum. Nihil autem repræsentat aut anticipat casum (cujus mos est, ut tantum per longa secula operetur) præter inventionem formarum.

Exempla autem hujusmodi instantiarum particularia nihil opus est adducere, propter copiam eorundem. Nam hoc omnino agendum, ut visitentur et penitus introspectantur omnes artes mechanicæ, atque liberales etiam (quatenus ad opera) atque inveniendi faciendæ sit congeries sive historia particularia, tanquam magnalium et operum magistralium, et maxime perfectorum in unaquaque ipsarum; una cum modis effectiois sive operationis.

Neque tamen astringimus diligentiam, quæ adhibenda est in hujusmodi collecta, ad ea, quæ censentur pro magisteriis et arcanis alicujus artis tantum, atque movent admirationem. Admiratio enim proles est raritatis: siquidem rara, licet in genere sint ex vulgaris naturis, tamen admirationem pariunt.

At contra, quæ revera admirationi esse debent, propter discrepantiam, quæ inest illis in specie, collatis ad alias species; tamen si in usu familiari præsto sint, leviter notantur. Debent autem notari *monodica* artis, non minus quam *monodica* naturæ; de quibus antea diximus. Atque quemadmodum in *monodicas* naturæ posuimus solem, lunam, magnetem, et similia, quæ re vulgarissima sunt, sed natura tamen fere singulari; idem et de *monodicas* artis faciendum est.

Exempli gratia; instantia *monodica* artis, est papyrus; res admodum vulgata. At si diligenter animum advertas, materiæ artificiales aut plane textiles sunt per fila directa et transversa; qualia sunt pannus sericus, aut laneus, et linteus, et hujusmodi: aut coagmentantur ex succis concretis; qualia sunt later, aut argilla figularis, aut vitrum, aut esmalta, aut porcellana, et similia; quæ, si bene uniantur, splendent; sin minus, indurantur certe, sed non splendent. Attamen omnia talia, quæ fiunt ex succis concretis, sunt fragilia; nec ullo modo hærentia et tenacia. At contra, papyrus est corpus tenax, quod scindi et lacerari possit, ita ut imitetur et fere æmuletur pellem sive membranam alicujus animalis, aut folium alicujus vegetabilis, et hujusmodi officina naturæ. Nam neque fragilis est, ut vitrum; neque textilis, ut pannus; sed habet fibras certe, non fila distincta, omnino ad modum materiarum naturalium: ut inter artificiales materias vix inveniatur simile aliquid, sed sit plane monodicum. Atque præferenda sane sunt in artificialibus ea, quæ maxime accedunt ad imitationem naturæ, aut e contrario eam potenter regunt et invertunt.

Rursus, inter *ingenia* et *manus hominis*, non prorsus contemnenda sunt præstigæ et jocularia. Nonnulla enim ex istis, licet sint usu levia et ludicra, tamen informatione valida esse possunt.

Postremo: neque omnino omissenda sunt superstitionosa, et (prout vocabulum sensu vulgari accipitur) magica. Licet enim hujusmodi res sint in immensum obrutæ grandi mole mendaciorum et fabularum; tamen inspiciendum paulisper, si forte subsit et lateat in aliquibus earum aliqua operatio naturalis: ut in fascino; et fortificatione imaginationis; et consensu rerum ad distans; et transmissione impressionum a spiritu ad spiritum, non minus quam a corpore ad corpus; et similibus.

## XXXII.

Ex iis, quæ ante dicta sunt, patet; quod quinque illa instantiarum genera, de quibus diximus (viz. *instantiarum conformium*, *instantiarum monodicarum*, *instantiarum deviantium*, *instantiarum limitansarum*, *instantiarum potestatis*) non debeant reservari, donec inquiratur natura aliqua certa (quemadmodum instantiæ reliquæ, quas primo loco proposuimus, necnon plurimæ ex iis, quæ sequentur, reservari debent) sed statim jam ab initio facienda est earum collectio, tanquam historia quædam particularis; eo quod digerant ea, quæ ingrediuntur intellectum, et corrigant pravam complexionem intellectus ipsius, quem omnino necesse est imbui, et infici, et demum perverti ac distorti ab incursibus quotidianis et consuetis.

Itaque adhibendæ sunt eæ instantiæ tanquam præparativum aliquod ad rectificandum et expurgandum intellectum. Quicquid enim abducit intellectum a consuetis, æquat et complanat aream ejus, ad recipiendum lumen siccum et purum notionum verarum.

Quin etiam hujusmodi instantiæ sternunt et præstruunt viam ad operativam; et suo loco dicemus, quando de *deductionibus ad prazin* sermo erit.

## XXXIII.

Inter *prærogativas instantiarum* ponemus loco undecimo *instantias comitatus*, atque *hostiles*; quas etiam *instantias propositionum fixarum* appellare consuevimus. Eæ sunt instantiæ, quæ exhibent aliquod corpus sive concretum tale, in quo natura inquisita perpetuo sequatur tanquam comes quidam individuus: aut contra, in quo natura inquisita perpetuo fugiat, atque ex *comitatu* excludatur, ut hostis et inimicus. Nam ex hujusmodi instantiis formantur propositiones certæ et universales; aut *affirmativæ*, aut *negativæ*: in quibus subjectum erit tale corpus in concreto, prædicatum vero natura ipsa inquisita. Etenim propositiones particulares omnino *fixæ* non sunt, ubi scilicet natura inquisita reperitur in aliquo concreto fluxa et mobilis; viz. accedens, sive acquisita; aut rursus recedens, sive deposita. Quocirca particulares propositiones non habent *prærogativam* aliquam majorem, nisi tantum in casu *migrationis*; de quo antea dictum est. Et nihilo minus, etiam particulares illæ propositiones comparatæ et collatæ cum universalibus, multum jvant; et suo loco dicetur. Neque tamen, etiam in universalibus istis propositionibus exactam aut absolutam

affirmationem vel abnegationem requirimus. Sufficit enim ad id, quod agitur, etiam si exceptionem nonnullam singularem aut raram patiantur.

Usus autem *instantiarum comitatus* est ad angustandam *affirmativam* formæ. Quemadmodum enim in *instantiis migrantibus* angustatur *affirmativa* formæ; viz. ut necessario poni debeat forma rei esse aliquid, quod per actum illum *migrationis* inditur aut destruitur: ita etiam in *instantiis comitatus* angustatur *affirmativa* formæ; ut necessario poni debeat forma rei esse aliquid, quod talem concretionem corporis subingrediat, aut contra ab eadem abhorreat; ut qui bene norit constitutionem aut schematismum hujusmodi corporis, non longe abfuerit ab extrahenda in lucem forma naturæ inquisitæ.

Exempli gratia; sit natura inquisita, calidum. *Instantia comitatus* est flamma. Etenim in aqua, aère, lapide, metallo, et aliis quamplurimum, calor est mobilis, et accedere potest et recedere: at omnis flamma est calida, ita ut calor in concretionem flammæ perpetuo sequatur. At *instantia hostilis* calidi nulla reperitur apud nos. Nam de visceribus terræ nihil constat ad sensum; sed eorum corporum, quæ nobis nota sunt, nulla prorsus est concretio, quæ non est susceptibilis caloris.

At rursus, sit natura inquisita, consistens: *instantia hostilis* est aër. Etenim metallum potest fluere, potest consistere; similiter vitrum, etiam aqua potest consistere, cum conglaciatur: at impossibile est, ut aër unquam consistat, aut exuat fluorem.

Verum de *instantiis* hujusmodi *propositionum fixarum* supersunt duo monita, quæ utilia sunt ad id quod agitur. Primum, ut si defuerit plane universalis *affirmativa* aut *negativa*, illud ipsum diligenter notetur tanquam non ens: sicut fecimus de calido, ubi universalis negativa (quatenus ad entia, quæ ad nostram notitiam pervenerint) in rerum natura deest. Similiter, si natura inquisita sit æternum aut incorruptibile; deest *affirmativa* universalis hic apud nos. Neque enim prædicari potest *æternum* aut *incorruptibile* de aliquo corpore eorum, quæ infra cœlestia sunt, aut supra interiora terræ. Alterum monitum est, ut propositionibus universalibus, tam affirmativis quam negativis, de aliquo concreto, subjungantur simul ea concreta, quæ proxime videntur accedere ad id quod est ex non-entibus: ut in calore, flammæ mollissimæ et minimum adurentes; in incorruptibili, aurum, quod proxime accedit. Omnia enim ista indicant terminos naturæ inter ens et non ens; et faciunt ad circumscriptiones formarum, ne gliscent et vagentur extra conditiones materiæ.

## XXXIV.

Inter *prærogativas instantiarum*, ponemus loco duodecimo ipsas illas *instantias subjunctivas*, de quibus in superiori aphorismo diximus: quas etiam *instantias ultimas* sive *termini* appellare consuevimus. Neque enim hujusmodi instantiæ utiles sunt tantum, quatenus subjunguntur propositionibus fixis; verum etiam per se et in proprietate sua. Indicant enim non obscure veras sectiones naturæ, et mensuras rerum, et illud *quousque* natura quid faciat et ferat, et deinde transitus naturæ ad aliud. Talia sunt; aurum, in pondere; ferrum, in duritie; cete,

in quantitate animalium; canis, in odore; inflammatio pulveris pyrii, in expansione celeri; et alia id genus. Nec minus exhibenda sunt ea, quæ sunt ultima gradu infimo, quam quæ supremo: ut spiritus vini, in pondere; sericum, in mollietate; vermiculi cutis, in quantitate animalium; et cætera.

## XXXV.

Inter *prærogativas instantiarum*, ponemus loco decimo tertio *instantias fœderis sive unionis*. Eæ sunt, quæ confundunt et adunant naturas, quæ existimantur esse heterogenæ; et pro talibus notantur et signantur per divisiones receptas.

At *instantiæ fœderis* ostendunt operationes et effectus, quæ deputantur alicui ex illis heterogeneis ut propria, competere etiam aliis ex heterogeneis; ut convincatur ista heterogenea (quæ in opinione est) vera non esse, aut essentialis; sed nil aliud esse, quam modificatio naturæ communis. Optimi itaque sunt usus ad elevandum et evhendum intellectum a differentiis ad genera, et ad tollendum larvas et simulacra rerum, prout occurrunt et prodeunt personatæ in substantiis concretis.

Exempli gratia: sit natura inquisita, calidum. Omnino videtur esse divisio solennis et authentica, quod sint tria genera caloris: videlicet calor cœlestium, calor animalium, et calor ignis: quodque isti calores (præsertim unus ex illis, comparatus ad reliquos duos) sint ipsa essentia et specie, sive natura specifica, differentes et plane heterogenei: Quandoquidem calor cœlestium et animalium generet et foveat, at calor ignis contra corrumpat et destruat. Est itaque *instantia fœderis* experimentum illud satis vulgatum, cum recipitur ramus aliquis vitis intra domum ubi sit focus assiduus, ex quo maturescunt uvæ, etiam mense integro citius quam foras: Ita ut maturatio fructus etiam pendentis super arborem fieri possit, scilicet ab igne, cum hoc ipsum videatur esse opus proprium solis. Itaque ab hoc initio facile insurgit intellectus, repudiata heterogenea essentiali, ad inquirendum quæ sint differentie illæ, quæ revera reperiuntur inter calorem solis et ignis, ex quibus fit, ut eorum operationes sint tam dissimiles, utcumque illi ipsi participant ex natura communi.

Quæ differentie reperientur quatuor: viz. primo, quod calor solis, respectu caloris ignis, sit gradu longe clementior et lenior; secundo, quod sit (præsertim ut defertur ad nos per aërem) qualitate multo humidior; tertio (quod caput rei est) quod sit summe inæqualis; atque accedens et auctus, et deinceps recedens et diminutus: id quod maxime confert ad generationem corporum. Recte enim asseruit Aristoteles, causam principalem generationum et corruptionum, quæ fiunt hic apud nos in superficie terræ, esse viam obliquam solis per zodiacum: unde calor solis, partim per vicissitudines diei et noctis, partim per successiones æstatis et hiemis, evadit miris modis inæqualis. Neque tamen desinit ille vir, id quod ab eo recte inventum fuit, statim corrumpere et depravare. Nam ut arbiter scilicet naturæ (quod illi in more est) valde magistraliter assignat causam generationis accessui solis; causam autem corruptionis, recessui: cum utraque res (accessus

videlicet solis, et recessus) non respective, sed quasi indifferenter præbeat causam tam generationi quam corruptioni: quandoquidem inæqualitas caloris, generationi et corruptioni rerum; æqualitas, conservationi tantum ministret. Est et quarta differentia inter calorem solis et ignis, magni prorsus momenti: viz. quod sol operationes suas insinuet per longa temporis spatia; ubi operationes ignis (urgente hominum impatientia) per breviora intervalla ad exitum perducantur. Quod si quis id sedulo agat, ut calorem ignis attemperet et reducat ad gradum moderatiorem et leniorem (quod multis modis facile fit); deinde etiam inspergat et admisceat nonnullam humiditatem; maxime autem si immetat calorem solis inæqualitate; postremo, si moram patienter toleret (non certe eam, quæ sit proportionata operibus solis; sed largiorem, quam homines adhibere solent in operibus ignis) is facile missam faciet heterogeniam illam caloris: et vel tentabit, vel exæquabit, vel in aliquibus vincet opera solis, per calorem ignis. Similis *instantia fœderis* est, resuscitatio papilionum, ex frigore stupentium et tanquam emortuarum, per exiguum teporem ignis: ut facile cernas, non magis negatum esse igni, vivificare animantia, quam maturare vegetabilia. Etiam inventum illud celebre Fracastorii de sartagine acriter calefacta, qua circumdant medici capita apoplecticorum desperatorum, expandit manifeste spiritus animales, ab humoribus et obstructionibus cerebri compressos et quasi extinctos; illosque ad motum excitat, non aliter quam ignis operatur in aquam aut aërem; et tamen per consequens vivificat. Etiam ova aliquando excluduntur per calorem ignis; id quod prorsus imitatur calorem animale; et complura ejusmodi: ut nemo dubitare possit, quin calor ignis in multis subjectis modificari possit ad imaginem caloris cœlestium et animalium.

Similiter sint naturæ inquisitæ, motus et quies. Videtur esse divisio solennis atque ex intima philosophia, quod corpora naturalia vel rotent, vel ferantur recta, vel stent sive quiescant. Aut enim est motus sine termino, aut statio in termino, aut latio ad terminum. At motus ille perennis rotationis, videtur esse cœlestium proprius: Statio, sive quies, videtur competere globo ipsi terræ: At corpora cætera (gravia quæ vocant, et levia; extra loca scilicet connaturalitatis suæ sita) feruntur recta ad massas sive congregationes similium; levia sursum, versus ambitum cœli; gravia deorsum, versus terram. Atque ista pulchra dictu sunt.

At *instantia fœderis* est cometa aliquis humilior; qui cum sit longe infra cœlum, tamen rotat. Atque commentum Aristotelis, de alligatione sive sequacitate cometæ ad astrum aliquod, jam pridem explosum est; non tantum quia ratio ejus non est probabilis, sed propter experientiam manifestam discursus et irregularis motus cometarum per varia loca cœli.

At rursus alia *instantia fœderis* circa hoc subjectum, est motus aëris; qui intra tropicos (ubi circuli rotationis sunt majores) videtur et ipse rotare ab oriente in occidentem.

Et alia rursus *instantia* foret fluxus et refluxus maris, si modo aquæ ipsæ deprehendantur ferri motu rotationis (licet tardo et evanido) ab oriente in occi-

dentem; ita tamen, ut bis in die repercutiantur. Itaque si hæc ita se habeant, manifestum est motum istum rotationis non terminari in cœlestibus, sed communicari aëri et aquæ.

Etiam ista proprietates levium, nimirum ut ferantur sursum, vacillant nonnihil. Atque in hoc, sumi potest pro *instantia fœderis*, bulla aquæ. Si enim aër fuerit subter aquam, ascendit rapide versus superficiem aquæ, per motum illum *plagæ* (quam vocat Democritus) per quam aqua descendens percudit et attollit aërem sursum; non autem per contentionem aut nixum aëris ipsius. Atqui ubi ad superficiem ipsam aquæ ventum fuerit, tum cohibetur aër ab ulteriore ascensu per levem resistantiam, quam reperit in aqua non statim tolerante se discontinuari: ita ut exilis admodum sit appetitus aëris ad superiora.

Similiter sit natura inquisita, pondus. Est plane divisio recepta; ut densa et solida ferantur versus centrum terræ, rara autem et tenuia versus ambitum cœli; tanquam ad loca sua propria. Atque loca quod attinet (licet in scholis hujusmodi res valeant) plane inepta et puerilis cogitatio est, locum aliquid posse. Itaque nugantur philosophi, cum dicunt, quod, si perforata esset terra, corpora gravia se sisterent quando ventum esset ad centrum. Esset enim certe virtuosum plane et efficax genus nihili, aut puncti mathematici; quod aut alia afficeret, aut rursus quod alia appeterent: corpus enim non nisi a corpore patitur. Verum iste appetitus ascendendiet descendendi, aut est in schematismo corporis quod movetur, aut in sympathia sive consensu cum alio corpore. Quod si inveniatur aliquod corpus densum et solidum, quod nihilominus non feratur ad terram; confunditur hujusmodi divisio. At si recipiatur opinio Gilberti, quod magnetica vis terræ ad alliciendum gravia, non extendatur ultra orbem virtutis suæ (quæ operatur semper ad distantiam certam, et non ultra) hocque per aliquam instantiam verificetur; ea demum erit *instantia fœderis* circa hoc subjectum. Neque tamen occurrit impræsentiarum aliqua instantia super hoc certa et manifesta. Proxime videntur accedere cataractæ cœli, quæ in navigationibus per oceanum Atlanticum versus Indias utrasque sæpe conspiciuntur. Tanta enim videtur esse vis et moles aquarum, quæ per hujusmodi cataractas subito effunditur, ut videatur collectio aquarum fuisse ante facta, atque in his locis hæsisse et mansisse, et postea potius per causam violentam dejecta et detrusa esse, quam naturali motu gravitatis cecidisse: adeo ut conjici possit corpoream molem, densam atque compactam, in magna distantia a terra, fore pensilem tanquam terram ipsam; nec casuram, nisi deiciatur. Verum de hoc nil certi affirmamus. Interim in hoc, et in multis aliis facile apparebit, quam inopes simus historiam naturalis, cum loco instantiarum certarum, nonnquam suppositiones afferre pro exemplis cogamur.

Similiter sit natura inquisita, discursus ingenii. Videtur omnino divisio vera, rationis humanæ, et solertiæ brutorum. Attamen sunt nonnullæ instantiæ actionum, quæ eduntur a brutis, per quas videntur etiam bruta quasi syllogizare: ut memoriæ proditum est de corvo; qui per magnas scititates fere enectus siti, conspexit aquam in trunco cavo arboris; atque cum non daretur ei intrare propter angustias,

non cessavit jacere multos lapillos, per quos surgeret et ascenderet aqua, ut bibere posset; quod postea cessit in proverbium.

Similiter sit natura inquisita, visibile. Videtur omnino esse divisio vera et certa, lucis, quæ est visibile originale, et primam copiam facit visui: et coloris, qui est visibile secundarium, et sine luce non cernitur, ita ut videatur nil aliud esse, quam imago aut modificatio lucis. Attamen ex utraque parte circa hoc videntur esse *instantiæ fœderis*; scilicet, nix in magna quantitate, et flamma sulphuris: in quarum altera videtur esse color primum lucens, in altera lux vergens ad colorem.

## XXXVI.

Inter prærogativas instantiarum ponemus loco decimo quarto *instantias crucis*, translato vocabulo a *crucibus*, quæ erectæ in biviis, indicant et signant viarum separationes. Has etiam *instantias decisorias* et *judiciales*, et in casibus nonnullis, *instantias oraculi* et *mandati*, appellare consuevimus. Earum ratio talis est. Cum in inquisitione naturæ alicujus, intellectus ponitur tanquam in æquilibrio, ut incertus sit, utri naturarum e duabus, vel quandoque pluribus, causa naturæ inquisitæ attribui aut assignari debeat, propter complurium naturarum concursum frequentem et ordinarium; *instantiæ crucis* ostendunt consortium unius ex naturis (quoad naturam inquisitam) fidum et indissolubile, alterius autem varium et separabile; unde terminatur quæstio, et recipitur natura illa prior pro causa, missa altera et repudiata. Itaque hujusmodi instantiæ sunt maximæ lucis, et quasi magnæ auctoritatis; ita ut curriculum interpretationis quandoque in illas desinat, et per illas perficiatur. Interdum autem *instantiæ crucis* illæ occurrunt, et inveniuntur inter jam pridem notatas; at ut plurimum novæ sunt, et de industria atque ex composito quæsitæ et applicatæ, et diligentia sedula et acri tandem erutæ.

Exempli gratia; sit natura inquisita fluxus et refluxus maris, ille bis repetitus in die, atque sexhorary, in accessibus et recessibus singulis, cum differentia nonnulla, que coincidit in modum lunæ: bivium circa hanc naturam tale est.

Necesse prorsus est, ut iste motus efficiatur, vel ab aquarum progressu et regressu, in modum aquæ in pelvi agitæ, quæ quando latus unum pelvis aluit, deserit alterum; vel a sublatione et subsidentia aquarum e profundo, in modum aquæ ebullientis, et rursus subsidentis: utri vero causæ fluxus et refluxus ille assignari debeat, oritur dubitatio. Quod si recipiatur prior assertio, necesse est, ut cum sit fluxus in mari ex una parte, fiat sub idem tempus alicubi in mari refluxus ex alia. Itaque ad hoc reducitur inquisitio. Atqui observavit Acosta, cum aliis nonnullis (diligenti facta inquisitione) quod ad littora Floridæ, et ad littora adversa Hispaniæ, et Africæ, fiat fluxus maris ad eadem tempora, et refluxus itidem ad eadem tempora; non contra, quod cum fluxus fit ad littora Floridæ, fiat refluxus ad littora Hispaniæ et Africæ. Attamen adhuc diligentius attendenti, non per hoc evincitur motus attollens, et abnegatur motus in progressu. Fieri enim potest, quod sit motus aquarum in pro-

gressu, et nihilominus inundet adversa littora ejusdem alvei simul; si aquæ scilicet illæ contrudantur et compellantur aliunde; quemadmodum fit in fluviis, qui fluunt et refluunt ad utrumque littus horis iisdem, cum tamen iste motus liquido sit motus in progressu, nempe aquarum ingredientium ostia fluminum ex mari. Itaque simili modo fieri potest, ut aquæ venientes magna mole ab oceano orientali Indico, compellantur et trudentur in alveum maris Atlantici, et propterea inundent utrumque latus simul. Quærendum itaque est, an sit alius alveus, per quem aquæ possint iisdem temporibus minui et refluere. Atque præsto est mare australe, mari Atlantico neutiquam minus, sed potius magis latum et extensum, quod ad hoc sufficere possit.

Itaque jam tandem perventum est ad *instantiam crucis* circa hoc subjectum: ea talis est. Si pro certo inveniatur, quod cum fit fluxus ad littora adversa tam Floridæ, quam Hispaniæ, in mari Atlantico; fiat simul fluxus ad littora Peruviae, et juxta dorsum Chinæ in mari australi; tum certe per hanc *instantiam decisoriam* abjudicanda est assertio, quod fluxus et refluxus maris, de quo inquiritur, fiat per motum progressivum. Neque enim relinquatur aliud mare, aut locus, ubi possit ad eadem tempora fieri regressus aut refluxus. Commodissime autem hoc sciri possit, si inquiratur ab incolis Panamæ et Limæ (ubi uterque oceanus, Atlanticus et australis, per parvum isthmum separantur) utrum ad contrarias isthmi partes fiat simul fluxus et refluxus maris, an e contra. Verum hæc decisio, sive abjudicatio certa videtur, posito quod terra stet immobilis. Quod si terra rotet, fieri fortasse potest, ut ex inæquali rotatione (quatenus ad celeritatem sive incitationem) terræ et aquarum maris, sequatur compulsio violenta aquarum in cumulum sursum, quæ sit fluxus; et relaxatio earundem (postquam amplius cumulari non sustinuerint) in deorsum, quæ sit refluxus. Verum de hoc facienda est inquisitio separatim. Attamen etiam hoc supposito, illud æque manet fixum, quod necesse sit fieri alicubi refluxum maris ad eadem tempora, quibus fiunt fluxus in aliis partibus.

Similiter sit natura inquisita, posterior ille motus ex duobus, quos supposuimus; videlicet motus maris se attollens, et rursus subsidens: si forte ita acciderit, ut (diligenti facto examine) rejiciatur motus alter, de quo diximus, progressivus; tum vero erit trivium circa hanc naturam tale. Necesse est, ut motus iste, per quem aquæ in fluxibus et refluxibus se attollunt, et rursus relabuntur, absque aliqua accessione aquarum aliarum, quæ advolvuntur, fiat per unum ex his tribus modis; vel quod ista aquarum copia emanet ex interioribus terræ, et rursus in illa se recipiat; vel quod non sit aliqua amplior moles aquarum, sed quod eadem aquæ (non aucto quanto suo) extendantur, sive rarefiant, ita ut majorem locum et dimensionem occupent, et rursus se contrahant; vel quod nec copia accedat major, nec extensio amplior, sed eadem aquæ (prout sunt, tam copia, quam densitate aut raritate) per vim aliquam magneticam desuper eas attrahentem, et evocantem, et per consensum se attollant, et deinde se remittant. Itaque reducatur (si placet) jam in-

quisitio (missis duobus illis motibus prioribus) ad hunc ultimum; et inquiratur si fiat aliqua talis sublatio per consensum, sive vim magneticam. Atqui primo manifestum est universas aquas, prout ponuntur in fossa sive cavo maris, non posse simul attolli, quia defuerit quod succedat in fundo; adeo ut si foret in aquis aliquis hujusmodi appetitus se attollendi, ille ipse tamen a nexu rerum, sive (ut vulgo loquuntur) ne detur vacuum, fractus foret et cohibitus. Relinquitur, ut attollantur aquæ ex aliqua parte, et per hoc minuantur et cedant ex alia. Enimvero rursus necessario sequetur, ut vis illa magnetica, cum super totum operari non possit, circa medium operetur intensissime; ita ut aquas in medio attollat; illæ vero sublata, latera per successionem deserant et destituant.

Itaque jam tandem perventum est ad *instantiam crucis* circa hoc subjectum: ea talis est. Si inveniatur, quod in refluxibus maris aquarum superficies in mari sit arcuata magis et rotunda, attollentibus se scilicet aquis in medio maris, et deficientibus circa latera, quæ sunt littora, et in fluxibus eadem superficies sit magis plana et æqua, redeuntibus scilicet aquis ad priorem suam positionem; tum certe per hanc *instantiam decisoriam* potest recipi sublatio per vim magneticam; aliter prorsus abjudicanda est. Hoc vero in fretis per lineas nauticas non difficile est experiri; videlicet utrum in refluxibus versus medium maris mare non sit magis altum sive profundum, quam in fluxibus. Notandum autem est, si hoc ita sit, fieri (contra ac creditur) ut attollant se aquæ in refluxibus, demittant se tantum in fluxibus, ita ut littora vestiant et inundent.

Similiter, sit natura inquisita, motus rotationis spontaneus; et speciatim, utrum motus diurnus, per quem sol et stellæ ad conspectum nostrum oriuntur et occidunt, sit motus rotationis verus in cælestibus; aut motus apparens in cælestibus, verus in terra. Poterit esse *instantia crucis* super hoc subjectum talis. Si inveniatur motus aliquis in oceano ab oriente in occidentem, licet admodum languidus et enervatus; si idem motus reperitur paulo incitator in aère, præsertim intra tropicos, ubi propter majores circulos est magis perceptibilis; si idem motus reperitur in humilioribus cometis, jam factus vivus et validus; si idem motus reperitur in planetis, ita tamen dispensatus et graduatus, ut quo propius absit a terra, sit tardior; quo longius, celerior, atque in cælo demum stellato sit velocissimus; tum certe recipi debet motus diurnus pro vero in cælis, et abnegandus est motus terræ; quia manifestum erit, motum ab oriente in occidentem esse plane cosmicum, et ex consensu universi, qui in summitatibus cæli maxime rapidus, gradatim labascatur, et tandem desinat, et extinguatur in immobili, videlicet terra.

Similiter, sit natura inquisita, motus rotationis ille alter apud astronomos decantatus, renitens et contrarius motui diurno, videlicet ab occidente in orientem, quem veteres astronomi attribuunt planetis, etiam cælo stellato; at Copernicus et ejus sectatores, terræ quoque; et quæretur, utrum inveniatur in rerum natura aliquis talis motus, an potius res ficta sit et supposita, ad compendia et commoditatis calculationum, et ad pulchrum illud, scilicet de ex-

pediendis motibus cœlestibus per circulos perfectos. Neutiquam enim evincitur iste motus esse in supernis verus et realis, nec per defectum restitutionis planetæ in motu diurno ad idem punctum cœli stellati, nec per diversam politatem zodiaci, habito respectu ad polos mundi, quæ duo nobis hunc motum pepererunt. Primum enim phænomenon per anteversionem et derelictionem optime salvatur; secundum, per lineas spirales; adeo ut inæqualitas restitutionis, et declinatio ad tropicos, possint esse potius modificationes motus unici illius diurni, quam motus renitentes, aut circa diversos polos. Et certissimum est, si paulisper pro plebeis nos geramus (missis astronomorum et scholæ commentis, quibus illud in more est, ut sensui in multis immerito vim faciant, et obscuriora malint) talem esse motum istum ad sensum, qualem diximus; cujus imaginem per fila ferrea (veluti in machina) aliquando representari fecimus.

Verum *instantia crucis* super hoc subjectum poterit esse talis. Si inveniat in aliqua historia fide digna, fuisse cometam aliquem, vel subliorem vel humiliorem, qui non rotaverit cum consensu manifesto (licet admodum irregulariter) motus diurni, sed potius rotaverit in contrarium cœli; tum certe bucusque iudicandum est, posse esse in natura aliquem talem motum. Sin nihil hujusmodi inveniat, habendus est pro suspecto, et ad alias *instantias crucis* circa hoc confugiendum.

Similiter, sit natura inquisita, pondus sive grave. Bivium circa hanc naturam tale est. Necessè est, ut gravia et ponderosa vel tendant ex natura sua ad centrum terræ, per proprium schematismum; vel ut a massa corporea ipsius terræ, tanquam a congregatione corporum connaturalium, attrahantur et rapiantur, et ad eam per consensum ferantur. At posterius hoc si in causa sit, sequitur, ut quo propius gravia appropinquant ad terram, eo fortius et majore cum impetu ferantur ad eam; quo longius ab ea absint, debilius et tardius (ut fit in attractionibus magneticis) idque fieri intra spatium certum; adeo ut si elongata fuerint a terra tali distantia, ut virtus terræ in ea agere non possit, pensilia mansura sint, ut et ipsa terra, nec omnino decasura.

Itaque talis circa hanc rem poterit esse *instantia crucis*. Sumatur horologium ex iis, quæ moventur per pondera plumbea; et aliud ex iis, quæ moventur per compressionem laminæ ferreæ; atque vere probentur, ne alterum altero velocius sit, aut tardius; deinde ponatur horologium illud movens per pondera, super fastigium alicujus templi altissimi, altero illo infra detento; et notetur diligenter, si horologium in alto situm tardius moveatur, quam solebat, propter diminutam virtutem ponderum. Idem fiat experimentum in profundis minerarum, alte sub terra depressarum; utrum horologium hujusmodi non moveatur velocius, quam solebat, propter auctam virtutem ponderum. Quod si inveniat virtus ponderum minui in sublimi, aggravari in subterraneis; recipiatur pro causa ponderis attractio a massa corporea terræ.

Similiter, sit natura inquisita, verticitas acus ferreæ, tactæ magnete. Circa hanc naturam tale erit bivium. Necessè est, ut tactus magnetis vel ex se indat ferro verticitatem ad septentriones et austrum;

vel ut excitet ferrum tantummodo et habiliter: motus autem ipse indatur ex præsentia terræ, ut Gilbertus opinatur, et tanto conatu probare nititur. Itaque huc spectant ea, quæ ille perspicaci industria conquisivit. Nimirum quod clavus ferreus, qui diu duravit in situ versus septentriones et austrum, colligat mora diutina verticitatem, absque tactu magnetis: ac si terra ipsa, quæ ob distantiam debiliter operatur (namque superficies aut extima incrustatio terræ virtutis magneticæ, ut ille vult, experts est) per moram tamen longam magnetus tactum suppleret, et ferrum excitet, deinde excitum conformaret et verteret. Rursus, quod ferrum ignitum et candens, si in extinctione sua exporrigatur inter septentriones et austrum, colligat quoque verticitatem absque tactu magnetis: ac si partes ferri in motu positæ per ignitionem, et postea se recipientes, in ipso articulo extinctionis suæ magis essent susceptivæ, et quasi sensitivæ, virtutis manantis a terra, quam alias; et inde fierent tanquam excitæ. Verum hæc, licet bene observata, tamen non evincunt prorsus, quod ille asserit.

*Instantia crucis* autem circa hoc subjectum poterit esse talis. Capiatur terrella ex magnete, et notentur poli ejus; et ponantur poli terrellæ versus orientem et occasum, non versus septentriones et austrum, atque ita jaceant; deinde superponatur acus ferrea intacta, et permittatur ita manere ad dies sex aut septem. Acus vero (nam de hoc non dubitatur) dum manet super magnetem, relictis polis mundi, se vertet ad polos magnetis. Itaque quamdiu ita manet, vertitur scilicet ad orientem et occidentem mundi. Quod si inveniat acus illa, remota a magnete, et posita super versorium, statim se applicare ad septentriones et austrum, vel etiam paulatim se eo recipere; tum recipienda est pro causa, præsentia terræ: sin autem vertatur (ut prius) in orientem et occidentem, aut perdat verticitatem, habenda est illa causa pro suspecta, et ulterius inquirendum est.

Similiter, sit natura inquisita, corporea substantia lunæ; an sit tenuis, flammea, sive aërea, ut plurimi ex priscis philosophis opinati sunt; an solida et densa, ut Gilbertus et multi moderni, cum nonnullis ex antiquis, tenent. Rationes posterioris istius opinionis fundantur in hoc maxime, quod luna radios solis reflectat; neque videtur fieri reflexio lucis nisi a solidis.

Itaque *instantiæ crucis* circa hoc subjectum esse poterunt (si modo aliquæ sint) quæ demonstrent reflexionem a corpore tenui, qualis est flamma, modo sit crassitie sufficientis. Certe causa crepusculi inter alias est reflexio radiorum solis a superiore parte aëris. Etiam quandoque reflecti videmus radios solis temporibus vespertinis serenis, a fimbriis nubium roscidarum, non minori splendore, sed potius illustriori et magis glorioso, quam qui redditur a corpore lunæ; neque tamen constat eas nubes coaluisse in corpus densum aquæ. Etiam videmus aërem tenebrosam pone fenestras noctu reflectere lucem candelæ, non minus quam corpus densum. Tentandum etiam foret experimentum immissionis radiorum solis per foramen, super flammam aliquam subfuscam et cœruleam. Sane radii aperti solis in-

cidentes in flammam obscuriores videntur eas quasi mortificare, ut conspiciantur magis instar fumi albi, quam flammæ. Atque hæc impræsentiarum occurrunt, quæ sint ex natura *instantiarum crucis* circa hanc rem; et meliora fortasse reperiri possunt. Sed notandum semper est, reflexionem a flamma non esse expectandam, nisi a flamma alicujus profunditatis: nam aliter vergit ad diaphanum. Hoc autem pro certo ponendum, lucem semper in corpore æquali, aut excipi et transmitti, sicut resiliere.

Similiter, sit natura inquisita, motus missilium; veluti spiculorum, sagittarum, globulorum, per aërem. Hunc motum schola (more suo) valde negligenter expedit; satis habens, si eum nomine motus violenti a naturali (quem vocant) distinguat: et quod ad primam percussorem sive impulsorem attinet, per illud (*quod duo corpora non possint esse in uno loco, ne fiat penetratio dimensionum*) sibi satisfaciat; et de processu continuato istius motus nihil curet. At circa hanc naturam bivium est tale: aut iste motus fit ab aëre vehente, et pone corpus emissum se colligente, instar fluvii erga scapham, aut venti erga paleas; aut a partibus ipsius corporis non sustentibus impressionem, sed ad eandem laxandam per successionem se promoventibus. Atque priorem illum recipit Fracastorius, et fere omnes qui de hoc motu paulo subtilius inquisiverunt: neque dubium est, quin sint aëris partes in hac re nonnullæ; sed alter motus proculdubio verus est, ut ex infinitis constat experimentis. Sed inter cæteras poterit esse circa hoc subjectum *instantia crucis* talis; quod lamina aut filum ferri paulo contumaciuss; vel etiam calamus sive penna in medio divisa, adducta et curvata inter pollicem et digitum, exiliant. Manifestum enim est, hoc non posse imputari aëri se pone corpus colligenti, quia fons motus est in medio laminæ vel calami, non in extremis.

Similiter, sit natura inquisita, motus ille rapidus et potens expansionis pulveris pyrii in flammam; unde tantæ moles subvertuntur, tanta pondera emittuntur, quanta in cuniculis majoribus et bombardis videmus. Bivium circa hanc naturam tale est: aut excitatur iste motus a mero corporis appetitu se dilatandi, postquam fuerit inflammatum; aut ab appetitu mixto spiritus crudi, qui rapide fugit ignem, et ex eo circumfuso, tanquam ex carcere, violenter erumpit. Schola autem et vulgaris opinio tantum versatur circa priorem illum appetitum. Putant enim homines se pulchre philosophari, si asserant flammam ex forma elementi necessitate quadam donari, locum ampliorem occupandi, quam idem corpus expleverat, cum subiret formam pulveris, atque inde sequi motum istum. Interim minime advertunt, licet hoc verum sit, positum quod flamma generetur, tamen posse impediri flammæ generationem a tanta mole, quæ illam comprimere et suffocare queat; ut non deducatur res ad istam necessitatem, de qua loquuntur. Nam quod necesse sit fieri expansionem, atque inde sequi emissionem, aut remissionem corporis quod obstat, si generetur flamma; recte putant. Sed ista necessitas plane evitatur, si moles illa solida flammam supprimat, antequam generetur. Atque videmus flammam, præsertim in prima generatione, mollem esse et lenem, et requirere cavum, in quo

experiri et ludere possit. Itaque tanta violentia huic rei per se assignari non potest. Sed illud verum; generationem hujusmodi flammarum flatulentarum, et veluti ventorum igneorum, fieri ex conflictu duorum corporum, eorumque naturæ inter se plane contrariæ; alterius admodum inflammabilis, quæ natura viget in sulphure; alterius flammam exhorrentis, qualis est spiritus crudus, qui est in nitro; adeo ut fiat conflictus mirabilis, inflammante se sulphure quantum potest (nam tertium corpus, nimirum carbo salicis, nil aliud fere præstat, quam ut illa duo corpora incorporet, et commode uniat) et erumpente spiritu nitri quantum potest, et una se dilatante (nam hoc faciunt et aër, et omnia cruda, et aqua, ut a calore dilatentur) et per istam fugam et eruptionem, interim flammam sulphuris, tanquam foliibus occultis, undequaque exsufflante.

Poterant autem esse *instantiæ crucis* circa hoc subjectum duorum generum. Alterum eorum corporum, quæ maxime sunt inflammabilia, qualia sunt sulphur, caphura, naphtha, et hujusmodi, cum eorum misturis; quæ citius et facilius concipiunt flammam quam pulvis pyrius, si non impediatur: ex quo liquet appetitum inflammandi per se effectum illum stupendum non operari. Alterum eorum, quæ flammam fugiunt et exhorrent, qualia sunt sales omnes. Videmus enim, si jaciuntur in ignem, spiritum aqueum erumpere cum fragore, antequam flamma concipiatur, quod etiam leniter fit in foliis paulo contumacioribus, parte aquea erumpente, antequam oleosa concipiat flammam. Sed maxime cernitur hoc in argento vivo, quod non male dicitur aqua mineralis. Hoc enim absque inflammatione, per eruptionem et expansionem simplicem, vires pulveris pyrii fere adæquat; quod etiam admixtum pulveri pyrio, ejus vires multiplicare dicitur.

Similiter, sit natura inquisita, transitoria natura flammæ, et extinctio ejus momentanea. Non enim videtur natura flammæ hic apud nos figi et consistere, sed singulis quasi momentis generari, et statim extingui. Manifestum enim est in flammis, quæ hic continuantur et durant, istam durationem non esse ejusdem flammæ in individuo, sed fieri per successionem novæ flammæ seriatim generatæ, minime autem manere eandem flammam numero; id quod facile perspicitur ex hoc, quod subtracto alimento sive fomite flammæ, flamma statim pereat. Bivium autem circa hanc naturam tale est. Momentanea ista natura aut fit remittente se causa, quæ eam primo genuit, ut in lumine, sonis, et motibus (quos vocant) violentis; aut quod flamma in natura sua possit hic apud nos manere, sed a contrariis naturis circumfusus vim patiatur et destruat.

Itaque poterit esse circa hoc subjectum *instantia crucis* talis. Videmus flammam in incendiis majoribus, quam alte in sursum ascendant. Quanto enim basis flammæ est latior, tanto vertex sublimior: itaque videtur principium extinctionis fieri circa latera, ubi ab aëre flamma comprimitur, et male habetur. At medietas flammæ, quæ aër non contingit, sed alia flamma undique circumdat, eadem numero manent; neque extinguuntur, donec paulatim angustentur ab aëre per latera circumfuso. Itaque omnis flamma pyramidalis est basi circa fomitem largior.

vertice autem (inimicante aëre, nec suppeditante fomite) acutior. At fumus angustior circa basin ascendendo dilatatur, et fit tanquam pyramis inversa; quia scilicet aër fumum recipit, flammam (neque enim quispiam somniet aërem esse flammam accensam, cum sint corpora plane heterogenea) comprimit.

Accuratio autem poterit esse *instantia crucis* ad hanc rem accommodata, si res forte manifestari possit per flammam bicolorem. Capiatur igitur situla parva ex metallo, et in ea figatur parva candela cerea accensa; ponatur situla in patera, et circumfundatur spiritus vini in modica quantitate, quæ ad labra situlæ non attingat; tum accende spiritum vini. At spiritus ille vini exhibebit flammam magis scilicet cœruleam, lychnus candelæ autem magis flavam. Notetur itaque utrum flamma lychni (quam facile est per colorem a flamma spiritus vini distinguere; neque enim flammæ, ut liquores, statim commiscantur) maneat pyramidalis, an potius magis tendat ad formam globosam, cum nihil inveniatur quod eam destruat aut comprimat. At hoc posterius si fiat, manere flammam eandem numero, quamdiu intra aliam flammam concludatur, nec vim inimicam aëris experiatur, pro certo ponendum est.

Atque de *instantiis crucis* hæc dicta sint. Longiores autem in iis tractandis ad hunc finem fuimus, ut homines paulatim discant et assuefiant, de natura judicare per *instantias crucis*, et experimenta lucifera, et non per rationes probabiles.

## XXXVII.

Inter *prærogativas instantiarum* ponemus loco decimo quinto *instantias divortii*; quæ indicant separationes naturarum earum, quæ ut plurimum occurrunt. Differunt autem ab *instantiis* quæ subjunguntur *instantiis comitatus*; quia illæ indicant separationes naturæ alicujus ab aliquo concreto, cum quo illa familiariter consuescit; hæc vero separationes naturæ alicujus ab altera natura. Differunt etiam ab *instantiis crucis*; quia nihil determinant, sed moment tantum de separabilitate unius naturæ ab altera. Usus autem earum est ad prodendas falsas formas, et dissipandas leves contemplationes ex rebus obvis orientes; adeo ut veluti plumbum et pondera intellectui addant.

Exempli gratia: sint naturæ inquisitæ, quatuor naturæ illæ; quas *contubernales* vult esse Telesius, et tanquam ex eadem camera: viz. calidum, lucidum, tenue, mobile, sive promptum ad motum. At plurimæ inveniuntur *instantiæ divortii* inter ipsas. Aër enim tenuis est et habilis ad motum, non calidus aut lucidus: luna lucida, absque calore: aqua fervens, calida absque lumine: motus acus ferreæ super versorium, pernix et agilis; et tamen in corpore frigido, denso, opaco: et complura id genus.

Similiter, sint naturæ inquisitæ, natura corporea, et actio naturalis. Videtur enim non inveniri actio naturalis, nisi subsistens in aliquo corpore. Attamen possit fortasse esse circa hanc rem *instantia nonnulla divortii*. Ea est actio magnetica, per quam ferrum fertur ad magnetem, gravia ad globum terræ. Addi etiam possint aliæ nonnullæ operationes ad distans. Actio siquidem hujusmodi et in tempore fit, per momenta, non in puncto temporis; et

in loco, per gradus et spatia. Est itaque aliquod momentum temporis et aliquod intervallum loci, in quibus ista virtus sive actio hæret in medio inter duo illa corpora, quæ motum cient. Reducitur itaque contemplatio ad hoc; utrum illa corpora, quæ sunt termini motus, disponant vel alterent corpora media, ut per successionem et tactum verum labatur virtus a termino ad terminum, et interim subsistat in corpore medio; an horum nihil sit, præter corpora, et virtutem, et spatia? Atque in radiis optiis, et sonis, et calore, et aliis nonnullis operantibus ad distans, probabile est media corpora disponi et alterari; eo magis, quod requiratur medium qualificatum ad deferendam operationem talem. At magnetica illa sive coitiva virtus admittit media tanquam adiphora, nec impeditur virtus in omnigeno medio. Quod si nil rei habeat virtus illa aut actio cum corpore medio, sequitur, quod sit virtus aut actio naturalis ad tempus nonnullum, et in loco nonnullo, subsistens sine corpore; cum neque subsistat in corporibus terminantibus, nec in mediis. Quare actio magnetica poterit esse *instantia divortii*, circa naturam corpoream, et actionem naturalem. Cui hoc adjici potest tanquam corollarium aut lucrum non prætermittendum: viz. quod etiam secundum sensum philosophandi sumi possit probatio, quod sint entia, et substantiæ separatæ et incorporeæ. Si enim virtus et actio naturalis emanans a corpore, subsistere possit aliquo tempore et aliquo loco, omnino sine corpore; prope est, ut possit etiam emanare in origine sua a substantia incorporea. Videtur enim non minus requiri natura corporea ad actionem naturalem sustentandam et devehendam, quam ad exciandam aut generandam.

## XXXVIII.

Sequuntur quinque ordines *instantiarum*, quas uno vocabulo generali *instantias lampadis*, sive *informationis primæ*, appellare consuevimus: eæ sunt, quæ auxiliantur sensui. Cum enim omnis *interpretatio naturæ* incipiat a sensu; atque a sensuum perceptionibus, recta, constanti, et munita via, ducat ad perceptiones intellectus, quæ sunt notiones veræ et axiomata; necesse est, ut quanto magis copiosæ et exactæ fuerint representationes, sive præbitiones ipsius sensus, tanto omnia cedant facilius et feliciter.

Harum autem quinque *instantiarum lampadis*; primæ roborant, ampliant, et rectificat actiones sensus immediatas; secundæ deducunt non-sensibile ad sensibile; tertiæ indicant processum continuatos sive series earum rerum et motuum, quæ (ut plurimum) non notantur nisi in exitu aut periodis: quartæ aliquid substituunt sensui in meris destitutionibus: quintæ excitant attentionem sensus et advertentiam, atque una limitant subtilitatem rerum. De his autem singulis jam dicendum est.

## XXXIX.

Inter *prærogativas instantiarum* ponemus loco decimo sexto *instantias januæ* sive *portæ*: eo enim nomine eas appellamus, quæ juvant actiones sensus immediatas. Inter sensus autem manifestum est partes primas tenere visum, quoad informationem; quare huic sensui præcipue auxilia conquirenda.

Auxilia autem triplicia esse posse videntur: vel ut percipiat non visa; vel ut majore intervallo; vel ut exactius et distinctius.

Primi generis sunt (missis bis-oculis, et hujusmodi, quæ valent tantum ad corrigendam et levandam infirmitatem visus non bene dispositi, atque ideo nihil amplius informant) ea, quæ nuper inventa sunt perspicilla; quæ latentes et invisibiles corporum minutias, et occultos schematismos, et motus (aucta insigniter specierum magnitudine) demonstrant; quorum vi, in pulice, musca, vermicultis, accurata corporis figura et lineamenta, necnon colores et motus prius non conspicui, non sine admiratione cernuntur. Quinetiam aiunt lineam rectam calamo vel penicillo descriptam, per hujusmodi perspicilla inæqualem admodum et tortuosam cerni: quia scilicet nec motus manus licet per regulam adjunctæ, nec impressio atramenti aut coloris, revera æqualia existant; licet illæ inæqualitates tam minutæ sint, ut sine adjumento hujusmodi perspicillorum conspici nequeant. Etiam superstitionem quandam observationem in hac re (ut fit in rebus novis et miris) addiderunt homines: viz. quod hujusmodi perspicilla opera naturæ illustrent, artis dehonestent. Illud vero nihil aliud est, quam quod texturæ naturales multo subtiliores sint quam artificiosæ. Perspicillum enim illud ad minuta tantum valet: quale perspicillum si vidiasset Democritus, exsiluisset forte, et modum videndi atomum (quem ille invisibilem omnino affirmavit) inventum fuisse putasset. Verum incompetentia hujusmodi perspicillorum, præterquam ad minutias tantum, (neque ad ipsas quoque, si fuerint in corpore majusculo,) usum rei destruit. Si enim inventum extendi posset at corpora majora, aut corporum majorum minutias; adeo ut textura panni lintei conspici posset tamquam rete; atque hoc modo minutias latentes et inæqualitates gemmarum, liquorum, urinarum, sanguinis, vulnerum, et multarum aliarum rerum cerni possent; magnæ proculdubio ex eo invento commoditates capi possent.

Secundi generis sunt illa altera perspicilla, quæ memorabili conatu adinvenit Galilæus: quorum ope, tanquam per scaphas aut naviculas, aperiri et exerceri possint propiora cum cælestibus commercia. Hinc enim constat galaxiam esse nodum cive coactionem stellarum parvarum, plane numeratarum et distinctarum, de qua re apud antiquos tantum suspicio fuit. Hinc demonstrari videtur, quod spatia orbium (quos vocant) planetarum non sint plane vacua aliis stellis; sed quod cælum inceptat stellescere, antequam ad cælum ipsum stellatum ventum sit; licet stellis minoribus, quam ut sine perspicillis istis conspici possint. Hinc choreas illas stellarum parvarum circa planetam Jovis (unde conjici possit, esse in motibus stellarum plura centra) intueri licet. Hinc inæqualitates luminosi et opaci in luna distinctius cernuntur et locantur; adeo ut fieri possit quædam seleno-graphia. Hinc maculæ in sole; et id genus: Omnia certe inventa nobilia, quatenus fides hujusmodi demonstrationibus tuto adhiberi possit. Quæ nobis ob hoc maxime suspectæ sunt, quod in istis paucis sistatur experimentum, neque alia complexa investigatu æque digna eadem ratione inventa sint.

Tertii generis sunt bacilla illa ad terras mensurandas, astrolabia, et similia; quæ sensum videndi non ampliant, sed rectificanc et dirigunt. Quod si sint aliæ instantiæ, quæ reliquos sensus juvent in ipsorum actionibus immediatis et individuis; tamen si ejusmodi sint, quæ informationi ipsi nihil addant plus quam jam habetur, ad id, quod nunc agitur, non faciunt: itaque earum mentionem non fecimus.

#### XL.

Inter *prærogativas instantiarum* ponemus loco decimo septimo *instantias citantes*; sumpto vocabulo a foris civilibus, quia citant ea ut compareant, quæ prius non comparuerunt; quas etiam *instantias evocantes* appellare consuevimus. Eæ deducunt non-sensibile ad sensibile.

Sensum autem fugiunt res, vel propter distantiam objecti locati; vel propter interceptionem sensus per corpora media; vel quia objectum non est habile ad impressionem in sensu faciendam; vel quia deficit quantum in objecto pro feriendo sensu; vel quia tempus non est proportionatum ad actuandum sensum; vel quia objecti percussio non toleratur a sensu; vel quia objectum ante implevit et possedit sensum, ut novo motui non sit locus. Atque hæc præcipue ad visum pertinent, et deinde ad tactum. Nam hi duo sensus sunt informativi ad largum, atque de communibus objectis; ubi reliqui tres non informant fere, nisi immediate et de propriis objectis.

In primo genere non fit deductio ad sensibile, nisi rei, quæ cerni non possit propter distantiam, adjicitur aut substituitur alia res, quæ sensum magis e longinquo provocare et ferire possit; veluti in significatione rerum per ignes, campanas, et similia.

In secundo genere fit deductio, cum ea, quæ interior propter interpositionem corporum latent, nec commode aperiri possunt, per ea, quæ sunt in superficie, aut ab interioribus effluunt, perducuntur ad sensum: ut status humanorum corporum per pulsus et urinas, et similia.

At tertii et quarti generis deductiones ad plurima spectant, atque undique in rerum inquisitione sunt conquiendæ. Hujus rei exempla sunt. Patet quod aër, et spiritus, et hujusmodi res, quæ sunt toto corpore tenues et subtiles, nec cerni nec tangi possint: Quare in inquisitione circa hujusmodi corpora deductionibus omnino est opus.

Sit itaque natura inquisita, actio et motus spiritus, qui includitur in corporibus tangibilibus. Omne enim tangibile apud nos continet spiritum invisibilem et intactilem, eique obducitur, atque eum quasi vestit. Hinc fons triplex potens ille, et mirabilis *processus* spiritus in corpore tangibili. Spiritus enim in re tangibili, emissus corpora contrahit et desiccatur: detentus, corpora intenerat et colligat; nec prorsus emissus nec prorsus detentus, informat, membrificat, assimilatur, egerit, organizat, et similia. Atque hæc omnia deducuntur ad sensibile per effectus conspicuos.

Etenim in omni corpore tangibili inanimato, spiritus inclusus primo multiplicat se, et tanquam depascet partes tangibiles eas, quæ sunt maxime ad hoc faciles et præparatæ; easque digerit, et conficit, et vertit in spiritum, et deinde una evolvant. Atque

hæc confectio et multiplicatio spiritus deducitur ad sensum per diminutionem ponderis. In omni enim desiccatione aliquid defluit de quanto; neque id ipsum ex spiritu tantum præinexistente, sed ex corpore quod prius fuit tangibile, et noviter verum est: spiritus enim non ponderat. Egressus autem sive emissio spiritus deducitur ad sensibile in rubigine metallorum, et aliis putrefactionibus ejus generis, quæ sistunt se, antequam pervenerint ad rudimenta vitæ; nam illæ ad tertium genus *processus* pertinent. Etenim in corporibus magis compactis spiritus non invenit poros et meatus, per quos evolet: itaque cogitur partes ipsas tangibiles protrudere et ante se agere, ita ut illæ simul exeant; atque inde fit rubigo, et similia. At contractio partium tangibilium, postquam aliquid de spiritu fuerit emissum (unde sequitur illa desiccatio) deducitur ad sensibile, tum per ipsam duritiem rei auctam, tum multo magis per scissuras, angustationes, corrugationes, et complicationes corporum, quæ inde sequuntur. Etenim partes ligni desiliunt et angustantur; pelles corrugantur: neque id solum, sed (si subita fuerit emissio spiritus per calorem ignis) tantum properant ad contractionem, ut se complicant et convolvant.

At contra, ubi spiritus detinetur, et tamen dilatatur et excitatur per calorem aut ejus analogam (id quod fit in corporibus magis solidis aut tenacibus) tum vero corpora emolliuntur, ut ferrum candens; fluunt, ut metalla; liquefiunt, ut gummi, cera, et similia. Itaque contrariæ illæ operationes caloris (ut ex eo alia durescant, alia liquescant) facile reconciliantur; quia in illis, spiritus emittitur; in his, agitatur et detinetur: quorum posterius est actio propria caloris et spiritus; prius, actio partium tangibilium tantum per occasionem spiritus emissi.

At ubi spiritus nec detinetur prorsus, nec prorsus emittitur; sed tantum inter claustra sua tentat et experitur, atque nacta est partes tangibiles obediens et sequaces in promptu; ita ut quo spiritus agit, eæ simul sequantur: tum vero sequitur efformatio in corpus organicum, et membrificatio, et reliquæ actiones vitales, tam in vegetabilibus quam in animalibus. Atque hæc maxime deducuntur ad sensum, per notationes diligentes primorum inceptuum, et rudimentorum sive tentamentorum vitæ in animalculis ex putrefactione natis; ut in ovis formicarum, vermibus, muscis, ranis post imbrem, etc. Requiritur autem ad vivificationem, et lenitas caloris, et lentor corporis; ut spiritus nec per festinationem erumpat, nec per contumaciam partium coërceatur, quin potius ad cæræ modum illas plicare et effingere possit.

Rursus, differentia illa spiritus maxime nobilis, et ad plurima pertinens (viz. spiritus abscissi; ramosi simpliciter; ramosi simul et cellulati: ex quibus prior est spiritus omnium corporum inanimatorum; secundus, vegetabilium; tertius, animalium) per plurimas instantias deductorias tanquam sub oculis ponitur.

Similiter patet, quod subtiliores texturæ et schematismi rerum (licet tota corpore visibilibus aut tangibilibus) nec cernantur, nec tangantur. Quare in his quoque per deductionem procedit informatio. At differentia schematismorum maxime radicalis est

primaria sumitur ex copia vel paucitate materiæ, quæ subit idem spatium sive dimensum. Reliqui enim schematismi (qui referuntur ad dissimilaritates partium, quæ in eodem corpore continentur, et collocationes ac posituras earundem) præ illo altero sunt secundarii.

Sit itaque natura inquisita, expansio sive coitio materiæ in corporibus respective: viz. quantum materiæ impleat quantum dimensum in singulis. Etenim nil verius in natura, quam propositio illa gemella; *Ex nihilo nihil fieri: neque quicquam in nihilum redigi*: verum quantum ipsum materiæ sive summam totalem constare, nec augeri aut minui. Nec illud minus verum; *Ex quanto illo materiæ sub eisdem spatiis sive dimensionibus, pro diversitate corporum, plus et minus contineri*; ut in aqua plus, in aëre minus: Adeo ut si quis asserat, aliquod contentum aquæ in par contentum aëris verti posse, idem sit ac si dicat, aliquid posse redigi in nihilum: contra, si quis asserat, aliquod contentum aëris in par contentum aquæ verti posse; idem sit ac si dicat, aliquid posse fieri ex nihilo. Atque ex copia ista et paucitate materiæ, notiones illæ *densi* et *rari*, quæ varie et promiscue accipiuntur, proprie abstrahuntur. Assumenda est et assertio illa tertia, etiam satis certa: quod hoc, de quo loquimur, plus et minus materiæ in corpore hoc vel illo, ad calculos (facta collatione) et proportionem exactas, aut exactis propinquas, reduci possit. Veluti si quis dicat inesse in dato contento auri talem coacervationem materiæ, ut opus habeat spiritus vini ad tale quantum materiæ æquandum, spatio vicini et semel majore, quam implet aurum; non erraverit.

Coacervatio autem materiæ, et rationes ejus deducuntur ad sensibile per pondus. Pondus enim respondet copię materiæ, quoad partes rei tangibiles: spiritus autem, et ejus quantum ex materia, non venit in computationem per pondus; levat enim pondus potius, quam gravat. At nos hujus rei tabulam fecimus satis accuratam; in qua pondera et spatia singulorum metallorum, lapidum præcipuorum, lignorum, liquorum, oleorum, et plurimorum aliorum corporum tam naturalium quam artificialium, excepimus: rem polychrestam, tam ad lucem informationis, quam ad normam operationis; et quæ multas res revelet omnino præter expectatum. Neque illud pro minimo habendam est, quod demonstret omnem varietatem, quæ in corporibus tangibilibus nobis notis versatur (intelligimus autem corpora bene unita, nec plane spongiosa, et cava, et magna ex parte aëre impleta) non ultra rationes partium viginti et unius excedere: tam finita scilicet est natura, aut saltem illa pars ejus, cujus usus ad nos maxime pertinet.

Etenim diligentię nostræ esse putavimus experiri, si forte capi possint rationes corporum non tangibilium sive pneumaticorum, respectu corporum tangibilium. Id quod tali molitione aggressi sumus. Phialam vitream accepimus, quæ unciam fortasse unam capere possit; parvitate vasis usi, ut minori cum calore posset fieri evaporatio sequens. Hanc phialam spiritu vini implevimus fere ad collum; eligentes spiritum vini, quod per tabulam priorem, eum esse ex corporibus tangibilibus (quæ bene unita,

nec cava sunt) rarissimum, et minimum continens materiæ sub suo dimenso, observavimus. Deinde pondus aquæ cum phiala ipsa exacte notavimus. Postea vesicam accepimus, quæ circa duas pintas contineret. Ex ea aërem omnem, quoad fieri potuit, expressimus, eo usque ut vesicæ ambo latera essent contigua: etiam prius vesicam oleo oblevimus cum fricatione leni, quo vesica esset clausior; ejus, siqua erat, porositate oleo obturata. Hanc vesicam circa os phialæ, ore phialæ intra os vesicæ recepto, fortiter ligavimus; filo parum cerato, ut melius adhæresceret et arctius ligaret. Tum demum phialam supra carbonem ardentem in foculo collocavimus. At paulo post vapor sive aura spiritus vini per calorem dilatati, et in pneumaticum versi, vesicam paulatim sufflavit, eamque universam veli instar undequaque extendit. Id postquam factum fuit, continuo vitrum ab igne removimus, et super tapetem posuimus, ne frigore disrumperetur: statim quoque in summitate vesicæ foramen fecimus, ne vapor, cessante calore, in liquorem restitutus resideret, et rationes confunderet. Tum vero vesicam ipsam sustulimus, et rursus pondus excepimus spiritus vini, qui remanebat. Inde quantum consumptum fuisset in vaporem seu pneumaticum, computavimus; et facta collatione, quantum locum sive spatium illud corpus impleisset, quando esset spiritus vini in phiala, et rursus quantum spatium impleverit, postquam factum fuisset pneumaticum in vesica, rationes subduximus: ex quibus manifeste liquebat, corpus istud ita versum et mutatum expansionem centuplo majorem, quam antea habuisset, acquisivisse.

Similiter, sit natura inquisita, calor aut frigus; ejus nempe gradus, ut a sensu non percipiantur ob debilitatem. Hæc deducuntur ad sensum per vitrum calendare, quale superius descripsimus. Calor enim et frigus, ipsa non percipiuntur ad tactum: at calor aërem expandit, frigus contrahit. Neque rursus illa expansio et contractio aëris percipitur ad visum: at aër ille expansus aquam deprimit; contractus, attollit; ac tum demum fit deductio ad visum, non ante, aut alias.

Similiter, sit natura inquisita, mistura corporum; viz. quid habeant ex aëreo, quid ex oleoso, quid ex spiritu, quid ex cinere, et salibus, et hujusmodi; vel etiam (in particulari) quid habeat lac butyri, quid coaguli, quid seri, et hujusmodi. Hæc deducuntur ad sensum per artificiosas et peritas separationes, quatenus ad tangibilia. At natura spiritus in ipsis, licet immediate non percipiatur, tamen deprehenditur per varios motus et nixus corporum tangibilium, in ipso actu et processu separationis suæ; atque etiam per acrimonias, corrosiones, et diversos colores, odores, et sapes eorundem corporum post separationem. Atque in hac parte, per distillationes atque artificiosas separationes, strenue sane ab hominibus elaboratum est; sed non multo feliciter quam in cæteris experimentis, quæ adhuc in usu sunt; modis nimirum prorsus palpatoriis, et viis cæcis, et magis operose quam intelligenter; et (quod pessimum est) nulla cum imitatione aut æmulatione naturæ, sed cum destructione (per calores vehementes, aut virtutes nimis validas) omnis subtilioris schematismi, in quo occultæ rerum virtutes et consensus

præcipue sitæ sunt. Neque illud etiam, quod alias monuimus, hominibus in mentem aut observationem venire solet in hujusmodi separationibus; hoc est, plurimas qualitates in corporum vexationibus, tam per ignem quam alios modos, indi ab ipso igne, iisque corporibus, quæ ad separationem adhibentur, quæ in composito prius non fuerunt; unde miræ fallaciæ. Neque enim scilicet vapor universus, qui ex aqua emittitur per ignem, vapor aut aër antea fuit in corpore aquæ; sed factus est maxima ex parte per dilatationem aquæ ex calore ignis.

Similiter in genere omnes exquisitæ probationes corporum, sive naturalium sive artificialium, per quas vera dignoscuntur ab adulterinis, meliora a vilioribus, huc referri debent: deducunt enim non-sensibile ad sensibile. Sunt itaque diligenti cura undique conquirendæ.

Quintum vero genus latitantiæ quod attinet; manifestum est actionem sensus transigi in motu, motum in tempore. Si igitur motus alicujus corporis sit vel tam tardus, vel tam velox, ut non sit proportionatus ad momenta, in quibus transigitur actio sensus; objectum omnino non percipitur: ut in motu indicis horologii, et rursus in motu pilæ sclopeti. Atque motus, qui ob tarditatem non percipitur, facile et ordinario deducitur ad sensum per summas motus; qui vero ob velocitatem, adhuc non bene mensurari consuevit; sed tamen postulat inquisitio naturæ, ut hoc fiat in aliquibus.

Sextum autem genus, ubi impeditur sensus propter nobilitatem objecti, recipit deductionem; vel per elongationem majorem objecti a sensu; vel per hebetationem objecti per interpositionem mediæ talis, quod objectum debilitet, non annihilat; vel per admissionem et exceptionem objecti reflexi, ubi percussio directa sit nimis fortis; ut solis in pelvi aquæ.

Septimum autem genus latitantiæ, ubi sensus ita oneratur objecto, ut novæ admissioni non sit locus, non habet fere locum nisi in olfactu et odoribus; nec ad id, quod agitur, multum pertinet. Quare de deductionibus non sensibilis ad sensibile hæc dicta sint.

Quandoque tamen deductio fit non ad sensum hominis, sed ad sensum alicujus alterius animalis, cujus sensus in aliquibus humanum excellit; ut nonnullorum odorum, ad sensum canis; laciæ, quæ in aëre non extrinsecus illuminato latenter existit, ad sensum felis, noctuæ, et hujusmodi animalium, quæ cernunt noctu. Recte enim notavit Telesius, etiam in aëre ipso inesse lucem quandam originalem, licet exilem et tenuem, et maxima ex parte oculis hominum aut plurimorum animalium non inservientem; quia illa animalia, ad quorum sensum hujusmodi lux est proportionata, cernant noctu; id quod vel sine luce fieri, vel per lucem internam, minus credibile est.

Atque illud utique notandum est; de destitutionibus sensuum, eorumque remediis, hic nos tractare.

Nam fallaciæ sensuum ad proprias inquisitiones de sensu et sensibili remittendæ sunt; excepta illa magna fallaciæ sensuum, nimirum quod constituentur lineas rerum ex analogia hominis, et non ex analogia universi; quæ non corrigitur, nisi per rationem et philosophiam universalem.

## XLI.

Inter *prærogativas instantiarum* ponemus loco decimo octavo *instantias viæ*; quas etiam *instantias itinerantes* et *instantias articulatas*, appellare consuevimus. Eæ sunt, quæ indicant naturæ motus gradatim continuatos. Hoc autem genus instantiarum potius fugit observationem, quam sensum. Mira enim est hominum circa hanc rem indiligentia. Contemplantur siquidem naturam tantummodo desultorie et per periodos, et postquam corpora fuerint absoluta ac completa, et non in operatione sua. Quod si artificis alicujus ingenia et industriam explorare et contemplari quis cuperet, is non tantum materias rudes artis, atque deinde opera perfecta, conspiciere desideraret; sed potius præsens esse, cum artifex operatur, et opus suum promovet. Atque simile quiddam circa naturam faciendum est. Exempli gratia; si quis de vegetatione plantarum inquirat, ei inspiciendum est ab ipsa satione seminis alicujus (id quod per extractionem, quasi singulis diebus, seminum, quæ per biduum, triduum, quadriduum, et sic deinceps in terra manserunt, eorumque diligentem intuitum, facile fieri potest) quomodo et quando semen intumescere et turgere incipiat, et veluti spiritu impleri; deinde quomodo corticulam rumpere, et emittere fibras, cum latrone nonnulla sui interim sursum, nisi terra fuerit admodum contumax; quomodo etiam emittat fibras, partim radicales deorsum, partim cauliculares sursum, aliquando serpendo per latera, si ex ea parte inveniatur terram apertam et magis facilem, et complura id genus. Similiter facere oportet circa exclusionem ovorum, ubi facile conspici dabitur processus vivificandi et organizandi, et quid, et quæ partes fiant ex vitello, quid ex albumine ovi, et alia. Similis est ratio circa animalia ex putrefactione: nam circa animalia perfecta et terrestria, per exsectiones fœtuum ex utero, minus humanum esset ista inquirere; nisi forte per occasiones abortuum, et venationum, et similibus. Omnino igitur vigilia quædam servanda est circa naturam, ut quæ melius se conspiciendam præbeat noctu, quam interdiu. Istæ enim contemplationes tanquam nocturnæ censi possint, ob lucernæ parvitatem et perpetuationem.

Quin et in inanitatis idem tentandum est: id quod nos fecimus in inquirendis aperturis liquorum per ignem. Alius enim est modus aperturæ in aqua, alius in vino, alius in aceto, alius in omphacio; longe alius in lacte, et oleo, et cæteris. Id quod facile cernere erat per ebullitionem super ignem lenem, et in vase vitreo, ubi omnia cerni perspicue possint. Verum hæc brevius perstringimus; fusius et exactius de iis sermones habituri, cum ad inventionem *latentis rerum processus* ventum erit: semper enim memoria tenendum est, nos hoc loco non res ipsas tractare, sed exempla tantum adducere.

## XLII.

Inter *prærogativas instantiarum* ponemus loco decimo nono *instantias supplementi, sive substitutio-* nis; quas etiam *instantias perfugii* appellare consuevimus. Eæ sunt, quæ suppleant informationem, ubi sensus plane destituitur; atque idcirco ad eas

confugimus, cum instantiæ propriæ haberi non possint. Duplicitur autem fit substitutio; aut per graduationem, aut per analogam. Exempli gratia: non invenitur medium, quod inhibeat prorsus operationem magnetus in movendo ferrum; non aurum interpositum, non argentum, non lapis, non vitrum, lignum, aqua, oleum, pannus aut corpora fibrosa, aër, flamma, et cætera. Attamen per probationem exactam fortasse inveniri possit aliquod medium, quod hebetet virtutem ipsius plus quam aliquod aliud, comparative et in aliquo gradu; veluti quod non trahat magnes ferrum per tantum crassitiem auri, quam per par spatium aëris: aut per tantum argentum ignitum, quam per frigidum, et sic de similibus. Nam de his nos experimentum non fecimus: sed sufficit tamen, ut proponatur loco exempli. Similiter non invenitur hic apud nos corpus, quod non suscipiat calidum igni approximatum. Attamen longe citius suscipit calorem aër, quam lapis. Atque talis est substitutio, quæ fit per gradus.

Substitutio autem per analogiam, utilis sane, sed minus certa est; atque idcirco cum iudicio quodam adhibenda. Ea fit, cum deducitur non-sensibile ad sensum; non per operationes sensibiles ipsius corporis insensibilis, sed per contemplationem corporis alicujus cognati sensibilis. Exempli gratia: si inquiratur de mistura spirituum, qui sunt corpora non-visibilia; videtur esse cognatio quædam inter corpora, et formites sive alimenta sua. Fomes autem flammæ videtur esse oleum et pinguis; aëris, aqua et aquea: flammæ enim multiplicant se super halitus olei, aër super vapores aquæ. Videndum itaque de mistura aquæ et olei, quæ se manifestat ad sensum: quandoquidem mistura aëris et flammæ generis fugiat sensum. At oleum et aqua inter se per compositionem aut agitationem imperfecte admodum miscentur, eadem in herbis, et sanguine, et partibus animalium, accurate et delicate miscentur. Itaque simile quiddam fieri possit circa misturam flammæ et aërei generis in spiritalibus: quæ per confusionem simplicem non bene sustinent misturam: eadem tamen in spiritibus plantarum et animalium misceri videntur; præsertim cum omnis spiritus animatus depascat humida utraque, aquea et pinguis, tanquam fomites suos.

Similiter, si non de perfectioribus misturis spiritalium, sed de compositione tantum inquiratur; nempe utrum facile inter se incorporentur; an potius (exempli gratia) sint aliqui venti et exhalationes, aut alia corpora spiritalia, quæ non miscentur cum aëre communi, sed tantum hærent et natant in eo, in globulis et guttis, et potius franguntur ac comminuuntur ab aëre, quam in ipsum recipiuntur et incorporantur. Hoc in aëre communi et aliis spiritalibus, ob subtilitatem corporum, percipi ad sensum non potest; attamen imago quædam hujus rei, quatenus fiat, concipi possit in liquoribus argenti vivi, olei, aquæ; atque etiam in aëre et fractione ejus, quando dissipatur et ascendit in parvis portiunculis per aquam; atque etiam in fumis crassioribus, denique in pulvere excitato et hærente in aëre; in quibus omnibus non fit incorporatio. Atque representatio prædicta in hoc subjecto non mala est, si illud primo diligenter inquisitum fuerit, utrum possit

esse talis heterogenea inter spiritalia, qualis invenitur inter liquida: nam tum demum hæc simulacra per analogiam non incommode substituentur.

Atque de *instantiis* istis *supplementi*, quod diximus, informationem ab iis hauriendam esse, quando desint instantiæ propriæ, loco *perfugit*, nihilominus intelligi volumus, quod illæ etiam magni sint usus, etiam cum propriæ instantiæ adsint; ad roborandam scilicet informationem una cum propriis. Verum de his exactius dicemus, quando ad *adminicula inductionis* tractanda sermo ordine dilabatur.

## XLIII.

Inter *prærogativas instantiarum* ponemus loco vicesimo *instantias persecantes*; quas etiam *instantias vellicantes* appellare consuevimus, sed diversa ratione. *Vellicantes* enim eas appellamus, quia vellicant intellectum; *persecantes*, quia persecant naturam: unde etiam illas quandoque *instantias Democriti* nominamus. Eæ sunt, quæ de admirabili et exquisita subtilitate naturæ intellectum submontent, ut excitetur et expergiscatur ad attentionem, et observationem, et inquisitionem debitam. Exempli gratia: quod parum guttulæ atramenti ad tot literas vel lineas extendatur; quod argentum, exterius tantum inauratum, ad tantum longitudinem fili inaurati continetur; quod pusillus vermiculus, qualis in cute invenitur, habeat in se spiritum simul et figuram dissimilarem partium; quod parum croci, etiam dolium aquæ colore inficiat; quod parum zibethi aut aromatis, longe majus contentum aëris odore; quod exiguo suffitu tanta excitetur nubes fumi; quod sonorum tam accuratæ differentiæ, quales sint voces articulatæ, per aërem undequaque vehantur, atque per foramina et poros etiam ligni et aquæ (licet admodum extenuatæ) penetrent, quin etiam repercutiuntur, idque tam distincte et velociter; quod lux et color, etiam tanto ambitu et tam perneciter, per corpora solida vitri, aquæ, et cum tanta et tam exquisita varietate imaginum permeent, etiam refringantur et reflectantur; quod magnes per corpora omnigena, etiam maxime compacta, operetur: sed (quod magis mirum est) quod in his omnibus, in medio adiaphoro (quale est aër) unius actio aliam non magnopere impediatur; nempè, quod eodem tempore per spatia aëris devehantur et visibilia tot imagines; et vocis articulatæ tot percussiones; et tot odores specificati, ut violæ, rosæ; etiam calor et frigus; et virtutes magneticæ; omnia (inquam) simul, uno alterum non impediendo; ac si singula haberent vias et meatus suos proprios separatos, neque unum in alterum impingeret aut incurreret.

Solemus tamen utiliter hujusmodi *instantiis persecantibus* subjungere instantias, quas *metas persecantionis* appellare consuevimus: veluti, quod in iis, quæ diximus, una actio in diverso genere aliam non perturbet aut impediatur; cum tamen in eodem genere una aliam domet et extinguit: veluti, lux solis, lucem cindellæ; sonitus bombardæ, vocem; fortior odor, delicatorem; intensor calor, remissionem; lamina ferri interposita inter magnetem et aliud ferrum, operationem magnetis. Verum de his quoque inter *adminicula inductionis* erit proprius dicendi locus.

## XLIV.

Atque de instantiis, quæ juvant sensum, jam dictum est; quæ præcipui usus sunt ad partem informativam. Informatio enim incipit a sensu. At universum negotium desinit in opera: atque quemadmodum illud principium, ita hoc finis rei est. Sequentur itaque instantiæ præcipui usus ad *partem operativam*. Eæ genere duæ sunt, numero septem: quas universas, generali nomine, *instantias practicas* appellare consuevimus. *Operativæ* autem *partis* vitia duo, totidemque dignitates instantiarum in genere. Aut enim fallit operatio, aut onerat nimia. Fallit operatio maxime (præsertim post diligentem naturarum inquisitionem) propter male determinatas et mensuratas corporum vires et actiones. Viros autem et actiones corporum circumscribantur et mensurantur, aut per spatia loci, aut per momenta temporis, aut per unionem quanti, aut per prædominantiam virtutis: quæ quatuor, nisi fuerint probe et diligenter pensitata, erunt fortasse scientiæ speculatione quidem pulchræ, sed opere inactivæ. Instantias vero quatuor itidem, quæ huc referuntur, uno nomine *instantias mathematicas* vocamus, et *instantias mensura*.

Onerosa autem fit praxis, vel propter misturam rerum inutilium; vel propter multiplicationem instrumentorum; vel propter molem materiæ et corporum, quæ ad aliquod opus requiri contigerint. Itaque eæ instantiæ in pretio esse debent, quæ aut dirigunt operativam ad ea quæ maxime hominum intersunt; aut quæ parcunt instrumentis; aut quæ parcunt materiæ sive suppellectili. Eas autem tres instantias, quæ huc pertinent, uno nomine *instantias propitias* sive *benevolas* vocamus. Itaque de his septem instantiis jam sigillatim dicemus. atque cum iis partem illam de prærogativis sive dignitatibus instantiarum claudemus.

## XLV.

Inter *prærogativas instantiarum* ponemus loco vicesimo primo *instantias virgæ*, sive *radii*; quas etiam *instantias perlativæ*, vel de *non ultra* appellare consuevimus. Virtutes enim rerum et motus operantur, et expediuntur per spatia, non indefinita aut fortuita, sed finita et certa; quæ ut in singulis naturis inquisitis teneantur et notentur, plurimum interest practicæ; non solum ad hoc, ut non fallat, sed etiam ut magis sit aucta et potens. Etenim interdum datur virtutes producere, et distantias tanquam retrahere in propius; ut in perspicillis.

Atque plurimæ virtutes operantur et efficiunt tantum per tactum manifestum; ut fit in percussione corporum, ubi alterum non summovet alterum, nisi impellens impulsum tangat. Etiam medicinæ, quæ exterius applicantur, ut unguenta, emplastra, non exercent vires suas, nisi per tactum corporis. Denique objecta sensuum, tactus et gustus, non feriunt, nisi contigua organis.

Sunt et aliæ virtutes, quæ operantur ad distantiam, verum valde exiguam, quarum paucae adhuc notatæ sunt, cum tamen plures sint quam homines suspiciuntur: ut (capiendo exempla ex vulgatis) cum succinum aut gagates trahunt paleas; bullæ approxima-

tæ solvunt bullas; medicinæ nonnullæ purgativæ eliciunt humores ex alto, et hujusmodi. At virtus illa magnetica, per quam ferrum et magnes, vel magnetes invicem cœunt, operatur intra orbem virtutis certum, sed parvum; ubi contra, si sit aliqua virtus magnetica emanans ab ipsa terra (paulo nimirum interiore) super acum ferream, quatenus ad verticitatem, operatio fiat ad distantiam magnam.

Rursus, si sit aliqua vis magnetica, quæ operetur per consensum inter globum terræ et ponderosa, aut inter globum lunæ et aquas maris (quæ maxime credibilis videtur in fluxibus et refluxibus semi-mensuris) aut inter cœlum stellatum et planetas, per quam evocentur et attollantur ad sua apogæa; hæc omnia operantur ad distantias admodum longinquas. Inveniuntur et quædam inflammationes sive conceptiones flammæ, quæ fiunt ad distantias bene magnas in aliquibus materiis; ut referunt de naphtha Babylonica. Calores etiam insinuant se per distantias amplas; quod etiam faciunt frigora: adeo ut habitantibus circa Canadam moles sive massæ glaciales, quæ abrumpuntur et natant per oceanum septentrionalem, et deferuntur per Atlanticum versus illas oras, percipiuntur et incutiant frigora e longinquo. Odores quoque (licet in his videatur semper esse quædam emissio corporea) operantur ad distantias notabiles; ut evenire solet navigantibus juxta littora Floridæ, aut etiam nonnulla Hispaniæ, ubi sunt sylvæ totæ ex arboribus limonum, aurantiorum, et hujusmodi plantarum odoratarum, aut frutices rosmarini, majoranæ, et similibus. Postremo radiationes lucis, et impressiones sonorum, operantur scilicet ad distantias spatiosas.

Verum hæc omnia, utcumque operentur ad distantias parvas sive magnas, operantur certe ad finitas et naturæ notas, ut sit quiddam *non ultra*; idque pro rationibus, aut molis seu quanti corporum; aut vigoris et debilitatis virtutum; aut favoribus et impedimentis mediorum; quæ omnia in computationem venire et notari debent. Quinetiam mensuræ motuum violentorum (quos vocant) ut missilium, tormentorum, rotarum, et similibus, cum hæc quoque manifesto suos habeant limites certos, notandæ sunt.

Inveniuntur etiam quidam motus et virtutes contrariæ illis, quæ operantur per tactum, et non ad distans; quæ operantur scilicet ad distans, et non ad tactum; et rursus, quæ operantur remissius ad distantiam minorem, et fortius ad distantiam majorem. Etenim visio non bene transigitur ad tactum, sed indiget medio et distantia. Licet meminerim, me audisse ex relatione cujusdam fide digni, quod ipse in curandis oculorum suorum cataractis (erat autem cura talis, ut immitteretur festuca quædam parva argentea intra primam oculi tunicam, quæ pelliculam illam cataractæ removeret et truderet in angulum oculi) clarissime vidisset festucam illam supra ipsam pupillam moventem. Quod utcumque verum esse possit, manifestum est, majora corpora non bene aut distincte cerni, nisi in cuspidi conii, cœuntibus radiis objecti ad nonnullam distantiam. Quin etiam in semibus oculis melius cernit, remoto objecto paulo longius, quam propius. In missilibus autem certum est, percussionem non fieri tam fortem ad distantiam nimis parvam, quam paulo post. Hæc itaque et

similia in mensuris motuum quoad distantias notanda sunt.

Est et aliud genus mensuræ localis motuum, quod non prætermittendum est. Illud vero pertinet ad motus non progressivos, sed sphericos; hoc est, ad expansionem corporum in majorem spheram, aut contractionem in minorem. Inquirendum enim est inter mensuras istas motuum, quantam compressionem aut extensionem corpora (pro natura ipsorum) facile et libenter patiantur, et ad quem terminum reluctari incipiant, adeo ut ad extremum *non ultra* ferant; ut cum vesica inflata comprimitur, sustinet illa compressionem nonnullam aëris; sed si major fuerit, non patitur aër, sed rumpitur vesica.

At nos hoc ipsum subtiliore experimento magis exacte probavimus. Accepimus enim campanulam ex metallo, leviolem scilicet et tenuiorem, quali ad excipiendum salem utimur; eamque in pelvim aquæ immisimus, ita ut deportaret secum aërem, qui continebatur in concavo, usque ad fundum pelvis. Locaveramus autem prius globulum in fundo pelvis, super quem campanula imponenda esset. Quare illud eveniebat, ut si globulus ille esset minusculus (pro ratione concavi) reciperet se aër in locum minorem, et contruderetur solum, non extruderetur. Quod si grandioris esset magnitudinis, quam ut aër libenter cederet, tum aër, majoris pressuræ impatiens, campanulam ex aliqua parte elevabat, et in bullis ascendebat.

Etiam ad probandum qualem extensionem (non minus quam compressionem) pateretur aër, tale quippiam practicavimus. Ovum vitreum accepimus, cum parvo foramine in uno extremo ovi. Aërem per foramen exsuctione forti attraximus, et statim digito foramen illud obturavimus; et ovum in aquam immersimus, et dein digitum removimus. Aër vero, tensura illa per exsuctionem facta tortus, et magis quam pro natura sua dilatatus, ideoque se recipere et contrahere nitens (ita ut si ovum illud in aquam non fuisset immersum, aërem ipsum traxisset cum sibilo) aquam traxit ad tale quantum, quale sufficere possit ad hoc, ut aër antiquam recuperaret spheram sive dimensionem.

Atque certum est, corpora tenuiora (quale est aër) pati contractionem nonnullam notabilem, ut dictum est: at corpora tangibilia (quale est aqua) multo ægrius, et ad minus spatium patiuntur compressionem: qualem autem patiat, tali experimento inquisivimus.

Fieri fecimus globum ex plumbo cavum, qui duas circiter pintas vinarias contineret; eumque satis per latera crassum, ut majorem vim sustineret. In illum aquam immisimus, per foramen alicubi factum, atque foramen illud, postquam globus aqua impletus fuisset, plumbo liquefacto obturavimus, ut globus deveniret plane consolidatus. Dein globum forti malleo ad duo latera adversa complanavimus: ex quo necesse fuit aquam in minus contrahi, cum spheræ figurarum sit capacissima. Deinde, cum malleatio non amplius sufficeret, ægrius se recipiente aqua, molendino seu torculari usi sumus; ut tandem aqua, impatiens pressuræ ulterioris, per solida plumbi (instar roris delicati) exstillaret. Postea, quantum spatii per eam compressionem imminutum

foret, computavimus: atque tantam compressionem passam esse aquam (sed violentia magna subactam) intelleximus.

At solidiora, sicca, aut magis compacta, qualia sunt lapides et ligna, necnon metalla, multo adhuc minore compressionem aut extensionem, et fere imperceptibilem ferunt; sed vel fractione, vel progressionem, vel aliis perturbationibus se liberant, ut in curvationibus ligni aut metalli, horologiis moventibus per complicationem laminæ, missilibus, malleationibus, et innumeris aliis motibus, apparet. Atque hæc omnia cum mensuris suis in indagatione naturæ notanda et exploranda sunt; aut in certitudine sua, aut per æstimativas, aut per comparativas, prout dabitur copia.

## XLVI.

Inter *prærogativas instantiarum* ponemus loco vicesimo secundo *instantias curriculi*, quas etiam *instantias ad aquam* appellare consuevimus; sumpto vocabulo a clepsydris apud antiquos, in quas infundebatur aqua loco arenæ. Eæ mensurant naturam per momenta temporis, quemadmodum *instantiæ virgæ* per gradus spatii. Omnis enim motus sive actio naturalis transigitur in tempore; alius velocius, alius tardius, sed utcumque momentis certis, et naturæ notis. Etiam illæ actiones, quæ subito videntur operari, et in ictu oculi (ut loquimur) deprehenduntur recipere majus et minus quoad tempus.

Primo itaque videmus, restitutiones corporum cælestium fieri per tempora numerata; etiam fluxus et refluxus maris. Latio autem gravium versus terram, et levium versus ambitum cæli, fit per certa momenta, pro ratione corporis quod fertur, et medii. At velificationes navium, motus animalium, perlationes missilium, omnes fiunt itidem per tempora (quantum ad summas) numerabilia. Calorem vero quod attinet, videmus pueros per hiemem manus in flamma lavare, nec tamen uri; et jocolatores vasa plena vino vel aqua, per motus agiles et æquales vertere deorsum, et sursum recuperare, non effuso liquore; et multa hujusmodi. Nec minus ipsæ compressiones, et dilatationes, et eruptiones corporum fiunt, aliæ velocius, aliæ tardius, pro natura corporis et motus, sed per momenta certa. Quinetiam in explosione plurium bombardarum simul, quæ exaudiuntur quandoque ad distantiam triginta milliarium, percipitur sonus prius ab iis, qui prope absunt a loco ubi fit sonitus, quam ab iis, qui longe. At in visu (cujus actio est perniciosissima) liquet etiam requiri ad eum actuandum momenta certa temporis; idque probatur ex iis, quæ propter motus velocitatem non cernuntur; ut ex latione pilæ ex sclopeto. Velocior enim est prætervolatio pilæ quam impressio speciei ejus, quæ deferri poterat ad visum.

Atque hoc, cum similibus, nobis quandoque dubitationem peperit plane monstrosam; videlicet, utrum cæli sereni et stellati facies ad idem tempus cernatur, quando vere existit, an potius aliquanto post; et utrum non sit (quatenus ad visum cælestium) non minus tempus verum, et tempus visum, quam locus verus et locus visus, qui notatur ab astronomis in parallaxibus. Adeo incredibile nobis videbatur, species sive radios corporum cælestium per tam

immensa spatia milliarium subito deferri posse ad visum: sed potius debere eas in tempore aliquo notabili delabi. Verum illa dubitatio (quoad majus aliquod intervallum temporis inter tempus verum et visum) postea plane evanuit; reputantibus nobis jacturam illam infinitam, et diminutionem quanti, quatenus ad apparentiam inter corpus stellæ verum, et speciem visam, quæ causatur a distantia; atque simul notantibus ad quantam distantiam (sexaginta scilicet ad minimum milliariorum) corpora, eaque tantum albicantia, subito hic apud nos cernantur; cum dubium non sit lucem cælestium, non tantum albedinis vividum calorem, verum etiam omnia flammæ (quæ apud nos nota est) lucem, quoad vigorem radiationis, multis partibus excedere; etiam immensa illa velocitas in ipso corpore, quæ cernitur in motu diurno (quæ etiam viros graves ita obstupefecit, ut mallet credere motum terræ) facit motum illum ejaculationis radiorum ab ipsis (licet celeritate, ut diximus, mirabilem) magis credibilem. Maxime vero omnium nos movit, quod si interponeretur intervallum temporis aliquod notabile inter veritatem et visum, foret ut species per nubes interim orientes, et similes medii perturbationes, interciperentur sæpenumero, et confunderentur. Atque de mensuris temporum simplicibus hæc dicta sint.

Verum non solum quaerenda est mensura motuum et actionum simpliciter, sed multo magis comparative: id enim eximii est usus, et ad plurima spectat. Atque videmus flammam alicujus tormenti ignei citius cerni, quam sonitus audiatur; licet necesse sit pilam prius aërem percutere, quam flamma, quæ pone erat, exire potuerit; fieri hoc autem propter velociorem transactionem motus lucis, quam soni. Videmus etiam species visibiles a visu citius excipi, quam dimitti; unde fit, quod nervi fidium, digito impulsu, duplicentur aut triplicentur quoad speciem, quia species nova recipitur, antequam prius dimittatur; ex quo etiam fit, ut annuli rotati videantur globosi, et fax ardens, noctu velociter portata, conspiciatur caudata. Etiam ex hoc fundamento inæqualitatis motuum quoad velocitatem, excogitavit Galilæus causam fluxus et refluxus maris, rotante terræ velocius, aquis tardius; ideoque accumulantis se aquis in sursum, et deinde per vices se remittentibus in deorsum; ut demonstratur in vase aquæ incitatus movente. Sed hoc commentus est concessio non concessibili (quod terra nempe moveatur) ac etiam non bene informatus de oceani motu sexhorario.

At exemplum hujus rei, de qua agitur, videlicet de comparativis mensuris motuum, neque solum rei ipsius, sed et usus insignis ejus (de quo paulo ante loquuti sumus) eminet in cuniculis subterraneis, in quibus collocatur pulvis pyrius; ubi immensæ moles terræ, ædificiorum, et similium, subvertuntur, et in altum jaciuntur, a pusilla quantitate pulveris pyrii. Cujus causa pro certo illa est, quod motus dilatationis pulveris qui impellit, multis partibus sit perniciosior, quam motus gravitatis, per quem fieri possit aliqua resistantia; adeo ut primus motus perfunctus sit, antequam motus adversus inceperit; ut in principiis nullitas quædam sit resistentiæ. Hinc etiam fit, quod in omni missili actus non tam robustus, quam acutus, et celer, ad perlationem potissimum valeat.

Neque etiam fieri potuisset, ut parva quantitas spiritus animalis in animalibus, præsertim in tam vastis corporibus, qualia sunt balæne aut elephantis, tantam molem corpoream flecteret et regeret; nisi propter velocitatem motus spiritus, et hebetudinem corporeæ molis, quatenus ad expediendam suam resistantiam.

Denique, hoc unum ex præcipuis fundamentis est experimentorum magicorum, de quibus mox dicemus; ubi scilicet parva moles materiæ longe majorem superat, et in ordinem redigit: hoc inquam; si fieri possit anteverso motum per velocitatem unius, antequam alter se expediat.

Postremo, hoc ipsum *prius* et *posterius* in omni actione naturali notari debet; veluti quod in infusione rhabarbari eliciatur purgativa vis prius, astrictiva post; simile quiddam etiam in infusione violarum in acetum experti sumus; ubi primo excipitur suavis et delicatus floris odor; post, pars floris magis terrea, quæ odorem confundit. Itaque si infundatur violæ per diem integrum, odor multo languidius excipitur; quod si infundatur per partem quartam horæ tantum, et extrahantur, et (quia paucus est spiritus odoratus, qui subsistit in viola) infundantur post singulas quartas horæ violæ novæ et recentes ad sexies; tum demum nobilitatur infusio, ita ut licet non manserint violæ, utcumque renovatæ, plus quam ad sequihoram; tamen permanserit odor gratissimus, et viola ipsa non inferior, ad annum integrum. Notandum tamen est, quod non se colligat odor ad vires suas plenas, nisi post mensem ab infusione. In distillationibus vero aromatum maceratorum in spiritu vini patet, quod surgat primo phlegma aqueum et inutile, deinde aqua plus habens ex spiritu vini, deinde post aqua plus habens exaromate. Atque hujus generis quam plurima inveniuntur in distillationibus notata digna. Verum hæc sufficiant ad exempla.

## XLVII.

Inter *prærogativas instantiarum* ponemus loco vicesimo tertio *instantias quanti*, quas etiam *doses naturæ* (sumpto vocabulo a medicinis) vocare consuevimus. Eæ sunt, quæ mesurant virtutes per *quanta* corporum, et indicant quid *quantum corporis* faciat ad *modum* virtutis. Ac primo sunt quædam virtutes, quæ non subsistunt nisi in *quanto cosmico*, hoc est, tali *quanto*, quod habeat consensum cum configuratione et fabrica universi. Terra enim stat; partes ejus cadunt. Aquæ in maribus fluunt et refluxant; in fluviis minime, nisi per ingressum maris. Deinde etiam omnes fere virtutes particulares secundum *multum* aut *parvum* corporis operantur. Aquæ largæ non facile corrumpuntur; exiguæ cito. Mustum et cervisia maturescunt longe citius, et fiunt potabilia, in utribus parvis, quam in doliis magnis. Si herba ponatur in majore portione liquoris, fit infusio magis quam imbibitio: si in minore, fit imbibitio magis quam infusio. Aliud igitur erga corpus humanum est balneum, aliud levis irroratio. Etiam parvi rores in aère nunquam cadunt, sed dissipantur, et cum aère incorporantur. Et videre est in anhelitu super gemmas, parum illud humoris, quasi nubeculam vento dissipatam, continuo solvi. Etiam frustum ejusdem magnetis non trahit tantum ferri,

quantum magnes integer. Sunt etiam virtutes, in quibus parvitas *quanti* magis potest; ut in penetrationibus, stylus acutus citius penetrat, quam obtusus; adamas punctuatus sculpsit in vitro, et similia.

Verum non hic morandum est in indefinitis, sed etiam de *rationibus quanti* corporis erga modum virtutis inquirendum. Proclive enim foret credere, quod rationes quanti rationis virtutis adæquantur; ut si pila plumbea unius uncie caderet in tali tempore, pila unciarum duarum deberet cadere duplo celerius, quod falsissimum est; nec eædem rationes in omni genere virtutum valent, sed longe diversæ. Itaque hæc mensuræ ex rebus ipsis petendæ sunt, et non ex verisimilitudine aut conjecturis.

Denique in omni inquisitione naturæ *quantum* corporis requiratur ad aliquod effectum, tanquam dosis, notandum; et cautiones de *nimis* et *parum* aspergendæ.

## XLVIII.

Inter *prærogativas instantiarum* ponemus loco vicesimo quarto *instantias luctæ*; quas etiam *instantias prædominantis* appellare consuevimus. Eæ indicant prædominantiam et cessionem virtutum ad invicem; et quæ ex illis sit fortior et vincat, quæ infirmior et succumbat. Sunt enim motus et nixus corporum compositi, decompositi, et complicati, non minus quam corpora ipsa. Proponemus igitur primum species præcipuas motuum sive virtutum activarum; ut magis perspicua sit ipsarum comparatio in robore, et exinde demonstratio atque designatio *instantiarum luctæ* et *prædominantis*.

Motus primus sit motus *antitypiæ* materiæ, quæ inest in singulis portionibus ejus; per quem plane annihilari non vult: ita ut nullum incendium, nullum pondus aut depressio, nulla violentia, nulla denique ætas aut diurnitas temporis possit redigere aliquam vel minimam portionem materiæ in nihilum, quin illa et sit aliquid, et loci aliquid occupet; et se (in qualicumque necessitate ponatur) vel formam mutando vel locum, liberet; vel (si non detur copia) ut est, subsistat; neque unquam res eo deveniat, ut aut nihil sit, aut nullibi. Quem motum schola (quæ semper fere et denominat et definit res, potius per effectus et incommoda, quam per causas interiores) vel denotat per illud axioma, quod *duo corpora non possint esse in uno loco*; vel vocat motum, *ne fiat penetratio dimensionum*. Neque hujus motus exempla proponi consentaneum est: inest enim omni corpori.

Sit motus secundus, motus (quem appellamus) *netus*; per quem corpora non patiuntur se ulla ex parte sui dirimi a contactu alterius corporis, ut quæ mutuo nexu et contactu gaudeant: quem motum schola vocat motum *ne detur vacuum*: veluti cum aqua attrahitur sursum exsuctione, aut per fistulas; caro per ventosas; aut cum aqua sistitur, nec effluit in hydriis perforatis, nisi os hydriæ ad immittendum aërem aperiatur; et innumera id genus.

Sit motus tertius, motus (quem appellamus) *libertatis*; per quem corpora se liberare nituntur a pressura aut tensura præternaturali, et restituere se in dimensum corpori suo conveniens. Cujus motus etiam innumera sunt exempla: veluti (quatenus ad

liberationem a pressura) aquæ in natando, aëris in volando; aquæ in remigando, aëris in undulationibus ventorum, laminæ in horologiis. Nec ineleganter se ostendit motus aëris compressi in scolopetis ludicris puerorum, cum alnum aut simile quiddam excavant, et infarciunt frusto alicujus radicis succulentæ, vel similibus, ad utrosque fines; deinde per embolum trudent radicem, vel hujusmodi farcimentum in foramen alterum: unde emittitur et ejicitur radix cum sonitu ad foramen alterum, idque antequam tangatur a radice, aut farcimento citimo, aut embolo. Quatenus vero ad liberationem a tensura, ostendit se hic motus in aëre post exsuctionem in ovis vitreis remanente; in chordis, in corio, et panno; resilientibus post tensuras suas, nisi tensuræ illæ per moram invaluerint, etc. Atque hunc motum schola sub nomine motus ex *forma elementi* innuit; satis quidem inscite, cum hic motus non tantum ad aërem, aquam, aut flammam pertineat, sed ad omnem diversitatem consistentiæ; ut ligni, ferri, plumbi, panni, membranæ, etc. in quibus singula corpora suæ habent dimensionis modulum; et ab eo ægre ad spatium aliquod notabile abripiuntur. Verum quia motus iste libertatis omnium est maxime obvius, et ad infinita spectans, consultum fuerit eum bene et perspicue distinguere. Quidam enim valde negligenter confundunt hunc motum cum gemino illo motu *antitypiæ* et *nexus*; liberationem scilicet a pressura, cum motu *antitypiæ*; a tensura, cum motu *nexus*: ac si ideo cederent aut se dilatarent corpora compressa, ne sequeretur *penetratio dimensionum*; ideo resilient et contraherent se corpora tensa, ne sequeretur *vacuum*. Atqui si aër compressus se vellet recipere in densitatem aquæ, aut lignum in densitatem lapidis, nil opus foret *penetratione dimensionum*; et nihilominus longe major posset esse compressio illorum, quam illa ullo modo patiuntur. Eodem modo si aqua se dilatate vellet in raritatem aëris, aut lapis in raritatem ligni, non opus foret *vacuo*: et tamen longe major possit fieri extensio eorum, quam illa ullo modo patiuntur. Itaque non reducit res ad *penetrationem dimensionem* et *vacuum*, nisi in ultimis condensationis et rarefactionis; cum tamen isti motus longe citra eas sistant et versentur; neque aliud sint, quam desideria corporum conservandi se in consistentiis suis (sive, si malint, in formis suis) nec ab iis recedendi subito, nisi per modos suaves, ac per consensum alterentur. At longe magis necessarium est (quia multa secum trahit) ut intimetur hominibus, motum violentum (quem nos *mechanicum*; Democritus, qui in motibus suis primis expediendis etiam infra mediocres philosophos ponendus est, motum *plagæ* vocavit) nil aliud esse quam motum libertatis, scilicet a compressione ad relaxationem. Etenim in omni sive simplici protrusione, sive volatu per aërem, non fit summotio aut latio localis, antequam partes corporis præternaturaliter patiantur et comprimantur ab impellente. Tum vero partibus aliis alias per successivam trudentibus, fertur totum; nec solum progrediendo, sed etiam notando simul; ut etiam hoc modo partes se liberare, aut magis ex æquo tolerare possint. Atque de hoc motu haecenus.

Sit motus quartus, motus cui nomen dedimus mo-

*tus hyles*: qui modus antistrophus est quodammodo motui, de quo diximus, libertatis. Etenim in motu libertatis corpora novum dimensionum, sive novam sphaeram, sive novam dilatationem aut contractionem (hæc enim verborum varietas idem innuit) exhorrent, respuunt, fugiunt, et resilire ac veterem consistentiam recuperare totis viribus contendunt. At contra in hoc motu *hyles*, corpora novam sphaeram sive dimensionum appetunt; atque ad illud libenter et propere, et quandoque valentissimo nixu (ut in pulvere pyrio) aspirant. Instrumenta autem hujus motus, non sola certe, sed potentissima, aut saltem frequentissima, sunt calor et frigus. Exempli gratia: aër si per tensuram (velut per exsuctionem in ovis vitreis) dilatetur, magno laborat desiderio seipsum restituendi. At admoto calore, e contra appetit dilatari, et concupiscit novam sphaeram, et transit et migrat in illam libenter, tanquam in novam formam (ut loquuntur). Nec post dilatationem nonnullam de reductu curat, nisi per admotionem frigidi ad eam invitetur; quæ non reductus est, sed transmutatio repetita. Eodem modo et aqua, si per compressionem arctetur, recalcatrat; et vult fieri qualis fuit, scilicet latior. At si interveniat frigus intensum et continuatum, mutat se sponte sua et libenter in condensationem glaciei; atque si plane continuetur frigus, nec a temporibus interrumpatur (ut fit in speluncis et cavernis paulo profundioribus) vertitur in crystallum, aut materiam similem, nec unquam restituitur.

Sit motus quintus, motus *continuationis*: Intelligimus autem non continuationis simplicis et primariæ, cum corpore aliquo altero (nam ille est motus *nixus*) sed continuationis sui, in corpore certo. Certissimum enim est, quod corpora omnia solutionem continuitatis exhorreant; alia magia, alia minus, sed omnia aliquatenus. Nam ut in corporibus duris (veluti chalybis, vitri) reluctatio contra discontinuationem est maxime robusta et valida; ita etiam in liquoribus, ubi cessare aut languere saltem videtur motus ejusmodi, tamen non prorsus reperitur privatio ejus; sed plane inest ipsis in gradu tanquam infirmo; et prodit se in experimentis plurimis; sicut in bullis, in rotunditate guttarum, in filiis tenuioribus stillicidiorum, et in sequacitate corporum glutinosorum, et ejusmodi. Sed maxime omnium se ostendit appetitus iste, si discontinuatio tentetur usque ad fractiones minores. Nam in mortariis, post contusionem ad certum gradum, non amplius operatur pistillum: aqua non subintrat rimas minores: quin et ipse aër, non obstante subtilitate corporis ipsius, poros vasorum paulo solidiorum non pertransit subito, nec nisi per diuturnam insinuationem.

Sit motus sextus, motus quem nominamus motum *ad lucrum*, sive *motum indigentiae*. Is est, per quem corpora, quando versantur inter plane heterogenea et quasi inimica, si forte nanciscantur copiam aut commoditatem evitandi illa heterogenea, et se applicandi ad magis cognata (licet illa ipsa cognata talia fuerint, quæ non habeant arctum consensum cum ipsis) tamen statim ea amplectuntur, et tanquam potiora malunt; et lucri loco (unde vocabulum sumpimus) hoc ponere videntur, tanquam talium corporum indiga. Exempli gratia; aurum, aut aliud metallum

foliatum, non delectatur aëre circumfuso. Itaque si corpus aliquod tangibile et crassum nanciscatur (ut digitum, papyrus, quidvis aliud) adherit statim, nec facile divellitur. Etiam papyrus, aut pannus, et hujusmodi, non bene se habent cum aëre, qui inseritur et commistus est in ipsorum poris. Itaque aquam aut liquorum libenter imbibunt, et aërem exterminant. Etiam saccharum, aut spongia infusa in aquam aut vinum, licet pars ipsorum emineat, et longe attollatur supra vinum aut aquam, tamen aquam aut vinum paulatim et per gradus attrahunt in sursum.

Unde optimus canon sumitur aperturæ et solutionum corporum. Missis enim corrosivis et aquis fortibus, quæ viam sibi aperiunt; si possit inveniri corpus proportionatum et magis consentiens et amicum corpori alicui solido, quam illud, cum quo tanquam per necessitatem commiscetur; statim se aperit et relaxat corpus, et illud alterum intro recipit, priore excluso aut summoto. Neque operatur aut potest iste motus ad lucrum, solummodo ad tactum. Nam electrica operatio (de qua Gilbertus et alii post eum tantas excitarunt fabulas) non alia est quam corporis per frictionem levem excitati appetitus, qui aërem non bene tolerat, sed aliud tangibile mavult, si reperiat in propinquo.

Sit motus septimus, motus (quem appellamus) *congregationis majoris*; per quem corpora feruntur ad massas connaturalium suorum; gravia ad globum terræ; levia ad ambitum cœli. Hunc schola nomine *motus naturalis* insignivit, levi contemplatione; quia scilicet nil spectabile erat ab extra, quod eum motum cieret (itaque rebus ipsis innatum atque insitum putavit) aut forte quia non cessat. Nec mirum: semper enim præsto sunt cœlum et terra; cum e contra causæ et origines plurimorum ex reliquis motibus interdum absint, interdum adsint. Itaque hunc, quia non intermittit, sed cæteris intermittibus statim occurrit, perpetuum et proprium; reliquos, adscitios posuit. Est autem iste motus revera satis infirmus et hebes, tanquam is, qui (nisi sit moles corporis major) cæteris motibus, quamdiu operantur, sedat et succumbat. Atque cum hic motus hominum cogitationes ita impleverit, ut fere reliquos motus occultaverit; tamen parum est, quod homines de eo sciunt, sed in multis circa illum erroribus versantur.

Sit motus octavus, motus *congregationis minoris*; per quem partes homogeneæ in corpore aliquo separant se ab heterogeneis, et coeunt inter sese; per quem etiam corpora integra ex similitudine substantiæ se amplectuntur et foveant, et quandoque ad distantiam aliquam congregantur, attrahuntur, et conveniunt: Veluti cum in lacte flos lactis post moram aliquam supernatat; in vino fœces et tartarum subsident. Neque enim hæc fiunt per motum gravitatis et levitatis tantum, ut aliæ partes summitatem petant, aliæ ad imum vergant; sed multo magis per desiderium homogeneorum inter se coeundi et se uniendi. Differt autem iste motus a motu *indigentis*, in duobus: Uno, quod in motu *indigentis* sit stimulus major naturæ malignæ et contrariæ: sit in hoc motu (si modo impedimenta et vincula absint) uniuntur partes per amicitiam, licet absit natura

aliena, quæ litem moveat: Altero, quod arctior sit unio, et tanquam majore cum delectu. In illo enim modo evitetur corpus inimicum, corpora etiam non admodum cognata concurrunt: At in hoc coeunt substantiæ, germana plane similitudine devinctæ; et conflantur tanquam in unum. Atque hic motus omnibus corporibus compositis inest; et se facile conspiciendum in singulis daret, nisi ligaretur et frænaretur per alios corporum appetitus et necessitates, quæ istam coitionem disturbant.

Ligatur autem motus iste plerumque tribus modis: torpore corporum; fræno corporis dominantis; et motu externo. Ad torporem corporum quod attinet; certum est inesse corporibus tangibilibus pigritiam quandam secundum magis et minus, et exhorrentiam motus localis; ut nisi excitentur, malint statu suo (prout sunt) esse contenta, quam in melius se expedire. Discutitur autem iste torpor triplici auxilio: aut per calorem, aut per virtutem alicujus cognati corporis eminentem, aut per motum vividum et potentem. Atque primo quoad auxilium caloris: hinc fit, quod calor pronuncietur esse illud, quod *separet heterogenea, congreget homogenea*: quam definitionem Peripateticorum merito derisit Gilbertus; dicens, eam esse perinde ac si quis diceret ac definiret hominem illud esse, quod serat triticum, et plantet vineas; esse enim definitionem tantum per effectus, eosque particulares. Sed adhuc magis culpanda est illa definitio; quia etiam effectus illi (quales, quales sunt) non sunt ex proprietate caloris, sed tantum per accidens (idem enim facit frigus, ut postea dicemus) nempe ex desiderio partium homogenearum coeundi; adjuvante tantum calore ad discutendum torporem, qui torpor desiderium illud antea ligaverat. Quoad vero auxilium virtutis inditæ a corpore cognato; illud mirabiliter elucescit in magnete armato, qui excitat in ferro virtutem detinendi ferrum per similitudinem substantiæ, discusso torpore ferri per virtutem magnetis. Quoad vero auxilium motus, conspicitur illud in sagittis ligneis, cuspidate etiam lignæ; quæ altius penetrant in alia ligna, quam si fuissent armatæ ferro, per similitudinem substantiæ, discusso torpore ligni per motum celerem: de quibus duobus experimentis etiam in aphorismo de *instantiis clandestinis* diximus.

Ligatio vero motus *congregationis minoris*, quæ fit per frænum corporis dominantis, conspicitur in solutione sanguinis et urinarum per frigus. Quamdiu enim repleta fuerint corpora illa spiritu agili, qui singulas eorum partes cujuscumque generis ipse ut dominus totius ordinat et cohibet; tamdiu non coeunt heterogenea propter frænum: sed postquam ille spiritus evaporaverit, aut suffocatus fuerit per frigus, tum solutæ partes a fræno, coeunt secundum desiderium suum naturale. Atque ideo fit, ut omnia corpora, quæ continent spiritum acrem (ut sales, et hujusmodi) durent et non solvantur, ob frænum permanens et durable spiritus dominantis et imperiosi.

Ligatio vero motus *congregationis minoris*, quæ fit per motum externum, maxime conspicitur in agitationibus corporum, per quas arcetur putrefactio. Omnis enim putrefactio fundatur in congregatione homogeneorum; unde paulatim fit corruptio prioris (quam vocant) formæ, et generatio novæ. Nam

putrefactionem, quæ sternit viam ad generationem novæ formæ, præcedit solutio veteris: quæ est ipsa coitio ad homogeneam. Ea vero, si non impedita fuerit, fit solutio simplex; sin occurrant varia quæ obstant, sequuntur putrefactiones, quæ sunt rudimenta generationis novæ. Quod si (id quod nunc agitur) fiat agitatio frequens per motum externum; tum vero motus iste coitionis (qui est delicatus et mollis, et indiget quiete ab externis) disturbatur et cessat; ut fieri videmus in innumeris: veluti, cum quotidiana agitatio aut profuentia aquæ arceat putrefactionem; venti arceant pestilentiam aëris; grana in granariis versa et agitata maneant pura; omnia denique agitata exterius non facile putrefiant interius.

Superest ut non omittatur coitio illa partium corporum, unde fit præcipue induratio et desiccatio. Postquam enim spiritus, aut humidum in spiritum versum, evolaverit in aliquo corpore porosiore (ut in ligno, osse, membrana, et hujusmodi) tum partes crassiores majore nixu contrahuntur et coeunt, unde sequitur induratio aut desiccatio: quod existimamus fieri, non tam ob motum *æreus*, ne detur vacuum, quam per motum istum anicitæ et unionis.

Ad coitionem vero ad distans quod attinet, ea infrequens est et rara: et tamen in pluribus inest, quam quibus observatur. Hujus simulacra sunt, cum bulla solvat bullam; medicamenta ex similitudine substantiæ trahant humores; chorda in diversis fidibus ad unisonum moveat chordam; et hujusmodi. Etiam in spiritibus animalium hunc motum vigere existimamus, sed plane incognitum: At eminet certe in magnete et ferro excito. Cum autem de motibus magnetis loquimur, distinguendi plane sunt. Quatuor enim virtutes sive operationes sunt in magnete, quæ non confundi, sed separari debent, licet admiratio hominum et stupor eas commiscuerit. Una, coitionis magnetis ad magnetem, vel ferri ad magnetem, vel ferri exciti ad ferrum. Secunda, verticitatis ejus ad septentriones et austrum, atque simul declinationis ejus. Tertia, penetrationis ejus per aurum, vitrum, lapidem, omnia. Quarta, communicationis virtutis ejus de lapide in ferrum, et de ferro in ferrum, absque communicatione substantiæ. Verum hoc loco de prima virtute ejus tantum loquimur, videlicet coitionis. Insignis etiam est motus coitionis argenti vivi et auri; adeo ut aurum alliciat argentum vivum licet confectum in unguenta: atque operarii inter vapores argenti vivi soleant tenere in ore frustum auri ad colligendas emissiones argenti vivi, alias crania et ossa eorum invasuras; unde etiam frustum illud paulo post albescit. Atque de motu *congregationis minoris* hæc dicta sint.

Sit motus novus, *motus magneticus*, qui licet sit ex genere motus *congregationis minoris*, tamen si operetur ad distantias magnas, et super massas rerum magnas, inquisitionem meretur separatam; præsertim si nec incipiat a tactu, quemadmodum plurimi, nec perducatur actionem ad tactum, quemadmodum omnes motus congregativi; sed corpora tantum elevet, aut ea intumescere faciat, nec quicquam ultra. Nam si luna attollat aquas, aut turgescere aut intumescere faciat humida; aut cælum stellatum atrahat planetas versus sua apogæa; aut sol alliget astra Veneris et Mercurii, ne longius absint a cor-

pore ejus, quam ad distantiam certam; videntur hi motus nec sub *congregatione majore*, nec sub *congregatione minore* bene collocari, sed esse tanquam congregativa media et imperfecta, ideoque speciem debere constituere propriam.

Sit motus decimus, *motus fugæ*; motus scilicet motui *congregationis minoris* contrarius; per quem corpora ex antipathia fugiunt et fugant inimica, seque ab illis separant, aut cum illis miscere se recusant. Quamvis enim videri possit in aliquibus hic motus esse motus tantum per accidens, aut per consequens, respectu motus *congregationis minoris*, quia nequeunt coire homogœna, nisi heterogœna exclusis et remotis: tamen ponendus est motus iste per se, et in speciem constituendus, quia in multis appetitus *fugæ* cernitur magis principalis, quam appetitus coitionis.

Eminet autem hic motus insigniter in excretionibus animalium, nec minus etiam in sensuum nonnullorum odiosis objectis, præcipue in olfactu, et gustu. Odor enim foetidus ita rejicitur ab olfactu ut etiam inducat in os stomachi motum expulsionis per consensum; sapor amarus et horridus ita rejicitur a palato aut gutture, ut inducat per consensum capitis conquassationem et horrorem. Veruntamen etiam in aliis locum habet iste motus: Conspicitur enim in antiperistasisibus nonnullus; ut in aëris media regione, cujus frigora videntur esse rejectiones nature frigidæ ex confiniis cœlestium; quemadmodum etiam videntur magni illi fervores et inflammationes, quæ inveniuntur in locis subterraneis, esse rejectiones nature calidæ ab interioribus terræ. Calor enim et frigus, si fuerint in quanto minore, se invicem perimunt; sin fuerint in massis majoribus, et tanquam justis exercitiis, tum vero per conflictum se locis invicem summovent et ejiciunt. Etiam tradunt cinnamomum et odorifera, sita juxta latrinas et loca foetida, diutius odorem retinere, quia recusant exire et commiseri cum foetidis. Certe argentum vivum, quod alias se re-uniret in corpus integrum, prohibetur per salivam hominis, aut axungiam porci, aut terebinthinam, et hujusmodi, ne partes ejus coeant propter malum consensum, quem habent cum hujusmodi corporibus; a quibus undique circumfusis se retrahunt; adeo ut fortior sit earum *fuga* ab istis interjacentibus, quam desiderium uniendo se cum partibus sui similibus; id quod vocant *mortificationem* argenti vivi. Etiam quod oleum cum aqua non miscetur, non tantum in causa est differentia levitatis; sed malus ipsorum consensus: ut videre est in spiritu vini, qui cum levior sit oleo, tamen se bene miscet cum aqua. At maxime omnium insignis est motus *fugæ* in nitro, et hujusmodi corporibus crudis, quæ flammam exhorrent; ut in pulvere pyrio, argento vivo, necnon in auro. *Fuga* vero ferri ab altero polo magnetis a Gilberto bene notatur non esse *fuga* propria, sed conformitas, et coitio ad situm magis accommodatum.

Sit motus undecimus, *motus assimilationis*, sive *multiplicationis* sui, sive etiam *generationis simplicis*. *Generationem autem simplicem* dicimus non corporum integralium, ut in plantis, aut animalibus; sed corporum similarium. Nempe per hunc motum corpora similaria vertunt corpora alia affinia, aut saltem

bene disposita et præparata, in substantiam et naturam suam: ut flamma, quæ super halitus et oleosa multiplicat se, et generat novam flammam; ær, qui supra aquam et aquea multiplicat se, et generat novum ærem; spiritus vegetabilis et animalis, qui super tenuiores partes, tam aquei quam oleosi, in alimentis suis multiplicat se, et generat novum spiritum; partes solidæ plantarum et animalium, veluti folium, flos, caro, os, et sic de cæteris, quæ singulæ ex succis alimentorum assimilant, et generant substantiam successivam et epusiam. Neque enim quenquam cum Paracelso delirare juvet, qui (distillationibus suis scilicet occæcatus) nutritionem per separationem tantum fieri voluit; quodque in pane vel sibo lateat oculus, nasus, cerebrum, jecur; in succo terræ radix, folium, flos. Etenim sicut faber ex rudi massa lapidis vel ligni, per separationem et rejectionem superflui, educit folium, florem, oculum, nasum, manum, pedem, et similia; ita Archæum illum fabrum internum ex alimento per separationem et rejectionem educere singula membra et partes, asserit ille. Verum, missis nugis, certissimum est partes singulas, tam similes quam organicas, in vegetabilibus et animalibus, succos alimentorum suorum fere communes, aut non multum diversos, primo attrahere cum nonnullo delectu, deinde assimilare, et vertere in naturam suam. Neque *assimulatio* ista, aut *generatio* simplex, fit solum in corporibus animatis; verum et inanimata ex hac re participant: veluti de flamma et aëre dictum est. Quinetiam spiritus emortuus, qui in omni tangibili animato continetur, id perpetuo agit, ut partes crassiores digerat et vertat in spiritum, qui deinde exeat; unde fit diminutio ponderis et exsiccatio, ut alibi diximus. Neque etiam respuenda est in *assimilatione* accretio illa, quam vulgo ab alimentatione distinguunt; veluti cum lutum inter lapillos concrevit, et vertitur in materiam lapideam; squammæ circa dentes vertuntur in substantiam non minus duram, quam sunt dentes ipsi, etc. Sumus enim in ea opinione, inesse corporibus omnibus desiderium assimilandi, non minus quam coëundi ad homogenea; verum ligatur ista virtus, sicut et illa; licet non iisdem modis. Sed modos illos, necnon solutionem ab iisdem, omni diligentia inquirere oportet; quia pertinent ad senectutis refocillationem. Postremo videtur notatu dignum, quod in novem illis motibus, de quibus diximus, corpora tantum naturæ suæ conservationem appetere videntur; in hoc decimo autem propagationem.

Sit motus duodecimus *motus excitationis*; qui motus videtur esse ex genere *assimilationis*, atque eo nomine quandoque a nobis promiscue vocatur. Est enim motus diffusivus, et communicativus, et transitivus, et multiplicativus, sicut et ille; atque effectu (ut plurimum) consentiunt, licet efficiendi modo et subjecto differant. Motus enim *assimilationis* procedit tanquam cum imperio et potestate; jubet enim et cogit assimilatum in assimilantem verti et mutari. At motus *excitationis* procedit tanquam arte et insinuatione, et furtim; et invitat tantum, et disponit excitatum ad naturam excitantis. Etiam motus *assimilationis* multiplicat et transformat corpora et substantias; veluti, plus fit flammæ, plus

aëris, plus spiritus, plus carnis. At in motu *excitationis*, multiplicantur et transeunt virtutes tantum; et plus fit calidi, plus magnetici, plus putridi. Eminet autem iste motus præcipue in calido et frigido. Neque enim calor diffundit se in calefaciendo per communicationem primi caloris; sed tantum per *excitationem* partium corporis ad motum illum, qui est forma calidi; de quo in *vindemiatione prima de natura calidi* diximus. Itaque longe tardius et difficilius excitatur calor in lapide aut metallo, quam in aëre; ob inhabilitatem et impromptitudinem corporum illorum ad motum illum; ita ut verisimile sit, posse esse interius versus viscera terræ materias, quæ calefieri prorsus respuant; quia ob condensationem majorem spiritu illo destituuntur, a quo motus iste excitationis plerumque incipit. Similiter magnes induit ferrum nova partium dispositione, et motu conformi; ipse autem nihil ex virtute perdit. Similiter fermentum panis, et flos cervisiæ, et coagulum lactis, et nonnulla ex venenis, excitant et invitunt motum in massa farinaria, aut cervisiæ, aut caseo, aut corpore humano successivum et continuatum: non tam ex vi excitantis, quam ex prædispositione et facili cessione excitati.

Sit motus decimus tertius, *motus impressionis*; qui motus est etiam ex genere motus *assimilationis*; estque ex diffusivis motibus subtilissimus. Nobis autem visum est eum in speciem propriam constituere, propter differentiam insignem quam habet erga priores duos. Motus enim *assimilationis* simplex corpora ipsa transformat; ita ut si tollas primum movens, nihil intersit ad ea quæ sequuntur. Neque enim prima accensio in flammam, aut prima versio in aërem, aliquid facit ad flammam aut aërem, in generatione succedentem. Similiter, motus *excitationis* omnino manet, remoto primo movente, ad tempora bene diuturna; ut in corpore calefacto, remoto primo calore; in ferro excito, remoto magnete; in massa farinaria, remoto fermento. At motus *impressionis*, licet sit diffusivus et transitivus, tamen perpetuo pendere videtur ex primo movente: adeo ut, sublato aut cessante illo, statim deficiat et pereat; itaque etiam momento, aut saltem exiguo tempore transigitur. Quare motus illos *assimilationis* et *excitationis*, *motus generationis Jovis*, quia generatio manet; hunc autem motum, *motum generationis Saturni*, quia natus statim devoratur et absorbetur, appellare consuevimus. Manifestat se vero hic motus in tribus; in lucis radiis; sonorum percussionibus; et magneticis, quatenus ad communicationem. Etenim, amota luce, statim pereunt colores, et reliquæ imagines ejus; amota percussione prima, et quassatione corporis inde facta, paulo post perit sonus. Licet enim soni etiam in medio per ventos tanquam per undas agitentur: tamen diligentius notandum est, quod sonus non tam diu durat, quam fit resonatio. Etenim impulsa campana, sonus ad bene magnum tempus continuari videtur; unde quis facile in errorem labatur, si existimet toto illo tempore sonum tanquam natum et hæere in aëre; quod falsissimum est. Etenim illa resonatio non est idem sonus numero, sed renovatur. Hoc autem manifestatur ex sedatione sive cohibitione corporis percussi. Si enim sistatur et detineatur campana

fortiter, et fiat immobilis, statim perit sonus, nec resonat amplius: ut in chordis; si post primam percussionem tangatur chorda, vel digito, ut in lyra; vel calamo, ut in epinetis; statim desinit resinatio. Magnete autem remoto, statim ferrum decidit. Luna autem a mari non potest removeri: nec terra a ponderoso dum cadit. Itaque de illis nullum fieri potest experimentum; sed ratio eadem est.

Sit motus decimus quartus, *motus configurationis*, aut *situs*; per quem corpora appetere videntur non coitionem aut separationem aliquam; sed situm, et collocationem, et *configurationem* cum aliis. Est autem iste motus valde abstrusus, nec bene inquisitus. Atque in quibusdam videtur quasi incausabilis; licet revera (ut existimamus) non ita sit. Etenim si quaeratur, cur potius caelum volvatur ab oriente in occidentem, quam ab occidente in orientem: aut cur vertatur circa polos positos juxta Ursas, potius quam circa Orionem, aut ex alia aliqua parte caeli: videtur ista quaestio tanquam quaedam ecstasis; cum ista potius ab experientia, et ut positiva, recipi debeant. At in natura profecto sunt quaedam ultima et incausabilia; verum hoc ex illis non esse videtur. Etenim hoc fieri existimamus ex quadam harmonia et consensu mundi, qui adhuc non venit in observationem. Quod si recipiatur motus terrae ab occidente in orientem; eadem manent quaestiones. Nam et ipsa super aliquos polos movetur. Atque, cur tandem debeant isti poli collocari magis ubi sunt, quam alibi? Item verticitas, et directio, et declinatio magnetis ad hunc motum referuntur. Etiam inveniuntur in corporibus tam naturalibus quam artificialibus, praesertim consistentibus, et non fluidis, collocatio quaedam et posita partium, et tanquam villi et fibrae; quae diligenter investigandae sunt; utpote sine quarum inventionem corpora illa commode tractari aut regi non possunt. At circulationes illas in liquidia, per quas illa, dum pressa sint, antequam se liberare possunt, se invicem relevant, ut compressionem illam ex aequo tolerant, motui *libertatis* verius assignamus.

Sit motus decimus quintus, *motus per transitionis*, sive *motus secundum meatus*; per quem virtutes corporum magis aut minus impediuntur, aut provehantur a mediis ipsorum, pro natura corporum et virtutum operantium, atque etiam medii. Aliud enim medium luci convenit, aliud sono, aliud calori et frigori, aliud virtutibus magneticis, necnon aliis nonnullis respective.

Sit motus decimus sextus, *motus regius* (ita enim eum appellamus) sive *politicus*; per quem partes in corpore aliquo praedominantes et imperantes, reliquas partes frænant, domant, subigunt, ordinant, et cogunt eas adunari, separari, consistere, moveri, collocari, non ex desideriis suis, sed prout in ordine sit, et conducit ad bene esse partis illius imperantis; adeo ut sit quasi *regimen* et *politia* quaedam, quam exercet pars regens in partes subditas. Eminent autem hic motus praecipue in spiritibus animalium, qui motus omnes partium reliquarum, quamdiu ipse in vigore est, contemperat. Invenitur autem in aliis corporibus in gradu quodam inferiore; quemadmodum dictum est de sanguine et urinis, quae non solvuntur, donec spiritus, qui partes earum commiscebat et cohibebat, emissus fuerit aut suffocatus.

Neque iste motus omnino spiritibus proprius est, licet in plerisque corporibus spiritus dominantur ob motum celerem, et penetrationem. Veruntamen in corporibus magis condensatis, nec spiritu vivido et vigente (qualis inest argento vivo et vitriolo) repletis, dominantur potius partes crassiores; adeo ut nisi frænum et jugum hoc arte aliqua excutiatur, de nova aliqua hujusmodi corporum transformatione minime sperandum sit. Neque vero quispiam nos oblitus esse existimet ejus quod nunc agitur, quia, cum ista series et distributio motuum ad nil aliud spectet, quam ut illorum *praedominantia* per *instantias lectae* melius inquiratur, jam inter motus ipsos *praedominantiae* mentionem faciamus. Non enim in *descriptione motus istius regii*, de *praedominantia* motuum aut virtutum tractamus, sed de *praedominantia* partium in corporibus. Haec enim ea est praedominantia, quae speciem istam motus peculiarem constituit.

Sit motus decimus septimus, *motus rotationis spontaneus*; per quem corpora motu gaudentia, et bene collocata, natura sua fruuntur, atque seipsa sequuntur, non aliud; et tanquam proprius petunt amplexus. Etenim videntur corpora aut movere sine termino; aut plane quiescere; aut ferri ad terminum, ubi pro natura sua aut rotant aut quiescant. Atque quae bene collocata sunt, si motu gaudeant, movent per circulum: motu scilicet aeterno et infinito. Quae bene collocata sunt, et motum exhorrent, prorsus quiescunt. Quae non bene collocata sunt, movent in linea recta (tanquam tramite brevissimo) ad consortia suorum connaturalium. Recipit autem motus iste *rotationis* differentias novem. Primam, centri sui, circa quod corpora movent: secundam, polorum suorum, supra quos movent: tertiam, circumferentiae sive ambitus sui, prout distant a centro: quartam, incitationis suae, prout celerius aut tardius rotant: quintam, consequutionis motus sui, veluti ab oriente in occidentem, aut ab occidente in orientem: sextam, declinationis a circulo perfecto per spiras longius aut propius distantes a centro suo: septimam, declinationis a circulo perfecto per spiras longius aut propius distantes a polis suis: octavam, distantiae propioris aut longioris spirarum suarum ad invicem: nonam et ultimam, variationis ipsorum polorum, si sint mobiles: quae ipsa ad rotationem non pertinet, nisi fiat circulariter. Atque iste motus communi et inveterata opinione habetur pro proprio caelestium. Attamen gravis de illo motu lis est inter nonnullos tam ex antiquis quam modernis, qui *rotationem* terrae attribuerunt. At multo fortasse justior movetur controversia (si modo res non sit omnino extra controversiam) an motus videlicet iste (concesso quod terra stet) caeli finibus contineatur, an potius descendat, et communicetur aëri et aquis. Motum autem *rotationis* in missilibus, ut in spiculis, sagittis, pilis sclopetorum, et similibus, omnino ad motum *libertatis* rejicimus.

Sit motus decimus octavus, *motus trepidationis*, cui (ut ab astronomis intelligitur) non multum fidei adhibemus. Nobis autem, corporum naturalium appetitus ubique serio perscrutantibus, occurrit iste motus; et constitui debere videtur in speciem. Est autem hic motus veluti aeternae cujusdam captivitatibus. Videlicet ubi corpora non omnino pro natura sua

bene locata, et tamen non prorsus male se habentia, perpetuo trepidant, et irrequiete se agunt, nec statu suo contenta, nec ulterius ausa progredi. Talis invenitur motus in corde et pulsibus animalium; et necesse est ut sit in omnibus corporibus, quæ statu accipiti ita degunt inter commoda et incommoda, ut distracta liberare se tentent, et denuo repulsam patientur, et tamen perpetuo experiantur.

Sit motus decimus nonus et postremus, motus ille cui vix nomen motus competit, et tamen est plane motus: quem motum, *motum decubitus*, sive *motum exhorrentiæ motus*, vocare licet. Per hunc motum terra stat mole sua, moventibus se extremis suis in medium; non ad centrum imaginativum, sed ad unionem. Per hunc etiam appetitum omnia majorem in modum condensata motum exhorrent; atque illis pro omni appetitu est non moveri; et licet infinitis modis vellicentur et provocentur ad motum, tamen naturam suam (quoad possunt) tuentur. Quod si ad motum compellantur, tamen hoc agere semper videntur, ut quietem et statum suum recuperent, neque amplius moveant. Atque circa hoc certe se agilia præbent, et satis perneciter et rapide (ut pertæsa et impatientia omnis moræ) contendunt. Hujus autem appetitus imago ex parte tantum cerni potest; quia hic apud nos, ex subactione et concoctione coelestium, omne tangibile non tantum non condensatum est ad ultimitatem, sed etiam cum spiritu nonnullo miscetur.

Proposuius itaque jam species, sive elementa simplicia motuum, appetituum, et virtutum activarum, quæ sunt in natura maxime catholica: neque parum scientiæ naturalis sub illis adumbratum est. Non negamus tamen, et alias species fortasse addi posse; atque istas ipsas divisiones secundum veriores rerum venas transferri; denique in minorem numerum posse redigi. Neque tamen hoc de divisionibus aliquibus abstractis intelligimus: veluti si quis dicat, corpora appetere vel conservationem, vel exaltationem, vel propagationem, vel fruitionem naturæ suæ: aut si quis dicat, motus rerum tendere ad conservationem et bonum, vel universi, ut *antitypiam* et *nezum*: vel universitatem magnarum, ut motus *congregationis majoris*, *rotationis*, et *exhorrentiæ motus*; vel formarum specialium, ut reliquos. Licet enim hæc vera sint, tamen nisi terminentur in materia et fabrica secundum veras lineas, speculativa sunt, et minus utilia. Interim sufficient, et boni erunt usus, ad pensitandas *prædominantias* virtutum, et exquirendas *instantias luctæ*; id quod nunc agitur.

Etenim ex his, quos proposuimus, motibus, alii prorsus sunt invincibiles; alii aliis sunt fortiores, et illos ligant, frænant, disponunt; alii aliis longius jaculantur; alii alios tempore et celeritate prævertunt; alii alios fovent, roborant, ampliant, accelerant.

Motus *antitypiæ* omnino est adamantinus et invincibilis: utrum vero motus *nezus* sit invincibilis, adhuc hæremus. Neque enim pro certo affirmaverimus, utrum detur vacuum, sive coarctatum, sive permistum. At de illo nobis constat; rationem illam, propter quam introductum est vacuum a Leuippo, et Democrito (videlicet quod absque eo non possent eadem corpora complecti et implere majora

et minora spatia) falsam esse. Est enim plane *plica materiæ* complicantis et replicantis se per spatia inter certos fines absque interpositione vacui: neque est in aère, ex vacuo, bis millies (tantum enim esse oportet) plus quam in auro. Id quod ex potentissimis corporum pneumaticorum virtutibus (quæ aliter tanquam pulveres minuti natarent in vacuo) et multis aliis demonstrationibus, nobis satis liquet. Reliqui vero motus regunt et reguntur invicem, pro rationibus vigoris, quanti, incitationis, ejaculationis, necnon tum auxiliorum, tum impedimentorum, quæ occurrunt.

Exempli gratia; magnes armatus nonnullus detinet et suspendit ferrum ad sexagecuplum pondus ipsius; eo usque dominatur motus *congregationis minoris* super motum *congregationis majoris*: quod si majus fuerit pondus, succumbit. Vectis tanti roboris subleabit tantum pondus; eo usque dominatur motus *libertatis* super motum *congregationis majoris*; sin majus fuerit pondus, succumbit. Corium tensum ad tensuram talem non rumpitur; eo usque dominatur motus *continuationis* super motum *tensuræ*; quod si ulterior fuerit tensura, rumpitur corium, et succumbit motus *continuationis*. Aqua per rimam perforationis talis effluit; eo usque dominatur motus *congregationis majoris* super motum *continuationis*; quod si minor fuerit rima, succumbit; et vincit motus *continuationis*. In pulvere sulphuris solius immisi in sclopetum cum pila, et ad moto igne, non emittitur pila; in eo motus *congregationis majoris* vincit motum *hyles*. At in pulvere pyrio emisso vincit motus *hyles* in sulphure; adjunctus motibus *hyles* et *fugæ* in nitro. Et sic de cæteris. Etenim *instantiæ luctæ* (quæ indicant *prædominantiam* virtutum, et secundum quas rationes et calculos prædominantur et succumbant) acri et sedula diligentia undique sunt conquirendæ.

Etiã modi et rationes ipsius succumbentiæ motuum diligenter sunt introspicendæ. Nempè, an omnino cessent, vel potius usque nitantur, sed ligentur. Etenim in corporibus hic apud nos nulla vera est quies, nec in integris, nec in partibus; sed tantum secundum apparentiam. Quies autem ista apparens, causatur aut per *æquilibrium*; aut per absolutam *prædominantiam* motuum. Per *æquilibrium*, ut in bilancibus, quæ stant, si æqua sint pondera. Per *prædominantiam*, ut in hydriis perforatis, ubi quiescit aqua, et detinetur a decasu per *prædominantiam* motus *nezus*. Notandum tamen est (ut diximus) quatenus nitantur motus illi succumbentes. Etenim si quis per luctam detineatur extensus in terra, brachiis et tibiis vinctis, aut aliter detentis; atque ille tamen totis viribus resurgere nitatur; non est minor nixus, licet non proficiat. Hujus autem rei conditio (scilicet utrum per *prædominantiam* motus succumbens quasi annihiletur; an potius continueatur nixus, licet non conspiciatur) quæ latet in conflictibus, apparebit fortasse in concurrentiis. Exempli gratia; fiat experimentum in sclopetis, utrum sclopetus, pro tanto spatio, quo emittat pilam in linea directa, sive (ut vulgo loquuntur) in puncto blanco, debiliorem edat percussionem ejaculando in supra, ubi motus ictus est simplex, quam desuper, ubi motus gravitatis concurrat cum ictu.

Etiam canones *prædominantiarum*, qui occurrunt, colligendi sunt. Veluti, quod quo communius est bonum quod appetitur, eo motus est fortior: ut motus nexus, qui respicit communionem universi, fortior est motu gravitatis, qui respicit communionem densorum. Etiam, quod appetitus, qui sunt boni privati, non prævalent plerumque contra appetitus boni magis publici; nisi in parvis quantis: quæ utinam obtinerent in civilibus.

## XLIX.

Inter *prærogativas instantiarum* ponemus loco vicesimo quinto *instantias innuentes*; eas scilicet, quæ commoda hominum innuunt aut designant. Et enim ipsum *posse* et ipsum *scire*, naturam humanam amplificat, non beant. Itaque decerpenda sunt ex universitate rerum ea quæ ad usum vitæ maxime faciunt. Verum de ijs erit magis proprius dicendi locus, cum *deductiones ad praxim* tractabimus. Quinetiam in ipso opere *interpretationis* circa singula subjecta, locum semper *chartæ humanæ*, sive *chartæ optativæ* assignamus: etenim et quærere et optare non inepte, pars scientiæ est.

## L.

Inter *prærogativas instantiarum* ponemus loco vicesimo sexto *instantias polychrestas*. Eæ sunt, quæ pertinent ad varia, et sæpius occurrunt; ideoque operæ et novis probationibus haud parum parcunt. Atque de instrumentis ipsis atque ingenuationibus proprius erit dicendi locus, cum *deductiones ad praxim* et experimentandi modos tractabimus. Quin etiam quæ adhuc cognita sunt, et in usum venerunt, in historiis particularibus singularum artium describentur. In præsentem autem subjungemus quædam catholica circa ea pro exemplis tantum *polychrestis*.

Operatur igitur homo super corpora naturalia (præter ipsam admotionem et amotionem corporum simplicem) septem præcipue modis: nempe, vel per exclusionem eorum quæ impediunt et disturbant: vel per compressiones, extensiones, agitationes, et hujusmodi: vel per calorem et frigus: vel per moram in loco convenienti: vel per frænum et regimen motus: vel per consensus speciales: vel per alternationem tempestivam et debitam, atque seriem et successionem horum omnium; aut saltem nonnullorum ex illis.

Ad primum igitur quod attinet; aer communis, qui undique præsto est et se ingerit, atque radii cœlestium, multum turbant: quæ itaque ad illorum exclusionem faciunt, merito haberi possint pro polychrestis. Huc igitur pertinent materies et crassities vasorum, in quibus corpora ad operationem præparata reponuntur. Similiter modi accurati obturationis vasorum, per consolidationem et *lutum sapientiæ*, ut loquuntur chemici. Etiam clausura per liquores in existimus utilissima res est: ut cum infundunt oleum super vinum aut succos herbarum; quod expandendo se in summitate instar operculi, optime ea conservat illæsa ab aère. Neque pulveres res malæ sunt; qui licet contineant aërem permistum, tamen vim aëris coacervati et circumfusi arcent; ut fit in conservatione uvarum et fructuum intra arenam et farinam. Etiam cera, mel, pix, et

hujusmodi tenacia, recte obducuntur ad clausuram perfectiorem, et ad summovendum aërem et cœlestia. Etiam nos experimentum quandoque fecimus, ponendo vas, necnon aliqua alia corpora, intra argentum vivum, quod omnium longe densissimum est ex iis quæ circumfundi possunt. Quinetiam specus et cavernæ subterraneæ magni usus sunt ad prohibendum insolationem et aërem istum apertum prædatorium; qualibus utuntur Germani septentrionales pro granariis. Necnon repositio corporum in fundo aquarum ad hoc spectat: ut memini me quippiam audisse de utribus vini demissis in profundum puteum, ad infrigidationem scilicet; sed casu et per neglectum ac oblivionem ibidem remanentibus per multos annos, et deinde extractis; unde vinum factum est, non solum, non vapidum, aut emortuum, sed multo magis nobile ad gustum; per commixtionem partium suarum (ut videtur) magis exquisitam. Quod si postulet res, ut corpora demittantur ad fundum æquarum, veluti intra fluvios aut mare, neque tamen aquas tangant, nec in vasibus obturatis concludantur, sed aère tantum circumdentur; bonus est usus vasis illius, quod adhibitum est nonnunquam ad operandum subter aquis supra navigia demersa, ut urinatores diutius manere possint sub aquis, et per vices ad tempus respirare. Illud hujusmodi erat: conficiebatur dolium ex metallo concavum, quod demittebatur æquabiliter ad superficiem aquæ, atque sic deportabat totum aërem, qui continebatur in dolio, secum in fundum maris. Stabat autem super pedes tres (instar tripodis) qui longitudinis erant aliquanto minoris statura hominis: ita ut urinator posset, cum anhelitus deficeret, immittere caput in cavum dolii, et respirare, et deinde opus continuare. Atque andivimus inventam esse jam machinam aliquam naviculæ aut scaphæ, quæ homines subter aquis vehere possit ad spatia nonnulla. Verum sub tali vase, quale modo diximus, corpora quævis facile suspendi possint; cujus causa hoc experimentum adduximus.

Est et alius usus diligentis et perfectæ clausuræ corporum: nempe, non solum ut prohibeatur aditus aëris per exterius (de quo jam dictum est) verum etiam ut cohabeatur exitus spiritus corporis, super quod fit operatio per interius. Necessè est enim ut operanti circa corpora naturalia constet de summis suis: viz. quod nihil expirarit aut effluerit. Fiant enim profundæ alterationes in corporibus, quando, natura prohibente annihilationem, ars prohibet etiam deperditionem aut evolutionem alicujus partis. Atque hac de re invaluit opinio falsa (quæ si vera esset, de ista conservatione summæ certæ absque diminutione esset fere desperandum) viz. spiritus corporum, et aërem majori gradu caloris attenuatum, nullis vasorum claustris posse contineri, quin per poros vasorum subtiliores evolent. Atque in hanc opinionem adducti sunt homines per vulgata illa experimenta, poculi inversi super aquam cum candela aut charta inflammata; ex quo fit ut aqua sursum attrahatur: atque similiter ventosarum, quæ super flammam calefactæ trahunt carnes. Existimant enim in utroque experimento aërem attenuatum emitti, et inde quantum ipsius minui; ideoque aquam, aut carnes per nexum succedere. Quod falsissimum est. Aër enim non quanto diminuitur, sed spatio contra-

hitur; neque incipit motus iste successione aquæ, antequam fiat extinctio flammæ, aut refrigeratio aëris: adeo ut medici, quo fortius attrahant ventosæ, ponant spongias frigidas aqua madefactas super ventosas. Itaque non est, cur homines multum sibi metuant de facili exitu aëris aut spirituum. Licet enim verum sit, etiam solidissima corpora habere suos poros, tamen ægre patitur aër aut spiritus comminutionem sui ad tantam subtilitatem; quemadmodum et aqua exire recusat per rimam minusculam.

De secundo vero modo ex septem prædictis illud imprimis notandum est, valere certe compressiones et hujusmodi violentias ad motum localem, atque alia id genus, potentissime; ut in machinis et missilibus: etiam ad destructionem corporis organici, atque earum virtutum, quæ consistunt plane in motu. Omnis enim vita, immo etiam omnis flamma et ignitio, destruitur per compressiones; ut et omnis machina corrumpitur et confunditur per easdem. Etiam ad destructionem virtutum, quæ consistunt in posituris, et dissimilaritate partium paulo crassiore; ut in coloribus (neque enim idem color floris integri et contusi, neque succini integri et pulverizati). Etiam in saporibus (neque enim idem sapor pyri immaturi et ejusdem compressi ac subacti; nam manifesto dulcedinem majorem concipit). Verum ad transformationes et alterationes nobiliores corporum similarium non multum valent istæ violentiæ; quia corpora per eas non acquirunt consistentiam aliquam novam constantem et quiescentem, sed transitoriam et nitentem semper ad restitutionem et liberationem sui. Attamen non abs re foret hujus rei facere experimenta aliqua diligentiora; ad hoc scilicet, utrum condensatio corporis bene similis (qualia sunt aër, aqua, oleum, et hujusmodi) aut rarefactio, similiter per violentiam indita, possint fieri constantes et fixæ, et quasi mutatae in naturam. Id quod primo experiendum per moram simplicem; deinde per auxilia et consensus. Atque illud nobis in promptu fuisset (si modo in mentem venisset) cum aquam (de qua alibi) per malleationes et pressoriam condensavimus, antequam erumperet. Deberimus enim spheram complanatam per aliquot dies sibi permississe, et tum demum aquam extraxisse; ut fieret experimentum, utrum statim impletura fuisset talem dimensionem, qualem habebat ante condensationem. Quod si non fecisset aut statim, aut certe paulo post; constans videlicet facta videri potuisset ista condensatio: sin minus; apparuisset factam fuisse restitutionem, et compressionem fuisse transitoriam. Etiam simile quiddam faciendum erat circa extensionem aëris in ovis vitreis. Etenim debuerat fieri, post exsuctionem fortem, subita et firma obturatio; deinde debuerant ova illa manere ita obturata per nonnullos dies; et tum demum experiendum fuisset, utrum aperto foramine attractus fuisset aër cum sibilo, aut etiam attracta fuisset tanta quantitas aquæ post immersionem, quanta fuisset ab initio, si nulla adhibita fuisset mora. Probabile enim aut saltem dignum probatione est, hæc fieri potuisse et posse; propterea quod in corporibus paulo magis dissimilaribus similia efficiat mora temporis. Etenim baculum per compressionem curvatum post aliquod tempus non resi-

lit: neque id imputandum est alicui deperditioni ex quanto ligni per moram; nam idem fiet in lamina ferri (si augeatur mora) quæ non est expirabilis. Quod si non succedat experimentum per moram simplicem; tamen non deserendum est negotium, sed auxilia alia adhibenda. Non enim parum lucrit fit, si per violentias indi possint corporibus naturæ fixæ et constantes. Hac enim ratione aër possit verti in aquam per condensationes: et complura alia id genus. Dominus enim est homo motuum violentorum magis quam cæterorum.

At tertius ex septem modis refertur ad magnum illud organum, tam naturæ quam artis, quoad operandum; videlicet calidum et frigidum. Atque in hac parte claudicat plane potentia humana, tanquam ex uno pede. Habemus enim calorem ignis, qui caloribus solis (prout ad nos deferuntur) et caloribus animalium, quasi infinitis partibus potentior est et intensior. At deest frigus, nisi quale per tempestates hiemales, aut per cavernas, aut per circumdationes nivis et glaciei, haberi potest: quod in comparatione æquari potest cum calore fortasse solis meridiano, in regione aliqua ex torridis, aucto insuper per reverberationes montium et parietum: nam hujusmodi, utique tam calores quam frigora, ab animalibus ad tempus exiguum tolerari possunt. Nihili autem sunt fere præ calore fornacis ardentis, aut alicujus frigoris quod huic gradui respondeat. Itaque omnia hic apud nos vergunt ad rarefactionem et desiccationem, et consumptionem; nihil fere ad condensationem et intenerationem, nisi per misturas et modos quasi spurios. Quare instantiæ frigoris omni diligentia sunt conquirendæ: quales videntur inveniri in expositione corporum super turres quando gelat acriter: in cavernis subterraneis: circumdationibus nivis et glaciei in locis profundioribus, et ad hoc excavatis: demissione corporum in puteis: sepulchris corporum in argento vivo et metallis: immersione corporum in aquis, quæ vertunt ligna in lapides: defossione corporum in terra (qualis fertur apud Chineses esse confectio porcellanæ, ubi massæ ad hoc factæ dicuntur manere intra terram per quadraginta aut quinquaginta annos, et transmitti ad heredes, tanquam mineræ quædam artificiales) et hujusmodi. Quinetiam quæ interveniunt in natura condensationes, factæ per frigora, similiter sunt investigandæ; ut causis eorum cognitis, transferri possint in artes. Quales cernuntur in exsudatione marmoris et lapidum; in rorationibus super vitra per interius fenestrarum, sub auroram, post gelu noctis; in originibus et collectionibus vaporum in aquas sub terra, unde sæpe scaturiunt fontes; et quæcunque sunt hujus generis.

Inveniuntur autem, præter illa, quæ sunt frigida ad tactum, quædam alia potestate frigida, quæ etiam condensant; veruntamen operari videntur super corpora animalium tantum, et vix ultra. Hujus generis se ostendunt multa in medicinis et emplastris. Alia autem condensant carnes et partes tangibiles; qualia sunt medicamenta astringentia, atque etiam inspissantia: alia condensant spiritus, id quod maxime cernitur in soporiferis. Duplex autem est modus condensationis spirituum per medicamenta soporifera, sive provocantia somnum: alter per

sedationem motus; alter per fugam spirituum. Etenim viola, rosa sicca, lactuca, et hujusmodi benedicta sive benigna, per vapores suos amicos et moderate refrigerantes, invitant spiritus ut se uniant, et ipsorum acrem et inquietum motum compeſcunt. Etiam aqua rosacea, apposita ad nares in deliquiis animæ, spiritus resolutos et nimium relaxatos se recipere facit, et tanquam alit: at opiatæ et eorum affinia spiritus plane fugant, ex qualitate sua maligna et inimica. Itaque si applicentur parti exteriori, statim aufugiunt spiritus ab illa parte, nec amplius libenter influunt: sin sumantur interius, vapores eorum, ascendentes ad caput, spiritus in ventriculis cerebri contentos undequaque fugant; cumque se retrahant spiritus, neque in aliam partem effugere possint, per consequens cœunt et condensantur; et quandoque plane extinguuntur et suffocantur: licet rursus eadem opiatæ moderate sumpta, per accidens secundarium (videlicet condensationem illam quæ a coitione succedit) confortent spiritus, eosque reddant magis robustos, et retardant eorum inutiles et incensivos motus: ex quo ad curas morborum et vitæ prolongationem haud parum conferant.

Etiam preparationes corporum ad excipiendum frigus non sunt omittendæ; veluti quod aqua parum tepida facilius congelari, quam omnino frigida et hujusmodi.

Præterea, quia natura frigus tam parce suppeditat, faciendum est quemadmodum pharmacopœ solent; qui, quando simplex aliquod haberi non possit, capiunt succedaneum ejus, et *quid pro quo*, ut vocant: veluti lignum aloës pro xylobalsamo, cassiam pro cinnamomo. Simili modo diligenter circumspiciendum est, si quæ sint succedanea frigoris; videlicet quibus modis fieri possint condensationes in corporibus aliter quam per frigus, quod illas efficit, ut opus suum proprium. Illæ autem condensationes videntur intra quaternum numerum (quantum adhuc liquet) contineri. Quarum prima videtur fieri per contrusionem simplicem; quæ parum potest ad densitatem constantem (resiliunt enim corpora) sed nihilominus forte res auxiliariis esse queat. Secunda fit per contractionem partium crassiorum in corpore aliquo post evolutionem aut exitum partium tenuiorum, ut fit in indurationibus per ignem, et repetitis extinctionibus metallorum, et similibus. Tertia fit per coitionem partium homogenearum, quæ sunt maxime solidæ in corpore aliquo, atque antea fuerant distractæ, et cum minus solidis commixtæ: veluti in restitutione mercurii sublimati, qui in pulvere longe majus occupat spatium, quam mercurius simplex; et similiter in omni repurgatione metallorum a scoriis suis. Quarta fit per consensus, admovendo quæ ex vi corporum occulta condensant; qui consensus adhuc raro se ostendunt, quod mirum minime est, quoniam antequam inventio succedat formarum et schematismorum, de inquisitione consensus non multum sperandum est. Certe quoad corpora animalium, dubium non est, quin sint complures medicinæ, tam interius quam exterius sumptæ, quæ condensant, tanquam per consensum, ut paulo ante diximus. Sed in inanimatis rara est hujusmodi operatio. Percrebuit sane, tam scriptis quam fama, narratio de arbore in una ex insulis sive Terceris sive

Canariis (neque enim bene memini) quæ perpetuo stillat; adeo ut inhabitantibus nonnullam commoditatem aquæ præbeat. Paracelsus autem ait, herbam vocatam Rorem solis meridie et fervente sole rore impleri, cum aliæ herbæ undique sint sicca: at nos utramque narrationem fabulosam esse existimamus. Omnino autem illæ instantiis nobilissimæ forent usua, et introspectione dignissimæ, si essent veræ. Etiam rores illos mellitos et instar mannæ, qui super foliis quercus inveniuntur mense Maio, non existimamus fieri et densari a consensu aliquo sive a proprietate folii quercus, sed cum super aliis foliis pariter cadant, contineri scilicet et durare in foliis quercus; quia sunt bene unita, nec spongiosa, ut plurima ex aliis.

Calorem vero quod attingit; copia et potestas nimirum homini abunde adest; observatio autem et inquisitio deficit in nonnullis, iisque maxime necessariis; utcumque Spagirici se venditent. Etenim caloris intensioris opificia exquiruntur et conspiciuntur; remissioris vero, quæ maxime in vias naturæ incident, non tentantur, ideoque latent. Itaque videmus per vulcanos istos, qui in pretio sunt, spiritus corporum magnopere exaltari, ut in aquis fortibus, et nonnullis aliis oleis chemicis, partes tangibiles indurari, et, emisso volatili, aliquando figi; partes homogeneas separari; etiam corpora heterogenea grosso modo incorporari et commisceri; maxime autem compages corporum compositorum et subtiliores schematismos destrui et confundi. Debuerant autem opificia caloris lenioris tentari et exquiri; unde subtiliores mixturæ et schematismi ordinati gigni possint et educi, ad exemplum naturæ, et imitationem operum solis: quemadmodum in aphorismo de instantiis *fœderis* quædam adumbravimus. Opificia enim natura transiguntur per longe minores portiones, et posituras magis exquisitas et varias, quam opificia ignis, prout nunc adhibetur. Tum vero videatur homo revera auctus potestate, si per calores et potentias artificiales opera naturæ possint specie representari, virtute perfici, copia variari: quibus addere oportet accelerationem temporis. Nam rubigo ferri longo tempore procedit, at versio in crocum martis subito; et similiter de æruginis et cerussa. Crystallum longo tempore conficitur, vitrum subito conflatur. Lapides longo tempore concreſcunt, lateres subito coquantur, etc. Interim (quod nunc agitur) omnes diversitates caloris cum effectibus suis respective diligenter et industrie undique sunt colligendæ et exquirendæ: celestium, per radios suos directos, reflexos, refractos, et unitos in speculis comburentibus; fulguris, flammæ, ignis carbonum; ignis ex diversis materiis; ignis aperti, conclusi, angustati et inundantia, denique per diversas fabricas fornacium qualificati; ignis flatu exciti, quieti et non exciti; ignis ad majorem aut minorem distantiam remoti; ignis per varia media permeantis; calorum humidorum, ut balnei Mariæ, fimi, caloris animalium per exterius, caloris animalium per interius, fœni conclusi; calorum aridorum, cineris, calcis, arenæ tepidæ; denique calorum cujusvis generis cum gradibus eorum.

Præcipue vero tentanda est inquisitio et inventio effectuum et opificiorum caloris accedentis et recedentis graduatim, et ordinatim, et periodice, et per

debita spatia, et moras. Ista enim inæqualitas ordinata revera filia coeli est, et generationis mater: neque a calore aut vehementi, aut præcipiti, aut subultorio, aliquid magni expectandum est. Etenim et in vegetabilibus hoc manifestissimum est; atque etiam in uteris animalium magna est calor inæqualitas, ex motu, somno, alimentationibus et passionibus fœmellarum, quæ uterum gestant; denique in ipais matricibus terræ, iis nimirum, in quibus metalla et fossilia efformantur, locum habet et viget ista inæqualitas. Quo magis notanda est inscitia aliquorum alchemistarum ex reformatis, qui per calores æquabiles lampadum, et hujusmodi, perpetuo uno tenore ardentium, se voti compotes fore existimarent. Atque de opificiis et effectibus caloris hæc dicta sint. Neque vero tempestivum est illa penitus scrutari, antequam rerum formæ et corporum schematismi ulterius investigati fuerint, et in lucem prodierint. Tum enim quærenda, et adoperanda, et aptanda sunt instrumenta, quando de exemplaribus constiterit.

Quartus modus operandi est per moram, quæ certe et promus et condus naturæ est, et quædam dispensatrix. Moram appellamus, cum corpus aliquod sibi permittitur ad tempus notabile, munitum interim et defensum ab aliqua vi externa. Tum enim motus intestini se producit et perficiunt, cum motus extranei et adventitii cessant. Opera autem ætatis sunt longe subtiliora, quam ignis. Neque enim possit fieri talis clarificatio vini per ignem, qualis fit per moram; neque etiam incinerationes per ignem tam sunt exquisitæ, quam resolutiones et consumptiones per secula. Incorporationes etiam et mistiones subitæ et præcipitatæ per ignem, longe inferiores sunt illis, quæ fiunt per moram. At dissimulare et varii schematismi, quos corpora per moras tentant (quales sunt putredines) per ignem aut calorem vehementiorem destruantur. Illud interim non abs re fuerit notare; motus corporum penitus conclusorum habere nonnihil ex violento. Incarceratio enim illa impedit motus spontaneos corporis. Itaque mora in vase aperto plus facit ad separationes; in vase penitus clauso ad commistiones; in vase nonnihil clauso, sed subintrante aère, ad putrefactiones; utcumque de opificiis et effectibus moræ undique sunt diligenter conquirendæ instantiæ.

At regimen motus (quod est quintus ex modis operandi) non parum valet. Regimen autem motus vocamus, cum corpus aliud occurrens, corporis alterius motum spontaneum impedit, repellit, admittit, dirigit. Hoc vero plerumque in figuris et situ vasorum consistit. Etenim conus erectus juvat ad condensationem vaporum in alembicis; at conus inversus juvat ad defæcationem sacchari in vasis resupinata. Aliquando autem sinuatio requiritur, et angustatio, et dilatatio per vices, et hujusmodi. Etiam omnis percolatio huc spectat; scilicet cum corpus occurrens, uni parti corporis alterius viam aperit, alteri obstruit. Neque semper percolatio aut aliud regimen motus fit per extra; sed etiam per corpus in corpore; ut cum lapilli immittuntur in aquas ad colligendam limositatem ipsarum; syrapi clarificantur cum albuminibus ovorum, ut crassiores partes adhærescant, et postea separari possint.

Etiam huic regimini motus satis levi er et inscite attribuit Telesius figuras animalium, ob rivulos scilicet et loculos matricis. Debuerat autem notare similem efformationem intestinis ovorum, ubi non sunt rugæ aut inæqualitas: at verum est regimen motus efformationes perficere in modulis et proplasticis.

Operationes vero per consensus aut fugas (qui sextus modus est) latent sæpenumero in profundo. Istæ enim (quas vocant) proprietates occultæ et specificæ, et sympathiæ, et antipathiæ sunt magna ex parte corruptelæ philosophiæ. Neque de consensus rerum inveniendis multum sperandum est ante inventionem formarum et schematizantium simplicium. Consensus enim nil aliud est quam symmetria formarum et schematizantium ad invicem.

Atqui majores et magis catholici rerum consensus non prorsus obscuri sunt. Itaque ab iis ordiendum. Eorum prima et summa diversitas ea est; ut quædam corpora copia et raritate materiæ admodum discrepent, schematismis consentiant; alia contra, copia, et raritate materiæ consentiant, schematismis discrepent. Nam non male notatum est a chemicis in principiorum suorum triade, sulphur et mercurium quasi per universitatem rerum permeare (nam de sale inepta ratio est, sed introducta, ut possit comprehendere corpora terræ, sicca, et fixa). At certe in illis duobus videtur consensus quidam naturæ ex maxime catholicis conspici. Etenim consentiunt sulphur; oleum, et exhalatio pinguis; flamma, et fortasse corpus stellæ: ex altera parte consentiunt mercurius; aqua et vapores aquei; aër; et fortasse æther purus et interstellaris. Attamen istæ quaterniones geminæ, sive magnæ rerum tribus (utraque intra ordines suos) copia materiæ atque densitate immensum differunt, sed schematismo valde conveniunt; ut in plurimis se producit. At contra metalla diversa copia et densitate multum conveniunt (præsertim respectu vegetabilium, etc.) sed schematismo multifariam differunt; et similiter vegetabilia et animalia diversa schematismis quasi infinitis variantur: sed intra copiam materiæ, sive densitatem paucorum graduum continentur.

Sequitur consensus maxime post priorem catholicus, videlicet corporum principalium et fomitem suorum; videlicet menstruorum et alimentorum. Itaque exquirendum, sub quibus climatibus, et in qua tellure, et ad quam profunditatem, metalla singula generentur; et similiter de gemmis, sive ex rupibus, sive inter mineras natis: In qua gleba terræ, arbores singulæ, et frutices, et herbæ potissimum proveniant, et tanquam gaudeant; et insimul quæ impinguationes, sive per stercorationes cujuscunque generis, sive per cretam, arenam maris, cineres, etc. maxime juvent; et quæ sint ex his pro varietate glebarum magis aptæ et auxiliares. Etiam insitio et inoculatio arborum et plantarum, earumque ratio; quæ scilicet plantæ super quas felicias inserantur, etc. multum pendet de eonsensu. In qua parte non injucundum foret experimentum, quod noviter audivimus esse tentatum de insitione arborum sylvestrium (quæ hucusque in arboribus hortensibus fieri consuevit) unde folia et glandes majorem in modum amplificantur, et arbores fiunt magis umbrosæ. Similiter alimenta animalium respective notanda sunt in

genere et cum negativis. Neque enim carnivora sustinet herbis nutrir; unde etiam ordo Folitanorum (licet voluntas humana plus possit, quam animantium cæterorum, super corpus suum) post experientiam factam (ut aiunt) tanquam ab humana natura non tolerabilis, fere evanuit. Etiam materiæ diversæ putrefactionum, unde animalcula generantur, notandæ sunt.

Atque consensus corporum principalium erga subordinata sua (tales enim ii possint censer, quos notavimus) satis in aperto sunt. Quibus addi possent sensuum consensus erga objecta sua. Qui consensus cum manifestissimi sint; bene notati, et acriter excussi, etiam aliis consensibus, qui latent, magnam præbere possint lucem.

At interiores corporum consensus et fugæ, sive amicitie et lites (tædet enim nos fere vocabulorum sympathie et antipathie, propter superstitiones et inania) aut falso ascriptæ, aut fabulis conspersæ, aut per neglectum, raræ admodum sunt. Etenim si quis asserat, inter vineam et brassicam esse dissidium, quia juxta sata minus læte proveniunt; præsto ratio est, quod utraque planta succulenta sit, et deprædatrix, unde altera alteram defraudat. Si quis asserat esse consensum et amicitiam inter segetes et cyaneum, aut papaver sylvestre, quia herbæ illæ fere non proveniunt nisi in arvis cultis: debuit is potius asserere, dissidium esse inter ea, quia papaver et cyaneus emittuntur et creantur ex tali succo terræ, qualem segetes reliquerint et repudiaverint; adeo ut satio segetum terram præparet ad eorum proventum. Atque hujusmodi falsarum ascriptionum magnus est numerus. Quoad fabulas vero, illæ omnino sunt exterminandæ. Restat tenuis certa copia eorum consensuum, qui certo probati sunt experimento; quales sunt magnetis et ferri, atque auri et argenti vivi, et similia. At in experimentis chemicis circa metalla inveniuntur et alii nonnulli observatione digni. Maxima vero frequentia eorum (ut in tanta paucitate) invenitur in medicinis nonnullis, quæ ex proprietatibus suis occultis (quas vocant) et specificis, respiciunt aut membra, aut humores, aut morbos, aut quandoque naturas individuales. Neque omittendi sunt consensus inter motus et affectus lunæ, et passionem corporum inferiorum, prout ex experimentis agriculturæ, nauticæ, et medicinæ, aut alias cum delectu severo et sincero colligi et recipi possint. Verum instantie universæ consensuum secretiorum quo magis sunt infrequentes, eo majori cum diligentia sunt inquirendæ, per traditiones, et narrationes fidas et probas; modo hoc fiat absque ulla levitate aut credulitate, sed fide anxia et quasi dubitanda. Restat consensus corporum modo operandi, tanquam inartificialis, sed usu polychrestus, qui nullo modo omittendus est, sed sedula observatione investigandus. Is est coitio sive unio corporum proclivis, aut difficilis, per compositionem sive appositionem simplicem. Etenim corpora nonnulla facile et libenter commiscuntur et incorporantur: alia autem ægre et perversæ. Veluti pulveres melius incorporantur cum aquis; calces et cineres cum oleis; et sic de similibus. Neque tantum sunt colligendæ instantie *propensionis*, aut *aversionis* corporum erga mixturam, sed etiam collocationis partium, et distri-

butionis, et digestionis, postquam commixta sint; denique et prædominantie post mixturam transactam.

Superest ultimo loco ex modis septem operandi septimus et postremus; operatio scilicet per alternationem, et vicissitudines priorum sex: de quo antequam in singulos illos paulo altius fuerit inquisitum, tempestivum non foret exempla proponere. Series autem sive catena hujusmodi alterationis, prout ad singula effecta accommodari possit, res est et cognitu maxime difficilis, et ad opera maxime valida. Summa autem detinet et occupat homines impatientia hujusmodi, tam inquisitionis quam praxeos; cum tamen sit instar filii labyrinthi, quoad opera majora. Atque hæc sufficiant ad exemplum polychrestii.

## LI.

Inter *prærogativas instantiarum* ponemus loco vicesimo septimo atque ultimo *instantias magicas*. Hoc nomine illas appellamus, in quibus materia, aut efficiens, tenuis aut parva est, pro magnitudine operis et effectus qui sequitur: adeo ut etiamsi fuerint vulgares, tamen sint instar miraculi; aliæ primo intuitu, aliæ etiam attentius contemplanti. Has vero natura ex sese subministrat parce; quid vero factura sit sinu excusso, et post inventionem formarum, et processuum, et schematismorum, futuris temporibus apparebit. At ista affecta magica (quantum adhuc conijcimus) fiunt tribus modis: Aut per multiplicationem sui; ut in igne, et venenis, quæ vocant specificas; necnon in motibus, qui transeunt et fortificantur de rota in rotam; aut per excitationem sive invitationem in altero, ut in magnete, qui excit acus innumeras, virtute nullatenus deperdita aut diminuta; aut in fermento, et hujusmodi: aut per anteversionem motus, ut dictum est de pulvere pyrio, et bombardis, et cuniculis: quorum priores duo modi indagationem consensuum requirunt: tertius, mensuræ motuum. Utrum vero sit aliquis modus mutandi corpora par minima (ut vocant) et transponendi subtiliores materiæ schematizatos (id quod ad omnimodas corporum transformationes pertinet: ut ars brevi tempore illud facere possit, quod natura per multas ambages molitur) de eo nulla hactenus nobis constant indicia. Quemadmodum autem in solidis et veris aspiramus ad ultima et summa; ita vana et tumida perpetuo odimus, et quantum in nobis est profligamus.

## LII.

Atque de dignitatibus sive *prærogativas instantiarum* hæc dicta sint. Illud vero monendum, nos in hoc nostro organo tractare logicam, non philosophiam. Sed cum logica nostra doceat intellectum, et erudiat ad hoc, ut non tenuibus mentis quasi claviculis rerum abstracta caperet et prensaret (ut logica vulgaris); sed naturam revera persectet; et corporum virtutes et actus, eorumque leges in materia determinatas inveniatur; ita ut non solum ex natura mentis, sed ex natura rerum quoque hæc scientia emanet; mirum non est, si ubique naturalibus contemplationibus et experimentis, ad exempla artis nostræ, conspersa fuerit et illustrata. Sunt autem (ut ex iis, quæ dicta sunt, patet) *prærogative instantiarum* numero viginti septem; Nominibus: *instan-*

*tiæ solitariæ: instantiæ migrantes: instantiæ ostensivæ: instantiæ clandestinæ: instantiæ constitutivæ: instantiæ conformes: instantiæ monodice: instantiæ deviantes: instantiæ limitaneæ: instantiæ potestatis: instantiæ comitatus et hostiles: instantiæ subjunctivæ: instantiæ fœderis: instantiæ crucis: instantiæ divortii: instantiæ januæ: instantiæ citantes: instantiæ viæ: instantiæ supplementi: instantiæ persecantes: instantiæ virgæ: instantiæ curriculi: doses naturæ: instantiæ luctæ: instantiæ innuentes: instantiæ polychrestæ: instantiæ magicæ.* Usus autem harum *instantiarum*, in quo instantias vulgares excellunt, versatur in genere, aut circa partem informativam, aut circa operativam, aut circa utramque. Atque quoad informativam, juvant illæ aut sensum aut intellectum: Sensum, ut quinque *instantiæ lampadis*: Intellectum: aut accelerando exclusivam formæ, ut *solitariæ*; aut angustando et propius indicando affirmativam formæ, ut *migrantes, ostensivæ, comitatus*, cum *subjunctivis*: aut erigendo intellectum et ducendo ad genera et naturas communes: idque aut immediate, ut *clandestinæ, monodice, fœderis*: aut gradu proximo, ut *constitutivæ*: aut gradu infimo, ut *conformes*: aut rectificando intellectum a cœnsuetis, ut *deviantes*: aut ducendo ad formam magnam, sive fabricam universi, ut *limitaneæ*: aut cavendo de formis et causis falsis, ut *crucis et divortii*. Quod vero ad operativam attinet; illæ practicam aut designant, aut mensurant, aut sublevant. Designant aut ostendendo a quibus incipiendum, ne actum agamus, ut *instantiæ potestatis*: aut ad quid aspirandum, si detur facultas, ut *innuentes*. Mensurant quatuor illæ *mathematicæ*: sublevant *polychrestæ et magicæ*.

Rursus ex istis *instantiis* viginti septem, nonnullarum (ut superius diximus de aliquibus) facienda est collectio jam ab initio, nec expectanda particularis inquisitio naturarum. Cujus generis sunt *instantiæ*

*conformes, monodice, deviantes, limitaneæ, potestatis, januæ, innuentes, polychrestæ, magicæ.* Hæc enim aut auxiliantur et medentur intellectui et sensui; aut instruunt praxin, in genere. Reliquæ tum demum conquirendæ sunt, cum conficiemus *tabulas comparentiæ* ad opus interpretis circa aliquam naturam particularem. Sunt enim *instantiæ prærogativis* istis insignitæ et donatæ, animæ instar inter vulgares instantias comparentiæ; et, ut ab initio diximus, pauçæ illarum sunt vice multarum. Quocirca cum *tabulas* conficimus, illæ omni studio sunt investigandæ, et in *tabulas* referendæ. Erit etiam earum mentio necessaria in iis quæ sequuntur. Præponendus itaque erat earum tractatus.

Nunc vero ad *adminicula et rectificationes inductionis*, et deinceps ad *concreta, et latentes processus, et latentes schematismos*, et reliqua, quæ *aphorismo* XXI. ordine proposuimus, pergendum; ut tandem (tanquam curatores probi et fideles) tradamus hominibus fortunas suas, emancipato intellectu, et facto tanquam majore; unde necesse est sequi emendationem status hominis, et ampliationem potestatis ejus super naturam. Homo enim per lapsum et de statu innocentie decidit, et de regno in creaturas. Utraque autem res etiam in hac vita nonnulla ex parte reparari potest; prior per religionem et fidem, posterior per artes et scientias. Neque enim per maledictionem facta est creatura prorsus et ad extremum rebellis: Sed in virtute illius diplomatis, "In sudore vultus comedes panem tuum," per labores varios (non per disputationes certe, aut per otiosas ceremonias magicas) tandem et aliqua ex parte ad panem homini præbendum, id est, ad usum vitæ humanæ subigitur.

FINIS LIBRI SECUNDI NOVI ORGANI.

ILLUSTRISSIMO ET EXCELLENTISSIMO

PRINCIPI CAROLO,

SERENISSIMI REGIS JACOBI FILIO ET HÆREDI

ILLUSTRISSIME ET EXCELLENTISSIME PRINCEPS,

PRIMITIAS *Historiæ nostræ naturalis* Celsitudini tuæ humillime offero : rem mole perpusillam, veluti granum sinapis ; sed tamen pignus eorum, quæ, Deo volente, sequentur. Obstrinximus enim nos ipsos, tanquam voto, singulis nos mensibus, ad quos Dei bonitas (cujus agitur gloria tanquam in cantico novo) vitam nostram produxerit, unam, aut plures ejus partes, prout fuerint magis aut minus arduæ, aut copiosæ, confecturos et edituros. Moti etiam fortasse erunt alii, nostro exemplo, ad similem industriam, præsertim postquam penitus perspexerint, quid agatur. Nam in *Historia naturali* bona, et bene instituta, claves sunt et scientiarum et operum. Deus Celsitudinem tuam diu servet incolumem.

CELSITUDINIS TUÆ

Servus humilis et devotus,

FR. ST. ALBAN.

### PARASCEVE AD

## HISTORIAM NATURALEM ET EXPERIMENTALEM :

SIVE

DESCRIPTIO HISTORIÆ NATURALIS ET EXPERIMENTALIS,

QUALIS SUFFICIAT, ET SIT IN ORDINE AD BASIS ET FUNDAMENTA PHILOSOPHIÆ VERÆ.

Quod *Instaurationem* nostram per partes edamus, in eo spectat, ut aliquid extra periculum ponatur. Non absimilis nos movet ratio, ut aliam quandam operis particulam jam in præsentī subjungamus, et cum iis, quæ supra absolvimus, una edamus : ea est descriptio et delineatio *Historiæ naturalis et experimentalis*, ejus generis, quæ sit in ordine ad condendam philosophiam ; et complectatur materiem probam, copiosam, et apte digestam ad opus interpretis, quod succedit. Huic autem rei locus proprius foret, cum ad *parascevas* inquisitionis ordine devenitum fuerit. Hoc autem prævertere, nec locum proprium expectare, consultius nobis videtur ; quod hujusmodi historia, qualem animo metimur et mox describemus, res perquam magnæ sit molis, nec sine magnis laboribus et sumptibus confici possit ; ut quæ multorum opera indigeat, et (ut alibi diximus) opus sit quasi regium. Itaque occurrit illud, non abs re

fore experiri, si forte hæc aliquibus aliis curæ esse possint ; ita ut dum nos destinata ordine perficiamus, hæc pars, quæ tam multiplex est et onerosa, etiam vivis nobis (si ita divinæ placuerit Majestati) instrui et parari possit, aliis una nobiscum in id sedulo incumbentibus ; præsertim cum vires nostræ (si in hoc soli fuerimus) vix tantæ provinciæ sufficere videantur. Etenim quæ ad opus ipsum intellectus pertinent, nos marte nostro fortasse vincemus. At intellectus materialia tam late patent, ut ea (tanquam per procuratores et mercatores) undique conquiri et importari debeant. Accedit etiam illud, quod cœptis nostris vix dignum esse æstimemus, ut in re tali, quæ fere omnium industriæ pateat, nos ipsi tempus teramus. Quod autem caput rei est, ipsi nunc præstabimus : ut ejusmodi historiæ modum, et descriptionem, qualis intentioni nostræ satisficiat, diligenter et exacte proponamus ; ne homines non admoniti

aliud agant, et ad exemplum naturalium historiarum, quæ jam in usu sunt, se regant, atque ab instituto nostro multum aberrant. Illud interim quod sæpe diximus, etiam hoc loco præcipue repetendum est: Non si omnia omnium ætatum ingenia coivissent, aut posthac coierint; non si universum genus humanum philosophiæ dedisset operam, aut dederit; et totus terrarum orbis nihil aliud fuisset, aut fuerit, quam academiæ, et collegia, et scholæ virorum doctorum: tamen absque tali, qualem nunc præcipimus, Historia naturali et experimentali, ullos, qui genere humano digni sint, progressus in philosophia et scientiis fieri potuisse, aut posse: Contra vero, comparata et bene instructa hujusmodi historia, additis experimentis auxiliariis et luciferis, quæ in ipso interpretationis curriculo occurrunt, aut eruenda erunt; paucorum annorum opus futuram esse inquisitionem naturæ et scientiarum omnium. Itaque aut hoc agendum est, aut negotium deserendum. Hoc enim solo et unico modo fundamenta philosophiæ veræ et activæ stabiliri possunt; et simul perspicient homines, tanquam ex profundo somno excitati, quid inter ingenii placita et commenta, ac veram et activam philosophiam intersit; et quid demum sit de natura naturam ipsam consulere.

Primo igitur de hujusmodi historia conficienda præcepta dabimus in genere; deinde particularem ejus figuram hominibus sub oculis ponemus: insecrantes interdum non minus *ad quid* inquisitio aptanda et referenda sit, quam *quid* queri debeat. Scilicet, ut scopus rei, bene intellectus et prævisus, etiam alia hominibus in mentem redigat, quæ a nobis fortasse prætermissa erunt. Historiam autem istam *historiam primam*, sive *historiam matrem* appellare consuevimus.

## APHORISMI DE CONFICIENDA HISTORIA PRIMA.

## APHORISMUS I.

Natura in triplici statu ponitur, et tanquam regimem subit trinum. Aut enim libera est, et cursu suo ordinario se explicat; aut a pravitatibus et insolentis materiæ, atque ab impedimentorum violentia de statu suo detruditur; aut ab arte et ministerio humano constringitur et fingitur. Atque primus ille status ad *species* rerum refertur; secundas ad *monstra*; tertius ad *artificialia*. Etenim in artificialibus natura jugum recipit ab imperio hominis; nunquam enim illa facta fuissent absque homine. At per operam et ministerium hominis conspicitur prorsus nova corporum facies, et veluti rerum universitas altera, sive theatrum alterum. Triplex itaque est historia naturalis. Tractat enim aut naturæ *libertatem*, aut *errores*, aut *vincula*; ut non male eam parti possimus, in *historiam generationum*, *prætergenerationem*, et *artium*; quarum postremam etiam *mechanicam* et *experimentalem* appellare consuevimus. Neque tamen id præcipimus, ut hæc tria separatim tractentur. Quidni enim possint historiæ monstrorum in singulis speciebus cum historia ipsarum specierum conjungi. Etiam artificialia quandoque cum speciebus recte conjunguntur, quandoque melius separantur. Quamobrem e re nata de his consilium capere optimum est. Methodus enim ite-

rationes et prolixitatem gignet, æque ubi nimia est, ac ubi nulla.

## II.

Historia naturalis, ut subjecto (quemadmodum diximus) triplex; ita usu duplex est. Adhibetur enim aut propter rerum ipsarum cognitionem, quæ historiæ mandantur; aut tanquam materia prima philosophiæ, atque veræ inductionis supellex sive sylvæ. Atque posterius hoc nunc agitur; nunc, inquam; neque unquam antehac. Neque enim Aristoteles, aut Theophrastus, aut Dioscorides, aut Caius Plinius, multo minus moderni, hunc finem (de quo loquimur) historiæ naturalis unquam sibi proposuerunt. Atque in hoc plurimum est; ut qui partes scribendi historiam naturalem sibi posthac sumpserint, hoc perpetuo cogitent atque animo agitent: se non lectoris delectationi, non utilitati ipsi, quæ ex narrationibus in præsens capi possit, debere inservire; sed conquirere et comparare rerum copiam et varietatem, quæ veris axiomatibus conficiendis sufficiat. Hoc enim si cogitent, modum hujusmodi historiæ ipsi sibi præscribent. Finis enim regit modum.

## III.

Quo autem majoris est hæc res operæ et laboris, eo illam minus onerari superfluis consentaneum est. Tria itaque sunt, de quibus homines sunt plane admonendi, ut in illis parce admodum operam suam collocent: tanquam iis, quæ massam operis in immensum augeant, virtutem parum aut nihil promoveant.

Primo igitur facessant antiquitates, et citationes, aut suffragia auctorum; etiam lites et controversiæ et opiniones discrepantes; omnia denique philologica. Neque enim citetur auctor, nisi in re dubiæ fidei; neque interponatur controversia, nisi in re magni momenti. Quæ vero ad ornamenta orationis, et similitudines, et eloquentiæ thesaurum, et hujusmodi inania spectant, omnino abjiciantur. Etiam quæ recipiuntur omnia, et ipsa proponantur breviter et strictim, ut nihil minus sint quam verba. Nemo enim, qui materialia ad ædificia, vel naves, vel hujusmodi aliquas structuras colligit et reponit, ea (officinarum more) belle collocat et ostentat, ut placeant; sed in hoc tantum sedulus est, ut proba et bona sint, et ut in reposito spatio minimum occupent. Atque ita prorsus faciendum est.

Secundo, non multum ad rem facit luxuria illa historiarum naturalium in descriptionibus et picturis specierum numerosis, atque earundem varietate curiosa. Hujusmodi enim pusillæ varietates nihil aliud sunt, quam lusus quidam naturæ, et lascivia, et prope ad individuorum naturam accedunt: atque habent peragrationem quandam in rebus ipsis amœnam et jucundam; informationem vero ad scientias tenuem et fere supervacuum.

Tertio, missæ plane faciendæ sunt omnes narrationes superstitiosæ (non dico prodigosæ, ubi memoria earum reperietur fida et probabilis, sed superstitiosæ) et experimentales magiæ ceremoniales. Nolumus enim philosophiæ infantiam, cui historia naturalis primam præbet mammam, fabulis anilibus

assuescere. Erit fortasse tempus (postquam in inquisitionem naturæ paulo altius penetratum sit) hujusmodi res leviter percurrendi; ut si quid in illis fœcibus hæreat virtutis naturalis, ea extrahi et in usum condi possit. Interim seponendæ sunt. Etiam magiæ naturalis experimenta diligenter et cum severitate ventilanda sunt, antequam recipiantur; præsertim illa, quæ ex vulgaribus sympathiis et antipathiis, magna cum socordia et facilitate credendi simul et fingendi, derivari solent.

Neque nil, aut parum actum est, in exoneranda historia naturali tribus his (quæ diximus) rebus superfluis; quæ alias volumina impleturæ fuissent. Neque tamen hic finis. Æque enim requiritur in opere magno, ut tam ea, quæ recipiuntur, succincte scribantur; quam ut superflua abscindantur: licet nimini dubium esse possit, quin hujusmodi castitas et brevis delectationem multo minorem tum legenti, tum scribenti, præbitura sit. Verum illud semper inculcandum est; hoc, quod paratur, horreum esse tantummodo et promptuarium rerum; in quo non manendum aut habitandum sit cum voluptate, sed eo descendendum, prout res postulat, cum aliquid ad usum sumendum sit circa opus *interpretis*, quod succedit.

## IV.

In historia, quam requirimus, et animo destinamus, ante omnia videndum est, ut late pateat et facta sit ad mensuram universi. Neque enim arctandus est mundus ad angustias intellectus (quod adhuc factum est) sed expandendus intellectus et laxandus, ad mundi imaginem recipiendam, qualis invenitur. Istud enim, "Respicere pauca, et pronunciare secundum pauca," omnia perdidit. Resumentes igitur partitionem, quam paulo ante fecimus, historiæ naturalis (quod sit *generationum*, *prætergenerationum*, et *artium*) *historiæ generationum* constituimus partes quinque. Sit prima, ætheris et cœlestium. Secunda, meteororum, et regionum (quas vocant) aëris; tractum videlicet a luna usque ad superficiem terræ; cui etiam parti cometas cujuscunque generis, tum sublimiores, tum humiliores, (utcunque se habeat rei veritas,) ordinis causa, assignamus. Tertia, terræ et maris. Quarta, elementorum (quæ vocant) flammæ sive ignis, aëris, aquæ, et terræ. Elementa autem eo sensu accipi volumus, ut intelligantur non pro primordiis rerum, sed pro corporum naturalium massis majoribus. Ita enim natura rerum distribuitur, ut sit quorundam corporum quantitas sive massa in universo perquam magna; quia scilicet ad schematismum eorum requiritur textura materiæ facilis et obvia; qualia sunt ea quatuor (quæ diximus) corpora: at quorundam aliorum corporum sit quantitas in universo parva, et parce suppeditata, propter texturam materiæ valde dissimilem et subtilem, et in plurimis determinatam, et organicam; qualia sunt species rerum naturalium, metalla, plantæ, animalia. Quare prius genus corporum, *collegia majora*; posterior *collegia minora* appellare consuevimus. At *collegiorum istorum majorum* est pars historiæ quarta, sub nomine elementorum, ut diximus. Neque vero confunditur pars quarta cum secunda aut tertia in

hoc, quod in singulis mentionem aëris, aquæ, et terræ fecimus. In secunda enim et tertia recipitur historia eorum, tanquam mundi partium integralium, et quatenus pertinent ad fabricam et configurationem universi; at in quarta continetur historia substantiæ et naturæ ipsorum, quæ in singulis eorum partibus similaribus viget, nec ad totum refertur. Quinta denique pars historiæ *collegia minora*, sive *species* continet; circa quas historia naturalis hactenus præcipue occupata est.

*Historiam vero prætergenerationum* quod attinet; jamdudum a nobis dictum est, quod illa cum historia generationum commodissime conjungi possit: ea scilicet, quæ sit prodigiosa tantum, et naturalis. Nam superstitiosam miraculorum historiam (cujuscunque sit generis) omnino relegamus in tractatum proprium; neque ipsum jam inde a principio suscipiendum, sed paulo post, quando altius in naturæ inquisitionem penetratum fuerit.

At *historiam artium*, et naturæ ab homine versæ et immutatæ, sive historiam experimentalem, triplicem constituimus. Aut enim de prompta est ex artibus mechanicis; aut ex operativa parte scientiarum liberalium; aut ex practicis compluribus et experimentis, quæ in artem propriam non coaluerunt; imo quæ quandoque ex vulgatissima experientia occurrunt, nec artem omnino desiderant. Quamobrem si ex his omnibus, quæ diximus, *generationibus*, *prætergenerationibus*, *artibus*, et *experimentis* confecta fuerit historia; nihil prætermissum videtur, per quod sensus ad informandum intellectum instrui possit. Neque igitur amplius intra circulos parvos (veluti incantati) subsultabimus, sed mundi pomœria circuitione æquabimus.

## V.

Inter partes eas, quas diximus, historiæ, maximi usus est *historia artium*: propterea quod ostendat res in motu, et magis recta ducat ad praxin. Quinetiam tollit larvam et velum a rebus naturalibus, quæ plerunque sub varietate figurarum et apparentiæ externæ occultantur aut obscurantur. Denique vexationes artis sunt certe tanquam vincula et manicæ Protei, quæ ultimos materiæ nixus et conatus produnt. Corpora enim perdi aut annihilari nolunt; sed potius in varias formas se mutant. Itaque circa hanc historiam licet mechanicam (ut videri possit) et minus liberalem (missa arrogantia et fastu) summa est adhibenda diligentia.

Rursus, inter artes præferuntur eæ, quæ corpora naturalia et rerum materialia exhibent, alterant, et præparant; ut agricultura; coquinaria; chemica; tinctoria; opificia vitri, esmaltæ, sacchari, pulveris pyrii, ignium artificialium, papyri, et hujusmodi. Jejunioris autem sunt usus, quæ præcipue consistunt in motu subtili manu et instrumentorum; quales sunt textoria; fabrilis; architectura: opificia molen-dinorum, horologiorum, cum similibus; licet et istæ nullo modo negligendæ sint: tum quia in illis occurrunt multa, quæ ad corporum naturalium alterationem spectant; tum quia accurate informant de motu lationis; quæ res est magni prorsus ad plurima momenti.

Verum in congerie universa istius *artium historiæ*,

illud omnino monendum est, et penitus memoria mandandum: recipienda esse experimenta artium non solum ea, quæ ducunt ad finem artis, sed etiam quæ ullo modo interveniunt. Exempli gratia, quod locustæ, aut cancri cocti, cum prius colorem luti referrent, rubescant, nihil ad mensam: sed hæc ipsa instantia tamen non mala est ad inquirendam naturam rubedinis; cum idem eveniat etiam in lateribus coctis. Similiter, quod carnes minori mora saliantur hieme quam æstate, non eo tantum spectat, ut coqus cibos bene et quantum sufficit condiat; sed etiam instantia bona est ad indicandam naturam et impressionem frigoris. Quamobrem toto (quod aiunt) cælo erraverit, qui intentioni nostræ satisfieri existimaverit, si artium experimenta colligantur, hujus rei solum gratia, ut hoc modo artes singulæ melius perficiantur. Licet enim et hoc non prorsus contemnamus in multis; tamen ea plane est mens nostra, ut omnium experimentorum mechanicorum rivuli in philosophiæ pelagus undequaque fluant. Delectus autem instantiarum in unoquoque genere eminentiorum (quas maxime et diligentissime conquirere oportet, et quasi venari) ex prærogativis instantiarum petendus est.

## VI.

Resumendum etiam est hoc loco, quod in *aphorismis* XCIX. CXIX. CXX. libri primi fusius tractavimus; hic vero, præcepti more, breviter imperare sufficiat: hoc est, ut recipiantur in hanc historiam, primo, res vulgarissimæ, quales quis supervacuam putaret scrip- to inserere, quia tam familiariter notæ sunt; dein, res viles, illiberales, turpes (*omnia enim munda mundis*; etsi lucrum ex lotio boni odoris sit, multo magis lumen et informatio ex re qualibet): etiam res viles et pueriles (nec mirum, repuerascendum enim plane est): postremo, res quæ nimis cujusdam subtilitatis esse videntur, quod in se nullius sint usus. Neque enim (ut jam dictum est) quæ in hac historia proponentur, propter se congesta sunt: itaque neque dignitatem eorum ex se metiri par est, sed quatenus ad alia transferri possint, et influant in philosophiam.

## VII.

Illud insuper præcipimus, ut omnia in naturalibus tam corporibus quam virtutibus (quantum fieri potest) numerata, appensa, dimensa, determinatur proponantur. Opera enim meditatur, non speculationes. Physica autem et mathematica, bene commixtæ, generant practicam. Quamobrem exactæ restitutiones et distantie planetarum, in historia cælestium: terræ ambitus, et quantum occupet in superficie respectu aquarum, in historia terræ et maris: quantum compressionem aër patiaturs absque forti antitypia, in historia aëris: quantum in metallis alterum alteri præponderet, in historia metallorum; et innumera id genus perquirenda et perscribenda sunt. Cum vero exactæ proportionales haberi non possint, tum certe ad æstimativas aut comparativas indefinitas confugiendum est. Veluti (si forte calculus astronomorum, de distantis, diffidimus) quod luna sit infra umbram terræ; quod Mercurius sit supra lunam; et hujusmodi. Etiam cum mediæ proportionales haberi non possint, proponantur extre-

mæ; veluti, quod languidior magnes attollat ferrum ad tale pondus, respectu ponderis ipsius lapidis; et quod maxime virtuosus, etiam ad rationem sexagecuplam; quod nos in armato magnete admodum parvo fieri vidimus. Atque satis scimus istas instantias determinatas non facile aut sæpe occurrere; sed in ipso interpretationis curriculo, tanquam auxiliaries, (quando res maxime postulat,) debere exquiri. Veruntamen si forte occurrant, modo non progressum conficiendæ naturalis historiæ nimis remorentur, etiam in ipsam eas inserere oportet.

## VIII.

Fidem vero eorum, quæ in historia sunt recipienda, quod attinet; necesse est ut illa sint aut fidei certæ, aut fidei dubiæ, aut fidei damnatæ. Atque prius genus simpliciter est proponendum. Secundum cum nota; viz. per verbum *Traditur*, aut *Referunt*, aut *Audivi ex fide-digna*, et hujusmodi. Nam argumenta fidei in alterutram partem, nimis operosum foret ascribere: et proculdubio scribentem nimis remorabitur. Neque multum etiam refert ad id, quod agitur: quoniam (ut in *aphorismo* CXVIII. lib. I. diximus) falsitatem experimentorum, nisi ea ubique scateant, veritas axiomatum paulo post convincet. Attamen si instantia fuerit nobilior, aut usu ipso, aut quia alia multa ex illo pendere possint; tum certe nominandus est auctor: neque id nude tantum, sed cum mentione aliqua; utrum ille ex relatione, aut exscriptione, (qualia sunt fere quæ scribit C. Plinius,) aut potius ex scientia propria illa affirmaverit; atque etiam utrum fuerit res sui temporis, an vetustior; insuper, utrum sit tale quippiam, cujus necesse foret ut multi essent testes, si verum foret; denique, utrum auctor ille fuerit vaniloquus et levis, an sobrius et severus; et similia, quæ faciunt ad pondus fidei. Postremo res damnatæ fidei, et tamen jactatas et celebratas; quales, partim neglectæ, partim propter usum similitudinum, per multa jam secula invaluerunt, (veluti, quod adamas liget magnetem, allium enervet; electrum omnia trahat præter ocymum; et alia multa hujusmodi,) oportebit non silentio rejicere, sed verbis expressis proscribere, ne illa amplius scientiis molesta sint.

Præterea non abs re fuerit, si forte origo vanitatis aut credulitatis alicujus occurrat, illam notare: veluti, quod herbæ satyrio attributa sit vis ad excitandam venerem, quia radix scilicet in figuram testiculorum efformata sit: cum revera hoc fiat, quia adnascitur annis singulis nova radix bulbosa, adnærente radice anni prioris; unde didymi illi. Manifestum autem hoc est, quod nova radix semper invenitur solida et succulenta, vetus emarcida et spongiosa. Quare nil mirum, si altera mergatur in aqua, altera natet: quod tamen pro re mira habetur, et reliquis ejus herbæ virtutibus auctoritatem addidit.

## IX.

Supersunt additamenta quædam historiæ naturalis utilia; quæque eam magis commode inflectere et aptare possint ad opus *interpretis*, quod succedit. Illa, quinque sunt.

Primum, quæstiones (non causarum dico, sed

facti) adjiciendæ sunt, ut inquisitionem ulteriorem provocent et sollicitent: ut, in historia terræ et maris, utrum mare Caspium fluat et refluat, et quali horarum spatio; utrum sit aliqua continens australis, an potius insulæ; et similia.

Secundo, in experimento aliquo novo et subtiliore, addendus est modus ipse experimenti, qui adhibitus est: ut liberum sit hominum judicium, utrum informatio per experimentum illud sit fidum aut fallax; atque etiam excitetur hominum industria ad exquirendos modos (si fieri possit) magis accuratos.

Tertio, si quid subsit in aliqua narratione dubii vel scrupuli, id suppressi aut reticere omnino nolumus; sed plane et perspicue ascribi, notæ aut moniti loco. Cupimus enim historiam primam, veluti facti sacramento de veritate ejus in singulis, religiosissime conscribi; cum sit volumen operum Dei, et (quantum inter majestatem divinarum, et humilitatem terrenorum collationem facere liceat) tanquam Scriptura altera.

Quarto, non abs re fuerit observationes quandoque aspergere (id quod C. Plinius fecit): veluti in historia terræ et maris; quod terrarum figura (quatenus adhuc cognita est) respectu marium, sit ad austrum angusta et veluti acuminata, ad septentriones lata et ampla; marium, contra: et quod oceani magni intersecent terras alveis exporrectis inter austrum et septentriones, non inter orientem et occidentem, nisi forte in extremis regionibus polaribus. Etiam canones (qui nil aliud sunt quam observationes generales et catholicæ) optime ascribuntur: veluti in historia cœlestium; quod Venus nunquam distat a Sole plus partibus 46; Mercurius 23: et quod planetæ, qui supra Solem locantur, tardissime moveant, cum longissime a terra absint; planetæ infra Solem, celerrime. Aliud insuper observationis genus adhibendum; quod nondum in usum venit, licet sit haud exigui momenti. Illud tale est: nempe, ut subjungantur iis quæ sunt, ea quæ non sunt. Veluti, in historia cœlestium, quod non inveniatur stella oblonga vel triangularis; sed quod omnis stella sit globosa: vel globosa simpliciter ut Luna; vel ad aspectum angulata, sed in medio globosa, ut reliquæ stellæ; vel ad aspectum comata, et in medio globosa, ut Sol: aut quod stellæ nullo prorsus spargantur ordine: ut non inveniatur vel quincunx, vel quadrangulum, nec alia figura perfecta, (utcunque imponantur nomina deltæ, coronæ, crucis,

quadrigarum, etc.) vix etiã linea recta, nisi forte in cingulo et pugione Orionis.

Quinto, juvabit fortasse nonnihil quærentem, quod credentem prorsus pervertat et perdat; viz. ut opiniones, quæ nunc receptæ sunt, cum earum varietate et sectis, brevi verborum complexu, et tanquam in transitu recensentur; ut intellectum vellicent, et nihil amplius.

## X.

Atque hæc sufficient, quatenus ad præcepta generalia: quæ si diligenter observentur, et finem recta petet hoc opus historiæ, nec excrecet supra modum. Quod si etiam, prout circumscribitur et limitatur, vastum opus alicui pusillanimo videri possit; is in bibliothecas oculos convertat; et, inter alia, corpora juris civilis aut juris canonici ex una parte spectet, et commentarios doctorum et jurisconsultorum ex altera; et videat quid intersit quoad molem et volumina. Nobis enim (qui, tanquam scribæ fideles, leges ipas naturæ, et nihil aliud excipimus et conscribimus) brevis competit, et fere ab ipsis rebus imponitur. Opinionum autem, et placitorum, et speculationum, non est numerus neque finis.

Quod vero in distributione operis nostri mentionem fecimus *cardinalium virtutum* in natura; et quod etiam harum historia, antequam ad opus *interpretationis* ventum fuerit, perscribenda esset; hujus rei minime oblitus sumus, sed eam nobis ipsis reservavimus: cum de aliorum industria in hac re, priusquam homines cum natura paulo arctius consuescere inciperint, prolixè spondere non audeamus. Nunc itaque ad delinationem *historiarum particularium* veniendum.

Verum, prout nunc negotiis dstringimur, non ulterius suppetit otium, quam ut *catalogum* tantum *historiarum particularium* secundum capita subjungamus. Enimvero cum primum huic rei vacare possimus, consilium est in singulis, veluti interrogando, docere; qualia sint circa unamquamque historiarum illarum potissimum inquirenda et conscribenda, tanquam ea quæ ad finem nostrum faciunt, instar *topicorum* quorundam particularium; vel potius, ut (sumpto exemplo a causis civilibus) in hac *vindicatione magna*, sive *processu*, a favore et providentia divina concessio et instituto (per quem genus humanum jus suum in naturam recuperare contendit) naturam ipsam et artes super articulos examinemus.

## CATALOGUS

## HISTORIARUM PARTICULARIUM

## SECUNDUM CAPITA.

1. HISTORIA cœlestium; sive astronomica.
2. Historia configurationis cœli et partium ejus, versus terram et partes ejus; sive cosmographica.
3. Historia cometarum.
4. Historia meteororum ignitorum.
5. Historia fulgurum, fulminum, tonitruum, et coruscationum.
6. Historia ventorum, et flatuum repentinorum, et undulationum aëris.
7. Historia iridum.

8. *Historia nubium, prout superne conspiciuntur.*
9. *Historia expansionis cœruleæ, crespusculi, plurium solium, plurium lunarum, halonum, colorum variorum solis et lunæ; atque omnis varietatis cœlestium ad aspectum, quæ fit ratione mediæ.*
10. *Historia pluviarum ordinarium, procellosarum, et prodigiosarum; etiam cataractarum (quas vocant) cœli, et similia.*
11. *Historia grandinis, nivis, gelu, pruinae, nebulae, roris, et similia.*
12. *Historia omnium aliorum cadentium sive descenduntium ex alto, et superne generatorum.*
13. *Historia sonituum in alto (si modo sint aliqui) præter tonitrua.*
14. *Historia aëris, in toto, sive in configuratione mundi.*
15. *Historia tempestatum, sive temperamentorum anni, tam secundum variationes regionum, quam secundum accidentia temporum, et periodos annorum; diluviarum, fervorum, siccitatum, et similia.*
16. *Historia terræ et maris; figuræ et ambitus ipsorum, et configurationis ipsorum inter se, atque exporrectionis ipsorum in latum aut angustum; insularum terræ in mari, sinuum maris, et lacuum salsorum in terra, isthmorum, promonteriorum.*
17. *Historia motuum (si qui sint) globi terræ et maris; et ex quibus experimentis illi colligi possint.*
18. *Historia motuum majorum et perturbationum in terra et mari; nempe terræ motuum, et tremorum, et hiatum, insularum de novo enascentium, insularum fluctuantium, abruptio-num terrarum per ingressum maris, invasionum et illuvionum, et contra desertionum maris; eruptionum ignium e terra, eruptionum subitaneorum aquarum e terra, et similia.*
19. *Historia geographica naturalis, montium, vallium, sylvarum, planitierum, arenarum, paludum, lacuum, fluviorum, torrentium, fontium, et omnis diversitatis scaturiginis ipsorum, et similia: missis gentibus, provinciis, urbibus, et hujusmodi civilibus.*
20. *Historia fluxuum et refluxuum maris, euriporum, undulationum et motuum maris aliorum.*
21. *Historia cæterorum accidentium maris; salsuginis ejus, colorum diversorum, profunditatis; et rupium, montium, et vallium submarinorum, et similia.*

## SEQUUNTUR HISTORIÆ MASSARUM MAJORUM.

22. *Historia flammæ, et ignitorum.*
23. *Historia aëris in substantia, non in configuratione.*
24. *Historia aquæ in substantia, non in configuratione.*
25. *Historia terræ et diversitatis ejus in substantia, non in configuratione.*

## SEQUUNTUR HISTORIÆ SPECIERUM.

26. *Historia metallorum perfectorum, auri, argenti; et minerarum, venarum, marcasitarum eorundem: operaria quoque in mineris ipsorum.*

27. *Historia argenti vivi.*
28. *Historia fossilium; veluti vitrioli, et sulphuris, etc.*
29. *Historia gemmarum; veluti adamantis, rubini, etc.*
30. *Historia lapidum; ut marmoris, lapidis Lydii, silicis, etc.*
31. *Historia magnetis.*
32. *Historia corporum miscellaneorum, quæ nec sunt fossilia prorsus, nec vegetabilia, ut salium, succini, ambrae-griseæ, etc.*
33. *Historia chemica circa metalla et mineralia.*
34. *Historia plantarum, arborum, fruticum, herbarum; et partium eorum, radicum, caulium, ligni, foliorum, florum, fructuum, seminum, lacrymarum, etc.*
35. *Historia chemica circa vegetabilia.*
36. *Historia piscium, et partium ac generationis ipsorum.*
37. *Historia volatilium, et partium ac generationis ipsorum.*
38. *Historia quadrupedum, et partium ac generationis ipsorum.*
39. *Historia serpentum, vermium, muscarum, et cæterorum insectorum; et partium ac generationis ipsorum.*
40. *Historia chemica circa ea quæ sumuntur ab animalibus.*

## SEQUUNTUR HISTORIÆ HOMINIS.

41. *Historia figuræ, et membrorum externorum hominis, staturæ, compagis, vultus, et lineamentorum; eorumque varietatis secundum gentes et climata, aut alias minores differentias.*
42. *Historia physiognomica super ipsa.*
43. *Historia anatomica, sive membrorum internorum hominis; et varietatis ipsorum, quatenus invenitur in ipsa naturali compage et structura, et non tantum quoad morbos et accidentia præternaturalia.*
44. *Historia partium similium hominis; ut carnis, ossium, membranarum, etc.*
45. *Historia humorum in homine; sanguinis, bilis, spermatis, etc.*
46. *Historia excrementorum; sputi, urinarum, sudorum, sedimentorum, capillorum, pilorum, rediviarum, unguium, et similia.*
47. *Historia facultatum; attractionis, digestionis, retentionis, expulsionis, sanguificationis, assimilationis alimentorum in membra, versionis sanguinis et floris ejus in spiritum, etc.*
48. *Historia motuum naturalium et involuntariorum; ut motus cordis, motus pulsuum, sternutationis, motus pulmonum, motus erectionis virgæ, etc.*
49. *Historia motuum mixtorum ex naturalibus et voluntariis; veluti respirationis, tussis, urinationis, sedis, etc.*
50. *Historia motuum voluntariorum; ut instrumentorum ad voces articulatas; ut motuum oculorum, linguæ, faucium, manuum, digitorum, deglutitionis, etc.*
51. *Historia somni et insomniorum.*
52. *Historia diversorum habituum corporis; pin-*

- guis, macilenti; complexionum (quas vocant) etc.
53. Historia generationis hominum.
  54. Historia conceptionis, vivificationis, gestationis in utero, partus, etc.
  55. Historia alimentationis hominis, atque omnis edulii et potabilis, atque omnis diætæ; et varietatis ipsorum secundum gentes aut minores differentias.
  56. Historia augmentationis et incrementi corporis in toto et partibus ipsius.
  57. Historia decursus ætatis; infantis, pueritiæ, juventutis, senectutis, longævitiæ, brevitatis vitæ, et similibus, secundum gentes et minores differentias.
  58. Historia vitæ et mortis.
  59. Historia medicinalis morborum, et symptomatum et signorum eorundem.
  60. Historia medicinalis curæ, et remediorum, et liberationum a morbis.
  61. Historia medicinalis eorum quæ conservant corpus et sanitatem.
  62. Historia medicinalis eorum quæ pertinent ad formam et decus corporis, etc.
  63. Historia medicinalis eorum quæ corpus alterant, et pertinent ad regimen alterativum.
  64. Historia pharmacopolaris.
  65. Historia chirurgica.
  66. Historia chemica circa medicinas.
  67. Historia visus et visibilium, sive optica.
  68. Historia picturæ, sculptoria, plastica, etc.
  69. Historia auditus et sonorum.
  70. Historia musicæ.
  71. Historia olfactus et odorum.
  72. Historia gustus, et saporum.
  73. Historia tactus et ejus objectorum.
  74. Historia Veneris, ut speciei tactus.
  75. Historia dolorum corporeorum, ut speciei tactus.
  76. Historia voluptatis et doloris in genere.
  77. Historia affectuum; ut iræ, amoris, verecundiæ, etc.
  78. Historia facultatum intellectualium; cogitativæ, phantasie, discursus, memoriæ, etc.
  79. Historia divinationum naturalium.
  80. Historia dignotionum, sive diacrisium occultarum naturalium.
  81. Historia coquinaria; et artium subservientium, veluti macellaria, aviaria, etc.
  82. Historia pistoria, et panificiorum; et artium subservientium, ut molendinaria, etc.
  83. Historia vinaria.
  84. Historia cellaria, et diversorum generum potus.
  85. Historia bellariorum et confecturarum.
  86. Historia mellis.
  87. Historia sacchari.
  88. Historia lacticiniorum.
  89. Historia balneatoria, et unguentaria.
  90. Historia miscellanea circa curam corporis; tonsorum, odorariorum, etc.
  91. Historia auri-fabrilis, et artium subservientium.
  92. Historia lanificiorum, et artium subservientium.
  93. Historia opificiorum e serico et bombyce, et artium subservientium.
  94. Historia opificiorum ex lino, cannabio, gossipio, setis, et aliis filaceis; et artium subservientium.
  95. Historia plumificiorum.
  96. Historia textoria, et artium subservientium.
  97. Historia tinctoria.
  98. Historia coriaria, alutaria; et artium subservientium.
  99. Historia culcitriaria et plumaria.
  100. Historia ferri-fabrilis.
  101. Historia latomiæ sive lapicidarum.
  102. Historia lateraria, et tegularia.
  103. Historia figularis.
  104. Historia cæmentaria, et crustaria.
  105. Historia ligni-fabrilis.
  106. Historia plumbaria.
  107. Historia vitri et omnium vitreorum, et vitriaria.
  108. Historia architecturæ in genere.
  109. Historia plaustraria, rhedaria, lecticaria, etc.
  110. Historia typographica, libraria, scriptoria, sigillatoria; atramenti, calami, papyri, membranæ, etc.
  111. Historia ceræ.
  112. Historia viminaria.
  113. Historia storearia, et opificiorum ex stramine, scirpis, et similibus.
  114. Historia lotricaria, scoparia, etc.
  115. Historia agriculturæ, pascuarie, cultus sylvarum, etc.
  116. Historia hortulana.
  117. Historia piscatoria.
  118. Historia venationis et aucupii.
  119. Historia rei bellicæ, et artium subservientium; ut armamentaria, arcuaria, sagittaria, scopetaria, tormentaria, balistaria, machinaria, etc.
  120. Historia rei nauticæ, et practicarum, et artium subservientium.
  121. Historia athletica, et omnis generis exercitationum hominis.
  122. Historia rei equestris.
  123. Historia ludorum omnis generis.
  124. Historia præstigiatorum et circulatorum.
  125. Historia miscellanea diversarum materiarum artificialium; ut esmaltæ, porcellanæ, complurium cæmentorum, etc.
  126. Historia salium.
  127. Historia miscellanea diversarum machinarum, et motuum.
  128. Historia miscellanea experimentorum vulgarium, quæ non coaluerunt in artem.
- ETIAM MATHEMATICARUM PURARUM HISTORIÆ, CONSCRIBENDÆ SUNT, LICET SINT POTIUS OBSERVATIONES QUAM EXPERIMENTA.
129. Historia naturarum et potestatum numerorum.
  130. Historia naturarum et potestatum figurarum.
- Non abs re fuerit admonere, quod, cum necesse sit multa ex experimentis sub duobus titulis vel pluribus cadere (veluti historia plantarum, et historia artis hortulanæ multa habebunt fere communia) commodior sit inquisitio per artes, dispositio vero per corpora. Parum enim nobis curæ est de artibus ipsis mechanicis, sed tantum de iis quæ afferunt ad instruendam philosophiam. Verum hæc e re nata melius regentur.

# FRAGMENTUM LIBRI VERULAMIANI,

CUI TITULUS

## ABECEDARIUM NATURÆ.

Cum tam multa producantur a terra et aquis, tam multa pertranseant aërem et ab eo excipiantur, tam multa mutantur et solvantur ab igne, minus perspicuæ forent inquisitiones cæteræ, nisi natura massarum istarum, quæ toties occurrent, bene cognita et explicata. His adjungimus inquisitiones de cœlestibus et meteoricis, cum et ipsæ sint massæ majores, et ex catholicis. *Vide Augm. Scient. Lib. II. c. 3. et Glob. Intellect.*

Massæ majores : inquisitio sexagesima septima. Triplex Tau, sive de terra.

Massæ majores : inquisitio sexagesima octava. Triplex Upsilon, sive de aqua.

Massæ majores : inquisitio sexagesima nona. Triplex Phi, sive de aëre.

Massæ majores : inquisitio septuagesima. Triplex Chi, sive de igne.

Massæ majores : inquisitio septuagesima prima. Triplex Psi, sive de cœlestibus.

Massæ majores : inquisitio septuagesima secunda. Triplex Omega, sive de meteoricis.

### CONDITIONES ENTIIUM.

Supersunt ad inquirendum in Abecedario conditiones entium, quæ videntur esse tanquam transcendentia, et parum stringunt de corpore naturæ, tamen eo, quo utimur, inquirendi modo, haud parum afferent illustrationis ad reliqua. Primo igitur, cum optime observatum fuerit a Democrito, naturam rerum esse copia materiæ et individuorum varietate amplam, atque (ut ille vult) infinitam; coitionibus vero et speciebus in tantum finitam, ut etiam angusta, et tanquam paupercula, videri possit: quandoquidem tam pauca inveniantur species, quæ sint aut esse possint, ut exercitum millenarium vix conficiant: cumque negativa affirmativis subjuncta ad informationem intellectus plurimum valeant; constituenda est inquisitio de ente, et non ente. Ea ordine est septuagesima tertia, et quadruplex Alpha numeratur.

Conditiones entium. Quadruplex Alpha; sive de ente et non ente.

Possibile et impossibile nil aliud est, quam potentiale ad ens, aut non potentiale ad ens. De eo inquisitio septuagesima quarta conficitur; quæ quadruplex Beta numeratur.

Conditiones entium. Quadruplex Beta; sive de possibili et impossibili.

Etiam multum, paucum, rarum, consuetum, sunt

potentialia ad ens in quanto. De iis inquisitio septuagesima quinta esto, quæ quadruplex Gamma numeretur.

Conditiones entium. Quadruplex Gamma; sive de multo et paucis.

Durabile et transitorium, æternum et momentaneum, sunt potentialia ad ens in duratione. De illis septuagesima sexta inquisitio esto, quæ quadruplex Delta numeratur.

Conditiones entium. Quadruplex Delta; sive de durabili et transitorio.

Naturale et monstrosum sunt potentialia ad ens, per cursum naturæ, et per deviationes ejus. De iis inquisitio septuagesima septima esto, quæ quadruplex Epsilon numeratur.

Conditiones entium. Quadruplex Epsilon; sive de naturali et monstroso.

Naturale et artificiale sunt potentialia ad ens, sine homine, et per hominem. De iis inquisitio septuagesima octava conficitur, quæ quadruplex Zeta numeretur.

Conditiones entium. Quadruplex Zeta; sive de naturali et artificiali.

Exempla in explicatione ordinis Abecedarii non adjunximus, quia ipsæ inquisitiones continent totas acies exemplorum.

Tituli, secundum quos ordo Abecedarii est dispositus, nullo modo eam auctoritatem habent, ut pro veris et fixis rerum divisionibus recipiantur. Hoc enim esset profiteri scire nos quæ inquiremus. Nam nemo res vere disperdit, qui non naturam ipsarum penitus cognovit. Satis sit, si ad ordinem inquirendi (id quod nunc agitur) commode se habeant.

### NORMA ABECEDARII.

Abecedarium hoc modo conficimus et regimus. Historia et experimenta omnino primas partes tenent. Ea, si enumerationem et seriem rerum particularium exhibeant, in tabulas conficiuntur; aliter sparsim excipiuntur.

Cum vero historia et experimenta sæpissime nos deserant, præsertim lucifera illa, et instantiæ crucis, per quas de veris rerum causis intellectui constare possit; mandata damus de experimentis novis. Hæc sint tanquam historia designata. Quid enim aliud nobis primo viam ingredientibus relinquitur?

Modum experimenti subtilioris explicamus, ne error subsit, atque ut alios ad meliores modos excogitandos excitemus.

Etiam monita et cautiones de rerum fallaciis et inveniendi erroribus, quæ nobis occurrunt, aspergimus. Observationes nostras super historiam et experimenta subteximus, ut interpretatio naturæ magis sit in procinctu.

Etiam canones, sed tamen mobiles, et axiomata inchoata, qualia nobis inquirentibus, non pronunciantibus, se offerunt, constituimus: utilia enim sunt, si non prorsus vera.

Denique tentamenta quædam interpretationis quandoque molimur, licet prorsus humi repentia, et vero interpretationis nomine nullo modo (ut arbitramur) decoranda. Quid enim nobis supercilia opus est aut impostura, cum toties profiteamur, nec nobis historiam et experimenta, qualibus opus est, suppetere, nec absque his interpretationem naturæ perfici posse, ideoque nobis satis esse, si initiis rerum non desimus?

Perspicuitatis autem et ordinis gratia, aditus quosdam ad inquisitiones, instar præfationum, substernimus:

item connexiones et vincula, ne inquisitiones sint magis abruptæ, interponimus.

Ad usum vero vellicationes quasdam de practica suggerimus.

Etiam optativa eorum, quæ adhuc non habentur, una cum proximis suis, ad erigendam humanam industriam, proponimus.

Neque sumus nescii, inquisitiones inter se aliquando complicari, ita ut nonnulla ex inquisitis in titulos diversos incidant. Sed modum eum adhibebimus, ut et repetitionum fastidia et rejectionum molestias, quantum fieri possit, vitemus; postponentes tamen hoc ipsum (quando necesse fuerit) perspicuitati docendi, in argumento tam obscuro.

Hæc est abecedarii norma et regula. Deus universi conditor, conservator et instaurator, opus hoc et in ascensione ad gloriam suam, et in descensione ad bonum humanum, pro sua erga homines benevolentia et misericordia, protegat et regat, per Filium suum unicum nobiscum Deum.

---

## HISTORIÆ NATURALIS

AD CONDENDAM

# P H I L O S O P H I A M

## PRÆFATIO.

CUM nobis homines nec opinandi nec experiendi vias tenere prorsus videantur, omni ope huic infortunio subveniendum putavimus: neque enim major aliunde se ostendit bene merendi ratio, quam si id agatur, ut homines, et placitorum larvis, et experimentorum stuporibus liberati, ipsi cum rebus, magis fida et magis arcta inita societate, contrahant quasi per experientiam quandam literatam. Hoc enim modo intellectus et in tuto et in summo collocatur, atque præsto insuper erit, atque ingruet rerum utilium proventus. Atque hujus rei exordia omnino a naturali historia ducenda sunt; nam universa philosophia Græcorum, cum sectis suis omnigenis, atque si qua alia philosophia in manibus est, nobis videtur super nimis angustam basin naturalis historiæ fundata esse, atque ex paucioribus, quam per erat, pronuntiasse. Arreptis enim quibusdam ab experientia traditionibus, neque iis interdum aut diligenter examinatis, reliqua in meditatione et ingenii agitatione posuere, assumpta in majorem rei fiduciam dialectica. Chemistæ autem, et universum mechanicorum et empiricorum genus, si et illis contemplationes et philosophiam tentare audacia crevit, paucarum rerum accuratæ subtilitati assueti, miris modis reliquas ad eas contorquent; et placita magis deformia et monstrosa, quam rationales illi producunt. Illi enim parum ex multis, hi rursus multum ex paucis, in philosophiæ materiam sumunt; utriusque autem ratio, si verum dicendum sit, infirma est et perditâ. Sed naturalis historia, quæ hactenus congesta est, primo intuitu copiosa videri possit; cum revera sit egena et inutilis, neque adeo ejus generis, quod quærimus. Neque enim a fabulis et deliriis purgata est, et in antiquitatem, et philologiam, et narrationes supervacuas excurrit, circa solida negligens et fastidiosa, curiosa et nimia in inanibus. Pessimum autem est in hac copia, quod rerum naturalium inquisitionem amplexa est, rerum autem mechanicarum magna ex parte aspernata. Atque hæc ipsæ ad naturæ sinus excutiendos longe illis præstant; natura enim, sponte sua fusa at vaga, disgregat intellectum, et varietate sua confundit; verum in mechanicis operationibus contrahitur judicium, et naturæ modi et processus cernuntur, non tantum effecta. Atque rursus universa mechanicorum subtilitas citra rem, quam quærimus, sistitur: artifex enim, operi et fini suo intentus, ad alia (quæ forsitan ad naturæ inquisitionem magis faciunt) nec animum erigit, nec manum porrigit. Itaque magis exquisita cura opus est, et probationibus electis, atque sumptu etiam, ac summa insuper patientia. Illud enim in experimentalibus omnia perdidit, quod homines etiam a principio fructifera experimenta, non lucifera, sectati sunt; atque ad opus aliquod magnificum educendum omnino incubuere, non ad pandenda oracula naturæ, quod opus operum est, et omnem

potestatem in se complectitur. Intervenit et illud ex hominum curiositate et fastu, quod ad secreta et rara se plerumque converterunt, et in his operam et inquisitionem posuerunt, spretis experimentis atque observationibus vulgaris: quod videntur fecisse, aut admirationem et famam captantes, aut in eo lapsi et decepti, quod philosophiæ officium in accommodandis et reducendis rarioribus eventibus ad ea, quæ familiariter occurrunt, non æque in ipsarum illarum vulgarium rerum causis, et causarum causis altioribus eruendis, sitam esse existarunt. Universe autem hujus de naturali historia querelæ causa ea præcipua est, quod homines non in opere tantum, sed in ipso instituto aberrarunt. Namque Historia illa naturalis, quæ extat, aut ob ipsorum experimentorum utilitatem, aut ob narrationum jucunditatem, confecta videtur, et propter se facta; non ut philosophiæ et scientiis initia, et veluti mammam præbeat. Itaque huic rei pro facultate nostra de esse nolumus. Nobis enim quantum philosophiis abstractis sit tribuendum jampridem constitutum est. Etiam vias inductionis veræ et bonæ, in qua sunt omnia, tenere nos arbitramur, et intellectus humani versus scientias facultatem incompetentem et prorsus imparem, veluti per machinas, aut filum aliquod labyrinthi, posse juvare. Neque nescii sumus, nos, si instaurationem illam scientiarum, quam in animo habemus, intra inventa ulla majora cohibere voluissimus, ampliorem fortasse honoris fructum percipere potuissemus. Verum cum nobis Deus animum indiderit, qui se rebus submittere sciat, quique, ex meriti conscientia et successus fiducia, speciosa libens prætereat; eam etiam partem operis nobis desumpsimus, quam existimamus alium quemquam aut in universum fugere, aut non pro instituto nostro tractare voluisse. Circa hoc autem duo sunt, de quibus homines, et alias, et nunc præcipue, cum ad rem ipsam accingimur, monitos volumus. Primo, ut mittant illam cogitationem, quæ facile hominum mentes occupat et obsidet, licet sit falsissima et perniciosissima; eam videlicet, quod rerum particularium inquisitio infinitum quiddam sit et sine exitu: cum illud verius sit, opinionum et disputationum modum nullum esse; sed phantasias illas ad perpetuos errores et infinitas agitationes damnari; particularia autem et informationes sensus (demptis individuis et rerum gradibus, quod inquisitioni veritatis satis est) comprehensionem pro certo, nec eam sane vastam aut desperatam, patiuntur. Secundo, ut homines subinde meminerint quid agatur, atque cum inciderint in complures res vulgarissimas, exiles, ac specie tenus leves, etiam turpes, et quibus (ut ait ille) honos præfandus sit; non arbitrentur nos nugari, aut mentem humanam inferius, quam pro dignitate sua, deprimerem. Neque enim ista propter se quæsitæ aut descripta sunt; sed nulla prorsus alia patet intellectui humano via, neque ratio operis aliter constat: nos siquidem conamur rem omnium maxime seriam, et humana mente dignissimam, ut lumen naturæ purum et minime phantasticum (cujus nomen hactenus quandoque jactatur; res hominibus penitus ignota est) per faciem a divino Numine præbitam et admotam, hoc nostro seculo accendatur. Neque enim dissimulamus nos in ea opinione esse, præposteram illam argumentorum et meditationum subtilitatem, primæ informationis sive veræ inductionis subtilitate et veritate suo tempore prætermittenda, aut non recte instituta, rem in integrum restituere nullo modo posse, licet omnia omnium ætatum ingenia coierint; sed naturam, ut fortunam, a fronte capillatam, ab occipitio calvam esse. Restat itaque ut res de integro tentetur, idque majoribus præsidii, atque, ex utrisque opinionum zelis, detur aditus ad regnum philosophiæ et scientiarum in quo opes humanæ sitæ sunt, (natura enim non nisi parendo vincitur,) qualis patet ad regnum illud cœlorum, in quod, nisi sub persona infantis, ingredi non licet. Usus autem hujus operis plebeium illum et promiscuum ex experimentis ipsis omnino non contemnimus, (cum et notitiæ et inventioni hominum, pro varietate artium et ingeniorum, plurima utilia proculdubio suggerere possit), attamen minimum quiddam esse censemus præ eo aditu ad scientiam et potentiam humanam, quem ex misericordia divina speramus: a qua etiam supplices iterum petimus, ut novis elemosynis per manus nostras familiam humanam dotare digetur.

Natura rerum aut libera est, ut in speciebus; aut perturbata, ut in monstris; aut constricta, ut in experimentis artium: facinora autem ejus cujuscunque generis digna memoratu et historia. Sed historia specierum, quæ habetur, veluti plantarum, animalium, metallorum, et fossilium, tumida est et curiosa; historia mirabilium, vana et e rumore; historia experimentorum manca, tentata per partes, tractata negligenter, atque omnino in usum practicæ, non in usum philosophiæ. Nobis itaque stat decretum, historiam specierum contrahere, historiam mirabilium excutere atque expurgare; præcipuam autem operam in experimentis mechanicis et artificialibus, atque naturæ erga manum humanam obsequiis, collocare. Quid enim ad nos lusus naturæ et lascivia? Hoc est pusillæ specierum ex figura differentiæ quæ ad opera nil faciunt, in quibus nihilominus naturalis historia luxuriatur. Mirabilium autem cognitio grata certe nobis, si expurgata et electa sit: sed quamobrem tandem grata? Non ob ipsam admirationis suavitatem, sed quod sæpe artem officii sui admonet, ut naturam sciens eo perducatur, quo ipsa sponte sua nonnunquam prævit. Omnino primas partes ad excitandum lumen naturæ artificialibus tribuimus; non tantum quia per se utilissima, sed quia naturalium fidissimi interpretes. Num forte fulguris, aut iridis naturam tam clare explicasset quisquam, antequam per tormenta bellica aut artificiosa iridum super parietem simulacra, utriusque ratio demonstrata esset? Quod si causarum fidi interpretes, etiam affectorum et operum certi et felices indices erunt. Neque tamen consentaneum putamus ex triplici ista partitione historiam nostram distrahere, ut singula seorsum tractentur, sed genera ipsa miscbimus, naturalia artificialibus, consueta admirandis adjungentes, atque utilissimis quibusque maxime inhærentes.

Atque a phænomenis ætheris ordiri solennius foret. Nos autem nil de severitate instituti nostri remittentes, ea antefereamus, quæ naturam constituunt et referunt magis communem, cujus uterque globus est particeps. Ordinem vero ab historia corporum secundum eam differentiam quæ videtur simplicissima; ea est copia aut paucitas materiæ intra idem spatium sive eandem circumscriptionem contentæ et exproctæ;

nam cum ex pronunciatis de natura nil verius sit, quam propositio illa gemella, "Ex nihilo nihil fieri, neque quicquam in nihilum redigi," sed quantum ipsum naturæ, sive materiæ summam universalem, perpetuo manere et constare, et nequiquam augeri aut minui. Etiam illud non minus certum, tametsi non tam perspicue notatum aut assertum sit, (quicquid homines de potentia materiæ æquabili ad formas fabulentur,) ex quanto illo materiæ sub iisdem spatiis dimensionibus plus et minus contineri, pro corporum diversitate a quibus occupantur, quorum alia magis compacta, alia magis extensa sive fusa evidentissime reperiuntur. Neque enim parem materiæ portionem recipit vas aut concavum aqua et aëre impletum; sed illud plus, istud minus. Itaque si quis asserat, ex pari aëris contento par aquæ contentum effici posse, idem est, ac si dicat, aliquid fieri posse ex nihilo. Nam quod deesse supponitur ex materia, id ex nihilo suppleri necesse foret. Rursus si quis asserat, par contentum aquæ in par contentum aëris posse verti, idem est, ac si dicat, aliquid posse redigi in nihilum. Nam quod superesse supponitur ex materia, id ad nihilum evanuisse similiter necesse foret. Neque nobis dubium est, quin hæc res etiam calculos pati possit, surdos fortasse in aliquibus, sed definitos et certos, et naturæ notos. Veluti si quis dicat, auri corpus, collatum ad corpus spiritus vini, esse concervationem materiæ superantem ratione vicecupla simpla aut circiter, non erraverit. Itaque, exhibitori jam historiam eam, quam diximus, de copia et paucitate materiæ, atque de materiæ coitione atque expansione, ex quibus notiones illæ densi et rari (si proprie accipiantur) ortum habent; hunc ordinem servabimus, ut primo corporum diversorum (ut auri, aquæ, olei, aëris, flammæ) rationes ad invicem recenseamus. Examinatis autem rationibus corporum diversorum, postea unius atque ejusdem corporis subingressus et expatiationes, cum calculis sive rationibus, memorabimus. Idem enim corpus, etiam absque accessione aut ablatione, aut saltem minime pro rata contractionis et extensionis, ex variis impulsibus tum externis tum internis, sustinet se congerere in majorem et minorem spheram. Interdum enim luctatur corpus, et in veterem spheram se restituere nititur; interdum plane transmigrat, nec revertere satagit. Hic cursus primo atque differentias et rationes corporis alicujus naturalis (quoad extantum) collati cum aperturis aut clausuris suis, memorabimus; videlicet cum pulveribus suis, cum calcibus suis, cum vitrificationibus suis, cum dissolutionibus suis, cum distillatis suis, cum vaporibus et auris, exhalationibus et inflammationibus suis memorabimus; deinde actus ipsos et motus, et progressus et terminos contractionis et dilatationis proponemus, et quando se restituant corpora, quando transmigrant secundum extantum; præcipue autem efficientia et media, per quæ hujusmodi corporum contractiones et dilatationes sequuntur, notabimus: atque interim virtutes et actiones, quæ corpora ex hujusmodi compressionibus et dilatationibus induunt et nanciscuntur, obiter subtexemus. Cumque probe noverimus quam difficilis res sit, in præsentis animorum statu, jam ab ipso principio cum natura consuescere, observationes nostras, ad attentionem hominum et meditationem excitandam et conciliandam, adjiciemus. Quod ad demonstrationem autem attinet, sive refectionem densitatis et raritatis corporum, nil dubitamus aut cunctamur quin quoad corpora crassa et palpabilia motus gravitatis (quem vocant) loco optimæ et maxime expeditæ probationis sumi possit: quo enim corpus compactius, eo gravius. Verum postquam ad gradum aëreorum et spiritualium ventum est, tum profecto a lancibus destituimur, atque alia nobis industria opus erit. Incipiemus autem ab auro, quod omnium, quæ habemus, (neque enim tam adulta est philosophia, ut de visceribus terræ statuere debeamus,) gravissimum est atque plurimum materiæ minimo spatio complectitur; atque ad hujus corporis spheram reliquorum rationes applicabimus; illud monentes, historiam ponderum hic nos minime tractare, nisi quatenus ad corporum spatia sive dimensa demonstranda lucem præbeat. Cum vero non conjicere et hariolari, sed invenire et scire, nobis propositum sit, hoc autem in examine et probatione experimentorum primorum magnopere positum esse judicemus, prorsus decrevimus in omni experimento subtiliore modum experimenti, quo usi sumus, aperte subjungere; ut postquam patefactum sit quomodo singula nobis constiterint, videant homines et quatenus fidem adhibeant, et quid ulterius faciendum sit, sive ad errores corrigendos, qui adhærere possint, sive ad excitandas atque adoperandas probationes magis fidas et exquisitas. Quin et ipsi de iis, quæ nobis minus explorata, atque errori magis exposita, et quasi finitima videbuntur, sedulo et sincere monebimus. Postremo, observationes nostras (ut modo diximus) adjiciemus, ut licet omnia integra philosophiæ servemus, tamen faciem ipsam historiæ naturalis etiam in transitu versus philosophiam obvertamus. Atque porro illud curabimus, ut quæcunque ea sint, sive experimenta sive observationes, quæ præter scopum inquisitionis occurrunt atque interveniunt, et ad alios titulos proprie pertinent, notemus, ne inquisitio confundatur.

# TITULI HISTORIARUM ET INQUISITIONUM

IN PRIMOS SEX MENSES DESTINATARUM.

HISTORIA VENTORUM.  
HISTORIA DENSIS ET RARI, NECNON COITIONIS ET EXPANSIONIS MATERIÆ PER SPATIA.  
HISTORIA GRAVIS ET LEVIS.

HISTORIA SYMPATHIÆ ET ANTIPATHIÆ RERUM.  
HISTORIA SULPHURIS, MERCURII, ET SALIS.  
HISTORIA VITÆ ET MORTIS.

## HISTORIA NATURALIS ET EXPERIMENTALIS

AD CONDENDAM

### PHILOSOPHIAM :

SIVE

PHÆNOMENA UNIVERSI.

QUÆ EST "INSTAURATIONIS MAGNÆ" PARS TERTIA.

MONENDI utique sunt homines, et per fortunas suas rogandi atque obsecrandi, ut animos submittant, et scientias in mundo majore quærant: quinetiam de philosophia vel cogitationem abjiciant, vel modicos saltem et tenues fructus ex illa sperent, usque dum Historia naturalis et experimentalis, diligens et probata, comparata sit et confecta. Quid enim sibi volunt ista cerebella hominum, et potentes nugæ? Fuerunt apud antiquos placita philosophorum valde numerosa; Pythagoræ, Philolai, Xenophanis, Heracliti, Empedoclis, Parmenidis, Anaxagoræ, Leucippi, Democriti, Platonis, Aristotelis, Theophrasti, Zenonis, aliorum. Hi omnes mundorum argumenta, tanquam fabularum, pro arbitrio confinxerunt, easque fabulas suas recitarunt, publicarunt; alias magis concinnas certe et probabiles, alias duriores. At nostris seculis, propter instituta scholarum et collegiorum, cohibentur ingenia magis; neque propterea omnino cessatum est: Patricius, Telesius, Brunus, Severinus Danus, Gilbertus Anglus, Campanella, scenam tentarunt, et novas fabulas egerunt, nec plausu celebres, nec argumento elegantes. Num hæc miramur? Quasi vero non possint infinita oriri hujusmodi placita et sectæ, omnibus seculis? Neque enim est, aut erit, hujusce rei finis aliquis aut modus. Alius aliud arripit, aliis alia placent; nihil est luminis sicci et aperti; quisque ex phantasie suæ cellulis, tanquam ex specu Platonis, philosophatur; ingenia sublimiora, acutius, feliciter; tardiora, minore successu, sed æque pertinacia. Quin non ita pridem, ex quorundam virorum doctorum, et, prout nunc sunt res, excellentium disciplina, scientiæ (credo propter varietatis et licentiæ tædia) intra certos et descriptos auctores cœrentur, atque ita

cohibitæ, senioribus imponuntur, adolescentibus instillantur; ut jam (quod cavillatus est Cicero in Cæsaris annum) "Stella lyræ ex edicto oriatur;" et auctoritas pro veritate, non veritas pro auctoritate sit. Quod genus institutionis et disciplinæ ad usum præsentem egregie valet; sed idem meliorum indicit exilium. Nimirum primorum parentum peccatum et luimus et imitamur: illi Dei similes esse voluerunt, posterius eorum adhuc magis; etenim mundos creamus, naturæ præimus et dominamur, omnia ita se habere volumus, prout nostræ fatuitati consentaneum fore videtur, non prout divinæ Sapientiæ, nec qualia inveniuntur in rebus ipsis; nec scio an res aut ingenia magis torqueamus: sed plane sigilla imaginis nostræ creaturis et operibus Dei imprimumus, non Creatoris sigilla cum cura inspicimus et agnoscimus. Itaque non immerito iterum de imperio in creaturas decidimus: et cum post lapsum hominis nihilominus dominatio nonnulla in creaturas reluctantes relicta fuerit, ut per veras et solidas artes subigi et flecti possint, id ipsum ex insolentia nostra, et quia Dei similes esse volumus, et propriæ rationis dictamina sequi, maxima ex parte amittimus. Quamobrem, si qua est erga Creatorem humilitas, si qua operum ejus reverentia et magnificatio; si qua charitas in homines, et erga necessitates et ærumnas humanas relevandas studium; si quis amor veritatis in naturalibus, et odium tenebrarum, et intellectus purificandi desiderium, orandi sunt homines iterum atque iterum, ut, missis paulisper, aut saltem sepositis, philosophiis istis volaticis et præposteris, quæ theses hypothesis anteposuerunt, et experientiam captivam duxerunt, atque de operibus Dei triumpharunt; summissæ, et cum veneratione

quadam, ad volumen creaturarum evolvendum accedant: atque in eo moram faciant, meditentur, et ab opinionibus abluti et mundi caste et integre versentur. Hic est ille sermo et lingua, qui "exivit in omnes fines terræ:" nec confusionem Babylonicam passus est: hunc perdiscant homines, et repuerascentes, atque iterum infantem facti, Abecedaria ejusdem in manibus habere dignentur. In interpretatione autem ejus eruenda atque enucleanda nulli operæ parcant, sed strenue procedant, persistent, immoriantur. Cum igitur in Instauratione nostra Historiam naturalem, qualis sit in ordine ad finem nostrum, in tertia operis parte collocaverimus; hanc rem prævertere et statim aggredi visum est. Etsi enim haud pauca, eaque ex præcipuis, supersint in Organo nostro absolvenda, tamen consilium est, universum opus Instaurationis potius promovere in multis, quam perficere in paucis; hoc perpetuo, maximo cum ardore (qualem Deus mentibus, ut plane confidimus, addere solet) appetentes, ut quod adhuc nunquam tentatum sit, id ne jam frustra tentetur. Simul subit animum illa cogitatio: spargi proculdubio per Europam complura ingenia, capacia, libera, excelsa, subtilia, solida, constantia. Quid si quis, tali ingenio præditus, rationem et usum Organi nostri capiat, probet? Tamen non habet quid agat, nec quomodo se ad philosophiam comparet aut accingat. Si esset res, quæ lectione librorum philosophicorum, aut disputatione, aut meditatione perfici posset, sufficeret fortasse ille, quisquis sit, et abunde illud præstaret.

Quod si ad historiam naturalem et experimenta artium illum remittimus (id quod facimus) hæret, non est instituti ejus, non otii, non impensæ. Atqui non est postulandum nobis, ut quis vetera dimittat, antequam in possessionem meliorum inducatur. Postquam autem naturæ et artium Historia, fidelis et copiosa, collecta et digesta fuerit, atque veluti ante oculos hominum posita et explicata; non tenuis est spes, ingenia, de quibus diximus, grandia (qualia et in antiquis philosophis viguerunt, et adhuc non raro reperiuntur) cum tantæ antehac fuerint efficacæ, ut veluti ex scalmo aut concha (rara scilicet experientia et frivola) naviculas quasdam philosophiæ, admirabili structura quoad opificium, ædificaverint; multo magis postquam sylvam et materiem nacta sint, solidiores structuras excitatura; idque licet via veteri pergere malint, nec via nostri Organi (quæ, ut nobis videtur, aut unica est, aut optima) uti. Itaque huc res redit, ut Organum nostrum, etiamsi fuerit absolutum, absque Historia naturali non multum; Historia naturalis, absque Organo, non parum instaurationem scientiarum sit provectura. Quare omnino, et ante omnia, in hoc incumbere satius et consultius visum est. Deus universi conditor, conservator, instaurator, hoc opus, et in ascensione ad gloriam suam, et in descensione ad bonum humanum pro sua erga homines benevolentia et misericordia, protegat et regat, per Filium suum unicum, nobiscum Deum.

## NORMA HISTORIÆ PRÆSENTIS.

QUAMVIS sub finem ejus partis Organi nostri, quæ edita est, præcepta de Historia naturali et experimentali conscripserimus; visum est tamen hujus, quam nunc aggredimur, Historiæ normam et figuram, et accuratius describere et succinctius. Titulis in catalogo comprehensis, qui pertinent ad concreta, titulos de naturis abstractis (quarum ibidem, ut historiæ reservatæ, mentionem fecimus) superaddimus. Hi sunt materiæ schematismi diversi, sive formæ primæ classis, motus simplices. Summæ motuum, mensuræ motuum, alia quædam. De his Abecedarium novum confecimus, et sub finem hujus voluminis collocavimus.

Titulos (cum ad omnes nullo modo sufficiamus) non ex ordine, sed ex delectu sumpsimus; quorum scilicet inquisitio, aut propter usum erat gravissima, aut propter copiam experimentorum maxime comoda, aut propter obscuritatem rei maxime difficilis et nobilis, aut propter discrepantiam titulorum inter se, latissime patens ad exempla.

In titulis singulis, post aditum quendam aut præfationem, statim topica particularia, sive articulos inquisitionis proponimus, tum ad lumen inquisitionis præsentis, tum ad provocationem futuræ. Domini

enim quæstionum sumus, rerum non item. Neque tamen quæstionum ordinem in Historia ipsa præciæ observamus, ne impedimento sit quod pro auxilio adhibetur.

Historia et experimenta omnino primas partes tenent. Ea, si enumerationem et seriem rerum particularium exhibeant, in tabulas conficiuntur; aliter seorsum excipiuntur.

Cum historia et experimenta sæpissime nos decerant, præsertim lucifera illa, et instantiæ crucis, per quas de veris rerum causis intellectui constare possit; mandata damus de experimentis novis, quantum prospicere animo possumus, aptis ad id, quod quæritur. Hæc mandata tanquam Historia designata sunt. Quid enim aliud nobis, primo viam ingredientibus, relinquatur?

Experimenti alicujus subtilioris modum, quo usi sumus, explicamus, ne error subsit; utque alios ad meliores et magis exactos modos excogitandos excitemus.

Monita et cautiones de rerum fallaciis, et, qui in inquirendo et inveniando possint occurrere, erroribus et scrupulis aspergimus; ut phantasmata omnia, quantum fieri potest, tanquam exorcismo fugemus.

Observationes nostras super historiam et experimenta subteximus, ut interpretatio naturæ magis sit in procinctu.

Commentationes, et tanquam rudimenta quædam interpretationis de causis, parce, et magis suggerendo quid esse possit, quam definiendo quid sit, interponimus.

Canones, sed tamen mobiles, sive axiomata inchoata, quæ nobis inquirentibus, non pronunciantibus, se offerunt, præscribimus et constituimus. Utiles enim sunt, si non prorsus veri.

Utilitatis humanæ nunquam obliti (licet lux ipsa dignior sit iis, quæ a luce monstrantur) vellicationes de practica, attentioni et memoriæ hominum subijcimus; cum nobis constet talem et tam infelicem

esse hominum stuporem, ut quandoque res ante pedes positas, nisi moniti, non videant, sed prætereant.

Opera et res impossibiles, aut saltem adhuc non inventas, quæ sub singulis titulis cadunt, proponimus; atque una ea, quæ jam inventa sunt et in hominum potestate, atque impossibilibus illis, et non inventis, sunt proxima et maxime cognata, subijcimus; ut simul et industria humana excitetur, atque animi addantur.

Patet ex antedictis, Historiam præsentem, non tantum tertiæ partis Instaurationis vices supplere, sed præparationem esse non contemnendam ad quartam, propter titulos ex Abecedario, et topica; et ad sextam, propter observationes majores, commentationes, et canones.

## HISTORIA VENTORUM.

### ADITUS, SIVE PREFÆTIO.

VENTI humanæ genti alas addiderunt. Eorum enim dono feruntur homines et volant; non per ærem certe, sed per maria; atque ingens patet janua commercii, et fit mundus pervius. Terræ autem (quæ gentis humanæ sedes est et domicilium) scopæ sunt: eamque, atque simul ærem ipsum, everrunt et mundant. Attamen et mare infamant, alioqui tranquillum et innocium: neque alias sine maleficio sunt. Motum, absque opera humana, cient magnum et vehementem; unde et ad navigandum et ad molendum, veluti operarii, conducti sunt; et ad multa adhæberi possunt, si humana non cesset diligentia. Natura ipsorum inter secreta et abdita reponi solet; nec mirum, cum nec æris natura et potestas cognita quoquo modo sit, cui famulantur et parasitantur venti, ut (apud poëtas) Æolus Junoni. Primariæ creaturæ non sunt, nec ex operibus sex dierum: quemadmodum nec reliqua meteora quoad actum, sed post nati ex ordine creationis.

### TOPICA PARTICULARIA:

#### SIVE ARTICULI INQUISITIONIS DE VENTIS.

1. Describito ventos ex diligentia nautica, et imponito nomina ipsis, sive vetera, sive nova, modo constantia.  
Venti vel generales sunt, vel statii, vel asseclæ, vel liberi. Generales voco, qui semper flant; statos, qui certis temporibus; asseclas, qui frequentius; liberos, qui indifferenter.
2. An sint venti aliqui generales, atque ipsissimi motus æris; et, si sint, in qua consecutione motus, et in quibus locis spirant?
3. Qui venti anniversarii sint, aut redeuntes per vices, et in quibus regionibus? An inveniatur ventus aliquis ita præcise

status, ut redeat regulariter ad dies certos et horas, instar æstus maris?

4. Qui venti sint asseclæ, et familiares regionum; qui temporum, in iisdem regionibus; qui verni; qui æstivales; qui autumnales; qui brumales; qui æquinoctiales; qui solstitiales; qui matutini, meridiani, vespertini, nocturni?

5. Quales sint venti marini, quales qui spirant a continente? Differentias autem marinorum et terrestrium diligenter excipito, tam eorum qui in terra et mari, quam eorum qui a terra et mari.

6. An non spirent venti ex omni parte cœli?  
Venti liberi.

Venti non multo plus plagis cœli, quam qualitatibus, variant. Alii vehementes, alii lenes; alii constantes, alii mutabiles; alii calidi, alii frigidi; alii humectant magis et solvunt, alii desiccant et constipant; alii congregant nubes, et sunt pluviosi vel etiam procellosi, alii dissipant, et sunt sereni.

7. Inquirito et narrato, qui sint venti uniuscujusque speciei ex prædictis, et quomodo variant secundum regiones et loca?  
Qualitates ventorum diversæ.

Origines locales ventorum triplices; aut dejiciuntur ex alto, aut emanant a terra, aut conflantur in ipso corpore æris.

8. Secundum has tres origines de ventis inquirito. Qui scilicet ex ipsis Origines locales ventorum. dejiciantur de media (quam vocant) regione æris; qui vero expirent e cavis terræ, sive illi erumpant confertim, sive efflent insensibiliter et sparsim, et postea glomerent ut rivuli in fluvium: qui denique generentur passim ex tumoribus sive expansionibus æris proximi?

Neque generationes ventorum originales tantum: sunt et accidentales, ex compressionibus

aëris scilicet, et percussionibus, et repercussionibus ejus.

Generaciones accidentales ventorum. 9. De hujusmodi ventorum generationibus accidentalibus inquirito. Generationes ventorum proprie non sunt; etenim augent et fortificant ventos potius, quam producant et excitant.

De communitate ventorum hactenus. Reperiuntur autem venti rari et prodigiosi, quales sunt Præster, Turbo, Ecnephas; hi super terram: at sunt et subterranei, quorum alii sunt vaporosi et mercuriales, ii percipiuntur in mineris; alii sulphurei, illi emittuntur, nacti exitum in terræ motibus, aut etiam effervescunt ex montibus ardentibus.

Venti extraordinarii et flatus repentini. 10. De hujusmodi ventis, raris et prodigiosis, atque adeo de omnibus ventorum miraculis inquirito.

A speciebus ventorum transeat inquisitio ad confacientia ad ventos (ita enim loqui volumus, quia vocabulum efficientis plus significat, vocabulum comitantis minus quam intelligimus) atque ad ea, quæ ventos putantur excitare aut sedare.

Confacientia ad ventos, et excitantia et sedantia ipsos. 11. Circa astrologica de ventis inquirito parce, nec de accuratis schematibus cœli curato; tantummodo observationes manifestiores de ventis ingruentibus circa exortus aliquorum astrorum, aut circa eclipses luminarium, aut conjunctiones planetarum negligito; nec minus quatenus pendent ex viis solis aut lunæ.

12. Quid confaciant meteora diversorum generum ad ventos? Quid terræ motus, quid imbres, quid concursus ventorum ad invicem? Concatenata enim sunt ista, et alterum alterum trahit.

13. Quid confaciant ad ventos, vaporum et exhalationum diversitas? Et quæ ex ipsis sint magis generativa ventorum, et quatenus natura ventorum sequatur hujusmodi materias suas?

14. Quid confaciant ea, quæ hic in terra sunt, aut fiunt, ad ventos; quid montes, et solutiones nivium in ipsis; quid moles glaciales, quæ in mari inatant et deferuntur alicubi; quid differentie soli aut terræ, (modo hoc fuerit per tractus majores,) veluti paludes, arenæ, sylvæ, campestria; quid ea, quæ hic apud homines aguntur, veluti incensiones ericæ, et similium, ad culturam agrorum; incensiones segetum aut villarum in bellis; desiccationes paludum; displosiones continuæ bombardarum; sonitus campanarum simul in magnis urbibus; et similia? Festucæ certe sunt res nostræ, sed tamen aliquid possunt.

15. De omnimodis excitationibus aut sedationibus ventorum inquirito, sed parce de fabulosis aut superstitionibus.

A confacientibus ad ventos transeat inquisitio ad inquirendos limites ventorum; de altitudine, extensione, duratione eorum.

Limites ventorum. 16. Inquirito diligenter de altitudine sive elevatione ventorum; atque si sint fastigia montium, ad quæ venti non aspirent; aut si conspiciantur nubes quandoque stare et non movere, flantibus eodem tempore ventis fortiter hic in terra.

17. Inquirito diligenter de spatiis, quæ venti deprehensi sunt simul occupare, et ad quos terminos? Exempli gratia, si auster flaverit tali loco, an constet quod eodem tempore aquilo flaverit ab illinc milliariibus decem? Contra, in quantas angustias venti redigi possint, ita ut fluant venti (id quod fieri videtur in turbinibus nonnullis) tanquam per canales.

18. Inquirito ad quod tempus, vel maximum, vel medium, vel minimum, continuari soleant venti, et deinde flaccescere et tanquam exspirare: qualis etiam esse soleat ortus et inceptio ventorum, qualis languor et cessatio; subito, gradatim, quoquo modo?

A limitibus ventorum transeat inquisitio ad successiones ventorum, vel inter se vel respectu pluvie et imbrum: cum enim choreas ducant, ordinem saltationis nosse jucundum fuerit.

19. An sit aliqua regula, aut observatio paulo certior, de successionebus ventorum ad invicem, sive ea sit in ordine ad motum solis, sive alias: et si sit, qualis sit illa?

20. Circa successionem et alternationem ventorum et pluvie inquirito; cum illud familiare et frequens sit, ut pluvia sedet ventos, venti compeasant et dissipent pluviam.

21. An post certam periodum annorum redintegretur successio ventorum; et si ita sit, quæ sit ea periodus?

A successionebus ventorum transeat inquisitio ad motus ipsorum. Motus ventorum septem inquisitionibus absolvuntur; quorum tres superioribus articulis continentur, quatuor adhuc manent intactæ: nam de motu ventorum dispersito per plagas cœli inquisitum est. Etiam de motu trium linearum, sursum, deorsum, lateraliter. Etiam de accidentali motu compressionum. Restant motus quartus progressivus, quintus undulationis, sextus conflictus, septimus in organis et machinis humanis.

22. Cum progressus sit semper a termino, de loco primi ortus, et tanquam fontibus alicujus venti, quantum fieri potest, diligenter inquirito. Siquidem videntur venti famæ similes. Nam licet tumultuentur et percurrant, tamen caput inter nubila condunt. Item de progressu ipso: exempli gratia, si boreas vehemens, qui flaverit Eboraci ad talem diem aut horam, flaverit Londini biduo post?

23. De undulatione ventorum inquisitionem ne omittito. Undulationem vocamus eum motum, quo ventus ad parva intervalla intenditur et remittitur, tanquam undæ aquarum: quarum vices optime percipiuntur ex auditu in ædibus. Eo autem magis notato diligenter differentias undulationis, sive sultationis inter aërem et aquam; quia in aëre et ventis deest motus gravitatis, qui pars magna est undulationis in aquis.

24. De conflictu et concursu ventorum flantium ad idem tempus diligenter inquirito. Primo, utrum fient simul plures venti originales, non dicimus reverberrantes? Et, si hoc ita sit, quales euripos in motu, quales rursus condensationes et alterationes in corpore aëris gignant?

25. An venti alii eodem tempore fient superius,

alii hic apud nos in imo? Quandoquidem observatum est a nonnullis, interdum nubes ferri in contrarium versionis pinnaculi: etiam nubes ferri forti aura, cum hic apud nos fuerit summa tranquillitas.

26. Fiat descriptio diligens admodum et particularis motus ventorum in impulsu navium per vela.

27. Fiat descriptio motus ventorum in velis molendinorum ad ventum; in volatu accipitrum et avium, etiam in vulgaribus et ludicris, veluti signorum explicatorum, draconum volantium, duellorum ad ventum, etc.

A motibus ventorum transeat inquisitio ad vim et potestates ipsorum.

Potestates ventorum.

28. Quid possint et agant venti circa currentes et aestus aquarum, et circa detentiones, immissiones, et inundationes

ipsarum?

29. Quid circa plantas et insecta, inducendo locustas, erucas, malos rores?

30. Quid circa purgationem et infectionem aëris, et circa pestilentias, morbos, et affectus animalium?

31. Quid circa delationem specierum (quas vocant) spiritalium, ut sonorum, radiorum, et similibus?

A potestatibus ventorum transeat inquisitio ad prognostica ventorum, non solum propter usum prædictionum, sed quia manu ducunt ad causas: prognostica enim aut præparationes rerum monstrant, antequam perducantur ad actum; aut inchoationes, antequam perducantur ad sensum.

Prognostica ventorum.

32. Colligantur, cum diligentia bona, prognostica ventorum omnigena, (præter astrologica, de quibus superius diximus quatenus sint inquirenda,) sive petantur ex meteoricis, sive ex aquis, sive ex instinctu animalium, aut quovis alio modo.

Postremo inquisitionem claudito, inquirendo de imitamentis ventorum, sive in naturalibus sive in artificialibus.

Imitamenta ventorum.

33. Inquirito de imitamentis ventorum in naturalibus; qualia sunt flatus in corporibus animalium, flatus in receptaculis distillationum, etc.

Inquirito de auris factis et ventis artificialibus, ut foliibus, refrigeratoriis in cœnaculis, etc.

Articuli tales sint. Neque nobis dubium est, quin ad nonnullos horum responderi non possit secundum copiam experientiæ, quam habemus. Verum quemadmodum in causis civilibus, quid causa postulet ut interrogetur, noverit jurisconsultus bonus; quid testes respondere possint, non norit: idem nobis circa Historiam naturæ accidit. Posterius cætera viderint.

NOMINA VENTORUM.

Ad Art. 1.

Nomina ventis, potius ex ordine et gradibus numerata, quam ex antiquitate propria, imponimus: hoc perspicuitatis et memoriæ gratia. Sed vocabula antiqua adjicimus quoque propter suffragia auctorum veterum, ex quibus cum haud pauca (licet anxio quodam judicio) exceperimus, non agnoscentur fere illa, nisi sub nominibus quibus illi usu sunt. Partitio autem generalis ea esto: Ut

sint venti cardinales, qui spirant a cardinibus mundi: semicardinales, qui in dimidiis: mediani, qui in intermediis: etiam ex intermediis mediani majores vocentur, qui in quadris; minores reliqui. Particularis autem divisio ea est, quæ sequitur.

CARDIN.

Boreas.  
Boreas 1. ad Eurum.  
MED. MAJ.  
Boreas 2. ad Eurum, sive Aquilo.  
Boreas 3. ad Eurum, sive Meses.

SEMICAR.

Euro-Boreas.  
Eurus 1. a Borea.  
MED. MAJ.  
Eurus 2. a Borea, sive Cæcias.  
Eurus 3. a Borea.

CARDIN.

Auster, sive Notus.  
Auster 1. ad Zephyrum.  
MED. MAJ.  
Auster 2. ad Zephyrum, sive Libonotus.  
Auster 3. ad Zephyrum.

SEMICAR.

Zephyro-Auster, sive Lybs.  
Zephyrus 1. ab Austro.  
MED. MAJ.  
Zephyrus 2. ab Austro, sive Africus.  
Zephyrus 3. ab Austro.

CARDIN.

Eurus, sive Subsolanus.  
Eurus 1. ad Austrum.  
MED. MAJ.  
Eurus 2. ad Austrum, sive Vulturinus.  
Eurus 3. ad Austrum.

SEMICAR.

Euro-Auster.  
Auster 1. ab Euro.  
MED. MAJ.  
Auster 2. ab Euro, sive Phœnicias.  
Auster 3. ab Euro.

CARDIN.

Zephyrus, sive Favonius.  
Zephyrus 1. ad Boream.  
MED. MAJ.  
Zephyrus 2. ad Boream, sive Corus.  
Zephyrus 3. ad Boream.

SEMICAR.

Zephyro-Boreas.  
Boreas 1. a Zephyro, sive Thrascias.  
MED. MAJ.  
Boreas 2. a Zephyro, sive Circius.  
Boreas 3. a Zephyro.

Sunt et alia ventorum nomina Apheliotes, Argestes, Olympias, Sciron, Hellespontius, Iapyx. Ea nil moramur. Satis sit nomina ventorum ex ordine et distributione plagarum cœli fixa imposuisse. In interpretatione auctorum non multum ponimus, cum in ipsis auctoribus parum sit.

VENTI LIBERI.

1. Non est plaga cœli, unde ventus non spiret: quin si plagas cœli in tot partes dividas, quod sunt gradus in horizonte, invenias ventos aliquando alicubi a singulis flantes.

2. Sunt regiones totæ, in quibus non pluit, aut raro admodum: at non sunt regiones, ubi non flent venti, et sæpius.

VENTI GENERALES.

De ventis generalibus phænomena rara. Nil mirum, cum intra tropicos præcipue perspiciantur loca damnata apud antiquos.

Constat navigantibus inter tropicos libero æquore flare ventum constantem et jugem (brizam vocant nautæ) ab oriente in occidentem. Is non ita segnis est, quin partim flatu proprio, partim regendo currentem maris, id efficiat, ut nequeant navigantes versus Peruviam eadem redire, qua proficiscuntur, via.

Ad Art. 6.

Ad Art. 2.

2. In nostris maribus Europæ percipitur cœlo sereno et sudo, et cessantibus ventis particularibus, aura quædam lenis ab oriente solisequa.

3. Recipit observatio vulgaris nubes sublimes ferri plerumque ab oriente in occidentem; idque cum, iisdem temporibus, circa terram aut tranquillitas sit, aut ventus diversus. Id si non semper faciunt, poterit in causa esse, quod venti particulares quandoque flant in sublimi, qui ventum istum generalem obruunt.

**Monitum.** Si quis sit talis ventus generalis ex ordine motus cœli, is non adeo firmus est, quin ventis particularibus cedat. Manifestior autem est intra tropicos propter circulos, quos conficit, majores; etiam in sublimi, propter eandem causam et propter cursum liberum. Quamobrem, si hic extra tropicos et juxta terram (ubi mollis admodum et segnis est) eum deprehendere voles, fiat experimentum in aère libero, et in summa tranquillitate, et in locis altis; et in corpore valde mobili, et tempore pomeridiano; quia per id tempus ventus orientalis particularis parcius fiat.

**Mandatum.** Fiat diligens observatio circa pinnacula, et ejusmodi fiabella, in fastigiis turrium et templorum, annon in maximis tranquillitatibus flent perpetuo versus occidentem?

**Phænomenon obliquum.** 4. Constat eorum, in Europa nostra, esse ventum desiccantem et acrem, zephyrum contra humectantem et alium. Annon hoc fit, quia (posito quod aër moveat ab oriente in occidentem) necesse est ut eurus, qui moveat in eadem consecutione, aërem dissipet et attenuet, unde fit aër mordax et siccus; zephyrus autem, qui in contraria, aërem in se vertat et condenset, unde fit obtusior, et demum humidus.

**Phænomenon obliquum.** 5. Consulito inquisitionem de motu et fluxu aquarum, utrum illæ moveant ab oriente ad occidentem. Nam si extrema hoc motu gaudeant, cœlum et aquæ; parum abest quin aër, qui intermedius est, ex eodem participet.

**Monitum.** Phænomena duo, proxime posita, obliqua appellamus, quia rem designatam non recta monstrant, sed per consequens; id quod (cum deest copia phænomenorum rectorum) etiam avide recipimus.

**Mandatum.** Quod briza illa inter tropicos luculenter spiret, res certa, causa ambigua. Possit ea esse, quia aër, more cœli, movetur; sed extra tropicos, quasi imperceptibiliter, propter circulos minores; intra manifesto, propter circulos majores quos conficit. Possit alia esse, quia calor omnem aërem dilatat, nec se priore loco contineri patitur. Ex dilatione autem aëris necessario fit impulsio aëris contigui, quæ brizam istam pariat prout progreditur sol. Sed illa intra tropicos, ubi sol est ardentior, insignior est; extra, fere latet. Videtur esse instantia crucis ad ambiguitatem istam tollendam, si inquiratur, utrum briza noctu flet, an non? Rotatio enim aëris etiam noctu manet, at calor solis non item.

6. At certum est illam noctu non flare, sed mane, aut etiam aurora adulta. Nihilominus non determinat illa instantia quæstionem. Nam condensatio aëris

nocturna, præsertim in illis regionibus, ubi nox et dies non magis pares sunt spatiis, quam differentes calore et frigore, possit motum illum naturalem aëris (qui lenis est) hebetare et confundere.

7. Si aër participet ex motu cœli, sequitur non tantum, quod eurus cum motu aëris concurret, zephyrus concertet; verum etiam quod boreas tanquam ab alto spiret, auster tanquam ab imo, in hemisphærio nostro, ubi polus antarcticus sub terra est, arcticus elevatur; idque etiam ab antiquis notatum est, sed titubanter et obscure; optime autem convenit cum experientia moderna, quia briza (quæ possit esse motus aëris) non est eurus integer, sed euro-aquilo.

#### VENTI STATI.

Ut in inquisitione de ventis generalibus homines scotomia passi sunt, ita in illa de ventis statis vertiginem: de illa silent, de hac sursum et deorsum sermones faciunt inconditos. Ignoscendum hoc magis, quod varia res est: quia stati venti cum locis permutantur, ut non iidem in Ægypto, Græcia, Italia spirent.

Ad Art. 3.  
Commercio.

1. Esse alicubi statos ventos, etiam nomen impositum declarat; ut et nomen alterum etesiarum, quod anniversarios sonat.

2. Apud antiquos inter causas inundationis Nilii ascripta est, quod eo anni tempore venti etesiarum (aquilones scilicet) flarent, qui cursum fluvii in mare inhibebant et retrorsum volebant.

3. Inveniuntur in mari currentes, qui nec naturali motui oceani, nec decursui ex locis magis elevatis, nec angustis ex litoribus adversis, aut promontorii excurrentibus attribui possint; sed plane reguntur a ventis statis.

4. Columbum, qui nolunt a relatione naucleri Hispani, et levius putant, ab obscuris antiquitatis vestigiis et auris, tam certam et fixam de Indiis occidentalibus opinionem concepissem, huc se convertunt, quod a statis ventis ad litora Lusitanie coniecerint continentem esse a parte occidentis: res dubia, nec admodum probabilis, cum ventorum itinerarium ad tam longos tractus vix attingat: magnus interim honos huic inquisitioni, si uni axiomati aut observationi ex iis, quas multas complectitur, inventio novi orbis debeatur.

5. Ubiunque siti sunt montes alti et nivales, ab ea parte flant venti stati ad tempus quo nives solvantur.

6. Arbitror et a paludibus magnis, quæ aquis cooperiuntur hieme, spirare ventos statos, sub tempora, quibus a calore solis siccati cœperint; sed de hoc mihi compertum non est.

7. Ubiunque generationes vaporum sunt in abundantia, idque certis temporibus; ibi scias ventos statos iisdem temporibus orituros.

8. Si venti stati flent alicubi, nec causa eorum reperitur in propinquo; scias ventos hujusmodi statos peregrinos esse, et a longe venire.

9. Notatum est ventos statos noctu non flare, sed tertia ab ortu solis hora insurgere: sunt certe hujusmodi venti, veluti ex longo itinere defessi, ut condensationem aëris nocturnam vix perfringant, at post exortum solis excitati paulisper procedant.

10. Omnes stati venti (præterquam ex locis propinquis) imbecilli sunt, et ventis subitis se submitunt.

11. Sunt complures venti stati, quos nos non percipimus aut observamus, propter infirmitatem ipsorum, unde a ventis liberis obruuntur: ideo vix notantur hieme, cum venti liberi vagantur magis; sed potius versus æstatem, cum venti illi erratici magis deficiant.

12. In partibus Europæ ex ventis statis hi potissimi sunt. Aquilones a solstitio; suntque exortus caniculæ, tum prodromi, tum sequaces: zephyri ab æquinotio autumnali: euri a verno: nam de brumali solstitio minus curandum propter hiemis varietates.

13. Venti ornithii sive aviarii, qui nomen traxerunt quod aves a regionibus gelidis transmarinis regionibus apricis immittant, nihil pertinent ad ventos statos, quia illi tempore sæpius fallunt: aves autem eorum commoditatem, sive citius sive tardius flent, expectant: etiam non raro postquam flare paululum inceperint et se subinde verterint, destituuntur aves, et merguntur in pelago, aliquando in naves decidunt.

14. Præcisus reditus ventorum ad diem et horam, instar æstus maris, non invenitur. Designant quandoque auctores nonnulli diem; sed potius ex conjectura, quam ex observatione constante.

#### VENTI ASSECLÆ.

Ventorum asseclarum vocabulum nostrum est: quod imponere visum est, ne aut pereat observatio circa ipsos, aut confundatur. Sensus talis est: divide, si placet, annum in tres, quatuor, quinque partes, in aliqua regione. Quod si ventus aliquis ibi flet, duas, tres, quatuor portiones ex ipsis; ventus contrarius unam; illum ventum, qui frequentius flat, ejus regionis asseclam nominamus. Sic de temporibus.

1. Auster et boreas asseclæ mundi sunt: frequentius enim per universum spirant illi, cum suis sectionibus, quam eurus et zephyrus cum suis.

2. Omnes venti liberi (non stati) magis asseclæ hiemus sunt, quam æstatis, maxime autem autumnii et veris.

3. Omnes venti liberi potius asseclæ sunt regionum extra tropicos, atque etiam circulos polares, quam intra; in regionibus enim torridis et glaciatis plerumque parcius spirant, in mediis frequentius.

4. Etiam omnes venti liberi, præsertim fortiores ex ipsis, flant sæpius et intensius mane et vespere, quam meridie et noctu.

5. Venti liberi in regionibus fistulosis et cavernosis frequentius spirant quam in firmis et solidis.

**Mandatum.** Cessavit fere humana diligentia in observatione ventorum asseclarum in regionibus particularibus, quod tamen fieri debuit, et ad multa utilis foret. Memini me a mercatore quodam, prudenti viro, qui ad Terram piscationis coloniæ duxerat, ibique hiemarar, causam quæsisisse cur regio illa tam impense frigida haberetur, cum clima satis benignum esset. Respondit, rem esse fama aliquanto minorem, causam autem duplicem. Unam, quod moles glaciales a cur-

renti maris Scythici juxta ea littora deveherentur. Alteram (quam longe potiore duxit) quod longe pluribus anni partibus spiraret apud eos zephyrus, quam eurus: quod etiam facit apud nos (inquit); sed apud illos a continenti, et gelidus; apud nos a mari, et tepidus. Quod si (addidit) tam frequenter et diu spiraret in Anglia eurus, quam apud eos zephyrus, longe forent intensiora frigora apud nos, et paria illis quæ ibi fiunt.

6. Zephyri sunt asseclæ horarum pomeridianarum: declinante enim sole frequentius spirant venti ab occidente, ab oriente rariis.

7. Auster noctis assecla est: nam noctu et sæpius oritur, et flat vehementius. Boreas autem interdiu.

8. Asseclarum vero maris, et continentis, multæ et magnæ sunt differentiæ. Ea præcipue, quæ Colombo ansam præbuit inveniendi novi orbis: quod venti marini stati non sunt, terrestres autem maxime. Cum enim abundet vaporibus mare, qui ubique fere indifferenter adsunt, ubique etiam generantur venti, et magna inconstantia huc illuc feruntur, cum certas origines et fontes non habeant. At terra ad materiam ventorum valde inæqualiter se habet; cum alia loca ad ventos pariendos et augendos magis efficacia sint; alia magis destituta. Itaque flant fere a parte fomitum suorum, et inde directionem sortiuntur.

9. Non satis constat sibi Acosta. Ait ad Peruviam et maritima maris australis fere per totum annum spirare austros. Idem alibi ait ad eas oras spirare potissimum ventos marinos. At auster illis terrestris est, ut et boreas et eurus, tantumque zephyrus est illis marinus. Sumendum, quod certius ponit, hoc est, austrum esse ventum asseclam et familiarem earum regionum; nisi forte ex nomine maris australis vel phantasiam vel modum loquendi corruptit, intelligens zephyrum per austrum, quod a mari australi spiret. At mare, quod vocant, australe, proprie australe non est, sed tanquam oceanus secundus occidentalis; quando simili cum Atlantico situ exporrigatur.

10. Marini venti sunt proculdubio terrestribus humidiores, sed tamen puriores, quique facilius et æqualius cum aëre puro incorporentur. Terrestres enim male coagmentati et fumei. Neque opponat quisquam eos debere esse, propter salsuginem maris, crassiores: natura enim terrestris salis non surgit in vaporibus.

11. Tepidi vel gelidi sunt venti marini, pro ratione qualitatum duarum prædictarum, humiditatis et puritatis. Humiditate enim frigora mitigant, (siccitas siquidem utrumque, et calorem et frigus, intendit,) at puritate refrigerant. Itaque extra tropicos, tepidi; intra, gelidi.

12. Arbitror ubique ventos marinos asseclas esse regionum (præsertim maritarum) singularum; frequentius scilicet spirare ventos a parte ubi collocatur mare, propter copiam longe uberiorem materiæ ad ventos in mari, quam in terra; nisi forte sit aliquis ventus status, spirans a terra ex causa peculiari. Nemo autem confundat ventos statos cum ventis asseclis, cum asseclæ semper frequentiores sint, stati sæpius rariores: id tamen utrisque commune est, quod venti spirent a parte fomitum suorum.

13. Vehementiores plerumque sunt venti marini,

quam terrestres ; ita tamen, ut, cum cessent, major sit malacia in medio mari, quam ad litora ; adeo ut nautæ quandoque ament potius litorum obliquitates premere, quam urgere altum, ad evitandas malacias.

14. Spirant a mari ad litora venti tropæi sive versarii, qui scilicet, postquam paulisper progressi sunt, subito vertuntur. Omnino est quædam refractionis inter auras maris et auras terræ, et inæqualitas. Omnis autem inæqualitas aëris est inchoatio quædam venti: maxime autem fiunt tropæi et euripi ventorum ubi mare sinuat.

15. Spirant quædam auræ plerumque circa omnes aquas majores ; potissimum autem sentiuntur mane ; at magis circa fluvios, quam in mari, propter differentiam auræ terræ et auræ aquæ.

16. In locis proximis juxta mare flectunt fere se arbores et incurvant, quasi aversantes auras maris : neque tamen malacia est ; sed venti maritimi, ob humiditatem et densitatem, sunt tanquam ponderosiores.

#### QUALITATES ET POTESTATES VENTORUM.

Ad Art. 7. Circa qualitates et potestates ventorum observatum est ab hominibus non diligenter et varie : nos certiora excerpimus ; reliqua, ut levia, ipsis ventis permittimus.

1. Auster pluviosus, boreas serenus apud nos sunt : alter nubes congregat et fovet, alter dissipat et discutit. Itaque poetæ, cum narrant de diluvio, fingunt eo tempore boream in carcere conclusum ; austrum cum amplissimis mandatis emissum.

2. Zephyrus apud nos pro auræ ætatis vento habitus est, qui comes esset perpetui veris, et mulceret flores.

3. Paracelsi schola, cum tribus suis principiis, etiam in templo Junonis (aëre scilicet) locum quaerent, tres collocarunt ; euro locum non repperunt.

“ Tineturis liquidum qui mercurialibus austrum, Divitis et zephyri rorantes sulphure venas, Et boream tristi rigidum sale.”

4. At nobis in Britannia eurus pro malefico habetur, ut in proverbio sit, “ eurus neque homini neque bestię propitium esse.”

5. Auster a præsentia solis, boreas ab absentia spirat in hemisphærio nostro : eurus in consecutione motus aëris, zephyrus in contrarium ubique : zephyrus a mari, eurus a continente ; plerumque in Europa et Asia occidentali. Hæ sunt differentię ventorum maxime radicales, unde plurimæ ex qualitatibus et potestatibus ventorum revera pendunt.

6. Auster minus anniversarius est et status, quam boreas, sed magis vagus et liber ; et quando est status, tam lenis est ut vix percipiatur.

7. Auster magis humilis est et lateralis, boreas celsior et spirans ex alto ; neque hoc de elevatione et depressione polari dicimus, de qua supra ; sed quod origines suas habeat plerumque magis in vicino auster, magis in sublimi boreas.

8. Auster nobis pluviosus, (ut jam dictum est,) Africæ vero serenus, sed magnos immittens fervores, non frigidus, ut alii dixerunt. Est tamen Africæ satis salubris ; at nobis, si flaverit paulo diutius in sudo, absque pluvia, auster valde pestilens est.

9. Auster et zephyrus non generant vapores, sed

spirant a partibus, ubi maxima est copia ipsorum propter auctum calorem solis, qui vapores elicit, ideoque sunt pluviosi. Quod si spiraverint a locis siccioribus et jejunis a vaporibus, sunt sereni ; sed tamen aliquando puri, aliquando æstuoosi.

10. Videtur hic apud nos auster et zephyrus fœderati, suntque tepidi et humidi ; at ex altera parte affines sunt boreas et eurus, suntque frigidi et sicci.

11. Auster et boreas (quod et antea attigimus) frequentius spirant, quam eurus et zephyrus, quia magna est inæqualitas vaporum ex illis partibus propter absentiam et præsentiam solis ; at orienti et occidenti sol tanquam adiaphorus est.

12. Auster saluberrimus marinus, a continente magis morbidus ; contra, boreas a mari suspectus, a terra sanus ; etiam frugibus et stirpibus auster marinus valde benignus, fugans rubigines et alias pernicias.

13. Auster lenior non admodum cogit nubes, sed sæpe serenus est, præsertim si sit brevior ; sed flans commotius aut diutius, facit cælum nubilum et inducit pluviam ; sed potius cum desinat aut flaccescere incipiat, quam a principio aut in ipso vigore.

14. Cum auster aut oritur aut desistit, fiunt fere mutationes tempestatum a sereno ad nubilum, aut a calido ad frigidum ; et e contra, boreas sæpe et oritur et desinit, priore tempestate manente et continuata.

15. Post pruinas, atque etiam nives paulo diuturniores, non alius fere ventus quam auster spirat, tanquam facta concoctione frigorum, quæ tum demum solvuntur, neque propterea semper sequitur pluvia, sed fit hoc etiam in regelationibus serenæ.

16. Auster et frequentius oritur, et fortius spirat noctu, quam interdum, præsertim noctibus hibernis. At boreas, si noctu oriatur, (quod contra suam consuetudinem est,) non ultra triduum fere durat.

17. Austro flante majores voluntur fluctus quam borea, etiam quando pari aut minore impetu spirat.

18. Spirante austro fit mare cœruleum et magis lucidum, borea contra atrius et obscurius.

19. Cum aër subito fit tepidior, denotat interdum pluviam : rursus alias, cum aura subito fit gelidior, pluviam præmonstrat. Sequitur vero hoc naturam ventorum : nam si flante austro aut euro intepescit aër, pluvia in propinquo est, itidemque cum flante septentrione aut zephyro refrigerescit.

20. Auster flat plerumque integer et solitarius. At borea, et præcipue cæcia et coro flantibus, sæpe contrarii et alii diversi venti simul spirant ; unde refringuntur et turbantur.

21. Boreas sementi faciendæ, auster inquisitionibus et inoculationibus cavendus.

22. A parte austri folia ex arboribus citius decidunt ; at palmites vitium ab ea parte erumpunt, et eo fere spectant.

23. In latis pascuis videndum est pastoribus (ut ait Plinius) ut greges ovium ad septentrionale latus adducant, ut contra austrum pascant. Nam si contra boream, claudicant, et lippiunt, et alvo moventur : quietiam boreas coitum illis debilitat, adeo ut si in hunc ventum spectantes coëant oves, fœmelle ut plurimum gignantur : sed in hoc Plinius (utpote transcriptor) sibi non constat.

24. Venti tribus temporibus frumento et segetibus nocent; in flore aperiente, et deflorescente, et sub maturitatem; tum enim exinaniunt aristas dejectis granis: at prioribus duobus temporibus florem aut in calamo constringunt aut decutiunt.

25. Flante austro anhelitus hominum magis foetet, appetitus animalium deicitur magis, morbi pestilentes grassantur, gravedines incumbunt, homines magis pigri sunt et hebetes: at flante borea, magis alacres, sani, avidiores cibi. Phthisicis tamen nocet boreas, et tussiculosus, et podagrices, et omni fluxui acuto.

26. Eurus siccus, mordax, mortificans; zephyrus humidus, clemens, almus.

27. Eurus, spirans vere adulto, calamitas fructuum, inducendo erucas et vermes, ut vix foliis parcat; nec æquus admodum segetibus: zephyrus contra, herbis, floribus, et omni vegetabili, maxime propitius et amicus. At eurus quoque circa æquinoctium autumnale satis gratus.

28. Venti ab occidente spirantes sunt vehementiores quam illi ab oriente, et magis curvant, et contorquent arbores.

29. Tempestas pluviosa, quæ incipit spirante euro, longius durat quam quæ spirante zephyro, et fere ad diem integrum extenditur.

30. Eurus ipse et boreas, postquam inceperint flare, constantius flant: auster et zephyrus magis mutabiles.

31. Flante euro visibilia omnia majora apparent: at flante zephyro audibilia; etiam longius deferuntur soni.

32. "Cæciam nubes ad se trahere," apud Græcos in proverbium transiit, comparando ei feneratorum, qui pecunias erogando sorbent: vehemens est ventus et latus, ut non possit summovere nubes tam cito, quam illæ renitantur et se vertant; quod fit etiam in majoribus incendiis, quæ contra ventum invalescunt.

33. Venti cardinales, aut etiam semicardinales, non sunt tam procellosi, quam mediani.

34. Mediani, a borea ad euro-boream, magis sereni; ab euro-borea ad eurus, magis procellosi. Similiter ab euro ad euro-astrum, magis sereni; ab euro-austro ad austrum, magis procellosi. Similiter ab austro ad zephyro-astrum, magis sereni; a zephyro-austro ad zephyrum, magis procellosi. Similiter a zephyro ad zephyro-boream, magis sereni; a zephyro-borea ad boream, magis procellosi: ita ut progrediendo secundum ordinem cæli, semper mediani prioris semicardinis disponantur ad serenitatem; posterioris, ad tempestates.

35. Tonitrua, et fulgura, et ecnephæ fiunt spirantibus ventis frigidis, quique participant ex borea, quales sunt corus, thrascias, circius, meses, cæcias: ideoque fulgura sæpius comitatur grandio.

36. Etiam nivales venti a septentrione veniunt, sed ab iis medianis qui non sunt procellosi, veluti corus et meses.

37. Omnino venti quinque modis naturas suas et proprietates nanciscuntur. Vel ab absentia aut præsentia solis; vel a consensu et dissensu cum naturali motu æris: vel a diversitate materiæ fomitem suorum a quibus generantur, maris, nivis, paludum, etc.

vel a tinctura regionum per quas pertranseunt: vel ab originibus localibus suis, in alto, sub terra, in medio; quæ omnia sequentes articuli melius explanabunt.

38. Venti omnes habent potestatem desiccandi, etiam magis quam ipse sol; quia sol vapores elicit, sed, nisi admodum fervens fuerit, non dissipat; at ventus eos et elicit et abducit: attamen auster minime omnium hoc facit; quinetiam saxa et trabes sudant magis flante nonnihilo austro, quam in tranquillo.

39. Martii magis longe desiccant, quam æstivi; adeo ut artifices instrumentorum musicorum ventos martios expectent ad materiam instrumentorum suorum desiccandam, eamque reddendam porosam et sonoram.

40. Venti omnis generis purgant ærem, eumque a putredine vindicant, ut anni, in quibus venti frequentius spirent, sint maxime salubres.

41. Sol principum fortunam subit; quibuscum ita sæpe agitur, ut præsidet in provinciis remotis magis obnoxios habeant subditos, et quibus obsequia præstentur magis, quam principi ipsi. Certe venti, qui potestatem et originem habent a sole, æque aut plus gubernant temperaturas regionum et affectus æris, quam ipse sol, in tantum ut Peruvia (quæ propter propinquitatem oceani, vastitatem amnium, et altissimos et maximos montes nivales, maximam habet copiam ventorum et aurarum spirantium) cum Europa de temperamento et clementia æris certet.

42. Nil mirum si ventorum tantus sit impetus, quantus invenitur, quandoquidem venti vehementes sint tanquam inundationes, atque torrentes et fluctus magni æris. Neque tamen, si attentius advertas, magnum quiddam est eorum potentia. Possunt deicere arbores, quæ cacuminum onere, tanquam velis expansis, iisdem commoditatem præbent, et se ipsæ onerant; possunt etiam ædificia infirmiora; sed structuras solidiores, nisi fiant cum terræ motibus, non subvertunt. Nives quandoque tanquam integras deiciunt ex montibus, ut planitiem subjacentem fere sepeliant, quod accidit Solymanno in campis Sultaniæ; etiam magnas quandoque immittunt inundationes aquarum.

43. Amnes quandoque tanquam in sicco ponunt venti, et fundos ipsorum discooperiunt: Si enim, post magnam siccitatem, ventus robustus in consecutione filii aquæ, pluribus diebus spirarit, ita ut aquas amnis, tanquam everrendo, devexerit in mare, aquas marinas prohibuerit, fit siccatio amnis in multis locis insolitis.

Verte polos, et verte simul observationes, quatenus ad austrum et boream. Monitum. Cum enim absentia et præsentia solis in causa sit, variat pro ratione polorum. At illud constans res esse possit, quod plus sit maris versus austrum, plus sit terræ versus boream, quod etiam ad ventos non parum facit.

Mille modis fiunt venti, ut ex inquisitione sequenti patebit: itaque in re tam varia figure observationes haud facile est. Attamen quæ a nobis posita sunt, pro certo plerumque obtinent. Monitum.

## ORIGINES LOCALES VENTORUM.

Ventorum origines locales nosse ar-  
 Ad Artic. 8. duæ est inquisitionis, cum illud Unde et  
 Connexio. Quo ventorum, ut res abdita, etiam in

Scripturis notata sit. Neque loquimur jam de fontibus ventorum particularium, (de quibus postea,) sed de matricibus ventorum in genere. Alii ex alto eas petunt, alii in profundo rimantur; in medio autem, ubi ut plurimum generantur, vix eas quæ-  
 runt; ut est mos hominum quæ ante pedes posita sunt præterire, et obscuriora malle. Illud liquet, ventos aut indigenas, aut advenas esse; sunt enim venti tanquam mercatores vaporum, eosque in nubes collectos et important in regiones, et exportant, unde iterum venti, tanquam per permutationem. Sed inquiramus jam de nativis. Qui enim aliunde advenæ, alibi nativi. Tres igitur origines locales; aut exspirant et scaturiunt e terra; aut dejiciuntur e sublimi; aut conflantur hic in corpore aëris. Qui autem dejiciuntur ex alto, duplicis generationis; aut enim dejiciuntur antequam formentur in nubes, aut postea ex nubibus rarefactis et dissipatis. Videamus quæ sit harum rerum historia.

1. Fixerunt poëtæ, regnum Æoli in antris et cavernis sub terram fuisse collocatum, ubi carcer esset ventorum, qui subinde emittebantur.

2. Etiam theologos quosdam, eisdemque philosophos, movent Scripturæ verba: "Qui producit ventos de thesauris suis:" tanquam venti prodirent ex locis thesaurariis, subterraneis scilicet, ubi sunt mineræ: sed hoc nihil est. Nam loquitur etiam Scriptura de thesauris nivis et grandinis, quas in sublimi generari nemo dubitat.

3. In subterraneis proculdubio magna existit aëris copia, eamque et exspirare sensim verisimile, et emitti confertim aliquando, urgentibus causis, necesse est.

In magnis siccitatibus et media æstate, cum magis rimosa sit terra, solet erumpere in locis aridis et arenosis magna vis aquarum. Quod si faciant aquæ (corpus crassum) raro; aërem (corpus tenue et subtile) hoc frequenter facere probabile est.

4. Si expirat aër e terra sensim et sparsim, parum percipitur primo; sed postquam aëris illius emanationes multas minutæ confluerint, tum fit ventus; ut ex scaturiginibus aquarum rivus. Hoc vero ita fieri videtur, quoniam notatum est ab antiquis, ventos complures in ortu suo, et in locis a quibus oriuntur, primo spirare exiguis, deinde in progressu invalescere prorsus, more fluviorum.

5. Inveniuntur quædam loca in mari, ac etiam lacus, qui, nullis flantibus ventis, majorem in modum tumescunt, ut hoc a subterraneo flatu fieri appareat.

6. Magna vis requiritur spiritus subterranei, ut terra concutiatur aut scindatur: levior, ut aqua sublevetur. Itaque tremores terræ rari; tumores et sublevationes aquarum frequentiores.

7. Etiam ubique notatum est, nonnihil attolli et tumescere aquas ante tempestates.

8. Spiritus subterraneus exilis, qui sparsim efflatur, non percipitur super terram, donec coierit in ventum, ob porositatem terræ; sed exiens subter

aquas, ob continuitatem aquæ, statim percipitur ex tumore nonnullo.

9. Assecelas esse ventos terrarum cavernosarum antea posuimus, ut prorsus videantur venti illi habere origines suas locales e terra.

10. In montibus magnis et saxeis inveniuntur venti et citius spirare (antequam scilicet percipiantur in valibus) et frequentius (cum scilicet valles sint in tranquillo): at omnes montes et rupes cavernosi sunt.

11. In comitatu Denbigh in Britannia, montosa regione et lapidosa, ex cavernis quibusdam tam vehementes (ait Gilbertus) sunt ventorum eruptiones, ut injecta vestimenta pannique rursus magna vi efflentur, et altius in aërem efferantur.

12. In Aber Barry juxta Sabrinam in Wallia, in quodam clivo saxoso, in quo sunt foramina, si quis aurem apposuerit, sonitus varios et murmur flatuum sub terra exaudiet.

Notavit Acosta, oppida Platæ et Potosæ in Peruvia non longe esse distantia, et utrumque situm esse in terra elevata aut montana, ut in hoc non differant; et nihilominus habere Potosam temperaturam aëris frigidam et hiemalem, Platam clementem et vernam; id quod videtur argenti fodinis juxta Potosam attribui posse; quod demonstrat esse spiracula terræ, quatenus ad calidum et frigidum.

13. Si terra sit primum frigidum, ut voluit Parmenides, (non contemnenda usus sententia, cum frigus et densitas arcto copulentur vinculo,) non minus probabile est, ejici halitus calidiores a frigore centrali terræ, quam dejici a frigore aëris sublimioris.

14. Sunt quidam putei in Dalmatia et regione Cyrenaica, ut quidam ex antiquis memorant, in quibus, si dejiciatur lapis, excitantur paulo post tempestates; ac si lapis perfringeret operculum aliquod in loco, ubi vis ventorum erat incarcerata.

Flammas evomunt Ætna, et complures montes; similiter et aërem erumpere posse consentaneum est, præsertim calore in subterraneis dilatatum et in motu positum.

15. In terræ motibus, ventos quosdam noxios et peregrinos, et ante eruptionem et postea flare, observatum est; ut fumi quidem minores solent emitti ante et post incendia magna.

Aër in terra conclusus erumpere ob varias causas compellitur. Quandoque massa terræ male coagmentata in cavum terræ decidit: quandoque aquæ se ingurgitant: quandoque expanditur aër per ignes subterraneos, ut ampliorum locum quærat: quandoque terra, quæ antea solida erat et concamerata, per ignes in cineres versa, se amplius sustinere non potest, sed decidit; et complura id genus.

Atque de prima origine locali ventorum, videlicet e subterraneis, hæc inquisita sunt; sequitur origo secunda ex sublimi, nempe media, quam appellant, regione aëris.

At nemo tam male quæ dicta sunt intelligat, quasi negemus, et reliquos ventos e terra et mari per vapores educi; sed hoc

Phænomenon obliquum.

Phænomenon obliquum.

Phænomenon obliquum.

Monitum.

Monitum.

prius genus erat ventorum, qui exeunt e terra jam venti formati.

16. Increscere murmur sylvarum antequam manifesto percipiuntur venti, notatum est; ex quo conicitur ventum a superiore loco descendere; quod etiam observatur in montibus (ut dictum est) sed causa magis ambigua propter cava montium.

17. Stellae sagittantes (ut loquimur) et vibratas sequitur ventus; atque etiam ex ea parte, ex qua fit jaculatio; ex quo patet, aërem in alto commotum esse antequam ille motus perveniat ad nos.

18. Apertio cœli, et disgregatio nubium, præmonstrat ventos, antequam fient in terra; quod itidem ostendit ventos inchoari in alto.

19. Stellae exiguae, antequam oriatur ventus, non cernuntur, licet nocte serena; cum scilicet (ut videtur) densatur, et fit minus diaphanus aer, propter materiam quæ postea solvitur in ventos.

20. Circuli apparent circa corpus lunæ; sol quandoque occidens conspicitur sanguineus; luna rubicundior est in ortu quarto; et complura alia inveniuntur prognostica ventorum in sublimi (de quibus suo loco dicemus); quæ indicant materiam ventorum ibi inchoari et præparari.

21. In istis phænomenis notabis illam, de qua diximus, differentiam, de duplici generatione ventorum in sublimi; nimirum ante congregationem vaporum in nubem, et post. Nam prognostica halonum et colorum solis et lunæ habent aliquid ex nube; at jaculatio illa et occultatio stellarum exiguarum fiunt in sereno.

22. Cum ventus prodit a nube formata, aut totaliter diaspatur nubes, et vertitur in ventum; aut scernitur partim in pluviam, partim in ventum; aut scinditur, et erumpit ventus, ut in procella.

23. Plurima sunt phænomena obliqua ubique in natura rerum de repercussione per frigidum; itaque cum constet esse in media regione aeris frigora valde intensa, planum fit, vapores maxima ex parte ea loca perfringere non posse, quin aut coagulentur, aut vibrentur; secundum opinionem veterum, in hac parte sanam.

Tertia origo localis ventorum est eorum, qui hic in inferiore aëre generantur, quos etiam tumores sive superoperationes aëris appellamus. Res maxime familiaris, et tamen silentio transmissa.

Commentatio.

Horum ventorum, qui conflantur in aëre infimo, generatio abstrusior aliqua res non est, quam hæc ipsa; Quod scilicet aër, noviter factus ex aqua et vaporibus attenuatis et resolutis, conjunctus cum aëre priore, non potest contineri iisdem quibus antea spatiis; sed excrescit, et volvitur, et ulteriora loca occupat. Hujus tamen rei duo sunt assumpta. Unum, quod gutta aquæ in aërem versa (quicquid de decima proportionem elementorum fabulentur) centuplo ad minus plus spatii desiderat, quam prius; alterum, quod parum aëris novi et moti, superadditum aëri veteri, totum concutit et in motu ponit: ut videre est ex pusillo vento, qui ex foliis aut rima fenestræ efflat, qui tamen totum aërem in cubiculo in motu ponere possit; ut ex flammis lucernarum facile apparet.

24. Quemadmodum rores et nebulae hic in aëre infimo generantur, nunquam factæ nubes, nec ad mediam regionem penetrantes; eodem modo et complures venti.

25. Aura continua spirat circa maria et aquas, quæ est ventus pusillus noviter factus.

26. Iris, quæ est ex meteoris quasi humillima, et generatur in proximo, quando non conspicitur integra, sed curtata, et quasi frusta ejus tantum in cornibus, solvitur in ventos, æque ac in pluviam, et magis.

27. Notatum est, esse quosdam ventos in regionibus, quæ disternantur et separantur per montes intermedios, qui ex altera parte montium spirant familiares, ad alteram non perveniunt. Ex quo manifestum, eos generari infra altitudinem ipsorum montium.

28. Infiniti sunt venti, qui spirant diebus serenis, atque etiam in regionibus ubi nunquam pluit: qui generantur ubi flant, nec unquam erant nubes, aut in mediam regionem ascenderunt.

Quicumque norit quam facile vapor solvatur in aërem, et quam ingens sit copia vaporum, et quantum spatium occupet gutta aquæ versa in aërem præ eo, quod antea occupabat, (ut dictum est,) et quam modicum sustineat se comprimi aër, non dubitabit quin necesse sit, etiam a superficie terræ usque ad sublimia aëris, ubique generari ventos: neque enim fieri potest, ut magna copia vaporum, cum cœperint expandi, ad mediam aëris regionem attollantur absque superoperatione aëris et tumultu in via.

Phænomena obliqua.

#### ACCIDENTALES GENERATIONES VENTORUM.

Accidentales generationes ventorum eas vocamus quæ non efficiunt aut gignunt motum impulsivum ventorum, sed eum compressione acuunt, repercussione vertunt; siuatione agitant et volvunt: quod fit per causas extrinsecas et posituram corporum adjunctorum.

Ad Art. 9. Connexio.

1. In locis ubi sunt colles minus elevati, et circa hos subsidunt valles, et ultra ipsos rursus colles altiores, major est agitatio aëris et sensus ventorum, quam aut in montanis aut in planis.

2. In urbibus, si sit aliquis locus paulo latior, et exitus angustiores, aut angiportus et plateæ se invicem secantes, percipiuntur ibi flatus et auræ.

3. In ædibus refrigeratoria per ventos fiunt, aut occurrunt, ubi aër est perflatilis, et ex una parte introit aër, ex adverso exit; sed multo magis, si aër intrat ex diversis partibus, et facit concursum auræ ad angulos, et habet exitum illi angulo communem: etiam concameratio cœnaculorum, et rotunditas, plurimum facit ad auras; quia repercutitur aër commotus ad omnes lineas; etiam sinuatio porticum magis juvat, quam si exporrigantur in recto; flatus enim in recto, licet non concludatur, sed liberum habeat exitum, tamen non reddit aërem tam inæqualem, et voluminosum, et undantem, quam conflatus ad angulos, et anfractus, et glomerationes in rotundo, et hujusmodi.

4. Post magnas tempestates in mari continuatur ventus accidentalis ad tempus postquam originalis resederit, factus ex collisione et percussione aëris per undulationem fluctuum.

5. Reperitur vulgo in hortis repercussio venti a parietibus, et ædibus, et aggeribus; ita ut putaret quis, ventum in contrariam partem spirare ejus, a qua revera spirat.

6. Si montes regionem aliqua ex parte cingant, et ventus paulo diutius ex plano contra montem spiraverit, fit ut ipsa repercussione montis aut contrahatur ventus in pluviam, si fuerit humidior, aut vertatur in ventum contrarium, sed qui brevi tempore duret.

7. In flexionibus promontiorum experiuntur nau-tæ sæpius mutationes ventorum.

#### VENTI EXTRAORDINARIJ, ET FLATUS REPENTINI.

De ventis extraordinariis sermocinan-  
tur quidam et causantur; cenephia sive  
Ad Art. 10. tur quidam et causantur; cenephia sive  
Connexio. procella, vortice, typhone, prestere: sed  
rem non narrant, quæ certe ex chronicis et historia  
sparsa peti debet.

1. Repentini flatus nunquam cælo sereno fiunt, sed semper nubilo et cum imbre: ut eruptionem quandam fieri, et flatum excuti, aquas concuti, recte putetur.

2. Procellæ, quæ fiunt cum nebula aut caligine, quas belluas vocant, quæque se sustinent instar columnæ, vehementes admodum sunt, et diræ navigantibus.

3. Typhones majores, qui per latitudinem aliquam notabilem corripunt, et correpta sorbent in sursum, raro fiunt; at vortices, sive turbines exigui, et quasi ludicri, frequenter.

4. Omnes procellæ, et typhones, et turbines majores, habent manifestum motum præcipiti aut vibrationis deorsum, magis quam alii venti; ut torrentum modo ruere videantur, et quasi per canales defluere, et postea a terra reverberari.

5. Fit in pratis, ut cumuli fœni quandoque in altum ferantur, et tum instar conopei spargantur; etiam in agris, ut caules pisarum involuti, et aristæ segetum demessæ, quin etiam lintea ad exsiccandum exposita, attollantur a turbiniibus usque ad altitudinem arborum, aut supra fastigia ædium; hæcque fiunt absque aliquo majore venti impetu aut vehementia.

6. At quandoque fiunt turbines leves, et admodum angusti, etiam in sereno; ita ut equitans videat pulveres vel paleas corripere et verti prope se, neque tamen ipse magnopere ventum sentiat; quæ proculdubio fiunt hic prope ex auris contrariis se mutuo repellentibus, et circulationem aëris ex concussione facientibus.

7. Certum est, esse quosdam flatus, qui manifesta vestigia relinquunt adustionis et torrefactionis in plantis. At presterem, qui est tanquam fulgur cæcum atque aër fervens, sed sine flamma, ad inquisitionem de fulgure rejicimus.

CONFACIENTIA AD VENTOS, ORIGINALES SCILICET;  
NAM DE ACCIDENTALIBUS SUPRA INQUISITUM EST.

Ad Art. 11, Quæ a veteribus de ventis eorumque  
12, 13, 14, 15, causis dicta sunt, confusa plane sunt et  
Connexio. incerta, nec maxima ex parte vera:  
neque mirum si non cernant clare, qui non spectant  
prope. Loquuntur ac si ventus aliud quippiam

esset separatam ab aère moto; atque ac si exhalationes generarent et conficerent corpus integrum ventorum, atque ac si materia ventorum esset exhalatio tantum calida et sicca; atque ac si origo motus ventorum esset tantummodo dejectio et percussio a frigore mediæ regionis: omnia phantastica et pro arbitrio. Attamen ex hujusmodi filis magnas conficiunt telas; operas scilicet aranearum. At omnis impulsio aëris est ventus, et exhalationes permixtæ aëri plus conferunt ad motum, quam ad materiam; et vapores humidus, ex calore proportionato, etiam facilius solvuntur in ventum, quam exhalationes siccæ; et complures venti generantur in regione infirma aëris, et ex terra exspirant, præter illos qui dejectiuntur et repercutiuntur. Videamus qualis sit sermo rerum ipsarum.

1. Rotatio naturalis aëris (ut dictum est in articulo de ventis generalibus) absque causa alia externa, gignit ventum perceptibilem intra tropicos, ubi aëris conversio fit per circulos majores.

2. Post motum aëris naturalem, antequam inquiramus de sole, qui est genitor ventorum præcipuus, videndum, num quid sittribuendum lunæ et aliis astris, ex experientia clara.

3. Excitantur venti magni et fortes nonnullis ante eclipsin lunæ horis; ita ut, si luna deficiat medio noctis, flent venti vesperi præcedente; si luna deficiat mane, flent venti medio noctis præcedente.

4. In Peruvia, quæ regio est admodum flatilis, notat Acosta maxime flare ventos in pleniluniis.

Dignum certe esset observatione, Mandatum.  
quid possint super ventos motus et  
tempora lunæ, cum liquido possint super aquas:  
veluti, utrum venti non sint paulo commotiores in  
pleniluniis et noviluniis quam in dimidiis, quem-  
admodum fit in aestibus aquarum: licet enim  
quidam commode fingant imperium lunæ esse  
super aquas; solis vero et astrorum super aërem;  
tamen certum est aquam et aërem esse corpora  
valde homogœna, et lunam, post solem, plurimum  
hic apud nos posse in omnibus.

5. Circa conjunctiones planetarum non fugit hominum observationem flare ventos majores.

6. Exortu Orionis surgunt plerumque venti et tempestates variæ; sed videndum annon hoc fiat, quia exortus ejus sit eo tempore anni, quod ad generationem ventorum est maxime efficax; ut sit potius concomitans quiddam, quam causa; quod etiam de ortu hyadum et pleiadum quoad imbres, et arcturi quoad tempestates, similiter merito dubitari possit: de luna et stellis haec tenentur.

7. Sol proculdubio est efficiens primarius ventorum plurimorum, operans per calorem in materiam duplicem: corpus scilicet aëris, et vapores sive exhalationes.

8. Sol, cum est potentior, aërem, licet purum et absque immistione ulla, dilatatur fortasse ad tertiam partem, quæ res haud parva est. Itaque per simplicem dilatationem, necesse est ut oriatur aura aliqua in visis solis, præsertim in magnis fervoribus; idque potius duas aut tres horas post exortum ejus, quam ipso mane.

9. In Europa noctes sunt æstuosiores; in Peruvia tres horæ matutinæ; ob unam eandemque causam;

videlicet, cessationem aurarum et ventorum illis horis.

10. In vitro calendari aër dilatatus deprimit aquam tanquam flatu; at in vitro pileato, aëre tantummodo impleto, aër dilatatus inflat vesicam ut ventus manifestus.

11. Experimentum fecimus in turri rotunda, undique clausa, hujus generis venti: nam foculum in medio ejus locavimus, cum prunis penitus ignitis, ut minus esset fumi; at a latere foculi in distantia nonnulla filum suspendimus cum cruce ex plumis, ut facile moveretur. Itaque post parvam moram, aucto calore et dilatato aëre, agitabatur crux plumea cum filo suo hinc inde motu vario; quin etiam facto foramine in fenestra turris exhibit flatu calidus, neque ille continuus, sed per vices, et undulans.

12. Etiam receptio aëris per frigus a dilatatione creat ejusmodi ventum, sed debiliorem, ob minores vires frigoris; adeo ut in Peruvia, sub quavis parva umbra, non solum majus percipiatur refrigerium, quam apud nos (per antiperistasin) sed manifesta aura ex receptione aëris quando subit umbram.

Atque de vento per meram dilatationem aut receptionem aëris facta, hactenus.

13. Venti ex meris motibus aëris, absque immisione vaporum, lenes et molles sunt. Videndum de ventis vaporariis, (eos dicimus qui generantur a vaporibus,) qui tanto illis alteris possunt esse vehementiores, quanto dilatatio guttæ aquæ versæ in aërem excedit aliquam dilatationem aëris jam facti: quod multis partibus facit, ut superius monstravimus.

14. Ventorum vaporariorum (qui sunt illi qui communiter fiant) efficiens est sol, et calor ejus proportionatus; materia, vapores et exhalationes qui vertuntur et resolvuntur in aërem; aërem inquam, (non aliud quippiam ab aëre,) sed tamen ab initio minus sincerum.

15. Solis calor exiguus non excitat vapores, itaque nec ventum.

16. Solis calor medius excitat vapores, nec tamen eos continuo dissipat. Itaque si magna fuerit ipsorum copia, coeunt in pluviam, aut simplicem, aut cum vento conjunctam; si minor, vertuntur in ventum simplicem.

17. Solis calor in incremento inclinatur magis ad generationem ventorum; in decremento, pluviarum.

18. Solis calor intensus et continuatus attenuat et dissipat vapores, eosque sublimat, atque interim aëri aequaliter immiscet et incorporat; unde aër quietus fit et serenus.

19. Calor solis magis aequalis et continuus, minus aptus ad generationem ventorum; magis inæqualis et alternans, magis aptus. Itaque in navigatione ad Russiam minus affliguntur ventis, quam in mari Britannico, propter longos dies; at in Peruvia sub æquinotio crebri venti, ob magnam inæqualitatem caloris, alternantem noctu et intardiu.

20. In vaporibus et copia spectatur et qualitas: copia parva gignit auras lenes; media ventos fortiores; magna aggravat aërem, et gignit pluvias, vel tranquillitas, vel cum ventis.

21. Vapores ex mari, et amnibus, et paludibus inundatis, longe majorem copiam gignunt ventorum,

quam halitus terrestres: attamen, qui a terra et locis minus humidis gignuntur venti, sunt magis obstinati et diutius durant, et sunt illi fere qui deiciuntur ex alto; ut opinio veterum in hac parte non fuerit omnino inutilis; nisi quod placuit illis, tanquam divisa hereditate, assignare vaporibus pluvias, et ventis solummodo exhalationes, et hujusmodi pulchra dictu, re inania.

22. Venti ex resolutionibus nivium jacentium super montes sunt fere medii inter ventos aquaticos et terrestres, sed magis inclinant ad aquaticos; sed tamen sunt acriores et mobiliiores.

23. Solutio nivium in montibus nivalibus (ut prius notavimus) semper inducit ventos statos ex ea parte.

24. Etiam anniversarii aquilonis circa exortum caniculæ existimantur venire a mari glaciali, et partibus circa circulum arcticum, ubi seræ sunt solutiones glaciæ et nivium, æstate tum valde adulta.

25. Moles, sive montes glaciales, quæ devehuntur versus Canadam et Terram Piscationis, magis gignunt auras quasdam frigidas, quam ventos mobiles.

26. Venti, qui ex terris sabulosis aut cretaceis proveniunt, sunt pauci et sicci; iidem in regionibus calidioribus æstuosi, et fumei, et torridi.

27. Venti ex vaporibus marinis facilius abeunt retro in pluviam, aqua jus suum repetente et vindicante: aut si hoc non conceditur, miscentur protinus aëri, et quietem agunt: at halitus terre, et fumei, et unctuosi, et solvuntur ægrius, et ascendunt altius, et magis irritati sunt in suo motu, et sæpe penetrant mediam regionem aëris, et sunt aliqua materia meteororum ignitorum.

28. Traditur apud nos in Anglia, temporibus, cum Gasconia esset hujus dittonis, exhibitum fuisse regi libellum supplicem per subditos suos Burdegalicæ et confinium; petendo ut prohiberetur incensio ericæ in agris Sussexiæ et Hamptonicæ, quia gigneret ventum circa finem Aprilis vineis suis exitabilem.

29. Concursus ventorum ad invicem, si fuerint fortes, gignunt ventos vehementes et verticosos; si lenes et humidi, gignunt pluviam, et sedant ventos.

30. Sedantur et coeunt venti quinque modis: cum aut aër, vaporibus oneratus et tumultuans, liberatur, vaporibus se contrahentibus in pluviam; aut cum vapores dissipantur et fiunt subtiliores, unde permiscentur aëri, et belle cum ipso conveniunt et quiete degunt; aut cum vapores sive halitus exaltantur, et sublimantur in altum, adeo ut requies sit ab ipsis, donec a media regione aëris deiciantur aut eam penetrent; aut cum vapores, coacti in nubes, ab aliis ventis in alto spirantibus, transvehuntur in alias regiones, ut pax sit ab ipsis in regionibus quas prætervolant; aut denique, cum venti a fomitibus suis spirantes, longo itinere, nec succedente nova materia, languescunt, et impetu suo destituuntur, et quasi exspirant.

31. Imbres plerumque ventos sedant, præsertim procellosos, ut et venti contra sæpius detinent imbrem.

32. Contrahunt se venti in pluviam (qui est primus ex quinque sedandi modis, isque præcipuus) aut ipso onere gravati cum vapores sint copiosi; aut propter contrarios motus ventorum modo sint placidi; aut propter obices montium et promontiorum,

quæ sistunt impetum ventorum, eosque paulatim in se vertunt; aut per frigora intensiora, unde condensantur.

33. Solent plerumque venti, minores et leviores, mane oriri et cum sole decumbere, sufficiente condensatione aëris nocturna ad receptionem eorum. Aër enim nonnullam compressionem patitur absque tumultu.

34. Sonitus campanarum existimatur tonitrua et fulgura dissipare; de ventis non venit in observationem.

Monitum. Consule locum de prognosticis ventorum; est enim nonnulla connexio causarum et signorum.

35. Narrat Plinius turbinis vehementiam, aspersione aceti in occursum ejus, compesci.

#### LIMITES VENTORUM.

1. Traditur de monte Atho, et simili Ad Art. 16, 17, ter de Olympo; consuevisse sacrificantes in aris, super fastigia ipsorum extractis, literas exarare in cineribus sacrificiorum, et postea redeuntes elapso anno (nam anniversaria erant sacrificia) easdem literas reperisse neutiquam turbatas aut confusas; etiamsi aræ illæ non starent in templo aliquo, sed sub dio. Unde manifestum erat, in tanta altitudine neque cecidisse imbrem, neque spirasse ventum.

2. Referunt in fastigio Pici de Teneriph, atque etiam in Andibus inter Peruviam et Chilem, nives subjacere per clivos et latera montium; at in ipsis cacuminibus nil aliud esse quam aërem quietum, vix spirabilem propter tenuitatem; qui etiam acrimonia quadam, et os stomachi, et oculos pungat, inducendo illi nauseam, his suffusionem et ruborem.

3. Venti vaporarii non videntur in aliqua majore altitudine flare, cum tamen probabile sit, aliquos ipsorum altius ascendere, quam pleræque nubes.

De altitudine hactenus, de latitudine videndum.

4. Certum est, spatia, quæ occupant venti, admodum varia esse, interdum amplissima, interdum pusilla et angusta. Deprehensi sunt venti occupasse spatium centenorum milliarium cum paucarum horarum differentia.

5. Spatiosi venti (si sint ex liberis) plerumque vehementes sunt, non lenes; sunt etiam diuturniores, et fere 24 horas durant; sunt itidem minus pluviosi. Angusti contra, aut lenes sunt, aut procellosi; at semper breves.

6. Stati procellosi sunt itinerarii, et longissima spatia occupant.

7. Venti procellosi non extenduntur per larga spatia, licet semper evagentur ultra spatia ipsius procellosi.

8. Marini venti intra spatia angustiora multo, quam terrestres, spirant; in tantum ut in mari aliquando conspiciatur, auram satis alacrem aliquam partem aquarum occupare (id quod ex crispatione aquæ facile cernitur) cum undique sit malacia, et aqua instar speculi plana.

9. Pusilli (ut dictum est) turbines ludunt quandoque coram equitantibus, instar fere ventorum ex folliibus.

De latitudine hactenus, de duratione videndum.

10. Durationes ventorum valde vehementium in

mari longiores sunt, sufficiente copia vaporum; in terra vix ultra diem et dimidium extenduntur.

11. Venti valde lenes nec in mari nec in terra ultra triduum constanter flant.

12. Non solum eurus zephyro magis est durabilis, (quod alibi posuimus,) sed etiam quicumque ille ventus sit, qui mane spirare incipit, magis durabilis solet esse illo qui surgit vesperi.

13. Certum est, ventos insurgere et augeri gradatim (nisi fuerint meræ procellæ) at decumbere celerius, interdum quasi subito.

#### SUCCESSIONES VENTORUM.

1. Si ventus se mutet conformiter ad motum solis, id est, ab euro ad austrum, Ad Art. 19, 20, ab austro ad zephyrum, a zephyro ad boream, a borea ad eurus, non revertitur plerumque; aut si hoc facit, fit ad breve tempus. Si vero in contrarium motus solis, scilicet ab euro ad boream, a borea ad zephyrum, a zephyro ad austrum, ab austro ad eurus, plerumque restituitur ad plagam priorem, saltem antequam confecerit circulum integrum.

2. Si pluvia primum inceperit, et postea cœperit flare ventus; ventus ille pluviae superstes erit. Quod si primo flaverit ventus, postea a pluvia occiderit, non reoritur plerumque ventus; et si facit, sequitur pluvia nova.

3. Si venti paucis horis variant, et tanquam experiantur, et deinde cœperint constanter flare, ventus ille durabit in dies plures.

4. Si auster cœperit flare dies duos vel tres, boreas quandoque post eum subito spirabit quod si boreas spiraverit totidem dies, non spirabit auster donec ventus paulisper ab euro flarit.

5. Cum annus inclinaret, et post autumnum hiems inceperit, si incipiente hieme spiraverit auster, et postea boreas, erit hiemis glacialis; sin sub initiis hiemis spiraverit boreas, postea auster, erit hiems clemens et tepidus.

6. Plinius citat Endoxum, quod series ventorum redeat post quadriennium; quod verum minime videtur; neque enim tam celeres sunt revolutiones. Illud ex aliquorum diligentia notatum est, tempestates grandiores et insigniores (fervorum, nivium, congelationum, hiemum tepidarum, æstatum gelidarum) redire plerumque ad circuitum annorum triginta quinque.

#### MOTUS VENTORUM.

Locuntur homines, ac si ventus esset corpus aliquod per se, atque impetu suo aërem ante se ageret et impelleret: Ad Art. 23, 24, 25, 26, 27. Connexio.

etiam cum ventus locum mutet, loquuntur, ac si idem ventus se in alium locum transferret. Hæc vero cum loquuntur plebei, tamen philosophi ipsi remedium hujusmodi opinionibus non præbent; sed et illi quoque balbutiunt, neque erroribus istis occurrunt.

1. Inquirendum igitur et de excitatione motus in ventis, et de directione ejus, cum de originibus localibus jam inquisitum sit. Atque de iis ventis, qui habent principium motus in sua prima impulsione, ut in iis qui deiciuntur ex alto, aut efflant e terra, excitatio motus est manifesta: alteri sub initiis suis

descendunt, alteri ascendunt, et postea ex resistentia aëris fiunt voluminosi, maxime secundum angulos violentiæ suæ. At de illis, qui confiantur ubique in aëre inferiore (qui sunt omnium ventorum frequentissimi) obscurior videtur inquisitio; cum tamen res sit vulgaris, ut in commentatione sub articulo octavo declaravimus.

2. Etiam hujus rei imaginem reperimus in illa turri oclusa, de qua paulo ante: tribus enim modis illud experimentum variavimus. Primus erat, is de quo supra diximus, focus ex prunis ante ignitis et claris. Secundus erat lebes aquæ ferventis, remoto illo foculo, atque tum erat motus crucis plumæ magis hebes et piger, quam ex foculo prunarum, hærente in aëre rore vaporis aquei, nec dissipato in materiam venti propter imbecillitatem caloris. At tertius erat ex utrisque simul, foculo et lebete; tum vero longe maxima erat crucis plumæ agitatio, adeo ut quandoque illam in sursum verteret, instar pusilli turbinis; aqua scilicet præbente copiam vaporis, et foculo, qui astabat, eum dissipante.

3. Itaque excitationis motus in ventis causa est præcipua superoneratio aëris, ex nova accessione aëris facti ex vaporibus.

Jam de directione motus videndum, et de verticitate, quæ est directionis mutatio.

4. Directionem motus progressivi ventorum regunt fomites sui, qui sunt similes fontibus amnium; loca scilicet, ubi magna reperitur copia vaporum, ibi enim est patria venti. Postquam autem invenerint currentem; ubi aër minime resistit, (sicut aqua invenit declivitatem,) tum quicquid inveniunt similis materiæ in via, in consortium recipiunt, et suo currenti miscent; quemadmodum faciunt et amnes. Itaque venti spirant semper a parte fomitem suorum.

5. Ubi non sunt fomites insignes in aliquo loco certo, vagantur admodum venti, et facile currentem suum mutant, ut in medio mari, et campestribus terræ latis.

6. Ubi magni sunt fomites ventorum in uno loco, sed in locis progressus sui parvæ accessiones, ibi venti fortiter flant sub initiis, et paulatim flaccescunt; ubi contra fomites magis continui, leniores sunt sub initiis, et postea augentur.

7. Sunt fomites mobiles ventorum, scilicet in nubibus; qui sæpe a ventis in alto spirantibus transportantur in loca procul distantia a fomitibus vaporum, ex quibus generatæ sunt illæ nubes: tum vero incipit esse fomes venti ex parte, ubi nubes incipiunt solvi in ventum.

8. At verticitas ventorum non fit eo, quod ventus prius flans se transferat; sed quod ille aut occiderit, aut ab altero vento in ordinem redactus sit. Atque totum hoc negotium pendet ex variis collocationibus fomitem ventorum, et varietate temporum, quando vapores, ex hujusmodi fomitibus manantes, solvuntur.

9. Si fuerint fomites ventorum a partibus contrariis, veluti alter fomes ab austro, alter a borea; prævalebit scilicet ventus fortior, neque erunt venti contrarii, sed ventus fortior continuo spirabit; ita tamen ut a vento imbecilliore non nihil hebetetur et dometur; ut fit in amnibus, accedente fluxu maris: nam motus maris prævalet, et est unicus; sed a motu fluvii non nihil frænatur. Quod si ita accide-

rit, ut alter ex illis ventis contrariis, qui primum fortior fuerat, succumbat, tum subito spirabit ventus a parte contraria, unde et ante spirabat, sed latitabat sub potestate majoris.

10. Si fomes (exempli gratia) fuerit ad euro-boream, spirabit scilicet euro-boreas. Quod si fuerint duo fomites ventorum, alter ad eorum, alter ad boream, ii venti ad aliquem tractum spirabunt separatim; at post angulum confluentiæ spirabunt ad euro-boream, aut cum inclinatione, prout alter fomes fuerit fortior.

11. Si sit fomes venti ex parte boreali, qui distet ab aliqua regione viginti miliaribus, et sit fortior, alter ex parte orientali, qui distet decem miliaribus, et sit debilior; spirabit tamen ad aliquas horas eurus, paulo post (nimirum post emensum iter) boreas.

12. Si spiret boreas, atque occurrat ab occidente mons aliquis, spirabit paulo post euro-boreas, compositus scilicet ex vento originali et repercusso.

13. Si sit fomes ventorum in terra a parte boreæ, halitus autem ejus feratur recta sursum, et inveniat nubem gelidam ab occidente, quæ eam in adversum detrudat, spirabit euro-boreas.

Fomites ventorum in terra et mari sunt stabiles, ita ut fons et origo Monitum.

ipsorum melius percipiatur: at fomites ventorum in nubibus sunt mobiles; adeo ut alibi suppediteur materia ventorum, alibi vero ipsi formentur: id quod efficit directionem motus in ventis magis confusam et incertam.

Hæc exempli gratia adduximus; similia simili modo se habent. Atque de directione motus ventorum hæc tenentur. At de longitudine et tanquam itinerario ventorum videndum; licet de hoc ipso paulo ante, sub nomine latitudinis ventorum, inquisitum videri possit. Nam et latitudo pro longitudine ab imperitis haberi possit, si majora spatia venti ex latere occupent, quam in longitudine progrediantur.

14. Si verum sit, Columbum ex oris Lusitaniæ, per ventos statos ab occidente, de continente in America judicium fecisse, longo certe itinere possint commeari venti.

15. Si verum sit, solutionem nivium circa Mare glaciale et Scandiam excitare aquilones in Italia et Græcia, &c. diebus canicularibus, longa certe sunt spatia.

16. Quanto citius in consecutione, in qua ventus movet, (exempli gratia, si sit eurus,) veniat tempestas ad locum aliquem ab oriente, quanto vero tardius ab occidente, nondum venit in observationem.

De motu ventorum in progressu hæc tenentur; videndum jam de undulatione ventorum.

17. Undulatio ventorum ad parva momenta fit; adeo ut centies in hora ad minus ventus (licet fortis) se suscitet, et alternatim remittat. Ex quo liqueat inæqualem esse impetum ventorum: nam nec flumina, licet rapida, nec currentes in mari, licet robusti, undulant, nisi accedente flatu ventorum: neque ipsa illa undulatio ventorum aliquid æqualitatis habet in se; nam, instar pulsas manus, aliquando intercurrit, aliquando intermittit.

18. Undulatio aëris in eo differt ab undulatione aquarum, quod in aquis, postquam fluctus sublatis fuerint in altum, sponte rursus decidunt ad planum:

ex quo fit, ut (quicquid dicant poëtae exaggerando tempestates, quod undæ attollantur in cœlum, et descendant in Tartarum) tamen descensus undarum non multum præcipitetur ultra planum et superficiem aquarum. At in undulatione aëris, ubi deest motus gravitatis, deprimitur et attollitur aër fere ex æquo.

De undulatione hactenus: jam de motu conflictus inquirendum est.

19. De conflictu ventorum et compositis currentibus jam partim inquisitum est. Plane constat ubi-quetarios esse ventos, præsertim leniores: id quod manifestum etiam ex hoc, quod pauci sunt dies aut horæ, in quibus non spirant auræ aliquæ lenes in locis liberis, idque satis inconstanter et varie. Nam venti, qui non proveniunt ex fomitibus majoribus, vagabundi sunt et volubiles, altero cum altero quasi ludente, modo impellente, modo fugiente.

20. Visum est nonnunquam in mari advenisse duos ventos simul ex contrariis partibus, id quod ex perturbatione superficiei aquæ ab utraque parte, atque tranquillitate aquæ in medio inter eos, facile erat conspiciere: postquam autem concurrissent illi venti contrarii, alias secutam esse tranquillitatem in aqua undique, cum scilicet venti se ex æquo fregissent, alias continuatam esse perturbationem aquæ, cum scilicet fortior ventus prævaluisset.

21. Certum est, in montibus Peruvianis sæpe accidere, ut venti eodem tempore super montes ex una parte spirant, in vallibus in contrarium.

22. Itidem certum apud nos, nubes in unam partem ferri, cum ventus a contraria parte flet, hic in proximo.

23. Quin et illud certum, aliquando cerni nubes altiores supervolare nubes humiliores; atque ita ut in diversas, aut etiam in contrarias partes abeant, tanquam currentibus adversis.

24. Itidem certum, quandoque in superiore aëre ventos nec distrahi, nec promoveri; cum hic infra ad semi-milliare insano ferantur impetu.

25. Certum etiam e contra, esse aliquando tranquillitatem infra, cum superne nubes ferantur satis alacriter; sed id rarius est.

Etiam in fluctibus, quandoque super-natans aqua, quandoque demersa, incitator est; quinetiam fiunt (sed raro) varii currentes aquæ, quæ volvitur supra, et quæ labitur in imo.

26. Neque prorsus contemnenda illa testimonia Virgilio, cum naturalis philosophiæ non fuerit ipse omnino imperitus:

“Una eurusque notusque ruunt, creberque procellis Africus.”—

Et rursus:

“Omnia ventorum concurrere prælia vidi.”

De motibus ventorum in natura rerum inquisitum est; videndum de motibus eorum in machinis humanis; ante omnia in velis navium.

#### MOTUS VENTORUM IN VELIS NAVIUM.

1. In navibus majoribus Britannicis (eas enim ad exemplum delegimus) quatuor sunt mali, aliquando quinque; omnes in linea recta per medium navis ducta, alteri post alteros erecti: eos sic nominabimus:

2. Malum principera, qui in medio navis est; malum proræ; malum puppis (qui aliquando est geminus); et malum rostri.

3. Habent singuli mali plures portiones, quæ sustolli, et per certos nodos aut articulos figi, et similiter auferri possunt; alii tres, alii duas tantum.

4. Malus rostri stat ab inferiori nodo inclinatus versus mare; a superiori rectus; reliqui omnes mali stant recti.

5. His malis superimpendent vela decem, et quando malus puppis geminatur, duodecim. Malus princeps et malus proræ tres habent ordines velorum. eos sic nominabimus: velum ab infra, velum a supra, et velum a summo. Reliqui habent duos tantum, carentes velo a summo.

6. Vela extenduntur in transversum, juxta verticem cujusque nodi mali, per ligna, quæ antennis vel virgas dicimus, quibus suprema velorum assuntur; imalgantur funibus ad angulos tantum; vela scilicet ab infra ad latera navis, vela a supra aut a summo ad antennis contiguas. Trahuntur etiam aut vertuntur iisdem funibus in alterutrum latus ad placitum.

7. Antenna sive virga cujusque mali in transversum porrigitur. Sed in malis puppis ex obliquo, altero fine ejus elevato, altero depresso; in cæteris in recto ad similitudinem literæ Tau.

8. Vela ab infra, quatenus ad vela principia, proræ, et rostri, sunt figuræ quadrangularis, parallelogrammæ: vela a supra et a summo nonnihil acuminata sive surgentia in arcum; at ex velis puppis quod a supra acuminatum, quod ab infra triangulare.

9. In navi, quæ erat mille et centum amphorarum, atque habebat in longitudine, in carina, pedes 112; in latitudine, in alveo, 40; velum ab infra mali principis continebat in altitudine pedes 42, in latitudine pedes 87.

10. Velum a supra ejusdem mali habebat in altitudine pedes 50, in latitudine pedes 84 ad basim, pedes 42 ad fastigium.

11. Velum a summo in altitudine pedes 27, in latitudine pedes 42 ad basim, 21 ad fastigium.

12. In malo proræ, velum ab infra habebat in altitudine pedes 40 cum dimidio, in latitudine pedes 72.

13. Velum a supra in altitudine pedes 46 cum dimidio, in latitudine pedes 69 ad basim, 36 ad fastigium.

14. Velum a summo in altitudine pedes 24, in latitudine pedes 36 ad basim, 18 ad fastigium.

15. In malo puppis, velum ab infra habebat in altitudine, a parte antennæ elevata, pedes 51; in latitudine, qua jungitur antennæ, pedes 72, reliquo desinente in acutum.

16. Velum a supra in altitudine pedes 30, in latitudine pedes 57 ad basim, 30 ad cacumen.

17. Si geminetur malus puppis in posteriore, vela minuuntur ab anteriore ad partem circiter quintam.

18. In malo rostri, velum ab infra habebat in altitudine pedes 28 cum dimidio, in latitudine pedes 60.

19. Velum a supra in altitudine pedes 25 cum dimidio, in latitudine pedes 60 ad basim, 30 ad fastigium.

20. Variant proportiones malorum et velorum, non tantum pro magnitudine navium, verum etiam pro variis earum usibus, ad quos ædificantur; ad pugnam, ad mercaturam, ad velocitatem, et cætera.

Verum nullo modo convenit proportio dimensionis velorum ad numerum amphorarum, cum navis quin-gentarum amphorarum, aut circiter, portet velum ab infra principis mali, paucos pedes minus undique, quam illa altera, quæ erat duplicis magnitudinis. Unde fit ut minores naves longe præsent celeritate majoribus, non tantum propter levitatem, sed etiam propter amplitudinem velorum, habito respectu ad corpus navis: nam proportionem illam continuare in navibus majoribus nimis vasta res esset et inhabilis.

21. Cum singula vela per summa extendantur, per ima ligentur tantum ad angulos; ventus neces-sario facit vela intumescere, præsertim versus ima, ubi sunt laxiora.

22. Longe autem major est tumor veli in velis ab infra, quam in cæteris; quia non solum parallelo-gramma sunt, cætera acuminata; verum etiam quia latitudo antennæ tanto excedit latitudinem laterum navis, ad quæ alligantur: unde necesse est, propter laxitatem, magnum dari receptum ventis; adeo ut in illa magna, quam exempli loco sumpsimus, navi tumor in vento recto possit esse ad 9 aut 10 pedes introrsum.

23. Fit etiam ob eandem causam, quod vela omnia, a vento tumefacta, ad imum colligant se in arcus, adeo ut multum venti præterlabi necesse sit; in tan-tum ut in illa, quam diximus, navi arcus ille ad sta-turam hominis accedat.

24. At in velo puppis illo triangulari, necesse est ut minor sit tumor, quam in quadrangulari; tum propter figuram minus capacem, tum quia in qua-drangulari tria latera laxa sunt, in triangulari duo tantum; unde sequitur quod ventus excipiat magis rigide.

25. Motus ventorum in velis, quo magis accedat ad rostrum navis, est fortior, et promovet magis, tum quia fit in loco ubi undæ, propter acumen proræ, facillime secantur; tum maxime quia motus a prora trahit navem, motus a puppi trudit.

26. Motus ventorum in velis superiorum ordinum promovet magis, quam in velis ordinis inferioris; quia motus violentus maxime efficax est ubi pluri-mum removetur a resistentia; ut in vectibus, et velis molendinorum. Sed periculum est demersionis aut eversionis navis; itaque et acuminata sunt illa, ne ventos nimios excipiant, et in usu præcipue cum spi-rent venti leniores.

27. Cum vela collocentur in recta linea, altera post altera, necesse est ut quæ posteriori constituan-tur, suffurentur ventum a prioribus, cum ventus flet recta: itaque si omnia simul fuerint erecta, tamen vis venti fere tantum locum habet in velis mali prin-cipis, cum parvo auxilio veli ab infra in malo rostri.

28. Felicissima et commodissima dispositio velo-rum in vento recto ea est, ut vela duo inferiora mali proræ erigantur; ibi enim (ut dictum est) motus est maxime efficax: erigatur etiam velum a supra mali principis: relinquitur enim spatium tantum subter, ut ventus sufficere possit velis prædictis proræ abs-que suffuratione notabili.

29. Propter illam, quam diximus, suffurationem ventorum, celerior est navigatio cum vento laterali, quam cum recto. Laterali enim flante, omnia vela in opere poni possunt; quia latera sibi invicem

obvertunt, nec altera altera impediunt, neque fit furtum.

30. Etiam flante vento laterali, vela rigidius in adversum venti extenduntur; quod ventum compri-mit nonnihil, et emittit in eam partem ubi flare de-bet: unde nonnihil fortitudinis acquirit. Ventus autem maxime propitius est, qui fiat in quadra inter rectum et lateralem.

31. Velum ab infra mali rostri vix unquam pos-set esse inutile, neque enim patitur furtum, quando colligat ventum, qui fiat undequaque circa latera navis et subter vela cætera.

32. Spectatur in motu ventorum in navibus tum impulsio tum directio. At directio illa, quæ fit per clavum, non multum pertinet ad inquisitionem præ-sentem, nisi quatenus habeat connexionem cum motu ventorum in velis.

Ut motus impulsio in vigore est Connexio.  
in prora, ita motus directionis in puppi;  
itaque ad eum velum ab infra mali puppis est max-imi momenti, et quasi copiam præbet auxiliarem clavo.

33. Cum pyxis nautica in plagas 32 distribuatur, adeo ut semicirculi ejus sint plagæ sedecim, potest fieri navigatio progressiva, (non angulata, quæ fieri solet in ventis plane contrariis,) etiamsi ex illis se-decim partibus decem fuerint adversæ, et sex tantum favorabiles; at ea navigatio multum pendet ex velo ab infra mali puppis: cum enim venti partes con-trariæ itineri, quia sunt præpotentes et clavo solo regi non possunt, alia vela obversuræ forent, una cum navi ipsa, in partem contrariam itineris; illud velum rigide extensum, ex opposito favens clavo et ejus motum fortificans, vertit et quasi circumfert proram in viam itineris.

34. Omnis ventus in velis nonnihil aggravat et deprimit navem; tantoque magis quo flaverit magis desuper. Itaque tempestatibus majoribus primo de-volvunt antennas et auferunt vela superiora, deinde, si opus fuerit, omnia; etiam malos ipsos incidunt; quin et projiciunt onera mercium, tormentorum, etc. ut allevent navem ad supernatandum, et præstandum obsequia undis.

35. Potest fieri per motum istum ventorum in velis navium (si ventus fuerit alacris et secundus) progressus in itinere 120 milliarium Italicorum intra spatium 24 horarum; idque in navi mercatoria; sunt enim naves quædam nunciæ, quæ ad officium celeritatis apposite extractæ sunt (quas *caruvellas* vocant) quæ etiam majora spatia vincere possunt. At cum venti plane contrarii sint, remedio ad iter promovendum utuntur hoc ultimo et pusillo: ut procedant lateraliter, prout ventus permittit, extra viam itineris, deinde flectant se versus iter, atque angulares istos progressus repellant; ex quo genere progressus (quod est minus quam ipsum serpere, nam serpentes sinuant, at illi angulos faciunt) poterint fortasse intra 24 horas vincere milliaria quindecim.

## OBSERVATIONES MAJORES.

1. Motus iste ventorum in velis navium habet im-pulsiois suæ tria præcipua capita et fontes, unde fluit; unde etiam præcepta sumi possint ad eum au-gendum et fortificandum.

2. Primus, fons est ex quanto venti qui excipitur. Nam nemini dubium esse possit, quin plus venti magis conferat quam minus. Itaque quantum ipsum venti procurandum diligenter: id fiet, si, instar patrum familias prudentiorum, et frugi simus, et a furto caveamus. Quare, quantum fieri potest, nil venti disperdatur aut effundatur, nil etiam surripiatur.

3. Ventus aut supra latera navium fiat, aut infra usque ad aream maris. Atque ut homines providi solent etiam circa minima quæque magis curare, (quia majora nemo non curare potest,) ita de istis inferioribus ventis (qui proculdubio non tantum possunt quantum superiores) primo videndum.

4. Ad ventos, qui circum latera navium et subter vela ipsarum potissimum flant, plane est officium veli ab infra mali rostri, quæ inclinata est et depressa ut excipiantur, ne fiat dispendium et jactura venti. Idque et per se prodest, et ventis, qui reliquis velis ministrant, nil obest. Circa hoc non video quid ulterius per diligentiam humanam fieri possit, nisi forte etiam ex medio navis similia vela humilia adhibeantur, instar pinnarum aut alarum, ex utroque latere gemina, cum ventus est rectus.

5. At quod ad cavendum de furto attinet, quod fit cum vela posteriora ventum ab interioribus surripiant in vento recto, (nam in laterali omnia vela cooperantur,) non video quid addi possit diligentiae humanæ; nisi, forte, ut, flante vento recto, fiat scala quædam velorum, ut posteriora vela a malo puppis sint humillima, media a malo principis mediocria, anteriora a malo proræ celsissima; ut alterum velum alterum non impediatur, sed potius adjuvet, et ventum tradat et transmittat. Atque de primo fonte impulsione hæc observata sint.

6. Secundus, fons impulsione est ex modo percussione veli per ventum; quæ, si propter ventum contractum sit acuta et rapida, movebit magis; si obtusa et languida, minus.

7. Quod ad hoc attinet, plurimum interest ut vela mediocrem extensionem et tumorem recipiant: nam si extendantur rigide, instar parietis ventum repercutiunt; si laxæ, debilis fit impulsio.

8. Circa hoc bene se expedivit in aliquibus industria humana, licet magis ex causa quam ex iudicio. Nam in vento laterali, contrahunt partem veli, quæ vento opponitur, quantum possunt; atque hoc modo ventum immittunt in eam partem, qua flare debet. Atque hoc agunt, et volunt. Sed interim hoc sequitur (quod fortasse non vident) ut ventus sit contractior, et reddat percussione magis acutam.

9. Quid addi possit industriæ humanæ in hac parte, non video; nisi mutetur figura in velis, et fiant aliqua vela non tumentia in rotundo, sed instar calcaris, aut trianguli, cum malo aut ligno in illo angulo verticis, ut et ventum magis contrahant in acutum, et secent aërem externum potentius. Ille autem angulus (ut arbitramur) non debet esse omnino acutus, sed tanquam triangulus curtatus, ut habeat latitudinem. Neque etiam novimus quid profuturum foret, si fiat tanquam velum in velo; hoc est, si in medio veli alicujus majoris sit bursa quædam, non omnino laxa ex carbaso, sed cum costis ex lignis, quæ ventum in medio veli excipiat, et cogat in acutum.

10. Tertius, fons impulsione est ex loco ubi fit percussio; isque duplex. Nam ex anteriore parte navis facilior et fortior est impulsio, quam ex posteriore; et ex superiore parte mali et veli, quam ab inferiore.

11. Neque hoc ignorasse visa est industria humana, cum et flante vento recto plurimam in velis mali proræ spem ponant; et in malaciis et tranquillitatibus vela a summo erigere non negligant. Neque nobis in præsentia occurrit, quid humanæ ex hac parte industriæ addi possit, nisi forte quoad primum, ut constituentur duo aut tres mali in prora, (medius rectus, reliqui inclinati,) quorum vela propendeant; et quoad secundum, ut amplientur vela proræ in summo, et sint minus, quam solent esse, acuminata. Sed in utroque cavendum incommodum periculi ex nimia depressione navis.

#### MOTUS VENTORUM IN ALIIS MACHINIS HUMANIS.

1. Motus molendinorum ad ventum nihil habet subtilitatis, et nihilominus non bene demonstrari et explicari solet. Vela constituentur recta in oppositum venti flantis. Prostat autem in ventum unum latus veli, alterum latus paulatim flectit se et subducit a vento. Conversio autem sive consecutio motus fit semper a latere inferiore, hoc est, eo quod remotius est a vento. At ventus superfundens se in adversum machinæ, a quatuor velis arctatur, et in quatuor intervallis viam suam inire cogitur. Eam compressionem non bene tolerat ventus; itaque necesse est ut tanquam cubito percutiat latera velorum, et proinde vertat, quemadmodum ludicra vertibula digito impelli et verti solent.

2. Quod si vela ex æquo expansa essent, dubia res esset ex qua parte foret inclinatio, ut in casu baculi; cum autem proximum latus, quod occurrit vento, impetum ejus dejiciat in latus inferius, atque illinc in spatia, cumque latus inferius ventum excipiat, tanquam palma manus, aut instar veli scaphæ, fit protinus conversio ab ea parte. Notandum autem est, originem motus esse non a prima impulsione quæ fit in fronte; sed a laterali impulsione post compressionem.

3. Probationes quasdam et experimenta circa hoc, pro augendo hoc motu, fecimus, tum ad pignus causæ recte inventæ, tum ad usum; imitamenta hujus motus effingentes in velis ex chartis, et vento ex foliis. Igitur addidimus lateri veli inferiori plicam inversam a vento, ut haberet ventus, lateralis jam factus, amplius quiddam quod percuteret; nec profuit, plica illa non tam percussione venti adjuvante, quam sectionem aëris in consequentia impediante. Locavimus post vela ad nonnullam distantiam obstacula, in latitudinem diametri omnium velorum, ut ventus magis compressus fortius percuteret; at hoc obfuit potius, repercussione motum primarium hebetante. At vela fecimus latiora in duplum, ut ventus arctaretur magis, et fieret percussio lateralis fortior: Hoc tandem magnopere successit; ut et longe mitiore flatu fieret conversio, et longe magis perniciter volveretur.

Fortasse hoc augmentum motus commodius fiet per octo vela, quam per vela quatuor, latitudine duplicata; nisi forte

nimia moles aggravaverit motum. De hoc fiat experimentum.

**Mandatum.** Etiam longitudo velorum facit ad motum. Nam in rotationibus levis violentia versus circumferentiam æquiparatur longe majori versus centrum. Sed tamen hoc conjungitur incommodum, quod quo longiora sunt vela, eo plus distant in summo, et minus arctatur ventus. Res non male fortasse se habeat, si vela sint paulo longiora, sed crescentia in latum circa summitatem, ut palma remi: sed de hoc nobis compertum non est.

**Monitum.** In his experimentis, si ponantur in usu ad molendina, robori totius machinæ, præcipue fundamentis ejus, subveniendum. Nam quanto magis arctatur ventus, tanto magis (licet motum velorum incitet) tamen machinam ipsam concutit.

4. Traditur alicubi esse rhedas moventes ad ventum; de hoc diligentius inquiratur.

**Mandatum.** Rhedæ moventes ad ventum non poterunt esse operæ pretium, nisi in locis apertis et planitiebus. Præterea quid fiet, si decubuerit ventus? Magis sobria esset cogitatio de facilitando motu curruum et plaustrorum per vela mobilia, ut equi vel boves minoribus viribus ea traherent, quam de creando motu per ventum solum.

#### PROGNOSTICA VENTORUM.

Divinatio quo magis pollui solet vanitate et superstitione, eo purior pars ejus magis recipienda et colenda. Naturalis vero divinatio aliquando certior est, aliquando magis in lubrico, prout subjectum se habet, circa quod versatur: quod si fuerit naturæ constantis et regularis, certam efficit prædictionem; si variæ et compositæ, tanquam ex natura et casu, fallacem.

Attamen etiam in subjecto vario, si diligenter canonizetur, tenebit prædictio ut plurimum; temporis forte momenta non assequetur, a re non multum errabit. Quin etiam quoad tempora eventus et complementi, nonnullæ prædictiones satis certo collimant, eæ videlicet, quæ sumuntur non a causis, verum ab ipsa re jam inchoata, sed citius se prodente in materia proclivi, et aptius disposita, quam in alia; ut in topicis circa hunc 32<sup>um</sup> articulum superius diximus. Prognostica igitur ventorum jam proponemus, miscentes nonnihil necessario de prognosticis pluviarum et serenitatis, quæ bene distrahi non poterant; sed justam de illis inquisitionem propriis titulis remittentes.

1. Sol, si oriens cernatur concavus, dabit eo ipso die ventos aut imbres; si appareat tanquam leviter excavatus, ventos; si cavus in profundo, imbres.

2. Si sol oriatur pallidus et (ut nos loquimur) aqueus, denotat pluviam; si occidat pallidus, ventum.

3. Si corpus ipsum solis in occasu cernatur tanquam sanguineum, præmonstrat magnos ventos in plures dies.

4. Si in exortu solis radii ejus spectantur rutili, non flavi, denotat pluvias potius quam ventos; idemque, si tales appareant in occasu.

5. Si in ortu aut occasu solis spectantur radii

ejus tanquam contracti aut curtati, neque eminentes illustres, licet nubes absint, significat imbres potius quam ventos.

6. Si ante ortum solis ostendent se radii præcursores, et ventum denotat et imbres.

7. Si in exortu solis porrigat sol radios e nubibus, medio solis manente cooperto nubibus, significabit pluviam; maxime si erumpant radii illi deorsum, ut sol cernatur tanquam barbatus: quod si radii erumpant e medio, aut sparsim, orbe exteriori cooperto nubibus, magnas dabit tempestates et ventorum et imbrum.

8. Si sol oriens cingitur circulo, a qua parte is circulus se aperuerit, expectetur ventus; sin totus circulus æqualiter defluerit, dabit serenitatem.

9. Si sub occasum solis appareat circa eum circulus candidus, levem denotat tempestatem eadem nocte; si ater, aut subfuscus, ventum magnum in diem sequentem.

10. Si nubes rubescant ex oriente sole, prædicunt ventum; si occidente, serenum in posterum.

11. Si sub exortum solis globabunt se nubes prope solem, denunciant eodem die tempestatem asperam; quod si ab ortu repellantur, et ad occasum abibunt, serenitatem.

12. Si in exortu solis dispergantur nubes a lateribus solis, aliæ petentes austrum, aliæ septentrionem; licet sit cælum serenum circa ipsum solem, præmonstrat ventos.

13. Si sol sub nube condatur occidens, pluviam denotat in posterum diem; quod si plane pluet occidente sole, ventos potius; sin nubes videantur quasi trahi versus solem, et ventos et tempestatem.

14. Si nubes, ex oriente sole, videantur non ambire solem, sed incumbere ei desuper, tanquam eclipsim facturæ, portendunt ventos ex ea parte orituros, quæ illæ nubes inclinaverint. Quod si hoc faciant meridie, et venti fient et imbres.

15. Si nubes solem circumcluserint, quanto minus luminis relinquetur, et magis pusillus apparebit orbis solis, tanto turbidior erit tempestatem: si vero duplex aut triplex orbis erit, ut appareant tanquam duo aut tres soles, tanto erit tempestatem atrocior per plures dies.

16. Novilunia dispositionum aëris significativa sunt; sed magis adhuc ortus quartus, tanquam novilunium confirmatum. Plenilunia autem ipsa præsagiunt magis, quam dies aliqui ab ipsis.

17. Diuturna observatione quinta luna suspecta est nautis, ob tempestates.

18. Si luna a novilunio ante diem quartum non apparuerit, turbidum aërem per totum mensem prædicat.

19. Si luna nascens, aut intra primos dies, cornu habuerit inferius magis obscurum aut fuscum, aut quovis modo non purum; dies turbidos et tempestates dabit ante plenilunium: si circa medium fuerit decolor, circa ipsum plenilunium sequentur tempestates; si cornu superius hoc patiat, circa lunam decreascentem.

20. Si ortu in quarto pura ibit luna per cælum, nec cornibus obtusis, neque prorsus jacens, neque prorsus recta, sed mediocris; serenitatem promittit majore ex parte usque ad novilunium.

21. Si in ortu illo rubicunda fuerit, ventos portendit; si rubiginosa aut obatra, pluvias; sed nil horum significat ultra plenilunium.

22. Recta luna semper fere minax est et infesta, potissimum autem denunciatur ventos; at si appareat cornibus obtusis et curtatis, imbres potius.

23. Si alterum cornu lunæ magis acuminatum fuerit et rigidum, altero magis obtuso, ventos potius significat; si utrumque, pluviam.

24. Si circulus aut halo circa lunam appareat, pluviam potius significat quam ventos; nisi stet recta luna intra eum circum, tum vero utrumque.

25. Circuli circa lunam ventos semper denotant ex parte qua ruperint; etiam splendor illustris circuli in aliqua parte, ventos ex ea parte qua splendet.

26. Circuli circa lunam, si fuerint duplices aut triplices, præmonstrant horridas et asperas tempestates; at multo magis, si illi circuli non fuerint integri, sed maculosi et interstincti.

27. Plenilunia, quoad colores et halones, eadem forte denotant, quæ ortus quartus; sed magis præsentia, nec tam procrastinata.

28. Plenilunia solent esse magis serena quam cæteræ ætates lunæ; sed eadem, hieme, quandoque intensiora dant frigora.

29. Luna sub occasum solis ampliata, et tamen luminosa, nec subfusca, serenitatem portat in plures dies.

30. Eclipses lunæ quasi semper comitantur venti; solis, serenitas; pluviae raro alterutrum.

31. A conjunctionibus reliquis planetarum præter solem expectabis ventos, et ante et post; a conjunctionibus cum sole, serenitatem.

32. In exortu pleiadum et hyadum sequuntur imbres et pluviae, sed tranquillæ; in exortu orionis et arcturi, tempestates.

33. Stellæ (ut loquimur) discurrentes et sagittantes protinus ventos indicant ex ea parte, unde vibrantur. Quod si ex variis aut etiam contrariis partibus volitent, magnas tempestates et ventorum et imbrum.

34. Cum non conspiciantur stellæ minusculæ, quales sunt quas vocant asellos, idque fit ubique per totum cælum, magnas præmonstrat tempestates et imbres intra aliquot dies: quod si alicubi stellæ minutæ obscurentur, alicubi sint claræ, ventos tantum, sed citius.

35. Cælum æqualiter splendens in noviluniis, aut ortu quarto, serenitatem dabit per plures dies; æqualiter obscurum, imbres; inæqualiter, ventos, ab ea parte qua cernitur obscuratio. Quod si subito fiat obscuratio sine nube aut caligine, quæ fulgorem stellarum perstringat, graves et asperæ instant tempestates.

36. Si planetarum aut stellarum majorum aliquam incluserit circulus integer, imbres prædicit; si fractus, ventos ad eas partes, ubi circulus deficit.

37. Cum tonat vehementius quam fulgurat, ventos dabit magnos; sin crebro inter tonandum fulserit, imbres confertos et grandibus guttis.

38. Tonitrua matutina ventos significant; meridiana imbres.

39. Tonitrua mugientia, et veluti transeuntia, ventos significant; at quæ inæquales habent fragores et acutos, procellas, tam ventorum quam imbrum.

40. Cum cælo sereno fulguraverit, non longe absunt venti et imbres ab ea parte, qua fulgurat; quod si ex diversis partibus cæli fulguraverit, sequuntur atroces et horridæ tempestates.

41. Si fulguraverit a plagis cæli gelidioribus, septentrione et aquilone, sequuntur grandines; si a tepidioribus, austro et zephyro, imbres cum cælo æstuoso.

42. Magni fervores post solstitium æstivale desinunt plerumque in tonitru et fulgura; quæ si non sequantur, desinunt in ventos et pluvias per plures dies.

43. Globus flammæ, quem Castorem vocabant antiqui, qui cernitur navigantibus in mari, si fuerit unicus, atrocem tempestatem prænnunciat, (Castor scilicet est frater intermortuus,) at multo magis, si non hæserit malo, sed volvatur aut saltet; quod si fuerint gemini, (præsentem scilicet Polluce fratre vivo,) idque tempestate adulta, salutare signum habetur: sin fuerint tres (superveniente scilicet Helena, peste rerum) magis dira incumbet tempestas: videtur sane unicus, crudam significare materiam tempestatis; duplex, quasi coctam et maturam; triplex vel multiplex, copiam ægre dissipabilem.

44. Si conspiciantur nubes ferri incitatus cælo sereno, expectentur venti ab ea parte, a qua feruntur nubes. Quod si globabuntur et glomerabunt simul, cum sol appropinquaverit ad eam partem, in qua globantur, incipient discuti; quod si discutientur magis versus boream, significat ventum; si versus austrum, pluvias.

45. Si occidente sole nubes orientur atræ aut fuscæ, imbre significat: si adversus solem, in oriente scilicet, eadem nocte; si juxta solem ab occidente, in posterum diem, cum ventis.

46. Liquidatio, sive disserenatio cæli nubili, incipiens in contrarium venti, qui fiat, serenitatem significat; sed a parte venti, nihil indicat, sed incerta res est.

47. Conspiciuntur quandoque plures, veluti cameræ aut contignationes nubium, altera supra alteras, (ut aliquando quinque simul se videsse, et notasse affirmet Gilbertus,) et semper atrores sunt infimæ, licet quandoque secus appareat, quia candidiores visum magis lacessunt. Duplex contignatio, si sit spissior, pluvias denotat instantes (præsertim si nubes inferior cernatur quasi gravida); plures contignationes perendinant pluvias.

48. Nubes, si ut vellera lanæ spargantur, hinc inde tempestates denotant; quod si, instar squamarum aut testarum, altera alteri incumbat, siccitatem et serenitatem.

49. Nubes plumatæ et similes ramis palmæ, aut floribus iridis, imbres protinus, non ita multo post, denunciant.

50. Cum montes et colles conspiciantur veluti pileati, incumbentibus in illos nubibus, eosque circumamplectentibus, tempestates præmonstrant imminentes.

51. Nubes electricæ et auræ ante occasum solis, et tanquam cum fimbriis deauratis, postquam sol magis condi cœperit, serenitates præmonstrant.

52. Nubes luteæ, et tanquam cœnosæ, significant imbrem cum vento instare.

53. Nubecula aliqua non ante visa subito se monstrans, cœlo circum sereno, præsertim ab occidente aut circa meridiem, tempestatem indicat ingruentem.

54. Nebulæ et caligines ascendentes, et sursum se recipientes, pluvias; et si subito hoc fiat, ut tanquam sorbeantur, ventos prædicunt; at cadentes et in valibus residentes, serenitatem.

55. Nube grava candidante, quam vocant antiqui tempestatem albam, sequitur, æstate, grando minuta instar confituræ; hieme, nix.

56. Autumnus serenus ventosam hiemem præmonstrat; ventosa hiems, ver pluviosum; ver pluviosum, æstatem serenam; serena æstas, autumnum ventosum. Ita ut annus (ut proverbio dicitur) sibi debitor raro sit; neque eadem series tempestatum redeat per duos annos simul.

57. Ignes in focis pallidiores solito, atque intra se murmurantes, tempestates nunciant: quod si flamma flexuose volitet et sinuet, ventum præcipue: at fungi, sive tuberes in lucernis, pluvias potius.

58. Carbones clarius perlucetes, ventum significant; etiam cum favillas ex se citius discutiant et deponunt.

59. Mare cum conspicitur in portu tranquillum in superficie, et nihilominus intra se murmuraverit, licet non intumuerit, ventum prædicat.

60. Littora in tranquillo resonantia, marisque ipsius sonitus cum plangore aut quadam echo clarius et longius solito auditus, ventos prænunciant.

61. Si in tranquillo et plana superficie maris conspiciantur spumæ hinc inde, aut coronæ albæ, aut aquarum bullæ, ventos prædicunt; et si hæc signa fuerint insigniora, asperas tempestates.

62. In mari fluctibus agitato si appareant spumæ coruscantes, (quas pulmones marinos vocant,) prænunciant duraturam tempestatem in plures dies.

63. Si mare silentio intumescat, et intra portum altius solito insurgat, aut æstus ad littora celerius solito accedat, ventos prænunciat.

64. Sonitus a montibus, nemorumque murmur increbrescens, atque fragor etiam nonnullus in campetribus, ventos portendit. Cœli quoque murmur prodigiosum absque tonitru, ad ventos maxime spectat.

65. Folia et paleæ ludentes sine aura, quæ sentiatur, et lanugines plantarum volitantes, plumæque in aquis innatantes et colludentes, ventos adesse nunciant.

66. Aves aquaticæ concursantes et gregatim volantes, mergique præcipue et fulicæ a mari aut stagnis fugientes, et ad littora aut ripas properantes, præsertim cum clangore, et ludentes in sicco, ventos prænunciant, maxime si hoc faciant mane.

67. At terrestres volucres contra, aquam petentes, eamque alis percutientes, et clangores dantes, et se perfundentes; ac præcipue cornix, tempestates portendunt.

68. Mergi anatesque ante ventum pennas rostro purgant; at anseres clangore suo importuno pluviam invocant.

69. Ardea petens excelsa, adeo ut nubem quandoque humilem supervolare conspiciatur, ventum significat. At milvi contra, in sublimi volantes, serenitatem.

70. Covi singultu quodam latrantes, si continua-

bunt, ventos denotant; si vero carptim vocem resorbent, aut per intervalla longiora crocitant, imbres.

71. Noctua garrula putabatur ab antiquis mutationem tempestatum præmonstrare; si in sereno, imbres; si in nubilo, serenitatem; at apud nos, noctua, clare et libenter ululans, serenitates plerumque indicat, præcipue hieme.

72. Aves in arboribus habitantes, si in nidos suos sedulo fugitent et a pabulo citius recedant, tempestates præmonstrant; ardea vero in arena stans tristis, aut corvus spatians, imbres tantum.

73. Delphini tranquillo mari lascivientes flatum existimantur prædicere, ex qua veniunt parte; at turbato ludentes et aquam spargentes, contra, serenitatem: at plerique piscium in summo natantes, aut quandoque exilientes, pluviam significant.

74. Ingruente vento, sues ita terrentur, et turbantur, et incomposite agunt, ut rustici dicant illud solum animal videre ventum, specie scilicet horrendum.

75. Paulo ante ventum araneæ sedulo laborant, et nent, ac si provide præoccuparent, quia vento flante nare nequeunt.

76. Ante pluviam campanarum sonitus auditur magis ex longinquo; at ante ventum, auditur magis inæqualiter, accedens et recedens, quemadmodum fit vento manifesto flante.

77. Trifolium inhorrescere, et folia contra tempestatem subrigere, pro certo ponit Plinius.

78. Idem ait vasa, in quibus esculenta reponuntur, quandoque sudorem in repositoriis relinquere, idque diras tempestates prænunciare.

Cum pluvia et venti habeant materiam fere communem; cumque

ventum semper præcedat nonnulla condensatio aëris, ex aëre noviter facto intra veterem recepto, ut ex plangoribus littorum, et excelso volatu ardæ et aliis patet; cumque pluviam similiter præcedat aëris condensatio, (sed aër in pluvia postea contrahitur magis, in ventis contra excrecit,) necesse est, ut pluvie habeant complura prognostica cum ventis communia. De iis consule prognostica pluviarum, sub titulo suo.

#### IMITAMENTA VENTORUM.

Si animum homines inducere possent, ut contemplationes suas in subjecto sibi proposito non nimium figerent, et cætera

Ad Art. 33.  
Connexio.

tanquam parerga rejicerent; nec circa ipsum subjectum in infinitum, et plerumque inutiliter subtilizarent; haudquaquam talis, qualis solet, occuparet ipsos stupor, sed transferendo cogitationes suas, et discurrendo, plurima invenirent in long inquoquæ prope latent. Itaque ut in jure civili, ita in jure naturæ, procedendum animo sagaci ad similia et conformia.

1. Folles apud homines Æoli utres sunt: unde ventum quis promere possit, pro modulo nostro. Etiam interstitia et fauces montium, et ædificiorum anfractus, non alia sunt quam folles majores. In usu autem sunt folles præcipue, aut ad excitationem flammarum, aut ad organa musica. Folium autem ratio est, ut sugant aërem propter rationem vacui, (ut loquuntur,) et emittant per compressionem.

2. Etiam flabellis utimur manualibus ad facien-

dam ventum et refrigeria, impellendo solummodo aërem leniter.

3. De cœnaculorum æstivorum refrigeriis quædam posuimus in responso ad artic. 9<sup>m</sup>. Possunt inveniri alii modi magis accurati, præsertim si, folium modo, alicubi attrahatur aër, alicubi emittatur. Sed ea, quæ jam in usu sunt, ad simplicem compressionem tantum referuntur.

4. Flatus in microcosmo et animalibus cum ventis in mundo majore optime conveniunt; nam et ex humore gignuntur, et cum humore alternant, ut faciunt venti et pluvie; et a calore fortiore dissipantur et perspirant. Ab illis autem transferenda est certe ea observatio ad ventos; quod scilicet gignantur flatus ex materia quæ dat vaporem tenacem, nec facile resolvablem; ut fabæ, et legumina, et fructus; quod etiam eodem modo se habet in ventis majoribus.

5. In destillatione vitrioli et aliorum fossilium, quæ sunt magis flutuosa, opus est receptaculis valde capacibus, et amplis, alioqui effringentur.

6. Ventus factus ex nitro commisto in pulvere pyrio, erumpens, et inflans flammam, ventos in universo (exceptis fulminosis) non tantum imitatur, sed exsuperat.

7. Hujus autem vires premuntur in machinis humanis, ut in bombardis, et cuniculis, et domibus pulverariis incensis; utrum autem, si in aëre aperto magna pulveris pyrii moles incensa esset, ventum ex aëris commotione, etiam ad plures horas, excitatura esset, nondum venit in experimentum.

8. Latet spiritus flutuosus et expansivus in argento vivo, adeo ut pulverum pyrium (ut quidam volunt) imitetur, et parum ex eo, pulveri pyrio admistum, eum reddat fortiozem. Etiam de auro loquantur chemistæ, quod periculose, et fere tonitruum modo, in quibusdam præparationibus erumpat; sed de his mihi non compertum est.

#### OBSERVATIO MAJOR.

Motus ventorum, tanquam in speculo, spectatur in motibus aquarum quoque plurima.

Venti magni sunt inundationes aëris, quales conspiciuntur inundationes aquarum; utraque ex aucto quanto. Quemadmodum aquæ aut descendunt ex alto, aut emanant e terra; ita et ventorum nonnulli sunt dejecti, nonnulli exsurgunt. Quemadmodum nonnunquam intra amnes sunt contrarii motus; unus fluxus maris, alter cursus amnis; et nihilominus unicus efficitur motus, prævalente fluxu maris: ita et flantibus ventis contrariis, major in ordinem rediget minorem. Quemadmodum in currentibus maris, et quorundam amnium, aliquando evenit, ut gurges in summitate aquæ in contrarium vergat gurgiti in profundo: ita et in aëre, flantibus simul contrariis ventis, alter alterum supervolat. Quemadmodum sunt cataractæ pluviarum in spatio angusto; similiter et turbine ventorum. Quemadmodum aquæ, utcumque progrediantur, tamen si perturbatæ fuerint, interim undulant, modo ascendentes et cumulatæ, modo descendentes et sulcatæ; similiter faciunt et venti, nisi quod absit motus gravitatis. Sunt et aliæ similitudines, quæ ex iis, quæ inquisita sunt, notari possunt.

#### CANONES MOBILES DE VENTIS.

Canones aut particulares sunt aut generales; utriusque mobiles apud nos. Connexio. Nil enim adhuc pronunciamus. At particulares ex singulis fere articulis possunt decerpi aut exprimi; generales, eosque paucos, ipsi jam excerpemus et subjungemus.

1. Ventus non est aliud quippiam ab aëre moto, sed ipse aër motus; aut per impulsionem simplicem, aut per immistionem vaporum.

2. Venti per impulsionem aëris simplicem sunt quatuor modis: aut per motum aëris naturalem, aut per expansionem aëris in viis solis, aut per receptionem aëris ex frigore subitaneo, aut per compressionem aëris per corpora externa.

Possit esse et quintus modus, per agitationem et concussionem aëris ab astris: sed sileant paulisper hujusmodi res, aut audiantur parca fide.

3. Ventorum qui fiunt per immistionem vaporum præcipua causa est superoneratio aëris per aërem noviter factum ex vaporibus; unde moles aëris excrevit, et nova spatia quærit.

4. Quantum non magnum aëris superadditi magnum ciet tumorem in aëre circumquaque; ita ut aër ille novus ex resolutione vaporum plus conferat ad motum quam ad materiam; corpus autem magnum venti consistit ex aëre priore: neque aër novus aërem veterem ante se agit, ac si corpora separata essent; sed utraque commixta ampliozem locum desiderant.

5. Quando aliud concurret principium motus præter ipsam superonerationem aëris, accessorium quippiam est illud, et principale fortificat et auget; unde fit, ut venti magni et impetuosissimi raro orientur ex superonerationem aëris simplici.

6. Quatuor sunt accessoria ad superonerationem aëris: exspiratio e subterraneis; dejectio ex media regione aëris (quam vocant); dissipatio ex nube facta; et mobilitas atque acrimonia exhalationis ipsius.

7. Motus venti quasi semper lateralis est; verum is qui fit per superonerationem simplicem, usque a principio; is qui fit per exspirationem e terra, aut repercussionem ab alto, non multo post; nisi eruptio, aut præcipitium, aut reverberatio, fuerint admodum violenta.

8. Aër nonnullam compressionem tolerat, antequam superonerationem percipiat et aërem contiguum impellat; ex quo fit, ut omnes venti sint paulo densiores quam aër quietus.

9. Sedantur venti quinque modis: aut coëntibus vaporibus, aut incorporatis, aut sublimatis, aut transvectis, aut destitutis.

10. Coënt vapores, atque adeo ipse aër in pluviam, quatuor modis: aut per copiam aggravantem, aut per frigora condensantia, aut per ventos contrarios compellentes, aut per obices repercuentes.

11. Tam vapores, quam exhalationes, materia ventorum sunt. Etenim ex exhalationibus nunquam pluvia, ex vaporibus sæpissime venti. At illud interest, quod facti venti ex vaporibus facilius se incorporant aëri puro, et citius sedantur, nec sint, tam obstinati, quam illi ex halitibus.

12. Modus, et diversæ conditiones caloris, non

minus possunt in generatione ventorum, quam copia, aut conditiones materiæ.

13. Solis calor in generatione ventorum ita proportionatus esse debet, ut eos excitet, sed non tanta copia, ut coëant in pluviam; nec tanta paucitate, ut prorsus discutiantur et dissipentur.

14. Venti spirant ex parte fomitem suorum; cumque fomites varie disponantur, diversi venti in plurimum simul spirant: sed fortior debiliorem aut obruit, aut flectit in currentem suum.

15. Ubique generantur venti ab ipsa terræ superficie usque ad frigidam regionem aëris; sed frequentiores in proximo, fortiores in sublimi.

16. Regiones, quæ habent ventos assecclas ex tepidis, sunt calidiores quam pro ratione climatis sui; quæ ex gelidis, frigidiores.

CHARTA HUMANA; SIVE OPTATIVA CUM PROXIMIS, CIRCA VENTOS.

Optativa. 1. *Vela navium ita componere et disponere, ut minore flatu majorem conficiant viam; res insigniter utilis ad compendia itinerum per mare, et parcendum impensis.*

Proximum. Proximum non occurrit adhuc inventum, præcise in practica. Sed consule de eo observationes majores super articulum 26<sup>um</sup>.

Optativa. 2. *Molendina ad ventum et vela ipsorum ita fabricari, ut minore flatu plus molant; res utilis ad lucrum.*

Proximum. Consule de hoc experimenta nostra in responso ad articulum 27<sup>um</sup>, ubi videtur res quasi peracta.

Optativa. 3. *Ventos orituros et occasuros, et tempora ipsorum prænosceri; res utilis ad navigationes et agriculturam; maxime autem ad electiones temporum ad prælia navalia.*

Proximum. Huc multa pertinent eorum quæ in inquisitione, præsertim in responso ad articulum 32<sup>um</sup>, notata sunt. At observatio in posterum diligentior, (si quibus ea cordi erit,) patecente jam causa ventorum, longe exactiora prognostica præstabit.

Optativa. 4. *Judicium et prognostica facere per ventos de aliis rebus; veluti primo, si sint continentes aut insulæ in mari in aliquo loco, vel potius mare liberum; res utilis ad navigationes novas et incognitas.*

Proximum est, observatio circa ventos statos; id quo usus videtur Columbus. Proximum.

5. *Itidem de ubertate aut caritate fructuum et segetum annis singulis: res utilis ad lucrum, et venditiones anticipantes et coëmptiones, ut proditum est de Thalete circa monopolium olivarum.* Optativa.

Huc pertinent nonnulla in inquisitione posita de ventis, aut malignis, aut decussivis et temporibus quando nocent, ad articulum 29<sup>um</sup>. Proximum.

6. *Itidem de morbis et pestilentis annis singulis; res utilis ad existimationem medicorum si illa prædicere possint; etiam ad causas et curas morborum, et nonnulla alia civilia.* Optativa.

Huc pertinent etiam nonnulla in inquisitione posita, ad articulum 30<sup>um</sup>. Proximum.

De prædictionibus ex ventis, circa segetes, fructus, et morbos, consule historias agriculturæ et medicinæ. Monitum.

7. *Ventos excitare et sedare.* Optativa.

De his habentur quædam superstitiosa et magica, quæ non videntur digna, quæ in Historiam naturalem seriam et severam recipiantur. Neque occurrit nobis aliquid proximum in hoc genere. Designatio ea esse poterit, ut natura aëris penitus introspectiatur et inquiratur; si possit inveniri aliquid, quod, in quantitate non magna in aërem immisum, possit excitare et multiplicare motum ad dilatationem aut contractionem in corpore aëris: ex hoc etenim (si fieri possit) sequentur excitationes et sedationes ventorum; quale est illud experimentum Plinii de aceto injecto in occursum turbinis, si verum foret. Altera designatio possit esse per emissionem ventorum ex subterraneis, si congregentur alicubi in magna copia; quale est illud receptum de puteo in Dalmatia; verum et loca hujusmodi carcerum nosse difficile. Proximum.

8. *Complura ludicra et mira per motum ventorum efficere.* Optativa.

De his cogitationem suscipere nobis non est otium. Proximum est illud vulgatum duellorum ad ventum: proculdubio multa ejusmodi jucunda reperiri possunt, et ad motus et ad sonos. Proximum.

# HISTORIA DENSIS ET RARI;

NECNON

## COITIONIS ET EXPANSIONIS MATERIÆ PER SPATIA.

### ADITUS.

NIL mirum, si natura philosophiæ et scientiis debitor sit, cum ad reddendas rationes nunquam adhuc sit interpellata. Neque enim de quanto materiæ, et quomodo illud per corpora sit distributum (in aliis copiose, in aliis parce) instituta est inquisitio diligens et dispensatoria, secundum veros aut proximos veris calculos. Illud recte receptum est, "Nil deperdi aut addi summæ universali:" etiam tractatus est a nonnullis ille locus, "quomodo corpora laxari possint et contrahi, absque vacuo intermisto, secundum plus et minus." Densi autem et rari naturas alius ad copiam et paucitatem materiæ retulit, alius hoc ipsum elusit; plerique auctorem suum secuti, rem totam per frigidam illam distinctionem actus et potentiæ discutunt et componunt. Etiam qui illa materiæ rationibus attribuant (quæ vera est sententia) neque materiam primam quanto plane spoliata, licet ad alias formas æquam, volunt; tamen in hoc ipso inquisitionem terminant, ulterius nihil quærent, neque quid inde sequatur perspiciunt; remque, quæ ad infinita spectat, et naturalis philosophiæ veluti basis est, aut non attingunt, aut non urgent.

Primo igitur, quod bene positum est, non movendum: non scilicet fieri in aliqua transmutatione corporum transactionem aut a nihilo, aut ad nihilum; sed opera esse ejusdem omnipotentis, creare ex nihilo, et redigere in nihilum: ex cursu naturæ vero hoc nunquam fieri. Itaque summa materiæ totalis semper constat; *nil additur, nil minuitur*: at istam summam inter corpora per portiones dividi, nemini dubium esse possit. Neque enim quisquam subtilitatibus abstractis tam dementatus esse queat, ut existimet tantum materiæ inesse dolio aquæ, quantum decem dolia aquæ; neque similiter dolio aëris, quantum decem dolia aëris. At in corpore eodem non dubitatur, quin copia materiæ multiplicetur pro mensura corporis: in corporibus diversis ambigitur. Quod si demonstraretur, unum dolium aquæ in aërem versum, decem dare dolia aëris, (istam enim computationem propter opinionem receptam sumimus, licet centupla verior sit,) bene habet: etenim jam non amplius sunt diversa corpora, aqua et aër, sed idem corpus aëris in decem dolia. At unum dolium aëris (ut modo concessum est) decima tantum pars est decem doliorum.

Itaque resisti jam non potest, quin in uno dolio aquæ decuplo plus sit materiæ, quam in uno dolio

aëris. Itaque, si quis asserat dolium aquæ totum in dolium aëris unicum verti posse, idem prorsus est ac si asserat aliquid posse redigi ad nihilum. Etenim una decima aquæ ad hoc sufficit, reliquæ novem partes necesse est ut annihilentur. Contra, si quis asserat dolium aëris in dolium aquæ verti posse, idem est ac si asserat aliquid posse creari ex nihilo. Etenim dolium aëris, nisi ad decimam partem dolii aquæ attinget, reliquæ novem partes necesse est ut fiant ex nihilo. Illud interim plane confitemur de rationibus, et calculis, et quota parte quanti materiæ, quæ diversis corporibus subest, et qua industria et sagacitate de illis informatio vera capi possit, arduum inquisitionem esse; quam tamen ingens et latissime fusa utilitas compenset. Nam et densitates et raritates corporum nosse, et multo magis condensationes et rarefactiones procurare et efficere, maxime interest et contemplativæ et practicæ. Cum igitur sit res (si qua alia) plane fundamentalis et catholica, accincti debemus ad eam accedere; quandoquidem omnis philosophia absque ea penitus discincta et dissoluta sit.

MODUS EXPERIMENTI CIRCA TABULAM SUPRASCRIPTAM.

INTELLIGUNTUR pondera, quibus usi sumus, ejus generis et computationis, quibus aurifabri utuntur; ut libra capiat uncias 12, uncia 20 denarios, denarius grana 24. Delegimus autem corpus auri puri, ad cujus exporrectionis mensuram reliquorum corporum rationes applicaremus, non tantum quia gravissimum, sed quia maxime unum et sui simile, nihil habens ex volatili. Experimentum fuit tale: unciam auri puri in figuram aleæ sive cubi efformavimus; dein situlam parvam, quadratam, ex argento paravimus, quæ cubum auri caperet, atque ei exacte conveniret; nisi quod situla esset nonnihil altior; ita tamen ut locus intra situlam, quo cubus ille auri ascenderat, linea conspicua signaretur. Id fecimus liquorum et pulverum gratia; ut cum liquor aliquis intra eandem situlam immittendus esset, non diffunderet, sed paulo interioris se contineret. Simul autem aliam situlam fieri fecimus, quæ cum altera illa, pondere et contento, prorsus par esset; ut in pari situla corporis contenti tantum ratio appareret. Tum cubos ejusdem magnitudinis sive dimensii fieri fecimus, in omnibus materiis in tabula specificatis, quæ sectionem pati possent; liquoribus vero ex tempore usi sumus, implendo scilicet situlam, quousque liquor ad locum illum linea signatum ascenderet: pulveribus eodem modo. Sed intelligantur pulveres maxime et fortiter compressi. Hoc enim potissimum ad æquationem pertinet, nec casum recipit. Itaque non alia fuit probatio, quam ut una ex situlis vacua in una lance, altera cum corpore in altera lance poneretur; et ratio ponderis corporis contenti per se exciperetur. Quanto vero pondus corporis pondere auri est minus, tanto exporrectio corporis est exporrectione auri major. Exempli gratia, cum auri ille cubus det unciam unam, myrrhæ vero denarium unum; liquet, exporrectionem myrrhæ ad exporrectionem auri habere rationem vicequam: ut vicies plus materiæ sit in auro quam in myrrhæ, in

simili spatio; rursus, vicies plus exporrectionis sit in myrrhæ quam in auro, in simili pondere.

1. Parvitas vasia, quo usi sumus, et Monita.  
forma etiam, (licet ad cubos illos recipiendos habilis et apta,) ad rationes exquisitas verificandas minus propria fuit. Nam nec minutias infragrani quadrantem facile excipere licebat; nec quadrata illa superficies in parvo, nec sensibili ascensu, sive altitudine, notabilem ponderis differentiam trahere potuit: contra quam fit in vasis in acutum surgentibus.

2. Minime dubium est, etiam complura corpora, quæ in tabula ponuntur, intra suam speciem magis et minus recipere, quoad pondera et spatia; nam et vina, et ligna ejusdem speciei, et nonnulla e reliquis, sunt certe alia aliis graviora. Itaque quoad calculationem exquisitam, casum quendam ista res recipit; neque ea individua, in quæ experimentum nostrum incidit, naturam speciei exacte referre, neque cum aliorum experimentis fortasse omnino in minimis consentire possunt.

3. In tabulam superiorem coniecimus ea corpora, quæ spatium sive mensuram commode implere, corpore integro et tanquam similari, possent; quæque etiam pondus habeant, ex cujus rationibus de materiæ coacervatione judicium fecimus. Itaque tria genera corporum huc retrahi non poterant; primo, ea quæ dimensionibus cubicæ satisfacere non poterant: ut folia, flores, pelliculæ, membranæ: secundo, corpora inæqualiter cava et porosa; ut spongia, suber, vellera: tertio, pneumatica, quia pondere non dotantur; ut aër, flamma.

4. Videndum, num forte contractio corporis arctior ex vi unita nanciscatur majorem rationem ponderis, quam pro quantitate materiæ. Id, utrum fiat necne, ex historia propria ponderis inquiretur. Quod si fiat, fallit certe supputatio: et quo corpora sunt tenuiora, eo paulo plus habent materiæ in simili exporrectione, quam pro calculo ponderis et mensuræ quæ ex eo pendet.

5. Hanc tabulam multis abhinc annis confeci, atque (ut memini) bona usus diligentia. Verum possit proculdubio tabula multo exactior componi; videlicet, tum ex pluribus, tum ampliore quapiam mensura; id quod ad exactas rationes plurimum facit; et omnino paranda est, cum res sit ex fundamentalibus.

1. Licet, atque adeo juvat, animo Observationes.  
prospicere, quam finita et comprehensibilis sit natura rerum in tangibilibus. Tabula enim naturam claudit tanquam in pugno. Nemo itaque expatiatur, nemo fingat aut somniet. Non invenitur in tabula ens, quod aliud ens in copia materiæ superet, ultra proportionem tricesimam duplam: tanto enim superat aurum lignum abietis. De interioribus autem terræ nihil decernimus; cum nec sensui nec experimento subjiciantur. Illa, cum a calore cælestium primo longius, deinde penitus, semota sint, possint esse corporibus nobis notis densiora.

2. Opinio de compositione sublunarium ex quatuor elementis non bene cedit. Aurum enim in situla illa tabulari est ponderis Den. 20; terra communis Den. 2, paulo plus; aqua Den. 1. Gran. 33; aër, ignis, longe tenuiora et minus materiata, ponderis

vero nullius. At forma materiam non auget. Videndum igitur, quomodo ex corpore 2 Den. et corporibus longe tenuioribus, educatur per formam, in pari dimenso, corpus 20 Den. Duo sunt effugia: unum, quod elementa tenuiora compingant densiorem in majorem densitatem quam simplicis elementi; alterum, quod non intelligat Peripatetici hoc de terra communi, sed de terra elementari, omni ente composito graviore. At ignis et aër non condensant, nisi per accidens, ut suo loco dicitur. Terra autem illa, quæ foret auro et omnibus gravior, ita sita est, ut vix adsit ad misionem. Melius igitur foret, ut plane nugari desinant, et cesset dictatura.

3. Diligenter notanda est series sive scala coactionis materiæ; et quomodo ascendat a coactione majore ad minorem: idque interdum per gradus, interdum per saltum. Si quidem utilis est hæc contemplatio, et ad iudicium et ad practicam. Coagumentatio metallica et subterranea maxima est; ita ut ex 32 illis partibus occupet duodecim: tantum enim distat aurum a stanno. In illo descensu ab auro et argento vivo magnus saltus ad plumbum. A plumbum ad stannum gradatio. Rursus magnus saltus a metallis ad lapides: nisi quod se interponat magnes, qui inde convincitur esse lapis metallicus. A lapidibus vero ad reliqua usque ad levissimum, continui et posilli gradus.

**Mandata.** 1. Cum fons densitatis videatur esse in profundo terræ, adeo ut versus superficiem ejus corpora eximie extenuentur; illud notatu dignum est, quod aurum (quod est ex metallis gravissimum) nihilominus reperitur quandoque in arenulis et ramentis fluviorum; etiam fere purum. Itaque inquirendum diligentur de situ ejusmodi locorum; utrum non sint ad pedes montium, quorum fundi et radices æquiparari possint mineris profundissimis, et aurum inde eluatur; aut quid tandem sit, quod pariat tantam condensationem versus summitates terræ.

2. De mineris in genere quærendum, quæ ex iis soleant esse depressiores, et quæ propius ad superficiem terræ; et in quali situ regionum, et in qua gleba nascantur; et quomodo se habeant ad aquas; et maxime, in quibus cubilibus decumbant et jaceant; et quomodo circumdantur, aut misceantur lapide, aut aliquo alio fossili: denique omnes circumstantiæ examinandæ, ut per istas explorari possit, qua ratione succi et spiritus terræ in condensationem istam metallicam (quæ reliquas longe superat) coëant aut compingantur.

**Observationes.** 4. Dubium minime est, quin et in vegetabilibus, atque etiam in partibus animalium, se ostendant corpora complura ligno abietis longe leviora. Nam et lanugines nonnullarum plantarum, alæ muscarum, et spolia serpentum; atque artificialia quoque diversa, ut lineus pannus extinctus (quali utimur ad fomites flammaram) et folia rosarum, quæ supersunt a distillatione, et hujusmodi, superant levitate (ut putamus) ligna levissima.

5. Cohibenda et corrigenda est illa cogitatio, in quam intellectus humanus propendet, nempe, dura esse maxime densa. Nam argentum vivum fluit, aurum molle est et plumbum. Illa vero durissimis

metallis (ferro et aëre) sunt densiora et graviora; lapidibus vero adhuc multo magis.

6. In tabula multa cadunt præter opinionem: veluti quod metalla lapidibus tanto graviora; quod vitrum (corpus scilicet excoctum) crystallo (corpore congelato) gravior; quod terra communis tam parum ponderosa; quod olea, aqua distillata vitrioli et sulphuris, ad pondus crudorum tam prope accedant; quod tam parum intersit inter pondus aquæ et vini; quod olea chemica (quæ subtiliora videri possint) oleis expressis ponderosiora; quod os sit deute et cornu tanto gravior; et alia similiter haud pauca.

3. Natura densi et rari, licet cæteras naturas fere percurrat, neque secundum earum normas regatur, videtur solummodo magnum habere consensum cum gravi et levi. At suspicamur etiam posse habere consensum cum tarda et celeri exceptione et depositione calidi et frigidi. Fiat igitur experimentum, si rarius corpus non admittat et amittat calorem aut frigus celerius, densius vero tardius. Idque probetur in auro, plumbum, lapide, ligno, etc. Fiat autem in simili gradu caloris, simili quanto et figura corporis.

1. Mixtura omnis corporum per tabulam et pondera revelari et deprehendi potest. Si enim quærat quantum aquæ sit admixtum vino, vel quantum plumbi auro, et sic de reliquis; ponderato compositum, et consule tabulam de pondere simplicium; et mediæ rationes compositi, comparatæ ad simplicia, dabunt quantum mixturæ. Arbitror hoc esse *εἴρηκα* illud Archimedis; sed utinque ita res est.

2. Confectio auri, aut transmutatio metallorum in illud, omnino pro suspecta habenda est. Aurum enim omnium corporum ponderosissimum et densissimum. Igitur, ut aliud quippiam vertatur in aurum, prorsus condensatione opus est. Condensatio autem (præsertim in corporibus valde materiatis, qualia sunt metalla) apud nos homines in superficie terræ degentes vix superinducitur: pleræque enim ignis densationes pseudo-densationes sunt, si totum respicias (ut postea videbimus) hoc est, corpora in partibus aliquibus suis condensant, totum minime.

3. Verum versio argenti vivi aut plumbi in argentum (cum argentum sit illis rarius) habenda est pro sperabili; cum tantum fixationem, et alia quædam innuat, non densationem.

4. Attamen si argentum vivum, aut plumbum, aut aliud metallum, verti posset in aurum quatenus ad cæteras auri proprietates, dempto pondere; ut, scilicet, fierent magis, quam sunt, fixa, magis malleabilia, magis sequacia, magis durabilia, et minus exposita rubigini, magis splendida, etiam flava, et hujusmodi; esset proculdubio res utilis et lucrativa, licet pondas auri non explerent.

7. Neque auro est ponderosius quicquam; neque ipsum aurum purum per artem (quatenus adhuc innotuit) redditur sese ponderosius.

1. Plumbum tamen notatum est et mole et pondere augeri; præsertim si condatur in cellis subterraneis, ubi res situm facile colligunt. Id quod maxime deprehensum est in stauis lapideis, quarum pedes plumbeis vinculis

Mandatum.

Vellitationes de practica.

Observatio.

Historia.

erant alligati; quæ vincula inventa sunt intumuisse, ut portiones illorum ex lapidibus penderent, quasi verrucæ. Utrum vero hoc fuerit auctio plumbi, an pullulatio vitrioli, inquiratur plenius.

TABULA EXPORRECTIONIS MATERIÆ PER IDEM SPATIUM SIVE DIMENSUM, IN CORPORIBUS IISDEM INTEGRIS ET COMMUNITIS.

		In cinere	1. 02.

TABULA EXPORRECTIONIS MATERIÆ PER IDEM SPATIUM SIVE DIMENSUM, IN CORPORIBUS CRUDIS ET DISTILLATIS.

	Den. Gr.		Den. Gr.
Salphur in corpore	2. 2.	In oleo chemico	1. 18.
Vitriolum in corpore	1. 22.	In oleo	1. 21.
Vinum in corpore	1. 2½.	In distillato	0. 22.
Acetum in corpore	1. 3½.	In distillato	1. 1.

**Monitum.** 6. Modus versionis corporis in pulverem, ad apertionem sive expansionem corporis multum facit. Alia enim est ratio pulveris qui fit per simplicem contusionem, sive limaturam; alia ejus qui per sublimationem, ut in mercurio; alia ejus qui per aquas fortes et erosionem (vertendo ea tanquam in rubiginem) ut in croco martis, et nonnihil in chalybe præparato; alia ejus qui per exustionem, ut cinis, calx. Itaque ista æquiparari nullo modo debent.

**Mandatum.** 4. Indigentissimæ sunt illæ duæ tabulæ prioræ. Ea demum foret tabula exacta corporum cum suis aperturis, quæ corporum singulorum integrorum pondera primo, dein pulverum suorum crudorum, dein cinerum, calcium, et rubiginum suarum, dein malagmatum suorum, dein vitrificationum suarum, (in iis quæ vitrificantur,) dein distillationum suarum, dein dissolutionum suarum, (subtracto pondere aquæ, in qua dissolvuntur,) nec non aliarum eorundem corporum alterationum, pondera exhiberet: ut hoc modo de corporum aperturis, et arctissimis naturæ integralis nexibus, judicium fieri posset.

**Observationes.** 8. Pulveres non sunt proprie corporum aperturæ, quia augmentum spatii fit non ex dilatatione corporis, sed ex interpositione aëris; atamen per hoc optime capitur æstimatio de corporum unione interiore, aut porositate. Nam quo corpora sunt magis unita, eo major intercedit differentia inter pulverem suum et corpus integrum. Igitur ratio argenti vivi crudi ad sublimatum in pulvere est quincupla, et amplius. Rationes chalybis et plumbi non ascendunt ad quadruplam. At in corporibus levioribus et porosis, laxior quandoque est positura partium in integris, quam in pulveribus

pressis: ut in ligno quercus, gravior est cinis quam corpus ipsum: etiam in pulveribus ipsis, quo corpus est gravius, eo pressus pulvis minus habet dimensum ad non pressum. Nam in levioribus, pulverum partes ita se sustentare possunt, (utpote qui aërem intermistum minus premant et secant,) ut pulvis non pressus triplicem impleat mensuram ad pulverem pressum.

9. Distillata plerumque attenuantur, et pondere decrescunt; sed hoc facit vinum duplo plus quam acetum.

1. Atque tangibilia per familias jam *Commentatio.* censa sunt, tanquam divites et inopes. Restat altera classis, videlicet pneumaticorum. Ea vero pondere non dotantur, per cujus incubitum de exporrectione materiæ in ipsis contentæ judicium fieri possit. Opus est igitur alio quopiam interprete. At primum, species pneumaticorum proponendæ sunt; deinde comparatio faciendæ.

Quemadmodum in tangibilibus interiora terræ, ita in pneumaticis æthera ad tempus seponimus.

Sunt pneumatica apud nos triplicis naturæ; inchoata, devincta, pura. Inchoata sunt fumi omnigeni, atque ex materiis diversis. Eorum ordo esse possit; primo, volatiliū, quæ expirant ex metallis et ex nonnullis fossiliis; quæ sunt (prout nomen significat) potius alata quam pneumatica; quia facile admodum coagulantur vel sublimando, vel cadendo, aut præcipitando. Secundo, vaporum; qui expirant ex aqua et aqueis. Tertio, fumorum (nomine generali retento); qui expirant ex corporibus siccis. Quarto, halituum; qui expirant ex corporibus oleosis. Quinto, aurarum; quæ expirant ex corporibus mole aqueis, spiritu inflammabilibus; qualia sunt vina, et liquores exaltati, sive potus fortes.

Est et aliud genus fumorum: illi scilicet in quos flamma desinit. Ii vero non possunt expirare, nisi ex inflammabilibus, cum flammam subsequantur. Hos post-fumos, seu fumos secundos, appellamus. Itaque non possunt esse post-vapores, quia aquea non inflammantur; sed post-fumi, (nomine speciali,) post-halitus, post-auræ; etiam, ut arbitror, post-volatilia, in nonnullis.

At pneumatica devincta ea sunt, quæ ipsa solitaria aut soluta non reperiuntur, sed tantum corporibus tangibilibus inclusa; quos spiritus etiam vulgo vocant. Participant autem et ex aqueo, et ex oleoso, et ex iisdem nutriuntur; quæ in pneumaticum versa, constituunt corpus veluti ex aëre et flamma; unde utriusque mysteria sunt. Accedunt autem spiritus isti (si ad pneumatica soluta spectes) proxime ad naturam aurarum, quales ex vino aut sale surgunt. Horum spirituum natura duplex; alia crudorum, alia vivorum. Crudi insunt omni tangibili; vivi animatis tantum, sive vegetabilibus sive sensibilibus. At pneumatica pura duo tantum inveniuntur, aër et flamma; licet illa quoque magnas diversitates sortiantur, et gradus exporrectionis inæquales.

TABULA PNEUMATICORUM, SECUNDUM COMMENTATIONEM SUPRADICTAM, PROUT ORDINE ASCENDUNT AD EXPORRECTIONEM MAJOREM.

Volatilia metallorum et fossilium :	Post-volatilia ipsorum : Vapores :
-------------------------------------	---------------------------------------

Fumi :	Spiritus crudi devincti in
Post-fumi :	tangibilibus :
Halitus :	Aër :
Post-halitus :	Spiritus vivi, sive incensi,
Auræ :	devincti in tangibilibus.
Post-auræ :	Flamma.

De exporrectionibus horum, tum ad invicem, tum ad tangibilia collatis, jam videndum. Atque si natura levis, per ascensum sursum, posset liquidare raritatem corporum, quemadmodum natura gravis, per descensum deorsum, liquidat eorum densitatem, res bene posset succedere. Sed multa obsunt. Primo, quod differentiae motuum in iis, quæ aspectum fugiunt, non percipiuntur immediate per sensum: deinde, quod non reperiatur in aëre, et similibus, tam fortis appetitus petendi superiora, quam putatur: denique, si aër moveretur sursum, tamen cum continuetur plerumque cum alio aëre, motus ille ægre percipi posset. Nam sicut aqua non ponderat super aquam; ita aër non insurgit subter aërem. Itaque alii modi excogitandi sunt.

Atque de exporrectione pneumaticorum ad invicem, quodque ordo et series raritatis, qualis in tabula ponitur, non leviter fundata sit, offerunt se quædam probationes non malæ: verum, de certis gradibus hujusmodi exporrectionis, et rursus de exporrectione pneumatici, comparati ad tangibile, difficilior certe est inquisitio.

Primo igitur fumos omnes, tam secundos quam primos, aëris raritatem non æquare consentaneum est; cum illi conspicui sint, aër minime; neque ipsi conspicui maneant paulo post, cum se aëri miscuerint.

Post-fumos præ-fumis esse tenuiores et rariores, satis liquet: cum sint flammæ (corporis tam subtilis) cadavera, et solutiones: experimento quoque manifestissimum est, in nocturnis spectaculis, intra cœnacula, quæ tot lychnis et facibus colluctant, etiam post plurium horarum moram, sufficere aërem respirationi, licet tot post-fumis in eum receptis. Quod si fuissent illi fumi præ-fumi, (quales sunt ex lychnis et facibus extinctis, absque flamma,) nemo, vel ad longe minorem moram, eos sustinere posset.

Spiritus crudos quoscunque in tangibilibus devinctos, etiam aëre densiores judicamus. Etenim spiritus vegetabilium, aut animalium mortuorum, aut hujusmodi, cum exhalaverint, manifesto retinent quiddam ex crasso, sive tangibili: ut cerni datur in odoribus; qui cum sint fumi parce exeuntes, nec conferti, ut in fumis conspicuis et vaporibus, tamen, si nacti fuerint aliquid tangibile, præsertim ex mollioribus, applicant se ad illud, et plane adhærent, illudque odore inficiunt; ut manifestum sit, illos cum crassa natura affinitatem ægre dirimere.

At spiritus vivos aëre ipso aliquanto rariores existimamus: tum quia inflammantur non nihil; tum quia diligenter experti sumus, aërem ad minuendum aut sublevandum pondus nihil conferre. Nam vesica inflata non est vacua et compressa levior, cum sit illa tamen repleta aëre; nec similiter spongia, aut vellus lanæ, aëre referta, illis ipsis vacuis leviora sunt, aëre excluso. At corpus animale vivum et mortuum gravitate manifesto differunt; licet haud tantum

quantum putantur. Quare videtur aër pondus non minuere; spiritus autem vivus hoc facere. Atque cum pondus densitates dijudicet, etiam levatio ponderis raritates dijudicare debet.

Supremo ordine collocatur flamma; tum quia illa manifestissime petit superiora; tum quia verisimile est, rationes pneumaticorum minime differre a rationibus fomitum suorum; ideoque, quemadmodum oleum est rarius aqua, similiter flammam rariorem esse aëre et spiritu. Etiam videtur flamma corpus tenuius, et mollius, et magis cedens, quam aër. Nam levissima quæpiam aura, commota juxta flammam lychni, eam reddit tremulam.

2. Quantam vero expansionem assequatur pneumaticum collatum ad tangibile, licet sit res ardua inventu, tamen curam de ejus inquisitione non abjecimus. Certissima autem visa est nobis fore probatio, si corporis aliquod tangibile (exporrectione ejus prius capta et mensurata) verti posset plane in pneumaticum, et deinde pneumatici illius exporrectio itidem notarétur; ut pensatis utriusque rationibus, de multiplicatione dimensi evidens demonstratio fieri posset.

3. Accepimus igitur phialam vitream parvam, quæ unciam fortasse unam capere posset. In eam spiritus vini (quia ex liquoribus proxime accedebat ad pneumaticum, cum esset levissimus) unciam dimidiam infudimus. Deinde vesicam accepimus admodum grandem, utpote quæ octo pintas vinaris (galornium scilicet, ut nostrates appellant) capere posset. Vesica autem erat non vetus; et propterea non sicca et renitens, sed recens et mollis. Ex illa vesica aërem omnem, quoad fieri potuit, expressimus; ut latera ejus essent quasi contigua et coherentia. Vesicam insuper per exterius oleo parum oblevimus, et molliter fricavimus: ut porositas vesicæ oleo obturaretur, atque etiam, ut inde fieret magis cedens, et tensibilis. Hanc circa os phialæ (ore scilicet phialæ intra os vesicæ recepto) applicuimus; eamque filo cerato arcte ligavimus. Tum demum phialam supra prunas ardentem in foculo collocavimus. Non ita multo post ascendebat aura spiritus vini in vesicam, eamque paulatim undequaque fortiter admodum inflavit. Quo facto, continuo vitrum ab igne removimus; et in summitate vesicæ foramen ac fecimus, ut aura potius expiraret, quam relabaretur in guttas. Deinde vesicam a phiala sustulimus, et per lances, quantum de illa semiuncia spiritus vini diminutum fuisset, et in auram versum, probavimus. Erat autem deperditum non plus (pondere) denarii sex. Adeo ut sex illi denarii in corpore spiritus vini, qui quadragesimam partem pintæ (ut meminimus) non implebant, in auram versi, spatium octo pintarum adæquarent.

Memini etiam vesicam ab igne remotam paulum flaccessere incepisse; Monitum. ut, non obstante tam insigni expansione, non videretur tamen aura versa fuisse in pneumaticum purum et fixum, cum ad se restituendam inclinaret. Attamen fallere possit hoc experimentum, si ex eo conjiciamus, aërem communem esse adhuc hujusmodi aura rariorem; quoniam arbitramur spiritum vini in pneumaticum versum (licet minime purum, tamen) propter calorem, superare

raritatem aëris frigidi; cum et ipse aër, per calorem, majorem in modum dilatetur, et exporrectionem aëris frigidi haud paulum superet. Itaque arbitramur, si experimentum fiat in aqua, multo minorem futuram expansionem; licet corpus aquæ plus materiæ contineat quam spiritus vini.

**Historia.** Si advertas fumum ex cereo recenter extincto exeuntem, et oculis metiaris crassitudinem ejus, et rursus intuearis corpus ipsius fumi postea inflammati; videbis expansionem flammæ, collatæ ad fumum, ampliata quasi ad duplam.

**Monitum.** Si accipias pauca grana pulveris pyrii, eaque inflames, magna prorsus fit expansio respectu corporis pulveris. Sed rursus, extincta illa flamma, multo amplius adhuc se extendit corpus fumi. Id vero non te fallat, ac si corpus tangibile plus expanderetur in fumo, quam in flamma; nam id secus se habet. Sed ratio apparentiæ est, quod corpus flammæ sit corpus integrum, corpus fumi corpus commixtum, ex longe majore parte, cum aère: itaque, sicut parum croci multum aquæ colorat; similiter parum fumi in multum aërem se spargit. Nam fumus spissus (ut antea dictum est) non sparsus, minor cernitur corpore flammæ.

**Historia.** Si accipias frustulum corticis aurantii exterioris (qui aromaticus est, et oleosus) ipsumque subito comprimis juxta lychnum, exilit aliquid roris in guttulis; quod tamen constituit corpus flammæ (respectu guttularum) insigniter amplum.

**Observatio.** Commentum illud Peripateticorum, de decupla proportione elementorum ad invicem in raritate, res fictitia est, et ad placitum; cum certum sit, aërem centuplo (ad minimum) rariorem esse aqua, flammamque oleo; at flammam ipsum aërem decupla minime superare.

**Monitum.** Non est, cur ista inquisitio et commentatio circa pneumatica videatur cuiquam nimis subtilis aut curiosa. Certum enim est, omissionem et inobservantiam circa illa obstupescisse philosophiam et medicinam, easque tanquam siderasse, ut fuerint ad veram causarum investigationem attonitæ, et quasi inutiles, qualitibus tribuendo, quæ spiritibus debentur: ut in titulo proprio de pneumatico ipso fusius apparebit.

**Comœxiõ.** Atque de exporrectione materiæ in corporibus secundum consistentias suas diversas, dum quiescunt, hæc inquisita sint. De appetitu autem et motu corporum, unde tumescunt, residunt, rarefiunt, condensantur, dilatantur, contrahuntur, majorem, minorem locum occupant, accuratius, si fieri possit, inquirendum; quia fructuosior est inquisitio, naturam simul et revelans, et regens. Attamen carptim facienda est inquisitio ista, et cursim. Iste enim titulus, de denso et raro, tam generalis est, ut si plenarie deductus foret, multa ex sequentibus titulis anticipaturus esset, quod fieri non oportet.

**Monitum.** Non difficile nobis foret historiam, quam jam subjungemus, sparsam in ordinem meliorem (quam qua usi sumus) redigere, instantias, quæ inter se affines sunt, simul

collocando. Id consulto evitavimus, duplici ratione moti. Primo, quod multæ ex instantiis ancipitis naturæ sint, et ad plura spectent. Itaque ordo accuratus in ejusmodi rebus aut iterat, aut fallit. Deinde (id quod præcipue in causa fuit, cur a methodo aliqua exacta abhorreremus) hoc quod agimus, omnium industriæ ad imitationem patere volumus. Quod si methodo aliqua artificiali et illustri collectio ista instantiarum connexa fuisset, desperassent proculdubio complures se ejusmodi inquisitionem facere potuisse. Quare et exemplo et monito cavemus, ut quisque in instantiis comparandis et proponendis suo judicio, suæ memoriæ, suæ copiæ inserviat. Satis sit si de scripto, et non memoriter, (id enim in tantis instantiarum fluctibus ludicrum quiddam esset,) semper procedat inventio; ut verè inductionis lumine postea absolvi possit. Atque illud perpetuo memoria tenendum, nos in hoc opere stipem tantummodo et tributum a sensu ad ærarium scientiarum exigere; neque exempla, ad illustranda axiomata, sed experimenta ad ea constituenda, proponere. Neque tamen dispositionem instantiarum prorsus negligemus, neque discincti hoc aggrediemur; sed ita instantias collocabimus, ut sibi invicem lucem præbeant nonnullam.

#### DILATIONES PER INTROCEPTIONEM SIMPLICEM, SIVE ADMISSIONEM CORPORIS NOVI.

1. Ex introceptione corporis alieni nil Historia spar- mirum si sequatur dilatatio corporis ali- cuius; quandoquidem hoc sit plane augmentum sive additio, non rarefactio vera. Attamen cum corpus, quod introcipitur, fuerit pneumaticum, (veluti aër, aut spiritus,) aut etiam cum corpus introceptum (licet fuerit tangibile, tamen) sensim illabatur, et se insinuet; vulgo habetur magis pro tumore quodam, quam accessione.

2. Vesica, aut alia tensilia (ut folles) inflantur aère integro, atque extenduntur; adeo ut indurentur, et ictum, jactum, pati possint: etiam bulla aquæ est instar vesicæ, nisi quod est tam fragilis.

3. Liquores de vase in vas de alto fusi, aut cochlearibus et spatulis, aut ventis, fortiter agitati, committuntur et commiscentur cum aère, unde se attollunt in spumam. Illi paulo post residunt, et minorem locum occupant, aère (fractis spumæ bullulis) exeunte.

4. Extruunt pueri ex aqua saponi admista (unde fit paulo tenacior) turres bullatas; adeo ut (parum admodum aquæ aère introcepto) magnum locum occupet.

5. At non invenitur quod flamma, per inflationem follium, aut agitationem aliam exteriorem, cum aère misceatur, et spumescat in eum modum, ut possit constitui corpus commixtum ex flamma et aère, instar spumæ, quæ commixta est ex aère et liquore.

6. At contra, certum est, per mistionem interiorem in corpore antequam inflammetur, fieri posse corpus commixtum ex aère et flamma. Nam pulvis pyrius habet partes non inflammabiles ex nitro, alias inflammabiles, præcipue ex sulphure; unde etiam magis albicat et palescit, quam cæteræ flammæ (licet flamma ipsa sulphuris vergat ad cœruleum): adeo

ut possit illa flamma recte comparari spumæ potentissimæ, e flamma et aëre coagmentatæ, sive vento cuidam igneo.

7. Quemadmodum autem spuma est corpus compositum ex aëre et liquore; ita etiam pulveres omnes sunt compositi ex aëre et minutis corporis pulverizati; ut non aliter different a spumis, quam contiguum differt a continuo: nam magna moles ipsorum consistit ex aëre, qui partes corporis sublevat; ut ex tabula secunda et tertia liquet.

8. Fiunt tumores in ventre animalium, et aliis partibus, ex flatu, et humore aqueo introcepto, et admisso; ut in hydrope, tympanite, et similibus.

9. Est genus columbarum, quod, capite intra collum recepto, inflatur et tumet.

10. Respiratio per pulmones (folium instar) aërem attrahit et reddit; dilatante se, per vices, pulmone, et residente.

11. Fœmellæ prægnantes tument mammillas, lacteo scilicet humore turgentes.

12. Glans virgæ in masculis, cum arrigitur in venerem, multum dilatatur mole.

13. Inspice in speculum, et nota latitudinem utriusque oculi pupillæ; dein claude alterum oculum; et videbis pupillam oculi aperti manifeste dilatam, spiritibus qui utriusque oculo inserviebant in unum confluentibus.

14. Rimæ globorum lusiorum, et similiter lignorum aliorum, a siccitate contractæ, per immersionem, et moram nonnullam in aqua, et imbibitionem ipsius aquæ, implentur et consolidantur.

15. Est genus quoddam fungi, qui excrecit ex arbore, quem vocant auriculam Judæi, qui immissus in aquam magnopere intumescit: quod non facit spongia, aut lana.

Atque de introceptionibus corporis

alieni (quæ sunt pseudo-rarefaactiones) hæc inquisita sint. Transeundum ad dilatationes et tumores, quæ fiunt in corporibus, ex spiritu innato (sive illi sunt naturales, ut loquuntur, sive præternaturales) absque igne, aut calore manifesto externo: licet in his quoque sequatur quandoque accessio sive introceptio humoris, præter ipsam dilatationem simplicem.

#### DILATATIONES PER SPIRITUM INNATUM SE EXPAN- DENTEM.

1. **MUSTUM**, aut cervisia nova, et similia, in doliis reposita, intumescunt, et insurgunt admodum; adeo ut, nisi detur spiraculum, dolia infringant; sin detur, se attollant, et exudent cum spuma, et quasi ebulliant.

2. **Liquores spirituosus** arctius conclusi (ut in utribus fortiter obturatis) magno impetu sæpe erumpunt, et opercula sua quandoque ejiciunt, tanquam e tormento.

3. **Audivi mustum** nuper calcatum, et quasi fervens, in vitro crasso et forti repositum, (ore vitri bene lutato et clauso, ut mustum nec erumpere nec perfringere posset) non reperiente exitum spiritu, se per continuas circulationes et vexationes vertiasse plane in tartarum; ut nihil restaret in vitro, præter auram et fæces: verum de hoc mihi parum constat.

4. **Semina plantarum**, ut pisorum, fabarum, et ejusmodi, turgescunt nonnihil, antequam emittant radicem aut caulem.

5. **Arbores** quandoque, spiritu et succo nativo tumescentes, corticem rumpunt, et emittunt gummi et lacrymas.

6. **Etiam gemmæ complures** videntur esse eruptiones succorum puriorum ex rupibus; cum tam gummi quam gemmæ rupium deprehendantur (ex splendore) esse succi percolati et depurati; adeo ut etiam saxa et lapides videantur ex spiritu innato tumescere.

7. **Neque dubium** est, quin in spermate animalium primus actus ad vivificandum sit quædam expansio massæ.

8. **Vitriolum erumpendo** tanquam germinat, et fere arboreascit.

9. **Lapides tempore et senio** (præsertim in locis humidioribus) emittunt salem, qui est e natura nitri.

10. **Omnis gleba terræ** tumet nitro: itaque si terra quævis sit cooperta et accumulata, ita ut succus ejus non exhauriatur per solem et aërem, nec se consumat in emittendo vegetabili; colligit nitrum, ut internum tumorem. Ideo in aliquibus Europæ partibus struunt mineras artificiales nitri, accumulata terra, in domibus ad hoc paratis, prohibito aditu solis.

11. **Sudores in animalibus**, per motum dilatatis spiritibus, atque humoribus veluti liquefactis, proveniunt.

12. **Pulsus cordis et arteriarum in animalibus** fit per irrequietam dilatationem spirituum, et receptum ipsorum, per vices.

13. **Quin et motus voluntarius in animalibus**, qui expeditur (in perfectioribus) per nervos, videtur radicem habere in compressione primum, deinde relaxatione spirituum.

14. **In omni contusione membri alicujus in animalibus**, sequitur tumor: idem evenit in plerisque doloribus.

15. **Aculei vesparum et apum majorem inducunt tumorem**, quam pro infictu: id multo magis faciunt punctiones serpentum.

16. **Etiam urtica, bryonia, et alia nonnulla**, levant cutem, et vesicas in illa causant.

17. **Habetur pro evidenti signo veneni**, (præsertim ejus generis quod operatur ex qualitate maligna; non per erosionem,) si facies aut corpus intumescat.

18. **In vesicationibus colli aut alterias alicujus partis**, quæ adhibentur ad curationes morborum, assurgit humor aqueus, sive ichor, qui postea, cute scissa aut puncta, effluit.

19. **Omnes pustulæ ex causa interna, et hujusmodi efflorescentiæ et apostemata**, inducunt tumores apparentes, et sublevant cutem.

20. **Iracundia subito effervescens** (in nonnullis, inflat buccas: similiter et fastus.

21. **Ranæ et bufones tument; et complura animalia** per ferociam erigunt cristas, et pilos, et plumas: quod fit ex contractione cutis per tumorem spirituum.

22. **Galli, quos Indicos, alii Turcicos vocant, irati, magnopere tument, et pennas tanquam jubar erigunt. Aves cum dormitant, dilatato spiritu, per receptum caloris ad interiora, nonnihil tument.**

23. **In omni carie et putredine tumescere incipi-**

unt spiritus corporis innati; cumque ad exitum proferant, solvunt et alterant rei compagem; et, si compages rei sit paulo tenacior et viscosior, ut exire non possint, novas formas moliantur; ut in vermibus e putredine natis; sed exordium actionis est a dilata-tione spirituum.

24. Neque spiritus in putredine cohibitus tantum molitur animalcula, verum et rudimenta plantarum: ut conspicitur in musco, et hirsutie arborum nonnullarum. Memini me expertum esse, casu quodam, non de industria, quod cum æstivo tempore malum citrium, ex parte sectum, in conclavi reliquisset, post duos menses inveni in parte secta putredinem quandam germinantem; adeo ut in capillis quibusdam exurgeret ad altitudinem pollicis, ad minus, atque in summitate capillorum singulorum ascivisset caput quoddam, instar capitæ pusilli clavi; plane incipiens imitari plantam.

25. Similiter, rubigines fiunt in metallis, et vitro et similibus, ex dilata-tione spiritus innati, qui tumescit, et urget partes crassiores, easque ante se agit, et extrudit, ut exeat.

26. Utrum terra in superficie tumescat, præsertim ubi glebæ sunt spongiosæ et cavæ, inquirendum. Certe inveniuntur quandoque in ejusmodi glebis arbores instar malorum navium, quæ sub terra nonnullos pedes in altum jacent demersæ et sepultæ: ut verisimile sit arbores illas per tempestates fuisse olim dejectas; postea vero, attollente se paulatim terra, coopertas fuisse et sepultas.

27. At subito et manifeste intumescit terra in terræ motibus, unde sæpenumero erumpunt scaturigines aquarum, vortices et globi flammæ, venti vehementes et peregrini, atque ejiuntur saxa, cineres.

28. Neque tamen terræ motus omnes prorsus subito fiunt; nam evenit nonnunquam, ut terra contremuerit per plures dies: et nostro tempore apud nos in agro Herfordiensi fuit terræ motus, admodum pusillus et lentus, sed rarus; in quo aliqua jugera terræ per diem integrum paulatim se moverunt, et in alium locum paulo declivorem, nec multo distantem, se transtulerunt, et ita quieverunt.

29. Utrum moles aquarum in maribus aliquando tumescant inquirendum. Nam in ipsis fluxibus maris, necesse est ut illi fiant vel ex motu progressivo, vel ex sublacione aquarum in sursum per virtutem et consensum aliquem magneticum, vel denique per tumorem sive relaxationem aliquam in ipsis aquis. Atque postremus iste modus (si modo talis aliquis sit inter causas fluxus alicujus) pertinet ad inquisitionem præsentem.

30. Aqua in fontibus et puteis nonnullis tumescit et residit; adeo ut æstus quosdam videatur pati.

31. Etiam erumpunt quandoque in quibusdam locis scaturigines aquarum, absque aliquo terræ motu, intra aliquos annos, ex causis incertis. Fitque ista eruptio plerumque in magnis siccitatibus.

32. Etiam notatum est, intumescere quandoque maria absque fluxu aut vento aliquo exteriori; idque fere tempestatem aliquam magnam præcedere.

Mandata. Non foret indignum experimento,

ut probetur, utrum fiat interdum aliqua relaxatio in corpore aquæ, etiam in minore quanto. Atqui si exponatur aqua soli vel aëri,

fiet potius consumptio: itaque experimentum faciendum, in vitro clauso. Accipe itaque vitrum, quod habeat ventrem amplum, collum vero longum et angustum, atque infundatur aqua, donec venter et pars inferior colli impleatur. Fiat autem hoc per tempestatem aëris borealem et siccam; atque ita permittatur, donec succedat tempestatem australis et pluviosa; et vide, si aqua insurgat aliquid in collo vitri. Etiam de tumoribus aquæ in puteis faciendæ est diligentior inquisitio; utrum fiant magis noctu quam interdiu, et quali tempestate anni.

33. In pinnis fidium ligneis fit tempore pluvioso, ut illæ tumescentes difficiliter torqueantur. Similiter pyxides lignæ difficiliter extrahuntur ex thecis suis, et ostia lignæ difficiliter aperiuntur.

34. Chordæ fidium extentæ paulo rigidius temporibus pluviosis rumpuntur.

35. Humores in corporibus animalium, tempestatibus australibus et pluviosis, deprehenduntur laxari et tumescere, et fluere, et incumbere magis, et meatus obstruere.

36. Recepta est opinio, humores et succos, non in animalibus tantum, sed et in plantis, sub pleniluniis magis turgescere, et cava implere.

37. Sales in locis humidis se solvunt, aperiunt, et dilatant: id quod faciunt (aliqua ex parte) saccharum et condita; quæ, nisi reponantur in cameris, ubi aliquando accenditur ignis, situm colligunt.

38. Etiam omnia, quæ per ignem cocta, et majorem in modum contracta sunt, tractu temporis nonnihil laxantur.

39. De tumoribus et relaxationibus aëris diligentius videndum; et quatenus in his militent (magna ex parte) causæ ventorum; cum vaporibus nec colliguntur commode in pluviam, nec dissipantur in aërem limpium, sed inducunt tumores in corpore aëris.

Atque de dilata-tionibus corporum per spiritum innatum, sive in maturationibus, sive in rudimentis generationum, sive in excitatione per motum, sive in irritationibus naturalibus aut præternaturalibus, sive in putrefactionibus, sive in relaxationibus, hæc pauca ex cumulo nature inquisita sunt. Transeundum jam ad aperturas et dilata-tiones quæ fiunt per ignem et calorem externum actualem.

DILATA-TIONES ET APERTURÆ CORPORUM, QUÆ FIUNT PER IGNEM ET CALOREM ACTUALEM, SIMPLICEM, EXTERNUM.

APERTURÆ corporum per calorem sive ignem (de quibus jam inquiremus) proprie spectant ad titulos de calido et frigido, et de motu hyles, et de separationibus et alterationibus. Attamen carpendum et prægustandum est aliquid ex ipsis in præsentem titulo, cum absque aliqua notitia ipsorum non possit inquiri recte de denso et raro.

1. Aër per calorem dilatatur simpliciter. Neque enim separatur quippiam aut emittitur, ut in tangibilibus; sed simpliciter fit expansio.

2. In ventosis, vitro et aëre intra ipsum contento calefactis, et ventosis carni applicatis, quando paulo post aër, qui per calorem dilatatus fuerit, remittente

calore, se recipiat paulatim et contrahat; attrahitur per motum nexus caro. Quod si ventosas fortius attrahere cupias, accipe spongiam frigida madefactam, et pone eam super ventrem ventosæ; ut, per refrigerationem amplius contracto aëre, ventosa fortius attrahat.

3. Accipe vitrum, et calefacias illud: mitte illud post in aquam: attrahet aquam pro minimo ad tertias contenti; unde liquet, aërem a calore rarefactum fuisse pariter ad tertias contenti. Sed hoc parum est. Nam cum vitrum, quo usi sumus, tenue esset, majorem calefactionem, absque periculo rupturæ, non facile patiebatur. Quod si fuisset phiala ferrea aut ænea, et majorem in modum calefacta, arbitrator aërem posse dilatari ad duplum aut triplum: quod experimento dignissimum est; etiam ad quousque, ut inde melius de raritate aëris superne, atque adeo ætheris ipsius, iudicium facere possimus.

4. In vitro quod appellamus calendare (quod tempestatem, quatenus ad calorem et frigus, tam accurate demonstrat varietates et gradus) evidentissime patet, quam parva accessio caloris expandat aërem notabiliter: adeo ut manus vitro superposita, radii aliqui solis, ipse anhelitus astantium operetur: quin et ipsius aëris externi inclinationes ad calorem et frigus (tactui ipsi imperceptibiles) aërem nihilominus in vitro sensim et perpetuo dilatent et contrahant.

5. Hero describit altaris fabricam eo artificio, ut, superimposito holocausto et incenso, subito aqua descenderet, quæ ignem extingueret. Id non aliam posebat industriam, quam ut sub altare esset locus concavus et conclusus, aëre repletus; qui aër ab igne calefactus, et propterea dilatatus, nullum reperiret exitum, nisi in canali ad parietem altaris erecto et curvato, ore super altare inverso. In canali erecto infusa erat aqua (facto etiam ventre in canali, ut largior copia aquæ reciperetur); ea aqua obice impediabatur, ne descenderet, foraminato; qui obex postquam erat versus, dabat locum aëri dilatato, ut aquam eveheret et ejiceret.

6. Inventum fuit Fracastorii ad excitandos apoplecticos, ut poneretur sartago fervens circa caput ad nonnullam distantiam; unde spiritus in cellis cerebri suffocati et congelati, et ab humoribus obsessi, dilatarentur, excitarentur, et vivificarentur.

7. Etiam papiliones, quæ hieme jacent emortuæ, admotæ ad ignem aut radios solis, motum et vitam recipiunt. Ægroti quoque in deliquiis, tam aquis fortibus et calidis intro sumptis, quam calore exteriori, et fricationibus, et motu excitantur.

8. Apertura aquæ talis est. Sub primo calore emittit vaporem paucum et rarum: neque intra corpus alia conspicitur mutatio. Continuato calore, corpore integro non insurgit, nec etiam bullis minutis in modum spumæ; sed per bullas majores et rariores ascendit, et in copiosum vaporem se solvit. Ille vapor, si non impediatur aut repercutiatur, aëri se immiscet; primo conspicuus, dein insensibilis et se disperdens.

9. Apertura olei talis est. A primo calore ascendunt guttulæ quædam aut granula per corpus olei sparsa; idque cum crepitatione quadam. Interim nec bullæ in superficie ludunt, (ut in aqua,) nec

corpus integrum tumet, nec quicquam fere halitus evolat. At post moram nonnullam, tum demum corpus integrum insurgit, et dilatatur expansione notabili, tanquam ad duplum; et copiosissimus et spissus admodum evolat halitus. Is halitus, si flammam interea non conceperit, miscet se tandem cum aëre, quemadmodum et vapor aquæ. Majorem autem calorem desiderat, ad hoc ut bulliat, oleum, quam aqua, et tardius multo bullire incipit.

10. Apertura spiritus vini ea est, ut aquam potius referat, quam oleum. Nam ebullit, magnis utique bullis, absque spuma aut totius corporis elevatione; longe autem minore calore, et multo celerius expanditur et evolat, quam aqua. Utriusque vero naturæ particeps (tam aquæ scilicet, quam oleosæ) et facile se immiscet aëri, et cito concipit flammam.

11. Acetum et agresta et vinum in hoc differunt in processu suæ aperturæ: quod acetum insurgat in minoribus bullis, et magis circa latera vasis; agresta et vinum in majoribus bullis, et magis in medio vasis.

12. Generaliter in liquidis hoc fit, ut pinguis, sicut oleum, lac, adeps, et hujusmodi, insurgant et tumeant simul toto corpore; succi maturi (et magis adhuc immaturi) bullis majoribus; succi effecti et vapidi bullis minoribus.

13. Omnibus liquoribus commune est, etiam oleo ipsi, ut antequam bulliant, paucas et raras semibullas circa latera vasis jacent.

14. Omnibus liquoribus commune est, ut in parva quantitate citius aperiantur, bulliant, atque consumantur, quam in magna.

Experimentum de aperturis liquorum faciendum est in vasis vitreis, ut Monitum. motus in corpore liquorum melius conspici possint; atque super foculos cum calore æquali, ut differentia verius percipiatur; atque igne lento, quia ignis vehemens præcipitat et confundit actiones.

15. Sunt vero complura corpora, quæ Historia. non sunt liquida, sed consistentia et determinata; attemen per calorem nanciscuntur eam aperturam, ut liquescant sive deveniant liquida, quamdiu calor ea vellicet et expandat; qualia sunt cera, adeps, butyrum, pix, resina, gummi, saccharum, mel; et plurima ex metallis, veluti plumbum, aurum, argentum, æs, cuprum. Ita tamen, ut ad aperturam requirantur non solum gradus caloris longe diversi, sed et modificationes ignis et flammæ dissimiles. Nam alia metalla colliquantur per ignem simpliciter, ut plumbum; alia per ignem motum et folibus excitatum, ut aurum et argentum; alia non sine admistione, ut chalybs, qui non, nisi admisto sulphure aut simili quopiam, colliquantur.

16. At ista omnia, si continuetur ignis et urgeat, non solum sortiuntur aperturam colliquationis, sed pertranseunt, et adipiscuntur secundam aperturam, (volatilis scilicet, sive pneumatici, sive consumptionis,) omnia, inquam, præter aurum: nam quatenus ad argentum vivum, cum in natura sua sit liquidum, incipit illud ab apertura secunda, et facile vertitur in volatile. De auro adhuc dubium est, utrum possit fieri volatile aut pneumaticum (aut etiam potabile, ut loquuntur) hoc est, non dissolubile quidem, (id enim facile est et tritum per aquas fortes,) sed diges-

tibile aut alterabile per ventriculum humanum. Hujus autem rei legitima videtur probatio; minime illa, ut vi ignis ascendat aut trudatur sursum; sed ut ita attenuetur et subigatur, ut restitui in metallum non possit.

17. Inquiratur etiam ulterius de vitro et vitrificatio, utrum per ignem consumantur et vertantur in pneumaticum. Habetur enim vitrum pro corpore fixo et exsucto; et vitrificatio pro morte metallorum.

18. Quæ colliquantur omnia, in via et processu suo incipiunt ab infimo illo gradu aperturæ, qui est emollitio et inteneratio, antequam colliquantur et fundantur; ut cera, gummi, metalla colliquabilia, vitrum, et similia.

19. At ferrum et chalybs, postquam fuerint perfecta et repurgata, (nisi fuerit admistio,) quatenus ad ignem simplicem persistunt, et non procedunt ultra illum gradum emollitionis, ut reddantur, scilicet, malleabilia et flexibilia, et exuant fragilitatem suam; minime autem pertingunt ad colliquationem sive fusionem.

20. Videntur ferrum et vitrum, cum aperiuntur ad illam molliem de qua diximus, dilatari sane in spiritu suo incluso; unde fit illa subactio partium tangibilem, ut duritiem et obstinationem suam deponant; neque tamen corpus ipsum integrum localiter dilatari aut intumescere cernitur. Attamen attentius paulo inquirenti deprehenditur plane in ipsis invisibilis quidam tumor et partium pulsatio; licet cohibeatur ab arcta compage sua. Nam si accipias vitrum ignitum, et majorem in modum calefactum, et ponas illud supra tabulam lapideam, aut simile aliquod corpus durum, (licet et ipsa tabula illa, seu corpus bene calefactum fuerit, ut frigori causa imputari non possit,) rumpetur prorsus vitrum, duritie lapidis scilicet tumorem illum occultum vitri percutiente. Itaque solent in hujusmodi casu, quando vitrum fervens summovetur ab igne, substernere ipsi pulverem aliquem, aut arenam mollem, quæ suaviter cedens tumorem in partibus vitri non retinet.

21. Etiam pilæ e bombardis emissæ, postquam non solum vehi, sed et gliscere aut labi omnino desierint, adeo ut ad aspectum sint prorsus immobiles, tamen dia post, magnum deprehendunt habere tumultum et pulsationem in minimis; adeo ut, si aliquid superponatur, magnam vim patiantur: neque id tam a calore comburente, quam a palpitatione percussiva.

22. Bacula lignea recentia, sub cineribus calidis detenta et versata, induunt mollietudinem, ut melius flectantur ad arbitrium. Experire quid fiat in baculis antiquioribus et in cannia.

23. Apertura combustibilium ea est, ut per ignem primo emittant fumum, dein concipiant flammam, postremo deponant cinerem.

24. In corporibus quæ continent humorem aqueum, et a flamma abhorrentem, in compage clausa et compacta, (qualia sunt folia lauri, et alia non porosa, sales, et similia,) ea est apertura per ignem, ut spiritus in iis contentus (aqueus et crudus) per calorem dilatatus, cum sonitu emittatur antequam flamma concipiatur: si vero in aliquo corpore (quod raro fit) insinual fiat et eruptio flatus et conceptio flam-

mæ, ingens tumultus excitatur, et potentissima dilatatio; flatu, tanquam internis foliis, flammam undiquaque exsufflante et expandente, ut in pulvere pyrio.

25. Panis in furno nonnihil tumescit, licet fiat minoris ponderis, quam ante: etiam in summo panis quandoque colligitur, tanquam bulla aut vesica crustæ; ut cavum quiddam aëre impletum maneat inter pelliculam illam crustæ (quæ excindi solet) et massam panis.

26. Etiam carnes assatæ nonnihil tument, præsertim si maneat epidermis, ut in porcellis.

27. At fructus assati quandoque exiliunt, ut castanæ; quandoque efringunt corticem, et emittunt pulpam, ut poma; quod si ab igne magis torrescant, asciscunt crustam carbonariam, ut cavum sit quiddam (ut in pane) inter crustam et carnem fructus; quod et fit in ovis.

28. Si vero calor sit lenis et cæcus, nec detur spiraculum facile ad emittendum vaporem, ut fit in pyris sub cinere assatis, et multo magis in iis quæ reponuntur in ollis, atque deinde sub cinere sepeliuntur, atque similiter in carnibus suffocatis, vel intra crustas panis, vel inter patinas; tum tumor ille et dilatatio per calorem repellitur et in se vertitur, atque tanquam in distillatione restituitur, et reddit corpora magis humectata, et tanquam mersa in succis suis.

29. At in aridis, si flamma fuerit suffocata, nec facilem reperiat exitum; rarefiunt corpora, et redduntur cava et porosa, ut in carbonibus e ligno, et punicibus, quæ ejiciuntur ex montibus flammantibus.

Transeundum jam esset ad dilatationes et aperturas corporum, quæ fiunt per calorem in distillationibus; in quibus magis accurate datur cernere hujusmodi aperturas, quam in coctionibus et ustionibus. Verum cum in illis immorari haud parum oporteat, cumque proprie pertineat inquisitio ipsarum ad titulos de calido et frigido, et de motu hyles, et de separationibus; exiguum quiddam est quod proponi debet in hoc titulo.

#### DILATATIONES PER CALOREM EXTERNUM IN DISTILLATIONIBUS.

1. DUPLEX est dilatatio, sive apertura, sive attenuatio corporum in distillationibus. Altera in transitu, cum corpus vertitur in vaporem aut fumum (qui postea restituitur); altera in corpore restituto, quod semper tenuius est, et magis subtile et expansum, et minus materiatum, quam corpus crudum, ex quo distillatum emanavit. Aqua enim rosacea (exempli gratia) est succo rosarum tenuius et minus ponderosum.

2. Distillationes omnes fiunt ex æstu quodam sive reciprocatione rarefactionis primo, et versionis in pneumaticum; dein condensationis et restitutionis in corpus tangibile, remittente se calore et vapore represso.

3. In distillationibus actiones dilatationis et condensationis non sunt sinceræ; sed intervenit actio illa (quæ maxime est intentionalis in practica) separationis partium heterogenearum; ut succi veri, phlegmatis, aquæ, olei, partis tenuioris, partis crassioris.

4. In distillationibus optime inquiritur et decernitur de gradibus et diversitatibus calorum; ut carbonum, furni calefacti, balnei, cinerum, arenæ calidæ, fimi, solis, ignis quiescentis, ignis follibus excitati, ignis conclusi et reverberati, caloris ascendentis, caloris descendentis, et hujusmodi: quæ omnia ad aperturas corporum, et præcipue ad complicatas actiones dilatandi et contrahendi (de quibus postea dicemus) insigniter faciunt. Neque tamen ullo modo videntur calores illi imitatores calores solis et cælestium; cum nec satis lenes sint et temperati, nec satis lenti et continuati, nec satis refracti et modificati per corpora media, nec satis inæqualiter accedentes et recedentes. De quibus omnibus, sub titulo calidi et frigidi, et titulis aliis ad hoc propriis, diligenter inquiramus.

5. Distillationes, et dilatationes per eas, fiunt in clauso, ubi concluduntur simul corpus distillandum, et vapores qui ex eo immittuntur, et aër. Neque tamen instillatoris et alembicis communibus diligenter arcetur aër exterior; quin per rostrum stillatorii, per quod liquor effluit, ille subintrare aliquatenus possit. At in retortis, ubi majore vehementia caloris opus est, non datur aëri exteriori ingressus, sed os receptaculi ori vasis (ubi corpus imponitur) per lutationes ita continuatur, ut universus processus rarefactionis et restitutionis intus transigatur. Quod si corpus sit plenum spiritu vigoroso, (ut vitriolum,) opus est receptaculo vasto et amplo, ut vapores liberius ludant, nec vas infrangant.

1. Utcunque tamen distillationes tanquam intra cellam undiquaque clausam transigantur; datur tamen spatium, ut corporis aliæ partes se expandere in vapores, aliæ subsidere in fæcibus, vapores rursus se glomerare et restituere, atque (si heterogenei fuerint) alii ab aliis se separare possint. Quod sequitur igitur pro mandato magno habendum, cum ad naturam in imis concutiendam, et ad novas transformationes aditum præbere possit. Vulcanus enim chemicorum et medicorum (licet multa utilia genuerit, tamen) virtutes veriores caloris fortassis minus complexus est, ob divortia et separationes partium, quæ in operationibus ipsorum semper interveniunt. Itaque summa rei quam mandamus huc spectat; ut illa separatio et reciprocatio rarefactionis et condensationis omnino prohibeatur, atque opus caloris intra corpus ipsum atque ejus claustra vertatur: hoc enim fortasse Proteum materie per manicas constructum tenebit, et se versiones suas experiri et expedire compellet. De hoc complura nobis in mentem veniunt, et alia reperiri possunt. Proponemus exemplum unum aut alterum ex facillimis, ad hoc tantum, ut percipi possit quid velimus.

2. Accipe vas quadratum ferri, in figura cubi, habeatque latera bene fortia et crassa. Impone cubum ligni ad mensuram vasis ad amussim factum, quique illud prorsus impleat. Superponatur operculum ferri non minus forte quam latera vasis; et lutetur optime, more chemicorum, ita ut sit clausissimum, et ignem tolerare possit. Deinde ponatur vas intra prunas, atque ita permittatur ad horas aliquas. Post amoveatur operculum; et vide quid factum sit de ligno. Nobis quidem videtur (cum prohibita

plane fuerint inflammatio et fumus, quo minus pneumaticum et humidum ligni emitti potuerint,) alterum ex his eventurum; vel ut corpus ligni vertatur in quoddam amalgama; vel ut solvatur in aërem sive pneumaticum purum, simul cum fæcibus (magis crassis quam sunt cineres) in fundo, et incrustatione nonnulla in lateribus vasis.

3. In simili vase ferreo fiat experimentum de aqua pura; qua repleatur ad summum. Sed adhibeatur ignis lenior: mora vero sit amplior. Quin etiam amoveatur ab igne certis horis, et refrigerat; dein iteretur operatio aliquoties. Hoc experimentum de aqua pura delegimus hanc ob causam; quod aqua corpus simplicissimum sit, expers coloris, odoris, saporis, et aliarum qualitatum. Quamobrem si per calorem temperaturam et lenem, et alternationem calefactionis et refrigerationis, et prohibitionem omnis evaporationis, spiritus aquæ non emissus, et nihilominus per hujusmodi calorem sollicitatus et attenuatus, se verterit in partes aquæ crassiores, easque ita digerere, et in novum schematismum mutare possit (minus scilicet simplicem et magis inæqualem) eo usque, ut vel colorem alium nanciscatur, vel odorem, vel saporem, vel oleositatem quandam, vel aliam alterationem notabilem, (qualis invenitur in corporibus compositis,) proculdubio res magna confecta foret, et ad plurima aditum patefaciens.

4. Circa distillationem clausam (ita enim eam appellare licet, ubi non datur spatium ad evaporationem) quivis multa alia poterit comminisci. Pro certo enim habemus, calorem analogum, operantem in corpus absque separationem aut consumptionem partium, mirabiles metaschematismos effingere et producere posse.

5. Attamen illud addi possit, ut mandati hujus appendix; ut excogitetur etiam aliquis modus (quod certe difficile non est) per quem calor operetur non solum in clauso, sed in tensili: id quod fit in omni matrice naturali, sive vegetabilium sive animalium. Hoc enim operationem ad multa extendit, quæ per clausuram simplicem effici non possunt. Neque hoc pertinet ad pygmæum Paracelsi, aut hujusmodi prodigiosas ineptias; sed ad solida et sana. Exempli gratia; non efficiet unquam distillatio clausa, ut aqua tota vertatur in oleum; quia oleum et pinguis majus occupant dimensum quam aqua. At si operatio fiat in tensili, hoc fortasse fieri possit: quæ esset res immensæ utilitatis, cum omnis alimentatio maxime consistat in pingui.

6. Bonum esset, et ad multa utile, ut in distillationibus natura ad rationes reddendas quandoque compelleretur; atque ut poneretur in certo quantum per distillationem consumptum fuerit, id est, versum in pneumaticum, et quid maneret, sive fixum, sive restitutum in corpore. Id fieri potest, si ante distillationem corpus distillandum ponderes, et vasa ipsa, intra quæ distillatio perficitur. At post distillationem ponderabis liquorem; ponderabis item fæces; denique ponderabis iterum vasa. Ex istis enim tribus ponderationibus cognosces quantum fuerit restitutum, quantum manserit in fæcibus, quantum adhererit vasibus; atque a decessione ponderis in illis tribus, comparati ad pondus corporis integri, cognosces quantum versum fuerit in pneumaticum.

**Connexio.** Transeundum a dilatationibus et rarefactionibus, quæ fiunt per calorem actualem, ad dilatationes et relaxationes quæ fiunt per remissionem frigoris vehementis et intensi; quæ ipsa remissio censi debet pro calore comparato.

**DILATIONES ET RELAXATIONES CORPORUM PER REMISSIONEM FRIGORIS.**

**Historia.** 1. Quæ per frigus vehemens concreverunt, neque tamen eo usque, ut per moram frigoris in densatione sua fixa sint, ea absque calore manifesto, et per remissionem tantum frigoris, se aperiant et restituant; ut fit in glacie, grandine, nive: sed hoc faciunt per calorem manifestum admodum multo celerius.

2. Verum delicatiora, quorum vigor consistit in spiritu nativo subtili, ut poma, pyra, granata, et similia, si semel fuerint congelata, suffocato spiritu, non recipiunt postea pristinum vigorem.

3. At vinum et cervisia per gelu ad gustum languescunt, nec vigent; at tamen, succedentibus relaxationibus et tempestatibus australibus, reviviscunt et relaxantur, et quasi denuo fervescunt.

**Connexio.** Transeundum a dilatationibus quæ fiunt per calorem externum actualem, atque etiam per remissionem frigoris, (quæ, ut jam diximus, est calor comparatus,) ad dilatationes corporum quæ fiunt per calores potentiales, sive spiritus auxiliares alterius corporis applicati et admoti.

**DILATIONES CORPORUM, QUÆ FIUNT PER CALOREM POTENTIALEM, SIVE PER SPIRITUS AUXILIARES ALTERIUS CORPORIS.**

De caloribus potentialibus consule tabulas medicinales qualitatum secundarum; et ex his poteris excerpere ea quæ operantur super corpus humanum per dilatationem: quæ sunt fere illa quæ sequuntur.

- Confortantia, quæ dilatant spiritus oppressos.
- Abstergentia, quæ roborant virtutem expulsivam.
- Aperientia quoad officina venarum et vasorum.
- Aperientia quoad poros et meatus partium.
- Digerentia cum maturatione.
- Digerentia cum discussione.
- Cautica.

Hæc præcipue (sunt et alia) habent radicem in dilatatione spirituum, et humorum, et succorum, et substantiæ in corpore per spiritus auxiliares; necnon per complexionem tangibilem, quæ inest medicinis illis, vel interius vel exterius sumptis.

**Commentatio.** Patet in vitro calendari, quam exquisito sensu sive perceptione præditus sit aer communis calidi et frigidi; utpote quæ tam subtiles ejus differentias et gradus statim dijudicare possit. Nec dubito, quin perceptio spiritus in animalibus vivis versus calorem et frigus sit adhuc longe acutior: nisi quod aer sit pneumaticum purum et sincerum, et nihil habeat tangibilis admisti; at spirituum perceptio retundatur et hebetetur corpore tangibili, in quo sunt devincti. Attamen, non obstante hoc impedimento, videntur adhuc spiritus vivorum potiores ipso aëre, quoad hanc perceptionem. Neque enim hactenus nobis constat, quod

calor potentialis (de quo jam loquimur) aërem possit dilatare; cum certum sit, quod hoc faciat super spiritus in animalium membris contentos; ut in qualitibus (quas diximus) secundis medicinarum liquet. Sed de hoc inquiratur paulo accuratius, ex mandato proxime sequente.

1. Accipe duo vitra calendaria ejusdem magnitudinis. Impone in altero Mandata. aquam, in altero spiritum vini, fortem et acrem; atque ita calefiant vitra, ut aqua et spiritus vini ad parem altitudinem ascendant. Colloca ea simul, et dimitte per spatium aliquod; et nota, si aqua deveniat altior quam spiritus vini. Nam si hoc fit, palam est, calorem spiritus vini potentialem aërem dilatasse, ita ut spiritum vini depresserit.

2. Possit esse res varii usus, si operationes secundarum qualitatum medicinalium probentur interdum, et exerceantur in corporibus vitæ expertibus. Licet enim dubium non sit, plerasque earum nullius prorsus effectus fore, quoniam requiritur plane spiritus vivus ad eas actuandas, ob operationis subtilitatem: aliæ tamen proculdubio super nonnulla corpora inanimata operabuntur. Videmus enim quod possit sal in carnibus, aromata in cadaveribus, coagulum in lacte, fermentum in pane, et hujusmodi. Inserviet igitur diligentia medicorum circa qualitates secundas, ad instruendas complures alias operationes, si animum advertas cum judicio; id semper supponens, quod virtus fortior requiritur ad operandum super corpus mortuum, quam vivum.

**Connexio.** Transeundum ad dilatationes corporum quæ fiunt per liberationem spirituum, refractis nimirum ergastulis partium crassiorum, quæ illos arte detinuerant, ut se dilatare non possent. In corporibus enim, quæ habent arctam compagem, atque naturæ integralis nexibus fortiter devincta sunt, non exequuntur spiritus opus suum dilatationis, nisi fiat prius solutio continui in partibus crassioribus; vel per liquores fortes erodentes et stimulantés tantum, vel per eandem cum calore. Atque hoc cernitur in aperturis et dissolutionibus metallorum, de quibus nunc (ut in reliquis) pauca proponemus.

**DILATIONES CORPORUM PER LIBERATIONEM SPIRITUUM SUORUM.**

1. ACCIPE pondus auri puri ad denarium unum, in parvas bracteolas redacti, quæ etiam manu lacerari possint. **Historia.**

2. Accipe etiam pondus quatuor den. aquæ regis; et mittantur simul in vitrum. Tum ponatur vitrum super foculum, in quo sit ignis prunarum modicus et lenis. Paulo post insurgunt arenulæ quædam, aut grana; quæ deinde, post parvam moram, se diffundunt et incorporantur cum aqua; ut aqua efficiatur, aqua tanquam electrica, splendida, et veluti croco tincta. Dissolutio autem auri per aquam in quantitibus prædictis fit tantum ad tertias. Neque enim aqua oneratur ulterius; adeo ut, si dissolvere cupis totum pondus illud auri den. unius, opus sit effundere portionem in qua solutio facta est, et superinfundere de novo pondus simile 4 den. aquæ regis, et sic tertio. Ista dissolutio fit leniter et placide

modico igne, absque fumis et sine calefactione vitri alia, quam per ignem.

3. Accipe argenti vivi in corpore pondus ad plactum, duplum aquæ fortis: ponito simul in vitro, neque ea ad ignem omnino admove. Attamen paulo post insurget intra corpus aquæ instar pulveris tenuissimi, et intra spatium horæ, absque igne, absque fumis, absque tumultu, vertetur corpus commixtum in aquam bene claram.

4. Accipe plumbum in lamellis ad pond. den. 1. aquæ fortis ad pond. den. 9. Non fit bona incorporatio, ut in aliis metallis; sed aqua demittit majorem partem plumbi in calce ad fundum vitri, manente aqua perturbata, sed vergente ad diaphanum.

5. Accipe argenti in lamellis, sive bracteolis, pondus den. 1. aquæ fortis pond. den. 4. pone super foculum in vitro, cum igne lento. Insurgit argentum in arenis, aut bullulis, intra corpus aquæ, majoribus paulo quam aurum; deinde incorporatur cum aqua, et vertuntur simul in liquorem tenuem, sed album et quasi lacteum. Sed postquam paulisper resederit liquor et refrixerit, ejaculantur (sive hoc emanet ex metallo, sive ex aqua, sive ex utroque) fragmina glacialia intra corpus aquæ: postquam autem per moram longiorem penitus resederit, clarificat se liquor, et devenit clarus et crystallinus, demissa glacie in fundum. Sustinet aqua operationem, qualem in auro, et fit dissolutio simili fere calore, nec colligit calorem per motum magis quam aurum.

6. Accipe cuprum in bracteolis ad pondus den. 1. aquæ fortis ad pondus den. 6. Mitte super foculum. Insurgit cuprum in bullulis sive arenulis majoribus adhuc quam argentum. Paulo post incorporatur cum aqua, et corpus commixtum vertitur in liquorem cœruleum, turbidum; sed postquam resederit, clarificat se ætheris instar in cœruleum, pulchrum, et splendidum, demissis in fundum facibus instar pulveris, quæ tamen ipsæ per moram immiununt, et ascendunt, et incorporantur. At den. illi sex aquæ fortis solvunt den. totum cupri, ut sustineat se onerari aqua duplo plus quam in auro et argento. Concipit autem dissolutio cupri calorem manifestum per tumultum interiorem, etiam antequam admoveatur ad ignem.

7. Accipe stannum in bracteolis ad pondus den. 1. aquæ fortis ad pond. den. 3. et vertitur totum metallum in corpus simile flori lactis aut coagulo; nec facile se clarificat; et concipit sine igne calorem manifestum.

8. Accipe ferri in laminis pond. den. 1. aquæ fortis pond. den. 9. et sine igne surgit ferrum in magnis bullis, non tantum intra corpus aquæ, sed supra, adeo ut ebulliat extra os vitri, atque insuper emittat copiosum et densum fumum croceum; idque cum maximo tumultu et calore vehementissimo, et qualem manus non sustineat.

Monitum. Dubium non est, quin vires variæ aquarum fortium diversorum generum, et modi ignis sive calor, qui adhibetur, istas aperturas etiam variare possint.

Mandata. Qualis sit ista dilatatio metallorum per aperturas videndum: utrum sit instar dilatationis auri foliati, quæ est pseudo-rarefactio, (ut mox dicemus,) quia corpus dilatatur potius loco

quam substantia, qualis itidem est dilatatio pulverum; an revera corpus ipsum metallorum dilatetur in substantia. Hoc hujusmodi experimento probari potest. Pondera argentum vivum; excipe etiam modulum ejus in situla: pondera similiter aquam fortem, et excipe modulum ejus in altera situla: deinde dissolve et incorpora ea modo supradicto; postea pondera incorporatum, et immitte illud etiam in duas illas situlas, et nota, si pondus et mensura compositi ad pondus et mensuram simplicium juste respondeat. Delegimus autem argentum vivum ad experimentum, quia minor est suspicio alicujus consumptionis, cum fiat dissolutio sine igne.

Videndum (obiter) utrum dissolutio argenti vivi lapides ponderosissimos, aut fortasse stannum, sustineat ut innatent. Etenim ex rationibus ponderum hoc colligi potest. Neque hoc pertinet ad miraculum et imposturam, sed ad investigandam naturam misturarum, ut suo titulo apparebit.

Notatu etiam dignum est, (licet non Observatio sit præsentis inquisitionis,) omnia metalla, licet sint aquis, in quibus dissolvuntur, insigniter graviora, tamen in actu primo dissolutionis ascendere in arenulis vel bullis. Atque eo magis hoc notandum est, quod ubi non advovetur ignis, ut in argento vivo, idem faciant.

Tumultus intra partes corporis inter Commentatio dissolvendum, istam ascensionem causat. Nam in vehementi erosione corpora impelluntur nonnihil motu locali; ut videre est in lapide parvo glareoso, qui positus in aceto forti ad latera patellæ, (ut facilius labatur,) per vices gliæcit, ut piciculus. Est et genus lapidis aut fossilis, quod immisum in acetum irrequiete se agit, et huc illic currit. At quæ sine impetu isto miscentur (ut arbitor) nisi quassata, non ascendunt; velut saccharum in fundo aquæ non dulcificat in summo; nec crocus colorat, nisi moveatur et agitetur.

Transeundum ad aliud genus dilatationum, quod etiam communi vocabulo Commercio dissolutionum (in aliquibus) nuncupatur. Fit autem ubi corpora versus alia corpora amica ruunt in amplexum; et, si datur copia, aperiunt se ut illa introcipiant. Neque fit hæc apertura tumultuose aut per penetrationem corporis ingredientis, (ut in aquis fortibus,) sed placide, et per relaxationem corporis recipientis.

#### DILATIONES PER AMPLEXUM ET OCCURSUM CORPORIS AMICI.

1. SACCHARUM et gummi nonnulla, ut Historia tragacanthum, in liquoribus infusa, solvuntur; laxant enim libenter (instar spongiarum) partes suas ad recipiendum liquorem.

2. Papyrus, seta, lana, et hujusmodi porosa, liquoribus immersa, aut alias humectata, ita se aperiunt, ut deveniant magis mollia, lacerabilia, et quasi putria.

3. Gaudia subita, ut ob nuntium bonum, aspectum ejus quod fuit in desiderio, et similia, licet non corpus amplectantur, sed phantasiam aliquam, nihilominus spiritus animalium insigniter dilatant; idque interdum cum periculo repentini deliqui aut mortis. Simile facit imaginatio in venereis.

**Mandatum.** Cogitandum de inveniendis menstruis substantiarum specialium: videntur enim posse esse liquores et pulpæ, tantæ cum corporibus determinatis sympathiæ, ut, illis admotis, partes suas facile laxent, easque libenter imbibant; seque per hoc in succis suis intenerent et renovent. Hoc enim pertinet ad unum ex magnalibus naturæ; nempe, ut rerum humores maxime radicales refo-cillari, et nutritio ab extra fieri possint, ut in cornibus, ossibus, membranis, lignis, etc. Etiam in iis, quæ operantur per divulsionem et penetrationem, est sympathia sive conformitas: aqua fortis siquidem non solvit aurum, ut nec aqua regia communis argentum.

**Connexio.** Transeundum ad dilatationes per assimilationem aut versionem; quando scilicet corpus imperans et magis activum subigit corpus accommodum et obsequiosum, et magis passivum; ita ut illud in se plane vertat, seque ex eo multiplicet et renovet. Quod si corpus assimilans sit tenuius et rarius quam corpus assimilatum, manifestum est assimilationem fieri non posse absque dilatatione.

#### DILATATIONES, QUÆ FIUNT PER ASSIMILATIONEM, SIVE VERSIONEM IN TENUIUS.

**Historia.** 1. AER, et maxime cum commotus est, (ut in ventis,) lambit humiditatem terræ, eamque deprædat et in se vertit.

2. Processus desiccationis in lignis, herbis, et hujusmodi tangibilibus, non admodum duris ab obstinatis, fit per deprædationem aëris, qui spiritum in corpore evocat et exsugit, et in se transubstantiat: itaque tarde hoc fit in oleosis et pinguibus, quia spiritus et humidum ipsorum non sunt tam consubstantialia aëri.

3. Spiritus in tangibilibus (qualia diximus) deprædantur partes ipsas crassiores corporis in quo includuntur. Nam spiritus, qui proximi sunt aëri, ipsi aëri obediunt, et exeunt cito: at qui in magis profundo corporis siti sunt, illi partes interiores ad jacentes deprædantur, et novum inde spiritum gignunt et secum copulant, ut una tandem exeant: unde fit in istis corporibus per ætatem et moram diminutio ponderis; quod fieri non posset, nisi pars aliqua non pneumatica in pneumaticum sensim verteretur. Nam spiritus jam factus in corpore non ponderat, sed levat pondus potius.

4. Multi tumores in corporibus animalium dis-cutiuntur absque suppuratione aut sanie, per insensilem transpirationem, versi plane in pneumaticum, et evolantes.

5. Esculenta flatuosa gignunt ventositates, succis suis versis in flatum, et exeunt per ructus et crepitu; etiam partes internas extendunt et torquent: quod faciunt etiam alimenta proba et laudata quandoque ob debilitatem functionum.

6. In omni alimentato, cum pars alimentata tenuior est alimento, (ut spiritus atque sanguis per arterias in animalibus leviores sunt, quam cibus et potus,) necesse est ut alimentatio inducat dilata-tionem.

7. Omnium aperturarum, dilatationum, et expansionum maxima, quatenus ad analogiam inter cor-

pus ante dilatationem et post, omniumque pernicio-sima, et quæ minima mora et brevissimo actu transi-gitur, est dilatatio oleosorum et inflammabilium in flammam; quod fit quasi affatim et sine gradibus. Estque (quoque flammam successivam) plane ex genere assimilationum; multiplicante se flamma super fomitem suum.

8. At quod potentissimum in hoc genere est, non ad velocitatem primæ inflammationis, (nam pulvis pyrius non tam cito inflammatur, quam sulphur, aut caphura, aut naphtha,) sed ad successionem flammæ semel conceptæ, et ad superandum ea quæ resistunt, est commistio illa expansionum in aërem simul et in flammam, (de qua supra diximus,) quæ invenitur in pulvere pyrio (ut liquet in bombardis et cuniculis).

9. Notant autem chemistæ, etiam argenti vivi expansionem per ignem esse admodum violentam; quin et aurum, vexatum et oclusum, quandoque potenter erumpere, cum periculo operantium.

Transeundum ad eas dilatationes, vel **Connexio.** distractiones et divulsiones, quæ fiunt, non ab appetitu aliquo in corpore ipso, quod dilata-tur, sed per violentiam corporum externorum, quæ, cum suis motibus prævaleant, necessitatem imponunt corpori alicui, ut dilatetur et distrahatur. Atque ista inquisitio pertinet ad titulum de motu liber-tatis; sed (ut in reliquis) aliquid de hoc, sed parce et paucis, jam inquiremus. Iste autem motus est plerumque geminus. Primo, motus distractionis a vi externa; deinde motus contractionis vel restituti-onis a motu corporis proprio: qui posterior motus licet ad condensationes spectet, tamen ita conjunctus est cum priore, ut hic commodius tractari debeat.

#### DILATATIONES SIVE DISTRACTIONES A VIOLENTIA EXTERNA.

1. BACULA lignea et similia flexionem nonnullam patiuntur, sed per vim; illa autem vis distrahit partes exteriores ligni in loco ubi arcuatur, et comprimit partes interiores: quod si vis illa paulo post remittatur, restituit se baculum, et resilit; sed si diutius in ea positura detineatur, figitur in ea, nec resilit amplius.

2. Similis est ratio horologiorum, (eorum scilicet quæ moventur per torturam laminarum,) in quibus videre est continuum et graduatum nixum laminarum ad se restituendum.

3. Pannus, et similia filacea, extenduntur majorem in modum, et resiliunt citius dimissa; non resiliunt longius detenta.

4. Caro, quæ surgit in ventosis, non est tumor, sed violenta extensio carnis integralis per attractionem.

5. Qualem rarefactionem tolleret aër, (pro modo scilicet violentiæ,) tali experimento elicere possis. Accipe ovum vitreum, in quo sit foramen minutum: exsuge aërem anhelitu quantum potes; deinde affatim obtura foramen digito, et merge ovum in aquam ita obturatam. Post tolle digitum, et videbis ovum attrahere aquam, tantum scilicet, quantum exsuctum fuerit aëris; ut aër, qui remansit, possit recuperare exporrectionem suam veterem, a qua fuerat vi distractus et extensus. Memini autem intrasse aquam, quasi ad decimam partem contenti ovi. Etiam me-

mini me reliquisse ovum (post exsuctionem) cera obturatum per diem integrum, ut experirer, si per moram illam (quæ certe nimis brevis erat ad experimentum justum) aër dilatatus figi posset, nec curaret de restitutione, ut fit in baculis et pannis. Sed cum tolleretur cera, aqua intrabat ut prius; etiam si ovum appositum fuisset ad aurem, aër novus intrabat cum sibilo.

6. At qualem rarefactionem aqua sustineat, possit forte hoc modo deprehendi. Accipe folles: attrahe aquam, quantum impleat cavum follium: neque tamen eleva folles ad summum, sed quasi ad dimidium. Deinde obstrue folles, et nihilominus eleva eos paulatim; et videbis, quatenus ista aqua recepta se dilatari patiat. Aut etiam per fistulam, aut syringam, attrahe nonnihil aquæ; deinde foramen obtura, et embolum adhuc paulatim attrahe.

Suspicio etiam fieri distractionem  
 Commentatio. spiritus aquæ in congelationem; sed subtilis est hujus rei ratio. Primo, pro certo poni possit, in omni excoctione (puta luti, cum fiunt lateres et tegulæ, crustæ panis, et similia) multum ex pneumatico corporis exhalare, et evolare, (ut paulo post monstrabimus,) atque inde necessario sequi, ut partes crassiores per motum nexus magna ex parte (nam est et alius motus, de quo nunc sermo non est) se contrahant. Nam sublato spiritu, nec alio corpore facile subintrante, ne detur vacuum (ut loquuntur) in locum illum, quem occupabant spiritus, succedunt partes; unde fit illa durities et contractio. Eadem prorsus ratione, sed modo contrario, videtur necessario sequi, ut spiritus in congelatione distrahantur. Etenim partes crassiores per frigus contrahuntur; itaque relinquuntur aliquod spatium (intra claustra corporis) occupandum: unde sequitur, si aliud corpus non succedat, ut spiritus præinexistens per motum nexus distrahatur tantum, quantum partes crassiores contrahantur. Sane id conspicitur in glacie, quod corpus interius reddatur rimosum, crustulatum, et parum tumescat; quodque ipsa glacies, non obstante insigni partium contractione, sit (in toto) levior quam ipsa aqua: idque dilatationi pneumatici merito attribui possit.

Transeundum ad dilatationes per deacervationem; quando, scilicet, quod erat cumulatum et acervatum, fit applanatum. Istæ autem dilatationes pro pseudo-dilatationibus habendæ sunt; dilatatio enim fit in positura partium, non in substantia corporis. Siquidem corpus manet in eadem densitate substantiæ; sed figuram nanciscitur ampliorem in superficie, minorem in profunditate.

#### DILATATIONES PER DEACERVATIONEM.

1. **AURUM** per malleationem in immensum dilatatur, ut in auro foliato; item per distractionem; ut in argenteis filis inauratis: inauratio enim fit in massa æquatam distrahatur.

2. **Argentum** etiam fit foliatum, licet non ad tam exquisitam tenuitatem quam aurum. Reliqua quoque metalla per malleationem dilatantur in bracteoas et lamellas tenues.

3. **Cera**, et hujusmodi, premuntur, et finguntur in oblinimenta tenuia.

4. **Gutta atramenti** in calamo dilatatur ad exsua-

tionem multarum literarum: quod et fit per penicillum in pigmentia, et vernice.

5. **Crocus** in parva quantitate magnam inficit quantitatem aquæ.

Atque de dilatationibus, et rarefactionibus, et aperturis corporum, hæc inquisita sunt. Superest jam ut de contrariis actionibus simili diligentia inquiramus; id est, de contractionibus, et condensationibus, et clausuris corporum. Quam partem visum est seorsum tractare, eo magis, quod non omnes actiones ex hac parte sint reciproæ; sed nonnullæ earum propriæ, et per se explicandæ. Etiam, quamvis contraria ratione consentiant; tamen in experimentis vix diversis investigantur, et se conspicienda præbent.

Actioni dilatationis per introceptionem corporis alieni reciproca est actio contractionis per emissionem aut expressionem corporis alieni: itaque de eo primo est inquirendum.

#### CONTRACTIONES PER EMISSIONEM AUT DEPOSITIONEM CORPORIS INTROCEPTI.

1. **CONSULE** instantias de dilatationibus per introceptionem, et oppone illis easdem instantias postquam dilatationes resederint: in his intelligimus, ubi datur residere.

2. **Metalla pura et perfecta**, licet variis modis vexentur et alterentur, ut in sublimationibus, præcipitationibus, malagmatibus, dissolutionibus, calcinationibus, et hujusmodi; tamen (natura metallica cum aliis corporibus non bene conveniente) per ignem et confiationem plerumque restituantur, et vertuntur in corpus quale prius. Est autem condensatio ista minus vera, quia videtur esse nihil aliud quam emissio et exclusio aëris, qui se miscuerat, aut aquarum, in quibus dissoluta erant, ad hoc, ut partes genuinæ corporis metalli rursus coire possint. Neque tamen dubium est, quin corpus longe minus spatium occupet quam prius, sed minime videtur densari substantia. Atque hæc potestas clavium, quæ aperit et claudit, viget maxime in metallis. Etiam metalla impura, et marcasitæ, atque minere metallorum, eodem modo (per ignem congregatis partibus homogeneis, et emissa et exclusa scoria, et purgamentis) depurantur. Etenim omne metallum purum densius est et ponderosius impuro.

3. **Ad magis arctam autem condensationem metallorum** facit, si metalla sæpius fusa, sæpius in aquis extincta sint; unde magis obstinata fiunt, et indurescunt. Utrum vero pondere ipso augeantur, pro ratione dimensi, hactenus non constat. De eo fiat experimentum. Atque ista induratio magis adhuc potenter fit per crebras solutiones et restitutiones, quam per fusiones et extinctiones. Inquirendum etiam est, in quali genere, aut mixtura aquarum, indurescant magis.

4. **Reperuntur tamen modi mortificationum metallorum**, id est, prohibitionum, ne cum soluta et aperta fuerint, restituantur. Id maxime cernitur in argento vivo; quod, si strenue tundatur, et inter tundendum injiciatur parum terebinthinæ, aut salivæ hominis, aut butyri, mortificatur argentum vivum, et nanciscitur aversionem et fastidium ad se restituendum.

**Mandatum.** Diligenter inquirendum de mortificationibus, hoc est, de impedimentis restitutionem omnium metallorum. Magna enim debet esse antipathia eorum, quæ prohibet ne ea coëant. Cumque omnis restitutio ipsorum sit genus quoddam condensationis, pertinebit scilicet cognitio privationis ad cognitionem formæ.

**Historia.** Dilatationibus per spiritum innatum se expandentem non opponitur proprie actio aliqua reciproca: cum contractio res aliena sit a spiritu, qui non contrahitur, nisi cum aut suffocatur, aut patitur, aut colligit se (arietis instar) ut fortius se dilatet. Attamen commode hoc loco substituemus actionem illam, quæ est propria partium crassiorum, sed per accidens imputari debet spiritui innato; ea est, ubi per evolutionem, sive emissionem spiritus, contrahuntur et indurantur partes. Spiritus autem emittitur vel ex agitatione sua propria, vel sollicitatus ab aëre ambiente, vel provocatus et irritatus ab igne, seu calore.

**Commentatio.** Idem faciunt quoad attenuationem et emissionem spiritus, et actiones quæ ex ea sequuntur, ignis sive calor, et tempus sive ætas. Verum ætas per se curriculum est solummodo, aut mensura motus. Igitur cum de ætate loquimur, intelligimus de virtute et operatione composita ex agitatione spiritus innati, et aëre ambiente, atque radiis cœlestium. Sed illud interest, quod ignis et calor vehemens dilatat corpora confertim, et fortiter, et visibiliter; ætas autem, instar caloris lenissimi, paulatim, et leniter, et occulto: fumi enim et vapores scilicet pissi sunt et conspicui, perspirationes vero neutiquam; ut manifestum est in odoribus. Attamen magis subtilis et exquisita est ea corporum attenuatio et rarefactio, quæ fit per ætatem, quam quæ fit per ignem. Nam ignis præcipitans actionem, pneumaticum, quod in corpore est, rapide evolare facit; humidum quoque quod præparatum est in pneumaticum subinde vertit, atque tale factum emittit: unde partes tangibiles sedulo se interim et gnæviter constipant, et non parum spiritus (tanquam manu injecta) morantur et detinent. At ætas pneumaticum jam factum ad evolutionem non urget subito; unde fit ut illud diutius manens in corpore, quicquid in tenue digeri possit, sensim et seriatim præparet, parum ex pneumatico jam facto placide et successive interim volante; adeo ut anticipet fere, et tanquam fallat constipationem partium tangibilium. Quamobrem in dissolutione per ætatem, sub finem negotii, parum admodum tangibilis figitur et manet. Etenim pulvis ille putris, qui per longos annorum circuitus manet, tanquam consumptionis reliquiæ, (qualis in sepulchris et monumentis vetustis nonnunquam invenitur,) res quasi nihili est, et omni incineratione, quæ fit per ignem, minui et magis destitutus. Nam cineres etiam succum habent, qui possit elici, et verti in sales: hujusmodi pulvis minime. Verum, quod ad inquisitionem præsentem pertinet, et cujus causa hæc dicta sunt, certum est spiritum, quamdiu detinetur in corpore, partes tangibiles colligere, intenerare, conficere, subruere; verum ab ejus emissionem partes tangibiles continuo se contrahere et constipare.

CONTRACTIONES PER ANGSTATIONEM PARTIUM CRASSIORUM POST SPIRITUM EMISSUM.

1. IN senectute cutes animalium cor- Historia.  
rugantur, et membra arescunt.

2. Pyra et poma diu servata rugas colligunt; nuces autem ita contrahuntur, ut non impleant testam.

3. Casei veteres in cortice exteriori efficiuntur rugosi. Ligna in trabibus, postibus, et paliis, tractu temporis, (præsertim si ponantur viridia,) contrahuntur in arctum, ut disjungantur et hient. Simile fit in globis lusoriis.

4. Terra in magnis siccitatibus divellitur, et in superficie sua plena rimarum efficitur: etiam quandoque rimæ tam in profundum penetrant, ut ad eruptionem aquarum causam præbeant.

Nemo nugetur, aiens, istam con- Monitum.

tractionem in desiccationibus nihil aliud esse, quam assumptionem humidi. Nam si id tantum agetur, ut humidum in spiritum versum evolaret, deberent corpora manere in priore exporrectione et dimenso suo, et solummodo cava fieri, ut pumices, aut suber; non autem localiter contrahi et minui dimenso suo.

5. Lutum per fornaces cogitur in Historia.  
lateres et tegulas: at si instet calor vehemens, ut in medio fornacis, vertitur etiam nonnulla pars luti, et funditur in vitrum.

6. Ligna, si suffocetur flamma, vertuntur in carbones; materiam scilicet magis spongiosam et levem, quam ligna cruda.

7. Metalla pleraque sepulta in crucibulis inter prunas ardentes, et multo magis per fornaces reverberatorias, vertuntur in materiam friabilem, et calcinantur.

8. Complura fossilia et metalla, et ex vegetabilibus nonnulla, vitrificantur per ignes fortes.

9. Omnia quæ assantur, si ignem plus æquo tolerant, incarbonantur, et recipiunt se in angustius dimensum.

10. Papyrus, membrana, lintea, pelles, et similia, per ignem non solum corrugantur in partibus, sed etiam se complicant et convolvunt, et tanquam rotulantur in toto.

11. Lintea a flamma primo concepta, paulo post suffocata, vertuntur in substantias raras; quæ vix inflammantur, sed facile ignescunt; quibus utimur ad fomites flammaram.

12. Pinguia, ut cera, butyrum, lardum, oleum, et similia, per ignem deveniunt frixa et fœculenta, et tanquam fuliginosa.

13. Ova contrahuntur, abigne, et quatenus ad albumen ipsorum, colorem mutant a claro in candidum.

14. Quinetiam si ovum testa exutum injiciatur in spiritum vini bonum et fortem, elixatur, et fit candidum; similiter et offa panis injecta in ipsum devenit quasi tosta.

1. Quamdiu (ut paulo ante innuimus) Observationes.  
spiritus in corpore detinetur, si per ignem aut calorem excitatus et dilatatus fuerit, tandem agit se, molitur exitum, partes tangibiles emollit, intenerat, colliquat: atque hoc est proprium opus spiritus, qui digerit et subigit partes. Sed

postquam spiritus sibi exitum invenerit, et emissus fuerit, tum prævalet opus partium, quæ a spiritu vexatæ conspirant, et se stringunt; tam ex desiderio nexus et mutui contactus, quam ex odio motus et vexationis. Atque inde sequitur coarctatio, induratio, obstinatio.

2. Est in processu contractionis partium ab igne finis et ultimitas: nam si minor sit copia materiæ per violentam deprædationem ignis, quam ut cohærere possint; tum demum se deserunt, et incinerantur et calcinantur.

Atque de contractionibus, quæ fiunt  
 Connexio. ab emissionem spiritus e corporibus, sive is emittatur per ætatem, sive per ignem, sive per calorem potentialem, hæc inquisita sunt. Actioni vero dilatationis per calorem actualem externum reciproca est actio contractionis per frigus actuale externum. Atque hæc condensatio est omnium maxime propria et genuina; maxime potens etiam foret, nisi quod non habemus hic apud nos in superficie terræ frigus aliquid intensum. Frigus autem et caloris remissio (nam utrumque hoc loco conjungere visum est) alia simpliciter, manente natura sua, condensat; alia rarefacta (sed imperfecte) restituit; alia per condensationem plane vertit et transfomat de natura in naturam. De his omnibus jam pauca sunt proponenda.

#### CONTRACTIONES CORPORUM PER FRIGUS ACTUALE EXTERNUM.

1. AER in vitro calendari percipit gradus tam frigidi quam calidi. Atque temporibus nivalibus super caput vitri quasi pileum ex nive posuimus; qui, licet aer ipse illo tempore fuisset hiemalis et asper, tamen frigus in tantum auxit, ut aqua per paucos gradus, aëre contracto, insurgeret.

2. Superius posuimus, aërem in vitro ad tertias per calorem dilatatum fuisse, atque tantundem, remittente calore, se contraxisse.

1. Experimento plane dignum est, ut probetur, utrum aer per calorem dilatatus figi in eadem exporrectione possit, ut se restituere et contrahere non laboret. Itaque accipe vitrum calendare robustum, idemque vehementer calefacto; deinde os bene obturato, ne aer se contrahere possit; et per aliquot dies obturatum dimittito: deinde in aquam ita obturatum mergito; et postquam in aqua fuerit, aperito, et videto quantum aquæ trahat, atque utrum sit ad eam proportionem quam alias tracturum fuisset, si vitrum statim in aquam fuisset missum.

2. Etiam obiter nota, (etsi ad titulum de calido et frigido potius pertineat,) utrum aer, ita fortiter dilatatus et per vim detentus, retineat calorem suum multo diutius, quam si os vitri apertum fuisset.

1. Stellæ tempore hiemali, noctibus valde serenis et gelidis, apparent grandiores quam noctibus æstivis serenis: quod fit præcipue ex universali condensatione aëris, qui tum vergit magis ad naturam aquæ: nam sub aqua omnia apparent longe grandiora.

2. Rores matutini sunt proculdubio vapores, qui in aërem purum non erant plene dissipati et versi,

sed hærebant imperfecte mixti, donec per frigora noctis, præsertim in regione media quam vocant aëris, fuerint repercussi, et in aquam condensati.

3. Condensatio pluvix, et nivis, et grandinis fit similiter per frigus mediæ regionis, quod vapores coagulat magis (ut plurimum) in alto, quam rores. Occurrunt vero dubitationes duæ, circa quas diligens fieri debet inquisitio. Altera, utrum guttæ ipsorum congelentur et condensentur in ipso casu; an fuerint illæ primo collectæ et congregatæ in moles majores aquarum, in aëre (propter distantiam a terra) pensiles, quæ postea, per violentiam aliquam conquisatæ, frangunt se, et comminuunt in guttas; ut in nonnullis cataractis Indiæ Occidentalis, quæ tam subito et confertim descendunt, ut videantur quasi ex vasibus fusæ et dejectæ. Altera, utrum non solum vapores, (qui olim fuerunt humores et aquæ, et solummodo restituuntur,) sed etiam pars magna aëris puri et perfecti per frigus (in illis regionibus vehementer et intensum) non fuerit coagulata, et mutata plane, et versa in pluviam, et reliqua, de quo paulo post inquiremus.

4. In distillationibus, humores primo vertuntur in vapores, illi, per remotionem ab igne destituti, per latera stillatorii contrusi, et nonnunquam per frigidam ab extra infusam accelerati, restitunt se in aquas et liquores. Imago prorsus familiaris eorum et pluvix.

5. Argentum vivum præcipue, necnon metallica alia, cum volatilia facta fuerint, properant tamen ad se restituendum, et occursum alicujus solidi et materiati magnopere gaudent. Itaque facile hærent, facile decidunt; adeo ut quandoque sit necesse vapores ipsorum igne persequi, et de igne in ignem transmittere, factis tanquam scalis receptaculorum ignis, ad nonnullam distantiam inter se, circa vas; ne vapor, postquam per ascensionem paulo fuerit remotior ab igne, citius quam expedit se restituat.

6. Quæ ab igne colliquata fuerint, post remissionem caloris densantur et consistunt ut prius; ut metalla, cera, adeps, gummi, etc.

7. Vellus laneum, super terram diutius jaceas, colligit pondus; quod fieri non posset, nisi aliquid pneumaticum densaretur in ponderosum.

8. Solebant antiquitus nautæ, velleribus lanæ, tanquam tapetibus aut aulæis, vestire latera navium noctu, ita ut non attingerent aquam; atque inde mane exprimere aquam dulcem, ad usum navigantium.

9. Etiam expertus sum de industria, quod alligando quatuor uncias lanæ ad funem, qui demittebatur in puteum 28 orgyiarum, ita tamen ut aquam per sex orgyas non attingeret, ex mora unius noctis crevisset pondus lanæ ad quinque uncias et drachmam unam; et hæsisset per exterius lanæ plane guttæ aquæ, ut ex iis tanquam lavare aut madefacere manus quis possit: idque iterum atque iterum expertus sum, variante quantitate ponderis, sed semper multum aucta.

10. Lapides, ut marmora et silices, atque etiam trabes lignæ, (præsertim pictæ et oblitæ oleo,) manifesto madefiunt sub regelationibus aut tempestatibus australibus; ut tanquam exudare videantur, et guttæ inde detergi possint.

11. In gelu madido (quod Anglice *Rynes* vocant)

fit irroratio in ædibus super vitra fenestrarum; idque magis interius versus cubiculum, quam exterius ad aërem apertum.

12. Anhelitus, qui est aër primo attractus, ac deinde intra cavum pulmonum brevi mora parum humefactus, super specula aut corpora polita (qualia sunt gemmæ, laminæ ensium, et similia) vertitur in quiddam roscidum, quod paulo post instar nubeculæ dissipatur.

13. Lintea etiam in ædibus (ubi ignis non accenditur) colligunt humiditatem, ita ut foco appropinquata fument.

14. Pulveres omnes in repositoriis conclusi colligunt humiditatem, ut hæreant et quasi glebefiant.

15. Existimatur origo fontium et aquarum dulcium, quæ ex terra scaturiunt, fieri ex aère concluso in cavis terræ (præsertim montium) coagulato et condensato.

16. Nebulæ sunt condensationes aëris imperfectæ, commistæ et longe majore parte aëris et parum aquei vaporis; et fiunt, hieme quidem, sub mutatione tempestatum a gelu ad regelationem, aut e contra; æstate vero et vere, ex expansione roris.

#### Mandatum.

1. Quia versio aëris in aquam utilissima res esset, idcirco omnes instantiæ, quæ ad hoc innuunt, diligenter pensandæ: atque inter alia in certo ponendum, utrum exsudationes marmorum, et similibus, in tempestatibus australibus et pluviosis, sint meræ condensationes aëris a duritie et lævore lapidum repercussæ, instar anhelitus in speculo; an participant nonnihil ex succo et pneumatico intrinsecus lapidis.

2. Probatio fieri possit per pannum linteum aut lanam supra lapidem positam: nam si tunc quoque exsudat lapis, participat exsudatio ex causa interiore.

Commentatio. Quod ipse aër vertatur in aquam in regionibus supernis, omnino necessario concluditur ex conservatione rerum.

Nam certissimum est humores maris et terræ verti in aërem purum, postquam vaporum naturam, tempore, et consortio, et rarefactione plenaria, penitus exuerint. Itaque si non esset reciprocatio, ut aër vicissim quandoque verteretur in aquam, quemadmodum aqua vertitur in aërem, non sufficerent plane vapores, qui remanent novelli et imperfecte misti, ad pluvias, et imbres, et re-integrationes specierum; sed secutæ forent siccitates intolerabiles, et conflagratio, et venti impetuosi, et tumores aëris, ex aère perpetuo multiplicato.

#### Historia.

1. In congelatione aquæ moles corporis integri non decrescit, sed intumescit potius. Fit tamen manifesta densatio in partibus; adeo ut conspiciantur rimæ et divulsionones intra corpus glaciei. Etiam quandoque (si aër subintret) cernuntur sensim capillitia, et fila, et flosculi. Glacies autem innatae aquæ; ut manifestum sit, non fieri densationem integram.

2. Vinum tardius congelascit quam aqua; spiritus vini non omnino.

3. Aquæ fortes et argentum vivum, arbitror, non gelascunt.

4. Oleum et adeps gelascunt et densantur, sed non ad indurationem.

5. Gelu terram facit concreescere, eamque reddidit siccam et duram. Poëta ait de regionibus hyperboreis:

“Æraque dissiliunt vulgo, vestesque rigescunt.”

6. Id quod faciunt tabulæ lignæ, præsertim in juncturis glutinatis.

7. Etiam clavi, per contractionem frigoris, decidunt (ut referunt) e parietibus.

8. Ossa animalium per gelu deveniunt magis crispa; adeo ut fractura ipsorum per hujusmodi tempora et facilius fiat, et ægrius curetur. Denique omnia dura redduntur per frigus magis fragilia.

9. Condensantur manifesto aquæ aut succi in lapides splendentes sive crystallinos; ut videre est in cavernis subterraneis intra rupes; ubi cernuntur stillæ multiformes, (instar stillarum conglaciatarum,) sed fixæ et saxæ, pensiles, quæ in ipso decasu (lento scilicet et tardo) congelatæ fuerunt. Utrum vero materia ipsarum sit promissa aqua, an succus natus lapidis, (saltem commistus,) in dubio est; præsertim cum gemmæ et crystalli in rupibus apertis exsurgant sæpe et excrescant (quod non potest imputari aquæ adhærenti) in sursum, et non decidant aut pendeant.

10. Lutum manifesto condensatur in lapides, ut videre est in aliquibus lapidibus magnis compositis ex parvis calculis, qui materia lapidea satis polita, et æque dura ac ipsi calculi, in interstitiis calculorum conglutinantur. Sed videtur hæc condensatio fieri non solum ex frigore terræ, sed per assimilationem, de qua paulo post.

11. Sunt quædam aquæ, quæ lignum, etiam paleas, (ut aiunt,) et hujusmodi, condensant in materiam lapideam; adeo ut pars ligni adhuc integri, quæ fuerit sub aqua, sit saxea; quæ emineat, maneat lignea; quod etiam vidi. De eo diligentius inquirendum, cum multum lucis præbere possit ad operativam condensationem.

Probabile est aquas metallicas, ob Mandatum.

densitatem, quam contraxerint a metallis, posse habere naturam insaxantem. Fiat probatio per stipulam, folia crassiora, lignum, et similia. Sed arbitror, deligendas esse aquas metallicas, quæ fiunt per ablationem aut crebram extinctionem, potius quam per dissolutionem; ne forte aquæ illæ fortes et corrosivæ impediunt condensationem.

12. In China habent mineras porcellanæ artificiales, defodiendo (non-  
nullas orgyas subter terram) massam quandam cæmenti ad hoc præparati et proprii; quæ post quadraginta aut circiter annos sepulta vertitur in porcellanam; ita ut transmittant homines hujusmodi mineras de hærede in hæredem. Historia.

13. Accepi rem fidei probatæ, de ovo, quod diu jacuerat in fundo aquæ, quæ circuibat ædes; quod inventum versum erat manifesto in lapidem, manentibus coloribus et distinctionibus vitelli, albuminis, testæ: sed testa erat fracta hic, illic, et splendescit in crustulis.

14. Audivi sæpius de versione albuminis ovi in materiam lapideam; sed nec veritatem rei nec modum novi.

15. Flamma proculdubio, cum extinguitur, vertitur in aliquid; videlicet in post-fumum; qui et ipse vertitur in fuliginem. De flammis vero spiritus vini, et hujusmodi aurarum, diligentior facienda est inquisitio, in quale corpus densentur, et qualis sit post-aura ipsarum. Neque enim apparet fuliginosum aliquod, ut in flammis ex oleosis.

Atque de contractionibus corporum per frigus actuale, sive hoc fiat in aëre, sive in aquis et liquoribus, sive in flamma; ac rursus, sive illa sit contractio simplex, sive restitutio, sive coagulatio et versio, hæc inquisita sint. Sequitur actio quæ opponitur dilatationi per calorem potentialem, scilicet contractio per frigus potentiale.

#### CONTRACTIONES CORPORUM PER FRIGUS POTENTIALE.

1. QUEMADMODUM consulendæ sunt tabulæ medicinales qualitatum secundarum ad inquisitionem de calore potentiâ, similiter consulendæ sunt ad inquisitionem de frigore potentiâ: in quibus excerpti debent potissimum astrictio, repercussio, oppilatio, inspissatio, stupefactio.

2. Opium, hyoscyamus, cicutâ, solanum, mandragora, et hujusmodi narcotica, spiritus animalium manifesto densant, in se vertunt, suffocant, et motu privant. Utrum vero super corpora mortua aliquid possint, fiat experimentum macerando carnes in succis ipsorum, ad experiendum si succedat denigratio et gangræna; vel macerando semina et nucleos, ad experiendum utrum mortificent ipsa, ut non crescant; vel linendo summitatem vitri calendaris per interius, succis ipsorum, ad experiendum utrum aequaliter contrahant aërem.

3. Apud Indias Occidentales reperiuntur, etiam per deserta arenosa et valde arida, cannæ magnæ, quæ super singulas juncturas, sive genicula, bonam copiam præbent aquæ dulcis, magno commodo itinerantium.

4. Referunt esse in quadam insula, aut ex Terce-riâ, aut ex Canariis, arborem, quæ perpetuo stillet; imo quæ nubeculam quandam roscidam semper habeat impendentem. Digna autem res cognitu esset, utrum inveniatur in vegetabili aliquo potentiale frigus, quod denset aërem in aquam. Itaque de hoc diligenter inquiratur: sed magis existimo, has esse cannas geniculatas, de quibus diximus.

5. Inveniuntur super folia nonnullarum arborum (veluti quercus) quæ unita sunt, nec humorem sugunt aut condunt, præcipue mense Maii apud nos, rores dulces, instar mannæ, et quasi melliti: utrum vero sit vis aliqua in foliis coagulans, an tantum illa rores commode excipiant et custodiant, non constat.

6. Vix invenitur corpus, in quo emineat tantum potentiale frigus, quantum in nitro. Nam ut aromata, et alia, licet ad tactum minime, tamen ad linguam aut palatum habent calorem perceptibilem; ita etiam nitrum ad linguam vel palatum habet frigus perceptibile, magis quam sempervivum, aut aliqua herba ex maxime frigidis. Itaque videtur subjectum accommodum ad experiendam virtutem potentialis frigidi in nitro. Poterit autem esse mandatum tale:

Mandatum. Accipe minutam vesicam ex pellicula, quantum fieri potest, tenui.

Infusa et liga; et merge eam intra nitrum per aliquos dies, et exime; et nota, si vesica aequaliter flaccescat: quod si facit, scias frigus nitri aërem contraxisse. Fiat idem experimentum mergendo vesicam intra argentum vivum: sed debet suspendi vesica per filum, ut mergi possit, et minus opprimi.

7. Accipe unguentum rosarum, aut hujusmodi; infunde aceti nonnihil: tantum abest ut liquor aceti reddat unguentum magis liquidum, ut contra illud reddat magis induratum et solidum.

Actioni dilatationis per amplexum opponitur actio contractionis per fugam et antiperistasin. Quemadmodum enim corpora versus grata et amica se laxant undiquaque, atque eunt in occursum; ita cum incidunt in odiosa et inimica, fugiunt undiquaque, et se contrudunt et constringunt.

#### CONTRACTIONES CORPORUM PER FUGAM ET ANTIPE- RISTASIN.

1. CALOR ignis per antiperistasin videtur nonnihil densari, et fieri acrior, ut sub gelu.

2. Contra, in regionibus torridis, videtur densari frigus per antiperistasin; adeo ut, si quis se recipiat ex campo aperto et radiis solaribus sub arbore patula, statim cohorreat.

3. Attribuitur, nec prorsus male, ista operatio contractionis per antiperistasin mediæ regioni aëris, ubi colligit se et unit natura frigidi, fugiens radios solis directos sparsos a coelo, et reflexos resiliens a terra; unde fiunt magnæ condensationes in illis partibus pluviarum, nivis, grandinis, et aliorum.

4. Merito dubitari possit, utrum opium et narcotica stupefaciant a potentiâ frigido, vel a fuga spirituum. Nam videtur opium partes habere calidas ex fortitudine odoris, ex amaritudine, et provocati-  
one sudoris, et aliis signis. Verum cum emittat vaporem inimicum et horribilem spiritibus, fugat illos undiquaque; unde se coagulant, et suffocantur.

Actioni dilatationis, quæ fit per assimilationem et versionem in tenuius, opponitur actio contractionis, quæ fit per assimilationem et versionem in densius. Intelligimus autem, quando hoc fit non per frigidum, vel actuale vel potentiale, sed per imperium corporis magis activi, quod se multiplicat ex corpore magis passivo. Assimilatio autem ad densum magis rara est, et minus potens multo, quam assimilatio ad rarum; quia corpora densa magis sunt ignava et inertia ad opus assimilationis quam tenuia.

#### CONTRACTIONES CORPORUM PER ASSIMILATIONEM, SIVE VERSIONEM IN DENSIS.

1. SUPRA notavimus, lutum inter lapides parvos densari in materiam lapideam.

2. Latera doliorum densant fæces vini in tartarum.

3. Dentes densant ea, quæ ex manducatione cil et humoribus oris adherent in squamas, quæ prægari et abscindi possint; verum æque duras ipsum os dentium.

4. Omnia dura et solida aliquid ex liquore et in fundo (maxime) et per latera adhærent et condensant.

5. Quæcunque alimenta vertuntur in corpus alimentatum magis densum quam corpus ipsius alimenti (sicut cibus et potus in animalibus vertuntur in ossa, calvariam, et cornua) in assimilando (ut manifestum est) condensantur.

Actio dilatationis per violentiam externam, sive ex appetitu sive contra appetitum corporis dilatati, opponitur [actio] contractionis per violentiam similiter externam; cum corpora ponuntur in necessitate, ab illis quæ in ipsum agunt, cedendi, et se comprimendi.

CONTRACTIONES CORPORUM, QUÆ FIUNT PER VIOLENTIAM EXTERNAM.

1. AER per violentiam, sive compressionem externam, aliquam condensationem facile patitur; majorem vero non tolerat: ut in violento impetu ventorum et terræ-motibus liquet.

2. Accipe catinum ligneum, inverte concavum ejus, et dimitte in aquam perpendiculariter, et facito illum descendere, impellens manu. Portabit secum aërem usque in fundum vasis, nec recipiet aquam interius, nisi parum infra summa labra: id ex colore ligni madefacti apparebit. Tanta autem fuerat condensatio aut compressio aëris, non amplior. Hoc ipsum insigniter apparebat, invento instrumento ad usum operariorum sub aqua. Illud tale erat: Deprimebatur dolium magnum et concavum aëre impletum. Illud stabat supra tres pedes metallicos, crassos, ut mergi posset: pedes erant breviores statura hominis. Urinatores, cum respiratione iis opus esset, flectebant se, et inserebant capita ipsorum in dolium, et respirabant: et hoc repetebant, et opus continuabant ad moram nonnullam; quosque scilicet aër, qui per insertionem capitis semper in quantitate nonnulla e dolio exibat, ad minimum diminutus esset.

3. At quantum ipsum condensationis, quod liberter toleratur sit aër, cognoscere et supputare possis hoc modo: Accipe pelvem aquæ plenam: mitte in eam globulum ex metallo, aut lapidem, qui resideat in fundo. Superimponere catinum, vel impellens manu, vel ex metallo ita fabricatum, ut fundum sponte petat. Si globulus fuerit talis magnitudinis, ut aër condensationem (qualis ad globulum intra catinum recipiendum sufficiat) liberter pati possit, condensabit se aër placide, et nullus erit alius motus; sin majoris fuerit magnitudinis, quam aër bene ferre possit, resistet aër, et levabit latus aliquod ipsius catini, et exibat in bullis.

4. Etiam ex compressione vesicæ videbis quousque comprimi possit sine ruptura; aut etiam ex foliis levatis, et denuo obturatis, prius foraminibus compressis. De condensatione aquæ tale a nobis factum est experimentum: Globum fieri fecimus plumbeum, cum lateribus bene crassis, et foramine in summo non magno. Globum aqua replevimus, et foramen metallo (ut meminimus) optime solidavimus. Tum globum illum, tanquam ad duos polos contrarios, primo malleis, deinde per pressorium robustum, fortiter compressimus. Cum autem ea applanatio multum sustulisset ex capacitate globi, eo ut ad octavam quasi diminuta fuisset, tandem non amplius sustinuit se aqua condensari. Sed

ulterius vexata et compressa non tolerabat, sed exibat aqua ex multis partibus solidi metalli, ad modum parvi imbris.

5. At omnis motus, quem vocant, violentus, veluti pilarum e tormentis, sagittarum, spiculorum, machinarum, et aliorum infinitorum, expeditur per compressionem præternaturalem corporum, et nixum ipsorum ad se restituendum; quod cum commode ad tempus facere non possint, loco moventur. Nam solida, præsertim dura, ulteriorem compressionem ægre admodum tolerant. Verum hujusce rei inquisitionem ad titulum de motu libertatis rejicimus. Etenim, ut sæpius diximus, titulus præsens de denso et raro spicas tantum legit non demetit.

6. Quo corpora sunt rariora, eo ab initio se contrahunt facilius; quod si ultra terminos suos compressa fuerint, eo se vindicant potentius; ut in flamma et aëre clauso manifestatur.

7. Flamma simpliciter compressa (licet sine flatu, ut in pulvere pyrio) tamen magis furit; ut conspici datur in fornacibus reverberatoriis, ubi flamma impeditur, aretatur, repercutitur, sinuat.

Dilatationi per deacervationem non opponitur actio reciproca: quia corpora deacervata non coacervantur rursus, nisi per conflationem: ut in restitutione metallorum, de qua supra.

Est et aliud genus fortasse contractionis corporum, non ex reciprocis, sed positivum, et per se. Arbitramur enim, in dissolutione corporum quæ fit in liquoribus, ut in dissolutione metallorum, etiam gummi, sacchari, et similium, recipi corpus aliquatenus intra liquorem; neque tamen liquorem pro rata parte corporis recepti dilatari, aut exporrigi. Quod si fit, sequitur ut sit condensatio; cum idem spatium contineat plus corporis. Certe in dissolutione metallorum, si aqua semel exceperit onus suum, non dissolvit amplius, nec operatur. Hanc autem condensationem (si talis quæpiam sit) contractionem corporum per onerationem appellare possumus.

Immitte aquam in cineres pressos ad summum; et nota diligenter, quantum decrescat de exporrectione cinerum, postquam receperint aquam, ab ea, quam habuerunt prius intermisto aëre.

Efficientia dilatationis corporum, quæ ex inquisitione priore in lucem prodeunt, sunt novem. 1. Introceptio, sive admissio corporis alieni. 2. Expansio naturalis, sive præternaturalis, spiritus innati. 3. Ignis, sive calor externus actualis; aut etiam remissio frigoris. 4. Calor externus potentialis, sive spiritus auxiliares. 5. Liberatio spirituum a vinculis partium. 6. Assimilatio ex imperio corporis rarioris magis activi. 7. Amplexus, sive [itio in occursum, corporis amici. 8. Distractio a violentia externa. 9. Deacervatio, sive] applanatio partium.

Efficientia vero contractionis corporum sunt octo. 1. Exclusio aut depositio corporis introcepti. 2. Angustatio sive contractio partium post spiritum emissum. 3. Frigus externum actuale; aut etiam remissio caloris. 4. Frigus externum potentiale. 5. Fuga et antiperistasis. 6. Assimilatio ex impe-

rio corporis densioris magis activi. 7. Compressio per violentiam externam. 8. Oneratio, si modo aliqua sit.

Actiones dilatationis per spiritum innatum, et per liberationem spirituum, et per deacervationem; atque rursus, actiones contractionis per constrictionem, sunt actiones sine reciproco. Reliquæ actiones sunt reciprocae.

Dilatationes per introceptionem et per deacervationem sunt pseudo-dilatationes; sicut et contractiones per exclusionem sunt pseudo-condensationes; sunt enim locales, non substantiales.

Expansio per ignem sive calorem sine separationem est omnium simplicissima: ea fit in pneumatico puro, sicut aëre; ubi nihil exhalat, nihil residet, sed mera fit dilatatio, eaque ad ampliacionem spatii sive exporrectionis insignem. Utrum simile quippiam fiat in flamma, videlicet, utrum flamma post expansionem primæ accensionis (quæ est magna) jam facta flamma (ubi magnus est ambientium ardor) se adhuc magis expandat, difficile cogniti est, propter celerem et momentaneam extinctionem flammæ: verum de hoc in titulo de flamma inquiremus. Proxima huic dilatationi (quatenus ad simplicitatem) est expansio, quæ fit in colliquatione metallorum, aut in emollitione ferri et ceræ, et similibus, ad tempus, antequam aliquid fiat volatile et emittatur. Verum hæc dilatatio occulta est, et fit intra claustra corporis integralis, nec visibiliter exporrectionem mutat aut ampliatur. At simul ac incipiat in corpore aliquo quippiam evolare, tum actiones fiunt complicatæ, partim rarefacientes, partim contrahentes: adeo ut contrariæ illæ actiones ignis, quæ vulgo notantur,

“Limus ut hic durescit, et hæc ut cera liquescit,  
Uno eodemque igni,”

in hoc fundentur, quod in altera spiritus emittitur, in altera detinetur.

Condensatio quæ fit per ignem, licet non sit pseudo-condensatio, (est enim substantialis,) tamen est condensatio potius secundum partes, quam secundum totum. Nam contrahuntur certe partes crassiores; ita tamen ut corpus integrum reddatur magis cavum et porosum, et minus ponderosum.

#### CANONES MOBILES.

1. SUMMA materiæ in universo eadem manet; neque fit transactio, aut a nihilo, aut ad nihilum.

2. Ex summa in aliquibus corporibus est plus, in aliquibus minus, sub eodem spatio.

3. Copia et paucitas materiæ constituunt notiones densi et rari, recte acceptas.

4. Est terminus, sive non ultra, densi et rari, sed non in ente aliquo nobis noto.

5. Non est vacuum in natura, nec congregatum nec intermistum.

6. Inter terminos densi et rari est plica materiæ, per quam se complicat et replicat absque vacuo.

7. Differentiæ densi et rari in tangibilibus nobis notis parum excedunt rationes 32 partium.

8. Differentia a rarissimo tangibili ad densissimum pneumaticum habet rationem centuplam et amplius.

9. Flamma est aëre rarior, ut et oleum aqua.

10. Flamma non est aër rarefactus, ut nec oleum est aqua rarefacta; sed sunt plane corpora heterogenea, et non nimis amica.

11. Spiritus vegetabilium et animalium sunt auræ composita ex pneumatico aëreo et flammeo; quemadmodum et succi eorum ex aëreo et oleoso.

12. Omne tangibile apud nos habet pneumaticum sive spiritum copulatum et inclusum.

13. Spiritus, quales sunt vegetabilium et animalium, non inveniuntur apud nos soluti, sed in tangibili devincti et conclusi.

14. Densum et rarum sunt propria opificia calidi et frigidi, densum frigidi, rarum calidi.

15. Calor super pneumatica operatur per expansionem simplicem.

16. Calor in tangibili exercet duplicem operationem; semper dilatando pneumaticum, sed crassum interdum contrahendo, interdum laxando.

17. Norma autem ejus rei talis est: spiritus emissus corpus contrahit et indurat, detentus intencrat et colliquat.

18. Colliquatio incipit a pneumatico in corpore expandendo; aliæ dissolutiones a crasso, liberando operationem pneumatici.

19. Post calorem et frigus, potentissima sunt ad rarefactionem et condensationem corporum consensus et fuga.

20. Restitutio a violentia et dilatata et condensata, in adversum violentiæ.

21. Assimilatio et dilatata et condensata, prout est assimilans assimilato rariis aut densis.

22. Quo corpora sunt rariora, a majorem sustinent et dilatationem et contractionem per externam violentiam ad certos terminos.

23. Si tensura aut pressura in corpore raro transgrediat terminos sustententiæ, tum corpora rariora potentius se vindicant in libertatem, quam densiora, quia sunt magis activa.

24. Potentissima omnium expansio est expansio aëris et flammæ conjunctim.

25. Imperfectæ sunt dilatationes et contractiones, ubi facilis et proclivis est restitutio.

26. Densum et rarum magnum habent consensum cum gravi et levi.

27. Parce suppeditatur homini facultas ad condensationem, ob defectum potentis frigidi.

28. Ætas est instar ignis lambentis, et exequitur opera caloris, sed accuratius.

29. Ætas deducit corpora vel ad putrefactionem vel ad arefactionem.

#### OPTATIVA CUM PROXIMIS.

1. *VERSIO aëris in aquam.*

Fontes in cavis montium. Exsudatio lapidum. Roratio anhelitus. Velus super latera navium, quæ. Meteora aquea, etc. Prox.

2. *Augmentum ponderis in metallis.*

Versio ferri in cuprum, quæ. Incrementum plumbi in cellis, quæ. Versio argenti vivi in aurum, quæ. Prox.

3. *Insaxatio terræ et materialium ex vegetabilibus aut animalibus.*

Aqua insaxans. Lapis compositus ex lapidibus parvis incrustatis. Stilli- Prox.

cidia crystallina in speluncis. Calculi in renibus, et vesica, et cyste fellis. Squamæ dentium.

4. *Varii usus motus dilatantis et contrahentis in aëre per calorem.*

Prox. Vitrum calendare. Altare Heronis. Organum musicum splendidibus radiis solis. Impostura de imitatione fluxus et refluxus maris et amnium.

5. *Inteneratio membrorum in animalibus per calorem proportionatum et spiritum detentum.*

Emollitio ferri. Emollitio ceræ. Prox. Omnia amalgamata. Pertinet ad instaurationem juventutis: nam omnis humectatio, præter eam quæ fit ex spiritu nativo detento, videtur esse pseudo-inteneratio, et parum juvat; ut in proprio titulo videbimus.

Parce proponimus sub isto titulo operativa et vellicationes de praxi: quia cum sit tam generalis et late patens, magis idoneus est ad informandum iudicium quam ad instruendam praxin. Monitum.

## HISTORIA GRAVIS ET LEVIS.

### ADITUS.

**Morum gravitatis et levitatis, veteres motus naturalis nomine insigniverunt.** Scilicet nullum conspiciebant efficiens externum; nullam etiam resistantiam apparentem. Quinimo citatior videbatur motus iste in progressu suo. Huic contemplationi, vel sermoni potius, phantasiam illam mathematicam de hæsiōne gravium ad centrum terræ, (etiam si perforata foret ipsa terra,) necnon commentum illud scholasticum, de motu corporum ad loca sua, veluti salem, asperserunt. His positis, perfunctos se credentes, nil amplius quærebant, nisi quod de centro gravitatis in diversis figuris, et de iis, quæ per aquam vehuntur, paulo dili-

gentius quispiam ex illis quæsit. Neque ex recentioribus quisquam operæ pretium circa hoc fecit, addendo solummodo pauca mechanica, eaque per demonstrationes suas detorta. Verum, missis verbulis, certissimum est, corpus non nisi a corpore pati; nec ullum fieri motum localem, qui non sollicitetur, aut a partibus corporis ipsius quod movetur, aut a corporibus adjacentibus, vel in contiguo, vel in proximo, vel saltem intra orbem activitatis suæ. Itaque vires magneticas non inscite introduxit Gilbertus; sed et ipse factus magnes: nimio scilicet plura, quam oportet, ad illas trahens, et navem ædificans ex scalmo.

## HISTORIA SYMPATHIÆ ET ANTIPATHIÆ RERUM.

### ADITUS.

**Lis et amicitia in natura stimuli sunt motuum, et claves operum.** Hinc corporum unio et fuga, hinc partium mistio et separatio, hinc altæ atque intimæ impressiones virtutum, et, quod vocant, conjungere activa cum passivis; denique magna natura. Sed impura est admodum hæc pars philosophiæ de Sympathia et Antipathia rerum, quam etiam Naturalem Magiam appellant, atque (quod semper fere fit) ubi diligentia defuit, spes superfuit. Operatio autem ejus in hominibus prorsus similis est soporiferis nonnullis medicamentis, quæ somnum conciliant, atque insuper læta et placencia somnia emittunt. Primo enim intellectum humanum in soporem conjicit, decantando proprietates specificas et virtutes occultas, et cœlitus demissas; unde homines ad veras causas eruendas non amplius excitantur, nec evigilant; sed in hujusmodi otii acquiescunt: deinde innumera commenta, somniorum

instar, insinuat et spargit. Sperant etiam homines vani naturam ex fronte et persona cognoscere, et per similitudines extrinsecas proprietates internas detegere. Practica quoque inquisitionis simillima. Præcepta enim magiæ naturalis talia sunt, ac si considerent homines terram subigere, et panem suum comedere absque sudore vultus; et per otiosas et faciles corporum applicationes rerum potentes fieri: semper autem in ore habent, et tanquam sponsores appellant magnetem, et consensum auri cum argento vivo, et pauca hujus generis, ad fidem aliarum rerum, quæ neutiqum simili contractu obligantur. Verum optima quæque laboribus, tum inquirendi tum operandi, proposuit Deus. Nos in jure naturæ enucleando, et rerum fœderibus interpretandis, paulo diligentiores erimus; nec miraculis faventes, nec tamen inquisitionem instituentes humilem aut angustam.

# HISTORIA SULPHURIS, MERCURII, ET SALIS.

## ADITUS.

PRINCIPIORUM trias istud a chemistis introductum est; atque quoad speculativa, est ex iis, quæ illi afferunt, inventum optimum. Subtiliores ex iis, quique philosophantur maxime, elementa volunt esse terram, aquam, aërem, æthera; illa autem non materiam rerum esse ponunt, sed matrices; in quibus specifica semina rerum generant, pro natura matricis. Pro materia autem prima (quam spoliata et adia-phoram ponunt scholastici) substituunt illa tria, sulphurem, mercurium, et salem, ex quibus omnia corpora sint coagmentata et mixta. Nos vocabula ipsorum accipimus; dogmata parum sana sunt. Illud tamen non male cum illorum opinione convenit, quod duo ex illis, sulphurem scilicet et mercurium (sensu nostro accepta) censemus esse naturas admodum primordiales, et penitissimos materiæ schematismos; et inter formas primæ classis fere præcipuas. Variare autem possumus vocabula sulphuris et mercurii, ut ea aliter nominemus; oleosum, aqueum; pingue, crudum; inflammabile, non inflammabile; et hujusmodi. Videntur enim esse hæc duæ rerum tribus magnæ prorsus, et quæ universum occupant et penetrant: siquidem in subterraneis sunt sulphur et mercurius, ut appellantur: in vegetabili et animali genere, sunt oleum et aqua: in pneumaticis

inferioribus, sunt aër et flamma: in cœlestibus, corpus stellæ et æther purum; verum de ultima hac dualitate nil adhuc pronunciamus, licet probabilis videatur esse symbolizatio. Quod vero ad salem attinet, alia res est. Si enim salem intelligunt pro parte corporis fixa, quæ neque abit in flammam, neque in fumum; pertinet hoc ad inquisitionem fluidi et determinati, de quibus nunc non est sermo. Sin salem accipi volunt, secundum literam, absque parabola; non est sal aliquid tertium a sulphure et mercurio; sed mixtum ex utrisque per spiritum acrem devinctis. Etenim sal omnis habet partes inflammabiles; habet alias, flammam non solum non concipientes, sed eam exhorrentes et strenue fugientes. Nihilominus cum inquisitio de sale sit quiddam affine inquisitioni de duobus reliquis, atque insuper sit eximii usus, utpote vinculum utriusque nature, sulphuræ, et mercurialis, et vitæ ipsius rudimentum; illum etiam in hanc historiam et inquisitionem recipere visum est. At illud interim monemus de pneumaticis illis, aëre, flamma, stellis, æthere; nos illa (prout certe merentur) inquisitionibus propriis reservare; et de sulphure et mercurio tangibili (nimirum vel minerali, vel vegetabili, et animali) hic tantum historiam instituire.

## HISTORIA VITÆ ET MORTIS:

SIVE

TITULUS SEXTUS IN "HISTORIA NATURALI ET EXPERIMENTALI AD CONDENDAM PHILOSOPHIAM:"

QUÆ EST, INSTAURATIONIS MAGNÆ PARS TERTIA.

*Viventibus et posteris Salutem.*

CUM "Historiam Vitæ et Mortis," inter sex designationes menstruas, ultimo loco posuerimus; omnino hoc prævertere visum est, et secundam edere, propter eximiam rei utilitatem; in qua, vel minima temporis jactura pro pretiosa haberi debet. Speramus enim et cupimus futurum, ut id plurimorum bono fiat; atque ut medici nobiliores animos nonnihil erigant, neque toti sint in curarum sordibus; neque solum propter necessitatem honorentur, sed fiant demum omnipotentis et clementis divinæ administri, in vita hominum proroganda et instauranda; præsertim cum hoc agatur per vias tutas, et commodas, et civiles, licet intetatas. Etsi enim nos Christiani ad terram promissionis perpetuo aspiremus et anhelemus; tamen interim itinerantibus nobis, in hac mundi eremo, etiam calceos istos et tegmina (corporis scilicet nostri fragilis) quam minimum atteri, erit signum favoris divini.

## ADITUS.

De vita brevi, et arte longa, vetus est cantilena et querela. Videtur igitur esse tanquam ex congruo, ut nos, qui pro viribus incumbimus ad artes perficiendas, etiam de vita hominum producenda cogitationem suscipiamus, favente et veritatis et vitæ Auctore. Etsi enim vita mortalium non aliud sit, quam cumulus et accessio peccatorum et ærumnarum, quique ad æternitatem aspirant, iis leve sit lucrum vitæ; tamen non despicienda est, etiam nobis Christianis, operum charitatis continuatio. Quinetiam discipulus amatus cæteris superstes fuit; et complures ex patribus, præsertim monachis sanctis et eremitis, longævi fuerunt; ut isti benedictioni (toties in lege veteri repetitæ) minus detractum videatur post ævum Servatoris, quam reliquis benedictionibus terrenis. Verum ut hoc pro maximo bono habeatur, proclive est. De modis assequendi ardua inquisitio; eoque magis, quod sit et opinionibus falsis et præconiis vanis depravata. Nam et quæ a turba medicorum de humore radicali et calore naturali dici solent, sunt seductoria; et laudes immodicæ medicinarum chemicarum primo inflant hominum spes, deinde destituunt.

Atque de morte, quæ sequitur ex suffocatione, putrefactione, et variis morbis, non instituitur præsens inquisitio; pertinet enim ad historiam medicinalem: sed de ea tantum morte, quæ fit per resolutionem ac atrophiam senilem. Attamen de ultimo passu mortis, atque de ipsa extinctione vitæ, quæ tot modis, et exterius et interius, fieri potest, (qui tamen habent quasi atrium commune, antequam ad articulum mortis ventum sit,) inquirere, affine quiddam præsentis inquisitioni esse censemus; sed illud postremo loco ponemus.

Quod reparari potest sensim, atque primo integro non destructo, id potentia æternum est, tanquam ignis Vestalis. Cum igitur viderent medici et philosophi, ali prorsus animalia, eorumque corpora reparari et refici; neque tamen id diu fieri, sed paulo post senescere ea, et ad interitum propere deduci; mortem quæsierunt in aliquo, quod proprie reparari non possit: existimantes humorem aliquem radicalem et primigenium non reparari in solidum, sed fieri, jam usque ab infantia, appositionem quandam degenerem, non reparationem justam; quæ sensim cum ætate depravetur, et demum pravum deducat ad nullum. Hæc cogitarunt imperite satis et leviter: omnia enim in animali, sub adolescentia et juventute, reparantur integre; quinetiam ad tempus quantitate augentur, qualitate meliorantur; ut materia reparationis quasi æterna esse posset, si modus reparationis non intercideret. Sed revera hoc fit: Vergente ætate, inæqualis admodum fit reparatio; aliæ partes reparantur satis feliciter, aliæ ægre et in pejus; ut ab eo tempore, corpora humana subire incipiant tormentum illud Mezentii, ut viva in amplexu mortuorum immoriantur; atque facile reparabilia, propter ægræ reparabilia copulata, defi-

ciant. Nam etiam post declinationem et decursum ætatis, spiritus, sanguis, caro, adeps, facile reparantur; at quæ sicciore, aut porosiores sunt partes, membranæ, et tunicæ omnes, nervi, arteriæ, venæ, ossa, cartilagine, etiam viscera pleraque, denique organica fere omnia, difficiliter reparantur, et cum jactura. Illæ autem ipsæ partes, cum ad illas alteras reparabiles partes, actu reparandas, omnino officium suum præstare debeant; activitate sua ac viribus imminutæ, functiones suas amplius exsequi non possunt. Ex quo fit, ut paulo post omnia ruere incipiant, et ipsæ illæ partes, quæ in natura sua sunt valde reparabiles, tamen deficientibus organis reparationis, nec ipsæ similiter amplius commode reparantur, sed minuantur, et tandem deficient. Causa autem periodi ea est; quod spiritus, instar flammæ lenis, perpetuo prædatorius, et cum hoc conspirans aër externus, qui etiam corpora sugit, et arefacit, tandem officinam corporis, et machinas, et organa perdat, et inhabilia reddat ad munus reparationis. Hæ sunt veræ viæ mortis naturalis bene et diligenter animo volvendæ: etenim qui naturæ vias non noverit, quomodo is illi occurrere possit, eamque vertere?

Itaque duplex debet esse inquisitio, altera de consumptione, aut deprædatione corporis humani; altera de ejusdem reparatione aut refectio: eo intuitu, ut altera, quantum fieri possit, inhibeatur, altera confortetur. Atque prior istarum pertinet præcipue ad spiritus et aërem externum, per quos fit deprædatio; secunda ad universum processum alimentationis, per quem fit restitutio. Atque quoad primam inquisitionis partem, quæ est de consumptione, omnino illa cum corporibus inanimatis, magna ex parte, communis est. Etenim quæ spiritus innatus (qui omnibus tangibilibus, sive vivis sive mortuis, inest) et aër ambiens operatur super inanimata, eadem et tentat super animata; licet superadditus spiritus vitalis illas operationes partim infringat et comescat, partim potenter admodum intendat et augeat. Nam manifestissimum est, inanimata complura absque reparatione, ad tempus bene longum durare posse: at animata, absque alimento et reparatione, subito concidunt et extinguuntur, ut et ignis. Itaque inquisitio duplex esse debet; primo contemplando corpus humanum, tanquam inanimatum et inalimentatum; deinde tanquam animatum et alimentatum: verum hæc præfati, ad topica inquisitionis jam pergamus.

## TOPICA PARTICULARIA; SIVE ARTICULI INQUISITIONIS DE VITA ET MORTE.

1. De natura durabilis et minus durabilis, in corporibus inanimatis, atque simul in vegetabilibus, inquisitionem habeto; non copiosam, aut legitimam, sed strictim et per capita, et tanquam in transitu.

2. De desiccatione, arefactione, et consumptione corporum inanimatorum, et vegetabilium, et de modis

et processu per quos fiunt; atque insuper de desiccationis, arefactionis, et consumptionis prohibitione et retardatione, corporumque in suo statu conservatione; atque rursus de corporum, postquam semel areferi cœperint, inteneratione, et emolliatione, et revirescentia, diligentius inquirito.

Neque tamen de his ipsis perfecta aut accurata facienda est inquisitio, cum ex proprio titulo durabilis hæc depromi debeant, cumque non sint in inquisitione præsentis principalia, sed lumen tantummodo præbent ad prolongationem et instaurationem vitæ in animalibus. In quibus ipsis (ut jam dictum est) eadem fere usu veniunt, sed suo modo. Ab inquisitione autem circa inanimata, et vegetabilia, transeat inquisitio ad animalia præter hominem.

3. De animalium longævitate, et brevitate vitæ, cum circumstantiis debitis, quæ ad hujusmodi ævitates videantur facere, inquirito.

4. Quoniam vero duplex est duratio corporum, altera in identitate simplici, altera per reparationem; quarum prima in inanimatis tantum obtinet, secunda in vegetabilibus, et animalibus, et proficitur per alimentacionem; ideo de alimentacione, ejusque viis, et processu inquirito: neque id ipsum exacte (pertinet enim ad titulos assimilationis, et alimentacionis) sed, ut reliqua, in transitu.

Ab inquisitione circa animalia, atque alimentata, transeat illa ad hominem: cum vero jam eventum sit ad subjectum inquisitionis principale, debet esse in omnibus inquisitio magis exacta, et numeris suis absoluta.

5. De longævitate, et brevitate vitæ in hominibus, secundum ætates mundi, regiones, et climata, et loca nativitatibus et habitacionibus, inquirito.

6. De longævitate, et brevitate vitæ in hominibus, secundum propagines et stirpes suas (tanquam esset hæreditaria); atque etiam secundum complexionem, constitutionem, et habitum corporis, staturas, necnon modos, et spatia grandescendi, atque secundum membrorum facturas et compages, inquirito.

7. De longævitate, et brevitate vitæ in hominibus, secundum tempora nativitatibus, ita inquirito, ut astrologica et schemata cœli in præsentia omittas; recipito tantum observationes (si quæ sint) plebeias, et manifestas, de partibus septimo, octavo, nono, et decimo mense; etiam noctu, interdiu, et quo mense anni?

8. De longævitate, et brevitate vitæ in hominibus, secundum victum, diætã, regimen vitæ, exercitia, et similia, inquirito; nam quatenus ad aërem, in quo vivunt, et morantur homines, de eo, in articulo superiore de locis habitacionis, inquiri debere intelligimus.

9. De longævitate, et brevitate vitæ in hominibus, secundum studia et genera vitæ, et affectus animæ, et varia accidentia, inquirito.

10. De medicinis, quæ putantur vitam prolongare, seorsum inquirito.

11. De signis et prognosticis vitæ longæ et brevem, non illis quæ mortem denotant in propinquo (id enim ad historiam medicinalem pertinet); sed de iis quæ etiam in sanitate apparent et observantur, inquirito; sive sint physiognomica, sive alia.

Hactenus instituta est inquisitio de longævitate et brevitate vitæ, tanquam inartificialis et in confuso; huic adicere visum est inquisitionem artificialem, atque inuuentem ad praxim, per intentiones. Eæ genere sunt tres. Distributiones autem magis particulares intentionum earum proponemus, cum ad ipsam inquisitionem ventum erit. Tres illæ intentiones generales sunt: prohibitio consumptionis; perfectio reparationis; renovatio veterationis.

12. De iis, quæ corpus in homine ab arefactione et consumptione conservant et eximunt, aut saltem inclinationem ad eas remorantur et differunt, inquirito.

13. De iis, quæ pertinent ad universum processum alimentacionis (unde fit reparatio in corpore hominis) ut sit proba, et minima cum jactura, inquirito.

14. De iis, quæ purgant inveterata et reponunt nova, quæque etiam ea, quæ jam arefacta et indurata sunt, rursus intenerant et humectant, inquirito.

Quoniam vero difficile est vias ad mortem nosse, nisi ipsius mortis sedem et domicilium (vel antrum potius) perscrutatus sis et inveneris; de hoc facienda est inquisitio; neque tamen de omni genere mortis, sed tantum de iis mortibus, quæ inferuntur per privationem et indigentiam, non per violentiam; illæ enim sunt tantum, quæ ad atrophiam senilem spectant.

15. De articulo mortis, et de atriolis mortis, quæ ad illum ducant, ab omni parte, (si modo id fiat per indigentiam, et non per violentiam,) inquirito.

Postremo, quoniam expedit nosse characterem et formam senectutis, quod fiet optime, si differentias omnes in statu corporis et functionibus, inter juventutem et senectutem, diligenter collegeris, ut ex iis perspicere possis, quid sit illud tandem, quod in tot effectus frondescat; etiam hanc inquisitionem ne omittito.

16. De differentibus status corporis et facultatum in juventute atque in senectute; et si quid sit ejusmodi, quod in senectute maneat, neque minuat, diligenter inquirito.

#### NATURA DURABILIS.

1. Metalla in tantum ævum durant, ut tempus durationis ipsorum, hominum observationem fugiat. Etiam quando solvantur per ætatem, rubiginem solvantur, non per perspirationem; aurum autem per neutrum.

Ad Art. 1.  
Historia.

2. Argentum vivum, licet humidum sit et fluidum, atque per ignem facile fiat volatile; tamen (quod novimus) absque igne, per ætatem solam, nec consumitur, nec contrahit rubiginem.

3. Lapides, præsertim duriores, et complura alia ex fossilibus, longi sunt ævi; idque licet exponantur in aërem; multo magis dum conduntur sub terra; attamen nitrum quoddam colligunt lapides, quod illis est instar rubiginis: gemmæ autem et crystallæ, metalla ipsa ævo superant: attamen clarore suo non nihil a longa ætate mulctantur.

4. Observatum est, lapides ex parte boreæ citius temporis edacitate consumi, quam austro expositos, idque et in pyramidibus, et in templis, et aliis ædificiis manifestum esse: ferrum contra, ad austrum

expositum, citius rubiginem contrahere, ad septentrionem tardius, ut in bacillis illis ferreis aut cratibus, quæ ad fenestras apponuntur, liquet. Nec mirum, cum in omni putrefactione (qualis est rubigo) humiditas acceleret dissolutionem; in arefactione simplici, siccitas.

5. In vegetabilibus (loquimur de avulsis nec vegetantibus) stemmata arborum duriorum, sive trunci, atque ligna, et materies ex ipsis, per secula nonnulla durant. Partes autem stemmatis varie se habent; sunt enim quædam arbores fistulosæ, ut sambucus, in quibus pulpa in medio mollior sit, exterius durius; at in arboribus solidis, qualis est quercus, interiorius (quod cor arboris vocant) durat magis.

6. Folia plantarum et flores, etiam caules, exiguæ sunt durationis, sed solvuntur in pulverem, seseque incinerant, nisi putrefiant; radices autem sunt magis durabiles.

7. Ossa animalium diu durant, ut videre est in ossuaria, scilicet repositoriis ossium defunctorum: cornua etiam valde durant; necnon dentes, sicut in ebore, et dentibus equi marini.

8. Pelles etiam et corium valde durant, ut cernere est in pergamenis antiquorum librorum: quintetiam papyrus complura secula tolerat, licet pergamenæ duratione cedat.

9. Ignem passa diu durant, ut vitrum, lateres; etiam carnes et fructus, ignem passi, diutius durant quam crudi; neque ob id tantum, quod huiusmodi coctio arceat putredinem; sed etiam quod, emissio humore aqueo, humor oleosus diutius se sustineat.

10. Aqua omnium liquorum citissime sorbetur ab aëre, oleum contra tardius evaporat; ut cernere est, non solum in liquoribus ipsis, verum etiam in mixtis: etenim papyrus, aqua madefacta, atque inde nonnihil diaphaneitatis nacta, paulo post albescit, et diaphaneitatem suam deponit, exhalante scilicet vapore aquæ; at contra, papyrus, oleo tincta, diu diaphaneitatem servat, minime exhalante oleo: unde qui chirographa adulterant, papyrum oleatam autographam imponunt: atque hac industria lineas trahere tentant.

11. Gummi omnia valde diu durant; etiam cera, et mel.

12. At æqualitas et inæqualitas eorum, quæ corporibus accidunt, non minus quam res ipsæ, ad durationem aut dissolutionem valent: nam ligna, lapides, alia, vel in aqua, vel in aëre perpetuo manentia, plus durant, quam si quandoque alluantur, quandoque affluerent. Atque lapides eruti, et in aëdificiis positi, diutius durant, si eodem situ, et ad easdem cœli plagas ponantur, quibus jacebant in mineris: id quod plantis etiam, e loco motis, et alio transplantatis, accidit.

## OBSERVATIONES MAJORES.

(1.) Loco assumpti ponatur, quod certissimum est; inesse omni tangibili spiritum sive corpus pneumaticum, partibus tangibilibus obiectum, et inclusum; atque ex illo spiritu initum capi omnis dissolutionis et consumptionis; itaque earundem antidotum est detentio spiritus.

(2.) Spiritus detinetur duplici modo; aut per compressionem arctam, tanquam in carcere; aut

per detentionem, tanquam spontaneam. Atque ea mansio etiam duplici ratione invitatur; videlicet, si spiritus ipse non sit mobilis admodum, aut acer; atque si insuper ab aëre ambiente minus sollicitetur ad exeundum. Itaque duo sunt durabilia; durum, et oleosum; durum constringit spiritum; oleosum partim demulcet spiritum, partim huiusmodi est, ut ab aëre minus sollicitetur: aër enim aquæ consubstantialis, flamma autem oleo. Atque de natura durabilis et minus durabilis in inanimatis, hæc inquisita sint.

13. Herbæ, quæ habentur ex frigidioribus, annuæ sunt, et quotannis moriuntur, tam radice quam caule: ut lactuca, portulaca; etiam triticum, et frumenti omne genus: sunt tamen etiam ex frigidis, quæ per tres aut quatuor annos durant, ut viola, fragaria, pimpinella, primula veris, acetosa; at borago, et buglossa, cum videantur vivæ tam similes, morte differunt; borago enim annua, buglossa anno superstes.

14. At herbæ calidæ plurimæ ætatem et annos ferunt; hyssopus, thymus, satureia, majorana altera, melissa, absinthium, chamædrys, salvia, etc. At fœniculum caule moritur, radice repullulat: ocy-mum vero, et majorana (quam vocant) suavis, non tam ætatis quam huiusmodi sunt impatientes; satæ enim in loco valde munito et tepido, superstites sunt: certe notum est schema (qualibus in hortis utuntur ad ornamentum) ex hyssopo, quotannis bis tonsum, usque ad quadraginta annos durasse.

15. Frutices, et arbores humiliores, ad sexagesimum annum, alia etiam duplo magis, vivunt. Vitis sexagenaria esse potest, et ferax est etiam in senectute. Rosmarinus, feliciter collocatus, etiam sexagesimum annum complet: at acanthus et hedera ultra centesimum durant. Sed rubi ætas non percipitur, quia flectendo caput in terram novas nanciscitur radices, ut veterem a nova distinguere haud facile sit.

16. Ex arboribus grandioribus annosissimæ sunt quercus, ilex, ornus, ulmus, fagus, castanea, platana, ficus ruminalis, lotos, oleaster, olea, palma, morus: ex his nonnullæ usque ad octingentesimum annum; etiam earum minus vivaces, usque ad ducentesimum perveniunt.

17. At arbores odoratæ et resinosæ, materia sua sive ligno, etiam illis, quas diximus, magis durabiles; ætate paulo minus vivaces; cupressus, abies, pinus, buxus, juniperus; at cedrus, corporis magnitudine adjutus, etiam superiores fere æquat.

18. Fraxinus, proventu alacris et velox, ætatem ad centesimum annum, aut nonnihil ultra producit; quod etiam quandoque facit ferula, et acer, et sorbus; at populus, et tilia, et salix, et (quam appellat) sycomorus, et juglans, non adeo vivaces sunt.

19. Malus, pyrus, prunus, malus Punica, malus Medica, et citria, mespilus, cornus, cerasus ad quinquagesimum aut sexagesimum annum pervenire possunt; præsertim si a musco, nonnullas ipsarum vestiente, aliquando purgantur.

20. Generaliter magnitudo corporis in arboribus, cum diurnitate vitæ (cæteris paribus) nonnihil habet commune; et similiter durities materiæ: quin et arbores glandiferæ, et nuciferæ, fructiferæ et bac-

ciferis sunt plerumque vivaciores: atque etiam præcocibus, vel fructu, vel foliis, serotinae et tardius frondescentes, atque tardius etiam folia deponentes, ætate diuturniores sunt: quin et sylvestres cultis; et in eadem specie, quæ acidum fructum ferunt, illis quæ dulcem.

## OBSERVATIO MAJOR.

(3.) Bene admodum notavit Aristoteles discrimen inter plantas et animalia, quoad alimentacionem et renovacionem; quod scilicet corpus animalium suis claustris circumseptum manet: atque insuper, postquam ad justam magnitudinem pervenerit, alimento continuatur et conservatur, sed nihil novum excrecit, præter capillos et ungues, quæ pro excrementis habentur; adeo ut necesse sit succos animalium citius veterascere: at in arboribus, quæ novos subinde ramos, nova vimina, novas frondes, novos fructus emittunt, evenit ut et ipsæ, quas diximus, partes novæ sint, nec ætatem passæ; cum vero quicquid viride sit et adolescens, fortius et alacrius alimentum ad se trahat, quam quod inceperit desiccari; evenit una et simul, ut truncus ipse, per quem hujusmodi alimentum transit ad ramos, uberiore et lætiore alimento in transitu irrigetur, perfundatur, et recreetur, id quod etiam insigniter patet ex hoc, (licet illud non annotaverit Aristoteles, qui nec ea ipsa, quæ jam diximus, tam perspicue explicavit,) quod in sepius, sylvis cæduis, arboribus tonsis, amputatio ramorum aut surculorum caulem ipsum ad truncum confortat, illumque efficit longe diuturniorem.

## DESICCATIO; DESICCATIONIS PROHIBITIO; ET DESICCATI INTENERATIO.

Ad Art. 2. 1. Ignis, et calor intensus, alia desiccant, alia colliquat;  
Historia.

"Limus ut hic durescit, et hæc ut cera liquescit, Uno eodemque igne."

Desiccet terram, et lapides, et lignum, et pannos, et pelles, et quæcunque non fluit: colliquat metalla, et ceram, et gummi, et butyrum, et sebum, et hujusmodi.

2. Atamen in illis ipsis, quæ colliquat ignis, si vehementior fuerit, ea in fine desiccet; nam et metalla, ex igne fortiore, emisso volatili, minuuntur pondere (præter aurum) et deveniunt magis fragilia; atque oleosa illa et pingua ab igne fortiore deveniunt frixa, et tosta, et magis sicca, et crustata.

3. Aër, præcipue apertus, manifesto desiccet, nunquam colliquat; veluti cum viæ et superficies terræ, imbribus madefactæ, desiccantur; lintea lota, quæ ad aërem exponuntur, siccantur; herbæ, et folia, et flores in umbra siccantur. At multo magis hoc facit aër, si aut solis radiis illustretur (modo non inducat putredinem) aut moveatur; ut flantibus ventis, et in arëis perflatilibus.

4. Ætas maxime, sed tamen lentissime, desiccet; ut fit in omnibus corporibus, quæ vetustate (modo non intercipientur a putredine) arefiunt: ætas autem nihil est per se (cum sit mensura tantum temporis) sed effectus producitur, a spiritu corporum innato, qui corporis humorem exsugit, et una cum ipso evolat; et ab aëre circumfuso, qui multiplicat se super

spiritus innatos et succos corporis, eosque deprædatur.

5. Frigus omnium maxime proprie exsiccet; siquidem desiccatio non fit nisi per contractionem; quod est opus proprium frigoris. Quoniam vero nos homines calidum potentissimum habemus in igne; frigidum autem infirmum admodum; nihil aliud scilicet quam hiemis, aut fortasse glaciei, aut nivis, aut nitri; ideo desiccationes frigoris sunt imbecillæ et facile dissolubiles: videmus tamen desiccari faciem terræ ex gelu, atque ex ventis martia, plus quam ex sole; cum idem ventus qui humorem lambit, etiam frigus incutiat.

6. Fumus foci desiccet, ut in laridis, et linguis boum, quæ in caminis suspenduntur: quinetiam suffitus ex olibano, aut ligno aloës, et similibus, desiccet cerebrum et catarrhis medetur.

7. Sal, mora paulo longiore, desiccet, non tantum in extimis, sed etiam in profundo; ut fit in carnibus, aut piscibus salitis; quæ per diuturnam salitionem manifesto etiam intrinsecus indurantur.

8. Gummi calidiora, applicata ad cutem, eam desiccant et corrugant; quod faciunt etiam aquæ nonnullæ constringentes.

9. Spiritus vini fortis in tantum desiccet instar ignis, ut et albumen ovi immissum candefaciat, et panem torreat.

10. Pulveres desiccant instar spongiarum, sugendo humidum, ut fit in pulvere atramento injecto post scriptionem: etiam levor, et unio corporis (qui non permittit vaporem humidi ingredi per poros) per accidens desiccet, quia ipsum aëri exponit; ut fit in gemmis, et speculis, et laminis ensium; in quæ si spires, cernuntur illa primo vapore obducta; sed paulo post evanescit ille vapor, ut nubecula. Atque de desiccatione hæc inquisita sint.

11. Granaria in usu sunt hodie, ad partes Germaniæ orientales, in cellis subterraneis, in quibus triticum et alia grana conservantur, substrato et circumposito undique stramine, ad nonnullam altitudinem, quod humiditatem cavernæ arceat et sorbeat: qua industria servantur grana etiam ad vicesimum, aut tricesimum annum: neque servantur tantum a putredine, sed (quod ad præsentem inquisitionem pertinet) in tali viriditate, ut panibus conficiendis optime sufficiant; idemque fuisse in usu in Cappadocia, et Thracia, et nonnullis locis Hispaniæ, perhibetur.

12. Granaria, in fastigiis ædium, cum fenestris ad orientem et septentrionem, commode collocantur; quinetiam constituunt quidam duo solaria, superius et inferius; superius autem foraminatum est, ut granum per foramen, (tanquam arena in clepsydra) continue descendat, et subinde palia, post aliquot dies, reponatur; ut granum sit in continuo motu. Notandum autem est, etiam hujusmodi res non tantum putredinem cohibere, verum etiam viriditatem conservare, et desiccationem retardare; cujus causa est ea, quam etiam superius notavimus; quod evolutio humoris aquei, quæ motu et vento acceleratur, humorem oleosum in suo esse conservat; qui alius in consortio humoris aquei fuisset una evoluturus. Etiam in quibusdam montibus, ubi aër est purus, cadavera ad plures dies manent non multum deflorescentia.

13. Fructus, veluti granata, citria, mala, pyra, et hujusmodi; etiam et flores, ut rosa, liliū, in vasis fictilibus bene obturata, diutius servantur; neque tamen non officit aër ambiens ab extimis, qui etiam per vas inæqualitates suas defert et insinuat; ut in calore et frigore manifestum est: itaque si et vasa diligenter obturentur, atque obturata sub terram insuper condantur, optimum erit; neque minus utile est, si non sub terra, sed sub aquis condantur, modo sint umbrosæ, ut putei et cisternæ in domibus; sed quæ sub aquis conduntur, melius reponuntur in vasis vitreis quam in fictilibus.

14. Generaliter quæ sub terra, et in cellis subterraneis, aut in profundo aquarum, reponuntur, virorem suum diutius tuentur, quam quæ supra terram.

15. Tradunt in conservatoriis nivium (sive sint in montibus in foveis naturalibus, sive per artem in puteis ad hoc factis) observatum fuisse, quod aliquando malum, aut castanea, aut nux, aut simile quippiam inciderit, quæ post plures menses liquefacta nive, aut etiam intra nivem ipsam, inventa sunt recentia et pulchra, ac si pridie essent decerpita.

16. Uvæ apud rusticos servantur in racemis cooperitis intra farinam; quod licet gustui eas reddat minus gratas, tamen humorem et viriditatem conservat: etiam omnes fructus duriores, non tantum in farina, sed in scobe lignorum, etiam inter acervos granorum integrorum, diu servantur.

17. Invaluit opinio, corpora intra liquores suæ speciei, tanquam menstrua sua, conservari recentia; ut urvas in vino, olivas in oleo, etc.

18. Servantur mala granata et cotonea, tincta paulisper in aquam marinam, aut salsam, et paulo post extracta, et in aëre aperto (modo fuerit in umbra) siccata.

19. In vino, oleo, aut amurca suspensa, diu servantur; multo magis in melle, et spiritu vini; atque etiam omnium maxime (ut quidam tradunt) in argento vivo.

20. Incrustatio etiam fructuum cera, pice, gypso, pasta, aut aliis oblinimentis, aut capsulis, diutius eos virides conservat.

21. Manifestum est, muscas, et araneas, et formicas et hujusmodi, casu in electro, aut etiam arborum gummis, immersas et sepultas, nunquam postea marcescere; licet sint corpora mollis et tenera.

22. Uvæ servantur pensiles; et sic de aliis fructibus; duplex est enim ejus rei commoditas; una, quod absque ulla contusione aut compressione fiat, qualis contra fit cum super dura collocantur; altera, quod aër undequaque ipsas æqualiter ambit.

23. Notatum est, tam putrefactionem, quam desiccationem in vegetabilibus, non similiter, ex omni parte, incipere; sed maxime ex ea parte, per quam solebant, cum essent viva, attrahere alimentum; itaque jubent aliqui pediculos malorum aut fructuum cera aut pice, liquefacta, obducere.

24. Fila candelarum aut lampadum majora citius absumunt seum aut oleum, quam minora; etiam flamma ex gossipo citius, quam ex scirpo, aut stramine, aut vimine ligneo; atque in baculis cereorum, citius ex junipero aut abiete, quam ex fraxino: etiam omnis flamma mota et vento agitata citius absumit, quam tranquilla; itaque intra cornu minus cito,

quam in aperto: tradunt quoque lychna in sepulchris admodum diu durare.

25. Alimenti etiam natura et præparatio non minus facit ad diurnitatem lychnorum, quam natura flammæ: nam cera sevo diurnior est; et sævum paulo madidum, sevo sicciore; et cera dura, cera molliore.

26. Arbores, si quotannis circa radices earum terram moveris, brevius durant, si per lustra aut decennia, diutius; etiam germina et surculos decerpere, facit, ad longævitatē; item stercoꝛatio aut stratio cretæ et similiū, aut multa irrigatio, feracitati confert, ætatem minuit. Atque de prohibitione desiccationis et consumptionis hæc inquisita sunt.

Inteneratio desiccati (quæ res est præcipua) experimenta præbet pauca; ideoque nonnulla, quæ inanimalibus fiunt, atque etiam in homine, conjungemus.

27. Vimina salicis, quibus ad ligandas arbores utuntur, in aqua infusa, fiunt magis flexibilia; similiter virgarum ferulæ extremitates in urecis cum aqua imponuntur, ne siccescant; quin et globuli lusorii, licet per siccitatem rimas collegerint, positi in aqua rursus implentur et consolidantur.

28. Ocreæ ex corio, vetustate duræ et obstinatæ, per illinitionem sevi ad ignem molliuntur; etiam igni simplici admotæ, non nihil: vesicæ et membranæ, postquam fuerint induratæ, ab aqua calefacta, admixto sevo aut aliquo pingui, intenerantur; melius autem, si etiam paululum confricentur.

29. Arbores veteres admodum, quæ diu steterunt immotæ, fodiendo et aperiendo terram circa radices ipsarum, manifesto tanquam juvenescunt, novis et teneris frondibus emissis.

30. Boves aratores veteres, et laboribus penitus exhausti, in læta pascua inducti, carnibus vestiuntur novis, et teneris, et juvenilibus, ut etiam ad gustum carnem juvencorum referant.

31. Diæta stricta consumens et emacians, ex guaiaco, pane bis cocto, et similibus, (quali ad curandum morbum Gallicum, et inveteratos catarrhos, et leucophlegmatiam utimur,) homines ad summam macilentiam deducit, consumptis succis corporis; qui postquam cœperint instaurari, et refici, manifesto cernuntur magis juveniles et virides; quinetiam existimamus morbos emaciantes, postea bene curatos, compluribus vitam prolongasse.

## OBSERVATIONES MAJORES.

1. Miris modis homines, more nocturnarum, in tenebris notionum suarum acute vident, ad experientiam, tanquam lucem diurnam, nictant et cæcutiunt. Loquuntur de elementari qualitate siccitatis; et de desiccantibus; et de naturalibus periodicis corporum, per quas corrumpuntur et consumuntur; sed interim, nec de initiis, nec de mediis, nec de extremis desiccationis et consumptionis, aliquid, quod valeat, observant.

2. Desiccatio et consumptio, in processu suo, tribus actionibus perficitur; atque originem ducunt actiones illæ a spiritu innato corporum, ut dictum est.

3. Prima actio est, attenuatio humidi in spiritum; secunda est, exitus aut evolutio spiritus; tertia est, contractio partium corporis crassiorum, statim post

spiritum emissum; atque hoc ultimum est illa desiccatio et induratio de qua præcipue agimus: priora duo consumunt tantum.

4. De attenuatione, res manifesta est; spiritus enim, qui in omni corpore tangibili includitur, sui non obliviscitur; sed quicquid nanciscitur in corpore (in quo obsidetur) quod digerere possit, et conficere, et in se vertere; illud plane alterat et subigit; et ex eo se multiplicat, et novum spiritum generat. Hoc ex probatione ea, instar omnium, evincitur; quod quæ plurimum siccantur, pondere minuuntur, et deveniunt cava, porosa, et ab intus sonantia; certissimum autem est, spiritum rei præ-inexistentem ad pondus nihil conferre, sed illud levare potius; ergo necesse est, ut spiritus præ-inexistens humidum et succum corporis, quæ antea ponderaverant, in se verterit; quo facto pondus minuitur. Atque hæc est prima actio, scilicet attenuationis humoris, et conversionis ejus in spiritum.

5. Secunda actio, quæ est exitus, sive evolutio spiritus, res etiam manifestissima est. Etenim illa evolutio, cum fit confertim, etiam sensui patet; in vaporibus aspectui, in odoribus olfactui: verum si sensim fiat evolutio, ut fit per ætatem, tum demum peragitur sine sensu; sed eadem res est; quinetiam ubi corporis compages aut ita arcta est, aut ita tenax, ut spiritus poros et meatus non inveniatur, per quos exeat, tum vero etiam partes ipsas crassiores corporis, in nixu suo exeundi, ante se agit, easque ultra corporis superficiem extrudit; ut fit in rubigine metallorum, et in carie omnium pinguium. Atque hæc est secunda actio, scilicet exitus et evolutionis spiritus.

6. Tertia actio paulo magis obscura, sed æque certa est; ea est contractio partium crassiorum post spiritum emissum. Atque primo videre est corpora post spiritum emissum manifesto arctari, et minore locum complere; ut fit in nucleis naccinum, qui siccati non implent testam; et in trabibus, et palis ligni, quæ primo contiguæ sunt ad invicem, ex desiccatione autem hiant; atque ex globulis lusoriis, et similibus, qui per siccitatem rimosi evadunt; cum partes se contrahant, et contractæ necessario spatia inter se relinquunt. Secundo patet ex rugis corporum siccatorum; nixus enim se contrahendi tantum valet, ut partes contrahendo interim adducat et sublevet; quæ enim in extremitatibus contrahuntur, in mediis sublevantur; atque hæc cernere est in papyris, et membranis vetustis; atque in cute animalium; atque in extimis casei mollioris; quæ omnia vetustate corrugantur. Atque tertio se ostendit amplius hæc contractio, in illis, quæ a calore non tantum corrugantur, verum etiam complicantur, et in se vertuntur, et quasi rotulantur; ut cernere est in membranis, et papyris, et foliis ad ignem admotis. Etenim contractio per ætatem, cum tardior sit, rugas fere parit; at contractio per ignem, quæ festina est, etiam complicationes. At in plurimis, ubi non datur corrugatio, aut complicatio; fit simplex contractio, et angustatio, et induratio, et desiccatio, ut primo positum est: quod si eousque inualescat evolutio spiritus et absumptio humidi, ut non relinquatur satis corporis ad se uniendum et contrahendum, tum vero cessat contractio ex necessitate, et corpus reddi-

tur putre, et nihil aliud quam pulvisculus cohærens, qui levi tactu dissipatur et abit in aërem; ut fit in corporibus cunctis valde absumptis, et papyrus et linteo ad ultimum combustis; et cadaveribus imbal-samatis post plura secula. Atque hæc est tertia illa actio; scilicet contractionis partium crassiorum post spiritum emissum.

7. Notandum est ignem et calorem per accidens tantum desiccare; proprium enim eorum opus est, ut spiritum et humida attenuent et dilatent; sequitur autem ex accidente, ut partes reliquæ se contrahant; sive ob fugam vacui tantum, sive ob alium motum simul; de quo nunc non est sermo.

8. Certum est etiam putrefactionem, non minus quam arefactionem, a spiritu innato originem ducere, sed longe alia via incidere; nam in putrefactione spiritus non emittitur simpliciter, sed ex parte detentus mira commiscitur; atque etiam partes crassiores non tam localiter contrahuntur, quam eoëunt singule ad homogeniam.

#### LONGÆVITAS ET BREVITAS VITÆ IN ANIMALIIBUS.

De diurnitate, et brevitate vitæ in animalibus tenuis est informatio, quæ Ad Art. 3. Connexio. haberi potest; observatio negligens; traditio fabulosa: in cicuribus vita degener corrumpit; in sylvestribus injuria cæli intercipit.

Neque quæ concomitantia videri possint, huic informationi multum auxiliantur (moles corporis; tempus gestationis in utero; numerus fœtus; tempus grandescendi; alia): propterea quod complicata sunt ista, atque alias concurrunt, alias disjunguntur.

1. Hominis ævum cæterorum animalium omnium superat (quantum narra- Historia. tione aliqua certa constare potest) præter admodum paucorum. Atque concomitantia in eo satis æqualiter se habent; statura et magnitudo grandis; gestatio in utero novimestris; fœtus ut plurimum unicus; pubes ad annum decimum quartum; grandescencia ad vigesimum.

2. Elephas, fide haud dubia, curriculum humane vitæ ordinarium transcendit: gestatio autem in utero decennialis, fabulosa; biennialis, aut saltem supra annum, certa: at moles ingens, et tempus grandescendi usque ad annum tricesimum; dentes robore firmissimo: neque etiam observationem hominum fugit, quod sanguis elephantis omnium sit frigidissimus: ætas autem ducentissimum annum nonnunquam complevit.

3. Leones vivaces habiti sunt, quod complures ex iis reperti sint edentuli; signo nonnihil fallaci, cum illud fieri possit ex gravitate anhelitus.

4. Ursus magnus dormitor est; animal pigrum, et iners, neque tamen vivacitatis notatum: illud autem signum brevis ævi, quod gestatio ejus in utero sit festina admodum, vix ad quadraginta dies.

5. Vulpi multa se bene habere videntur ad longævitate; optime tecta est, carnivora, et degit in antris; neque tamen vivacitatis notata: certe est generis canini, quod genus brevioris est vitæ.

6. Camelus longævus est; animal macilentum, et nervosum; ita ut quinquaginta annos ordinario, ætatem quandoque compleat.

7. Equi vita mediocris, vix quadragessimam æ-

num attingit: ordinarium autem curriculum viginti annorum est: sed hanc brevitate vitæ fortasse homini debet; desunt enim jam nobis equi solis, qui in pascuis liberi et læti degebant. Attamen crescit equus usque ad sextum annum, et generat in senectute. Gestat etiam in utero equa diutius quam fœmina, et in gemellis rarior est. Asinus similis fere ævi ut equus; mulus utroque vivacior.

8. Cervorum vita celebratur vulgo ob longitudinem; neque tamen narratione aliqua certa: nescio quid de cervo torquato, cooperta torque ipsa pinguedine carnis, circumferunt. Eo minus credibilis est longævitas in cervo, quod quinto anno perficitur; atque non multo post cornua, (quæ annuatim decidunt et renovantur,) succedunt magis conjuncta fronte et minus ramosa.

9. Canis brevis est ævi; non extenditur ætas ultra annum vicesimum; neque sæpe attingit ad decimum quartum; animal ex calidissimis, atque inæqualiter vivens; cum, ut plurimum, aut vehementius moveat, aut dormiat. Etiam multiparum est, et novem septimanas gestat in utero.

10. Bos quoque, pro magnitudine et robore, admodum brevis est ævi, quasi sexdecim annorum; maresque fœminis nonnihil vivaciores: attamen unicuique plerumque edit partum, et gestat in utero circa sex menses. Animal pigrum, et carnosum, et facile pinguescens, et herbis solis pastum.

11. At decennalis ætas in ovibus etiam rara est; licet sit animal mediocris magnitudinis, et optime tectum; atque, quod mirum, cum minimum in illis reperitur bilis, capillitium habent omnium crispissimum; neque enim pilus alicujus animalis tam tortus est, quam lana. Arietes ante tertium annum non generant, atque habiles sunt ad generandum usque ad octavam; fœmellæ pariunt quamdiu vivunt. Morbosum ovibus animal, nec ætatis suæ curriculum fere implet.

12. Caper etiam similis est ævi cum ove, nec dispar multum in cæteris; licet sit animal magis agile, et carne paulo firmiore, eoque debuerit esse vivacius; attamen salacius est multo, eoque brevioris ævi.

13. Sues ad quindecim annos quandoque vivunt, etiam ad viginti; cumque sint carne, inter animalia omnia, humidissima, tamen nihil videtur hoc proficere ad longitudinem vitæ; de apro aut sue sylvestri, nil certi habetur.

14. Felis ætas est inter sextum annum et decimum; agile animal, et spiritu acri, cujus semen (ut refert *Ælianus*) fœmellam adurit; unde increbuit opinio; quod felis concipit in dolore, et parit cum facilitate: vorax est in cibis, quos potius deglutit, quam mandit.

15. Lepores, et cuniculi vix ad septem annos perveniunt; animalia generativa, etiam superfœtantia; in hoc disparia, quod cuniculus sub terra vivit, lepus in aperto; quodque leporis carnes atriores sint.

16. Aves mole corporis quadrupedibus longe sunt minores: puilla enim res est aquila aut cygnus, præ bove aut equo; item struthio præ elephanto.

17. Aves optime tectæ sunt: pluma enim tepore, et incubitu presso ad corpus, et lanam, et capillitia excedit.

18. Aves, cum plures pariant, eos simul in alvo

non gestant, sed ova excludunt per vices: unde liberalius sufficit alimentum fœtui.

19. Aves parum aut nihil alimenta mandunt, ut integrum sæpe reperiat in gulis ipsarum. Attamen frangunt fructum nuce, et nucleum excerpunt. Existimantur autem esse concoctionis fortis et calidæ.

20. Motus avium, dum volant, mixtus est, inter motum artuum et gestationem; saluberrimum exercitationis genus.

21. De avium generatione Aristoteles bene notavit, (sed male ad alia animalia traduxit,) minus scilicet conferre semen maris ad generationem; sed activitatem potius indere, quam materiam; unde etiam ova fœcunda et sterilia, in plurimis non dignoscuntur.

22. Aves quasi omnes ad magnitudinem suam justam perveniunt primo anno, aut paulo post: verum est, quoad plumas in nonnullis, quoad rostrum in aliis, annos numerari; ad magnitudinem autem corporis, minime.

23. Aquila pro longæva habetur, anni non numerantur: etiam in signum trahitur longævitas, quod rostra renovet, unde juvenescat; ex quo illud "Aquilæ senectus." Attamen res fortasse ita se habet; ut instauratio aquilæ non mutet rostrum, sed contra mutatio rostri instaurat aquilam: postquam enim rostrum aduncitate sua nimium increverit, pascit aquila cum difficultate.

24. Vultures etiam longævi perhibentur, adeo ut vitam fere ad centesimum annum producant: milvi quoque, atque adeo omnes volucres carnivoræ et rapaces, diuturnioris sunt ævi. De accipitre autem, quia vitam degit degenerem et servilem, ex usu humano, minus certum fieri possit iudicium circa periodum ejus vitæ naturalem. Attamen ex domesticis, deprehensus est accipiter aliquando ad annos triginta vixisse; ex sylvestribus, ad quadraginta.

25. Corvus traditur esse similiter longævus, aliquando centenarius; carnivora avis, neque admodum frequens in volatu; sed magis sedentaria, et carnibus admodum atris. At cornix, cætera (præterquam magnitudine, et voce) similis, paulo minus diu vivit, sed tamen habetur ex vivacibus.

26. Cygnus, pro certo, admodum longævus invenitur, et centesimum annum haud raro superat; avis optime plumata, ichthyophaga, et perpetuo in gestatione, idque in aquis currentibus.

27. Anser quoque ex longævis; licet herba et id genus pabulo nutriatur; maxime autem sylvestris; adeo ut in proverbium apud Germanos sit, "Magis senex quam anser nivalis."

28. Ciconiæ longævæ admodum esse deberent, si verum esset, quod antiquitus notatum fuit, eas Thebas nunquam accessisse, quia urbs illa sæpius capta esset: id si cavissent, aut plusquam unius seculi memoriam habebant, aut parentes pullos suos historiam edocebant: verum omnia fabellis plena.

29. Nam de phœnice tantum accrevit fabulæ, ut obruatur, si qua in ea re fuit veritas. Illud autem, quod admirationi erat, eum magno aliarum avium comitatu volantem semper visum, minus mirum; cum hoc etiam in ulula interdiu volante, aut psittaco e cavea emisso, ubique cernere detur.

30. Psittacus, pro certo, usque ad sexaginta annos cognitus est vivere apud nos, quotquot supra habuis-

set, cum huc esset transvectus. Avis cibi quasi omnigeni, atque etiam mandens cibos, atque mutans subinde rostrum: aspera, et ferocula, carnibus atris.

31. Pavo ad viginti annos vivit: oculos autem Argus non recipit ante trimatum: tardigrada avis, carnibus vero candidis.

32. Gallus gallinaceus, salax, pugnax, et brevis ævi: alacris admodum ales, et carnibus etiam albis.

33. Gallus Indicus, aut Turcicus (quem vocant) gallinacei ævum parum superat; iracundus ales, et carnibus valde albis.

34. Palumbes sunt ex vivacioribus, ut quinquagesimum annum aliquando compleant, ærius ales, et in alto et nidificans et sedens. Columbæ vero ac turtures, vita breves, usque ad annum octavum.

35. At phasiani et perdices etiam decimum sextum annum implere possunt. Aves numerosi fœtus, carnibus autem paulo obscurioribus, quam pullorum genus.

36. Fertur de merula, quod sit ex avibus minoribus maxime longæva; procax certe avis, et vocalis.

37. Passer notatur esse ævi brevissimi; id quod ad salacitatem refertur in maribus: at carduelis, corpore haud major, deprehensus est vivere ad annos viginti.

38. De struthionibus nihil certi habemus; qui domi nutriuntur, adeo infelices fuerunt, ut non deprehensi sint diu vivere: de ave ibi constat tantum quod sit longæva, anni non numerantur.

39. Piscium vita magis incerta est, quam terrestrium, cum sub aquis degentes minus observentur: non respirant ex ipsis plurimi; unde spiritus vitalis magis conclusus est; itaque licet refrigerium excipiant per branchias, haud tamen ita continua fit refrigeratio, quam per anhelitum.

40. In aquis cum degant, a desiccatione illa et deprædatione, quæ fit per ærem ambientem, immunes sunt; neque tamen dubium est, quin aqua ambiens, atque intra poros corporis penetrans et recepta, plus noceat ad vitam quam aer.

41. Sanguinis perhibentur esse minus tepidi; suntque nonnulli ipsorum voracissimi, etiam speciei propriæ; caro autem ipsorum mollior est, quam terrestrium, et minus tenax: attamen pinguescunt majorem in modum, ut ex balænis infinita extrahatur quantitas olei.

42. Delphini traduntur vivere annos circa triginta; capto experimento in aliquibus a cauda præcisâ: grandescunt autem ad annos decem.

43. Mirum est, quod referunt de piscibus, quod ætate, post annos nonnullos, plurimum attenuantur corpore, manente cauda, et capite, in magnitudine priore.

44. Deprehensæ sunt aliquando in piscinis Cæsarianis murænæ vixisse ad annum sexagesimum. Certe redditæ sunt longo usu tam familiares, ut Crassus orator unam ex illis defleverit.

45. Lucius ex piscibus aquæ dulcis longissime vivere reperitur; ad annum quandoque quadragesimum; piscis vorax, et carnibus siccioribus et firmiteribus.

46. At carpio, abramus, tinca, anguilla, et hujusmodi, non putantur vivere ultra annos decem.

47. Salmones cito grandescunt, brevi vivunt;

quod etiam faciunt trutæ; at perca tarde crescit, et vivit diutius.

48. Vasta illa moles balænarum et orcarum, quamdiu spiritu regatur, nil certi habemus; neque etiam de phocis, aut porcis marinis, et aliis piscibus innumeris.

49. Crocodili perhibentur esse admodum vivaces, atque grandescendi periodum itidem habere insignem; adeo ut hos solos ex animalibus perpetuo, dum vivunt, grandescere opinio sit. Animal est oviparum, vorax et sævum, et optime tectum contra aquas. At de reliquo testaceo genere nihil certi, quod ad vitam ipsorum attinet, reperimus.

## OBSERVATIONES MAJORES.

Normam aliquam longævitatis et brevittatis vitæ in animalibus invenire difficile est, propter observationum negligentiam et causarum complicationem; pauca notabimus.

1. Inveniuntur plures ex avibus longævæ, quam ex quadrupedibus, (sicut aquila, vultur, milvus, pelicanus, corvus, cornix, cygnus, anser, ciconia, grus, ibis, psittacus, palumbæ, etc.) licet intra annum perficiantur, et minoris sint molis. Tegumentum certe ipsarum avium contra intemperies cœli optimum est: cumque in aère libero plerumque degant, similes sunt habitatoribus montium puriorum, qui longævi sunt. Etiam motus ipsarum, qui (ut alibi dictum est) mixtus est ex gestatione atque motu artuum, minus fatigat aut concutit, et magis salubris est: neque in utero matrum compressionem aut penuriam alimenti patiuntur initia volatilium; quia ova per vices excluduntur: maxime vero omnium illud in causa esse arbitramur; quod fiant aves magis ex substantia matris, quam patris; unde spiritum nanciscuntur minus acrem et incensum.

2. Poni possit, animalia, quæ creantur magis ex substantia matris quam patris, esse longæviora; quemadmodum aves, ut dictum est: etiam, quæ longiore tempore gestantur in alvo, plus habere ex substantia matris, minus e semine patris; ac proinde diuturnioris ævi esse: adeo ut existimemus etiam inter homines (quod in aliquibus notavimus) eos, qui similiores sunt matribus, diutius vivere; nec non liberos senum, qui ex uxoribus adolescentulis progignuntur, modo fuerint patres sani et non morbidi.

3. Initia rerum et injuriæ et auxilio maxime subjiciuntur: itaque minorem compressionem et liberaliorem alimentationem fœtus in utero ad longævitatem multum conferre par est: id fit, aut cum exeunt fœtus per vices, ut in avibus; aut cum pariuntur unci, ut in animalibus uni paris.

4. At tempus longius gestationis in utero tripliciter facit ad longitudinem vitæ. Primo, quod plus habet fœtus ex substantia matris, ut dictum est; deinde, quod prodit confirmatior; postremo, quod aëris vim prædatoriam tardius experitur. Quinetiam denotat periodos ipsius naturæ, per majores fieri circulos. Atque licet et boves et oves, qui in utero manent circiter sex menses, brevioris sint ævi, tamen id ex aliis causis ortum habet.

5. Comestores graminis et herbæ simplicis, brevis sunt ævi; longioris autem animalia carnivora, aut etiam seminum et fructuum comestores, sicut aves:

nam etiam cervi, qui longævi sunt, quasi dimidium pabuli (ut vulgo loquuntur) supra caput petunt; aëser autem, præter gramen, etiam aliquid invenit ex aquis, quod juvet.

6. Integumentum corporis ad longævitatē multum conferre arbitramur: aëris enim inæqualitates (quæ miris modis corpus labefactant et subruunt) propulsat et longius arcet; id quod in avibus præcipue viget: at quod oves, licet bene tectæ sint, parum vivat: id morbis (qui illud animal obsident) atque simplici esui graminis, imputandum est.

7. Spirituum sedes principalis proculdubio est in capite; atque licet ad animales spiritus tantum, hoc vulgo referatur, tamen illud ipsum ad omnia pertinet: neque illud dubium, quod spiritus maxime corpus lambunt et consumunt; adeo ut aut major copia ipsorum aut major incensio et acrimonia, plurimum vitam abbreviet: itaque existimamus magnam causam longævitatē in avibus esse, quod pro mole corporis capita habeant tam minuta; adeo ut etiam homines, qui valde magnum habent cranium, minus diu vivere existimemus.

8. Gestationem (ut prius notavimus) omne aliud genus motus ad longitudinem vitæ superare arbitramur; gestantur autem aves aquatiles, ut cygnus; atque aves omnes in volatu, sed cum artuum motu subinde contentiore; et pisces, de quorum vitæ longitudine parum certi sumus.

9. Quæ longiore tempore perficiuntur (non loquendo de grandescencia sola, sed de aliis gradibus ad maturitatem; sicut homo primo emittit dentes, deinde pubem, deinde barbam, etc.); longæviora sunt; indicat enim periodos confici per majores circulos.

10. Animalia mitiora longæva non sunt, ut ovis, columba; bilis enim complurium functionum in corpore veluti cos est et stimulus.

11. Animalia, quorum carnes sunt paulo atriiores, longioris sunt vitæ, quam quæ carnibus sunt candidis; indicat enim succum corporis magis firmum et minus dissipabilem.

12. In omni corruptibili quantitas ipsa multum facit ad conservationem integri; etenim ignis magis longiore tempore extinguitur; aquæ portio parva citius evaporat; truncus non tam cito arescit, quam vimen; itaque generaliter, (in speciebus dico, non in individuis,) quæ mole grandiora sunt animalia, pusillis sunt longæviora; nisi aliqua alia causa potens rem impediatur.

#### ALIMENTATIO ET VIA ALIMENTANDI.

Ad Art. 4. 1. Alimentum erga alimentatum de-  
Historia. bet esse naturæ inferioris, et simplicioris substantiæ: plantæ ex terra et aqua nutriuntur; animalia ex plantis; homines ex animalibus: sunt et animalia carnivora, atque homo ipse plantas sumit in partem alimenti; homo vero et carnivora animalia ex plantis solis ægre nutriuntur; possunt fortasse ex fructibus, et seminibus igne coctis, multo usu nutrirī, sed foliis plantarum aut herbarum minime; ut ordo Foliantorum experimento comprobavit.

2. At nimia proximitas aut consubstantialitas alimenti erga alimentatum non succedit: etenim animalia, quæ herbis vescuntur, carnes non tangunt;

etiam ex carnivoris animalibus pauca carnes propriæ speciei sapiunt: homines vero, qui anthropophagi fuerunt, ordinario tamen humanis carnibus non vescuntur; sed aut ex ultione in inimicos, aut pravis consuetudinibus in illud desiderium lapsi sunt: at arvum grano ex ipso proveniente feliciter non seritur; neque in insitione surculus aut virgultum in proprium truncum immitti solet.

3. Quo alimentum melius est præparatum, et paulo propius accedit ad substantiam alimentati, eo et plantæ feraciores sunt, et animalia habitu sunt pinguiora; neque enim virgultum aut surculus, in terram immisus, tam bene pascitur, quam si idem immittatur in truncum, cum natura sua bene consentientem, ubi invenit alimentum digestum et præparatum; neque etiam (ut tradunt) semen cepæ, aut similium, in terram immisum, tam magnam producit plantam, quam si semen in aliam cepam indatur, insitione quadam in radicem et subterranea: quin etiam nuper inventum est, virgulta arborum sylvestrium, veluti ulmi, quercus, fraxini, et similium, in truncos insita, longe majora proferre folia, quam quæ sine insitione proveniunt: etiam homines carnibus crudis non tam bene pascuntur, quam ignem passis.

4. Animalia per os nutriuntur; plantæ per radices; fœtus animalium in utero per umbilicum; aves ad parum temporis ex vitellis ovorum suorum; quorum nonnulla pars, etiam postquam exclusæ sunt, in gulis earum invenitur.

5. Omne alimentum movet maxime a centro ad circumferentiam. sive ab intra ad extra; attamen notandum est, arbores et plantas potius per cortices et extima, quam per medullas et intima, nutrirī; etenim si circumcirca decorticatæ fuerint, licet ad spatium parvum, non vivunt amplius: atque sanguis in venis animalium non minus carnes sub illis sitas nutrit, quam supra illas.

6. In omni alimentatione duplex est actio, extrusio et attractio; quarum prima a functione interiore, altera ab exteriori procedit.

7. Vegetabilia assimilant alimenta sua simpliciter, absque excretionē: etenim gummi et lacrymæ potius exuberantiæ, quam excretionē, sunt: tuberes autem morbi potius; at animalium substantia magis sui similis est perceptiva; itaque cum fastidio conjuncta est, et inutilia rejicit, utilia assimilat.

8. Mirum est de pediculis fructuum; quod omne alimentum, quod tantos quandoque producit fructus, per tam angusta collula transire cogitur; fructus enim nunquam trunco inhæret, absque pediculo aliquo.

9. Notandum semina animalium nutritionem non excipere, nisi recentia; at semina plantarum manent alimentabilia ad longum tempus: attamen virgulta non germinant, nisi indantur recentia; neque radices ipsæ longius vegetant, nisi sint terra co-operta.

10. In animalibus gradus sunt nutrimenti pro ætate; fœtui in utero sufficit succus maternus; a nativitate lac; postea cibi et potus; atque sub senectute crassiores fere cibi et sapidiores placent.

Præcipue omnium ad inquisitionem præsentem facit, diligenter et Mandatum. attente indagare; utrum non possit fieri nutritio ab extra; aut saltem non per os? Certe balnea

ex lacte exhibentur in marasmis et emaciationibus; neque desunt ex medicis, qui existimant alimentacionem nonnullam fieri posse per clysteria: omnino huic rei incumbendum; si enim nutritio fieri possit, aut per extra, aut alias quam per stomachum, tum vero debilitas concoctionis, quæ ingruit in senibus, illis auxiliis compensari possit, et tanquam in integrum restitui.

LONGÆVITAS ET BREVIITAS VITÆ IN HOMINE.

Ad Art. 5,  
6, 7, 8, 9,  
et 11.  
Historia.

1. Ante diluivium plura centenaria annorum vixisse homines refert Sacra Scriptura: nemo tamen patrum millesimum annum complevit. Neque hæc vitæ diurnitas gratiæ, aut lineæ sanctæ, attribui possit; cum recenseantur ante diluivium patrum generationes undecim; at filiorum Adami per Cain tantum generationes octo; ut progenies Cain etiam longævior videri possit. Ista vero longævitas, immediate post diluivium, dimidio corrui; sed in post-natis; nam Noah, qui ante natus erat, majorum ætatem æquavit; et Sem ad sexcentimum annum pervenit. Deinde, post tres generationes a diluivio, vita hominum ad quartam quasi partem ætatis primitivæ reducta est; videlicet, ad annos circiter ducentos.

2. Abraham annos centum septuaginta quinque vixit; vir magnanimus, et cui cuncta cedebant prospere. Isaac autem ad annum centesimum et octogesimum pervenit; vir castus et vitæ quietioris. At Jacob, post multas ærumnas, et numerosam sobolem, ad annum centesimum quadragesimum septimum duravit: vir patiens, et lenis, et astutus. Ishmael autem, vir militaris, annos centum triginta septem vixit. At Sarah (cujus unice ex fœminis anni recensentur) mortua est anno ætatis suæ centesimo vicesimo septimo; mulier decora et magnanima, optima mater et uxor; neque tamen minus libertate, quam obsequio erga maritum, clara. Joseph etiam, vir prudens et politicus, in adolescentia afflictus, postea in magna felicitate ætatem transigens, ad annos centum et decem vixit. Levi autem frater ejus, natu major, centesimum tricesimum septimum annum complevit; vir contumeliæ impatiens et vindicativus: eandemque fere ætatem attigit filius Levi; itemque nepos ejus, pater Aaronis et Mosis.

3. Moses centum viginti annos vixit; vir animosus, et tamen mitissimus, lingua autem impeditus: ipse vero Moses in psalmo suo vitam hominis pronuntiavit annorum tantum septuaginta, et si quis robustior fuerit, octoginta esse; quæ certe mensura vitæ usque ad hodiernum diem maxima ex parte durat. Aaron autem, tribus annis senior, eodem cum fratre anno mortuus est; vir lingua promptior, moribus faciliior, et minus constans. At Phinehas, Aaronis nepos, (ex gratia fortasse extraordinaria,) ad trecentimum annum vixisse colligitur; si modo bellum Israëlitarum contra tribum Benjamin (in qua expeditione Phinehas consultus est) eadem serie temporum gestum sit, qua res in historia narratur; vir erat omnium maxime zelotes. Joshua autem, vir militaris, et dux egregius, et perpetuo florens, ad annum centesimum et decimum vixit: cui Caleb fuit contemporaneus, et videtur fuisse æquævus:

Ehud autem judex, etiam centenarius ad minimum fuisse videtur, cum post devictos Moabitas octoginta annos sub ejus regimine Terra Sancta quieviisset; vir acer et intrepidus, quique pro populo se quodammodo devovisset.

4. Job, post instaurationem felicitatis suæ, annos centum et quadraginta vixit, cum ante afflictiones suas eorum annorum fuisset, qui filios habuerit ætatis virilis; vir politicus, et eloquens, et energetes, et exemplum patientiæ. Eli sacerdos vixit annos nonaginta octo; vir corpore obesus, animo placidus, et indulgens in suos. Elizeus autem propheta videtur mortuus esse centenario major; cum reperitur vixisse post assumptionem Eliæ annos sexaginta; tempore vero assumptionis talis fuerit, ut pueri eum tanquam vetulum calvum subsannaverint: vir vehemens et severus, et austeræ vitæ, et contemptor divitiarum. Isaias etiam propheta videtur esse centenarius; nam prophetiæ munus exercuisse septuaginta annos reperitur; annis, tum quo cœpisset prophetizare, tum quo mortuus esset, incertis: vir admirabilis eloquentiæ, et propheta evangelizans, promissis Dei Testamenti novi (tanquam uter mæsto) plenus.

5. Tobias senior annos centum quinquaginta octo; junior centum viginti septem, vixerunt: viri misericordes et eleemosynarii. Videntur etiam tempore captivitatis complures ex Judæis, qui e Babylone reversi sunt, longævi fuisse; cum utriusque templi (interjecto annorum septuaginta spatio) dicantur remississe, et disparitatem ipsorum deplorasse. Postea defluxit seculis compluribus, tempore Servatoris, Simeon invenitur nonagenarius: vir religiosus, et spei et expectationis plenus. Et eodem tempore Anna prophetissa ultra centenarium vixisse manifestoprehenditur; cum septem annis nupta fuisset; vidua autem per annos octoginta quatuor, quibus addendi sunt anni virginitatis, et qui prophetiam ejus de Servatore insecuti sunt: mulier sancta, et vitam degens in orationibus et jejuniis.

6. Longævitates hominum, qui apud ethnicos auctores inveniuntur, parum certæ memoriæ sunt; tum propter fabulas, in quas hujusmodi narrationes proclives admodum sunt; tum propter fallaciam in calculationibus annorum. Certe de Ægyptiis nil magni refertur in his, quæ extant, quoad longævitatem; cum reges ipsorum, qui longissime regnarunt, quinquagesimum aut quinquagesimum quintum annum non excesserint; quod pro nihilo est; cum etiam temporibus modernis hujusmodi spatia nonnunquam compleantur. At Arcadam regibus vitæ longissimæ fabulose tribuuntur: regio certe illa montana, et pastoralis, et victus incorrupti; attamen cum sub Pane tanquam deo tutelari fuerit, videntur etiam omnia, quæ ad eam pertinent, fuisse tanquam Panica, et vana, et ad fabulas idonea.

7. Numa Romanorum rex octogenarius fuit; vir pacificus et speculativus, et religioni addictus. M. Valerius Corvinus centum annos implevit, interjectis inter primum et sextum consulatum annis quadraginta sex; vir bello et animis fortissimus, ingenio civilis et popularis, et fortuna perpetuo florens.

8. Solon Atheniensis legislato, et unus ex Septem, supra annos octoginta vixit; vir magnanimus, sed

popularis et amans patriæ; item eruditus, et non alienus a voluptatibus et vita teneriore. Epimenides Cretensis centum quinquaginta septem annos vixisse traditur; mixta res cum portento, quia quinquaginta septem ipsorum sub antro eum delituisse ferunt. At dimidio sæculi post, Xenophaneæ Colophonius annos centum et duos, aut etiam diutius vixit; utpote qui viginti quinque annos natum patriam reliquit, septuaginta septem totos annos est peregrinatus, ac postea rediit; sed quamdiu a reditu vixerit, non constat: vir non magis itineribus quam mente oberans; utpote cuius nomen, propter opiniones, a Xenophane in Xenomanem traductum est; vasti proculdubio conceptus, et nihil spirans nisi infinitum.

9. Anacreon poëta major octogenario fuit; homo lascivus, et voluptarius, et bibax. Pindarus Thebanus octogesimum annum complevit; poëta sublimis, cum quadam novitate ingenii, et multus in cultu deorum. Sophocles Atheniensis similem ætatem complevit; poëta grandiloquus, totus in scribendo, et familiæ negligens.

10. Artaxerxes Persarum rex annos nonaginta quatuor vixit; vir hebetioris ingenii, neque curarum magnarum patiens, amans gloriæ, sed otii magis. Eodem tempore Agesilaus rex Spartanus octoginta quatuor annos implevit; vir moderatus, ut inter reges philosophus; sed nihilominus ambitiosus et bellator, et tam militia, quam rebus gerendis, strenuus.

11. Gorgias Leontinus annos centum et octo vixit; vir rhetor, et prudentiæ suæ ostentator, et qui adolescentes mercede accepta ut institueret, multum peregrinator fuit, et paulo ante mortem, nihil se habere quod senectutem inculparet, dixit. Protagoras Abderites nonaginta annos vixit: iste similiter rhetor fuit, sed non tam encyclopædia usus, quam civiles res, et instructionem ad rempublicam tractandam docere professus; attamen circumcursator civitatum æque ac Gorgias. At Isocrates Atheniensis nonagesimum octavum annum complevit; rhetor item, sed vir valde modestus, et lucem forensem fugiens, atque domi tantum scholam aperiens. Democritus Abderites ad annos centum et novem ætatem produxit; magnus philosophus, et, si quis alius ex Græcis, vere physicus; regionum complurium, et multo magis naturæ ipsius, perambulator; sedulus quoque experimentator, et (quod Aristoteles ei objicit) similitudinem potius sectator, quam disputationum leges servans. Diogenes Sinopeus ad nonaginta annos vixit; vir erga alios liber, in se imperiosus; victu sordido et patientia gaudens. Zeno Citieus centenarius, duobus tantum demptis annis, fuit; vir animo excelso, et opinionum contemptor, magni iidem acuminis, neque tamen molesti, sed quod animos magis caperet, quam constringeret; quale etiam postea fuit in Seneca. Plato Atheniensis annum octogesimum primum implevit; vir magnanimus, sed tamen quietis amantior, contemplatione sublimis et imaginativus, moribus urbanus et elegans; attamen magis placidus quam hilaris: et majestatem quandam præ se ferens. Theophrastus Ereasius annum octogesimum quintum complevit; vir dulcis eloquio, dulcis etiam rerum varietate; quique ex philosophia suavia tantum decerperit, molesta et amara non attigerit. Carneades Cyrenæus, multis

postea annis, ad octogesimum quintum ætatis annum similiter pervenit; vir eloquentius profluentis, quique grata et amœna cognitionis varietate et se ipsum, et alios delectaret. At Ciceronis tempore Orbilius, non philosophus, aut rhetor, sed grammaticus, ad centesimum fere annum vixit; primo miles, deinde ludimagister; vir natura acerbus et lingua et calamo, et versus discipulos etiam plagosus.

12. Q. Fabius Maximus sexaginta tribus annis augur fuit; unde constat eum octogenario majorem occubuisse; licet verum sit in auguratu nobilitatem magis spectari solitam, quam ætatem: vir prudens et cunctator, et in omnibus vitæ partibus moderatus, et cum comitate severus. Masinissa rex Numidarum nonagesimum annum superavit, et filium genuit post octogesimum quintum; vir acer, et fortunæ fidens, et juventute multas rerum vicissitudines expertus, decursu ætatis constanter felix. At M. Porcius Cato ultra annum nonagesimum vixit; vir ferrei prope corporis et animi; linguæ acerbæ, et similitates amans; idem agriculturæ deditus, si bique et familiæ suæ medicus.

13. Terentia Ciceronis uxor ad annum centesimum tertium vixit; mulier multis ærumnis conflictata, primo exilio mariti, deinde dissidio, et rursus calamitate ejus extrema; etiam podagra sæpius vexata. Luceia annum centenarium haud parum superavit; cum dicatur centum annis totis in scena mimam agens pronuntiasse; puellæ fortasse primo partes suscipiens, postremo anus decrepitæ. At Galeria Copiola, mima etiam et saltria, pro tyrocinio suo producta est in scenam, quoto anno ætatis incertum est; verum post annos nonaginta novem ab ea productione rursus reducta est in scenam, non jam pro mima, sed pro miraculo, in dedicatione theatri a Pompeio Magno; neque hic finis, cum etiam in ludis votivis pro salute divi Augusti iterum monstrata sit in scena.

14. Fuit et alia mima ætate paulo inferior, dignitate sublimior, quæ ad nonagesimum annum ætatem fere produxit; Livia Julia Augusta, Cæsaris Augusti uxor, Tiberii mater. Etenim si fabula fuit vita Augusti (id quod ipse voluit, cum decubens amicis præcepisset, ut postquam expiraret, sibi *Plaudite* exhiberent) certe et Livia optima mima fuit; quæ cum marito obæquo, cum filio potestate quadam et prædominantia, tam bene congrueret. Mulier comis, et tamen matronalis, negotiosa, et potestatis tenax. At Junia C. Cassii uxor, M. Bruti soror, etiam nonagenaria fuit; cum post aciem Philippensem sexaginta quatuor annos vixisset. Mulier magnanima, opibus felix, calamitate mariti et proximorum, et longa viduitate mœsta, sed tamen honorata.

15. Memorabilis est annus Domini septuagesimus sextus, tempore imperatoris Vespasiani; quo reperiuntur longævitatibus tanquam facti; eo enim anno peractus est census (census autem de ætatibus auctoritatem et informationem habet fidissimam); atque in ea parte Italiæ, quæ jacet inter Apenninum et Padum, inventi sunt homines, qui annum centesimum æquarunt et superarunt, centum et viginti quatuor; videlicet annorum centum, homines quinquaginta quatuor; annorum centum et decem, homines quinquaginta septem; annorum centum et viginti quinque,

homines duo; annorum centum et triginta, homines quatuor; annorum centum et triginta quinque aut triginta septem, homines item quatuor; annorum centum et quadraginta, homines tres. Præter hos, speciatim Parma edidit quinque, quorum tres, centum viginti annos, duo, centum triginta compleverunt; Bruxella unum annorum centum viginti quinque; Placentia unum annorum centum triginta unius; Faventia unam mulierem annorum centum triginta duorum; oppidum quoddam (tunc dictum Velleiacium) in collibus circa Placentiam decem dedit; quorum sex, annum ætatis centesimum decimum, quatuor, centesimum vicesimum compleverunt; Ariminum, denique, unum centum et quinquaginta annorum, nomine M. Aponium.

Monitum. Ne res in longum procederet, visum est tam in illis, quos jam recensuimus, quam in his, quos mox recensebimus, nullam adducere octogenario minorem: apposuimus autem singulis characterem sive elogium verum et perbreve; at ejusmodi, quod iudicio nostro nonnullam habeat ad longævitatē (quæ moribus et fortuna non parum regitur) relationem; sed duplici modo: aut quod tales longævi esse plerunque soleant, aut quod tales, licet minus apte dispositi, tamen longævi esse aliquando possint.

16. Inter imperatores Romanos et Græcos, item Francos et Germanos, usque ad nostram ætatem, qui numerum prope ducentorum principum complerunt, quatuor tantum inventi sunt octogenarii; quibus addere liceat imperatores duos primos, Augustum et Tiberium; quorum hic septuagesimum octavum, ille septuagesimum sextum annum implevit; et ad octogesimum forte pervenire uterque potuisset, si placuisset Livie et Caio. Augustus (ut dictum est) annos vixit septuaginta sex; vir moderatus ingenio; idem ad res perficiendas vehemens, cætera placidus et serenus, cibo et potu sobrius, venere intemperantior, per omnia felix; quique anno ætatis tricesimo gravem et periculosum passus est morbum, adeo ut salus ejus pro desperata esset: quem Antonius Musa medicus, cum cæteri medici calida medicamenta, tanquam morbo convenientia, adhibuissent, contraria ratione frigidis curavit; quod fortasse ei ad diurnitatem vitæ profuit. Tiberius duos amplius annos vixit; vir lentis maxillis, (ut Augustus aiebat,) sermone scilicet tardus, sed validus; sanguinarius, bibax, quique libidinem etiam in dietam transtulit; attamen valetudinis sæ curator probus, ut qui solitus esset dicere, stultum esse, qui post triginta annorum vitam medicum consuleret aut advocaret. Gordianus senior octoginta annos vixit, et tamen violenta morte periit, postquam vix degustasset imperium; vir magnanimus et splendidus, eruditus et poëta, et constanti vitæ tenore (ante ipsam obitum) felix. Valerianus imperator septuaginta sex annos vixit, antequam a Sapore rege Persarum captus esset; post captivitatem autem septem annos vixit inter contumelias, etiam violenta morte præreptus; vir mediocris animi, nec strenuus; existimatione tamen paulo eminentior et evectus, experimento minor. Anastasius cognomine Dicorus octoginta octo annos

vixit; homo animi sedati, sed humilior, et superstitiosus, et timidus. Anicius Justinianus annos octoginta tres vixit; vir gloriæ appetens, persona propria socors, ducum suorum virtute felix et celebris; uxorius, neque suus, sed aliorum ductu circumactus. Helena Britanna, Constantini Magni mater, octogenaria fuit; mulier civilibus rebus minus se immiacens, nec mariti nec filii imperio, sed tota religioni dedita; magnanima. et semper florens. Theodora imperatrix (quæ Zoes soror erat, Monomachi uxor; ipsa autem post obitum ejus sola regnavit) annos supra octoginta vixit; mulier negotiosa, et imperio delectata, felix admodum, et ex felicitate credula.

17. Jam a secularibus ad principes viros in ecclesia narrationem convertemus. S. Johannes Apostolus Servatoris et discipulus amatus, nonaginta tres annos vixit; vere aquilæ emblemate notatus, nihil spirans nisi divinum, et tanquam Seraph inter Apostolos propter fervorem charitatis. S. Lucas evangelista octoginta quatuor annos complevit; vir eloquens et peregrinator, S. Pauli comes individuus, et medicus. Symeon Cleophæ, frater Domini dictus, episcopus Hierosolymitanus, annos centum et viginti vixit: licet martyrio præreptus fuerit; vir animosus, et constans, et bonorum operum plenus. Polycarpus Apostolorum discipulus, Smyrnenensis episcopus, videtur ad centum annos et amplius ætatem produxisse; licet martyrio interceptus; vir excelsi animi et heroicæ patientiæ, et laboribus indefessus. Dionysius Areopagita, Paulo Apostolo contemporaneus, ad nonaginta annos vixisse videtur; Volucris cœli appellatus ob theologiam sublimem; neque minus factis quam meditationibus insignis. Aquila et Priscilla, Pauli Apostoli primo hospites, deinde coadjutores, conjugio felici et celebri ad centum ad minimum annos vixerunt; cum sub Xysto primo superstitēs fuerint: nobile par, et in omnem charitatem effusum; quibus inter maximas consolationes (quales proculdubio primos illos ecclesiæ fundatores sequebantur) etiam illud conjugalis consortii tanquam magnus cumulus accesserat. S. Paulus Eremita annos centum et tredecim vixit; vixit autem in spelunca victu tam simplici et duro, ut eo vitam tolerare supra humanas vires videri possit; in meditationibus et soliloquiis tantummodo ævum transigens; qui tamen non illiteratus aut idiota, sed eruditus fuit. S. Antonius, Cœnobarum primus institutor, aut (ut alii volunt) restitutor, ad centesimum quintum annum pervenit: vir devotus et contemplativus, et tamen civilibus rebus utilis; vitæ genere austero et aspero; attamen in gloriosa quadam solitudine degens, nec sine imperio; cum et monachos suos sub se habuisset, atque insuper a compluribus et Christianis et philosophis, veluti vivum aliquod simulacrum, non sine adoratione quadam visitatus esset. S. Athanasius mortuus est octogenario major; vir invincibilis constantiæ, famæ semper imperans, nec fortunæ succumbens; idem erga potentiores liber, erga populum gratosus et acceptus; exercitatus contentionibus, in iisque et animosus et solers. S. Hieronymus plurimorum consensu annum nonagesimum superavit; vir calamo potens, et virilis eloquentiæ; varie eruditus, et linguis, et scientiis; peregrinator item, atque vitæ

versus senium austerioris; sed in vita privata spiritus gerens altos, et late fulgens ex obscuro.

18. At papæ Romani numerantur ducenti quadraginta unus; ex tanto numero quinque solummodo octogenarii, aut supra reperiuntur: primitivis autem compluribus justa ætas martyrii prærogativa anticipata est. Joannes, vicesimus tertius papa Romanus, nonagesimum ætatis annum complevit; vir ingenii inquieti, et novis rebus studens, et multa transferens, nonnulla in melius, haud pauca in aliud; magnus autem opum et thesauri accumulator. Gregorius dictus duodecimus, creatus papa in schismate, et quasi interrex, nonagenarius obiit; de eo propter brevitetatem papatus nihil invenimus, quod annotemus. Paulus tertius ad octoginta et unum annos vixit; vir sedati animi et profundi consilii, idem doctus et astrologus, et valetudinem impense regens; more autem veteris sacerdotis Eli indulgens in suos. Paulus quartus octoginta tres annos vixit; vir natura asper et severus, altos gerens spiritus, et imperiosus, ingenio commotior, sermone eloquens et expeditus. Gregorius decimus tertius similem ætatem octoginta trium annorum implevit; vir plane bonus, animo et corpore sanus, polilicus, temperatus, energetes et elemosynarius.

19. Quæ sequentur, ordine promiscua, fidei magis dubiæ, observatione magis jejuna, erunt. Rex Arganthonius, qui regnavit Gadibus in Hispania, centum et triginta, aut (ut alii volunt) quadraginta, annos vixit; ex quibus octoginta regnavit: de moribus ejus et vitæ genere, et tempore quo vixit, siletur. Cinyras Cypriorum rex in insula illa, tunc habita beata et voluptaria, centum quinquaginta aut sexaginta annos vixisse prohibetur. Reges duo Latini in Italia, pater et filius, alter octingentos, alter sexcentos annos, vixisse traduntur; verum hoc narratur a philologis quibusdam, quibus et ipsis (cætera satis credulis) fides rei suspecta est, imo damnata. Arcadium reges nonnullos trecentos annos vixisse alii tradunt: regio certe ad vitam longam satis idonea; res fortasse fabulis aucta. Narrant Dandonem quendam in Illyrico absque incommodis senectutis quingentos annos vixisse. Apud Epios, Ætolix videlicet partem, narrant universam gentem admodum longævam fuisse; ut multi ex his ducenum annorum inventi sint; inter eos præcipuum quendam nomine Litorium, virum giganteæ staturæ, qui trecentos annos cumulaverat. In Tmoli montis fastigio (Tempus antiquitus vocato) homines complures centum quinquaginta annos vixisse traditur. Sectam Essæorum apud Judæos ultra centum annos communiter vixisse tradunt: secta autem illa simplici admodum diæta utebatur, ad regulam Pythagoræ. Appollonius Tyanæus centum annos excessit, aspectu (ut in tanta ætate) pulcher, vir certe mirificus, apud ethnicos divinus habitus, apud Christianos magus; victu Pythagoricus, magnus peregrinator, magna etiam gloria florens, et tanquam pro numine cultus; attamen sub finem ætatis accusationes et contumelias passus, unde nihilominus incolumis quoquo modo evasit. Attamen ne longævitas sua diæta Pythagoricæ solum tribuatur, sed etiam e genere suo aliquid taxasse videatur; avus ejus etiam centum triginta annos vixit. Q. Metellum ultra centum annos vix-

isse certa res est; atque, post consularia imperia feliciter administrata, pontificem maximum jam senem creatum esse, et sacra per-viginti duos annos tractasse; neque ore in votis nuncupandis hæsitante, neque in sacrificiis faciendis tremula manu utentem. Appium Cæcum annosissimum fuisse constat; annos non numerant; quorum partem majorem, postquam luminibus orbatus esset, transegit; neque propterea mollitus, familiam numerosam, clientelas quamplurimas, quin etiam rempublicam fortissime rexit; extrema vero ætate lectica in senatum delatus, pacem cum Pyrrho vehementissime dissuasit; cujus principium orationis admodum memorabile, et invincibile quoddam robur, et impetum animi spirans. "Magna," inquit, "impatientia (patres conscripti) cæcitate meam per plures jam annos tuli; at nunc etiam me surdum quoque optaverim, cum vos tam deformia consilia agitare audiam." M. Perpenna vixit annos nonaginta octo; omnibus, quos consul sententiam in senatu rogaverat (hoc est, omnibus senatoribus sui anni) superstes fuit: etiam omnibus, quos paulo post censor in senatum legerat, septem tantum exceptis. Hiero, rex Siciliæ temporibus belli Punici secundi, ad centesimum fere annum vixit; vir et regimine et moribus moderatus; numinum cultor, et amicitix conservator religiosus; beneficus, et constanter fortunatus. Statilia ex nobili familia, Claudii tempore, vixit annos nonaginta novem. Clodia filii filia centum et quindecim. Xenophilus, antiquus philosophus, e secta Pythagoræ, centum et sex annos vixit, sana et vivida senectute, et magna apud vulgum doctrinæ fama. Insulani Corcyræi habebantur olim vivaces, sed hodie communi aliorum sorte vivunt. Hippocrates Couis, medicus insignis, centum et quatuor annos vixit; artemque suam tam longa vita comprobavit et honestavit; vir cum prudentia quadam doctus, in experientia et observatione multus; non verba aut methodos captans, sed nervos tantum scientiæ separans et proponens. Demonax philosophus (non solum professione, sed moribus) tempore Adriani, ad centenarium fere annum vixit; vir magni animi, atque animi victor, idque vere sine affectatione, et in maximo humanarum rerum contemptu, civilis et urbanus. Is cum amici de sepultura ipsius verba injicerent, "Desinite," inquit, de sepultura curare; cadaver enim fetor sepeliet." Atque illi; "Placet ergo avibus aut canibus exponi?" Ille rursus, "Cum," inquit, "vividus hominibus prodesse pro viribus contenderim, quæ invidia est, si mortuus etiam animalibus aliquid præbeam?" Populus Indiæ, Pandoræ appellati, admodum longævi; etiam usque ad annum ducentesimum: addunt rem magis miram; scilicet cum pueri fere candido capillo fuerint, senectute ante canitiem eos nigrescere solitos: id tamen ubique vulgare est, ut pueris capillitio candidiore, virili ætate pili mutentur in obscurius. Etiam Seres, Indorum populus, cum vino suo ex palmis, longævi habitus sunt, usque ad annum centesimum tricesimum. Euphranor grammaticus consenuit in schola, et docebat literas, ultra annum centesimum. Ovidius senior, poëtæ pater, nonaginta annos vixit; diversus a moribus filii, utpote qui Musas contempsit, et poëtice filio dissuasit. Asinius Pollio, Augusti fa-

miliaris, centum annos superavit; vir ingentis luxus, eloquens, literarum cultor, attamen vehemens, superbus, crudelis, et tanquam sibi natus. Invaluit opinio de Seneca, quod admodum annosus fuerit, usque ad annum centesimum decimum quartum; quod verum esse non potest, cum tantum absit, ut senex decrepitus ad Neronis tyrocinium admotus sit, ut contra rebus gerendis strenue suffecerit; quinetiam paulo ante, medio tempore Claudii, exularit, ob adulteria aliquarum principum fœminarum; quod in talem ætatem non competit. Joannes de Temporibus, ex omnibus posterioribus seculis, traditione quadam et opinione vulgari, usque ad miraculum, vel potius usque ad fabulam, longævus perhibetur, annorum supra trecentos; natione fuit Francus, militavit autem sub Carolo Magno. Gartius Aretinus, Petrarchæ proavus, ad centum et quatuor annos pervenit, prospera semper usus valetudine, atque in extremis vires labantes sentiens potius, quam morbum; quæ vera est resolutio per senium. Ex Venetis reperiuntur haud pauci longævi, etiam gradu eminentiori; Franciscus Donatus dux; Thomas Contarenus procurator S. Marci; Franciscus Molinus item procurator S. Marci; alii. At maxime memorabile est illud de Cornaro Veneto, qui corpore, sub initio, valetudinario, cœpit primum metiri cibum et potum, ad certum pondus, in curam sanitatis: ea cura transit usu in dietam, et ex diæta in magnam longævitatē, usque ad annum centesimum, et ultra, integris sensibus, et constanti valetudine. Gulielmus Postellus, nostra ætate, Gallus, ad centesimum et prope vicesimum annum vixit; etiam summitatibus barbæ in labro superiore nonnihil nigrescentibus, neque prorsus canis; vir capite motus, et non integræ omnino phantasie; magnus peregrinator, et mathematicus, et hæretica pravitate nonnihil aspersus.

20. Apud nos in Anglia, arbitror non existere villulam paulo populiosiore, in qua non reperiatur aliquis vir, aut mulier ex octogenariis; etiam ante paucos annos, in agro Herefordiensi, inter ludos florales, instituta erat chorea et saltatio ex viris octo, quorum ætas simul computata octingentos annos complebat; cum quod alteris eorum ad centenarium deesset, alteris aliquibus superesset.

21. In hospitali Bethleem, ad suburbia Londini, quod in sustentationem et custodiam phreneticorum institutum est, inveniuntur de tempore in tempus multi ex mente captis fuisse longævi.

22. Ætates, de quibus fabulantur, nympharum et dæmonum aëreorum, qui corpore mortales essent, sed admodum longævi (id quod et antiqua, et inter quosdam recenti superstitione et credulitate, receptum est); pro fabulis et somniis habemus; præsertim cum sit res, nec cum philosophia, nec cum religione bene consentiens. Atque de historia longævitatē in homine, per individua, aut individuis proxima, hæc inquisita sint. Jam ad observationes per capita transibimus.

23. Decursus seculorum, et successio propaginis, nihil videntur omnino demere de diuturnitate vitæ; quippe curriculum humanæ ætatis videmus, usque a tempore Mosis ad nostra, circa octogesimum an-

num stetisse; neque sensim et paulatim (ut quis crederet) declinasse. Sunt certe tempora in singulis regionibus, quibus homines diutius aut brevius degunt. Diutius plerumque, cum tempora fuerint barbara, et simplicioris victus, et exercitationi corporis magis dedita; brevius, cum magis civilia, et plus luxuriæ et otii: verum ista transeunt per vices, propago ipsa nihil facit. Neque dubium est, quin idem fiat in animalibus cæteris, siquidem nec boves, nec equi, aut oves, et similia, ævo, ultimis his seculis, minuuntur; itaque præcipitatio ætatis facta est per diluvium; et fieri fortasse potest per similes majores casus, (ut loquuntur,) veluti inundationes particulares, combustiones per longas siccitates, terræ motus, et similia. Quinetiam videtur similis esse ratio in magnitudine corporum sive statura; quæ nec ipsa per successionem propaginis defuit; licet Virgilius (communem opinionem secutus) divinas set posteros futuros præsentibus minores; unde ait de campis Æmathiis, et Æmonensibus subarandis:

“Grandiaque effosis mirabitur ossa sepulchra.”

Etenim cum constet fuisse quondam homines staturis giganteis, (quales et in Sicilia, et alibi, in vetustis sepulchris et cavernis, pro certo reperti sunt,) tamen jam per tria fere millenaria annorum, ad quæ producit memoria satis certa, in iisdem locis nil tale continuatur; licet etiam hæc res per mores et consuetudines civiles vices quasdam patiatur, quemadmodum et illa altera. Atque hæc magis notanda, quia insedit animis hominum penitus opinio, quod sit perpetuus defluxus per ætatem, tum quoad diuturnitatem vitæ, tum quoad magnitudinem et robur corporis; omniaque labi et ruere in deterius.

24. Regionibus frigidioribus et hyperboreis diutius homines vivunt plerumque, quam calidioribus; quod necesse est fieri, cum et cutis sit magis astricta; et succi corporis minus dissipabiles; et spiritus ipsi minus acres ad consumendum, et magis fabriles ad reparandum; et aër (utpote modice calefactus a radiis solis) minus prætorius: at sub linea æquinoctiali, ubi sol transit, et duplex sit hiems et æstas, sitque etiam major æqualitas inter spatia dierum et noctium, (si cætera non impediunt,) etiam bene diu vivunt; ut in Peruvia et Taprobana.

25. Insulani mediterraneis ut plurimum sunt longæviores; neque enim tam diu vivunt in Russia, quam in Orcadibus; neque tam diu in Africa ejusdem paralleli, quam in Canariis et Terceris; Japonenses etiam Chinesibus (licet hi longævitatē appetentes sint usque ad insaniam) sunt vivaciore; nec mirum, cum aura maris, et in regionibus frigidioribus foveat, et in calidioribus refrigeret.

26. Loca excelsa potius edunt longævos, quam depressa; præsertim si non sint juga montium, sed terræ altæ quatenus ad situm eorum generalem; qualis fuit Arcadia in Græcia, et Ætolie pars, ubi longævi admodum fuerunt: at de montibus ipsis eadem foret ratio, propter aërem videlicet puriorem et limpidiorem, nisi hoc labefactaretur per accidens; interventu scilicet vaporum ex vallibus eo ascendentium, et ibi acquiescentium. Itaque in montibus nivalibus non reperitur aliqua insignis vitæ longitudo; non in Alpibus, non in Pyrennæis, non in Apennino;

sed medii colles, aut etiam valles dant homines longæviores; at in montium jugis protensis versus Æthiopiā et Abyssinos, ubi, propter arenas subjectas, parum aut nihil incumbit in montes vaporis, diutissime vivunt; etiam ad hodiernum diem annum non raro centesimum et quinquagesimum implentea.

27. Paludes, et tractus earum, præsertim exporrecti in plano, nativis propitii, advenis maligni, quoad vitæ prorogationem aut decurtationem; quodque mirum videri possit, paludes, aqua salsa per vices inundatæ, minus salubres, quam quæ aqua dulci.

28. Regiones particulares, quæ notatæ sunt longævos produxisse, sunt Arcadia, Ætolia, India cis Gangem, Brasilia, Taprobana, Britannia, Hybernia, cum Insulis Orcadibus et Hebridibus; nam de Æthiopia quod ab aliquo ex antiquis refertur, quod longævi fuerint, res vana est.

29. Occulte est res salubritas, præsertim perfectior, aëris; et potius experimento, quam discursu et conjectura, elicitur. Capi possit experimentum ex vellere lanæ, per expositionem in aërem cum mora aliqua dierum, minus aucto pondere: aliud ex frusto carnis diutius manente non putrefacto; aliud ex vitro calendari minori spatio reciprocante; de his et similibus amplius inquiratur.

30. Aëris non tantum bonitas aut puritas, verum etiam æqualitas, quoad longævitatē spectatur. Collium et vallium varietas, aspectui et sensui grata, longævitati suspecta; at planities modice sicca, nec tamen nimis sterilis aut arenosa, nec prorsus sine arboribus et umbra, diuturnitati vitæ magis commoda.

31. Inæqualitas aëris (ut jam dictum est) in loco mansionis mala; verum mutatio aëris in peregrinatione, postquam quis assueverit, bona; unde et magni peregrinatores longævi fuerunt: similiter etiam longævi, qui in tuguriolis suis, eodem loco, perpetuo vitam degerunt; aër enim assuetus minus consumit, at mutatus magis alit et reparat.

32. Ut series et numerus successionum ad diuturnitatem aut brevitatē vitæ nihil est (ut jam diximus) ita conditio immediata parentum, tam ex parte patris, quam matris, proculdubio multum potest. Alii siquidem generantur ex senibus, alii ex adolescentulis, alii ex viris ætate justiore; item alii a patribus cum sani fuerint et bene dispositi; alii a morbidis et languidis; item alii a repletis et ebriis, alii post somnum et horis matutinis; item alii post longam intermissionem veneris, alii post venerem repetitam; item alii flagrante amore patrum, (ut fit plerumque in spuris,) alii defervescente, ut in conjugis diuturnis. Eadem etiam ex parte matris spectantur: quibus addi debent, conditio matris, dum gestat uterum, quali sanitate, quali diæta; et tempus gestationis, ad decimum mensem, aut celerius. Hæc ad normam reducere, quatenus ad longævitatē, difficile est; atque eo difficilior, quod fortasse quæ optima quis putaret, in contrarium cedent: etenim alacritas illa in generatione, quæ liberos corpore robustos et agiles producit, ad longævitatē minus utilis erit, propter acrimoniam et incensionem spirituum. Diximus antea, plus habere ex materno sanguine, conferre ad longævitatē; etiam mediocria simili ratione optima esse putamus; amorem potius conjugalem quam meretricium; horas gener-

ationis matutinas; statum corporis non nimis alacrem aut turgidum, et similia. Illud etiam bene observari debet, quod habitus parentum robustior ipsis magis est propitius, quam fœtui; præcipue in matre: itaque satis imperite Plato existimavit, claudicare virtutē generationum, quod mulieres similibus cum viris exercitiis, tam animi quam corporis, non utantur; illud contra se habet: distantia enim virtutis inter marem et fœminam maxime utilis est fœtui; atque fœminæ teneriores magis præbitoræ sunt ad alendum fœtum, quod etiam in nutricibus tenet. Neque enim Spartanæ mulieres, quæ ante annum vicesimum secundum, aut (ut alii dicunt) vinctum, nubere non solebant (ideoque Andromanæ vocabantur) generosiorē aut longæviorē sobolem ediderunt, quam Romanæ, aut Athenienses, aut Thebanæ, apud quas anni duodecim aut quatuordecim nubiles erant. Atque si in Spartanis aliquid fuerit egregium, id magis victus parsimonie debetur, quam nuptiis mulierum serotinis. Illud vero experientia docet, esse quasdam stirpes ad tempus longævas, ut longævitas sit, quemadmodum morbi, res hæreditaria, in aliquibus periodicis.

33. Candidiores genis, cute, et capillis, minus vivaces; subnigri, aut rufi, aut lentiginosi magis. Etiam rubor nimius in juventute longævitatē minus promittit, quam pallor. Cutis durior longævitatē signum potius, quam mollior; neque tamen hoc intelligitur de cute spissiori, (quam vocant aserinam,) quæ est tanquam spongiosa; sed de dura simul et compacta; quin et frons majoribus rugis sulcatus, melius signum, quam nitidus et explicatus.

34. Pili in capite asperiores, et magis setosi, ostendunt vitam longiorē, quam molles et delicati; crispi vero eandem prænunciant, si sint simul asperi; contra, si sint molles et splendentes. Item si sit crispatio potius densa, quam per largiores circinnos.

35. Citius aut serius calvescere, res est quasi indifferens; cum calvastris plurimi longævi fuerint; etiam cito canescere (utunque videatur canities præcursor ingruentis senectutis) res fallax est: cum haud pauci præpropere canescentes, diu postea vixerint: quinetiam præmatura canities, absque ulla calvitie, signum est longævitatē; contra, si concomitetur calvitie.

36. Pilositas partium superiorum signum vitæ minus longæ; atque pectore hirsuti, et quasi jubati, minus vivaces: at inferiorum pilositas, ut femorum, tibiarum, signum longæ vitæ.

37. Proceritas staturæ (nisi fuerit enormis) compage commoda, et sine gracilitate, præsertim si concomitetur corporis agilitas, signum longæ vitæ; at contra, homines brevioris staturæ magis vivaces, si fuerint minus agiles et motu tardiores.

38. In corporis analogia; qui corpore aliquanto breviores sunt, tibiis longioribus, longæviores sunt, quam qui corpore magis demisso, tibiis autem brevioribus: item, qui inferioribus partibus largiores sunt, et superioribus contractiores, (structura corporis quasi surgente in acutum,) longæviores, quam qui humeros lati, deorsum sunt tanquam attenuati.

39. Macies cum affectibus sedatis, tranquillis, et facilibus; pinguior autem habitus cum cholera, ve-

hementia, et pertinacia, diuturnitatem vitæ significant; obesitas autem in juventute brevioram vitam præmonstrat, in senectute res est magis indifferens.

40. Diu et sensim grandescere, signum vitæ longæ; si ad staturam magnam, magnum signum: sin ad minorem, signum tamen: at contra velociter grandescere ad staturam magnam, signum malum est; sin ad staturam brevem, minus malum.

41. Carnes firmiores, et corpus musculosum et nervosum, et nates minus tumentes, (quantum sedendo tantum sufficiant,) et venæ paulo eminentiores, longævitatē denotant: contraria brevitatē vitæ.

42. Caput, pro analogia corporis, minutius; collum mediocre, non oblongum, aut gracile, aut tumidum, aut tanquam humeris impactum; nares patulæ, quacunque forma nasi; os largus; auris cartilaginea, non carnosa; dentes robusti et contigui, non exiles, aut rari, longævitatē prænunciant; et multo magis, si dentes aliqui novi provectione ætate proveniant.

43. Pectus latius, sed non elevatum, quin potius adductius; humerique aliquantulum gibbi, et (ut loquuntur) fornicati; venter planus, nec prominens; manus largior, et palma minus lineis exarata; pes brevior et rotundior; femora minus carnosa; suræ non cadentes, sed se altius sustentantes, signa longævitatē.

44. Oculi paulo grandiores, atque iris ipsorum cum quodam virore; sensus omnes non nimis acuti; pulsus juventute tardior, sub ætatem vergentem paulo incitator; detentio anhelitus faciliior et in plura momenta; alvus juventute siccior, vergente ætate humidior, signa etiam longævitatē.

45. De temporibus nativitatis nihil observatum est, quoad longævitatē, memoratu dignum, præter astrologica, quæ in topicis relegavimus. Partus octimestris, non solum pro non vivaci, verum etiam pro non vitali habetur; etiam partus hiemales habentur pro longævioribus.

46. Victus sive diætæ Pythagorica, aut monastica, secundum regulas strictiores, aut ad amussim æqualis (qualis fuit illa Cornari) videtur potenter facere ad vitæ longitudinem. At contra ex iis, qui libere et communi more vivunt, longæviores reperti sunt sæpenumero edaces et epulones, denique qui liberaliore mensa uti sunt. Media diætæ, quæ habetur pro temperata, laudatur, et ad sanitatem confert, ad vitam longævam parum potest; etenim diætæ illa strictior spiritus progignit paucos, et lentos, unde minus consumit; at illa plenior alimentum præbet copiosum, unde magis reparat; media neutrum præstat: ubi enim extrema nociva sunt, medium optimum; verum ubi extrema jувativa, medium nihili fere est. Diætæ autem illi strictiori convenit etiam vigilia, ne spiritus pauci multo somno opprimantur; exercitatio item modica, ne exolvantur; veneris abstinencia, ne exhauriantur: at diætæ, uberiori convenit contra somnus largior, exercitatio frequentior, usus veneris tempestivus. Balnea et unguenta (qualia fuerunt in usu) delictis potius, quam vitæ producendæ, accommodata fuerunt; verum de his omnibus, cum ad inquisitionem secundum intentiones ventum erit, accuratius dicemus. Illud interim Celsi medici, non solum docti, verum etiam prudentis, non contemnendum est; qui varietatem et alternationem

diætæ jubet, sed cum inclinatione in partem benigniorem; scilicet, ut quis vigiliis quandoque se assuescat, alias somno indulgeat, sed somno sæpius: itidem interdum jejundet, interdum epuletur, sed epuletur sæpius; interdum animi contentionibus strenue incumbat, interdum remissionibus utatur, sed remissionibus sæpius. Illud certe minime dubium est, quin diætæ bene instituta partes ad prolongandam vitam potiores teneat; neque conveni unquam aliquem valde longævum, qui interrogatus de victu suo non observasset aliquid peculiare; alii alia. Equidem memini quendam senem centenario majorem, qui productus est testis de antiqua quadam præscriptione; is cum, finito testimonio, a iudice familiariter interrogaretur, quid agens tam diu vixisset; respondit, (præter expectatum, et cum risu audientium,) "Edendo antequam esurirem, et potando antequam sitirem." Sed de his (ut dictum est) postea.

47. Vita religiosa et in sacris videtur ad longævitatē facere. Sunt in hoc genere vitæ, otium; admiratio et contemplatio rerum divinarum; gaudia non sensualia; spes nobiles; metus salubres; mores dulces; denique renovationes continuæ per observantias, pœnitentias et expiationes; quæ omnia ad diuturnitatem vitæ potenter faciunt. Quibus si accedat diætæ illa austera, quæ massam corporis induret, spiritus humiliet, nil mirum si sequatur longævitas insignis; qualis fuit Pauli eremitæ, Symonis Stylitæ anachoretæ columnaris, et complurium aliorum monachorum ex eremo, et anachoretarum.

48. Huic proxima est vita in literis, philosophorum, rhetorum, et grammaticorum. Degitur hic quoque in otio et in iis cogitationibus, quæ, cum ad negotia vitæ nihil pertineant, non mordent, sed varietate et impertinentia delectant; vivunt etiam ad arbitrium suum, in quibus maxime placeat horas et tempus terentes; atque in consortio plerumque adolescentium, quod paulo lætius est. In philosophiis autem magna est discrepantia, quoad longævitatē, inter sectas. Etenim philosophiæ, quæ nonnihil habent ex superstitione et contemplationibus sublimibus, optimæ, ut Pythagorica, Platonica: etiam quæ mundi perambulationem et rerum naturalium varietatem complectebantur, et cogitationes habebant distinctas, et altas, et magnanimas (de infinito, et de astris, et de virtutibus heroicis, et hujusmodi) ad longævitatē bonæ; quales fuerunt Democriti, Philolai, Xenophonis, astrologorum, et Stoicorum: etiam quæ nihil habebant speculationis profundioris, sed ex sensu communi, et opinionibus vulgaris, abque inquisitione acriori, in omnem partem placide disputabant, similiter bonæ; quales fuerunt Carneadis et Academicorum; item rhetorum et grammaticorum: at contra, philosophiæ in subtilitatum molestiis versantes, et pronuntiativæ, et singula ad principiorum trutinam examinantes et torquentes; denique spinosiores et angustiores, malæ; quales fuerunt plerumque Peripateticorum et scholasticorum.

49. Vita rusticana item ad longævitatē idonea: frequens est sub dio et aère libero; non socors, sed in motu; dapibus plerumque recentibus et inemptis; sine curis et invidia.

50. De vita militari, in juventute, etiam bonam habemus opinionem; certe complures bellatores

egregii longævi fuerunt; Corvinus, Camillus, Xenophon, Agesilaus, et alii tam prisci, quam moderni: prodest certe longævitati, si a juventute ad ætatem provecam omnia creantur in benignius, ut juvenis laboriosa dulcedinem quandam senectuti largiatur; existimamus etiam affectus militares, ad contentionis studium et spem victoriæ erectos, talem infundere calorem spiritibus, qui longævitati prosit.

MEDICINÆ AD LONGÆVITATEM.

Ad Art. 10. **Connexio.** Medicina, quæ habetur, intuetur fere tantum conservationem sanitatis, et curationem morborum: de iis autem, quæ proprie spectant ad longævitatem, parva est mentio et tanquam obiter. Proponemus tamen ea medicamenta, quæ in hoc genere notantur, cordialia scilicet quæ vocantur. Etenim quæ, sumpta in curationibus, cor et (quod verius est) spiritus muniunt et roborant contra venena et morbos, translata cum iudicio et delectu in diætâ, etiam ad vitam producendam aliqua ex parte prodesse posse consentaneum est. Id faciemus non promiscue ea cumulantes, (ut moris est,) sed excerptes optima.

1. Aurum triplici forma exhibetur; aut in auro (quod appellant) potabili; aut in vino extinctionis auri; aut in auro in substantia; qualia sunt, aurum foliatum et limatura auri. Quod ad aurum potabile attinet, cœpit dari in morbis desperatis aut gravioribus pro egregio cordiali, atque successu non contemnendo. Verum existimamus spiritus salis, per quos fit dissolutio, virtutem illam, quæ reperitur, largiri potius quam ipsum aurum; quod tamen sedulo celatur: quod si aperiri possit aurum absque aquis corrosivis, aut per corrosivas (modo absit qualitas venenata) bene postea ablutas, rem non inutilem fore arbitramur.

2. Margaritæ sumuntur aut in pulvere lævigato, aut in malagmate quodam sive dissolutione per succum limonum impense acerborum et recentium; atque dantur aliquando in confectionibus aromaticis, aliquando in liquore. Margarita proculdubio affinitatem habet cum concha, cui adhæret; et possit esse similis fere qualitatis cum testis cancerorum fluviatilium.

3. Inter gemmas crystallinas habentur pro cordialibus præcipue duæ; smaragdus et hyacinthus; quæ dantur sub iisdem formis, quibus margaritæ, excepto quod dissolutiones earum (quod scimus) non sint in usu. Verum nobis magis suspectæ sunt gemmæ illæ vitreæ ob asperitatem.

**Monitum.** De his quæ memoravimus, quatenus et quomodo juvamentum præbeant, postea dicitur.

4. Lapis bezoar probatæ est virtutis; quod spiritus recreet, et lenem sudorem provocet. Cornu autem monocerotis de existimatione sua decidit; ita tamen ut gradum servet cum cornu cervi, et osse de corde cervi, et ebore, et similibus.

5. Ambra-grisia ex optimis est ad spiritus demulcendos et confortandos. Sequuntur nomina tantum simplicium, cum virtutes ipsarum satis sint cognitæ.

*Calida.* Crocus: folium Indum: lignum aloës:

cortex citri: melissa: oeyum: caryophyllata: flores aurantiorum: rosmarinus: mentha: betonica: carduus benedictus.

*Frigida.* Nitrum: rosa: viola: fragaria: fraga: succus limonum dulcium: succus aurantiorum dulcium: succus pomorum fragrantium: borago: buglossa: pimpinella: santalum: camphora.

Cum de iis jam sermo sit, quæ in diætâ transferri possint, aquæ illæ **Monitum.**

ardentiores, atque olea chemica, (quæ, ut ait quidam ex nugatoribus, sunt sub planeta Martis, et habent vim furiosam et destructivam,) quinetiam aromata ipsa acria et mordacia, rejicienda sunt; et videndum quomodo componi possint aquæ et liquores ex præcedentibus: non phlegmaticæ illæ stillatitiæ, neque rursus ardentes ex spiritu vini, sed magis temperatæ, et nihilominus vivæ, et vaporem benignum spirantes.

6. Hæsitamus de frequenti sanguinis missione, utrum ad longævitatem conferat; et potius in ea sumus opinione, quod hoc faciat, si in habitum versa fuerit, et cætera sint accommodata; etenim succum corporis veterem emittit, et novum inducit.

7. Arbitramur etiam morbos quosdam emaciantes, bene curatos, ad longævitatem prodesse; succos enim novos præbent veteribus consumptis; atque (ut ait ille) convalescere est juvenescere; itaque inducendi sunt tanquam morbi quidam artificiales, id quod fit per diætâ strictas et emaciantes, de quibus postea dicemus.

INTENTIONES.

Postquam autem inquisitionem absol-  
verimus secundum subjecta, videlicet, **Ad Art. 12,**  
corporum inanimatorum, vegetabilium, **13. et 14.**  
animalium, hominis; propius accedemus, et inquisitionem per intentiones ordinabimus; veras et proprias (ut omnino arbitramur) quæque sint tanquam semitæ vitæ mortalis. Neque enim in hac parte quicquam, quod valeat, hactenus inquisitionem est; sed plane fuerunt hominum contemplationes quasi simplices et non proficientes. Nam cum audiamus ex una parte homines de confortando calore naturali, atque humore radicali; atque de cibis, qui generant sanguinem laudabilem, quique sit nec torridus, nec phlegmaticus; atque de refocillatione et recreatione spiritu, verba facientes; existimamus sane homines non malos esse, qui hæc loquuntur: sed nihil horum potenter facit ad finem. Cum vero ex altera parte audiamus sermones inferri de medicinis ex auro (quia scilicet aurum corruptioni est minime obnoxium) et de gemmis, ad recreandos spiritus propter proprietates occultas et clariorem suum; quodque si possint detineri, et excipi in vasis, balsama et quintæ essentiæ animalium, superbam faceret spem immortalitatis: quodque carnes serpentum et cervorum consensu quodam valeant ad renovationem vitæ, quia alter mutat spolia, alter cornua, (debuerant autem carnes aquilarum adjungere, quia aquila mutat rostrum,) quodque quidam, cum unguentum sub terra defossum reperisset, eoque se a capite ad pedes usque unxiasset (exceptis plantis pedum) ex huiusmodi unctione trecentos annos vix-

isset absque morbo (præter tumores plantarum pedum) atque de Artefio, qui, cum spiritum suum labascere sensisset, spiritum adolescentis cujusdam robusti ad se traxisset, eumque inde exanimasset, sed ipse complures annos ex alieno illo spiritu vixisset; et de horis fortunatis secundum schemata cœli, in quibus medicinæ ad vitam producendam colligi et componi debent; atque de sigillis planetarum, per quæ virtutes cœlitus ad prolongationem vitæ haurire et deducere possimus; et hujusmodi fabulosis et superstitionis; prorsus miramur homines ita mente captos, ut iis hujusmodi res imponi possit. Denique, subit humani generis miseratio, quod tam duro fato obsideatur, inter res inutiles et ineptas. Nostræ autem intentiones, et rem ipsam premere, et procul esse a commentis vanis et credulis, confidimus; et tales, ut rebus, quæ illis intentionibus satisfaciant, a posteris quamplurima, intentionibus autem ipsis, non multum addi posse existimemus.

Sunt tamen pauca, sed magni prorsus momenti, quorum homines præmonitos esse volumus.

Primo, nos in hac sententia sumus, ut existimemus officia vitæ esse vita ipsa potiora. Itaque, si quid sit ejusmodi, quod intentionibus nostris magis exacte respondere possit, ita tamen ut officia et munia vitæ omnino impediatur; quicquid hujus generis sit rejicimus: levem fortasse aliquam mentionem hujusmodi rerum facimus, sed minime illis insistimus. Neque enim de vita aliqua in speluncis, ubi radii et tempestates cœli non penetrant, instar antri Epimænidis; aut de perpetuis balneis ex liquoribus præparatis; aut de superpellicis et ceratis ita applicandis, ut corpus perpetuo sit tanquam in capsula; aut de pigmentis spissis, more barbarorum nonnullorum: aut de ordinatione victus et diætæ accurata, quæ solum hoc videatur agere, et nihil aliud curare, quam ut quis vivat, (qualis fuit Herodici apud antiquos, et Cornari Veneti nostro seculo, sed majore cum moderatione,) aut de hujusmodi portæptis, fastidiis, et incommodis, sermonem aliquid serium et diligentem instituis; sed ea afferimus remedia et præcepta, ex quibus officia vitæ non deserantur, aut nimias excipiant moras et molestias.

Secundo, ex altera parte, hominibus denunciamus, ut nugari desinant, nec existimant tantum opus, quantum est naturæ potentem cursum remorari et retrovertere, posse haustu aliquo matutino, aut usu alicujus pretiosæ medicinæ, ad exitum perducii; sed ut pro certo habeant, necesse esse ut hujusmodi opus sit plane res operosa, et quæ ex compluribus remediis, atque eorum inter se connexione idonea, constet; neque enim quisquam ita stupidus esse debet, ut credat id, quod nunquam est factum, fieri posse nisi per modos etiam nunquam tentatos.

Tertio diserte profitemur, nonnulla ex iis, quæ proponemus, experimento nobis non esse probata, (neque enim hoc patitur nostrum genus vitæ,) sed tantum summa (ut arbitramur) ratione, ex principis nostris et præsuppositis (quorum alia inserimus, alia mente servamus) esse derivata; et tanquam ex rupe aut minera ipsius naturæ excisa et effossa. Neque tamen curam omisimus, eamque providentem et sedulam, quin (quandoquidem de corpore humano agatur, quod, ut ait Scriptura, est *supra vestimentum*)

ea proponamus remedia, quæ sint tuta saltem, si forte non fuerint fructuosa.

Quarto, illud homines rite et animadvertere, et distinguere volumus; non eadem semper, quæ ad vitam sanam, ad vitam longam conferre. Sunt enim nonnulla, quæ ad spiritum alacritatem, et functionum robor et vigorem prosunt, quæ tamen de summa vitæ detrahunt. Sunt et alia, quæ ad prolongationem vitæ plurimum juvant, sed tamen non sunt absque periculo valetudinis; nisi per accommodata quædam huic rei occurratur; de quibus tamen (prout res postulat) cautiones et monita exhibere non prætermitemus.

Postremo, visum est nobis varia remedia, secundum singulas intentiones, proponere; delectum vero remediorum, atque ordinem ipsorum, in medio relinquere. Etenim ex ipsis, quæ constitutionibus corporum diversis, quæ generibus vitæ variis, quæ ætatibus singulis, maxime conveniant, quæque alia post alia sumenda sint, et quomodo praxis universa harum rerum sit instruenda et regenda, exacta perscribere, et nimis longum foret, neque idoneum est quod publicetur.

Intentiones in topicis proposuimus tres. Prohibitionem consumptionis; perfectionem reparationis; et renovationem veterationis. Verum, cum quæ dicuntur nihil minus sint quam verba, intentiones illas tres ad decem operationes deducemus.

1. Prima est operatio super spiritus, ut revirescant.
2. Secunda operatio est super exclusionem aëris.
3. Tertia operatio est super sanguinem et calorem sanguificantem.
4. Quarta operatio est super succos corporis.
5. Quinta operatio est super viscera ad extrusionem alimenti.
6. Sexta operatio est super partes exteriores ad attractionem alimenti.
7. Septima operatio est super alimentum ipsum ad insinuationem ejusdem.
8. Octava operatio est super actum ultimum assimilationis.
9. Nona operatio est super intenerationem partium, postquam cœperint desiccari.

10. Decima operatio est super expurgationem succi veteris et substitutionem succi novi.

Harum operationum primæ quatuor pertinent ad intentionem primam; quatuor proxima ad intentionem secundam; duæ ultimæ ad intentionem tertiam.

Cum vero hæc pars, de intensionibus, ad praxim innuat; sub historiæ nomine, non solum experimenta et observationes, sed etiam consilia, remedia, causarum explicationes, assumpta, et quæcunque hoc spectant, immiscebimus.

## I.

## OPERATIO SUPER SPIRITUS, UT MANEANT JUVENILES, ET REVIRESCANT.

1. Spiritus omnium, quæ in corpore fiunt, fabri sunt atque opifices. Id et Historia. consensu, et ex infinitis instantiis patet.
2. Si quis possit efficere, ut in corpore senili

rursus indantur spiritus, quales sunt in juvene; rotam hanc magnam rotas reliquas minores circumagere, et naturæ cursum retrogradum fieri posse, consentaneum est.

3. In omni consumptione, sive per ignem, sive per ætatem, quo plus spiritus rei, sive calor, deprædatur humorem, eo brevior est duratio rei. Id ubique occurrit et patet.

4. Spiritus in tali temperamento et gradu activitatis ponendi sunt, ut succos corporis (ut ait ille) non bibant et sorbeant, sed pitissent.

5. Duo sunt genera flammarum; una acris et impotens, quæ tenuiora evolare facit, in duriora parum potest; ut flamma ex stramine vel ramentis ligni: altera fortis et constans, quæ etiam insurgit in dura et obstinata; qualis est lignorum grandiorum, et similium.

6. Flammæ acriores, et tamen minus robustæ, corpora desiccant, et reddunt effæta et exsucta; at fortiores corpora intenerant et liquant.

7. Etiam ex medicinis dissipantibus nonnullæ in tumoribus tenuia tantum emittunt, ideoque indurant; nonnullæ potenter discutiunt, ideoque emolliunt.

8. Etiam in purgantibus et abstergentibus quædam magis fluida raptim asportant; quædam magis contumacia et viscosa trahunt.

9. Spiritus tali calore indui et armari debent, ut potius ament dura et obstinata convellere et subrere, quam tenuia et præparata emittere et asportare: eo enim modo fit corpus viride et solidum.

10. Spiritus ita subigendi et componendi sunt, ut fiant substantia densi, non rari; calore pertinaces, non acres; copia quanta sufficit ad munia vitæ, non redundantes aut turgidi: motu sedati, non subsultorii et inæquales.

11. Super spiritus plurimum operari et posse vapores, ex somno, et ebrietate, et passionibus melancholicis, et lætificantibus, et recreatione spirituum per odores in deliquiis, et languoribus, patet.

12. Spiritus quatuor modis condensantur. Aut fugando; aut refrigerando; aut demulcendo; aut sedando. Atque primum de condensatione per fugam videndum.

13. Quicquid fugat undequaque, cogit corpus in centrum suum, atque ideo condensat.

14. Ad condensationem spirituum per fugam longe potentissimum et efficacissimum est opium; et deinde opiata, atque generaliter soporifera.

15. Efficacia opii ad condensationem spirituum admodum insignis est; cum tria fortasse grana ejus spiritus paulo post ita coagulent, ut non redeant, sed extinguantur, et reddantur immobiles.

16. Opium et similia non fugant spiritus propter frigus suum, (habent enim partes manifesto calidas,) sed e converso refrigerant propter fugam spirituum.

17. Fuga spirituum ex opio et opiatis optime cernitur in illis exterius applicatis; quia subinde spiritus statim se subducunt, nec amplius accedere volunt, sed mortificatur pars, et vergit ad gangrenam.

18. Opiata in magnis doloribus, veluti calculi, aut in abscissione membrorum, dolores mitigant; maxime per fugam spirituum.

19. Opiata sortiuntur bonum effectum ex mala

causa; fuga enim spirituum mala; condensatio autem eorum a fuga bona.

20. Græci multum posuerunt, et ad sanitatem, et ad prolongationem vitæ, in opiatis: Arabes vero adhuc magis; in tantum ut medicinæ suæ grandiores (quas *Deorum manus* vocant) pro basi sua et ingrediente principali habeant opium; reliquis admistia ad ejus noxias qualitates retundendas et corrigendas; quales sunt theriaca, mithridatium, et cætera.

21. Quicquid in cura morborum pestilentialium et malignorum feliciter exhibetur, ut spiritus sistantur et frænentur, ne turbent et tumultuentur; id optime transfertur ad prolongationem vitæ; cum idem faciat ad utrumque; condensatio videlicet spirituum. Id autem præstant ante omnia opiata.

22. Turcæ opium experiuntur, etiam in bona quantitate, innoxium et confortativum; adeo ut etiam ante prælia ad fortitudinem illud sumant; nobis vero, nisi in parva quantitate, et cum bonis correctivis, lethale est.

23. Opium et opiata manifesto deprehenduntur excitare venem; quod testatur vim ipsorum ad roborandos spiritus.

24. Aqua stillatitia ex sylvestri papavere ad crapulam, febres, et varios morbos feliciter adhibetur; quæ proculdubio est temperatum genus opiati: neque de varietate usus ejus miretur quispiam; id enim opiatis familiare est; quia spiritus roboratus et densatus insurgit in quemcunque morbum.

25. Turcæ habent etiam in usu herbæ genus, quam vocant Caphe, quam desiccata pulverizant, et in aqua calida propinant; quam dicunt haud parvum præstare illis vigorem, et in animis et in ingeniis: quæ tamen, largius sumpta, mentem movet et turbat; unde manifestum est eam esse similis naturæ cum opiatis.

29. Celebratur in universo oriente radix quædam vocata Betel, quam Indi, et reliqui in ore habere et mandere consueverunt; atque ex ea mansione mire recreantur, et ad labores tolerandos, et ad languores discutiendos, et ad coitum fortificandum; videtur autem esse ex narcoticis, quia magno opere denigrat dentes.

27. Incipit nostro seculo in immensum crescere usus tobacco; atque afficit homines occulta quadam delectatione, ut qui illi semel assueti sint, difficile postea abstineant; et facit proculdubio, ad corpus allevandum, et tollendas lassitudines; atque vulgo virtus ejus refertur eo, quod aperiat meatus, et eliciat humores: attamen rectius referri potest ad condensationem spirituum: cum sit hyoscyami quoddam genus, et caput manifesto turbet, quemadmodum opiata.

28. Sunt aliquando humores generati in corpore, qui et ipsi sunt tanquam opiati; ut fit in aliquibus melancholiis, quibus si quis corripiatur, admodum fit longævus.

26. Opiata (quæ etiam narcotica vocantur et stupefactiva) simplicia sunt, opium ipsum, quod est succus papaveris; papaver utrumque, et in herba, et in semine; hyoscyamus; mandragora; cicuta; tobacco; solanum.

30. Opiata composita sunt, theriaca, Mithridatium, triferæ, ladanum Paracelsi, diacodium, diascordium, Philonium, pilulæ de cynoglossa.

31. Ex his, quæ dicta sunt, possent deduci quædam designationes, sive consilia ad prolongationem vitæ, secundum hanc intentionem, scilicet condensationis spirituum per opiata.

32. Sit itaque quotannis, a juventute adulta, diæta quadam opiata. Usurpetur sub fine Maii; quia spiritus æstate maxime solvuntur et attenuantur, et minor instat metus ab humoribus frigidis: sit vero opiatum aliquod magistrale, debilius quam ea quæ in usu sunt, et quoad minorem quantitatem opii, et quoad parciores mixturam impense calidiorum: sumatur mane inter somnos; victus sit simplicior et parcior, absque vino, aut aromatibus, aut vaporosis; sumatur autem medicina alternis tantum diebus, et continuetur diæta ad quatuordecim dies. Hæc designatio iudicio nostro intentioni haud perperam satisfacit.

33. Possit etiam esse acceptio opiatorum, non tantum per os, sed etiam per fumos: sed talis esse debet, ut non moveat nimis facultatem expulsiuam, aut eliciat humores; sed tantum brevi mora operetur super spiritus intra cerebrum; itaque suffumigatio matutina, per os et nares excepta, cum tabacco, admisto ligno aloës, et foliis siccis roris-marini et parum myrrhæ, utilis foret.

34. In opiata magna, qualia sunt theriaca, Mithridatum, et cætera, (præsertim in juventute,) non malum foret potius aquas ipsorum stillatitias sumere, quam corpora ipsorum; etenim vapor in distillando surgit; calor medicamenti fere subsidet: aquæ autem stillatitiæ plerumque in virtutibus, quæ per vapores fiunt, bonæ; in cæteris, enerves.

35. Sunt medicamenta, quæ gradum habent quandam debilem et occultum, et propterea tutum, ad virtutem opiata; ea immittunt vaporem lentum et copiosum, sed non malignum, quemadmodum opiata faciunt: itaque spiritus non fugant, sed congregant tamen et nonnihil inspissant.

36. Medicamenta in ordine ad opiata sunt ante omnia crocus, atque ejus flores; deinde folium Indum; ambræ-grisia; coriandri semen præparatum; amomum et pseudamomum; lignum Rhodium; aqua florum aurantium, et multo magis infusio florum eorundem recentium in oleo amygdalino; nux moschata foraminata et in aqua rosacea macerata.

37. Ut opiata parce admodum et certis temporibus, (ut dictum est,) ita hæc secundaria familiariter, et in victu quotidiano, sumi possunt; et multum conferunt ad prolongationem vitæ. Certe pharmacopœus quidam Calcutiæ, ex usu ambræ, ad centum sexaginta annos vixisse perhibetur; atque nobiles in Barbaria, ex ejusdem usu, longævi reperiuntur, cum plebs brevioris sit ævi; et apud majores nostros, qui nobis fuerunt vivaciores, crocus magno in usu fuit, in placentiis, jusculis, &c. Atque de primo modo condensationis spirituum, per opiata et subordinata, hæc inquisita sint.

38. Jam vero de secundo modo condensationis spirituum, per frigus, inquiremus; proprium enim opus frigoris est densatio; atque perficitur absque malignitate aliqua, aut qualitate inimica: ideoque tutior est operatio, quam per opiata; licet paulo minus potens, si per vices tantum, quemadmodum opiata, usurparetur: at rursus, quia familiariter et

in victu quotidiano moderate adhiberi potest, etiam longe potentior ad prolongationem vitæ est, quam per opiata.

39. Refrigeratio spirituum fit tribus modis; aut per respirationem; aut per vapores; aut per alimenta. Prima optima est, sed fere extra nostram potestatem; secunda etiam potens, et tamen præsto est; tertia debilis et per circuitus.

40. Aër limpidus, et purus, et nihil habens fuliginis, antequam recipiatur in pulmones, et minus obnoxius radiis solis, spiritus optime densat. Talis invenitur aut in jugis montium siccis, aut in campestribus perflatilibus et tamen umbrosis.

41. Quoad refrigerationem et densationem spirituum per vapores, radicem hujus operationis ponimus in nitro, veluti creatura ad hoc propria et electa; his usi et persuasi indicia:

42. Nitrum est tanquam aroma frigidum; idque indicat sensus ipse. Mordet enim et tentat linguam et palatum frigore, ut aromata calore; atque inter ea, quæ novimus, unicum est et solum, quod hoc præestet.

43. Frigida fere omnia (quæ sunt proprie frigida, non per accidens, ut opium) habent spiritum exilem et paucum; contra spirituosus sunt omnia fere calida. Solum invenitur nitrum in natura vegetabili, quod spiritu abundet, et tamen sit frigidum. Nam caphura, quæ est spirituosus, et tamen edit actiones frigidi, refrigerat per accidens tantum; nempe tenuitate sua, absque acrimonia, juvando perspirationem in inflammationibus.

44. In congelatione et conglaciatione liquorum, quæ nuper cœpit esse in usu, per nivem et glaciem ad exteriora vasis appositas, immiscetur nitrum; atque proculdubio excitat et roborat congelationem: verum est, etiam usurpari ad hoc salem nigrum commune, qui potius activitatem indit frigori nivali, quam per se infrigidat; sed, ut accipi, in regionibus calidioribus, ubi nix non cadit, fit congelatio a nitro solo: sed hoc mihi compertum non est.

45. Pulvis pyrius, qui præcipue constat ex nitro, perhibetur epotus conducere ad fortitudinem, et usurpari a nautis sæpenumero et militibus ante prælia, quemadmodum a Turcis opium.

46. Datur feliciter nitrum in causionibus et febribus pestilentialibus, ad leniendos et frænandos ardores earum perniciosos.

47. Manifestissimum est nitrum in pulvere pyro magnopere exhorreere flammam; unde fit admirabilis illa ventositas et exsufflatio.

48. Nitrum deprehenditur esse veluti spiritus terræ: etenim certissimum est, quamcunque terram, licet puram, neque nitrosam admixtam, ita accumulata et tectam, ut immunis sit a radiis solis, neque emittat aliquod vegetabile, colligere etiam satis copiose nitrum; unde liquet spiritum nitri, non tantum spiritui animalium, verum etiam spiritui vegetabilium esse inferiorem.

49. Animalia quæ potant ex aqua nitrosa, manifesto pinguescunt; quod signum est frigidi in nitro.

50. Impinguitio soli maxime fit a nitrositate: omnis enim sterco ratio est nitrosa: atque hoc signum est spiritus in nitro.

51. Ex his patet spiritus humanos per spiritum

nitri posse infrigidari et densari, et fieri magis crudos et minus acres: quemadmodum igitur vina fortia, et aromata, et similia, spiritus incendunt, et vitam abbreviant; ita et nitrum e converso illos componit et comprimit, et facit ad longævitatē.

52. Usus autem nitri potest esse in cibo inter salem, ad decimam partem salis; in jusculis matutinis, ad grana a tribus ad decem; etiam in potu; sed qualitercunque usurpatum cum modo, ad longævitatē summe prodest.

53. Quemadmodum opium præcipuas partes tenet in condensatione spirituum per fugam, atque habet simul sua subordinata, minus potentia, sed magis tuta, quæ et majori quantitate et frequentiori usu sumi possunt, de quibus superius diximus: ita similiter et nitrum, quod condensat spiritus per frigus, et quandam (ut moderni loquuntur) frescuram, habet quoque et ipsum sua subordinata.

54. Subordinata ad nitrum sunt omnia, quæ exhibent odorem nonnihili terreum; qualis est odor terræ puræ et bonæ, recenter effossæ et versatæ: in his præcipua sunt borago, buglossa, hippo-buglossa, pimpinella, fragaria, et fraga ipsa, frambesia, fructus cœumeris crudus, poma cruda fragrantia, folia et gemmæ vitis, etiam viola.

55. Proxima sunt ea, quæ habent quandam virorem odoris, sed paulo magis vergentem ad calidum, neque omnino expertem virtutis illius refrigerii: qualia sunt melissa, citrum viride, aurantium viride, aqua rosacea stillaticia; pyra assa fragrantia; etiam rosea pallida, rubea, et muscatella.

56. Illud notandum est, subordinata ad nitrum plerumque plus ad intentionem conferre cruda, quam ignem passa; quia spiritus ille refrigerii ab igne dissipatur; itaque bene sumuntur infusa in potu, aut cruda.

57. Quemadmodum condensatio spiritus per subordinata ad opium fit aliquatenus per odores; similiter et illa, quæ fit per subordinata ad nitrum; itaque odor terræ recentis et puræ spiritus optimæ composcit, sive aratrum sequendo, sive fodiendo, sive herbas inutiles evellendo; etiam folia, in sylvis et sepibus, vergente autumno, decidentia, bonum refrigerium præstant spiritibus; et maxime omnium, fragaria moriens. Etiam odor violæ, aut florum parietariæ, aut fabarum, aut rubi suavis, et mardreselve, exceptus dum crescunt, similis est naturæ.

58. Quin et novimus virum nobilem longævum, qui statim a somno, glebam terræ recentis, sub nares apponi quotidie fecit, ut ejus odorem exciperet.

59. Dubium non est, quin refrigeratio et attemperatio sanguinis per frigida, qualia sunt endivia, cichorea, hepatica, portulaca, etc. per consequens infrigidet quoque spiritus; sed hoc fit per circuitum; at vapores operantur immediate.

Atque de condensatione spirituum per frigus jam inquisitum est; tertiam diximus esse condensationem per id, quod vocamus, demulcere spiritus: Quartam per sedationem alacritatis et motus nimii ipsorum.

60. Demulcent spiritus quæcunque illis sunt grata atque amica; neque tamen provocant eos nimium ad exterius; sed contra faciunt ut spiritus, quasi seipsis contenti, se fruantur, et recipiant se in centrum suum.

61. De his, si repetas ea, quæ superius posita

sunt, tanquam subordinata et ad opium et ad nitrum; nihil est opus alia inquisitione.

62. Quod vero ad sedationem impetus spirituum attinet, de ea mox dicemus, cum de motu ipsorum inquiremus: nunc igitur postquam de densatione spirituum dixerimus, (quæ pertinet ad substantiam ipsorum,) veniendum ad modum caloris in ipsis.

63. Calor spirituum, ut diximus, ejus generis esse debet, ut sit robustus, non acris; et amet obstinata subruere, potius quam attenuata asportare.

64. Cavendum ab aromatibus, vino, et potu forti; ut usus ipsorum sit valde temperatus et abstinentia interpolatus: etiam a satureia, origano, pulegio, et omnibus, quæ ad palatum acria sunt et incensiva. Illa enim præstant spiritibus calorem non fabrilem, sed prædatorium.

65. Robustum præbent calorem præcipue enula, allium, carduus benedictus, nasturtium adolescens, chamædryd, angelica, zedoaria, verbena, valeriana, myrrha, costum, sambuci flores, myrrhis. Horum usus cum delectu et judicio, alias in condimentis, alias in medicamentis, huic operationi satisfaciet.

66. Bene etiam cedit, quod opiata magna huic quoque operationi egregie serviunt: eo videlicet, quod exhibent calorem talem per compositionem, qualis in simplicibus opatur, sed vix habetur: etenim recipiendo calida illa intensissima (qualia sunt euphorbium, pyrethrum, stachys-agria, dracontium, anacardi, castoreum, aristolochium, opopanax, ammoniacum, galbanum, et similia; quæ intus per se sumi non possunt) ad retundendam vim narcoticam opii, constituunt demum talem complexionem medicamenti, qualem jam requirimus; quod optime percipitur in hoc, quod theriaca et Mithridatium, et reliqua, non sunt acria nec mordent linguam; sed tantum sunt paululum amara, et odoris potentis, et produnt demum caliditatem suam in stomacho et operationibus sequentibus.

67. Etiam ad calorem robustum spirituum facit venus sæpe excitata, raro peracta: atque nonnulli ex affectibus, de quibus postea dicitur. Atque de calore spirituum, analogo ad prolongationem vitæ, jam inquisitum est.

68. De copia spirituum, ut non sint exuberantes et ebullientes, sed potius parci et intra modum (cum flamma parva non tantum prædatur, quantum magna) brevis inquisitio est.

69. Videtur ab experientia comprobari, quod diæta tenuis et fere Pythagorica, vel ex regulis severioribus vitæ monasticæ, vel ex institutis eremitarum, quæ necessitatem et inopiam habebant pro regula, vitam reddat longævam.

70. Huc pertinent potus aquæ, stratum durum, aër frigidus, victus tenuis, (scilicet ex oleribus, fructibus, atque carnibus et piscibus conditis et salitis, potius quam recentibus et calidis,) indusium cilicii, crebra jejunia, crebræ vigiliæ, raræ voluptates sensuales, et hujusmodi: omnia enim ista minuunt spiritus, eosque redigunt ad quantitatem eam, quæ tantummodo vitæ muniis sufficiat; unde minor fit deprædatio.

71. Quod si diæta fuerit hujusmodi rigoribus et mortificationibus paulo benignior, sed tamen semper æqualis, et sibi constans, eandem opem præstat;

etenim etiam in flammis videmus, flammam nonnihil majorem (modo fuerit constans et tranquilla) minus absumere ex fomite suo, quam flamma minor agitata, et per vices intensior et remissior: id quod plane demonstravit regimen, et diæta Cornari Veneti, qui bibit et edit tot annos ad justum pondus; unde centesimum annum viribus et sensibus validus superavit.

72. Etiam videndum est, ne corpus, quod plenus nutritur, neque per hujusmodi (quales diximus) diætas emaciatur, veneris usum tempestivum omittat; ne spiritus nimis turgeant, et corpus emolliant et destruant. Itaque de copia spiritus moderata, et quasi frugali, jam inquisitum est.

73. Sequitur inquisitio de frænatione motus spiritus; motus enim manifesto eum attenuat et incendit. Illa frænatio fit tribus modis: per somnum; per evitacionem laboris vehementis, aut exercitii nimii, denique omnis lassitudinis; et per cohibicionem affectuum molestorum. Ac primo de somno.

74. Fabula habet Epimenidem in antro plures annos dormivisse, neque alimento eguisse, cum spiritus inter dormiendum minus depascat.

75. Experientia docet animalia quædam (qualia sunt sorices et vesperiliones) in quibusdam locis oclusis per integram hiemem dormire; adeo somnus deprædationem vitalem compescit; quod etiam facere putantur apes et fuci, licet quandoque a melle destituti: itidem papiliones et muscæ.

76. Somnus post prandium, ascendentibus in caput vaporibus non ingratissimus (utpote primis roribus ciborum) spiritibus prodest, sed ad alia omnia, quæ ad sanitatem pertinent, gravis est et noxius; attamen in extrema senectute eadem est ratio cibi et somni; quia frequens esse debet et refectio et dormitio, sed brevis et pusilla: quietiam ad ultimam metam senectutis mera quies et perpetuus quasi decubitus prodest, præsertim temporibus hiemalibus.

77. Verum ut somnus moderatus ad prolongacionem vitæ facit, ita multo magis, si sit placidus et non turbidus.

78. Somnum placidum conciliant, viola, lactuca, (præsertim cocta) syrupus e rosis siccis, crocus, melissa, poma in introitu lecti, offa panis ex vino malvatico, præsertim infusa prius rosa muscatella: itaque utile foret conficere aliquam pilulam, vel aliquem haustum parvum ex hujusmodi rebus, eoque uti familiariter. Etiam ea quæ os ventriculi bene claudunt, ut semen coriandri præparatum, cotonea, et pyra fragrantia assata, somnum inducunt placidum: ante omnia, juvenili ætate, et maxime iis, qui habent ventriculum satis fortem, prodest haustus bonus aquæ puræ, crudæ, in introitu lecti.

#### Mandatum.

De ectasi voluntaria, sive procurata, atque de cogitationibus defixis et profundis, (modo sint absque molestia,) nihil habeo comperti; faciunt proculdubio ad intentionem, et densant spiritus, etiam potentius quam somnus: cum sensus æque, aut magis sopiant et suspendant: de illis inquiratur ulterius. Atque de somno hæcenus.

79. Quatenus ad motum et exercitia; lassitudo nocet, atque motus et exercitatio, quæ est nimis

celeris et velox, quales sunt cursus, pila, gladiatoria, et similia: et rursus cum impetus extenditur ad ultimas vires et nixus, quales sunt saltus, lecta, et similia. Certum enim est, spiritus in angustiis positos, vel per pernicitatem motus, vel per ultimos nixus, fieri postea magis acres et prædatorios. Ex altera parte exercitia, quæ satis fortem cient motum, sed non nimis celerem, aut ad ultimas vires, (quales sunt saltatio, sagittatio, equitatio, lusus globorum, et similia,) nihil efficiunt, sed prosunt potius.

Veniendum jam ad affectus et passiones animi, et videndum, qui ex ipsis ad longævitatem sint noxii, qui utiles.

80. Gaudia magna attenuant et diffundunt spiritus, et vitam abbreviant: lætitia familiaris roborat spiritus, evocando eos, nec tamen exsolvendo.

81. Impressiones gaudiorum sensuales, malæ; ruminaciones gaudiorum in memoria, aut prehensiones eorum ex spe vel phantasia, bonæ.

82. Magis confortat spiritus gaudium pressum et parce communicatum, quam gaudium effusum et publicatum.

83. Mæror et tristitia, si metu vacet, et non nimium angat, vitam potius prolongat: spiritus enim contrahit, et est condensacionis genus.

84. Metus graviore vitam abbreviant: licet enim et mæror et metus spiritum uterque angustiet; tamen in mærore est simplex contractio; at in metu, propter curas de remedio, et spes intermistas, fit æstus et vexatio spirituum.

85. Ira compressa est etiam vexacionis genus; et spiritum corporis succos carpere facit; at sibi permessa et foras prodiens, juvat; tanquam medicamenta illa, quæ robustum inducunt calorem.

86. Invidia pessima est, et carpit spiritus, atque illi rursus corpus; eo magis, quod fere perpetua est, nec agit (ut dicitur) festos dies.

87. Misericordia ex malo alieno, quod in nos ipsos cadere non posse videtur, bona; quæ vero similitudine quadam potest reflecti in miserantem, mala, quia excitat metum.

88. Pudor levis minime officit, cum spiritus paululum contrahat et subinde effundat; adeo ut verecundi diu (ut plurimum) vivant; at pudor ex ignominia magna, et diu affligens, spiritus contrahit, usque ad suffocationem, et est perniciosus.

89. Amor, si non fuerit infelix et nimis sauciens, ex genere gaudii est; et eadem subit leges, quas de gaudio posuimus.

90. Spes omnium affectuum utilissima est, et ad prolongacionem vitæ plurimum facit; si non nimium sæpe intercidat, sed phantasiam boni intuitu pascat: itaque qui finem aliquem, tanquam metam vitæ, figunt et proponunt; et perpetuo et sensim in voto suo proficiunt; vivaces ut plurimum sunt; adeo ut, cum ad culmen spei suæ venerint, nec habeant quod amplius sperent, fere animis concidunt, nec diu superstites sint; ut spes videatur tanquam gaudium foliatum, quod in immensum extenditur, sicut aurum.

91. Admiratio, et levis contemplatio, ad vitam prolongandam maxime faciunt; detinent enim spiritus in rebus, quæ placent, nec eos turbare, aut inquiete et morose agere sinunt: unde omnes con-

templatores rerum naturalium, qui tot et tanta habebant, quæ mirarentur, (ut Democritus, Plato, Parmenides, Apollonius,) longævi fuerunt: etiam rhetores, qui res degustabant tantum et potius orationis lumen quam rerum obscuritatem sectabantur, fuerunt itidem longævi; ut Gorgias, Protagoras, Isocrates, Seneca: atque certe quemadmodum senes plerumque garruli, et loquaces sunt; ita et loquaces sæpissime senescunt: indicat enim levem contemplationem, et quæ spiritum non magnopere stringat aut vexet: at inquisitio subtilis, et acuta, et acris vitam abbreviat; spiritum enim lassat et carpit.

Atque de motu spirituum per animi affectus hæc inquisita sint; subjungemus autem quasdam alias observationes generales circa spiritus, præter superiores, quæ non cadunt in distributionem præcedentem.

92. Præcipuæ curæ esse debet, ut spiritus non exsolvantur sæpius; solutionem enim præcedit extenuatio, neque spiritus semel extenuatus ita facile se recipit et densatur: exsolutio autem fit per nimios labores; nimis vehementes affectus animi; nimios sudores; nimias evacuationes; balnea tepida; et intemperatum aut intempestivum usum veneris; etiam nimias curas et sollicitudines et expectationes anxias; denique per morbos malignos; et dolores et cruciatus corporis graves: quæ omnia, quantum fieri potest, (ut etiam medici vulgares monent,) evitanda sunt.

93. Spiritus et consuetis delectantur et novis. Mirum autem in modum facit ad conservandum vigorem spirituum, ut nec consuetis utamur ad satietatem, nec novis ante appetitum vividum et strenuum. Itaque et consuetudines abruptendæ sunt iudicio quodam et cura, antequam perveniant ad fastidium; et appetitus ad nova ad tempus cohibendus, donec fiat fortior et alacrior. Atque insuper vita, quoad fieri potest, ita instituenda, ut multas et varias habeat redintegrationes, neque perpetuo in iisdem versando spiritus torpeant: licet enim non male dictum sit a Seneca, "Stultus semper incipit vivere," tamen illa stultitia, ut et aliæ quamplurimæ, longævitati prodest.

94. Circa spiritus observandum est, (etsi contrarium fieri consueverit,) ut quando percipiant homines spiritus suos esse in statu bono, et placido, et sano, (id quod ex tranquillitate animi et lætitia datur perspicui,) eos foveant, nec mutant; sin in statu inquieto et maligno (id quod ex tristitia, pigritia, atque alia indispositione animi apparebit) eos subinde obruant et alterent. Continentur autem spiritus in eodem statu per cohibitionem affectuum, temperamentum diætæ, abstinentiam a venere, moderationem a labore, otium mediocre: alterant autem et obruunt spiritus contraria istis; scilicet, affectus vehementes, epulæ profusæ, venus immoderata, labores ardui, studia intensa et negotia. Atqui consueverunt homines, cum læti sunt et sibi maxime placent, tum epulas, venerem, labores, contentiones, negotia, maxime sequi et affectare. Quod si quis longitudini vitæ consulere velit, contrario modo (quod mirum dictu) se gerere debet; spiritus enim bonos fovere et continuare, male dispositos exhaurire et mutare, oportet.

95. Non inepte ait Ficinus, senes debere ad con-

fortationem spirituum suorum, acta pueritiæ suæ et adolescentiæ sæpe recordari et ruminare. Certa recreatio est senibus singulis, tanquam peculiaris, recordatio talis. Itaque dulce est hominibus societatem habere eorum, qui olim una educati fuerant, et loca ipsa educationis suæ invisere. Vespasianus autem huic rei tantum tribuebat, ut cum esset imperator nullo modo animum inducere potuisset, ut ædes paternas, licet humiles, mutaret; ne aliquid deperiret consuetudini oculorum et memoriæ pueritiæ suæ; quinetiam in scypho quodam aviæ suæ ligneo, cum labro argenteo, diebus festis potabat.

96. Illud ante omnia spiritibus gratum est; ut fiat progressus continue in benignius. Itaque eo modo est instituenda juvenus et ætas virilis, ut senectuti nova solatia relinquuntur; quorum præcipuum sit otium moderatum. Itaque sibi ipsi manus inferunt senes honorati, qui in otium non secedunt: cujus rei insigne reperitur exemplum in Cassiodoro; qui tanta apud reges Italiæ Gothos auctoritate pollebat, ut instar animæ esset erga eorum negotia; postea autem fere octogenarius in monasterium se recepit, ubi non ante centesimum demum annum vitam clausit. At huic rei duæ cautiones adhibendæ sunt; una, ut non expectent donec corpus omnino confectum sit et morbidum: etenim in hujusmodi corporibus omnis mutatio, licet in benignius, mortem accelerat: altera, ut otio plane inertis se minime dedant, sed habeant aliquid quod cogitationes et animum ipsorum placide detinere possit; in quo genere, præcipua oblectamenta sunt literæ, deinde studia ædificandi et plantandi.

97. Postremo eadem actio, contentio, labor libenter susceptus et cum bona voluntate, spiritus recreat; cum aversatione autem et ingratiis, spiritus carpit et sternit: itaque ad longævitatatem confert, si quis arte talem vitam instituat, quæ libera sit, et ad arbitrium suum traducatur; aut tale obsequium animo suo conciliaverit, ut quicquid a fortuna imponatur, eum potius ducat quam trahat.

98. Neque illud omittendum ad regimen affectuum; ut præcipua cura adhibeatur oris ventriculi, maxime ne sit relaxatum nimis; quia plus dominatur illa pars super affectus, præsertim quotidianos, quam aut cor aut cerebrum; exceptis tantummodo iis, quæ fiunt per potentes vapores, ut in ebrietate et melancholia.

99. De operatione super spiritus, ut juveniles maneant et revirescant, hæc inquisita sunt: quod eo diligentius præstitimus, quod de his operationibus, potiori ex parte, magnum est apud medicos et alios auctores silentium: maxime autem, quia operatio super spiritus eorumque recrudescentiam ad prolongationem vitæ est via maxime proclivis et compendiaris: propter duplex scilicet compendium; alterum, quod spiritus compendio operetur super corpus; alterum, quod vapores et affectus compendio operentur super spiritus; adeo ut hæc finem petant, quasi in linea recta; cætera magis per circuitum.

## II.

## OPERATIO SUPER EXCLUSIONEM AERIS.

1. Exclusio aëris ambientis ad diurnitatem vitæ dupliciter innuit. Pri-

Historia.

mo, quod maxime omnium, post spiritum innatum, aër extrinsecus (utcuque spiritum humanum quasi animet, et ad sanitatem plurimum conferat) succos corporis deprædatur, et desiccationem corporis accelerat: itaque exclusio aëris ad longitudinem vitæ confert.

2. Alter effectus, qui sequitur exclusionem aëris, subtilior multo est et profundior; scilicet quod corpus oclusum et non perspirans spiritum inclusum detinet, et in duriora corporis vertit; unde spiritus ea emollit et intenerat.

3. Hujus rei explicata est ratio in desiccatione inanimatorum; atque est axioma quasi infallibile, quod spiritus emissus corpora desiccet; detentus colliquat et intenerat: atque illud insuper simul assumendum, quod calor omnis proprie attenuat et humectat, et per accidens tantum contrahit et desiccet.

4. Vita in antris et speluncis, ubi aër non recipit radios solis, possit facere ad longævitatē; aër enim per se ad prædationem corporis non multum potest, nisi calore excitatus. Certe si quis memoriam rerum recolat, ex pluribus reliquiis et monumentis constare videtur, fuisse hominum magnitudines et staturas longe iis, quæ postea fuerunt, grandiores; ut in Sicilia et aliis nonnullis locis. Istiusmodi autem homines in speluncis plerumque ætatem degebant: atqui diuturnitas ætatis, et amplitudo membrorum, habent nonnihil commune. Etiam antrum Epimenidis inter fabulas ambulat. Suspicio etiam vitam anachoretarum columnarium simile quippiam fuisse vitæ in antris; quippe ubi radii solis parum penetrabant, neque aër magnas mutationes aut inæqualitates recipere poterat. Illud certum, utrunque Simeonem, Stylitam, et Danielelem, et Sabam, atque alios anachoretas columnares, admodum longævos fuisse. Etiam anachoretæ moderni, intra muros aut columnas septi et clausi, longævi sæpius reperiuntur.

5. Proxima vitæ in antris est vita in montibus. Quemadmodum enim in antra calores solis non penetrant; ita in fastidiis montium, reflexione destituti, parum possunt. Accipiendum autem hoc est de montibus, ubi aër limpides est et purus; scilicet ubi propter ariditates vallium nebulæ et vapores non ascendunt; quod fit in montibus qui Barbariam cingunt; ubi etiam hodie vivunt sæpenumero ad annos centum et quinquaginta, ut jam antea notatum est.

6. Atque hujusmodi aër antrorum aut montium, ex sua natura propria, parum, aut nihil deprædatur: at aër, qualis est noster, cum sit propter calores solis prædatorius, quantum fieri potest, a corpore est excludendus.

7. Aër vero prohibetur et excluditur duobus modis: primo, si claudantur meatus; secundo, si opleantur.

8. Ad clausuram meatuum faciunt, ipsius aëris frigiditas: nuditas cutis, ex qua illa induratur; lavatio in frigida; astringentia cuti applicata, qualia sunt, mastiche, myrrha, myrtus.

9. Multo magis huic operationi satisfiet per balnea, sed raro usurpata, (præsertim temporibus æstivis,) quæ constant ex aquis mineralibus astringentibus, quæ tuto exhiberi possunt; quales sunt chalybeatæ et vitriolata; hæ enim cutem potenter contrahunt.

10. Quod ad oppletionem attinet; pigmenta, et hujusmodi spissamenta unctiosa, atque (quod commodissime in usu potest esse) oleum et pingua, non minus corporis substantiam conservant, quam pigmenta in oleo et vernix ligna.

11. Britones antiqui corpus glasto pingebant, et fuerunt admodum longævi; quemadmodum et Picti, qui inde etiam nomen traxisse a nonnullis putantur.

12. Hodie se pingunt Brasilienses et Virginienses, qui sunt (præsertim illi priores) admodum longævi; adeo ut quinque abhinc annis patres Galli nonnullos convenerint, qui ædificationem Fernamburgi, annis abhinc centum et viginti, ipsi ad tunc virilis ætatis, meminissent.

13. Joannes de Temporibus, qui dicitur ad trecentisimum annum ætatem produxisse, interrogatus quomodo se conservasset; respondisse fertur, "Extra, oleo; intus, melle."

14. Hiberni, præsertim sylvestres, etiam adhuc sunt valde vivaces; certe aiunt, paucis abhinc annis comitissam Desmondia vixisse ad annum centesimum quadragesimum, et ter per vices dentisse. Hibernis autem mos est se nudos ante focum batyro salso et veteri fricare et quasi condire.

15. Idem Hiberni in usu habuerunt lintea et indusia croceata; quod licet ad arcendam putrefactionem introductum fuerat, tamen (utrunque) ad vitæ longitudinem utile fuisse existimamus; nam crocus ex omnibus, quæ novimus, ad cutem et confortationem carnis est res optima; cum et notabiliter astringat, et habeat insuper oleositatem et calorem subtilem sine ulla acrimonia. Equidem memini quendam Anglum, ut vectigalia supprimeret, croci saccum cum transfretaret, circa stomachum portasse, ut lateret; eumque, cum antea ex mari gravissime ægrotare solitus esset, optime tunc valuisse, nec nauseam ullam sensisse.

16. Hippocrates jubet vestes ad cutem hieme puras portare, ætate sordidas et oleo imbutas; hujus ratio videtur, quod per ætatem spiritus exhalant maxime; itaque pori cutis opplendi sunt.

17. Ante omnia igitur usum olei, vel olivarum, vel amygdalini dulcis, ad cutem ab extra unguendam, ad longævitatē conducere existimamus; eaque unctio debet fieri singulis auroris, cum exitur e lecto, cum oleo, in quo admisceatur parum salis nigri et croci. Unctio autem levis debet esse, ex lana aut spongia molliori, neque quæ stillet super corpus, sed cutem tantum intingat et inficiat.

18. Certum est liquores in majori quantitate, etiam oleosos, haurire nonnihil ex corpore; sed contra, parva quantitate imbibi a corpore: itaque levis aspersio facienda est, ut diximus; aut plane indusium ipsum oleo liniendum est.

19. Objici vero forte possit, istam unctionem ex oleo, quam laudamus, (licet apud nos in usu nunquam fuerit, atque apud Italos in desuetudinem abierit,) olim quidem apud Græcos et Romanos familiarem fuisse et diætæ partem; neque tamen iis seculis homines magis fuisse longævos. Sed respondetur rectissime; oleum in usu fuisse tantum post balnea, nisi forte inter athletas; balnea autem ex calido operationi nostræ tanto contraria sunt, quanto unctiones congruæ; cum alterum meatus aperiat, alterum

obstruat. Itaque balneum absque unctione sequenti pessimum; unctio absque balneo optima. Etiam ad delicias potius adhibebatur ista unctio, atque (si in optimam partem accipias) ad sanitatem; sed nullo modo in ordine ad vitam longævam; itaque simul adhibebantur unguenta pretiosa, quæ ad delicias grata, ad nostram intentionem noxia sunt, ob calorem; ut bene dixisse videatur Virgilius:

“Nec casia liquidi corrumpitur usus olivi.”

20. Inunctio ex oleo et hieme confert ad sanitatem, per exclusionem frigoris; et æstate, ad detinendos spiritus et prohibendam exsolutionem eorum, et ardentem vim aëris, quæ tunc maxime est prædatoria.

21. Cum inunctio ex oleo operatio sit ad vitam longam fere potentissima; visum est addere cautiones, ne periclitetur valetudo: eæ quatuor sunt, secundum quatuor incommoda, quæ exinde sequi possint.

22. Primum incommodum est, quod reprimendo sudores morbos inducere possit, ex humoribus illis excrementitiis: huic remedium adhibendum est ex purgationibus et clysteris, ut evacuationi debite consulatur; certum enim est evacuationem per sudores sanitati plerumque conferre; longitudini vitæ officere. Purgativa autem moderata in humores agunt, non in spiritus, quod facit sudor.

23. Secundum incommodum est, quod corpus calefacere possit et subinde inflammare; spiritus enim oclusus nec perspirans, ferventior est: huic incommodo occurritur, si diæta ut plurimum vergat ad frigidum, et sumantur propria quædam ad refrigerandum per vices: de quibus mox in operatione super sanguinem inquiremus.

24. Tertium est, quod caput gravare possit; omnis enim oppletio extrinsecus repercutit vapores, et eos mittit versus caput: huic incommodo omnino occurritur per cathartica, præsertim clysteria; et claudendo os ventriculi fortiter cum stypticis; et pectendo et fricando caput, etiam cum lixivii idoneis, ut aliquid exhalet; et non omittingo exercitationem bonam, et qualem convenit, ut etiam per cutem nonnihil perspiret.

25. Quartum incommodum subtilius est malum; videlicet quod spiritus, detentus per clausuram pororum, videatur posse seipsum nimis multiplicare; quia cum parum evolet, et continuo spiritus novus generetur, nimium increscit spiritus, et sic corpus etiam plus prædari possit: verum hoc non prorsus ita se habet; nam spiritus omnis conclusus hebes fit, (quando quidem ventiletur motu spiritus, ut et flamma,) ideoque minus activus est, et minus sui generans; calore certe auctus, (ut et flamma,) sed motu piger: sed et huic incommodo remedium adhiberi possit a frigidis oleo quandoque admistis; qualia sunt rosa et myrtus; nam calidis omnino abstinendum, ut dictum est de casia.

26. Neque inutilis est applicatio ad corpus vestium, quæ et ipsæ in se habent aliquid unctuosi sive oleosi, non aquosi: illæ enim exhaurient corpus minus; quales sunt ex lana, potius quam ex lino: certe manifestum est in spiritibus odororum, quod si ponas pulveres odoratos inter lintea, multo citius virtutem perdunt, quam inter lanea. Itaque lintea

tactu et munditie jucunda; sed ad nostram operationem suspecta.

27. Hiberni sylvestres, cum incipiunt ægrotare, nihil prius faciunt, quam ut lintea e stratis tollant, et in laneis pannis se convolvant.

28. Referunt nonnulli, se magno sanitatis suæ commodo laneis carminatis proxime ad cutem, sub indusiis suis, usos fuisse, tam ad braccas, quam ad corporalia.

29. Est et illud observandum, aërem corpori asuetum minus illud deprædari, quam novum et subinde mutatum: itaque pauperes, qui in tuguriis suis intra proprios lares perpetuo vivunt, nec sedes mutant, sunt plerumque longæviores: veruntamen quoad alias operationes mutationem aëris (præsertim spiritibus non omnino inertibus) utilem esse iudicamus; mediocritas autem adhibenda foret, quæ utrinque satisficiat; illud fiet, si quatuor temporibus anni fiet per stata tempora mutatio loci ad sedes idoneas; neque sint corpora aut in peregrinatione nimia, aut in statione. Atque de operatione per exclusionem aëris, et de evitanda vi ejus prædatoria, hæc dicta sint.

### III.

#### OPERATIO SUPER SANGUINEM ET CALOREM SANGUIFICANTEM.

I. Operationes duæ sequentes sunt operationibus duabus præcedentibus Historia. tanquam antistrophæ; atque iis respondent, quemadmodum passiva activis; præcedentes enim duæ id agunt, ut spiritus et aër actionibus suis sint minus deprædantes; hæc vero, ut sanguis et succus corporis sint minus deprædabiles. Quoniam vero sanguis est irrigatio succorum et membrorum, et præparatio ad ea; operationem super sanguinem primo loco collocamus. Circa hanc operationem proponemus consilia numero pauca, sed vi valde efficacia: ea tria sunt.

2. Primo dubium non est, quin si sanguis sit aliquanto frigidior, minus futurus sit dissipabilis: quoniam vero quæ per os sumuntur frigida, cum reliquis intentionibus haud paucis male conveniunt; ideo optimum foret alia invenire, quæ non sunt cum istiusmodi incommodis complicata. Ea duo sunt.

3. Prius huiusmodi est; adducantur in usum, idque maxime in juventute, clysteria nihil omnino purgantia aut abstergentia; sed solummodo refrigerantia et nonnihil aperientia: probata sunt quæ fiunt ex succis lactuæ, portulacæ, hepaticæ, etiam sedi majoris, et mucilaginis seminis psyllii, cum decoctione aliqua temperata aperiente, admisto aliquanto caphoræ: verum vergente ætate, omittatur sedum majus et portulaca, et substituantur succi boraginis, et endiviæ, aut similium; atque retineantur clysteria huiusmodi quantum fieri potest, ad horam scilicet, aut amplius.

4. Alterum est ejusmodi; in usu sint, præsertim ætate, balnea aquæ dulcis et modice admodum tepidæ, prorsus absque emollientibus, malva, mercuriali, lacte, et similibus; adhibeatur potius serum lactis recens in nonnulla quantitate, et rosa.

5. Verum, quod caput rei est et novum, illud

præcipimus; ut ante balneationem inungatur corpus cum oleo, cum spissamentis; ut qualitas refrigerii excipiatur, aqua magis arceatur: neque tamen meatus corporis nimium ocludantur: etenim cum frigus exterius corpus fortiter ocludit, tantum abest ut promoveat in frigidationem, ut etiam eam prohibeat, et irritet calorem.

6. Similis est usus vesicarum, cum decoctionibus et succis refrigerantibus, applicatis circa inferiorem regionem corporis, videlicet sub costas, usque ad pubem; nam et hoc est genus balneationis, ubi corpus liquoris ut plurimum excluditur, refrigerium tantum excipitur.

7. Restat tertium consilium, quod non ad sanguinis qualitatem, sed ad substantiam ejus pertinet, ut reddatur magis firma et minus dissipabilis, et in quam calor spiritus minus agere possit.

8. Atque de usu limaturæ auri, aut auri foliati, aut pulveris margaritarum, gemmarum, et corallii, et similium, hodie nihil credimus, nisi quatenus præsentis operationi satisfaciunt: certe, cum Arabes, et Græci, et moderni, iis rebus tantas virtutes tribuerint, non omnino nihil videatur esse in istis, quæ tot homines experti observarunt. Itaque missis phantasticis circa illas opinionibus, plane arbitramur, si universæ substantiæ sanguinis aliquid insinuari possit per minima, in quod spiritus et calor parum aut nihil agere possint, omnino id non tantum putrefactioni, sed etiam arefactioni obstiturum, et ad vitam prolongandam fore efficacissimum: in hoc tamen plures adhibendæ sunt cautiones: primo, ut fiat admodum exacta comminutio: secundo, ut hujusmodi dura et solida sint omnis malignæ qualitatis expertia, ne cum in venis dispergantur et lateant, aliquid nocimenti inferant: tertio, ut nunquam sumantur cum cibus, nec ita excipiantur, ut diu hæreant, ne generent periculosas obstructions circa mesenterium: quarto, ut rarus sit eorum usus, ne cœant et cumulentur in venis.

9. Itaque modus excipiendi sit, stomacho jejuno, in vino albo, cui admistum sit parum olei amygdalini, et fiat corporis exercitatio super haustum eorum.

10. Simplicia autem, quæ operationi huic satisfaciunt, possint esse loco omnium; aurum, margaritæ, et corallium; metalla enim omnia, præter aurum, non sunt absque maligna qualitate in volatili ipsorum: neque etiam tam exquisite comminuantur, quam aurum foliatum; gemmæ autem translucidæ, et tanquam vitreæ, minus nobis placent (ut et antea diximus) propter suspicionem corrosionis.

11. At nostro judicio et tutior et efficacior foret usus lignorum, in infusionibus et decoctionibus; satis enim in iis possit esse ad firmitudinem sanguinis, neque tamen simile periculum est ab obstructione: præcipue autem, quia possunt sumi in cibo et potu; unde facilius ingressum reperient in venas, nec deponentur in fœcibus.

12. Ligna ad hoc idonea sunt, santalum; quercus; et vitis; ligna enim calidiora, aut aliqua ex parte resinosa, rejicimus; possint tamen adjici caules siccæ et lignosæ roris-marini; cum frutex sit ros-marinus et ætatem multarum arborum æquet; etiam hederæ caules siccæ et lignosæ, sed ea quantitate, ut saporem non reddant ingratum.

13. Sumantur vero ligna aut in jusculis decocta, aut infusa in mustum, aut cervisiam, antequam se-deat: in jusculis autem (ut fit in guaiaco et similibus) semper infundantur diu, antequam decoquantur, ut firmior pars ligni, et non tantum ea quæ leviter hæret, eliciatur: fraxinus autem, licet ad pocula adhibeatur, nobis suspecta est. Atque de operatione super sanguinem hæc inquisita sint.

## IV.

## OPERATIO SUPER SUCCOS CORPORIS.

1. Duo sunt corporum genera (ut in Historia inquisitione de inanimatis jam dictum est) quæ difficilius consumuntur: dura et pinguis; ut cernitur in metallis et lapidibus; atque in oleo et cera.

2. Operandum itaque est, ut succus corporis sit subdurus; atque etiam ut sit subpinguis, aut subroscidus.

3. Quatenus ad duritiam, ea efficitur tribus modis: natura alimenti firma; frigore condensante cutem et carnes; et exercitatione succos fermentante et compingente, ne sint molles et spumosi.

4. Quatenus ad naturam alimenti, talis esse debet, ut sit minus dissipabilis; qualia sunt caro bovina, caro suilla, caro cervina, etiam caro caprearum, hædorum, cygnorum, et anserum, et palumbium sylvestrium, (præsertim si hujusmodi carnes fuerint modice salitæ,) piaces itidem saliti et sicci; etiam caseus subvetus, et hujusmodi.

5. Quoad panem autem, avenaceus, aut etiam paululum pisatus, aut secalicius, aut hordeaceus, solidior est quam ex frumento; atque etiam in pane frumentaceo solidior qui paulo plus habet ex fure, quam qui purioris est pollinis.

6. Orcades, qui piscibus vescuntur salitis, atque generaliter ichthyophagi, longævi sunt.

7. Monachi et eremitæ, qui parce et sicco alimento pascabantur, fuerunt ut plurimum longævi.

8. Etiam aqua pura, in potu frequentur usurpata, reddit succos corporis minus spumosos; cui si, propter spiritus hebetudinem, (qui proculdubio in aqua est parum penetrativus,) admisceatur aliquid nitri, utile esse existimamus. Atque de firmitudine alimenti hactenus.

9. Quatenus ad condensationem cutis et carnum per frigus; vivaciores fere sunt, qui sub dio vivunt, quam qui sub tecto; atque qui in regionibus frigidis, quam qui in calidis.

10. Vestes nimis, sive in lectis, sive portatæ, corpus solvunt.

11. Lavatio corporis in frigida, bona ad longitudinem vitæ; usus balnearum tepidorum malus; de balneis autem ex aquis astringentibus mineralibus superius dictum est.

12. Quatenus ad exercitationem; vita otiosa manifesto reddit carnes molles et dissipabiles: exercitatio autem robusta (modo absint nimii sudores aut lassitudines) duras et compactas: etiam exercitatio intra aquas frigidas, qualis est natatio, valde bona; atque generaliter exercitatio sub dio, melior quam sub tecto.

13. De fricationibus (quod est exercitationis ge-

nus) tamen, quia alimenta magis evocant quam indurant, postea suo loco inquiremus.

14. Jam vero cum de duritie succorum dictum sit, veniendum ad oleositatem sive roscidationem ipsorum; quæ perfectior et potentior est intentio, quam induratio; quia non habet incommodum, neque malum complicatum: omnia enim, quæ ad duritiam succorum pertinent, ejusmodi sunt, ut cum alimenti absorptionem prohibeant, etiam ejusdem reparationem impediunt; unde fit ut diuturnitati vitæ eadem et prosint et obsint; at quæ ad roscidationem succorum pertinent, ex utraque parte juvant; cum reddant alimentum et minus dissipabile, et magis reparabile.

15. Cum vero dicimus, quod succus corporis debeat fieri roscidus et pinguis, notandum est, hoc nos non intelligere de pinguedine, aut adipe manifesto, sed de rore perfuso et (si placet) radicali in ipsa corporis substantia.

16. Neque rursus existimet quispiam oleum, aut pingua ciborum, aut medullas, similia sibi generare, atque intentioni nostræ satisfacere; neque enim quæ perfecta semel sunt, retro aguntur; sed talia debent esse alimenta, quæ post digestionem et maturationem tum demum oleositatem in succis ingenerent.

17. Neque rursus existimet quispiam oleum, et pingue coacervatum, et simplex, difficilis esse dissipationis; in mistione autem non eandem retinere naturam; etenim quemadmodum oleum per se multo serius consumitur quam aqua, ita etiam in papyro, aut sudario, diutius hæret, et tardius desiccatur; ut prius notavimus.

18. Ad irrorationem corporis melius faciunt cibi assati, aut furno cocti, quam elixi: atque omnis præparatio ciborum cum aqua incommoda est; quintiam et oleum copiosius elici videmus ex corporibus sicca, quam ex humidis.

19. Generaliter ad irrorationem corporis prodest multus usus dulcium, sacchari, mellis, amygdalarum dulcium, pinearum, pistaciorum, dactylorum, uvarum passarum, uvarum Corinthi, ficuum, et hujusmodi: contra, omnia acida, et nimium salsa, et nimium acria, sunt generationi succi roscidi opposita.

20. Neque Manichæis eorumque diætæ favere existimabimur, si semina quæque, et nucleos, et radices in cibis aut eorum condimentis frequentia esse debere dicamus; quandoquidem omnis panis (panis autem ciborum firmamentum est) aut ex seminibus est, aut ex radicibus.

21. Ante omnia vero ad irrorationem corporis maxime facit natura potus, qui ciborum vehiculum est: itaque in usu sint potus illi, qui absque omni acrimonia, aut acedine, subtiles tamen sint, quales sunt vina (ut ait anus apud Plautum) "vetustate edentula," et cervisia ejusdem generis.

22. Hydromel (ut arbitramur) non foret malum, si fuerit forte et vetus; attamen quoniam omne mel habet aliquid acutum (ut patet ex acerrima illa aqua, quam chemici ex eo extrahunt, quæ etiam metalla solvit) melius foret, si fieret similis potio ex saccharo, non infuso leviter, sed ita incorporato, quemadmodum mel solet esse in hydromelite, et quæ habeat vetustatem anni aut sex mensium; unde aqua cruditate deponat, et saccharum subtilitatem acquirat.

23. Atque vetustas vini aut potus hoc habet, quod subtilitatem generat in partibus liquoris, acrimonia in spiritibus; quorum primum utile, secundum noxium; itaque ad hanc complicationem enodandam mittatur in dolium, priusquam resederit nonnihil vinum a musto, caro suilla, aut cervina bene cocta, ut habeant spiritus vini, quod ruminent et mandant, atque inde mordacitatem suam deponant.

24. Similiter si recipiat cervisia non solum grana tritici, hordei, avenarum, pisarum, etc. sed etiam partem (puta tertiam) ex radicibus aut pulpis pinquibus (qualia sunt radices potadi, medullæ artiplicis, radices bardanæ, aut aliæ radices dulces et esculentæ) utiliolem fore potum ad longævitatem existimamus, quam cervisiam ex granis tantum.

25. Etiam quæ in partibus suis valde tenuia sunt, et nihilominus nulla prorsus sunt acrimonia aut mordacitate, utilia sunt in condimentis ciborum; qualem virtutem inesse deprehendimus in paucis quibusdam ex floribus; floribus scilicet hederæ, qui in aceto infusi etiam gustui placent; floribus calendulæ, qui in usu sunt in brodiis; et floribus betonicæ. Atque de operatione super succos corporis hæc inquisita sunt.

## V.

## OPERATIO SUPER VISCERA AD EXTRUSIONEM ALIMENTI.

1. Quæ viscera illa principalia, quæ Historia. concoctionis fontes sunt, stomachum, hepar, cor, cerebrum, ad functiones suas probe exercendas confortant, (unde alimenta in partes distribuuntur, spiritus sparguntur, atque inde reparatio corporis totius transigitur,) a medicis, atque eorum descriptis et consiliis, petenda sunt.

2. De splene, felle, renibus, mesenterio, iliis, et pulmonibus, non loquimur; sunt enim membra ministrantia principalibus; atque cum de sanitate tractatur, in considerationem vel præcipuam quandoque veniunt; quia patiuntur singula suos morbos, qui nisi curentur, etiam in viscera principalia incurrunt: quatenus vero ad prolongationem vitæ, et reparationem per alimenta, et retardationem atrophie senilis, si concoctiones et principalia illa viscera bene se habeant, cætera maxima ex parte ad votum sequuntur.

3. Atque ex medicorum libris, qui de quatuor membrorum principalium confortatione et commodis sermones faciunt, decerpenda sunt ea unicuique, quæ pro ratione status corporis proprii in diætam et regimen vitæ transferri poterint: etenim sanitas medicinis temporalibus plerumque indiget; at diuturnitas vitæ ex victus ratione, et constanti medicinarum juvantium serie, speranda est: nos vero pauca, eaque selecta et optima proponemus.

4. Stomachum, (qui, ut aiunt, est paterfamilias, et cujus robur ad reliquas concoctiones est fundamentale,) ita munire decet et confirmare, ut sit absque intemperie calidus; deinde astrictus, non laxus; etiam mundus, non humorum fastidiis oppressus; et nihilominus (cum ex seipso, potius quam ex venis, nutriatur) minime prorsus inanis aut jejunos; postre-

mo in appetitu servandus est, quia appetitus digestionem acuit.

5. Miramur quomodo illud, calidum bibere (quod apud antiquos in usu fuit) in desuetudinem abierit; novimus certe medicum admodum celebrem, qui in prandio et cœna jusculum etiam præcalidum avidè ingerere solebat, et paulo post optare ut regestum esset; "Neque enim mihi jusculo opus est, (inquit,) sed calido tantum."

6. Omnino utile arbitramur primam potionem, sive vini, sive cervisiæ, sive potus alterius, (cui quis insuevit,) in cœna semper calidam exhiberi.

7. Vinum extinctionis auri utile arbitramur semel in mensa; non quod aurum aliquid virtutis ad hoc largiri credamus, sed quia extinctionem omnem metallicam in aliquo liquore astrictionem potentem indere novimus: aurum autem deligimus, quia præter illam (quam optamus) astrictionem, nil aliud metallicæ impressionis post se relinquit.

8. Offas panis in vino media mensa utiles, quam ipsum vinum esse judicamus; præsertim si vino, cui offa intingatur, rosmarinus et cortex citri fuerint infusi; idque cum saccharo, ut tardius labatur.

9. Usus cotoneorum ad stomachi robur utilem esse certum est: melius tamen adhiberi judicamus in succis depuratis, cum saccharo (quos myvas vocant) quam in carnibus ipsorum, quia stomachum nimis gravant: illæ vero myvæ post mensam, simplices; at ante mensam, cum aceto utilissime sumuntur.

10. Utilia stomacho sunt præ cæteris simplicibus rosmarinus, enula, mastiche, absinthium, salvia, mentha.

11. Pilulas ex aloë, et mastiche, et croco, præsertim temporibus hiemalibus, ante prandium sumptas, probamus; ita tamen ut aloë non tantum succo rosarum multis vicibus abluta sit, sed etiam in aceto, (in quo dissolutum fuerit tragacanthum,) et postea in oleo amygdalino dulci et recenti, ad aliquot horas macerata sit, antequam formetur in pilulas.

12. Vinum aut cervisiæ infusionis absinthii, cum modico enulæ et santali citrini, recte per vices adhibetur; atque hoc hieme potius.

13. At æstate, haustus ex vino albo, cum aqua fragariæ diluto, in quo vino pulveres exquisiti perlarum, et testarum cancerorum fluviatilium, et (quod mirum fortasse videatur) parum cretæ, fuerint infusa, stomachum optime recreat et roborat.

14. At generaliter omnis haustus matutinus (quales frequenter in usu sunt) refrigerantium (succorum, decoctionum, seri lactis, hordeaceorum, et similium) fugiendus est; nihilque prorsus immittendum stomacho jejuno, quod sit frigidum purum: Melius exhibebuntur res hujusmodi (si necessitas postulet) vel hora quinta post prandium, vel hora una post leve jentaculum.

15. Jejunia frequentia mala sunt ad longævitatē; quinetiam sitis quæcunque evitanda, et servandus stomachus satis mundus, sed perpetuo quasi humidus.

16. Oleum olivarum recens et bonum, in quo Mithridatii nonnihil dissolutum fuerit, inunctum spinæ dorsi, ex adverso oris stomachi, stomachum mirum in modum confortat.

17. Sacculus ex floccis carminatis, infusus in vinum austerum, in quod infusa fuerint myrtus et cortex citri et parum croci, super stomachum perpetuo gestari potest. Atque de stomachum confortantibus hactenus; cum etiam haud pauca ex his, quæ aliis operationibus inserviunt, ad hoc etiam juvent.

18. Jecori, si a torrefactione sive desiccatione, atque ab obstructione, immune servetur, nil ultra opus est: etenim exsolutio illa, quæ aquositates generat, morbus prorsus est; at reliqua duo etiam senectus obrepens inducit.

19. Huc pertinent vel maxime ea, quæ in operatione super sanguinem descripta sunt; iis adjiciemus pauca admodum, sed electa.

20. Præcipue in usu sit vinum granatorum dulcium; aut si illud haberi non possit, succus ipsorum recens expressus; mane sumendus, cum aliquanto sacchari, et immisso in vitrum (in quod fit expressio) modico corticis citri recentis, et caryophyllis tribus aut quatuor integris: hocque usurpetur a Februario ad finem Aprilis.

21. In usum adducatur ante alias omnes herbas nasturtium; sed tamen pubescens, non vetus: usurpetur sive crudum, sive in jusculis, sive in pota; et post hanc cochlearia.

22. Aloë, quocunque modo abluta aut correcta, hepatis noxia; itaque nunquam familiariter sumenda est. Rhabarbarum contra vitale hepatis, modo tres adhibeantur cautiones: primo, ut sumatur ante cibum, ne desiccet nimis, aut vestigium stypticitatis relinquat: secundo, ut maceretur ad horam unam, aut duas, in oleo amygdalino recenti, cum aqua rosacea, antequam alias infundatur, aut detur in substantia: tertio, ut vicibus alternis sumatur, alias simplex, alias cum tartaro, aut parum salis nigri, ne leviora tantum asportet, et reddat massam humorum magis obstinatam.

23. Vinum, aut decoctum aliquod chalybeatum, ter aut quater in anno sumi probo, ad obstructiones potentiores solvendas; ita tamen ut semper præcedat haustus duorum, aut trium cochlearium olei amygdalini dulcis recentis, et sequatur motus corporis, præsertim brachiorum et hypochondriorum.

24. Liquores dulcorati, idque cum pinguedine quadam, ad arcendam arefactionem et salsedinem et torrefactionem, et denique senilitatem jecoris, præcipue et plurimum possunt; præsertim si per vetustatem bene incorporentur; tales fiant ex fructibus et radicibus dulcibus; scilicet vina et potus ex uvis passis recentibus, jujubis, caricis, dactylis, pastinacis, bulbis sive potadis, et hujusmodi, cum admixtione glycyrrhizæ quandoque; etiam potus ex granis Indiciis (quæ mayz vocant) cum mixtura dulcium, plurimum confert. Notandum est autem, intentionem præservationis jecoris in mollitie quadam et pinguedine longe potentiorē esse illa altera, quæ pertinet ad apertionem jecoris, quæ potius inuit ad sanitatem, quam ad diuturnitatem vitæ; nisi quod obstructio ea, quæ inducit torrefactionem, æque malitiosa est, ac aliæ arefactiones.

25. Radices cichorei, spinaciæ, betæ, a medullis purgatas, atque ad teneritudinem coctas in aqua, cum tertia parte vini albi, pro condimentis familiariori-

bus cum oleo et aceto, laudo; etiam gemmas, sive caules asparagi, pulpas artiplicia, et radices bardanæ, debitis modis elixas et conditas: et juscula (tempore veris) ex foliis pubescentibus vitium et herba viridi tritici. Atque de jecore muniendo hactenus.

26. Cor juvamentum suscipit maxime, atque nocumentum, ex aëre, quem spiramus; ex vaporibus; atque ex affectibus: atque complura ex iis, quæ de spiritibus supra dicta sunt, huc transferri possunt; indigesta autem moles cordialium apud medicos ad intentionem nostram parum valet: attamen, quæ venenorum malignitati occurrereprehenduntur, ea demum ad muniendas cordis vires sano cum judicio adhiberi possunt; præsertim si sint ex eo genere, quod non tam propriam veneni naturam frangat, quam cor et spiritus in venenum insurgere faciat. Atque de cordialibus consule tabulam superius positam.

27. Aëris bonitas in locis experientia potius dignoscitur, quam signis. Optimum judicamus aërem spirare in locis æquis et planis, atque ex omni parte perflatilibus; si fuerit terra sicca, neque tamen prorsus arida, aut arenosa; quæque emittat serpillum et amaraci genus, et hinc inde caules mentæ campestris; quæque sit non prorsus rasa, sed arboribus nonnullis (ad umbram) sparsim consita; atque ubi rosa rubi spiret aliquid muscatellum et aromaticum: flumina si adsint, nocere potius arbitramur, nisi fuerint exigua admodum, et limpida, et glareosa.

28. Aërem matutinum certum est vespertino esse magis vitalem, licet ad delicias alter magis ametur.

29. Aërem a vento agitatum paulo leniore, aëre cæli æreni feliciorum esse arbitramur: optimus autem est zephyrus matutinus, et boreas postmeridianus.

30. Odores ad confortationem cordis præcipue utiles sunt; neque tamen ac si odor bonus esset aëris boni prærogativa. Certum enim est, quemadmodum inveniuntur aëres prorsus pestilentes, qui non tantum foetent, quantum alii minus noxii; similiter inveniri e contra aëres saluberrimos et spiritibus amicissimos, qui aut prorsus sint inodori, aut ad sensum minus grati et fragrantæ. Atque omnino, ubi degitur in aëre bono, odores per vices tantum repeti debent: odor enim continuus (licet optimus) spiritus nonnihil onerat.

31. Laudamus ante omnes alios (ut etiam superius innuimus) odores ex plantis vegetantibus et non avulsis, in aëre aperto exceptis; quales sunt ex viola, floribus caryophylli, (tam majoris quam minoris), floribus fabarum, floribus tilisæ, floribus sive pulvisculo vitium, floribus madre-selve, floribus parietariæ luteæ; rosa muscatella, (nam cæteræ rosæ germinantes parce emittunt odores,) fragaria (præsertim moriente) rubo suavi, (præcipue ineunte vere,) mentha campestri, lavendula florente, atque in regionibus calidioribus, malo aurantio, citrio, myrto, lauro: itaque ambulatio aut sessio inter hujusmodi auras in usu esse debet.

32. Ad cordis juvamentum, odores refrigerantes calidioribus anteponimus; suffitus itaque matutinus, aut sub calores meridiei, optimus fuerit, ex æquis portionibus aceti, aquæ rosacæ, et vini generosi, super laminam ferri quasi candentem fusorum.

33. Neque vero matri telluri libere nos quis existimet, si præcipiamus inter fodiendum, aut terram vertendam, vinum generosum superinfundi.

34. Aquam e floribus aurantiorum bonam, cum modica parte aquæ rosacæ et vini fragrantis, etiam per nares attrahi, aut per syringem errhini more immitti, (sed rarius,) bonum est.

35. At masticatio (quamvis non habeamus betel) et detentio in ore eorum quæ spiritus fovent (licet assidua) utilis admodum est. Fiant itaque grana, aut pusilli pastilli ex ambra, et musco, et ligno aloës, et ligno Rhodio, et radice iridis, et rosa: atque formentur illa grana, aut pastilli, per aquam rosaceam, quæ per paxillulum balsami Indi transierit.

36. Vapores vero, qui ex rebus intro sumptis cor muniunt et fovent, hæc tria habere debent; ut sint amici, clari, et refrigerantes. Caliditas enim vaporum, mala; atque ipsum vinum, quod putatur habere vaporem solummodo calefacientem, non expers est prorsus qualitatis opiatæ. Claros autem vapores vocamus eos, qui plus habent ex vapore, quam ex exhalatione, neque sunt omnino fumei, aut fuliginosi, aut unctuosi, sed humidi et æquales.

37. Inter turbam inutilem cordialium pauca ad diætam in usu esse debent; loco omnium ambragrisia, et crocus, et granum kermes, ex calidioribus; atque radices buglossi et boraginis, atque mala citria, et limones dulces, et poma fragrantia, ex frigidioribus. Etiam eo (quo diximus) modo et aurum et margaritæ, non tantum intra venas, sed etiam in transitu et circa præcordia aliquid possunt; per refrigerium scilicet, absque aliqua noxia qualitate.

38. De lapide bezoar, ob multas probationes, virtuti ejus fidem non prorsus derogamus; sed omnino modus ejus sumptionis talis esse debet, ut facillime virtus ejus communicetur spiritibus. Itaque nec in jusculis, nec in syrupsis, nec in aqua rosacea, aut hujusmodi, usum ejus probamus; sed tantum in vino, aut aqua cinnamomi, aut hujusmodi distillato, sed tenui, non calido aut forti.

39. De affectibus jam superius inquisitum est: illud tantum adjicimus, omne desiderium magnum et constans, et (ut loquuntur) heroicum, cordis virtutes roborare et ampliari: atque de corde hactenus.

40. Ad cerebrum quod attinet (ubi cathedra et universitas spirituum animalium residet) quæ superius inquisita sunt, de opio, et nitro, et subordinatis ad ipsa, et de conciliatione somni placidi, etiam huc aliquatenus spectant. Illud quoque certum, cerebrum tanquam in tutela stomachi esse; ideoque quæ stomachum confortant et muniunt, cerebrum per consensum juvant, atque huc similiter transferri debent. Adjiciemus pauca, tria externa, internum unum.

41. Balneationem pedum omnino in usu esse volumus, ad minus, semel in septimana; balneumque fieri ex lixivio, cum sale nigro, et salvia, chamæmelo, fœniculo, sampsucho, et costo, cum foliis angelicæ viridis.

42. Suffitus laudamus etiam quotidianum mane ex rore-marino arido, ramulis lauri siccis, et ligno aloës; nam gummi suavia caput gravant.

43. Cavendum prorsus, ne capiti per exterius admoveantur calida; qualia sunt aromata, non excepta

nuce moschata: etenim calida illa ad plantas pedum præcipitamus, ibique solum applicari volumus. Uctionem vero capitis levem ex oleo, cum rosa et myrto, et parum salis et croci, laudamus.

44. Memores eorum, quæ de opiatis, et nitro, et similibus, ante proposuimus, quæ spiritus tantopere densant, non existimamus abs re fore, si semel diebus quatuordecim accipiantur in brodio matutino grana tria vel quatuor castorei, cum modico seminis angelicæ et calami aromatici; quæ et ipsa cerebrum roborant, et in densitate substantiæ spirituum (quæ ad vitæ longævitatē tam necessaria est) motus vivacitatem et vigorem excitant.

45. In confortativis quatuor viscerum principium ea proposuimus, quæ et propria sunt, atque electa, atque in diætā et regimen vitæ transferri tuto et commode possunt: varietas enim medicamentorum ignorantia filia est; neque multa ferula (quod aiunt) tam multos morbos fecere, quam multa medicamenta paucas curas. Atque de operatione super viscera principalia, ad extrusionem alimenti, hæc inquisita sunt.

## VI.

## OPERATIO SUPER PARTES EXTERIORES AD ATTRACTIONEM ALIMENTI.

Historia.

1. Licet concoctio bona, per partes interiores facta, primas partes ad probam alimentationem teneat; tamen concurrere etiam debent actiones partium exteriorum; ut sicut facultas interior alimentum emittit et extrudit, ita facultas partium exteriorum idem arripiat et attrahat; quoque imbecillior fuerit facultas concoctionis, eo magis opus est auxilio concurrente facultatis attractivæ.

2. Attractio valida partium exteriorum excitatur præcipue per motum corporis, per quem partes calefactæ et confortatæ alimentum ad se alacrius vocant et attrahunt.

3. Illud vero maxime cavendum et prohibendum; ne idem motus et calor, qui ad membra novum succum evocat, membrum simul eo succo, quo antea perfusum erat, nimium exsolvat.

4. Fricationes huic intentioni optime subserviunt, factæ præcipue mane; sed hoc perpetuo comitetur, ut post fricationem fiat levis inunctio cum oleo, ne attritio partium exteriorum eas per perspirationem reddat effetas.

5. Proxima est exercitatio, per quam partes ipsæ se fricant et concutiunt: modo sit moderata, et quæ (ut superius notatum est) nec sit celeris, nec ad ultimas vires, nec ad lassitudinem; verum in hac ipsa, atque fricatione, eadem est ratio et cautio, ne corpus nimium perspiret: itaque exercitatio melior est sub dio quam sub tecto, et hieme quam æstate; atque insuper, exercitatio inunctione non tantum claudi debet, ut fricatio; sed etiam in exercitationibus vehementioribus adhibenda est unctio, et in principio, et sub finem, more athletarum.

6. Ad exercitacionem, ut quam minimum aut spiritus, aut succos exsolvat, utile est, ut usurpetur stomacho non prorsus jejuno. Itaque ut exercitatio nec stomacho repleto, (quod plurimum interest sani-

tatis,) nec jejuno (quod non minus interest longitudinis vitæ) usurpetur; in usum adduci debet jentaculum mane, non ex medicamentis, aut haustibus matutinis, aut uvis passis, aut ficibus, aut hujusmodi; sed plane ex cibo et potu; at levi admodum et modica quantitate.

7. Exercitationes ad irrigationem membrorum debent esse membris omnibus quasi æquales; non ut (quemadmodum ait Socrates) tibis moveant, brachia quiescant, nec e contra; sed ut partes universæ ex motu participant; atque omnino ad vitam prodest, ut corpus nunquam diu in eadem positura permaneat; sed singulis semi-horis, ad minus, posituram mutet, præterquam in somno.

8. Quæ ad mortificationem usurpantur, ad vivificationem traduci possunt; nam et indusia setosa, et flagellationes, et omnis exteriorum vexatio, vim eorum attractivam roborat.

9. Urticationem commendat Cardanus, etiam ad melancholiam; verum de hac parum nobis comperitum est; et suspecta nobis est illa, ne, propter venenatam nonnullam qualitatem urticæ, serpigines usu frequenti inducat et mala cutis. Atque de operatione super partes exteriores, ad attractionem alimenti, hæc inquisita sunt.

## VII.

## OPERATIO SUPER ALIMENTUM IPSUM AD INSINUATIONEM EJUDEM.

1. Reprehensio vulgaris de multis ferculis censorem potius decet, quam medicum; aut utcumque constantia sanitatis utilis esse potest, ad longitudinem vitæ noxia est; propterea quod mistura alimentorum varia et aliquantum heterogenea exitum reperit in venas et succos, melius et alacrius, quam simplex et homogenea; cum insuper ad appetitum excitandum (qui acies est digestionis) plurimum possit. Itaque et mensam variam et mutationes subinde ciborum, pro temporibus anni, aut alias, probamus.

2. Etiam illud de simplicitate ciborum absque condimentis, simplicitas iudicii est; cum condimenta bona et bene electa sint præparationes ciborum saluberrimæ, atque tum ad sanitatem, tum ad vitam conferant.

3. Videndum est, ut cum cibis durioribus conjungantur potus fortiores, et condimenta quæ penetrent et incidant; cum cibis contra facillioribus, potus tenues et condimenta pinguis.

4. Cum paulo ante monuerimus, ut prima potio in cœna excipiatur calida, nunc addimus, quod ad præparationem stomachi etiam semi-hora ante cibum bonus haustus potus (cui quisque maxime insuerit) calidus usurpetur; sed parum aromatizatus ad gratiam saporis.

5. Præparatio ciborum, et panis, et potuum, si bene et in ordine ad intentionem instituat, magni est prorsus momenti; licet sit res mechanica, et sapiat culinam et cellam; cum tamen longe præstet fabellis de auro, et gemmis, et hujusmodi.

6. Humectatio succorum corporis per præparationem alimentorum humidam puerilis res est; ad feroces morborum nonnihil facit; ad alimentationem

vera roscidam omnino contraria est; itaque elixatio ciborum longe inferior est, ad intentionem nostram, assatione, et coctione in furno, et similibus.

7. Assatio debet fieri igne vivo, et celerius perfici; non igne lento et nimia mora.

8. Carnes omnes solidiores in usu esse debent non prorsus recentes, sed nonnihil salis expertæ; ex sale ipso autem in mensa, eo minus sumi debet, aut nihil omnino. Sal enim alimento incorporatus magis valet ad distributionem, quam per se sumptus.

9. Debent in usum adduci macerationes et infusiones carniū varis et bonæ in liquoribus idoneis, ante assationes; quemadmodum quandoque in usu sunt similia ante coctiones in furno, et in muriis aliorum piscium.

10. At pulsationes et tanquam verberationes carniū, antequam coquantur, haud parvum rem præstant: certe in confesso est et perdice, et phasianos, in aucupio; et damas, et cervos, in venatione occisos (nisi fuerit ea fuga longior) gratiores esse etiam ad gustum. Pisces autem nonnulli flagellati et verberati, evadunt meliores. Etiam pyra duriora et austera, atque alii nonnulli fructus, compressione dulcescunt. Bonum esset in usum adduci, carniū duriorum nonnullam pulsationem et contusionem, antequam ignem patiantur; idque ex optimis præparationibus erit.

11. Panis modice fermentatus, et valde parum salitus, optimus est; quique etiam in furno ferventi satis, nec admodum elanguido, coctus est.

12. Potus præparatio ad vitam longam simplici fere præcepto constat: atque de aquæ potioribus nihil attinet dicere; potest hujusmodi diæta (ut alibi diximus) vitam aliquandiu remorari, sed nunquam majorem in modum prolongare; at in aliis potibus spirituosus, qualia sunt vinum, cervisia, hydromeli, et hujusmodi, id tanquam summa summarum affectari et observari debet, ut partes liquoris sint subtilissimæ, et spiritus lenissimus: hoc vetustate simplici difficile erit efficere, quæ gignit partes paulo subtiliores, spiritus vero multo aciores; itaque de infusione in doliis substantiæ alicujus pinguis, quæ spirituum acrimoniam compescat, jam antea præceptum est: est et alius modus absque infusione aut mistura; is est, ut liquor potus continuo agitur, sive per vecturam in mari, sive per vecturam in carris, sive suspendendo utres ex funibus, eosque quotidie agitando, aut aliis hujusmodi modis: certum enim est, motum illum localem partes subtilizare, ac spiritus in partibus interim ita fermentare, ut acedini (quod putrefactionis genus est) non vacent.

13. Vergente autem senectute, etiam talis præparatio ciborum instituenda est, quæ sit tanquam in media via ad chylum. Atque de distillationibus ciborum, meræ nugæ sunt; etenim portio nutritiva vel optima non ascendit in vaporem.

14. Incorporatio cibi et potus, antequam concurrant in stomacho, gradus est ad chylum; itaque sumantur vel pulli, vel perdice et phasiani, et similia; et coquantur in aqua cum parum salis; deinde mundentur et siccentur; postea sive in musto, sive in cervisia fervescent, infundantur, cum parum sacchari.

15. Etiam expressiones ciborum et concisiones minutæ, bene conditæ, senibus utiles sunt; eo magis

quod officio dentium in manducatione (quod præparationis præcipuum genus est) fere destituuntur.

16. Atque de juvamentis ejus defectus (dentium scilicet roboris, ad cibum molendum) tria sunt quæ conferre possint. Primum, ut alii dentes renascantur; id quod difficile omnino esse videtur, nec posse perfici absque instauratione corporis intima et potenti. Secundum est, ut mandibula per astringentia debita ita firmentur, ut officio dentium aliqua ex parte sufficere possint; quod non male cedere posse videtur. Tertium ut cibus sit ita præparatus, ut ista masticatione non egeat; quod promptum est et expeditum.

17. Subit etiam cogitatio de quantitate cibi et potus; eam in excessu nonnullo quandoque ad irri-gationem corporis utilem esse: itaque et epulæ profusæ et perpotationes non omnino inhihendæ sunt. Atque de operatione super alimenta et eorundem præparationem hæc inquisita sunt.

## VIII.

## OPERATIO SUPER ACTUM ULTIMUM ASSIMILATIONIS.

De actu ultimo assimilationis (quem Connexio. operationes tres proxime præcedentes intuentur) brevis et simplex erit præceptio: resque magis explicatione indiget, quam præceptione aliqua varia.

1. Certum est corpora omnia assimilandis, quæ in contiguo sunt, desiderio Commentatio. nonnullo indui. Id faciunt generosæ et alacriter tenuia et pneumatica; veluti flamma, spiritus, aër: at contra, quæ molem habent crassum et tangibilem, debiliter admodum; eo quod desiderium illud assimilandi a fortiori desiderio quietis, et se non movendi, ligetur.

2. Certum est itidem, desiderium illud assimilandi, in mole corporea ligatum, ut diximus, et inutile redditum, a calore aut spiritu in proximo liberari nonnihil et excitari, ut tum demum actuetur; quæ unica est causa, cur inanimata non assimilent, animata assimilent.

3. Certum et hoc quoque est; quo durior sit corporis consistentia, eo illud indigere majore calore ad stimulum assimilationis; quod in senibus male omnino cedit, quia partes sunt obstinatioris, calor imbecillior. Itaque aut obstinatio partium mollienda, aut calor intendendus; atque de malacissatione membrorum postea dicemus, cum jam ante etiam plura, quæ ad duritiem hujusmodi prohibendam, et præveniendam pertinent, proposuerimus. De calore autem intendendo jam simplici præcepto utemur, si prius etiam alterum axioma assumserimus.

4. Actus assimilationis, (qui a calore, ut diximus, circumfuso excitatur) est motus admodum accuratus et subtilis, et in minimis. Omnes autem hujusmodi motus tum demum sunt in vigore, cum omnis localis motus cesset, qui eum obturbet. Etenim motus separationis in homogenea, qui in lacte est, ut flos supernatet, serum subsidat, nunquam fiet, si lac leniter agitur: neque putrefactio ulla in aqua aut mistis procedet, si illa continuo localiter moveantur.

Ex his itaque, quæ assumpta sunt, hoc jam ad inquisitionem præsentem concludemus.

5. Actus ipse assimilationis perficitur præcipue in somno et quiete, præsertim versus auroram, facta jam distributione: non habemus igitur aliud, quod ad præcipiendum occurrit, nisi ut homines dormiant in calido; atque insuper, ut versus auroram sumatur aliqua inunctio, vel indusium intinctum, excitans moderate calorem, atque post illud sumptum redintegretur somnus. Atque de actu ultimo assimilationis, hæc inquisita sunt.

## IX.

OPERATIO SUPER INTENERATIONEM EJUS, QUOD ARE-  
FIERI CŒPIT, SIVE MALACISSATIO CORPORIS.

Connexio. De inteneratione per interius, quæ per multas ambages et circuitus fit, tam alimentationis, quam detentionis spiritus, (ideoque sensim perficitur,) superius inquisitum est; de ea autem, quæ fit per exterius, et quasi subito, sive de corpore malacissando, jam videndum est.

Historia. 1. In fabula de restitutione Pelæ in juventutem, Medea, cum id se moliri fingeret, eam proposuit rationem rei faciendæ; ut corpus senis in frustra concideretur; deinde in lebetæ cum medicamentis quibusdam decoqueretur. Coctio fortasse aliqua ad hoc requiretur, concisione in frustra scilicet non est opus.

2. Attamen etiam concisio in frustra adhibenda aliquatenus videtur, non ferro, sed iudicio: cum enim viscerum et partium sit consistentia multum diversa, necesse est, ut inteneratio ipsorum non iisdem modis absolvatur, sed ut instituatur cura singulorum, præter ea quæ pertinent ad intenerationem totius massæ corporis; de qua tamen primum.

3. Huic operationi per balnea, unctiones, et similia, (si modo sit ejus rei aliqua potestas,) satisfieri verisimile est; circa quæ observanda sunt ea, quæ sequuntur.

4. Non nimis indulgendum est spei, quod hæc res confici possit, propter ea, quæ fieri cernimus in imbibitionibus et macerationibus inanimatorum, per quas illa intenerantur; cujus aliqua exempla superius adduximus. Facilius enim est operatio hujusmodi super inanimata, quia attrahunt et sugunt liquores: at in corpore animali difficilior, quia motus in iis fertur potius ad circumferentiam.

5. Ideo balnea, quæ in usu sunt, emollientia parum prosunt, sed obsunt potius: quia extrahunt magis, quam imprimunt; et solvunt compagem corporis, potius quam consolidant.

6. Balnea et unctiones, quæ operationi præsentī (corpori scilicet bene et solide malacissandi) inservere possint, tres debent habere proprietates.

7. Prima et præcipua est, ut constent ex iis, quæ tota substantia similia sunt corpori et carni humanis, quæque sint tanquam alma et nutricia per exterius.

8. Secunda est, ut habeant admista ea, quæ subtilitate nonnulla imprimant, ut vim nutritivam eorum, quibus admiscuntur, insinuent et inculcent.

9. Tertia, ut recipiant nonnullam misturam (licet

reliquis longe minorem) eorum, quæ sunt astringentia; non austera, aut acerba, sed unctiosa et confortantia, ut dum reliqua duo operentur, interim prohibeatur (quantum fieri potest) exhalatio e corpore, quæ virtutem malacissantium perdat; sed potius ut per astringentem cutis, et clausuram meatuum, motus ad intra promoveatur et juvetur.

10. Consubstantiale maxime corpori humano est sanguis tepidus, vel ex homine, vel ex aliis animalibus: at Ficini illud commentum, ad instaurationem virium in senibus, de exsuctione sanguinis humani ex brachio adolescentis sani, leve admodum est: etenim, quod per interius nutrit, nullo modo debet esse æquale, aut plane homogeneum corpori, quod nutritur; sed aliquatenus inferius et subordinatum, ut subigi possit: at in exterius applicatis, quanto substantia est similior, tanto consensus melior.

11. Ab antiquo receptum est, balneum ex sanguine infantium sanare lepram, et carnes jam corruptas restituere; adeo ut hoc ipsum fuerit regibus quibusdam invidiæ apud plebem.

12. Proditum est Heraclitum, hydrope laborantem, se in ventre calido bovis, nuper occisi, immersisse.

13. In usu est sanguis tepidus catulorum felis ad erysipelata, et instaurandas carnes et cutem.

14. Brachium, aut membrum aliquod abscissum, aut ex quo sanguis alias nimium profuit, utiliter inseritur in ventrem alicujus animalis nuper dissectum; nam potenter operatur ad sistendum sanguinem; sanguine membri abscissi sanguinem recentem animalis per consensum sorbente et ad se vehementer trahente; unde et ipse sistitur et refluit.

15. Multum in usu est in morbis extremis, et quasi desperatis, ut columbæ scissæ, aliæ post alias mutatæ, ad plantas pedum ægroti apponantur; unde sequitur interdum auxilium mirabile; id vulgo imputatur, quasi maligna morbi traherent; sed utrumque caput petit ista medicatio, et spiritus animales confortat.

16. Verum balnea ista et unctiones sanguinolentæ nobis videntur sordidæ et odiosæ; videndum de aliis, quæ minus fortasse habent fastidii, neque tamen minus juvamenti.

17. Post sanguinem igitur recentem similia substantiæ corporis humani sunt alimentosa, carnes pinguiores, bovinæ, suillæ, cervinæ; ostrea inter pisces; lac, butyrum; vitella ovorum; pollen tritici; vinum dulce, aut saccharatum, aut mulsum.

18. Quæ admisceri debent ad impressionem, sunt, loco omnium, sales, præsertim niger; etiam vinum (cum spiritu turgeat) imprimit et utile est vehiculum.

19. Astringentia ejus generis, quæ descripsimus, unctiosa scilicet et confortantia, sunt, crocus, matriche, et myrrha, et baccæ myrti.

20. Ex his, pro nostro iudicio, optime fiet balneum, quale desideramus. Medici et posterius meliora reperient.

21. Longe autem potentior fiet operatio, si balneum, quale proposuimus (quod caput rei esse arbitramur) comitetur quadruplex operationis series sive ordo.

22. Primo, ut balneum præcedat fricatio corporis, et inunctio ex oleo, cum aliquo spissamento; ut virtus et calor humectans balnei potius subintret cor-

pus, quam aquea pars liquoris. Deinde, sequatur balneum ipsum, ad horas forte duas. A balneo autem emplastretur corpus ex mastiche, myrrha, tragacantho, diapalma, croco, ut cohibeatur (quantum fieri potest) perspiratio, donec malacum paulatim vertatur in solidum; idque per viginti quatuor horas, vel amplius. Postremo, amota emplastratione, fiat unctio cum oleo, addito sale et croco, et renovetur balneum post quatrimum, cum emplastratione et unctioe, (ut prius,) et continuetur hujusmodi malacissatio per mensem unum.

23. Etiam durante tempore malacissationis utile judicamus, et proprium, et secundum intentionem nostram, ut corpus bene nutriatur, et ab aëre frigido abstinenceatur, et nil nisi calidum bibatur.

24. Hoc vero (ut initio in genere monuimus) est ex iis, quæ nobis experimento probata non sunt, sed descripta tantummodo ex collimatione ad finem. Etenim meta posita, aliis lampada tradimus.

25. Neque negligenda sunt fomenta ex corporibus vivis. Ficinus ait (neque id per jocum) Davidem contubernia puellæ, alias salubriter, sed nimis sero usum fuisse; debuerat autem addere, quod puellam illam, more virginum Persiæ, oportuisset inungi myrrha et similibus, non ad delicias, sed ad augendam virtutem fomenti ex corpore vivo.

26. Barbarossa, ætate extrema, ex consilio medici Judæi puerulos continue stomacho et iliis applicabat ad fomenta: etiam senes nonnulli caniculas (animalia scilicet inter calidissima) stomacho noctu applicare consueverunt.

27. De hominibus quibusdam nasonibus (qui, irisionis pertæsi, nasorum tuberes et quasi surculos amputarunt, atque in brachiorum ulnas, incisione nonnulla adapertas, ad tempus insuerunt, atque inde nasos magis decentes efformarunt) increbuit relatio quasi certa: idque in multis nominibus: ea si vera sit, consensum carnis ad carnem, præsertim vivarum, plane testatur.

28. De inteneratione particulari viscerum principalium, stomachi, pulmonum, jecoris, cordis, cerebri, spinalis medullæ, renum, fells, iliorum, venarum, articularum, nervorum, cartilaginum, ossium, nimis longa foret inquisitio et præscriptio; cum jam non praxim instruamus, sed indicationes ad praxim.

## X.

## OPERATIO SUPER EXPURGATIONEM SUCCI VETERIS ET RESTITUTIONEM SUCCI NOVI, SIVE RENOVATIONEM PER VICES.

Historia. Licet quæ hic ponemus superius fere præoccupata sint, tamen quia ista operatio est ex principalibus, retractabimus ea paulo fusius.

1. Certum est, boves aratores, atque laboribus exhaustos, in pascua nova et læta admissos, carnes recipere teneras et juveniles: idque esu et palato comprobari; ut manifestum sit carniarum intenerationem non esse difficilem; verum et carnis intenerationem sæpius repetitam, etiam ad ossa et membranas, et similia, pervenire posse verisimile est.

2. Certum est, diætæ, quæ in usu sunt, ex guaiaco præcipue, atque ex sarsa-parilla, et china, et sassafras, præsertim longius continuatas, et secundum

regulas rigidiores, universum corporis succum primo attenuare, deinde consumere atque sorbere; quod manifestissimum est, quia morbum Gallicum usque ad gummositates provectum, quique intimos corporis succos occupaverit et depravaverit, ex illis diætæ posse curari probatum est: atque insuper quia æque manifestum est, per hujusmodi diætæ homines factos macilentos, pallidos, et quasi cadaverosos, paulo post impinguari, colorari, et manifesto renovari. Quamobrem hujusmodi diætæ, vergente ætate, semel biennio, ad intentionem nostram utiles esse omnino existimamus, tanquam exuvias et spolia serpentum.

3. Fidenter dicimus (neque vero quis, rogo, nos inter hæreticos Catharos reponat) purgationes repetitas, atque factas familiares, longe magis ad diuturnitatem vitæ facere, quam exercitia et sudores. Id autem fieri necesse est, si teneatur quod positum est; unctioes corporis, et meatuum ab extra oppletiones, et aëris exclusiones, et spiritus in massa corporis detentiones, plurimum conducere ad vitam longævam. Etenim certissimum est, per sudores et perspirationes exteriores, non solum humores et vapores excrementitios exhalari et absumi; sed una etiam succos et spiritus bonos, qui non tamen facile reparantur: in purgationibus autem (nisi fuerint admodum immoderatæ) non item, cum super humores præcipue operentur. Purgationes autem ad hanc intentionem optimæ sunt, quæ paulo ante cibum sumuntur, quia desiccant minus; ideoque debent esse ex iis catharticis, quæ ventriculum minime turbant.

Intentiones operationum, quas proposuimus, (ut arbitramur,) verissimæ sunt; remedia intentionibus fida. Neque credibile est dictu, (licet haud pauca ex ipsis velut plebeia videri possint,) quanta cura et delectu ea a nobis examinata fuerint; ut sint (salva semper intentione) et tuta et efficacia. Rem ipsam experimentum et comprobavit et promovebit. Talia autem in omnibus rebus sunt opera consilii cujusque prudentioris; quæ sunt effectu admiranda, ordine quoque egregia, modis faciendi tanquam vulgaria.

## A TRIOLA MORTIS.

De atriolis mortis jam inquirendum; id est, de iis, quæ accidunt morientibus Ad Art. 15. Connexio. in articulo mortis, et paulo ante, et post: ut cum multis viis perveniatur ad mortem, intelligi possit in quæ communia illæ desinant; præcipue in mortibus, quæ inferuntur per indigentiam nature, potius quam per violentiam; tametsi etiam aliquid ex his propter rerum connexionem inspergendum sit.

1. Spiritus vivus videtur tribus indigere, ut subsistat: motu commodo; refrigerio temperato; et alimento idoneo. Historia. Flamma vero duobus ex his tantum indigere videtur; motu nimirum et alimento; propterea quod flamma simplex sit substantia, spiritus composita; ita ut si transeat paulo propius in naturam flammeam, se perdat.

2. Etiam flamma majore flamma et potentiore resolvitur et necatur, ut bene notavit Aristoteles; multo magis spiritus.

3. Flamma, si comprimatur nimium, extinguitur; ut cernere est in candela, superimposito vitro: etenim aër per calorem dilatatus contrudit flammam, eamque minuit et extinguit; neque in caminis concipitur flamma, si materies, absque spatio aliquo interjecto, compingatur.

4. Etiam ignita compressione extinguuntur; veluti si carbonem ignitum ferro, aut pede, fortiter comprimas, extinguitur statim ignis.

5. At ut ad spiritum veniamus; si sanguis aut phlegma irruat in ventriculos cerebri, fit mors subito; cum spiritus non habeat, ubi se moveat.

6. Contusio etiam capitis vehemens inducit subitam mortem, spiritibus in ventriculis cerebri angustatis.

7. Opium et alia narcotica fortiora coagulant spiritum, eumque privant motu.

8. Vapor venenatus, spiritui totaliter odiosus, infert mortem subitam, ut in venenis mortiferis, quæ operantur per malignitatem (ut loquuntur) specificam; incutit enim fastidium spiritui, ut amplius movere, aut rei tam inimicæ occurrere, nolit.

9. Etiam extrema ebrietas, aut crapula, quandoque inferunt mortem subitam; cum spiritus non tam densitate aut malignitate vaporis, (ut in opio et venenis malignis,) quam ipsa copia obruatur.

10. Extremus mœror et metus, præsertim subitus, (ut fit in nuncio malo et improvise,) quandoque dant subitam mortem.

11. At non solum nimia compressio, sed etiam nimia dilatatio spiritus, mortifera.

12. Gaudia ingentia et repentina complures exanimarunt.

13. In magnis evacuationibus, quales fiunt in secundis hydropicis, exeuntibus confertim aquis; multo magis in ingentibus et repentinis profluvii sanguinis, sequitur sæpius mors subita; idque per meram fugam vacui in corpore, omnibus affatim moventibus ad spatia implenda, quæ exinaniantur: atque inter alia spiritu ipso: nam quoad profluvia sanguinis tardiora, res spectat ad indigentiam alimenti, non ad refusionem spiritus. Atque de motu spiritus, in tantum vel compresso, vel effuso, ut mortem inferat, hæc inquisita sunt.

14. Veniendum ad indigentiam refrigerii. Cohibitio respirationis mortem infert subitam, ut in omni suffocatione aut strangulatione. Neque tamen videtur res referri debere tam ad impedimentum motus, quam ad impedimentum refrigerii; quia aër nimis calidus, licet libere attractus, non minus suffocat, quam si inhibeatur respiratio; ut fit in iis, qui suffocati aliquando sunt ex carbonibus incensis, aut lithanthracibus, aut parietibus recenter dealbatis, in cubiculis clausis, igne etiam accenso: quod genus mortis traditur fuisse imperatoris Joviniani. Aut etiam ex balneis siccis supercalefactis, quod usurpatum fuit in nece Faustæ, Constantini Magni uxoris.

15. Valde pusillam est tempus, quo natura anhelitum repetit, atque expelli fuliginem aëris in pulmones attracti, et recentem intro-recipi desiderat; vix certe ad tertiam partem minutæ.

16. Rursus pulsus arteriarum et motus cordis, systoles et diastoles, triplo velocior quam respiratio; adeo ut, si fieri posset, ut ille motus in corde absque

inhibita respiratione sisti posset, sequeretur mors etiam celerius, quam ex strangulatione.

17. Usus tamen et consuetudo in hac naturali actione respirationis nonnihil valet; ut in urinatoribus Deliis, et piscatoribus perlarum, qui perpetuo usu decuplum temporis ad minimum retinere anhelitum possunt, plusquam pro ratione aliorum hominum.

18. Sunt ex animalibus, etiam ex iis quæ pulmones habent, alia quæ ad longius tempus, alia quæ ad brevius, anhelitum cohibere possunt; prout majore scilicet aut minore indigent refrigerio.

19. Pisces minore indigent refrigerio, quam animalia terrestria: indigent tamen, atque refrigerantur per branchias: atque quemadmodum terrestria aërem nimis fervidum, aut oclusum, non ferunt; ita et pisces in aqua, glacie totaliter et diutius operata, suffocantur.

20. Si spiritus insultum patiatur ab alio calore, proprio longe vehementiore, dissipatur et perditur. Si enim proprium calorem non sustineat absque refrigerio, multo minus alienum intensiorem tolerare potest; id cernitur in febribus ardentibus, ubi calor humorum putrefactorum calorem nativum superat, usque ad extinctionem sive dissipationem.

21. Somni quoque indigentia et usus refertur ad refrigerium. Motus enim spiritum attenuat et rarefacit, et calorem ejus acuit et intendit. Somnus contra, motum et discursum ejus sedat et compescit. Etsi enim somnus actiones partium ad spiritum mortalium, et omnem motum ad circumferentiam corporis roborat et promoveat; tamen motum proprium spiritus vivi magna ex parte consopit et tranquillat. At somnus regulariter semel infra 24 horas naturæ humanæ debetur, idque ad sex aut quinque horas ad minimum; licet sint etiam in hac parte quandoque naturæ miracula; ut refertur de Mæcenate, quod longo tempore ante obitum non dormisset. Atque de indigentia refrigerii ad spiritum conservandum hæc inquisita sint.

22. Quod vero ad tertiam indigentiam attinet, (alimenti scilicet,) videtur illa ad partes potius quam ad spiritum vivum pertinere. Facile enim quis credat, spiritum vivum subsistere in identitate, non per successionem aut renovationem. Atque quoad animam rationalem in homine, certo certius est, eam nec ex traduce esse, nec reparari, nec interire. Loquuntur de spiritu naturali animalium, atque etiam vegetabilium, qui ab illa altera essentialiter et formaliter differt; ex horum enim confusione metempsychosis illa, et innumera tam ethnicorum, quam hæreticorum, commenta emanarunt.

23. Renovatio per alimentum in corpore humano regulariter singulis diebus requiritur. Triduanum autem jejuniis sanis vix toleratur: usus tamen et consuetudo, etiam in hac parte, haud parum valet: at morbo languentibus inedia minus gravis est. Etiam somnus alimentationis nonnihil parat, quemadmodum contra exercitatio eam efflagitat magis. Inventi etiam sunt (sed raro) aliqui, qui, quodam naturæ miraculo, sine cibo et potu ad tempus non medioere vixerunt.

24. Corpora mortua, si non intercipientur a putredine, diutius sine notabili assumptione subsistunt:

At corpora viva non multum ultra triduum, (ut dictum est,) nisi reparantur per alimentationem; id quod indicat citam illam absorptionem esse opus spiritus vivi, qui aut se reparat, aut partes ponit in necessitate se reparandi, aut utrumque: quam rem etiam illud astruit, (quod paulo ante notatum est,) nempe, quod possint animalia sine alimento paulo diutius durare, si dormiant. At somnus omnino nil aliud est, quam receptio spiritus vivi in se.

25. Copiosa nimis et continua effluxio sanguinis, qualis aliquando fit ab hæmorrhoidibus; interdum a vomitu sanguineo, venis interioribus reseratis aut fractis; interdum ex vulneribus, mortem infert festinam: cum sanguis venarum sanguini arteriarum ministret; sanguis arteriarum, spiritui.

26. Haud parvum est quantum cibi et potus, quod homo, bis in die pastus, intra corpus recipit: longe plus, quam aut per sellam, aut per urinam, aut per sudores egerit: nil mirum (inquis) cum reliquum in succos et substantiam corporis mutetur. Recte: sed cogita paulisper, quod ea accessio fit bis in die, neque tamen corpus exundat; similiter, licet spiritus reparetur, tamen quanto suo non enormiter excrecit.

27. Nil attinet adesse alimentum in gradu remoto, sed ejus generis et ita præparatum et ministratum, ut spiritus in illud agere possit. Neque enim baculus cerei sufficit ad flammam continuandam, nisi adsit cera; neque homines herbis solis pasci possunt: atque inde fit atrophia senilis, quod licet adsit caro et sanguis, tamen spiritus est factus tam paucus et rarus, et succi et sanguis tam effæti et obstinati, ut non teneat proportio ad alimentandum.

28. Subducamus calculos indigentæ, secundum cursum naturæ ordinariæ et consuetum. Explicatione motus sui in ventriculis cerebri et nervis indiget spiritus perpetuo: motu cordis, tertia parte momenti; respiratione, singulis momentis; somno et alimento, intra triduum; potentia ad alimentandum quasi post octoginta annos. Atque si alicui ex his indigentis non succurratur, sequitur mors. Atque tria plane esse videntur atriola mortis; destitutio spiritus, in motu suo; in refrigerio; in alimento.

**Monita.** (1.) Erraverit, qui existimet spiritum vivum, exemplo flammæ, perpetuo generari et extingui, nec ad tempus aliquod notabile durare. Neque enim hoc facit flamma ipsa ex natura sua, sed quia inter inimica versatur: nam flamma intra flammam durat. At spiritus vivus inter amica degit et obsequia plurima. Itaque cum flamma sit substantia momentanea, aër autem substantia fixa; spiritus vivi media est ratio.

(2.) De interitu spiritus per destructionem organorum, (qualis fit per morbos et violentiam,) non est inquisitio præsens (ut ab initio diximus); tametsi et ille in eadem tria atriola desinat. Atque de ipsa forma mortis hæc inquisita sint.

29. Duo sunt magni præcursores mortis; alter a capite, alter a corde missus: convulsio et extremus labor pulsus; nam etiam singultus ille lethalis est convulsionis genus; labor autem pulsus lethalis

habet velocitatem insignem, quandoquidem cor sub ipsa morte ita trepidet, ut systole et diastole fere confundantur; habet etiam conjunctam debilitatem et humilitatem, et sæpius intermissionem magnam, labascente motu cordis, nec fortiter aut constanter insurgere valente.

30. Præcedunt etiam mortem in propinquo summa inquietudo et jactatio; motus manuum floccos colligendo; nixus prehensionis et tentationis fortis; dentes etiam fortiter comprimere; glutire vocem; tremor labii inferioris; pallor oris; memoria confusa; sermonis privatio; sudores frigidi; corporis elongatio; sublatio albuginis oculorum; faciei totius alteratio (naso acuto, oculis concavis, genis labantibus); linguæ contractio et convolutio; frigus extremitatum; in aliquibus emissio sanguinis aut spermatis; clamor acutus; ahelitus creber; inferioris maxillæ lapsus, et similia.

31. Mortem sequuntur sensus omnis et motus, tam cordis et arteriarum, quam nervorum et artuum, privatio; impotentia corporis se sustentandi erectum; rigor nervorum et partium; depositio omnis caloris; paulo post putrefactio et fætor.

32. Anguillæ, serpentes, et insecta diu moventur singulis partibus post concisionem; ut etiam rustici putent partes singulas ad se rursus uniendum expedire. Etiam aves capitibus avulsis ad tempus subsultant: quin et corda animalium avulsa diu palpitant. Equidem meminimus ipsi vidisse hominis cor, qui evisceratus erat, (supplicii genere apud nos versus proditores recepto,) quod in ignem de more injectum saltabat in altum, primo ad sesquipedem, et deinde gradatim ad minus; durante spatio (ut meminimus) septem aut octo minutarum. Etiam vetus et fide digna traditio est, de bove sub eviscerationem mugiente. At magis certa de homine, qui eo supplicii genere (quod diximus) evisceratus, postquam cor avulsum penitus esset, et in carnificis manu, tria aut quatuor verba precum auditus est proferre; quod ideo magis credibile esse diximus, quam illud de sacrificio; quia solent amici hujusmodi reorum mercedem dare carnifici, ut officium suum perniciosissime expediat, quo illi celerius a doloribus liberentur: in sacrificiis vero non videmus causam, cur similis præstetur a sacerdote diligentia.

33. Ad resuscitandum eos, qui deliqua animi aut catalepsis subitas patiuntur, (quorum haud pauci, absque ope, etiam exspiraturi fuissent,) hæc sunt in usu. Exhibitio aquarum ex vino distillarum, (quas aquas vocamus calidas et cordiales,) inflexio corporis in pronum; obturatio fortis oris et narium; flexio digitorum cum tortura quadam; evulsio pilorum barbæ aut capitis; frictio partium, præsertim faciei et extremorum; subita inspersio aquæ frigidæ in faciem; strepitus acuti et subiti; appositio ad nares aquæ rosacæ, cum aceto, in languoribus; incensio plumarum, pannorum, in suffocatione uteri: at maxime sartago fervefacta utilis est apoplecticis; etiam fatus arctus corporum vivorum aliquibus profuit.

34. Complura fuerunt exempla hominum, tanquam mortuorum aut expositorum e lecto, aut delatorum ad funus, quietiam nonnullorum in terra conditorum, qui nihilominus revixerunt; id quod in iis, qui conditi sunt, repertum est (terra aliquanto

post aperta) per obtusionem et vulnerationem capitis, ex jactatione et nixu cadaveris intra feretrum: cujus exemplum recentissimum, et maxime memorabile fuit, Joannis Scoti, subtilis illius et scholastici; qui a servo, cum sepultus esset, absente (quique, ut videtur, hujusmodi catalepsiæ ejus symptomata noverat) aliquanto post effossus, in tali statu reperiens: et simile quiddam accidit nostra ætate, in persona histrionis sepulti Cantabrigiæ. Memini me accepisse de generoso quodam, qui, ludibundus, ex curiositate desiderabat scire qualia paterentur in patibulo suspensi; seseque suspendit, super scabellum se allevans, et deinde se demittens; putans etiam penes se futurum, ut scabellum pro arbitrio suo recuperaret; id quod facere non potuit; sed tamen ab amico præsentis adjutus est: ille interrogatus, quid passus esset? Retulit se dolorem non sensitisse; sed primo observatam sibi fuisse circa oculos speciem ignis et incendii; deinde extremæ nigredinis, sive tenebrarum; postremo coloris cujusdam cœrulei pallidioris, sive thalassini; qualis etiam conspicitur sæpe animo linquentibus. Audivi etiam de medico adhuc vivente, qui hominem, qui se suspenderat, atque per horam dimidiam suspensus manserat, in vitam frictionibus et balneis calidis reduxerat; quique etiam profiteri soleat, se non dubitare, quin suspensum quemcunque ad tempus prædictum revocare posset, modo cervicem ei, per impetum primæ demissionis, non fuerint effractæ.

#### DISCRIMINA JUVENTUTIS ET SENECTUTIS.

Ad Art. 16. I. Scala humani corporis talis est:

concipi, vivificari in utero; nasci; mamma; depulsio a mamilla; usus cibi et potus ab initio, qualis infantibus convenit: dentire primo, circa annum secundum; incipere gradiri; incipere loqui; dentire secundo, circa annum septimum; pubescere, circa annum duodecimum aut decimum quartum; potentem esse ad generandum, et fluxus menstruorum; pili circa tibias et axillas; barbescere; atque huc usque, et quandoque ulterius, grandescere; deinde roboris artuum status et ultimitas, etiam agilitatis; canescere et calvescere; cessatio menstrui et potentiæ generationis; vergere ad decrepitem, et animal tripes; mori. Interim animus quoque suas habet periodos, sed per annos non possunt describi: ut memoriam labilem, et similia, de quibus postea.

2. Discrimina juventutis et senectutis hæc sunt. Cutis juveni lævis et explicata; seni arida et rugosa, præsertim circa frontem et oculos: carnea juveni tenera et molles; seni duriores: robor juveni et agilitas; seni diminutio virium et motuum tarditas: juveni coctionum validitas; seni debilitas: juveni viscera mollia et succulenta; seni salsa et retorruda: juveni corpus erectius; seni inclinatio in curvum: juveni constantia artuum; seni debilitas et tremor: juveni humores biliosi, et sanguis fervidior; seni humores phlegmatici et melancholici, et sanguis frigidior: juveni venus in promptu; seni tardior: juveni succi corporis magis roscidi; seni magis crudi et aquei: juveni spiritus multus et turgescens; seni paucus et jejunus: juveni spiritus densus et viridis; seni acris et rarus: juveni sensus vivaces

et integri; seni hebetiores et deficientes: juveni dentes robusti et integri; seni debiles, attriti, et decidui: juveni pili colorati; seni, cujuscunque fuerint coloris, cani: juveni coma; seni calvitias: juveni pulsus grandior et incitator; seni obsecurior et tardior: juveni morbi magis acuti et curabiles; seni magis chronici, et curatu difficiles: juveni vulnera citius coalescentia; seni tardius: juveni generantes florentes calore; seni aut pallidæ, aut rubicundæ, atque sanguine spisso: juveni minor molestia ex catarrhis; seni major: neque scimus in quæ proficiant senes, (quoad corpus,) nisi quandoque in obesitate; cujus causa præsto est; quia corpora senum nec bene perspirant, nec bene assimilant; pinguedo autem nihil aliud est, quam exuberantia alimenti ultra id, quod excernitur, aut perfecte assimilatur. Etiam in quibusdam senibus in edacitatem proficitur, propter acidum humores, licet senes digerant minus. Ac universa, quæ jam diximus, medici, quasi feriantes, referent ad caloris naturalis et humoris radicalis diminutionem, quæ res nihili sunt ad usum. Illud certum, siccitatem in decursu ætatis frigiditatem præcedere; atque corpora cum sint in statu et acme caloris, ad siccitatem declinare; frigiditatem autem postea sequi.

3. Jam vero etiam de affectibus animi videndum. Equidem memini, cum adolescens essem Pictavi in Gallia, me consuevisse familiariter cum Gallo quodam, juvene ingeniosissimo, sed paululum loquaci; qui postea in virum eminentissimum evasit; ille in mores senum invehere solitus est, atque dicere, si daretur conspici animos senum, quemadmodum cernuntur corpora, non minores apparituras in iisdem deformitates: quin etiam ingenio suo indulgens, contendebat vitia animorum in senibus vitis corporum esse quodammodo consentientia et parallela. Pro ariditate cutis, substituebat impudentiam: pro duritie viscerum, immisericordiam: pro lippitudine oculorum, oculum malum et invidiam: pro immersione oculorum et curvatione corporis versus terram, atheismum (neque enim cælum, inquit, respiciunt, ut prius): pro tremore membrorum, vacillationem decretorum, et fluxam inconstantiam: pro inflexione digitorum, tanquam ad prehensionem, rapacitatem et avaritiam: pro habescentia genuum, timiditatem: pro rugis, calliditatem et obliquitatem: et alia quæ non occurrunt. Sed ut serii simus: juveni adest pudor et verecundia; seni paululum obduruit: juveni benignitas et misericordia; seni occalluit: juveni æmulatio laudabilis; seni invidia maligna: juveni inclinatio ad religionem et devotionem, ob fervorem, et inexperientiam mali; seni defervescentia in pietate, ob charitatis teporem, et diutinam conversationem inter mala, necnon ob credendi difficultatem: juveni valde velle; seni moderatio: juveni levitas quædam et mobilitas; seni gravitas major et constantia: juveni liberalitas, et beneficentia, et philanthropia; seni avaritia, et sibi sapere, et consulere: juveni confidentia, et bene sperare; seni diffidentia, et plurima habere pro suspectis: juveni facilitas et obsequium; seni morositas et fastidium: juveni sinceritas et animus apertus; seni cautio et animus tectus: juveni magna appetere; seni necessaria curare: juveni præsentibus rebus

favere; seni antea potiora habere: juveni superiores revereri; seni censura in illos uti: et complura alia, quæ ad mores potius pertinent, quam ad inquisitionem præsentem. Attamen, quemadmodum in corpore, ita in animo, in nonnulla proficiunt senes, nisi fuerint admodum emeriti; nempe, ut cum ad excogitandum minus sint prompti, iudicio tamen valeant; et tutiora et saniora, quam speciosiora malint; etiam in garrulitate proficiunt et ostentationem; fructum enim sermonis petunt, cum rebus minus valeant, ut non absurde Tithonum in cicadam versum fuisse poëtæ fingant.

## CANONES MOBILES

### DE DURATIONE VITÆ, ET FORMA MORTIS.

#### CANON I.

*Non fit consumptio, nisi quod deperditum sit de corpore, transmigret in corpus aliud.*

#### EXPLICATIO.

Nullus est rerum interitus: itaque quod absumitur, aut evolat in aërem, aut recipitur in corpus aliquod adjacens: quare videmus araneam, aut muscam, aut formicam, in electro, monumento plus quam regio, sepultas, æternizari; cum tamen sint res teneræ et dissipabiles. Verum non adest aër, in quem aliquid evolet; atque substantia electri est tam heterogenea, ut nihil ex illis recipiat. Simile etiam fore arbitratur, misso ligno, aut radice, aut ejusmodi, in argentum vivum. At cera, et mel, et gummi, habent similem operationem, sed ex parte tantum.

#### CANON II.

*Inest omni tangibili spiritus, corpore crassiore obiectus et obsessus; atque ex eo originem habet consumptio et dissolutio.*

#### EXPLICATIO.

Nullum corpus nobis notum, hic in superiore parte terræ, spiritu vacat; sive per attenuationem et concoctionem caloris cœlestium, sive alias. Neque enim cava rerum tangibilium vacuum recipiunt; sed aut aërem, aut spiritum rei proprium. Spiritus autem ille (de quo loquimur) non est virtus aliqua, aut energia, aut entelechia, aut nugæ: sed plane corpus tenue, invisibile; attamen locatum, dimensum, reale: neque rursus spiritus ille aër est, (quemadmodum nec succus uvæ est aqua,) sed corpus tenue, cognatum aëri, at multum ab eo diversum: partes autem rei crassiores (cum sint naturæ pigræ, nec admodum mobilis) per periodos longas duraturæ forent: sed spiritus ille est, qui turbat, et illas fodiat et subruit, atque humidum corporis, et quicquid digerere potest in novum spiritum, deprædat; deinde tam spiritus corporis præinexistens, quam noviter factus, simul sensim evolvant. Id optime ostenditur in diminutione ponderis corporum arefactorum per perspirationem. Neque enim quicquid emittitur, erat spiritus, quando ponderaverat; neque non spiritus, quando evolaverat.

#### CANON III.

*Spiritus emissus desiccatur; detentus et moliens intus, aut colliquatur, aut putrefacit, aut vivificat.*

#### EXPLICATIO.

Quatuor sunt processus spiritus; ad arefactionem; ad colliquationem; ad putrefactionem; ad generationem corporum. Arefactio non est opus proprium spiritus, sed partium crassiorum, post emissum spiritum: tum enim illæ se contrahunt, partim per fugam vacui, partim per unionem homogeneorum: ut liquet in omnibus, quæ arefiunt per ætatem; et in siccioribus corporibus, quæ desiccantur per ignem, ut lateribus, carbonibus, panibus. Colliquatio est merum opus spirituum; neque fit nisi calore excitentur; tum enim spiritus se dilatantes, neque tamen exeuntes, se insinuant et perfundunt inter partes crassiores; easque ipsas reddunt molles et fusiles; ut in metallis et cera: etenim metalla, et alia tenacia, apta sunt ad cohibendum spiritum, ne excitatus evolet. Putrefactio est opus mixtum spiritus et partium crassiorum: etenim spiritu (qui partes rei continebat et frænabat) partim emisso, partim languescente, omnia solvuntur et redeunt in heterogeneas suas, sive (si placet) elementa sua; quod spiritus inerat rei, congregatur ad se (unde putrefacta incipiunt esse gravis odoris): oleosa ad se (unde putrefacta habent nonnihil lævoris et unctuositatis): aquea itidem ad se; fæces ad se (unde fit confusio illa in putrefactis). At generatio, sive vivificatio, est opus itidem mixtum spiritus et partium crassiorum; sed longe alio modo: spiritus enim totaliter detinetur, sed tumet et movetur localiter; partes autem crassiores non solvuntur, sed sequuntur motum spiritus, atque ab eo, quasi diffillantur et extruduntur in varias figuras; unde fit illa generatio et organizatio: itaque semper fit vivificatio in materia tenaci et lenta; atque etiam sequaci et molli; ut simul et spiritus fiat detentio; atque etiam cessio lenis partium, prout eas effingit spiritus: atque hoc cernitur in materia omnium tam vegetabilium quam animalium, sive generentur ex putrefactione, sive ex spermate; in his enim omnibus manifestissime cernitur esse materia difficilis ad abrumpendum, facilis ad cedendum.

#### CANON IV.

*In omnibus animatis duo sunt genera spirituum; spiritus mortuales, quales insunt inanimatis; et superadditus spiritus vitalis.*

#### EXPLICATIO.

Jam ante dictum est ad longævitatem procurandam, debere considerari corpus humanum, primo, ut inanimatum et inalimentatum; secundo, ut animatum et alimentatum: nam prior consideratio dat leges de consumptione, secunda de reparatione. Itaque nosse debemus, inesse humanis carnibus, ossibus, membranis, organis, denique partibus singulis, dum vivunt, in substantia earum perfusus tales spiritus, quales insunt in hujusmodi rebus, carne, osse, membrana; et cæteris, separatis et mortuis; quales etiam manent in cadavere: at spiritus vitalis,

tametsi eos regat, et quandam habeat cum illis consensum, longe alius est ab ipsis; integralis at per se constans. Sunt autem duo discrimina præcipua inter spiritus mortuales et spiritus vitales; alterum, quod spiritus mortuales minime sibi continuentur; sed sint tanquam abscissi et circumdati corpore crassiore, quod eos intercipit; quemadmodum aer permixtus est in nive aut spuma. At spiritus vitalis omnis sibi continuatur, per quosdam canales, per quos permeat, nec totaliter intercipitur. Atque hic spiritus etiam duplex est; alter ramosus tantum, permeans per parvos ductus et tanquam lineas: alter habet etiam cellam, ut non tantum sibi continuetur, sed etiam congregetur in spatio aliquo cavo, in bene magna quantitate, pro analogia corporis; atque in illa cella est fons rivulorum, qui inde diducantur. Ea cella præcipue est in ventriculis cerebri, qui in animalibus magis ignobilibus angusti sunt; adeo ut videantur spiritus per universum corpus fusi, potius quam cellulati: ut cernere est in serpentibus, anguillis, muscis, quorum singulæ portiones abscissæ moventur diu: etiam aves diutius capitibus avulsis subsultant; quoniam parva habeant capita, et parvas cellas: at animalia nobiliora ventriculos eos habent ampliores; et maxime omnium homo. Alterum discrimen inter spiritus est; quod spiritus vitalis nonnullam habeat incensionem; atque sit tanquam aura composita ex flamma et aëre; quemadmodum succi animalium habeant et oleum et aquam. At illa incensio peculiare præbet motus et facultates; etenim et fumus inflammabilis, etiam ante flammam conceptam, calidus est, tenuis, mobilis; et tamen alia res est, postquam facta sit flamma; at incensio spirituum vitalium multis partibus lenior est, quam mollissima flamma, ex spiritu vini, aut alias; atque insuper mixta est, ex magna parte, cum substantia aërea; ut sit et flammæ et aëreæ naturæ mysterium.

## CANON V.

*Actiones naturales sunt propriae partium singularum, sed spiritus vitalis eas eximat et acuit.*

## EXPLICATIO.

Actiones sive functiones, quæ sunt in singulis membris, naturam ipsorum membrorum sequuntur (attractio, retentio digestio, assimilatio, separatio, excretio, perspiratio, etiam sensus ipse) pro proprietate organorum singulorum (stomachi, jecoris cordis, splenis, felle, cerebri, oculi, auris, et cæterorum). Neque tamen ulla ex ipsis actionibus unquam actiata foret, nisi ex vigore, et præsentia spiritus vitalis et caloris ejus; quemadmodum nec ferrum aliud ferrum attracturum foret, nisi excitaretur a magnete; neque ovum unquam fœcundum foret, nisi substantia fœmellæ actiata fuisset ab initu maris.

## CANON VI.

*Spiritus mortuales aëri proxime consubstantiales sunt; spiritus vitales magis accedunt ad substantiam flammæ.*

## EXPLICATIO.

Explicatio canonis quarti præcedentis est etiam declaratio canonis præsentis; verum insuper hinc

fit, ut quæcunque sint pingua et oleosa, diu maneat in esse suo; neque enim aer illa multum vellicat; neque illa etiam ipsa cum aëre conjungi multum desiderant: illud autem prorsus vanum est, quod flamma sit aer accensus, cum flamma et aer non minus heterogenea sint, quam oleum et aqua. Quod vero dicitur in canone, quod spiritus vitales magis accedant ad substantiam flammæ; illud intelligendum est, quod magis hoc faciant, quam spiritus mortuales; non quod magis sint flammæ quam aëri.

## CANON VII.

*Spiritus desideria duo sunt; unum se multiplicandi; alterum exeundi, et se congregandi cum suis connaturalibus.*

## EXPLICATIO.

Intelligitur canon de spiritibus mortalibus; etenim quoad desiderium secundum, spiritus vitalis exitum e corpore suo maxime exhorret; neque enim invenit connaturalia hic in proximo: ruit forte in occursum rei desiderabilis, ad extrema corporis sui; sed egressum, ut dictum est, fugit: verum de spiritibus mortalibus utrumque desiderium tenet: quod ad primum enim attinet, omnis spiritus, inter crassiora locatus, non feliciter habitat; itaque cum simile sui non inveniatur, eo magis simile sui creat et facit, in tali solitudine positus; et strenue laborat, ut se multiplicet et volatile crassiorum deprædetur, ut augeatur suo quanto. Quod vero ad secundum desiderium evolandi et se in aërem recipiendi; certum est omnia tenuia (quæ semper sunt mobilia) ad sui similia in proximo libenter ferri; ut bulla aquæ fertur ad bullam, flamma ad flammam: at multo magis hoc fit in evolutione spiritus in aërem ambientem; quia non fertur ad particulam sui similem, sed etiam tanquam ad globulum connaturalium suorum. At illud interum notandum; quod exitus et evolutio spiritus in aërem est duplicata actio; partim ex appetitu spiritus, partim ex appetitu aëris; aer enim communis tanquam res indigens est, atque omnia avidè arripit; spiritus, odores, radios, sonos, et alia.

## CANON VIII.

*Spiritus detentus, si alium spiritum gignendi copiam non habeat, etiam crassiora intenerat.*

## EXPLICATIO.

Generatio novi spiritus non fit nisi super ea, quæ sunt in gradu ad spiritum propriore: qualia sunt humida. Itaque si partes crassiores (inter quas versatur spiritus) sint in gradu remotiore, licet spiritus eas conficere non possit, tamen (quod potest) eas labefactat, et emollit, et fundit; ut cum quantum suum augere non possit, tamen habitat laxius, et inter ea degat, quæ sint magis amica: iste autem aphorismus ad finem nostrum admodum utilis est; quia innuit ad intenerationem partium obstinatarum per detentionem spiritus.

## CANON IX.

*Inteneratio partium duriorum bene procedit, cum spiritus nec evolat neo generet.*

## EXPLICATIO.

Iste canon solvit nodum et difficultatem in operatione intenerandi, per detentionem spiritus: si enim spiritus non emissus deprædatur omnia intus, nil fit lucri ad intenerationem partium, in esse suo; sed potius solvantur illæ et corrumpuntur. Itaque una cum detentione refrigerari debent spiritus et astringi, ne sint nimis activi.

## CANON X.

*Calor spiritus ad viriditatem corporis debet esse robustus, non acris.*

## EXPLICATIO.

Etiam iste canon pertinet ad solvendum nodum supradictum, sed longe latius patet; describit enim, qualis debeat esse temperamentum calor in corpore ad longævitatē. Hoc vero utile est, sive spiritus detineantur, sive non; utrunque enim talis debet esse calor spirituum, ut verat se potius in dura, quam deprædatur mollia: alterum enim desiccatur, alterum intenerat. Quinetiam, eadem res valet ad alimentationem bene perficiendam; talis enim calor optime excitat facultatem assimilandi, atque una optime præparat materiam ad assimilandum. Proprietates autem hujusmodi caloris tales esse debent; primo ut tardus sit, nec subito calefaciat: secundo, ut non sit admodum intensus, sed mediocris: tertio, ut sit æqualis, non incompositus, scilicet se intendens et remittens: quarto, ut, si inveniatur calor iste, quod ei resistat, non facile suffocetur aut langueat. Subtilis admodum hæc operatio; sed cum sit ex utilissimis, non deserenda est. Nos vero in remediis (quæ ad indendum spiritibus calorem robustum, sive eum, quem vocamus fabrilem, non prædatorium, propositum) huic rei aliqua ex parte satisfacimus.

## CANON XI.

*Spirituum densatio in substantia sua valet ad longævitatē.*

## EXPLICATIO.

Subordinatus est canon ad præcedentem; etenim spiritus densior suscipit omnes illas quatuor caloris proprietates, quas diximus. Modi autem densationis in prima ex decem operationibus habentur.

## CANON XII.

*Spiritus in magna copia et magis festinat ad exitum, et magis deprædatur, quam in exigua.*

## EXPLICATIO.

Clarus est per se canon iste, cum quantum ipsum regulariter augeat virtutem; atque cernere est in flammis, quod quanto fuerint majores, tanto et erumpant fortius, et absument celerius. Itaque nimia copia, aut turgescencia spiritus, prorsus nocet longævitatē: neque amplior est optanda copia spi-

rituum, quam quæ muniis vitæ, et bonæ reparationis ministerio sufficiat.

## CANON XIII.

*Spiritus æqualiter perfusus minus festinat ad exitum, et minus deprædatur, quam impariter locatus.*

## EXPLICATIO.

Non solum copia spirituum secundum totum durationem rerum obest; sed etiam eadem copia, minus refracta, similiter obest. Itaque quo magis fuerit spiritus comminutus, et per minima insinuat, eo deprædatur minus. Dissolutio enim incipit a parte, ubi spiritus est laxior; itaque et exercitatio, et fricationes, longævitatē multum conferunt: agitatio enim optime comminuit, et commiscet res per minima.

## CANON XIV.

*Motus spirituum inordinatus et subsultorius magis prosperat ad exitum, et magis deprædatur, quam constans et æqualis.*

## EXPLICATIO.

In inanimatis tenet iste canon certo; inæqualitas enim dissolutionis mater; in animatis vero (quia non solum spectatur consumptio, sed reparatio; reparatio autem procedit per rerum appetitus: appetitus rursus acuitur per varietatem) non tenet rigide; sed eousque tamen recipiendus est, ut varietas ista potius sit alternatio quam confusio, et tantquam constans in inconstantia.

## CANON XV.

*Spiritus in corpore compagis solidæ detinetur, licet invitus.*

## EXPLICATIO.

Omnia solutionem continuitatis suæ exhorrent; attamen pro modo densitatis aut tenuitatis suæ. Etenim, quo corpora sunt magis tenuia, eo in minores et angustiores meatus se compelli patiuntur: itaque aqua subintrabit meatum, quem non subintrabit pulvis: aër etiam, quem non subintrabit aqua: quin flamma et spiritus, quem non subintrabit aër. Veruntamen est hujusce rei aliquis terminus; neque enim spiritus in tantum desiderio exeundi laborat, ut patiat se discontinuari nimis, et in nimis arctos poros aut meatus agi; itaque si spiritus, corpore duro, aut etiam unctoso et tenaci, (quod non facile dividitur,) circumdetur, plane constringitur, et tantquam incarceratur, et appetitum exeundi posthabet; quare videmus metalla et lapides longo ævo egere, ut exeat spiritus; nisi aut spiritus igne excitetur, aut partes crassiores aquis corrodentibus et fortibus disjungantur. Similis est ratio tenacium, qualia sunt gummi, nisi quod leniore calore solvantur. Itaque succi corporis duri, cutis constricta, et similia, (quæ procurantur ab alimentorum siccitate, et exercitiatione, et aëris frigore,) utilia sunt ad longævitatē: quia claustra circumdant spiritui arcta, ne exeat.

## CANON XVI.

*In oleosis et pinguibus detinetur spiritus libenter, licet non sint tenacia.*

## EXPLICATIO.

Spiritus, si nec a corporis circumdati antipathia irritetur, nec a corporis nimia similitudine pascatur, nec a corpore externo sollicitetur aut provocetur, non tumultuatur multum ad exeundum: quæ omnia oleosis desunt: nam nec tam spiritui infesta sunt, quam dura; nec tam propinqua, quam aquea; nec cum aëre ambiente bene consentiunt.

## CANON XVII.

*Evolatio cita humoris aquei conservat diutius oleosum in esse suo.*

## EXPLICATIO.

Diximus aquea, utpote aëri consubstantialia, citius evolare, oleosa tardius, ut cum aëre minus consentientia: at cum humidum utrumque plerisque corporibus insit, evenit ut aqueum veluti prodat oleosum; nam illud sensim exiens, hoc etiam asportat. Itaque nil magis juvat ad corporum conservationem, quam siccatio lenis, quæ humorem aqueum exspirare faciat, nec oleosum sollicitet; tum enim oleosum fruitur natura sua: neque hoc spectat ad inhibendam putredinam, (licet etiam illud sequatur,) sed ad conservandam viriditatem. Hinc fit, ut fricationes molles et exercitationes moderatæ, ad perspirationem potius quam ad sudorem, longævitati plurimum conferant.

## CANON XVIII.

*Aër exclusus confert ad longævitatē, si aliis incommodis caveas.*

## EXPLICATIO.

Diximus paulo ante, evolutionem spiritus esse actionem duplicatam, ex appetitu spiritus et aëris. Quare si altera tollatur, haud parum proficitur; id quod ex inunctionibus præcipue exspectari debet. Attamen hoc sequuntur varia incommoda; quibus quomodo subveniatur, in operatione secunda ex decem annotavimus.

## CANON XIX.

*Spiritus juveniles, senili corpori inditi, naturam compendio retrovertere possint.*

## EXPLICATIO.

Natura spirituum est quasi rota suprema, quæ alias rotas in corpore humano circumagit. Itaque illa in intentione longævitatis primi poni debet. Huc accedit, quod facilius et magis expedita via patet ad alterandos spiritus, quam ad alia. Etenim duplex est operatio super spiritus; altera per alimenta, quæ est tarda, et tanquam per circuitum; altera (et illa gemina) quæ est subita, et spiritus recta petit: nempe per vapores, aut per affectus.

## CANON XX.

*Succi corporis subduri et roscidi faciunt ad longævitatē.*

## EXPLICATIO.

Ratio perspicua est, cum antea posuerimus dura

et oleosa, sive roscida, ægrius dissipari. Illud tamen interest, (sicut etiam in operatione decima notavimus,) quod succus subdurus minus dissipabilis est, sed est simul minus reparabilis. Itaque commodum cum incommodo conjunctum est: neque possit propterea aliquid magnale per hoc præstari; at succus roscidus utriusque rei satisfacit; itaque diligentius huic incumbendum.

## CANON XXI.

*Quicquid tenuitate penetrat, neque tamen acrimonia rodit, gignit succos roscidos.*

## EXPLICATIO.

Canon iste magis difficilis est practica, quam intellectu: manifestum est enim, quicquid bene penetrat, sed tamen cum stimulo aut dente, (qualia sunt omnia acria et acida,) relinquere, ubicunque transit, vestigium nonnullum siccitatis et divulsionis; ut succos iudret, partes convellat; at contra, quæ penetrant mera tenuitate, tanquam furtum et insinuativè, absque violentia, irrorare et irrigare in transitu. De his in operationibus quarta et septima haud pauca descripsimus.

## CANON XXII.

*Assimilatio optime fit, cessante motu locali.*

## EXPLICATIO.

Hunc canonem in commentatione ad operationem octavam satis explicavimus.

## CANON XXIII.

*Alimentatio per exterius, aut saltem non per stomachum, longævitati utilissima, si fieri possit.*

## EXPLICATIO.

Videmus omnia, quæ per nutritionem peraguntur, fieri per longas ambages; quæ vero per amplexus similibus, (ut fit in infusionibus,) non longam requirere moram. Itaque utilissima foret alimentatio per exterius; atque eo magis, quod deciduæ sint facultates concoctionum sub senectute: quamobrem si possint esse nutritiones aliæ auxiliares, per balneationes, unctiones, aut etiam per clysteria, conjuncta possint proficere, quæ singula minus valeant.

## CANON XXIV.

*Ubi concoctio debilis est ad extrusionem alimenti, ibi exteriora confortari debent ad evocationem alimenti.*

## EXPLICATIO.

Non est hoc, quod in isto canone proponitur, eadem res cum præcedente; aliud enim est, si alimentum exterius intro trahatur, aliud, si alimentum interius extra trahatur: at in hoc concurrunt, quod debilitati concoctionum interiorum alia via subveniant.

## CANON XXV.

*Omnis subita renovatio corporis fit, aut per spiritus, aut per malacissationes.*

## EXPLICATIO.

Duo sunt in corpore, spiritus et partes; ad utrumque longa via pervenitur per nutritionem; at viæ breves ad spiritus per vapores et affectus; et ad partes, per malacissationes. Illud autem paulo attentius notandum, quod nullo modo confundimus alimentationem per exterius cum malacissatione; neque enim intentio est malacissationis, ut nutriat partes; sed tantum ut eas reddat magis idoneas ad nutriendum.

## CANON XXVI.

*Malacissatio fit per consubstantialia, imprimentia, et occludentia.*

## EXPLICATIO.

Manifesta ratio est, quod consubstantialia proprie malacissent; imprimentia deducant; occludentia retineant, et perspirationem, quæ est motus malacissationi oppositus, cohibeant. Itaque (ut in operatione nona descripsimus) malacissatio simul bene fieri non potest sed per seriem et ordinem: primum, excludendo liquorem per spissamenta; quia extranea et crassa infusio non bene coagmetent corpus; subtile debet esse, et ex vaporis genere, quod intrat. Secundo, intenerando per consensum consubstantialium: corpora enim ad tactum eorum, quæ valde consentiunt, se aperiant, et poros laxant. Tertio, imprimentia vehicula sunt, et nonnihil consubstantialia inculcant, et mistura leniter astringentium, perspirationem interim paululum cohibet. At sequitur quarto loco magna illa astrictio et clausura per emplastrationem; et postea gradatim per inunctionem; donec malacum vertatur in solidum, ut suo loco diximus.

## CANON XXVII.

*Crebra renovatio reparabilium irrigat etiam minus reparabilia.*

## EXPLICATIO.

Diximus in additu ipso historiæ hujus eam esse viam mortis, quod magis reparabilia in consortio minus reparabilium intereant; ut totis viribus in reparatione hujusmodi partium minus reparabilium sit exsudandum; itaque admoniti Aristotelis observatione de plantis, quod scilicet novitas ramorum truncum ipsum in transitu reficiat; similem rationem fore arbitrati sumus, si sæpe reparentur carnes et sanguis in corpore humano; ut inde ipsa ossa, et membranæ, et reliqua, quæ natura minus sunt reparabilia, partim per transitum alacrem succorum, partim per vestitum illum novum carniem et sanguinis recentiorum, irrigentur et renoventur.

## CANON XXVIII.

*Refrigeratio, quæ non transit per stomachum, utilis ad longævitatem.*

## EXPLICATIO.

Ratio præsto est, quia cum refrigeratio non temperata, sed potens (præsertim sanguinis) ad vitam longam sit præcipue necessaria; omnino hoc non

fieri possit per intus, quantum opus est, absque destructione stomachi et viscerum.

## CANON XXIX.

*Complicatio illa, quod tam consumptio, quam reparatio, sint caloris opera, maximum est obstaculum ad longævitatem.*

## EXPLICATIO.

Destruuntur fere omnia magna opera a naturis complicatis; cum quod alia ratione juvet, alia noceat; atque hic librato iudicio et sagaci practica opus est; id nos, quantum res permittit et in præsentia occurrit, fecimus; separando calores benignos a nocivis; et ea, quæ ad utrumque faciunt.

## CANON XXX.

*Curatio morborum temporariis eget medicinis; ad longævitas vitæ expectanda est a diætis.*

## EXPLICATIO.

Quæ ex accidente superveniunt, sublatis causis desinunt: at cursus naturæ continuus, instar fluvii labentis, etiam continua indiget remigatione aut ventilatione in adversum: itaque operandum est regulariter per diætâs. Diætæ autem genere duplices sunt; diætæ statæ, quæ certis temporibus; et diætæ familiaris, quæ in victu quotidiana usurpari debet: potentiores autem sunt diætæ statæ, id est, series remedium ad tempus. Etenim quæ tanta virtute pollent, ut naturam retro vertere valeant, fortiora sunt plerumque, et magis subito alterantia, quam quæ familiariter in usum recipi tuto possint. Atque in remediis nostris intentionalibus, tres tantum diætâs statas reperias: diætâs opiatam; diætâs malacissantem; et diætâs emaciantem et renovantem. At inter ea, quæ ad diætâs familiarem et victum quotidianum præscripta a nobis sunt, efficacissima sunt hæc, quæ sequuntur; quæ etiam validitatem diætârum statarum fere sequant: nitrum, et subordinata ad nitrum; regimen affectuum, et studiorum genus; refrigeria, quæ non transeunt per stomachum; potus roscidantes; perspersio sanguinis cum materia firmiore, ut margaritis, lignis; inunctiones debitæ, ad cohibendum aërem et detentionem spirituum; calefactoria per exterius, tempore assimilationis post somnum; cautio de iis, quæ incendunt spiritum, induntque ei calorem acrem, ut de vinis et aromatibus; et usus moderatus et temperativus eorum, quæ indunt spiritibus calorem robustum, ut croci, nasturtii, alii, enulæ, opiatorum compositorum.

## CANON XXXI.

*Spiritus vivus interitum patitur immediate, cum destituitur, aut motu, aut refrigerio, aut alimento.*

## EXPLICATIO.

Sunt hæc scilicet illa tria, quæ superius vocavi- mus atriola mortis; suntque passionnes spiritus propriæ et immediatæ. Etenim organa omnia partium principalium serviunt, ut hæc tria officia præstentur: et rursus, omnis destructio organorum, quæ est lethifera, eo rem deducit, ut unum, aut plura ex his tribus deficiant. Itaque alia omnia sunt diversæ

viæ ad mortem : sed in hæc desinant. Fabrica autem partium, organum spiritus est ; quemadmodum et ille, animæ rationalis ; quæ incorporea est et divina.

## CANON XXXII.

*Flamma substantia momentanea est : aër fixa : spiritus vivi in animalibus, media est ratio.*

## EXPLICATIO.

Res est hæc et altioris indagacionis, et longioris explicationis, quam faciat ad inquisitionem præsentem. Sciendum interim flammam continenter generari et exstingui ; ut per successionem tantum continetur. Aër autem corpus fixum est, nec solvitur ; licet enim aër ex humido aqueo novum aërem gignat ; tamen vetus aër nihilo minus manet ; unde fit super-oneratio illa aëris, de quo diximus in titulo de ventis. At spiritus utriusque naturæ participes est, et flammæ et aëreæ ; quemadmodum et

fomites ejus sunt oleum, quod est homogeneous flammæ ; et aër, qui est homogeneous aquæ. Spiritus enim non nutritur ex oleoso simplici, neque ex aqueo simplici, sed ex utroque : atque licet nec aër cum flamma, nec oleum cum aqua, bene componantur, tamen satis conveniunt in mixto. Etiam spiritus habet ex aëre faciles suas et delicatas impressiones et receptiones ; a flamma autem, nobiles suos et potentes motus et activitates. Similiter etiam duratio spiritus res composita est, nec tam momentanea, quam flammæ, nec tamen tam fixa, quam aëris ; atque eo magis non sequitur rationes flammæ, quod flamma etiam ipsa exstinguitur per accidens ; nempe a contrariis et destruentibus circumfusis ; quam causam et necessitatem non habet pariter spiritus. Reparatur autem spiritus ex sanguine vivo et florido articularum exilium, quæ insinuatur in cerebrum ; sed reparatio ista suo modo, de quo nunc non est sermo.

## HISTORIA ET INQUISITIO PRIMA

## DE SONO ET AUDITU,

## ET DE FÖRMA SONI, ET LATENTE PROCESSU SONI :

## SIVE SYLVA SONI ET AUDITUS.

De generatione soni, et prima percussione.

De duratione soni, et de interitu et extinctione soni.

De confusione et perturbatione soni.

De adventitiiis auxiliis et impedimentis soni.

De hæsiione soni, et varietate mediorum.

De penetratione soni.

De delatione soni, et directione seu fusione ejus, et de area quam occupat, simul, et separatim.

De corporum diversitate, quæ reddunt sonum ; et instrumentis, et de speciebus soni, quæ occurrunt.

De multiplicatione, augmentatione, diminutione, et fractione sonorum.

De repercussione soni, et echo.

De conjugis et dissidiis audibilium et visibilium, et aliarum, quas vocant, specierum spiritualium.

De celeritate generationis et extinctionis soni, et tempore in quo fiunt.

De affinitate, aut nulla affinitate, quam habet sonus cum motu aëris, in quo defertur, locali et manifesto.

De communicatione aëris percussi et elisi cum aëre, et corporibus, vel spiritibus ipsorum, ambientibus.

De efformatione, sive articulatione soni.

De ipsissima impressione soni ad sensum.

De organo auditus, ejusque dispositione et indispotione, auxiliis et impedimentis.

De sono et auditu inter prima inquisitionem instituere visum est. Etenim expedit intellectui, et tan-

quam ad salubritatem ejus pertinet, ut contemplationes spiritualium (quas vocant) specierum, et operationum ad distans, misceantur cum contemplatione eorum, quæ operantur tantum per communicationem substantiæ ad tactum. Deinde observationes de sonis pepererunt nobis artem musicæ. Illud autem solenne est, et quasi perpetuum, cum experimenta et observationes coaluerint in artem, mathematicam et practicam intendi, physicam deseri. Quin etiam optica paulo melius se habet ; non enim tantum pictura et pulchritudo et symmetria optiæ proponuntur ; sed contemplatio omnium visibilium. At musicæ, tantum toni harmonici. Itaque de sonis videndum.

## DE GENERATIONE SONI, ET PRIMA PERCUSSIONE.

COLLISIO, sive elisio, ut vocant, aëris, quam volunt esse causam soni, nec formam nec latentem processum denotat soni, sed vocabulum ignorantæ est et levis contemplationis.

Sonus diffunditur et labitur tam levi impulsu in sua generatione ; item tam longe, idque in ambitum, cum non multum pendeat ex prima directione ; item tam placide absque ullo motu evidenti, probato vel per flammam, vel per plumas, et feutucas, vel alio quovis modo ; ut durum plane videatur, soni formam esse aliquam elisionem vel motum manifestum localem aëris, licet hoc efficientis vices habere possit.

Quandoquidem sonus tam subito generetur, et continuo pereat, necesse videtur ut aut generatio ejus aërem de sua natura paulum dejiciat, atque interitus ejus eum restituat; ut in compressionibus aquarum, ubi corpus in aquam injectum complures circulos efficiat in aqvis, qui proveniunt ex aqua primum compressa, deinde in suam consistentiam et dimensionem se restituente (id quod motum libertatis appellare consuevimus); aut contra, quod generatio soni sit impressio grata et benevola, quæ se insinuat aëri, et ad quam libenter aër se excitat; et interitus ejus sit a vi aliqua inimica, quæ aërem eo motu atque impressione diutius frui non sinit; ut in generatione ipsius corporis flammæ, in qua generatio flammæ videtur fieri alacriter, sed ab aëre et inimicis circumfusis cito destrui.

Fistulatio, quæ fit per os absque aliqua admota fistula, possit effici sugendo anhelitum versus interiora palati, non solum extrudendo anhelitum ad extra. Atque plane omnis sorbitio aëris ad interius dat sonum nonnullum. Quod dignum admodum notatu videtur: quia sonus generatur in contrarium motus manifesti aëris, ut prima aëris impulsio videatur plane efficiens remotum, nec sit ex forma soni.

Similiter si accipiatur vitreum ovum, atque per parvum foramen aër fortiter exsugatur; deinde foramen cera obturetur; et ad tempus dimittatur; post cera a foramine auferatur; audies manifeste sibilum aëris intrantis in ovum, tractum scilicet ab aëre interiore, qui post violentam rarefactionem se restituit. Ut hoc quoque experimento generetur sonus in contrarium motus manifesti aëris.

Similiter, in ludicro illo instrumento, quod vocatur lyra Judaica, tenendo latera inter dentes vibratur lingula ferrea tracta ad exterius, sed resilit interius ad aërem in palato, et inde creatur sonus.

Atque in his tribus experimentis dubium non est quin sonus generetur per percussionem aëris introrum versus palatum aut ovum vitreum.

Generatur sonus per percussione. Percussio illa fit, vel aëris ad aërem, vel corporis duri ad aërem, vel corporis duri ad corpus durum.

Exemplum percussione aëris ad aërem maxime viget in voce humana et in vocibus avium, et aliorum animalium; deinde in instrumentis musicis, quæ excitantur per inflationem: etiam in bombardis et sclopetis, ubi percussio edens sonum generatur maxime ex percussione aëris conclusi, exeuntis ex ore bombardæ aut sclopeti ad aërem externum. Nam pile indita non multum facit ad fragorem. Neque percussio corporis mollis ad corpus molle tantum representatur in percussione aëris ad aërem; verum et aëris ad flammam, ut in excitatione flammæ per folles; etiam flammæ inter se, alia aliam impellens, reddunt quandam mugitum; utrum vero interveniat aër, inquiratur ulterius. Etiam omnis flamma subito concepta, si sit alicujus amplitudinis, excitat sonum summovendo (ut arbitror) aërem magis quam ex esse: etiam in eruptionibus fit percussio spiritus erumpentis ad aërem ambientem; ut in crepitaculis quæ fiunt ex foliis siccis, aut sale nigro, et multis aliis immisissis in ignem; et in tonitru, vel erumpente spiritu e nube, vel volutante et agitato, ut fit in toni-

tru magis surdo et prolongato; etiam solet (ad ludicrum) folium rosæ viridis contractum ut aërem contineat, super dorsum manus aut frontem percussum, crepare per eruptionem aëris.

Exempla percussione corporis duri ad aërem ostendunt se in instrumentis musicis sonantibus per chordas; in sibilo sagittæ volantis per aërem; in flagellatione aëris, licet non percutiat corpus durum, etiam in organis musicis editur sonus per aërem percutientem aquam in fistula illa, quam vocant lusciniolam, quæ reddit sonum perpetuo tremulum, in mota aqua, et rursus recipiente: etiam in ludicris instrumentis, quibus se oblectant pueri (Gallos vocant) ad imitationem vocum avium: similiter in aliis hydraulicis.

Exempla percussione corporis duri ad corpus durum se ostendunt vel simpliciter, vel cum communicatione aëris nonnihil conclusi, præter illum aërem, qui secatur sive eliditur inter corpora dura percussa; simpliciter, ut in omni malleatione, seu pulsatione corporum durorum; cum communicatione aëris conclusi, ut in campanis et tympanis.

Lapis injectus fortiter in aquam reddit sonum; atque etiam guttæ pluvie cadentes super aquam; nec minus unda pulsans undam: in quibus percussio fit inter corpus durum et aquam.

Videtur in generatione omnis soni illud constans esse, ut aliquæ sint partes aëris, utque requiratur aër inter corpora percussa; qui aër, in percussione corporis duri ad aërem, et corporis duri ad corpus durum, videtur manifeste secari aut elidi. Arbitror flammam ad hoc posse sufficere, vice aëris: veluti si inter flammam majores sonet campana, aut lapides percutiantur: at in percussione aëris ad aërem elisio aut separatio illa videtur obscurior, sed tantum videtur aër verberari et impelli, idque molliter admodum in voce leni. Attamen necesse videtur, etiam in hoc genere, ut sit aliqua elisio aëris percussi per aërem percutientem: nam etiam in aëre moto per flabellum, aër a latere, et emissio aëre per folles, currens ille aëris, qui emittitur, dividit reliquum aërem. Verum de hoc genere elisionis aëris, quod fit ubi aëris percussio ad aërem edit sonum, ut in voce, inquiratur ulterius.

Merito dubitatur, utrum percussio illa, quæ edit sonum cum aër percutitur per chordam, aut alias, fiat ab initio, cum aër resiliente chorda percutitur; aut paulo post, videlicet densato per primam percussione aëre, et deinde præstante vices tanquam corporis duri.

Ubi redditur sonus per percussione aëris ad aërem, requiritur ut sit incarcerationio aut conclusio aëris in aliquo concavo; ut in fistulando per os, in tibiis; in barbitis; in voce, quæ participat ubi aër includitur in cavo oris aut gutturis. In percussione corporis duri ad aërem requiritur durities corporis, et citus motus; et interdum communicatio cum concavo, ut in cithara, lyra, flagellatione aëris, etc. At in percussione corporis duri ad corpus durum minus requiritur concavum, aut celer motus.

Fabulantur de pulvere pyrio albo, qui præstaret percussione absque sono. Certum est nitrum, quod est album, ad exsufflationem plurimum valere, ita tamen ut pernitas incensionis et percussione

et sonum multum promoveat: cita autem incensio ex carbone salicis maxime causatur, qui est niger. Igitur si fiat compositio ex sulphure et nitro et ex modico camphoræ, fieri potest ut incensio sit tardior, et percussio non ita vibrans et acuta: unde multum potest diminui de sono; sed etiam cum jactura in fortitudine percussio. De hoc inquiretur ulterius.

DE DURATIONE SONI, ET EJUS INTERITU ET  
EXTINCTIONE.

DURATIO soni campanæ percussæ aut chordæ, qui videtur prolongari et sensim extingui, non provenit utique a prima percussione: sed trepidatio corporis percussi generat in aëre continenter novum sonum. Nam si prohibeatur illa trepidatio, et sistatur campana aut chorda, perit cito sonus; ut fit in espinettis, ubi si dimittitur spina, ut chordam tangat, cessat sonus.

Campana pensilis in aëre longe clariorem et diuturniorem reddit sonum, licet percutiatur malleo ad extra, quam si stare fixa, et similiter malleo percutiatur. Atque de diuturniore sono reddita est jam ratio, quia trepidat diutius. Quod vero etiam primitivus sonus in pensili sit magis sonorus, in stante minus, amplius inquirendum est.

Similiter scyphus argenteus aut vitreus, talitro percussus, si sibi permittatur, sonum edit clariorem et diuturniorem; quod si pes scyphi altera manu teneatur fixus, longe hebetiorem et brevioris moræ.

Qui redditur in barbitio aut cithara sonus, manifesto non fit a percussione inter digitum, aut calamus, et chordam; seu inter digitum, aut calamus, et aërem: sed impellente digito, ac tum resiliente chorda, et resiliendo percussente aërem. Itaque cum chorda movetur plectro, non digito, aut calamo, continuari potest sonus ad placitum, propter asperitatem fili plectri resina parum obducti; unde non labitur per chordam, nec eam semel percussit, sed hæret, eamque continenter vexat; ex quo motu sonus continuatur.

Potest sumi in argumentum, quod sonus sit plane genitus quoddam motus localis in aëre, quod ita subito pereat. Quia in omni sectione aut impulsione aëris, aër affatim se recipiat et restituit; quod etiam aqua facit per multos circulos, licet non tam velociter quam aër.

DE CONFUSIONE ET PERTURBATIONE SONI.

In actu visus visibilia ex una parte non impediunt visibilia ex aliis partibus; quin universa quæ se offerunt undiquaque visibilia, terræ, aquæ, sylvæ, sol, ædificia, homines, simul ob oculos representantur. Quod si totidem voces aut soni ex diversis partibus simul salirent, confunderetur plane auditus, nec ea distincte percipere posset.

Major sonus confundit minorem, ut nec exaudiat: at species spirituales (ut loquuntur) diversi generis a sono, non confundunt sonum, sed omnia simul et semel hærent in aëre, alterum altero parum aut nihil conturbante; veluti lux, aut color, calor et frigus, odores, virtutes magneticæ; omnia hæc simul possunt hærare in aëre, nec tamen magnopere impediunt vel conturbant sonos.

Causa cur plura visibilia simul ad oculum repræ-

sentantur, altero alterum non confundente, ea omnino esse videatur; quod visibilia non cernuntur, nisi in linea recta; at soni audiuntur etiam in obliqua, aut arcuata. Itaque in area sphaeræ visus quot objecta deferuntur, tot sunt conii radorum; neque unquam alter conus in alterum coincidit; neque vertices conorum in idem punctum concurrunt, quia deferuntur in lineis rectis. At soni, qui deferuntur per lineas, et rectas, et arcuatas, possunt facile in unum punctum concurrere, itaque confunduntur. Eadem videtur causa, cur color magis vividus colorem magis obscurum non mergat; at lux major lucem debiliorem obscurat et condit; quia lux cernitur in linea arcuata, quemadmodum et sonus. Nam licet flamma ipsa candelæ non cernitur nisi in linea recta, tamen lux undique circumfusa perfertur ad visum in lineis arcuatis, quoad corpus candelæ: similis est ratio solis, aut flammæ. Quod si opponatur, neque ipsam lucem cerni nisi in recta linea ab aëre illuminato, verum est: verum id arbitrari etiam accidere sono; neque enim auditur sonus nisi in lineis rectis ab aliqua parte sphaeræ soni, quo prima pulsatio pertingit. Attamen color, qui nihil aliud est quam lucis imago inæqualiter reflexa, tam debiles circumfundit species, ut aërem circumfusum parum aut nihil tingat, nisi ubi deferuntur colores in lineis rectis inter objectum et oculum.

Fiat experimentum in aulo (Anglice "a recorder") duplici, in quo sit labrum, et lingua, et guttur, ad utrumque finem, ita ut applicentur ad unisonum: cava autem fistula existente duplici et continuata, sonent duo simul cantionem eandem ad utrumque finem, ac notetur utrum confundatur sonus, an amplietur, an hebetetur.

Accipiantur duo cavi trunci, et conjungantur in modum crucis, ita ut in loco ubi connectuntur sint pervii; et loquantur duo ad directum et transversum truncum, et applicentur similiter aures duorum ad fines oppositos, et notetur utrum voces se invicem confundant.

DE ADVENTITIIS AUXILIIS ET IMPEDIMENTIS SONI;  
DE HÆSIONE SONI, ET VARIETATE MEDIORUM.

MEMINI in camera Cantabrigiæ nonnihil ruinosæ, ad suffulcimentum erectam fuisse columnam ferream, crassitudinis pollicis fortasse et dimidii, eam columnam, baculo aut alias percussam, lenem sonum exhibuisse in camera ubi stabat columna, at in camera quæ subtus erat bombum sonorum.

Inquirendum, quæ corpora, et cujus soliditatis, et crassitudinis, omnino arceant et excludant sonum; atque etiam quæ magis aut minus eum hebetent, licet omnino non intercipient. Neque enim adhuc constat, quæ media interjecta magis propitia sint, quæ magis impediunt. Itaque fiat experimentum in auro, lapide, vitro, panno, aqua, oleo, et eorum crassitudine respectiva. De hoc omnino inquirendum est ulterius.

Aër medium ad sonum est maxime propitium, et quasi unicum. Rursus, aër humidior (arbitror) magis defert sonum quam sicciior: at in nebula quid fit, non memini. Nocturnus etiam magis quam diurnus: verum id silentio assignari potest.

Inquiretur de medio flammæ, qualis sit operationis

versus sonum; utrum videlicet flamma alicujus crassitudinis omnino arceat et interceptat sonum, aut saltem eum magis hebetet, quam aër. In ignibus Jubili hoc experiri licet.

Inquirendum etiam de medio aëris vehementer moti. Licet enim ventus deferat sonum, arbitrator tamen ventos vehementiores nonnihil turbare sonum, ut minus longe exaudiatur, etiam secundum ventum, quam in tranquillo: de quo inquiretur ulterius.

Videndum qualem reddit sonum sæs, aut ferrum ignitum malleo percussum, comparatum ad eum quem reddit frigidum.

#### DE PENETRATIONE SONI.

LAPIS aëritates habet tanquam nucleum aut ovum lapidis, qui agitatus reddit sonum obtusum; item tintinnabula; sed longe clariorem, si detur rima.

Inquiratur ab urinatoribus, si omnino audiant subter aquam, præsertim profundiorē: atque inquiretur plane utrumque; non tantum utrum audiant sonum aliquem de supra, qui editur in aëre; sed etiam utrum audiant percussionem corporis aquæ intra aquam, ubi non est aër. Expertus hoc sum in balneo; demittebatur situla bene capax; ita autem demittebatur ore inverso in æquilibrio, ut omnino in concavo suo deferret secum aërem subter aquam ad altitudinem palmæ unius; atque ad hunc modum tenebatur situla manibus depressa, ne everteretur aut resurgeret: tum urinator inserebat caput in concavam situlæ, et loquebatur: exaudiebatur vox loquentis; etiam sermo intelligebatur articulatum, sed mirum in modum acutus, et instar sibili fere, qualis in puparum ludo vox exaudiri solet.

Inquiratur illud exacte, ut reddatur omnino positivum, utrum possit generari sonus, nisi sit aër inter percussiones et percussum corpus. Veluti demittantur duo lapilli pensiles per filum in pelvim aquæ vel flumen, et agitentur ut percutiant se invicem in medio aquæ; vel mittatur forceps apertus in medium aquæ, et ibi claudatur: et notetur utrum edat sonum, et qualem. Equidem existimo urinatores, cum natant, subter aquam non edere sonum; nisi fortassis aliquis esse possit per successionem motus ad superficiem aquæ, atque inde percutiente aqua aërem.

Dubium non est, quin in utribus clausis, nec prorsus impletis, et agitatis, reddatur sonus, liquoris scilicet in iis contenti: nec minus redditur sonus demisso lapide in aquam, cum percutiat fundum vasis. Verum in primo experimento admiscetur aër; in secundo percussio fundi vasis per lapillum communicat cum aëre extra vas. At post percussionem primam non necesse est ut aër sit in medio per universam aream sphaeræ deferentis: nam id evincitur per experimentum loquentis in situla subter aquam, ubi pars deferentis ex aqua non est aër, sed lignum situlæ, et aqua; unde acuitur et minuitur sonus, et extinguitur.

Quoniam autem manifestum est, per corpora dura (velut terram figuralem et vitrum) transire et penetrare sonum; idque etiam certissimum est (licet adhuc hominum observationem laterit) inesse in omni corpore tangibili pneumaticum quiddam præter partes crassas intermixtum, videndum num hujusmodi penetratio soni non inde fiat, quod partes pneu-

maticæ sive aëreæ corporis tangibilis communicent cum aëre externo.

Accipe catinum aquæ argenteum, alterum ligneum; accipe forcipem ferream, et percutite fines ejus intra aquam in catinis illis, in distantia latitudinis pollicis fortasse aut amplius a fundo: audies sonum forcipis percussæ in catino argenteo magis multo sonorum, quam in ligneo. Quod si tamen vacua forent catina, et percuteretur forceps ad eandem distantiam, parum aut nihil interesset. Ex quo liquet primum, ubi nullus est aër, qui possit elidi, sed tantum aqua, edi sonum; deinde, melius communicari sonum editum per percussionem cum catino per aquam, quam per aërem. Clauso ore fortiter redditur murmur (quale solet esse mutorum) per palatum; quod si nares etiam fortiter obturentur, nullum possit fieri murmur. Unde liquet, sonum illum per palatum non actuari, nisi per apertum quod intercedit inter palatum et nares.

#### DE DELATIONE SONI, ET DIRECTIONE SEU FUSIONE EJUS; ET DE AREA QUAM OCCUPAT, SIMUL, ET SEPARATIM.

OMNIS SONUS diffunditur in ambitum sphaericum a loco pulsationis, et occupat universam aream ejus sphaeræ ad terminum certum, sursum, deorsum, lateraliter, undequaque.

Per aream ejus sphaeræ fortissimus est sonus juxta pulsationem: deinde secundum proportionem distantiae elanguescit, et demum evanescit.

Termini ejus sphaeræ extenduntur, pro acumine auditus, aliquatenus; sed est quiddam ultimum, quo, in sensu maxime exquisito, non pertingit sonus.

Est (arbitror) nonnihil in directione primæ impulsioniæ. Si quis enim staret in suggesto aperto in campis, et clamaret, longius arbitrator exaudiri posset vox in prorsum a loquente, quam pone. Sic si displodatur bombardæ, vel sclopetus, longius arbitrator exaudiri possit sonus in prorsum a bombardæ, aut sclopeto, quam pone.

Utrum aliquid sit in ascensione soni sursum, aut in descensione soni deorsum, quod sonum promoveat in ulterius, aut cessare faciat proprius, non constat. Auditur quidem plane sonus, si quis ex alta fenestra aut turri loquatur, ab iis qui stant in solo; et contra, editus ab iis qui in solo stant, a fenestra, aut turri: sed ab utrisque facilius, aut longius, de eo inquiretur ulterius.

Solent in concionibus usurpari suggesta, et in concionibus imperatoris monticelli ex cespitibus; sed minime tamen per hæc evincitur sonum facilius defluere, quam insurgere; quoniam hujus rei possit esse causa liber in loco altiore aër, nec obstipatus aut impeditus, ut fit infra in turba; non autem motus proclivior in deorsum. Itaque in hoc experimento non acquiescat contemplatio, sed fiat experimentum ubi cætera sint paria.

Vis soni excipitur tota in qualibet parte aëris, non tota in toto aëre, nisi foramen aut meatus fuerit valde exilis; nam si stet quis in loco aliquo maxime clauso, ita ut non penetret sonus omnino, idque in quacunque parte sphaeræ soni, et fiat foramen parvum, vox articulata intrabit per illud foramen, et denique per tot foramina quot placuerit terebrare per

universum ambitum sphaeræ soni: ut manifestum sit totam illam articulationem soni deferri integram per minusculas illas partes aëris, non minus quam si aër esset undique apertus.

Attendendum tamen est, utrum soni editi ex pulsationibus majoribus aëris (quales fiunt ex dispositionibus bombardarum) non deveniant exiliores cum intrent illa parva foramina. Subtilitates enim sonorum forte intrare possunt non confusæ, sed universus fragor neutiquam. De hoc inquiretur ulterius.

Radii corporum visibilium non feriant sensum, nisi deferantur per medium in directum, et interpositio corporis opaci in linea recta intercipit visum, licet alia omnino fuerint undequaque aperta. Verum sonus, si detur delatio, vel meatus, vel arcuando per sursum, vel inversa arcuatione per deorsum, vel lateraliter, vel etiam sinuando, non perit, sed pervenit. Attamen arbitror fortius deferri sonum per lineas directas inter pulsationes et aurem, et frangi nonnihil impetum per arcuationes et per situationes; veluti si paries sit inter loquentem et audientem, arbitror vocem non tam bene exaudiri quam si abesset paries. Arbitror etiam si paulo longius collocetur, vel loquens, vel audiens a pariete, melius exaudiri vocem quam prope parietem, quia arcuatio tanto minus abit a linea recta. Verum de hoc inquiretur ulterius.

Adnota aure ad alterum terminum tubi alicujus, aut cavi trunci longi, et voce submissa ad alterum orificium tubæ, exaudiri possit vox talis, quæ eadem submissione edita ad aërem apertum non pertingeret, nec exaudiretur. Unde liquet, clausuram illam aëris conferre ad deferendam vocem absque confusione.

Etiam communis est opinio, melius exaudiri vocem, cæteris paribus, sub tecto, quam sub dio: utrum vero melius exaudiatur vox, aure collocata in aperto, voce in tecto; aut contra, aure in tecto, voce in aperto, inquiretur ulterius; licet etiam in hoc communis sit opinio, melius exaudiri quæ foras sunt in ædibus, quam quæ in ædibus foras.

Commune est auditui ac visui, ac etiam quadantenus cæteris sensibus, ut intentio animi sentientis et directio expressa ad percipiendum nonnihil juvet; ut cum quis dirigit intuitum, aut (ut loquuntur) arrigit aures.

Soni non perferuntur æque longe articulati, et distincti, quam species, et glomeratio ipsorum confusa: nam strepitus vocum exaudiri potest, ubi voces ipsæ articulate non audiuntur; et tinnitus musicæ confusus, cum harmonia ipsa aut cantio non exaudiatur.

In trunco cavo optime conservatur sonus. Igitur accipiatur truncus cavus, bene oblongus, et demittatur extra fenestram cameræ humilioris; loquatur quispiam exerendo caput extra fenestram ad unum terminum trunci, quam maxime potest submissæ; apponat alter aurem ad alterum terminum trunci, stans infra in solo: fiat similiter hoc via versa, loquendo infra, aurem apponendo supra; atque ex hoc experimento fiat judicium, utrum vox ascendat aut descendat proclivius, aut etiam pariter.

Tradunt pro certo esse loca et ædificia nonnulla ita concamerata, ut si quis stet in quadam parte cameræ, et loquatur, melius exaudiri possit ad distantiam nonnullam, quam prope.

Omnis concentus paulo gravius et profundius sonare videtur, si removeatur nonnihil a sono edito, quam prope: ut simile quiddam videatur accidere auditui circa sonum, quale accedit visui circa species visibiles, ut nonnulla distantia ab organo sensus promoveat perceptionem sensus.

Verum fallax potest esse ista opinio, idque dupliciter. Primo, quod in actu visus requiruntur forte radii ab objecto ad pupillam, qui nulli possunt esse ubi objectum tangit pupillam; id quod inter auditum et sonum non requiritur; sed multo magis, quod ad videndum opus est luce. Objectum autem tangens pupillam intercipit lucem: at nihil hujusmodi auditui competit. Secundo etiam, quia in visu non semper desideratur medium: quandoquidem in tollendis cataractis oculorum, stylus ille parvus argenteus, quo summoventur cataractæ, etiam super pupillam intra tuniculam oculi movens, optime cernitur.

In objectis visus, si collocetur oculus in tenebris, objectum in luce, bene habet; si objectum in tenebris, oculus in luce, non fit visio. Itæ si velum tenuè ponatur ob oculos, aut reticulum, objectum bene cernitur; si super objectum, confundit visum. Atque licet fortasse neutrum horum competat sono et auditui, tamen monere possunt, ut fiant experimenta, utrum aures collocata juxta truncum cavum, si sonus fiat ad distans in aperto; aut, via versa, sonus excitatus ad cavum truncum, aures autem ponatur ad distans in aperto, promoveat magis perceptionem sensus.

DE CORPORUM DIVERSITATE, QUÆ REDDUNT SONUM, ET INSTRUMENTIS, ET DE SPECIEBUS SONI, QUÆ OCCURRUNT.

GENERA sonorum talem videntur subire partitionem: magnus, parvus; acutus, gravis; harmonicus, absonus; summissus, sive susurrans, exterior sive sonans; simplex, compositus; originalis, reflexus: ut sint partitiones sex.

Quo fortior fuerit prima pulsatio, et delatio liberior, et absque impedimento, eo major editur sonus: quo debilior percussio, et magis conturbata delatio, eo minor.

Acuti soni deferuntur æque longe, et fortasse longius, quam graves. De hoc melius inquiretur.

Prout majus fuerit concavum campanæ, eo graviorem edit sonum; quo minus, acutiorem.

Quo major fuerit chorda, eo reddit sonum graviorem; quo minor, acutiorem.

Quo intentior fuerit chorda, eo reddit sonum acutiorem; quo laxior, graviorem: ut chorda paulo major strictius extensa, et minor laxius, eundem possint reddere sonum.

In tubis similiter, et tibiis, et cornibus, et fistulis, atque etiam in ore hominis fistulantis, quo angustiora sunt et magis contracta, eo reddunt sonum acutiorem; quo latiora aut laxiora, graviorem.

In tibiis, aër exiens ex foramine propiore ad spiritum, reddit sonum acutiorem; e longinquiore, graviorem: ut tibia paulo major ad foramen propius, et minor ad longinquius, eundem possint reddere sonum.

In instrumentis chordarum nonnullis (ut in barbito, citharis, et similibus) invenerunt homines com-

moditatem ad extensionem earum præter extensionem primam, ut comprimentes eas digitis, inferius, aut superius, eas extendant ad alterationem soni.

Si accipiat scyphus vitreus aut argenteus, et talitro percutiatur, si aqua in scypho altius ascenderit, et scyphus plenior fuerit, reddit sonum acutiorem; si humilior, et scyphus magis vacuus fuerit, graviorem.

In trunco cavo, quali ad aves percutiendas utuntur, si quis ore fistulet, admoto ore ad alterum finem trunci, hebetatur scilicet sonus ad astantem; at si applicetur auris ad alterum finem, reddit sonum acutissimum, ut vix tolerari possit.

Fiat experimentum in trunco ex parte ubi collocatur auris angusto, ex parte ubi collocatur os latiore (et e converso) utrum sonus reddatur acutior, aut gravior, in modum speculorum, quæ contrahunt aut ampliant objecta visus.

#### DE MULTIPLICATIONE, AUGMENTATIONE, ET DIMINUTIONE, ET FRACTIONE SONI.

VIDENDUM quomodo possit artificialiter sonus majorari et multiplicari. Specula utrumque præstant in visu. Videtur autem reflexio subita soni verti in augmentum: nam si vox et echo simul reddantur, necesse est ut non distinguatur sonus, sed majoretur. Itaque soni super flumina ampliores sunt, resonante aqua, et se uniente cum sono originali.

Etiam notavi, facta æde rotunda in conductibus (ut loquuntur) aquarum, et deinde caverna oblonga, ac tum æde majore (quale est videre in campis juxta Charing-cross prope Londinum) si fiat clamor per fenestram, aut rimam ædis rotundæ, et stet quispiam juxta fenestram ædis majoris, longe terribiorem cieri rugitum, quam fit ad aurem alicujus astantis prope ubi fit clamor.

Memini in joculari ludo puparum, locutionem ita edî, ut audiatur distincte, sed longe acutior et exilior quam in aperto; ut fit in speculis, quæ reddunt literas longe minutiores quam sunt in medio ordinario: ita ut videatur plane sonus per artem reddi posse, et amplior et exilior.

Tenant pueri cornu arcus tensi inter dentes, et sagitta percutiunt chordam, unde redditur sonus magis sonorus, et quasi bombus longe major, quam si arcus non teneretur a dentibus: quod imputant consensui quem habent ossa dentium cum ossa auditus; quandoquidem et, via versa, ex stridore in auditu etiam dentes obstupescant.

Similiter tangat hasta lignum cavi lyræ, præsertim foraminis in ipso ad cavum finem, et teneatur dentibus ex altero fine, et sonet lyra; major fit sonus per prehensionem dentium, ei scilicet quiprehendit.

Certissimum est (licet non animadversum) quod vis illa, quæ post primam percussionem defert pilas, aut sagittas, aut spicula, et similia, consistat in partibus minutis corporis emissi, et non in aère perpetuo deferente, instar scaphæ in aqua. Hoc posito, videndum utrum non possit diminui sonus in bombardâ, aut sclopeto, absque magna debilitatione percussionis, hoc modo. Fiat sclopetum cum tubo bene forti, ut non facile frangatur; fiant in tubo quatuor aut quinque foramina, non instar rimarum,

sed rotunda circa medium tubi. Percussio suas jam accepit vires, nisi quatenus ratione longitudinis tubi augeantur: at percussio aëris ad exitum sclopeti, quod generat sonum, multum extenuabitur ab emissionem soni per illa foramina in medio, antequam aër inclusus perforatur ad os sclopeti. Itaque probabile est, sonum illum et bombum multis partibus diminutum fore.

#### DE REPERCUSSIONE SONI, ET ECHO.

REPERCUSSIONE SONORUM (quam echo vocamus) in argumentum sumi potest, non esse sonum motum localem aëris. Nam si esset, deberat repercuissio fieri in modo consimili ad originale; ut fit in omnibus repercuissionibus corporeis. At in sono, cum tam accurata requiratur generatio, ut in voce, quæ tot habet instrumenta, et in instrumentis musicis, quæ subtiliter fabricata sunt, ea, quæ reddunt sonum repercuissum, nihil horum habent, sed rudia plane sunt, et illud fere habent, ut sonus non transeat, vix aliud quippiam.

#### DE CONJUGIIS ET DISSIDIIS AUDIBILIIUM ET VISIBILIIUM, ET ALIARUM, QUAS VOCANT, SPECIERUM SPIRITUALIUM.

##### CONVENIUNT IN HIS.

Ambo diffunduntur in circuitum sphericum, et occupant universam aream ejus spheræ, et feruntur ad spatia bene longinqua, et elanguescunt paulatim secundum distantiam objecti, deinde evanescent. Ambo deferunt figuras et differentias suas, per portiones minutas spheræ suæ integras et inconfusas; ut percipiuntur per foramina parva non secus quam in aperto.

Ambo sunt generationis et delationis valde subitæ ac celeris; ac e contra extinguuntur et pereunt subito et celeriter.

Ambo suscipiunt et deferunt minutas differentias et accuratas, ut colorum, figurarum, motuum, distantiarum in visibilibus; vocum articulatarum, tonorum harmonicorum, et pernicios alterationis sive trepidationis ipsorum in audibilibus.

Ambo in virtute et viribus suis non videntur vel emittere aliquam corporalem substantiam in media sua, aut ambitum spheræ suæ; nec etiam edere ad cieri manifestum motum localem in mediis suis, sed deferre quasdam species spirituales, quarum ignoratur ratio et modus.

Ambo videntur non generativa alicujus alterius virtutis aut qualitatis præter virtutem propriam, et eatenus operari; alias sterilia esse.

Ambo in propria sua actione videntur tria quasi corporaliter operari. Primum, quod fortius objectum mergat et confundat debilius, ut lux solis lucem candelæ, displosio bombardæ vocem. Secundum, quod excellentius objectum destruat sensum debiliorem, ut lumen solis oculum, sonus violentus in proximo ad aurem auditum. Tertium, quod ambo repercutiuntur, ut in speculis et echo.

Neque objectum unius confundit aut impedit objectum alterius; velut lux aut color, sonum, aut e contra.

Ambo afficiunt sensum in animalibus, idque ob-

jectis secundum magis aut minus gratis aut odiosis : attamen efficiunt etiam modo suo inanimata proportionata et organia sensuum (ut videtur) conformia ; ut colores speculum, quod crystallinum est instar oculi ; soni locos reverberationis, qui videntur etiam similes ossi et cavernæ auris.

Ambo operantur varie, prout habent media sua bene aut perperam disposita.

Ad ambo medium magis conducibile et propitium est ær. In ambobus, in objectis accuratioribus, nonnihil affert intentio sensus, et quasi erectio ejus ad percipiendum.

#### DIFFERUNT IN HIS.

VIDENTUR species visibilium esse tanquam emissiones radorum a corpore visibili, instar fere odorum. At species audibilium videntur magis participare ex motu locali, instar percussionum quæ fiunt in aère : ut cum dupliciter plerumque operentur corpora, per communicationem naturæ suæ, aut per impressionem aut signationem motus, videatur diffusio illa in visibilibus magis ex primo modo participare, in audibilibus ex secundo.

Videtur delatio sonorum magis manifesto deferri per aërem, quam visibilium. Neque enim, arbitrator, ventus vehemens tantum impedire potest aliquid visibile a longe, quam sonum ; flante, intelligo, vento in contrarium.

Insignis est illa differentia, unde etiam plurimæ minores differentie derivantur, quod visibilia (excepta luce originali) non feruntur nisi per lineas rectas, cum soni deferantur per lineas arcuatas.

Hinc fit quod visibilia alia alia non confundant simul representata ; soni contra. Hinc fit quod soliditas substantiæ non videatur impedire visum magnopere, modo posituræ partium corporis sint ordine simplici et per rectos meatus, ut in vitro, aqua, crystallo, adamante : at parum panni serici aut linei rumpit visum, cum sint corpora valde tenuia et porosa ; at hujusmodi panni parum aut nihil impediunt auditum, ubi solida illa quam plurimum. Hinc fit quod ad reverberationem visibilium sufficiat parvum speculum, aut simile corpus perspicuum, modo ponatur in linea recta, ubi visibilia meant ; at ad faciendam reverberationem echus oportet sonum etiam a lateribus includere, quia fertur undequaque. Longius fertur objectum visibile, pro rata proportionem, quam sonus.

Visibilia, nimis prope admota ad oculum, non tam bene cernuntur, quam per distantiam nonnullam, ut radii coire possint in angulo magis acuto : at in auditu, quo propius, eo melius. Verum in hoc duplex potest esse error. Prior, quod ad visum requiritur lux : ea autem, objecto ad oculum propius admoto, arcetur. Nam audivi ex fide digno, qui curabatur ex cataractis oculorum, cum stylus ille minutus argenteus duceretur super ipsam pupillam oculi sui, eamque tangeret, absque ullo medio (existente stylo illo, seu acu argenteo, longe angustiore quam pupilla erat oculi) eum clarissime vidiæ stylum illum. Secundus, quod sit plane interposita caverna auris ante instrumentum auditus, ut sonus exterior tangere os et membranam auditus plane nequeat.

Celerius deferuntur species visua, quam soni, ut percipitur in flamma, et sonitu sclopetorum ; etiam in fulgure, et tonitru, ubi tonitru auditur post pausam.

Etiam existimo diutius hæere species soni, quam visibilia. Licet enim et illæ non subito intereat, ut manifestum est in circulo vertente, et chordis talitro percussis, et crepusculo, et similibus ; tamen diutius arbitrator durant soni, quia deferuntur a ventis.

Radii lucis glomerati etiam inducunt calorem, quæ est actio diversa a visibili. Similiter, si verum sit, clamores aves volantes dejecisse, etiam ea est actio protinus diversa ab audibili.

Non videtur in visibili esse objectum tam odiosum ad sensum, quam in audibili : sed magis ex æquo. Nam fœda visui magis displicent ob excitationem phantasie de rebus fœdis, quam propter æ ; at in audibilibus, sonitus serræ, dum acuitur, et similia inducunt horrorem ; et tonus discordans in musica statim rejicitur et respuitur.

Non constat esse refractionem in sonis, ut in radiis. Attamen proculdubio resiliunt soni ; sed illud reflexioni assignandum. Neque enim (arbitrator) si sonus pertranseat diversa media, ut aërem, pannum, lignum, alium esse locum soni ubi defertur, alium ubi audiatur ; id quod proprium refractionis est ; sed videtur pendere ex operatione in lineis rectis refractio ; id quod non competit sono.

Contractio vero soni, et dilatatio ejus, secundum dispositionem medii fit proculdubio, ut in puparum vocibus et locutione sub aqua : contrahitur sonus in caverna illa, in campis dilatatur ; quemadmodum per specula dilatantur et contrahuntur visibilia.

Medium trepidans (ut fumus in visibilibus) facit visibilia objecta etiam trepidare : at in sonis nihil adhuc tale invenitur, nisi forte accessio et recessus pro ventos. Nam trepidatio in fistula lusciniolæ, est trepidatio percussionis, non medii.

Post multam lucem, mutando ad tenebras, vel post tenebras ad lucem, confunditur parum visus : utrum vero hoc fiat a magnis fragoribus, aut alto silentio, inquirendum.

#### DE CELERITATE GENERATIONIS, ET EXTINCTIONIS SONI, ET TEMPORE IN QUO FIUNT.

OMNIS sonus cito admodum generatur, et cito interit : celeritas autem motus ipsius, et differentiarum ejus, non tam mirabilis res videtur. Etenim digitorum motus in cithara, aut anhelitus in fistula aut tibia, celeres admodum inveniuntur ; etiam lingua ipsa (non curiosum prorsus organum) tot peragat motus quot literas : quod vero soni non solum tam perneciter generentur, sed et tantum spatium sua vi et impressione quasi momentanea occupent subito, id summam admirationem habet. Nam, exempli gratia, homo in medio campo vociferans exauditur ad quartam partem milliariis in ambitu, idque verbis articulatis, iisque in singulis minutis portionibus aëris hærentibus, idque in spatio temporis longe minore fortasse minuto.

De spatio temporis, in quo defertur sonus, inquirendum. Id hoc modo inveniri potest : Stet homo in campanili, noctu ; stet alter in plano, ad distantiam forte milliariis, aut quam procul campana exaudiri possit, habeatque paratam faciem lucentem, sed

coopertam. Sonet campana in campanili; quam cito illa exaudiatur ab illo altero qui stat in plano, attollat ille facem: per hoc, ex spatio temporis inter campanam pulsam et facem visam, deprehendi possunt momenta motus soni ab eo qui stat in campanili.

In tormentis igneis flamma conspicitur antequam bombus exaudiatur; cum tamen flamma sequatur exitum pilæ: ut flamma tardius exeat; citius sensum feriat. Unde recte colligitur, radios visibiles celerius diffundi, et pervenire, quam species aut impressiones soni.

DEAFFINITATE, AUT NULLA AFFINITATE, QUAM HABET SONUS CUM MOTU AERIS, IN QUO DEFERTUR, LOCALI ET MANIFESTO.

Sonus non videtur manifesto et actualiter quatefacere et turbare aërem, ut ventus solet; sed videtur motus soni fieri per species spirituales; ita enim loquendum, donec certius quippiam inveniat.

Adeo ut existimem, sonum clamantis bene magnam, in parva ab ipso motu anhelitus distantia, vix folium aliquod populi albæ tremulum, aut festucam, aut flammam moturum.

Attamen in pulsationibus majoribus deprehenditur motus plane corporalis et actualis aëris: id vero utrum fiat a motu ipso, qui generat sonum, an a concussa, aut concomitantia, non constat. Tonitrua quandoque tremere faciunt fenestras vitreas, et etiam parietes: arbitror etiam bombardas displosas, aut eruptiones cuniculorum subterraneorum idem facere.

Memini etiam, ni fallor, apud collegium regium in Cantabrigia, esse ligneam quandam fabricam, in qua campanæ pendent, eamque a campanis, quando sonant, quateferi. Sed qualiscunque fuerit ille occultus motus, qui est sonus, apparet illum nec absque manifesto motu in prima pulsatione gigni, et rursus per motum manifestum aëris deferri aut impediri.

Verbum placide prolatum, quod ad distantiam triginta pedum forte exaudiri possit, tamen admotam flammam candelæ prope os, ad unum pedem etiam, vix trepidare faciet: ubi paulo intensior flatus oris flammam faciet tremulam multo in longiore distantia.

Sonus campanarum, et similium, accedit clarior, aut recedit hebetior, prout fiat ventus versus aurem aut adversus. Idem fit in clamore: qui, contra ventum editus, non tam longe auditur.

Traditur, per ingentes clamores applaudentium, et voces jubili, ita aërem collisum aut rarefactum fuisse, ut deciderent aves volantes. Opinio vagatur, sonitus complurium campanarum simul in urbibus populosis contra et fulminum perniciem et pestilentias valere.

Traduntur pro certo loca et ædificia nonnulla ita concamerata, ut si quis loquatur, atque (ut fertur) loctio ista fiat contra parietem in una parte cameræ, melius exaudiantur verba post distantiam nonnullam a voce, quam prope.

Notavi sedens in curru, et demisso ex una parte velo currus, aperto ex altera, mendicum, qui clamabat ex latere currus clauso, ita visum esse ac si clamaret ex latere aperto; ut vox plane repulsa circumiret, aut saltem undique sonans, putaretur tamen ex ea parte audiri, qua melius pertingeret.

Si teneatur candela juxta foramen illud quod spiraculum est tympani, et percutiatur tympanum, concutitur et extinguitur flamma. Idem fit in sonando cornu venatoris, si apponatur candela ad exitum cornu, etc.

Etiam exquisitæ differentiæ, quas suscipit sonus, easque secum defert, demonstrant hujusmodi molles affectus non esse motus continuos locales. Nam sigilla in materia certe accommodata faciunt exquisitas impressiones; ita ut in generatione soni fortasse hoc fieri possit. Sed delatio et continuatio illa non competit, præsertim in liquidis: exquisitas autem illas differentias intelligimus de vocibus articulatis et tonis harmonicis.

Verum omnino de hac re (videlicet, quam relationem et correspondentiam habeat sonus ad motum localem aëris) inquiratur diligentius; non per viam, utrum (quod genus quæstionis in hujusmodi rebus omnia perdidit) sed per viam, quatenus: idque non per argumenta discursiva, sed per apposita experimenta et instantias crucis.

DE COMMUNICATIONE AERIS PERCUSSI ET ELISI CUM AERE ET CORPORIBUS VEL SPIRITIBUS IPSORUM AMBIENTIBUS.

In percussione campanæ, sonus editus per percussione campanæ cum malleo ab extra, ut cum embolo ad intra, ejusdem est toni. Adeo et sonus redditus per percussione ab extra non possit generari per collisionem aëris inter malleum et extima campanæ; quandoquidem habeat rationes ad concavum campanæ ab intra. Et si foret lamina plana aëris, non concavum quippiam, alius, opinor, foret sonus.

Si fuerat rima in campana, reddit sonum raucum, non jucundum aut gratum.

Videndum, quid faciat corporis, quod percutitur, crassitudo ad sonum, et quousque; veluti, si ejusdem concavi una campana sit crassior, altera tenuior. Expertus sum in campana ex auro, eam reddere sonum excellentem, nihilo pejorem, imo meliorem, quam campanam argenteam, aut æneam. Attamen nummus aureus non tam bene tinnit quam argenteus.

Dolia vacua reddunt sonum profundum et sonorum, repleta hebetem et mortuum.

At in barbitō, cithara, et hujusmodi, licet prima percussio sit inter chordam, et aërem exteriorem; tamen statim ille aër communicat cum aëre in ventre, sive cavo barbiti, aut citharæ. Unde in hujusmodi instrumentis fit semper perforatio aliqua, ut aër exterior communicet cum aëre concluso, absque quo sonus foret hebes et emortuus.

Fiat experimentum fistulæ illius lusciniolæ, ut impléatur oleo, non aqua; et notetur quanto sonus sit mollior, aut obtusior.

Cum redditur sonus inter anhelitum et aërem percussum, in fistula, aut tibia, ita tamen redditur, ut habeat communicationem nonnullam cum corpore tibie aut fistulæ. Alius enim fit sonus in tuba lignea, alius in ænea; alius, arbitror, si tuba per interius, aut fortasse etiam per exterius, fuerit obducta serico, aut panno; alius fortasse si tuba fuerit madida, alius si sicca. Etiam existimo in espinettis, aut barbitō, si tabula illa lignea, super

quam extenduntur chordæ, foret ænea, aut argentea, diversum nonnihil possit edere sonum. Verum de his omnibus inquiratur ulterius. Etiam quatenus ad communicationem, inquirendum est, quid possit corporum diversitas et inæqualitas: veluti si penderent tres campanæ, una intra alteram cum spatio aëris interposito, et percuteretur campana exterior malleo, qualem editura foret sonum respectu campanæ simplicis.

Obducatur campana ab extra panno aut serico, et notetur, quando pulsatur campana per embolum interius, quid faciat obductio illa ad sonum.

Si foret in barbito lamina ænea, aut argentea, fora-

minata loco lignæ, videndum quid hoc faciat ad sonum.

Usurpantur in Dania, atque etiam deferuntur ad nos, tympana ænea, non lignea, minora ligneis, atque edunt sonum (arbitror) magis sonorum.

Agitatio aëris in ventis vehementioribus non multum (arbitror) redditura sit sonum, si absunt sylvæ, fluctus, ædes, aut similia; attamen receptum est, ante tempestates fieri murmura nonnulla in sylvis, licet flatus ad sensum non percipiatur, nec moveantur folia.

Desunt tria capitula, quæ perficere non vacabat.

## ARTICULI QUÆSTIONUM CIRCA MINERALIA.

PRIMA LITERA ALPHABETI EST COMPOSITIO, INCORPORATIO, AUT UNIO METALLORUM ET MINERALIUM.

QUIBUSCUM metallis aurum per simplicem colliquesfactionem incorporabit, et quibuscum non: qua item quantitate incorporabit, et quod genus corporis talis compositio constituet.

Aurum cum argento, quod fuit vetus illud electrum: aurum cum hydrargyro, sive argento vivo: aurum cum plumbo: aurum cum cyprio, sive cupro: aurum cum ære: aurum cum ferro: aurum cum stanno.

ARGENTUM itidem.

Argentum cum argento vivo: argentum cum plumbo: argentum cum cupro: argentum cum ære: argentum cum ferro: argentum cum stanno.

TUM ARGENTUM VIVUM.

Argentum vivum cum plumbo: argentum vivum cum cupro: argentum vivum cum ære: argentum vivum cum ferro: argentum vivum cum stanno.

PLUMBUM etiam.

Plumbum cum cupro: plumbum cum ære: plumbum cum ferro: plumbum cum stanno.

CUPRUM pariter.

Cuprum cum ære: cuprum cum ferro: cuprum cum stanno.

Æs etiam.

Æs cum ferro: æs cum stanno.

Ultimo FERRUM.

Ferrum cum stanno.

Quenam sint metalla composita vulgo usitata atque cognita, et quibus proportionibus ea misceantur. Nempe,

Orichalcum ex ære et Cadmia sive lapide calaminari.

Plumbum cinereum ex plumbo vulgari et stanno.

Æs campanum ex, etc.

Metallum illud factitium, quod specie tenus argentum æmulatur, vulgo alchemicum dictum.

Trium, vel plurium, metallorum decomposita nimis prolixum esset recensere; excepto, siqua sint composita istiusmodi pridem observata.

Observandum porro, numqua duo metalla, quæ

secum sola misceri non sustinent, alius, et cujusnam, ope misceri poterint.

Quæ metalla confici possint ex metallo et lapide, aut aliis fossilibus; perinde ac orichalcum ex ære et lapide calaminari fit: quæ nempe metalla cum vitriolo; quæ cum ferro in pulverem trito; quæ cum silice, etc.

In nonnullis saltem horum periculum fiat, ut de cæterorum ingenio melius constet.

Numquam metalla, et alia fossilia, cum vitro liquefacto incorporabunt. Et quod genus corporis inde consurget.

In incorporationibus quantitates sedulo pendendæ. Forte enim in exigua quantitate incorporatio fiet, quæ in majore non item; ut videre est in illis sequioribus metallis (vulgo *alloys* dictis) quibus in auro, et argento, in monetam cudendis, utuntur.

In corpore composito tria præcipue dispicienda sunt: color; fragilitas aut ductilitas; volatilitas aut fixatio; comparando cum corporibus simplicibus.

In præsens emolumentum usumque, hæc regula est. Ratio habeatur pretii duorum corporum simplicium; tum pendatur dignitas unius supra aliud, respectu usus: dein advertet, num poteris compositum efficere, quod plus pretii vilitate refundat, quam ab usus dignitate detriverit. Verbi gratia. Pendatur pretium bombardarum ferrearum: pendatur etiam pretium bombardarum ferrearum: tum porro advertas, quantum æneæ bombardæ ferreis usu præstent; tum si ex ære et ferro compositas conflare poteris, quæ usus commoditate a puris æneis non multum aberunt, multo autem minore pretio constabunt; id scilicet rei, et privatæ et publicæ, in lucrum cedit.

Sic in auro, et argento, pretium in duodenis duplum est. Dignitas auri supra argentum haud magna est. Similis utriusque splendor; sed et argenti etiam splendor quorundam oculis magis aridet: ut in pannis vittisque bracteatis; ensium capulis argento obductis, et similibus. Præcipua dignitas in eo est, quod aurum ignem sustineat, quem nequit argentum: id autem ex naturæ præstantia oritur, non in usu ejus omnino positum est. Neque

enim novi, quid in usu præset, præterquam quod argento obducta squalori ac rubigini magis obnoxia sint, quam deaurata: quod vitium, si paucillum auri admiscendo corrigi possit, id lucro erit. Itaque nonnihil mirari subit, per aliquot jam ætates antiquorum electrum intercedisse (quod fuit ex auro et argento, mixtis, conflatum) cuius, opinor, in cuedis nummis, in vasis pretiosis extundendis, et in deaurando, plurimus usus esse poterit.

Notandum, in conversione metallorum impossibilitatem, vel saltem difficultatem non levem, subsesse: relati in efficiendo auro, argento, cupro. E contra, in adulterandis confingendisque metallis, fraudem esse libero homine indignam. Videtur autem inter hæc mediam viam esse; scilicet, per nova composita, si quidem modi incorporandi plene innotescerent.

Quam incorporationem, seu potius imbibitionem, metalla recipient ex vegetabilibus, citra dissolutionem: ut cum armamentarii chalybi lentorum ductilitatemque, aquam, aut succum herbarum inspergendo, conciliant cumque aurum, quod præter modum induruit, renitensque est factum, injectis coriorum maceratorum aut oleo subactorum ramentis, pristinam ductilitatem recuperat; inquirendum est.

Notandum, quod in his, et similibus apparentibus imbibitionibus, optimum esset ut ratio haberetur ponderis aucti, aut non aucti: si enim nihil ponderis accesserit, suspicari possumus, nullam prorsus substantiæ imbibitionem factam esse: sed tantum alterius corporis applicationem disponere ac invitare metallum ad aliam partium posituram, quam alias ex se capturum foret.

Post incorporationem metallorum per simplicem colliquefactionem, ut magis discernatur indoles, ac consensus, dissensusque metallorum per dissolutorum incorporationem: observandum est, quæ metalla aquis stygiis dissoluta facile in unum coalescant, et quæ non: qua de re articulatum inquirendum, ut prius in colliquefactionibus.

Observandum in dissolutionibus non coalescentibus, quisnam effectus sequatur: num scilicet ebullitio; ad fundum præcipitatio; ad summum ejaculatio; in meditullio suspensio; et similia.

Nota dissensum menstruorum, sive aquarum stygiarum, posse incorporationi impedimento esse, æque ac dissensum metallorum ipsorum. Ubi ergo menstrua eadem sunt, et tamen incorporatio non fit, illic in metallis ipsis dissensus est: id vero minime constat, ubi menstrua diversa sunt.

SECUNDA LITERA ALPHABETI EST SEPARATIO METALLORUM, ET MINERALIUM.

SEPARATIO triplicis generis est. Primum, separatio metalli puri a recremento et nativa scoria, quam repurgationem dicimus. Secundum, cum unum metallum seu minerale ex alio elicimus, quod extractionem vocare licet. Tertium, cum metallum aliquod resolvimus in sua principia, materiam primam, sive elementa, (vel quocunque alio nomine indigitare placeat,) quam operationem principiationem vocabimus.

Quod ad repurgationem attinet, de illa per singula metalla quæremus, nempe aurum, argentum, et reliqua.

Obiter etiam quæremus de primo lapide, rudimento minerali, metallo immaturo, sive marcasita, singulorum metallorum; quod genus corpora sint, et quibus sensim gradibus ditescant.

Quærendum etiam de modo separandi; num igne, vel aquis stygiis; vel aliter. Præterea, quod ad modum repurgandi, dispiciendum est, quo pacto calorem intendere vel fusionem accelerare possis; quo minore pretio stet repurgatio.

Modi hoc faciendi in tribus sunt: nempe, in flatu, quo ignis accenditur; in modulo fornacis, quo calor unitione et reflexione intendatur; et in quibusdam additiis, sive medicamentis, quorum ope corpora citius aperiantur.

Nota modum faciendi, ut flatus quam minimum intermittatur, et intendendi caloris in fornace, in omnibus metallis eundem esse posse: additiis autem, ut citior fusio concilietur, diversa sint oportet, pro diversa metallorum natura.

Notetur porro, quod si putes quantitatem additamentorum adaugendo ad proportionem scoriam nativæ admistæ rem confici, falli poteris: quantitas enim passivi plus oberit, quam eadem quantitas activi proderit.

Quod ad extractionem, quærendum quæ metalla alia contineant, et quæ non: ut plumbum continet argentum; cuprum item argentum. Et similiter in aliis.

Nota; quamlibet impensæ in extrahendo pretium extracti superent, pergendum tamen esse: inde enim natura, et possibilitas rei saltem detegitur. Cæterum, de impensæ siminuenendis poterit subinde iniri ratio.

Quærendum insuper, in qua differentia sint ista metalla, quæ alia plus minusve continent; et quomodo id conveniat cum vilitate aut dignitate metalli, vel mineralis, ei permisti, in se. Verbi causa, plumbum illud, quod plus argenti continet, eo fragilius, atque alias in se vilius habetur.

Quod ad principiationem attinet, affirmare non possum, utrum tale quidpiam in rerum natura sit, necne; chemicosque in eo nimium desudare existimo. Sed utcunque sit, (num solutio, aut extractio, aut vero conversio, fiat per ignem,) sedulo quærendum est, qui sales, sulphur, vitriolum, mercurius, aut corpora istius modi simplicia, in singulis metallis reperiantur; et qua quantitate.

TERTIA LITERA ALPHABETI EST VARIATIO METALLORUM IN DIVERSAS FORMAS, CORPORA, AC NATURAS, QUARUM PARTICULARIA SIGILLATIM HIC SEQUUNTUR.

TINCTURA: rubigo: calcinatio: sublimatio: præcipitatio: amalgamatizatio, vel versio in massam mollem: vitrificatio: fusio, vel versio in liquorem: germinatio, vel ramificatio, vel arborescentia: induratio et mollificatio: ductilificatio vel fragilificatio: volatilitas et fixatio: transmutatio vel conversio.

De tinctura inquirendum; quo modo metalla penitus penitusque tingantur; quibus modis id fiat, et in quos colores: quomodo nempe argentum flavedine, cuprum albedine, tingatur: quomodo etiam rubor, viriditas, cæsius color, splendore retento, inducatur.

Item de tinctura vitri.

Item de tinctura marmoris, silicis, vel alterius la-

pidia. In vertendo in rubiginem duo præcipue quærenda; quibus id corrosivis fiat; et in quos colores mutatio sit. Ut plumbum in album, quod cerussam dicunt: ferrum in flavum, quod crocum martis dicitur; argentum vivum in cinnabarim: æs in æruginem, quam viride æris vocant.

De calcinatione quærendum; quomodo singula metalla calcinentur; et in quale corpus, et quæ sit calcinandi via exquisitissima.

Quantum ad sublimationem, quærendum; quomodo fiat sublimatio, et quæ metalla sublimationem sustineant; et quodnam corpus sublimatum efficiet.

Similiter quod ad præcipitationem, quærendum; quibus aquis stygiis singula metalla præcipitantur; aut quibuscum additamentis; et quo tempore; et in quod corpus.

Sic etiam de amalgamatizatione; quæ metalla illam patientur; quomodo fiet; et in quale corpus.

De vitrificatione quoque; quæ metalla eam sustineant; quibus item fiat mediis; in quem colorem mutatio fiat: quando item totum penitus metallum in vitrum mutatur; et quando in parte tantum vitrea metallum suspenditur: quod etiam sit pondus corporis vitrificati comparati cum corpore crudo: cumque vitrificatio mors quædam metallorum habeatur, quærendum, a qua vitrificatione fiat regressus, et a qua non.

De solutione in liquorem, quærendum; quod sit cujusque metalli dissolvendi proprium menstruum; et negative, quod menstruum in quod metallum dentem imprimet, et in quod non; et quæ varia menstrea quodlibet metallum dissolvent, et quæ perfectissime; item processus, seu motio dissolutionis: modus surgendi, bulliendi, vaporandi; violentior aut pacatior; majore an minore cum calore: item quantum, seu proportio, metalli, in quam vim suam exercere possit aqua fortis, sic ut in plusculum non valeat. Item color, in quem liquor mutabitur. Supra omnia quærendum, numquod menstruum sit, quod metalla dissolvere possit citra mordacitatem atque corrosionem; et quod corpus per sympathiam aperiat, sine rodente violentaque penetratione.

Quod ad germinationem, sive ramificationem, tametsi obiter tantum fiat, et in nugis fere habeatur, et animi tantum causa factis, non tamen usu magis serio destituitur; propterea quod subtilissimos et delicatos motus spirituum detegat, quando gestiunt, nec tamen erumpere datur: quemadmodum in vegetabilibus videre licet.

Quod ad indurationem, et mollitionem, quærendum; quidnam sit, quod metalla sensim et gradatim duriora efficiet; quod itidem molliora. Hæc inquisitio in geminum finem collineat. Primo, in usum; ut cum ferrum igne molliatur, facit ut malleo cedat. Secundo, quoniam induratio fixationis quidam gradus est; emollitio autem, volatilitatis. De his ergo instituta quæstio illis lucem dabit.

Quod ad ductile et fragile, ejusdem fere generis sunt. Digna tamen de quibus sigillatim quærat: præcipue, ut fragilitati jungatur ductilitas; veluti, quod vitrum malleo duci sustineat, et ut enses ad obsistendum et penetrandum rigidi sint, nec tamen fractu faciles.

Quod ad volatilitatem fixationemque attinet, hæc præcipua membra sunt, de quibus quærat. Extremus fixationis gradus est, in quem nec ullus ignis,

nec aqua stygia simul cum igne, quidquam operari poterit; si tamen talis omnino fixatio possibilis sit. Proximus est, quando ignis simplex, absque aqua aliqua stygia, nihil movebit. Proximus, quando vis artis exploratoriae ferri poterit. Proximus, quando ignem folle non excitatum ferre possit, talemve ignis gradum. Proximus est, quando ignem ferre non possit, sed tamen malleo ducitur. Ultimus est, quando nec ducitur, nec tamen fluit, sed stupet. Sic et volatilitatis summus gradus est, quando absque reditu avolat. Proximus, quando sursum volabit, et non difficulter redibit. Proximus, quando sursum volabit supra caput, per genus quoddam exsufflationis, citra vaporationem. Proximus, quando liquescet, tametsi non ascendat. Proximus, quando mollescet, tametsi non liquescat. De his omnibus diligenter quærendum, in variis metallis, in gradibus præsertim maxime remotis.

Quod ad transmutationem, sive versionem; si realis et vera sit, summus est artis apex. Cautè tamen ab extractione, restitutione, et adulteratione, distinguenda est. Relatum aliquoties mihi est, ferrum in cuprum verti, plumboque pondus adactum esse, quod fieri nequiret sine corporis alicujus in plumbum versione. Quodcumque id genus fuerit, idque rite exploratum, diligenter inquirendum, et literis consignandum foret.

#### QUARTA LITERA ALPHABETI EST RESTITUTIO.

PRIMO igitur quærendum negative, quæ corpora nunquam redibunt, aut propter extremas fixationes, ut in quibusdam vitrificationibus; aut propter extremam volatilitatem.

Quærendum etiam de duobus modis reductionis. Primo, ignis adminiculo, quod fit partes tantum homogeneas congregando. Secundo, devocando eas adminiculo corporis alicujus, quod cum iis consentit. Sic enim ferrum cuprum in aqua devocat; aurum argentum vivum ad se trahit per vaporem. Quicquid hujus generis fuerit, sedulo inquirendum.

Quærendum etiam, quæ tempus sive vetustas redncet; sine adminiculo ignis, aut alterius cujusvis corporis.

Quærendum etiam quid unioni, sive restitutioni, obstiterit, quod mortificatio quandoque dicitur: ut cum argentum vivum resina, terebinthina, saliva, aut butyro, interimitur.

Ultimo inquirendum, qua in re metallum restitutum a metallo crudo differat; ut num renitentius sit factum, aut novum colorem acquisiverit, aut similia.

#### INQUISITIO DE MAGNETE.

MAGNES trahit pulverem chalybis præparati, quali utuntur ad medicinam; etiam chalybem calcinatum in tenuissimum pulverem nigrum, æque fortiter ac limaturam ferri crudam: crocum autem martis, qui est rubigo ferri artificiosa, hebetius et debilius. Si vero ferrum dissolvatur in aqua forti, et guttæ aliquæ dissolutionis ponantur super vitram planum, non extrahit magnes ferrum, nec trahit aquam ipsam ferratam.

Magnes scobem suam trahit, quemadmodum limaturam ferri : parvaque admodum magnetis frustula, alterum alterum trahit, ut pensilia fiant et capillata, quemadmodum acus.

Pone magnetem in tali distantia a ferro, ut non trahat : interpone pileum ferri, servata distantia, et trahet ; virtute magnetis per ferrum melius diffusa, quam per medium aëris solius.

Magnes immissus intra aquam fortem, ibique per plures horas manens, virtute non minuitur.

Magnes fricatione contra pannum (ut utimur in electro) aut contra alium magnetem, aut calefactus ad ignem, virtute non augetur.

Magnes alius alio est longe virtuosior : quietiam virtutem suam, pro modo ejus, ferro tactum transmittit : virtutem, inquam, non solum verticitalis, sed etiam attractionis simplicis. Nam si accipias magnetem fortiolem, eoque ferrum (puta cultellum) tangas ; deinde magnete debiliore similiter alium cultellum, videbis cultellum fortiore magnete tactum majus trahere pondus ferri quam qui debiliore tactus est.

Magnes ad æque distans ferrum trahit per aërem, aquam, vinum, oleum.

Magnete, aut pulvere ejus, in aqua forti immerso, nihil omnino dissolvitur, sicut in ferro fit ; licet magnes videatur esse corpus ferro consubstantiale.

Pulvis magnetis ferrum intactum non trahit, nec tactum etiam : attamen ipse pulvis a ferro tacto trahitur, et adhæret ; ab intacto autem minime : adeo ut pulvis magnetis videatur passivam virtutem aliquo modo retinere, activam autem non omnino.

Acus super planum posita, quæ magnete non trahitur propter pondus ; eadem superimposita fundo vitri elevato, ut utrinque propendeat, trahitur ; quod eo magis relatu dignum puto, quia hujusmodi quiddam fortasse occasionem dedit frivolæ illi narrationi, quod adamas magnetis virtutem impediât. Pone enim acum super adamantem parvum, in tabulam sectam, magnete præsentem ad distans majus, quam in quo trahere posset, tamen trepidabit : illa autem trepidatio, non prohibito motus est, sed motus ipse.

Magnes ferrum tactum longe vivacius trahit, quam intactum ; adeo ut ferrum, quod intactum in data distantia non trahit, id in triplici distantia tactum trahat.

Nihil extrahitur ferri aut metallicæ materiæ ex magnete per ignem, et nota separationis.

Magnes non solvitur in aqua regis plus quam in aqua forti.

Magnes, in crucibulo positus, citra tamen quam ut flammam emittat, minuitur multum pondere, et immensum virtute, ut vix ferrum atrahat.

Magnes ægre liquefit, sed tamen figuram nonnihil immutat, et rubescit ut ferrum.

Magnes, combustus integer, virtutem passivam, ut se applicet alteri magneti, retinet ; activam ad ferrum trahendum fere perdit.

Magnes in crucibulo combustus emittit fumum, vix tamen visibilem, qui laminam æris superimpositam nonnihil albicare facit : ut solent etiam metalla.

Magnes in comburendo penetrat per crucibulum, idque tam extra, quam intra, fracto, quod a splendore splendescere facit.

Consentiunt omnes, magnetem, si comburatur, ita ut flammam quandam luridam et sulphuream jaciât, prorsus fieri virtute evanidum ; eamque nunquam post ea recuperare ; licet refrigeretur in positura australi et septentrionali : id quod lateribus virtutem indit, et in magnetibus non prorsus combustis vires renovat.

Experimentum factum est, de ferro magnete tacto, ac etiam de magnete ipso, collocatis super fastigium templi S. Pauli Londini, quod est ex altissimis templis Europæ ; annon minuerentur virtute attractiva, propter distantiam a terra ? sed nihil prorsus variatum est. [ *Ex Reliquiis Baconianis.* ]

Si fiat versorium ex metallo aliquo, more indicis magnetici, et fini alteri apponatur succinum, leniter fricatum, versorium convertit se.

Succinum calefactum ab igne, sive tepeat, sive ferveat, sive inflammetur, non trahit.

Bacillum ferreum candens, flamma, candela ardens, carbo ignitus, admota festucis aut versorii, non trahunt.

Succinum in majore mole, si fuerit politum, allicit, licet non fricatum ; si in minore, aut impurius, sine frictione non trahit.

Crystallus, lapis specularis, vitrum, electrica cætera, si urantur, aut torreantur, non trahunt.

Pix : resina mollior : benjoin : asphaltum : camphora : galbanum : ammoniacum : storax : assa : hæc cælo calidior neutiquam prorsus trahunt ; at tempore frigidior obscure et infirme trahunt.

Vapidus aër succino, etc. afflatus, vel ab ore, vel ab aëre humidior, virtutem trahendi suffocat.

Si charta aut linteum interponatur inter succinum et paleam, non fit motus aut attractio.

Succinum aut electrica, calefacta ex radiis solis, non expergefunt ad trahendum, sicut ex frictione.

Succinum fricatum, et radiis solis expositum, diutius vires trahendi retinet, nec tam cito eas deponit, ac si in umbra positum esset.

Fervor ex speculo comburente, succino, etc. conciliatus, non juvat ad trahendum.

Sulphur accensum, et cera dura inflammata, non trahunt.

Succinum, cum citissime a frictione festucæ vel versorio apponitur, optime trahit.

Virtus electrica viget in retentione ad tempus, non minus quam in attractione prima.

Flamma, apposito succino intra orbem activitatis, non trahitur.

Gutta aquæ, admoto succino, trahitur in conum. Electrica, si durius affricentur, impeditur attractio.

Quæ ægre alliciunt in claro cælo, in crasso non movent.

Aqua imposita succino virtutem trahendi suffocat, licet ipsam aquam trahat.

Sarca, ita succino circumdatum, ut tangat, attractione tollit ; sed interpositum ut non tangat, non omnino tollit.

Oleum, succino appositum, motum non impedit ; nec succinum, digito oleo madefacto fricatum, vires trahendi perdit.

Firmius provocant, et diutius retinent succinum, gagates, et hujusmodi, etiam minore cum frictione : adamas, crystallum, vitrum, diutius teri debent, ut manifesto incalescant antequam trahant.

Quæ flammæ approximant, licet propinqua distantia, a succino non trahuntur.

Fumum, extineta lucerna, succinum, etc. trahit. Fumus, ubi exit et crassus est, fortius trahit succi-

nium; cum ascenderit, et rarior fit, debilius. Corpus ab electricis attractum non manifesto alteratur, sed tantum incumbit.

## INQUISITIO

DE

VERSIONIBUS, TRANSMUTATIONIBUS, MULTIPLICATIONIBUS, ET EFFECTIONIBUS

## C O R P O R U M.

TERRA per ignem versa est in lateres, quæ sunt ex natura saxorum; quibusque ad ædificationem utimur, sicut et saxis. Idem est in tegulis.

Naphtha, quæ fuit bituminosum illud cæmentum, ex quo extruebantur muri Babylonis, tempore adipiscitur valde magnam duritiem et firmitatem, ad instar saxi.

In terris argillaceis, ubi calculi et glarea habentur, invenies saxa ingentia ex calculis et glarea coagulata; et inter ipsos materiam saxeam, æque duram, aut certe duriores quam calculi ipsi.

Sunt quædam scaturigines aquarum, in quas si immergas lignum, vertetur in naturam lapidis: adeo ut pars submersa intra aquam deveniat lapis; pars supra aquam remaneat lignum.

Materia viscosa circa renes et vesicam in corpore humano vertitur in calculum, sive materiam lapideam. Lapis etiam sæpe invenitur in cista fellis: aliquando etiam, sed rarissime, in vena porta.

Quære, quantum temporis requiritur, ut materia terræ in lapidicinis vertatur in naturam lapideam?

Aqua, ut conjicere licet, vertitur in crystallum: quod videre est in cavernis quamplurimis, ubi crystallus in stillicidiis pendet.

Experimentum capias de ligno, sive caulibus herbarum, in argento vivo sepultis, utrum indurescant, et quasi lapidescant, annon.

Fama increbuit de lapide in capite bufonis vetuli et magni generato.

Relatum est, nobilem quandam, in palude sua fredientem, invenisse ovum in lapidem versum, albimine et vitello proprium colorem retinentibus; testa autem clare micante, instar adamantis exquisite in angulos secti.

Experimentum sumas, de corporibus aliquibus, prope fundum putei demissis; veluti ligno, aut aliis quibusdam substantiis tenerioribus, sed aquam non tangant, ne putrefiant.

Aiunt albumen ovi, per diuturnam insolationem, vel expositionem in radios solis, contraxisse duritiam lapidis.

Lutum, in aqua, vertitur in testas piscium: ut in musculis, piscibus; qui reperiuntur in paludibus dulcibus, non fluentibus, et musco coopertiis. Substantia autem testarum earum est valde tenuis, lucida, et micans.

## TOPICA INQUISITIONIS

DE

## L U C E E T L U M I N E.

### TABULA PRÆSENTIÆ.

I. VIDENDUM primo, quæ sint ea, cujuscuque generis, quæ progignunt lucem: ut stellæ, meteora ignita, flamma, ligna, metalla, et alia ignita; saccharum inter scalpendum et frangendum, cicindela, rores aquæ salis percussæ et sparsæ, oculi quorundam animalium, ligna nonnulla putria, magna vis

nivis; ær fortasse ipse tenuem possit habere lucem, animalium visui, quæ noctu cernunt, conformem; ferrum et stannum, cum in aquam fortem immittuntur resolvenda, ebulliunt, et sine ullo igne acrem calorem concipiunt; utrum vero lucem aliquam edunt, inquiratur. Oleum lampadum magnis frigidibus scintillat: nocte suda, circa equum sudantem conspicitur nonnunquam lux quædam tenuis; circa ca-

pillos quorundam hominum accidit, sed raro, lux etiam tenuis, tanquam flammula lambens; ut factum est in Lucio Martio, in Hispania. Ventrale ejuſdem ſœminæ nuper inventum est, quod micaret, minime immotum, sed inter fricandum. Erat autem intinctum in viridi, atque tincturam illam ingreditur alumen, et crepabat nonnihil, cum micabat. Utrum alumen inter scalpendum, aut frangendum, micet, inquiratur: sed fortiore (ut puto) indiget fractione, quam saccharum, quia magis contumax est. Tibialia nonnulla inter exuendum nituerunt, sive ex sudore, sive ex tinctura aluminis. Alia.

#### TABULA ABSENTIÆ IN PROXIMO.

2. Videndum etiam, quæ sint ea, quæ nullam lucem edant: quæ tamen cum iis, quæ edant, magnam habent similitudinem. Aqua bulliens non edit lucem. Aër, licet violenter fervefactus, non edit lucem. Specula, et adamantes, quæ lucem tam insigniter reflectunt, nullam edunt lucem originalem. Alia.

Videndum est etiam accurate, in hoc genere instantiarum, de instantiis migrantibus, ubi scilicet adest et abest lux, quasi transiens. Carbo ignitus luces, sed fortiter compressus statim lucem deponit. Humor ille crystallinus cicindelæ morte vermis, etiam fractus et in partes divisus, lucem ad parvum tempus retinet, sed quæ paulo post evanescat. Alia.

#### TABULA GRADUUM.

3. Videndum, quæ lux sit magis intensa, et vibrans, quæ minus. Flamma lignorum fortem edit lucem; flamma spiritus vini, debiliorem; flamma carbonum penitus accensorum, fuscam admodum et vix visibilem. Alia.

#### COLORES LUCIS.

4. Videndum est de coloribus lucis, quales sint, quales non. Stellarum aliæ candidæ sunt, aliæ splendidæ, aliæ rubæ, aliæ plumbeæ. Flammæ ordinariæ, et inter eas, coruscationes cœlitus, et flammæ pulveris pyri maxime albicant. Flamma sulphuris cerulea est, et pulchra. In aliquibus autem corporibus sunt purpureæ flammæ. Non inveniuntur flammæ virides. Quæ maxime ad viriditatem inclinat, est lux cicindelæ. Nec inveniuntur coccinæ flammæ. Ferrum ignitum rubicundum est; et paulo intentius ignitum quasi candescit. Alia.

#### REFLEXIONES LUCIS.

5. Videndum, quæ corpora lucem reflectunt; ut specula, aquæ, metalla polita, luna, gemmæ. Omnia liquida, et superficie valde æquata et lævi, splendent nonnihil. Splendor autem est gradus quidam pusillus.

Videndum attente, utrum lux corporis lucidi ab alio corpore lucido reflecti possit: ut si sumatur ferrum ignitum, et opponatur radiis solis. Nam reflexiones lucis omnino super-reflectuntur (elanguentia tamen paulatim) de speculo in speculum. Alia.

#### MULTIPLICATIONES LUCIS.

6. Videndum de multiplicatione lucis, ut per specula perspectiva, et similia, quibus acui potest lux, et in longinquum projici; aut etiam reddi ad distin-

guendas res visibiles subtilius et melius; ut videre est apud pictores, qui phialam aqua plenam ad candelam adhibent.

Videndum etiam, num omnia in majore quanto lucem non reflectant: lux enim (ut credi possit) aut pertransit, aut reflectitur. Qua de causa luna, etiamsi fuerit corpus opacum, tamen ob magnitudinem lucem reflectere possit.

Videndum etiam, utrum aggregatio corporum lucidorum, lucem multiplicet. Atque de æqualiter lucidis dubitandum non est. Utrum vero lux, quæ majore luce penitus obruitur, ut videri per se non possit, adjiciat tamen aliquid lucis, inquiratur. Etiam splendida quæque nonnihil lucis contribuunt. Magis enim lucidum erit cubiculum serico, quam lana, ornatum. Multiplicatur etiam lux per refractionem: nam gemmæ angulis intercisæ, et vitrum fractum, magis splendent, quam si plana fuerint. Alia.

#### MODI OBRUENDI LUCEM.

7. Videndum de modis obruendi lucem; veluti per exsuperantiam majoris lucis, mediorem crassitudines, aut opacitates. Radii solis certe, in flammam foci immisi, flammam veluti fumum quandam albiorem apparere faciunt. Alia.

#### OPERATIONES SIVE EFFECTUS LUCIS.

8. Videndum de operationibus, sive effectibus lucis, qui pauci sunt; et ad corpora, præsertim solida, alteranda parum possunt. Lux enim præ omnibus se generat, alias qualitates parce.

Lux certe aërem nonnihil attenuat; spiritibus animalium grata est, eosque exhilarat; colorum omnium et visibilium radios submortuos excitat. Omnis enim color lucis imago fracta est. Alia.

#### MORA LUCIS.

9. Videndum est de mora lucis; quæ, ut videtur, momentanea est. Neque enim lux, si per multas horas in cubiculo duraverit, magis illud illuminat, quam si per momentum aliquod: cum in calore, et aliis, contra fiat. Etenim, et prior calor manet, et novus superadditur. Attamen crepuscula nonnihil a reliquiis lucis provenire, ab aliquibus putantur.

#### VIE ET PROCESSUS LUCIS.

10. Videndum attente de viis et processibus lucis. Lux circumfunditur; utrum vero una ascendat paululum, an æqualiter deorsum, et sursum, circumfundatur, inquiratur. Lux ipsa lucem undique circa se parit; ut cum corpus lucis, umbraculo scilicet interposito non cernatur; lux ipsa tamen omnia circum illuminat, præter ea quæ sub umbram umbraculi cadunt: quæ tamen ipsa nonnihil lucis accipiunt a luce circumjecta; nam multo melius aliquid intra umbram situm cerni potest, quam si nulla omnino adesset lux. Itaque corpus visibile corporis alicujus lucidi, et ipsa lux, res discrepantes esse videntur. Lux corpora fibrosa, et inæqualis posituræ, non penetrat; sed tamen a soliditate durtiæ corporis non impeditur, ut fit in vitro, et similibus. Itaque recta linea, et pori non transversa, videntur lucem tantum perferre.

Delatio lucis fit optime per aërem; qui quo purior fuerit, eo melius lucem transmittit. Utrum lux per corpus aëris vehatur, inquiratur. Sonos certe videmus a ventis vehi; et longius secundo vento, quam adverso, audiri possint: utrum vero simile aliquid fiat in luce, inquiratur. Alia.

#### DIAPHANEITAS LUCIDORUM.

11. Videndum etiam est de diaphaneitate lucidorum. Filum candelæ intra flammam cernitur: at per majores flammæ objecta ad visum non perveniunt. At contra omnis diaphaneitas ex corpore aliquo ignito perit; ut in vitrò videre est, quod ignitum non amplius manet diaphanum. Corpus aëris diaphanum est; item aquæ: at illa duo diaphana commista, in nive, aut spuma, non amplius diaphana sunt, sed acquirunt lucem quandam originalem.

#### COGNATIONES ET HOSTILITATES LUCIS.

12. Videndum de cognationibus, atque etiam hostilitatibus lucis. Cognationem maxime habet lux cum tribus rebus, quatenus ad generationem lucis; calore, tenuitate, et motu. Videndum igitur de conjugiiis et divortiis eorum erga lucem; atque eorundem conjugiorum et divortiorum gradibus. Flamma spiritus vini aut ignis fatui longe ferro ignito calore lenior est, verum lumine fortior. Cicindelæ, et roes aquæ salsæ, et multa ex illis, quæ enumeravimus, lucem jaciunt, calida ad tactum non sunt. Etiam metalla ignita tenuia non sunt, at calore tamen ardente prædita. At contra, aër est inter tenuissima corpora, sed luce vacat. Rursus, idem aër, atque etiam venti, motu rapidi sunt, lucem tamen non præbent. At contra, metalla ignita motum suum hebetem non exuunt, lucem nihilominus vibrant.

In cognationibus autem lucis, quæ non ad generationem ejus, sed ad processum tantum spectant, nihil tam conjunctum est, quam sonus: itaque de eorum sympathiis et dissidiis accurate videndum. In his conveniunt. Lux et sonus in ambitum circumfunduntur. Lux et sonus per longissima spatia feruntur; sed lux perniciosus, ut in tormentis videmus, ubi lux

citius cernitur, quam auditur sonus, cum tamen flamma pone sequatur. Lux et sonus subtilissimas distinctiones patiuntur; ut in verbis articulatis soni; in omnibus visibilibus imaginibus lux. Lux et sonus nihil fere producant aut generant, præterquam in sensibus et spiritibus animalium. Lux et sonus facile generantur, et brevi evanescent: Nam non est quod quis putet sonum illum, qui ad tempus aliquod a campana aut chorda percussa durat, a prima percussione fieri: nam si campana vel chorda tangatur et sistatur, sonus statim perit; unde manifestum est, per successionem creari. Lux a majore luce, sicut sonus a majore sono, obruitur; et cætera.

Differant autem, quod lux (ut diximus) sono velocior sit. Lux majore spatia vincit, quam sonus. Lux utrum in corpore aëris deferatur, quemadmodum sonus, incertum sit. Lux, in linea recta tantum, sonus in linea obliqua, et undiquaque feratur: etenim cum quid in umbra umbraculi cernitur, non est, quod quis putet, quod lux ipsa penetret umbraculum, sed aërem tantum circumfusum illuminat; qui etiam aërem pone umbraculum vicinitate nonnihil illustrat: at sonus, ab uno latere parietis redditus, ex altera parte parietis auditur, non multum debilitatus. Etiam sonus intra septa corporum solidorum audiatur, licet exilior factus; ut fit in sonis infra lapides hæmatites; aut in corporibus percussis infra aquam; at lux in corpore diaphano, undique obstructo, omnino non cernitur. Ultimo, quod omnis sonus generetur in motu, et elisione corporum manifesta; lux non item.

At hostilitates lucis, nisi quis privationes pro hostilitatibus habere velit, non occurrunt; verum, quod maxime credibile est, torpor corporum in partibus suis, maxime est luci inimicus. Nam fere nihil lucet, quod non, aut propria natura insigniter mobile est; aut excitatum, vel calore, vel motu, vel spiritu vitali. Alia.

Intelligo autem semper, quod non tantum aliæ instantiæ investigandæ sint (istas enim paucas exempli loco solummodo adduximus) sed etiam ut novi topici articuli, prout rerum natura fert, adjiciantur.

## SCRIPTA

### IN NATURALI ET UNIVERSALI PHILOSOPHIA.

---

#### TEMPORIS PARTUS MASCULUS,

#### SIVE INSTAURATIO MAGNA IMPERII HUMANI IN UNIVERSUM.

AD Deum Patrem, Deum Verbum, Deum Spiritum, preces fundimus humillimas et ardentissimas, ut humani generis ærumnarum memores, et peregrinationis istius vitæ nostræ, in qua dies paucos et malos terimus; nova adhuc refrigeria e fontibus bonitatis suæ ad miserias nostras leniendas aperiant; atque illud insuper, ne humana divinis officiant, neve ex rese-

ratione viarum sensus, et accensione majore luminis naturalis, aliquid incredulitatis et noctis animis nostris erga divina mysteria oboriatur: sed potius ut ab intellectu, a phantasiis et vanitate puro et repurgato, et divinis oraculis nihilominus subdito et prorsus deditio fidei dentur quæ fidei sunt.

---

### FRANCISCUS BACON LECTORI.

Si qui fuerint, qui in veterum placitis sibi acquiescendum non putarunt, quod aliquando ab animi constantia, sæpius ab ingenii levitate fieri vidimus; ii, qualescunque fuerint, hac fere defensione communi usi sunt; se, licet ab antiquitate desciverint, tamen ea afferre, quæ cum sensu optime convenient; atque homines, si hoc sibi in animum inducere possint, ut auctoritate non perstringantur, sed sibi ipsi et, sensibus credant, facile in eorum partes transituros. Nos vero sensum nec contradictione violavimus, nec abstractione destruimus, et materiam ei longe uberiorem, quam alii, præbuimus, et multo ministerio errores ejus restitimus, potestates auximus, atque judicium ejus, damnatis phantasiis, atque in ordinem redacta ratione, munivimus et firmavimus; ut alii professione quadam, nos reipsa sensum tueri videamur; atque philosophia nostra una fere atque eadem res sit cum sensu restituto et liberato. Neque propterea tamen nobis de hominum fide et assensu large pollicemur, cum nostra ratio cum nulla priorum consentiat, sed plane in diversum trahat. Nam qui hucusque, pertæsi eorum, quæ veteres afferunt, ad experientiam et sensum tanquam de integro se contulerunt, in hunc modum fere se gesserunt; ut nonnulla primo secundum sensum acriter et stre-

nue inquisiverint; ea potissimum sumentes, quæ illis maxime rationem totius habere visa sunt. Atque ex his confestim experientiæ manipulis, et tanquam factionibus placita confinxerint, anguste, et inæqualiter philosophati, et omnia paucis condonantes. Atque iste tamen modus philosophandi, ad fidem faciendam sæpenumero validus et felix est; ob angustias pectoris humani, quod illis, quæ una et subito mentem subire possunt, maxime movetur, et acquiescendi cupidum cætera vel negligit, vel modo quodam non perceptibili ita se habere putat, ut illa pauca quibus phantasia impleri aut inflari consuevit. At contra, nos non manipulares, sed justum divinorum operum exercitum post nos trahentes, et ex æquo et secundum summas rerum pronunciantes, non habemus fere quo nos vertamus, aut ex qua parte aditum ad humanam fidem reperiamus; cum ea, quæ adducimus, altius quam notiones, latius quam hujusmodi experimenta, se extendant. Itaque necesse est, ut ex illis pleraque præproperis et propensius sensuum prehensionibus non satisfaciant, nonnulla autem dura, et instar religionis incredibilia, ad sensus accedant. Sensus enim humani fallunt utique, sed tamen etiam se indicant; verum errores præsto, indicia accersita sunt. Itaque et novam

prorsus tradendi viam ingressi sumus, rei ipsi convenientem: non disputando, aut exempla rara et sparsa adducendo; cum uterque fidei faciendæ modus fortasse adversus nobis futurus fuisset, quorum decreta nec in cura notionum, nec in angustiis experientiæ abscissæ, et truncatæ; fundata sint: sed experientiam coacervatam et continuam adhibuimus, atque homines ad fontes rerum adduximus, ac universum intellectus processum et derivationes sub oculos posuimus. Quare quicumque eo animo sunt, ut aut argumentis nitantur, aut paucis exemplis cedant, aut auctoritatibus impediuntur, aut opus nostrum evolvere et introspicere propter aut animi aut temporis angustias non possint; cum illis nos profecto de hac re nec serio colloqui possumus. Satis fue-

rit, si illud Philocratis de Demosthene dictum huc transferamus. "Atque nolite mirari, Athenienses, si mihi cum Demosthene non conveniat. Ille enim aquam, ego vinum bibo." Illi enim certe liquorem bibunt crudum, ex intellectu vel sponte manantem, vel industria quadam haustum: nos autem liquorem paramus et propinamus ex infinitis uvis confectum, iisque maturis et tempestivis, et per racemos decerpitis et collectis, et subinde torculari pressis, et rursus in vase se separantibus, et clarificatis. Ne enim hoc Deus siverit, ut phantasie nostræ somnium pro exemplari mundi edamus; sed potius benigne fateat, ut apocalypsin et visionem vestigiorum et viarum Creatoris in natura et creaturis conscribamus.

Chartæ novellæ.

Atque exemplum inquisitionis de natura (ut videre est) absolvimus, idque in subjecto omnium maxime capaci et diffuso; eaque forma, quam judicamus cum veritate et intellectu summum consensum habere. Neque tamen, more apud homines recepto, formulæ alicui necessitatem imponimus: tanquam unica esset, et instar artis ipsius: sed certe omnibus pertentatis, ex longo usu, et nonnullo, ut putamus, iudicio, hanc ipsam formam sive rationem disponendi materiam rerum, ad opus intellectus, ut probatam et electam exhibemus. Nihil autem officit, quo minus ii, qui otio magis abundant, aut a difficultatibus, quas primo experientem sequi necesse est, liberi jam erunt, aut majoris etiam et altioris sunt ingenii, rem in potius

perducant. Nam et ipsi statuimus, artem inveniendi adolescere cum inventis: neque ad aliud immotum et involabile inveniendi artificium, hominum industriam et felicitatem astringendam: artis enim perfectionem artis usum remorari, nihil est necesse. Quod autem viam novam scientiam docendi et tradendi ingressi sumus, quod doctrinam et præcepta quasi prætereuntes, et aliud agentes distulimus; atque in exemplo præcipue elaboravimus: hoc summa ratione nos fecisse arbitramur. Neque sane homines latere volumus, quid in hac re secuti sumus: nam obtinere in hominum æquitate positum est, vel potius in fortuna communi. Res enim humani generis agitur, non nostra. Primum hoc videmur adepti, quod maximum est, ut plane intelligamur. Longe enim aliud est singulis præceptis exempla subnectere: aliud, universi operis figuram perfectam et quasi solidam construere et representare. Etenim in mathematicis, adstante machina aut fabrica, sequitur demonstratio facilis et perspicua: sed absque hac commoditate, omnia videntur involuta, et, quam revera sunt, subtiliora. Atque etiam illud usu venit, ut quo grandius instrumentum demonstrationis fiat, eo sit et fidelius et illustrius. Etiam putamus nos aliquem modestiæ et simplicitatis fructum percipere posse, quod nec vim nec insidias hominum iudiciis fecimus aut paravimus: sed rem nudam et apertam exhibuimus. Nemo enim ante nos, homines ad fontes naturæ et res ipsas adduxerunt, ut in medium consulerent: sed exempla et experientiam ad dictorum suorum fidem, non ad alieni iudicii libertatem, adhibuerunt: ut dupliciter nos de humano genere meritis existimemus, duas res, maxime mortalibus charas et gratas, potestatem et libertatem, simul deferentes: potestatem operum, libertatem iudicii. Ac veluti in iudiciis civilibus ea maxime incorrupta et recta sunt, ubi minimum oratorum licentiæ et turbia, aut etiam eloquentiæ conceditur; sed omnis fere opera et tempus testibus consumitur: eodem modo et de natura iudicia exercentur optima, cum nec pugnaci nec probabilis orationi aut disputationi maximæ partes tribuuntur, sed experientiæ testimoniis evidentibus et concervatis res conficitur. Nam certe in auctorum testimoniis libido et stimulus versatur: rerum autem testimonia et responsa, interdum obscura et perplexa, sed semper sincera et incorrupta sunt. Liberati etiam videmur magno malo, ex hominum fastidio et præiudicio. Solent enim viri prudentes, et graves, et cunctatores, novitatem omnem levitatis et vanitatis nomine suspectam habere: novas autem sectas et nova placita ut larvas et umbras aspernari: neque enim multum interesse putant, utrum homines in theoriis consentiant aut dissentiant; nisi quod vetera et recepta magis sint, ob consensum et mores, rebus gerendis accommodata. Huic malo non aliud remedium reperiebatur, nisi ut amplitudine exempli, in ipsos hominum sensus ita incurramus, ut, primo aspectu, quisvis mediocri iudicii rem solidam et sobriam esse, atque opera et utilitatem spirantem; et a novæ scolæ aut novæ sectæ ratione et consuetudine prorsus alienam, statim perscipiat et agnoscat. Speramus etiam hoc potissimum modo, antiquis et aliis, qui in philosophia aliquid opinati sunt, auctoritatem et fidem abrogari: honorem et

reverentiam conservari posse, idque non artificio quodam, sed ex vi ipsa rei. Existimamus enim subitum animos hominum cogitationem, num et illi hujusmodi diligentiam adhibuerint, aut placita et opiniones suas a tali fundamento excitaverint. Atque sane hoc dubium alicui videri potuisset, si opiniones eorum tantum ad nos pervenissent, modus autem inquisitionis et demonstrationis non apparuisset. Tum enim tale quippiam in mentem nobis venisset cogitare, illos proculdubio a meditationum suarum principio magnam vim et copiam exemplorum paraviisse, eamque simili quo nos ordine, vel fortasse meliore disposuisse. Sed postquam re compta, illis pronuntiare visum esset; tum demum pronuntiata et eorum explicationes et connexiones in scripta redegiisse; addito sparsim uno aut altero exemplo ad docendi lumen: sed primordia illa et notas, ac veluti codicillos et commentarios suos in lucem edere, et supervacuum et molestum putasse: Itaque fecisse ut in ædificando facere decet: nam post operis ipsius structuram, machinas et scalas, et hujusmodi instrumenta a conspectu amovenda esse. Verum hæc de ipsis cogitare, nobis per ipsos integrum non est: formam enim et rationem suam inquirendi, et ipsi profitentur, et scripta eorum ejusdem expressam imaginem præ se ferunt. Ea non alia fuit, quam ut ab exemplis quibusdam, quibus sensus plurimum assueverat, ad conclusiones maxime generales, sive principia scientiarum, advolarent: ad quorum immotam veritatem conclusiones inferiores per media derivarent. Ex quibus arte constituta, tum demum, si qua controversia de aliquo exemplo mota esset, quod placitis suis refragari videretur, illud per distinctiones aut regularum suarum explanationes in ordinem redigerent: aut si de rerum particularium causis mentio injiceretur, eas ad speculationes suas ingeniose accommodarent. Itaque res et totius erroris processus prorsus patet: nam et missio experientiæ præpropria fuit: et conclusiones mediæ (quæ operum vitæ sunt) aut neglectæ, aut infirmo fundamento positæ sunt; et sensui ipsi (qui non representatur) ingenii quædam facta est substitutio illegitima et infelix, et si qua frequens alicubi inter eorum scripta inveniatur exemplorum et particularium mentio, id sero, et postquam jam decretum esset de placitis suis, factum esse constat. Nostra autem ratio huic maxime contraria est: quod tabulæ affatim extra controversiam ponunt. Quibus positæ et illud sequitur, admirationem, quæ quibusdam ex antiquis aut alii cuiquam tribuitur, intactam et imminutam manere. Nam in iis, quæ in ingenio et meditatione posita sunt, illi mirabiles homines se præstiterunt. Nostra autem talia sunt, quæ hominum ingenia et facultates fere æquant. Nam quemadmodum ad hoc, ut linea recte describatur, plurimum est in manus et visus facultate, si per constantiam manus et oculorum iudicium tantum res tentatur; sin per regulam admotam, non multum: aut, ut etiam simplicius verba faciamus, quemadmodum ad hoc, ut longa oratio recitetur memoriter, homo memoria pollens ab homine oblioso mirum in modum differt; sin de scripto, non item: eadem ratione, et in contemplatione rerum, quæ mentis viribus solum incumbit, homo homini præstat vel

maxime: in ea autem, quæ per tabulas fit, et earum usum rite adhibitum, non multo major in hominum intellectu eminet inæqualitas, quam in sensu inesse solet. Quin et ab ingeniorum acumine et agilitate, dum suo motu feruntur, periculum metuimus. Itaque hominum ingeniis non plumas aut alas, sed plumbum et pondera addimus. Accedit et illud, quod rem omnium difficillimam (si vis et contentio adhibeatur) per tabulas nostras sponte secuturam non diffidimus; hanc ipsam, ut postquam homines primo aditu fortasse difficiles et alieni, paulo post nativæ rerum subtilitati, quæ oculis suis subjicitur, et differentiis in experientia plane signatis et expressis, assueverint; continuo fere subtilitatem verborum et disputationum, quæ hucusque hominum cogitationes occupavit et tenuit, quasi pro re ludicra et quadam incantatione et spectro habituri sint; atque de natura decreturi, quod de fortuna dici solet, eam a fonte capillatam, ob occipitio calvam esse: omnem enim istam seram et præposteram subtilitatem, postquam tempus rerum præterierit, naturam pensare et captare, sed nunquam apprehendere et capere posse. Etiam vivum nos et plane animatum docendi genus adhibuisse arbitramur: non enim scientiam a stirpibus avulsam, sed cum radicibus integris, tradimus, ut in ingeniis melioribus, veluti in gleba ferociore, transplantata, magnum et felix incrementum recipere possit. Nos autem si qua in re vel male credidimus, vel obdormivimus et minus attendimus, vel defecimus, et inquisitionem abruptimus; nihilominus rem ita proposuimus, ut et errores nostri, antequam massam scientiæ altius inficiant, notari et separari possint; atque etiam ut facilis et expedita sit laborum nostrorum successio et continuatio: tum autem homines vires suas noscent, cum non eadem infiniti, sed omissa alii præstabunt. Etiam illud ludibrium avertisse videmur, cui frequens nostra operum mentio et inculcatio exponi posset, nisi homines inter res ipsas versari coëgissemus, hoc est, ut homines opera, quæ ab aliis exigimus, et a nobis poscerent: facile enim quis jam perspiciet, non frustra nos de operibus sermonem intulisse, cum in

tabulis ipsis paucas nec novorum operum designationes et fœnora reperiet, atque simul rationem nostram plane perspiciet: non opera ex operibus (scilicet ut empirici solent) sed ex operibus causas, ex causis rursus opera nota, ut legitimi naturæ interpretes, educendi: atque propterea evitandi præteritæ et effusam a principio ad opera deflexionem, atque hujus rei legitimum et præstitutum tempus observandi et expectandi. Postremo et illud videmur effecisse, ut homines non solum de vi et instituto hujus instaurationis nostræ, sed etiam de mole et quantitate ejus, veras opiniones habeant, ne forte alicui in mentem venire possit, hoc, quod molimur, vastum quiddam esse, et supra humanas vires; cum contra plerumque fiat, ut quod magis utile magis finitum sit: hæc vero de natura inquisitio, vel singulis non sit pervia, conjunctis vero operis etiam expedita. Quod ut pateat magis, digestum tabularum addere visum est. Primæ tabulæ sunt de motu; secundæ, de calore et frigore; tertiæ, de radiis verum et impressionibus ad distans; quartæ, de vegetatione et vitis; quintæ, de passionibus corporis animalis; sextæ, de sensu et objectis; septimæ, de affectibus animi; octavæ, de mente et ejus facultatibus. Atque hæc tabulæ ad naturæ separationem pertinent, et sunt ex parte formæ. Ad constructionem autem naturæ pertinent, et ex parte materiæ sunt tabulæ, quæ sequuntur; nonæ, de architectura mundi; decimæ, de relativis magnis, sive accidentibus essentiæ; undecimæ, de corporum consistentiis, sive inæqualitate partium; duodecimæ, de speciebus sive rerum fabricis et societatibus ordinariis; decimæ tertiæ, de relativis parvis, sive proprietatibus; ut universa inquisitio per tredecim tabulas absolvatur. Minores autem tabulas (quas specilla appellamus) ex occasione et usu præsentii conficimus. Neque enim in illis ipsis ullam, nisi per tabulas, et de scripto, inquisitionem recipimus. Restat pars altera mole minor, vi potior; ut postquam constructionem machinæ docuimus, etiam de usu machinæ lucem et consilia præbeamus.

## COGITATIONES DE NATURA RERUM.

### COGITATIO I. DE SECTIONE CORPORUM, CONTINUO, ET VACUO.

DOCTRINA Democriti de atomis aut vera est, aut ad demonstrationem utiliter adhibetur. Non facile enim est naturæ subtilitatem genuinam, et qualis in rebus ipsis invenitur, aut cogitatione complecti, aut verbis exprimere, nisi supponatur atomus. Accipitur autem duobus sensibus atomus, non multum inter se diversis. Aut enim accipitur pro corporum sectionis sive fractionis termino ultimo, sive portione minima; aut pro corpore quod vacuo caret. Quod ad primam attinet, hæc duo posita tuto et certo

statui possunt: alterum, inveniri in rebus dispartitionem et comminutionem, longe ea, quæ sub aspectum cadit, subtiliorem: alterum, eam tamen infinitam non esse, nec perpetuo divisibilem. Si quis enim diligenter attendat, reperiet rerum minutias in corporibus continuatis eas, quæ in corporibus fractis et discontinuatis inveniuntur, subtilitate longe vincere. Videmus enim parum croci in aqua infusum et agitatam, puta dolium aquæ, ita inficere, ut ab alia aqua pura etiam visu distingui possit. Quæ certe dispartitio croci per aquam subtilitatem exquisitissimi pulveris superat. Quod manifestum fiet, si tantundem pulveris ligni Brasiliæ, vel balustiorum,

vel alicujus rei optime coloratæ (quæ tamen croci lentorem, ad se in liquoribus aperiendum et incorporandum, non habeat) immisceas. Itaque ridiculum erat, atomos pro parvis illis corpusculis, quæ sub radiis solis conspiciuntur, accipere. Ea enim pulveris instar sunt, atomum autem, ut ipse Democritus aiebat, nemo unquam vidit, aut videre possit. Sed ista rerum dispartitio in odoribus multo magis mirabilem se ostendit. Etenim si parum croci dolium aquæ, colore; at parum zibethi cœnaculum amplum, odore imbueret, et inficere potest, et subinde aliud, et rursus aliud. Neque quisquam sibi fingat, odores, luminis more, aut etiam caloris et frigoris, absque communicatione substantiæ diffundi; cum notare possit, odores etiam rebus solidis, lignis, metallis, adhærescere, idque ad tempus non exiguum; posse etiam frictione, lavatione ab eisdem discuti et purgari. Verum in hisce et similibus, quod processus infinitus non sit, nemo sanus contradixerit, cum intra spatia et limites, et corporum quantitates, hujusmodi dispartitio sive diffusio cohibeatur; ut in exemplis antedictis evidētissimum est. Quod ad secundum sensum atomi atinet, quod vacuum præsupponit, atomumque ex privatione vacui definit; bona et seria diligentia Heronis fuit, quæ vacuum coacervatum negavit, vacuum commistum asseruit. Cum enim perpetuum corporum nexum cereret, neque inveniri prorsus aut assignari spatium aliquod, quod corpore vacet; et multo magis, cum corpora gravia et ponderosa sursum ferri, et naturas suas quoque modo deponere et violare potius, quam divulsionem absolutam a corpore contiguo patiantur, videret; naturam a vacuo majoris notæ sive coacervato abhorreere prorsus statuit. Contra, cum eandem corporis materiam contrahi, et coactari, et rursus aperi et dilatari perspiceret, et spatia inæqualia interdum majora, interdum minor occupare et complere; non vidit quomodo hujusmodi ingressus et egressus corporum in locis suis fieri possit, nisi propter vacuum admistum, minus videlicet et, corpore compresso, plus relaxato: necesse enim esse, contractionem istam per unum ex his tribus modis fieri; aut eo, quem diximus, nempe quod vacuum pro ratione contractionis excludatur; aut quod aliud aliquod corpus prius intermistum exprimat; aut quod sit quædam naturalis (qualis qualis ea sit) corporum condensatio et rarefactio. Atque quod ad corporis tenuioris expressionem atinet, ista ratio nullum exitum habere videtur. Nam verum est, spongiæ, et hujusmodi porosa, expresso aëre, contrahi. De aëre ipso autem manifestum est per plurima experimenta, cum spatio notabili contrahi posse. Num ergo et ipsius aëris subtiliorem partem exprimi putandum est? et deinceps hujusmodi partis aliam, et sic in infinitum? Nam adversissimum tali opinioni est, quod quo tenuiora corpora sint, eo majorem contractionem sustineant, cum contra fieri oporteret, si contractio per expressionem partis tenuioris fieret. Atque de illo altero modo, corpora scilicet eadem, nec alias mutata, tamen magis et minus in raritate aut densitate recipere, non multum laborandum est. Positivum enim quiddam videtur esse, et ratione surda, et inexplicata niti, qualia sunt fere Aristotelis pronuntiata. Restat itaque tertius ille modus, qui

vacuum supponit. Quod si illud quis objiciat, durum videri et fere incredibile, ut vacuum admistum sit, cum corpus ubique reperiatur; is si exempla, quæ modo adduximus, aquæ croco, vel aëris odoribus infecti, animo sedatiore consideret, facile perspiciet, nullam partem posse assignari aquæ, ubi crocus non sit, et tamen manifestum esse ex comparatione croci et aquæ antequam miscerentur, corpus aquæ corpus croci multis numeris excedere. Quod si id in diversis corporibus invenitur, multo magis in corpore et vacuo hoc fieri putandum est. Verum in ea parte Heronis, utpote hominis mechanici, contemplatio illa Democriti philosophi clarissimi inferior fuit: quod Hero, quia hic apud nos in nostro isto orbe vacuum coacervatum non reperit, ideo illud simpliciter negavit. Nil enim impedit, quominus in regionibus ætheris, ubi proculdubio majores sunt corporum expansiones, etiam vacuum coacervatum sit. In iis autem inquisitionibus et similibus semel monitum sit, ne quis propter tantam naturæ subtilitatem confundatur et diffidat. Cogitet enim et unitates et summas rerum ex æquo supputationi submitti. Tam facile enim quis mille annos dixerit, aut cogitaret, quam mille momenta; cum tamen anni a multis momentis constituantur. Neque cursus existimet aliquis, hæc potius speculationis curiosæ esse, quam ad opera et usum referri: videre enim est omnes fere philosophos et alios, qui in experientia et rebus particularibus sedulo versati sunt, et naturam ad vivum dissecuerunt, in hujusmodi inquisitiones incidere, licet eas feliciter non peragant. Neque alia subest causa potentior et verior, ob quam philosophia, quam habemus, effectuum sit sterilis, nisi quod verborum et notionum vulgarium subtilitates captavit; naturæ subtilitatem non persecuta est, nec inquirere constituit.

## II. DE ÆQUALITATE AC INÆQUALITATE ATOMORUM SIVE SEMINUM.

PYTHAGORÆ inventa et placita talia ex majore parte fuere, quæ ad ordinem potius quamdam religiosorum fundandum, quam ad scholam in philosophia aperiendam, accommodata essent; quod et eventus comprobavit. Ea enim disciplina plus in hæresi Manichæorum, et superstitione Mahumeti, quam apud philosophos, valuit et floruit. Opinio tamen ejus, mundum ex numeris constare, eo sensu accipi potest, ut ad naturæ principia penetret. Duplex enim est, atque adeo esse potest, opinio de atomis sive rerum seminibus; una Democriti, quæ atomis inæqualitatem et figuram, et per figuram situm attribuit; altera fortasæ Pythagoræ, quæ eas omnino pares et similes esse asseruit. Qui enim æqualitatem atomis assignat, is omnia in numeris necessario ponit; qui autem reliqua attributa admittit, is naturas primitivas atomorum singularium præter numeros sive rationes coitionum adhibet. Activa autem quæstio, quæ huic speculativæ respondet, eamque determinare potest, ea est, quam etiam Democritus adducit; utrum omnia ex omnibus fieri possint. Quod cum illa a ratione alienum putasset, atomorum diversitatem tenuit. Nobis vero ea quæstio non bene instituta, nec quæstionem priorem premere videtur, si de transmutatione immediata corpora intelligatur.

Verum utrum etiam per debitos circuitus et mutationes medias universa non transeant, ea demum quæstio legitima est. Dubium enim non est, semina rerum, licet sint paria, postquam se in certas turmas et nodos conjecerint, corporum dissimilium naturam omnino induere, donec eadem turmæ aut nodi dissolvantur; adeo ut compositorum natura et affectus transmutationi immediatæ non minori impedimento ac obici, quam simplicium, esse possit. Verum Democritus in corporum principiis investigandis acutus; in motuum autem principiis examinandis sibi impar et imperitus deprehenditur; quod etiam commune vitium omnium philosophorum fuit. Atque hujus, de qua loquimur, inquisitionis de prima conditione seminum sive atomorum, utilitas, nescimus, an non sit omnino maxima; ut quæ sit actus et potentia suprema regula, et spei et operum vera moderatrix. Etiam alia inquisitio inde fluit, cujus utilitas complexu minor, sed rebus et operibus prior est. Ea est de separatione et alteratione, hoc est, quid per separationem fiat, et quid alia ratione. Familiaris enim est animo humano error, qui etiam a chemistarum philosophia magnum robur et incrementum accepit; ut ea separationi deputentur, quæ alio spectent. Exempli gratia; cum aqua in vaporem transit, facile quis opinetur partem aquæ subtiliorem emitti, crassiorem subsistere; ut in ligno videre est, ubi pars in flamma et fumo evolat, pars in cinere manet. Simile quiddam et in aqua fieri quis putet, licet non tam manifestum. Quamvis enim tota aqua quandoque ebullire et consumi videatur, tamen fæces quasdam ejus, tanquam cinerem, vasi adhærescere posse. Verum et ista ratio cogitationem fallit. Certissimum enim est, totum corpus aquæ in aërem posse mutari, et si quid vasi adhærescat, id non ex delectu et separatione partis crassioris, sed forte ut aliqua pars (licet pari omnino cum ea, quæ evolat, substantia) situ vas tetigeret, evenire; idque exemplo argenti vivi elucescit, quod totum fit volatile, et rursus totum absque diminutione vel tantilla consistit. Etiam in oleo lampadum, et sevo candelarum, totum a pingui fit volatile, nec aliqua fit incineratio; nam fuligo post flammam non ante flammam gignitur; et flammæ cadaver, non olei aut sevi sedimentum est. Atque hoc aditum quandam ad Democriti opinionem de diversitate seminum sive atomorum labefactandam præbet. Aditum, inquam, in natura; nam in opinione aditus ille est multo mollior et blandior, quod philosophia vulgaris materiam suam commentitiam ad omnes formas æquam et communem fingit.

### III. DE NEGLIGENTIA VETERUM IN INQUISITIONE DE MOTU, ET MOVENTIBUS RERUM PRINCIPIIS.

INQUISITIONEM de natura in motu contemplando et examinando maxime collocare, ejus est, qui opera spectet. Quieta autem rerum principia contemplari aut comminisci, eorum est, qui sermones serere, et disputationes alere velint. Quieta autem voco principia, quæ docent ex quibus res confientur et consistant, non autem qua vi et via coalescant. Neque enim ad agendum, et potestatem sive operationem humanam amplificandam sufficit, aut magnopere attinet, nosse ex quibus res constent, si modos et

vias mutationum et transformationum ignores. Nam sumpto exemplo a mechanicis (a quarum phantasia celebres illæ de principiis rerum inquisitiones fluxiæ videntur) an forte qui simplicia theriacam ingredientia novit, is pro certo theriacam componere potest? Aut qui sacchari, vitri, panni, materialia recte descripta apud se habet, num propterea artem, quæ ad eorum præparationem et effectum pertinet, tenere videtur? Atque in hujusmodi tamen principiis mortuis investigandis et examinandis hominum speculationes præcipue occupatæ sunt; ac si quis cadaveris naturæ anatomiam inspicere, non naturæ vivæ facultates et virtutes inquirere, sibi proponat et destinet. De moventibus autem rerum principiis sermo fere in transitu habetur: ut omnem admirationem superet, si intueamur quam negligenter et dissolute res omnium maxima et utilissima inquiratur et tractetur. Etenim si cogitationem de iis, quæ dicuntur, paulisper suscipiamus: num stimulus materiæ per privationem? num efformatio materiæ ad ideam? num aggregatio particularum similium? num agitatio fortuita atomorum in vacuo? num lis et amicitia? num cœli et terræ impressiones reciproæ; num elementorum commercium per qualitates symbolizantes? num influxus cœlestium? num sympathiæ et antipathiæ rerum? num occultæ et specificæ virtutes et proprietates? num fatum, fortuna, necessitas? num, inquam, hujusmodi generalia, quæ nil aliud sunt quam spectra, et simulacra in superficie rerum, veluti in aquis, natantia et ludentia, humanum genus beabunt? aut opes humanas efficient auctores? Ista enim phantasiam implent, vel inflant potius, sed nil prorsus ad operum effectum, corporum mutationem, aut motuum regimen faciunt. Atque rursus, de motu naturali et violento, de motu ex seipso et aliunde, de terminis motuum argutari et subtilitates captare; et hæc quoque nil admodum de corpore naturæ stringunt; sed potius in cortice describuntur. Itaque his missis, vel ad populares sermones damnatis et relegatis, illi demum rerum appetitus et inclinationes investigandæ sunt, a quibus ista, quam videmus, tanta effectuum et mutationum varietas, in operibus et naturæ et artis confatur, et emergit. Atque tentandum, ut naturæ, veluti Proteo, vincula injiciamus. Sunt enim genera motuum recte inventa et discreta, vera Protei vincula. Nam prout motuum, id est, incitationum et cohibitionum stimuli et nodi adhibentur, ad illud sequitur materiæ ipsius conversio et transformatio.

### IV. DE DIVISIONE VULGARI MOTUS, QUOD SIT INUTILIS, ET MINUS ACUTA.

DIVISIO motus recepta in philosophia popularis videtur et absque fundamento, ut quæ rem per effectus tantum dividit; atque ad hoc, ut per causas sciamus, nihil conducit. Nam generatio, corruptio, augmentatio, diminutio, alteratio, latio ad locum, nil aliud quam opera et effectus motuum sunt; qui cum ad manifestam rerum mutationem pervenerunt, quæ populari notæ subjacet, tum demum hiis nominibus (pingui satis contemplatione) insigniuntur. Neque enim dubitamus, quin hoc sibi velint, cum corpora per motum (cujuscunque sit generis) eo usque processerint, ut formam novam teneant, vel veterem

ponant (quod veluti periodus quædam est, et justis spatii confectio) id motum generationis et corruptionis nominari; sin autem, manente forma, quantitatem tantummodo et dimensionem novam adipiscantur, id motum augmentationis et diminutionis dici; sic, manente etiam mole et claustris, sive circumscriptione, tamen qualitate, actionibus et passionibus mutantur, id motum alterationis appellari; sin, manente utique et forma, et mole, et quantitate, locum et nil aliud mutant, id per motum lationis significari. Verum hæc omnia acutius et diligentius inspicienti, mensura motus sunt, et periodi, sive curricula quædam motuum et veluti pensa, non veræ differentię, cum quid factum sit designent; at rationem facti vix innuant. Itaque hujusmodi vocabula docendi gratia sunt necessaria, et dialecticis rationibus accommodata, naturalis autem scientię egentissima. Omnes enim isti motus compositi sunt, et decompositi, et multipliciter compositi; cum perite contemplantibus ad simpliciora penetrandum sit. Nam principia, fontes, causę, et formę motuum, id est omnigenę materię appetitus et passiones, philosophię debentur: ac deinceps motuum impressiones sive impulsiones; fręna et reluctationes; vię et obstructiones; alternationes et misturę; circuitus et catenę; denique universus motuum processus. Neque enim disputationes animosę, aut sermones probabiles, aut contemplationes vagę, aut denique placita speciosa, multum juvant. Sed id agendum ut, modis debitis, et ministerio naturę convenienti, motum quemcunque in materia susceptibili excitare, cohibere, intendere, remittere, multiplicare, ac sopire et sistere possimus; atque inde corporum conservaciones, mutationes, et transformationes præstare. Maxime autem ii motus sunt inquirendi, qui simplices, primitivi, et fundamentales sunt, ex quibus reliqui conflantur. Certissimum enim est, quanto simpliciores motus inveniuntur, tanto magis humanam potestatem amplificari, et a specialibus et præparatis materiis liberari, et in nova opera invalescere. Et certe quemadmodum verba sive vocabula omnium linguarum, immensa varietate, e paucis literis simplicibus componuntur; pari ratione universę rerum actiones et virtutes a paucis motuum simplicium naturis et originibus constituuntur. Turpe autem fuerit hominibus, proprię vocis tintinnabula tam accurate explorasse, ad naturę autem vocem tam illiteratos esse, et more prisce seculi (antequam literę inventę essent) sonos tantum compositos, et voces dignoscere; elementa et literas non distinguere.

#### V. DE QUANTO MATERIÆ CERTO, ET QUOD MUTATIO FIAT ABSQUE INTERITU.

OMNIA mutari, et nil vere interire, ac summam materię prorsus eandem manere satis constat. Atque ut omnipotentia Dei opus erat, ut aliquid crearetur e nihilo, ita et similis omnipotentia requiritur, ut aliquid redigatur in nihilum. Id sive per destinationem virtutis conservatricis, sive per actum dissolutionis fiat, nihil ad rem: tantum necesse est, ut decretum intercedat Creatoris. Hoc posito ne cogitatio abstrahatur, aut materia aliqua fictitia intelligatur, etiam illud significamus; eam a nobis introduci materiam, atque ea natura investitam, ut vere

dici possit huic corpori plus materię adesse, illi autem (licet eandem mensuram expleant) minus. Exempli gratia, plumbo plus, aquę minus, aëri multo minus; neque hoc solum indefinite et ratione incerta et surda, sed præcię; adeo ut calculos hæc res pati possit, veluti plus duplo, triplo, et similiter. Itaque si quis dicat, aërem ex aqua fieri posse, aut rursus aquam ex aëre, audiam; si vero dicat similem mensuram aquę in similem mensuram aëris verti posse, non audiam; idem enim est, ac si dixisset, aliquid posse redigi in nihilum. Similiter e converso, si dicat datam mensuram aëris (exempli gratia vesicam contenti certi aëris plenam) in similem mensuram aquę verti posse, idem est ac si dicat, aliquid fieri posse ex nihilo. Ex his itaque positis, tria præcepta sive consilia ad usum derivare jam visum est, ut homines peritius, et propter peritiam felicius, cum natura negotientur. Primum hujusmodi est, ut homines frequenter naturam de rationibus suis reddendis interpellent; hoc est, cum corpus aliquod, quod prius sensui manifestum erat, aufugisset et disparuisset videant, ut non prius rationes admittant, aut liquident, quam demonstratum eis fuerit, quo tandem corpus illud migraverit, et ad quę receptum sit. Hoc, ut nunc sunt res, negligentissime fit, et contemplatio plerumque cum aspectu desinit; adeo ut flammę, rei vulgatissimę, receptum homines non norint, quandoquidem eam in corpus aëris mutari falsissimum sit. Secundum hujusmodi, ut cum homines considerent necessitatem naturę prorsus adamantinam, quę materię inest, ut se sustentet, nec in nihilum cedat, aut solvatur; illi rursus nullum genus vexationis et agitationis materię prætermittant, si ultimas ejus operationes et obstinationes detegere atque educere velint. Atque hoc consilium non admodum artificiosum certe videri possit; quis negat? Sed utile tamen quiddam videtur, neque nihil in eo est. Veruntamen, si placet, etiam nunc parum observationis huic rei adspargamus. Itaque sic habeto. Maximum certe homini, sive operanti, sive experienti, impedimentum occurrit, quod materię massam certam, absque diminutione aut accessione, servare, et premere, et subigere vix licet; sed, separatione facta, ultima vis eluditur. Separatio autem duplex intervenit: aut quod pars materię evolet, ut in decoctione; aut saltem quod secessio fit, ut in flore lactis. Intentio itaque mutationis corporum profundę et intimę non alia est, quam si materia omnino debitis modis vexetur; sed tamen istę duę separationes nihilominus interim prohibeantur. Tum enim materia vere constringitur, ubi fugę omnis via intercipitur. Tertium denique hujusmodi, ut homines, cum corporum alterationes in eadem materię massa, neque aucta, neque diminuta, fieri videant, primum eo errore phantasiam liberent, qui alte hæret; alterationem nempe tantummodo per separationem fieri; deinde ut sedulo et perite distinguere incipiant de alterationibus, quando ad separationem referri debeant; quando ad disordinationem tantum, et variam positionem partium absque alia separatione; quando ad utramque. Neque enim credo, cum pyrum immaturum et acerbum manibus fortius attractamus, contundimus, et subigimus, unde illud dulcedinem acquirit; aut cum suc-

cinum vel gemma, in pulverem subtilissimum re-  
ducta, colorem deponunt, materiæ pars notabilis de-  
perditur, sed tantum partes corporis in nova positione  
constituuntur. Restat ut errorem quendam ex opi-  
nionibus hominum evellamus, cujus ea vis est, ut, si  
fides ei adhibeatur, aliqua ex his, quæ diximus, pro  
desperatis haberi possint. Vulgaris enim opinio est,  
rerum spiritus, cum ad intensiorem quendam gradum  
tenuitatis per calorem evecit sunt, etiam in vasis so-  
lidissimis (puta argenti, vitri) per occultos eorundem  
poros et meatus evolari; quod minus verum est.  
Neque enim aër aut spiritus, licet accedente calore,  
rarefactus, non flamma ipsa, tam libenter se com-  
minuit, ut per hujusmodi poros exitum sibi quærere  
aut facere sustineat. Verum ut nec aqua per rimam  
valde parvam, ita nec aër per hujusmodi poros ef-  
fluit. Nam ut aër aqua longe tenuior, ita et tales  
pori rimis conspicuis longe subtiliores sunt: neque  
opus haberet sub vase operto suffocari, si hujusmo-  
di perspirationes illi ullo modo præsto essent aut  
competerent. Exemplum autem, quod adducunt,  
miserum est, vel potius miserandum, ut sunt pleræ-  
que contemplationes vulgaris philosophiæ, cum ad  
particularia ventum est. Aiunt enim, si charta in-  
flammata in poculum mittatur, et subito os poculi  
super vas aquæ convertatur, aquam sursum trahi;  
propterea quod postquam flamma, et aër per flam-  
mam rarefactus, quæ spatii aliquantum impleverant,  
per poros vasis exhalaverint, restare ut corpus ali-  
quod succedat. Idem in ventosis fieri, quæ carnes be-  
ne sentiunt, de causa, quæ præcedit, imperitissime.  
Neque enim est aliqua corporis emissio, quæ spatium  
præbet, sed sola corporis contractio. Corpus enim, in  
quod flamma recedit, longe minus spatium complet,  
quam flamma antequam extingueretur. Hinc fit  
illud inane, quod successionem desiderat. Atque in  
ventosis hoc evidentissimum est. Nam cum eas  
fortius trahere volunt, spongia aquæ frigidæ infusa  
illas tangunt, ut per frigus aër interior condensetur,  
et se in minus spatium colligat. Itaque demimus  
certe hominibus eam solitudinem, ne de spirituum  
tam facili evolutione laborent: cum et illi spiritus,  
quos sæpe desiderant, odorum, saporum, similitum,  
non semper extra septa evolent, sed intra confundan-  
tur; hoc certissimum est.

#### VI. DE QUIETE APPARENTE, ET CONSISTENTIA, ET FLUORE.

QUOD quædam quiescere videantur, et motu pri-  
vari, id secundum totum aut integrum recte videtur,  
secundum partes autem, hominum opinionem fallit.  
Quies enim simplex et absoluta, et in partibus et in  
toto nulla est, sed quæ esse putatur per motuum im-  
pedimenta, cohibitiones, et æquilibria efficitur. Ex-  
empli gratia, cum in vasis in fundo perforatis, quibus  
hortos irrigamus, aqua (si os vasis obturetur) ex fo-  
raminibus illis non effluit; id per motum retrahen-  
tem, non per naturam quiescentem fieri perspicuum  
est. Aqua enim tam contendit descendere, quam si  
actu suo potiatur; sed cum in summitate vasis non  
sit quod succedat, aqua in imo ab aqua in summo  
retrahitur, et vim patitur. Si quis enim alterum in-  
firmiorem in lucta teneat, ut se movere non possit,

atque ille nitatur sedulo, non propterea tamen minor  
est motus renitentia, quia non prævalet, et a motu  
fortiori ligatur. Hoc autem quod dicimus de falsa  
quiete, et in rebus innumeris utile cognitu est, et  
non minimum lucis præbet in inquisitione naturæ  
solidi et liquidi, sive consistentiæ et fluoris. Solida  
enim videntur in positione sua manere et quiescere,  
liquida autem moveri et confundi. Neque enim co-  
lumna ex aqua, aut alia effigies extrui potest, ut de  
ligno vel lapide. Itaque in promptu est opinari,  
partes aquæ superiores contendere (motu, quem ap-  
pellant, naturali) ut defluant; partes autem ligni  
non item. Atqui hoc verum non est, cum idem in-  
sit motus partibus ligni, quæ in summo collocantur,  
ut deorsum ferantur, qui aquæ; idque in actum per-  
duceretur, nisi ligaretur et retraheretur iste motus a  
motu potiore. Is autem est certe appetitus conti-  
nuitatis, sive separationis fuga, quæ et ipsa tam  
aquæ, quam ligno, competit; sed in ligno est motu  
gravitatis fortior, in aqua debilior. Nam quod ex  
hujusmodi motu etiam quæ liquida sunt participant,  
id manifestum est. Videmus enim in bullis aquæ  
ad separationem evitandam, aquam se in pelliculas  
conijcere, in hemisphærii formam confictas. Vide-  
mus etiam in stillicidiis, aquam, ut aquæ continue-  
tur, in filum exile se producere et attenuare, quoad  
sequens aqua suppetat; sin autem deficiat aqua ad  
continuationem, tum se in guttas rotundas recipere,  
quarum diameter filo illo priore sit multo major.  
Simili modo videmus, aquam comminutionem magis  
exquisitam ægre pati, cum ex foraminibus et rimis  
(si subtiliores sint) naturali suo pondere absque con-  
cussione non effluat. Quare constat, appetitum con-  
tinuitatis etiam liquidis inesse, sed debilem. At  
contra in rebus solidis viget, et motui naturali sive  
gravitati prædominatur. Si quis enim existimet in  
columna ligni vel lapidis superiores partes non sit  
difficili cupere, sed se in eodem plane statu sustinere,  
is facile se corriget, si consideret columnam, sive  
similia, si altitudo ejus ad latitudinem basis non sit  
proportionata, sed modum excedat, stare non posse,  
sed devexo pondere ferri; adeo ut structuris præal-  
tis necesse sit, ut ad pyramidis formam inclinent, et  
sint versus summitatem angustiores. Qualis autem  
sit ea natura, quæ appetitum istum continuitatis in-  
tendat aut remittat, non facile inquirenti occurrit.  
Illud fortasse suggeretur, partes solidorum esse  
magis densas et compactas; liquidorum magis raras  
et solutas; aut liquidis subesse spiritum, quod fluoris  
sit principium, qui in solidis desit, et hujusmodi.  
Sed neutrum horum veritatis consonum est. Mani-  
festum enim est, nivem et ceram, quæ secari et fingi,  
et impressiones recipere possunt, argento vivo aut  
plumbo liquefacto longe esse rariora; ut in ratione  
ponderum evincitur. Quod si quis adhuc insistat, fieri  
posse, ut nix aut cera, licet sit (in toto) argento vivo  
rarior, tamen habere possit partes magis clausas et  
compactas; verum quia sit corpus spongiosum, et  
cava multa et aërem recipiat, ideo in summa effici  
leviorem, ut in pumice fit, qui cum pro ratione molis  
sit fortasse ligno levior, tamen si utrumque in pul-  
verem redigatur, pulverem pumicis pulvere ligni  
futurum graviorem, quia cavitates illæ non amplius  
adsint: Hæc bene notata et objecta sunt. Sed quid

ad nivem et ceram colliquatam dicent, ubi jam cavitates expletæ sunt; vel quid ad gummi corpora, mastichen, et similia, quæ cavitates istas manifestas non habent, et tamen sunt pluribus liquoribus leviora? Quod autem de spiritu afferunt, per cuius vim et impetum res fluant; id certe primo intuitu probabile est, et notionibus communibus familiari, re ipsa autem durius est, et magis erroneum, cum veræ rationi non solum non innitatur, sed fere opponatur. Spiritus enim ille, quem dicunt, revera (quod mirum fortasse dictu) consistentiam inducit, non fluorem: quod et optime in instantia nivis cernitur; quæ cum ex aqua et aëre compositum corpus sit, cumque et aqua et aër seorsum fluant, in mistura tamen consistentiam adipiscitur. Quod si quis objiciat, id evenire posse ex condensatione aquæ partis per frigus, et non ab interpositione aëris; is se corriget, si animadvertat etiam spumam corpus simile nivi esse, quod tamen a frigore nullo modo condensetur. Sin adhuc urgeat, et in spuma præcedere condensationem, non a frigore, sed tamen ab agitatione et percussione; is pueros consulat, qui ex levi aura, per fistulam sive calamum inspirata, et aqua (ob parum saponis admistum) paulo tenacior, miram et turritam bullarum structuram conficiunt. Res autem sic se habet; corpora ad tactum corporis amici, sive similis, se solvere et laxare, ad tactum autem corporis dissentientis se stringere et sustinere. Itaque appositionem corporis alieni esse consistentiæ causam. Sic videmus oleum aquæ admistum, ut fit in unguentis, liquidatam, quæ et in aqua et in oleo antea vigeat, quadantenus exuere. Contra videmus, papyrum aqua madefactum se solvere, et consistentiam (quæ ob aërem antea in poris admistum valida erat) deponere; oleo vero madefactum, minus, quia oleum papyro minus consentiat. Idem quoque in saccharo videmus et similibus, quæ ad aquam vel vinum intromittenda se laxant, neque solum cum liquores illis incumbunt, sed eosdem quoque sugunt et sursum trahunt.

VII. DE CONSENSU CORPORUM, QUÆ SENSU PRÆDITA SUNT, ET QUÆ SENSU CARENT.

PASSIONES corporum, quæ sensu dotantur, et quæ sensu carent, magnum consensum habent; nisi quod in corpore sensibili accedat spiritus. Nam pupilla oculi speculo sive aquis æquiparatur; et simili natura imagines lucis et rerum visibilium excipit et reddit. Organum autem auditus obici intra locum cavernosum conforme est, a quo vox et sonus optime resultat. Attractiones autem rerum inanimatarum, et rursus horrores sive fugæ (eas dico, quæ ex proprietate fiunt) in animalibus, olfactui atque odoribus gratis et odiosis, conveniunt. Tactus autem ratio et gustus, omnem, quæ in corporibus animatis accidere possit, aut violentiam aut contra insinuationem animam et amicam, ac universas earundem passionum figuras veluti vates aut interpres exprimit. Nam compressiones, extensiones, erosiones, separationes, et similia, in corporibus mortuis in processu latent, nec nisi post effectum manifestum percipiuntur. In animalibus autem cum sensu doloris secundum diversa genera aut characteres violentiæ peraguntur, permeante per omnia spiritu. Atque ab hoc prin-

cipio deducitur cognitio, num forte alicui animantium adsit alius quispiam sensus præter eos, qui notantur; et quot et quales sensus in universo animantium genere esse possint. Ex passionibus enim materiæ rite distinctis sequetur numerus sensuum, si modo organa competant, et accedat spiritus.

VIII. DE MOTU VIOLENTO, QUOD SIT FUGA, ET DISCURSATIO PARTIUM REI PROPTER PRESSURAM, LICET MINIME VISIBILIS.

MOTUS violentus (quem vocant) per quem missilia, ut lapides, sagittæ, globi ferrei, et similia, per aërem volant, fere omnium motuum est vulgatissimus. Atque in hujus tamen observatione et inquisitione miram et supinam negligentiam hominum notare licet. Neque parvo detrimento in motus istius natura et potestate investiganda offenditur; cum ad infinita sit utilis, et tormentis, machinis, et universæ rei mechanicæ sit instar animæ et vitæ. Plurimi autem se perfunctos inquisitione putant, si motum illum violentum esse pronuntient, et a naturali distinguant. Atque is sane est Aristotelis et scholæ ejus mos proprius et disciplina, curare ut habeant homines quod pronuntient, non quod sentiant; et docere quomodo aliquis affirmando aut negando se expedire, non cogitando se explicare, et sibi satisfacere possit. Alii paulo attentius, arrepto illo posito, duo corpora in uno loco esse non posse, restare aiunt, ut quod fortius sit impellat, debilius cedat; eam cessionem sive fugam, si minor adhibeatur vis, non ultra durare, quam prima impulsio continetur, ut in protrusione; si autem major, etiam remoto corpore impellente, ad tempus vigere, donec sensim remittatur, ut in jactu. Atque hi rursus, alio ejusdem scholæ more inveterato, primordia rei captant, de processu et exitu non solliciti, tanquam prima quæque cætera trahant; quo fit ut immatura quadam impatientia contemplationem abrumpant. Nam ad id, quod corpora sub ipsum ictum cedant, aliquid afferunt; sed postquam corpus impellens jam remotum sit, adeo ut necessitas illa confusionis corporum jam plane cessaverit, cur postea motus continetur, nihil dicunt, nec se ipsi satis capiunt. Alii autem, magis diligentes, et in inquisitione perseverantes, cum vim aëris in ventis et similibus, quæ vel arbores et turres dejicere possit, animadvertissent, opinati sunt eam vim, quæ hujusmodi missilia post primam impulsionem deducat et comitetur, aëri deberi attribui, pone corpus, quod movetur, collecto et ingruenti, cuius impetu corpus, tanquam navis in gurgite aquarum, vehatur. Atque hi certe rem non deserunt, atque contemplationem ad exitum perducent; sed tamen a veritate aberrant. Res autem vere in hunc modum se habet. Præcipuus motus partibus ipsius corporis, quod volat, inesse videtur; qui cum visu, ob nimiam subtilitatem, non percipitur, homines non satis attendentes, sed levi observatione rem transmittentes, latet. Accuratus autem scrutanti manifeste constat, corpora, quæ duriora sunt, pressionis esse impatientissima, et ejusdem veluti sensum acutissimum habere, adeo ut, quam minimum a naturali positione depulsa, magna pernecitate nitantur ut liberentur et in pristinum statum restituantur. Quod ut fiat, partes singulæ, facto principio a

parte pulsata, se invicem non secus, ac vis externa, protrudunt, ac vigent; et fit continua et intensissima (licet minime visibilis) partium trepidatio et commotio. Atque hoc videmus fieri in exemplo vitri, sacchari, et hujusmodi rerum fragilium, quæ si mucrone aut ferro acuto secentur aut dividantur, protinus in aliis partibus, a tactu mucronis remotis, quasi in instanti disrumpuntur. Quod evidenter demonstrat communicationem motus pressuræ in partes succedentes; qui motus, cum per omnia moliatur, et ubique tentet, ea parte contractionem inducit, quæ ex præcedente corporis dispositione minus fortis erat compactio. Neque tamen ipse motus, quando per omnia turbat et percurrit, sub aspectum venit, donec aperta fiat effractio, sive continuitatis solutio. Rursus videmus, si forte filum ferreum, aut bacillum, aut durior pars calami (vel hujusmodi corpora, quæ flexibilia quidem sunt, non absque aliqua renitentia) inter pollicem et indicem per extrema sua curventur et stringantur, ea statim prosilire. Cujus motus causa manifeste deprehenditur non esse in extremis corporis partibus, quæ digitis stringuntur, sed in medio, quod vim patitur, ad cuius revelationem motus ille se expedit. In hoc autem exemplo plane liquet, causam illam motus, quam adducunt de impulsione aëris, excludi. Neque enim ulla fit percussio, quæ aërem immittat. Atque hoc etiam levi illo experimento evincitur, cum pruni nucleum recentem et lubricum premimus, digitosque paulatim adducimus, atque hac ratione emittimus. Nam et in hoc quoque exemplo compressio illa vice percussio est. Evidentissimus autem hujusce motus effectus cernitur in perpetuis conversionibus sive rotationibus corporum missilium dum volant. Siquidem ea procedunt utique, sed progressum suum faciunt in lineis spiritalibus, hoc est, procedendo et rotando. Atque certe is motus spiralis, cum tam sit rapidus, et nihilominus tam expeditus, et rebus quodammodo familiaris, nobis dubitationem movit, num forte ex altiore principio non penderet. Sed existimamus non aliam causam huic rei subesse, quam eandem, quam nunc tractamus. Namque pressura corporis affatim motum in partibus sive minutis ejus excitat, ut se quacunque via expediant et liberent. Itaque corpus non solum in linea recta agitur et provolat, sed undequaque experitur, atque ideo se rotat; utroque enim modo ad se laxandum nonnihil proficit. Atque in rebus solidis subtile quiddam et abditum: in mollibus evidens et quasi palpabile est. Nam ut cera vel plumbum, et hujusmodi mollia, malleo percussa, cedunt, non tantum in directum, sed et in latera, undequaque: eodem modo et corpora dura sive renitentia fugiunt et in recta linea et in circuitu. Cessio enim corporalis in mollibus, et localis in duris, ratione conveniunt; atque in corporis mollis efformatione, corporis duri passio, cum fugit et volat, optime conspicitur. Interim nemo existimet nos præter motum istum (qui caput rei est) non etiam aliquas partes aëri devehenti tribuere, qui motum principalem adjuvare, impedire, flectere, regere possit. Nam et ejus rei potestas est non parva. Atque hæc motus violenti sive mechanici (qui adhuc latuit) explicatio veluti fons quidam practicæ est.

IX. DE CAUSA MOTUS IN TORMENTIS IGNEIS, QUOD EX PARTE TANTUM, NEC EA POTIORE INQUISITA SIT.

TORMENTORUM igneorum causa, et motus tam potentis et nobilis explicatio, manca est, et ex parte potiore deficit. Aiunt enim pulverem tormentarium, postquam in flammam conversus sit et extenuatus, se dilatare et majus spatium occupare: unde sequi, ne duo corpora in uno loco sint, aut dimensionum penetratio fiat, aut forma elementi destruat, aut sitas partium præter naturam totius sit (hæc enim dicuntur) corporis, quod obstat expulsionem vel effractionem. Neque nihil est, quod dicunt. Nam et iste appetitus, et materiæ passio, et hujusmodi motus pars aliqua. Sed nihilominus in hoc peccant, quod ad necessitatem istam corporis dilatandi rem præproperea cogitatione deducunt, neque quod natura prius est, distincte considerant. Nam ut corpus pulveris, postquam in flammam mutatus est, majorem locum occupet, necessitatem sane habet; ut autem corpus pulveris inflammetur, idque tam rapide, id simili necessitate non constringitur; sed ex præcedente motuum conflictu et comparisone pendet. Nam dubium non est, quin corpus illud solidum et grave, quod per hujusmodi motum extruditur, vel removetur, antequam cedat, sedulo obnitatur: et si forte robustius sit, victoria potiatur; id est, ut non flamma globum expellat, sed globus flammam suffocet. Itaque si loco pulveris tormentarii sulphurem vel caphuram vel similia accipias, quæ flammam et ipsa cito corripunt, et (quia corporum compactio inflammationi impedimento est) ea in grana pulveris, admista cineris juniperi vel alicujus ligni maxime combustilis aliqua portione, efformes; tamen (si nitrum absit) motus iste rapidus et potens non sequitur: sed motus ad inflammationem, a mole corporis renitentis, impeditur et constringitur; nec se explicat aut ad effectum pertingit. Rei autem veritas sic se habet. Motum istum, de quo quaeritur, geminatum et compositum reperias. Nam præter motum inflammationis, qui in sulphurea pulveris parte maxime viget, subest alius magis fortis et violentus. Is fit a spiritu crudo et aqueo, qui ex nitro maxime, et nonnihil a carbone salicis, concipitur, qui et ipse expanditur certe (ut vapores subdito calore solent) sed una etiam (quod caput rei est) impetu rapidissimo a calore et inflammatione fugit et erumpit, atque per hoc etiam inflammationi vias relaxat et aperit. Hujusce motus rudimenta et in crepitationibus aridorum foliorum lauri vel hederæ cernimus, cum in ignem mittuntur; et magis etiam in sale, qui ad rei inquisitione naturam propius accedit. Simile etiam quiddam et in sevo candelarum maddo, et in flatulentis ligni viridis flammis sæpe videmus. Maxime autem eminet iste motus in argento vivo, quod corpus maxime crudum, et instar aquæ mineralis est; cujus vires (si ab igne vexetur, et ab exitu prohibeatur) non multo pulveris tormentarii viribus inferiores sunt. Itaque hoc exemplo monendi homines sunt et rogandi, ne in causarum inquisitione unum aliquid arripiant, et facile pronuntient; sed circumspectant, et contemplationes suas fortius et altius figant.

X. DE DISSIMILITUDINE CŒLESTIUM ET SUBLUNARIUM QUOAD ÆTERNITATEM ET MUTABILITATEM; QUOD NON SIT VERIFICATA.

Quod receptum est, universitatem naturæ veluti per globos recte dividi et distingui; ut alia sit ratio cœlestium, alia sublunarium, id non absque causa introductum videtur; si in hac opinione modus adhibeatur. Dubium enim non est, quin regiones sub orbe lunari positæ et supra, una cum corporibus, quæ sub eisdem spatiis continentur, multis et magnis rebus differant. Neque tamen hoc certius est, quam illud, corporibus utriusque globi inesse communes inclinationes, passiones, et motus. Itaque unitatem naturæ sequi debemus, et ista distinguere potius, quam discernere, nec contemplationem frangere. Sed quod ulterius receptum est, cœlestia mutationes non subire, sublunaria vero, aut elementaria quæ vocant, iisdem obnoxia esse; et materiam horum instar meretricis esse, novas formas perpetuo appetentem; illorum autem instar matronæ, stabili et intemerato connubio gaudentem; popularis opinio videtur esse, et infirma, et ex apparentia et superstitione orta. Videtur autem nobis hæc sententia ex utraque parte labilis et sine fundamento. Nam neque cœlo ea competit æternitas, quam fingunt, nec rursus terræ ea mutabilitas. Nam quod ad cœlum attinet, non ea nitendum est ratione, mutationes ibidem non fieri, quia sub aspectum non veniunt: aspectum enim frustrat et corporis subtilitas, et loci distantia. Nam variæ inveniuntur aëris mutationes, ut in æstu, frigore, odoribus, sonis, manifestum est, quæ sub visum non cadunt. Neque rursus (credo) si oculus in circulo lunæ positus esset, a tanto intervallo, quæ hic apud nos fiunt, et qui in superficie terræ obveniunt motus, et mutationes machinarum, animalium, plantarum, et hujusmodi (quæ pusillæ alicujus festuæ dimensionem, ob distantiam, non æquant) cernere posset. In corporibus autem, quæ tantæ molis et magnitudinis sunt, ut, ob dimensionum suarum amplitudinem, spatia distantiarum vincere, atque ad aspectum pervenire possunt, mutationes in regionibus cœlestibus fieri, ex cometis quibusdam satis liquet; iis dico, qui certam et constantem configurationem cum stellis fixis servarunt; qualis fuit illa, quæ in Cassiopea, nostra ætate, apparuit. Quod autem ad terram attinet; postquam ad interiora ejus, relicta ea, quæ in superficie et partibus proximis invenitur, incrustatione et mistura, penetratum est, videtur et ibi quoque similis ei, quæ in cœlo supponitur, perpetuitas existere. Proculdubio enim est, si in profundo terræ pateretur mutationes, consequentiam earum mutationum, etiam in nostra regione, quam calcamus, majores casus fuisse parituram, quam fieri videmus. Sane terræ motus plerique, et eruptiones aquarum, vel eructationes ignium, non ex profundo admodum, sed prope insurgunt, cum parvum aliquod spatium in superficie occupent: quanto enim latiore regionem et tractum hujusmodi accidentia in facie terræ occupant, tanto magis radices sive origines eorum ad viscera terræ penetrare potandum est. Itaque majores terræ motus (majores, inquam, ambitu, non violentia) qui rarius eveniunt, recte cometis ejus generis, de quo diximus,

æquiparari possunt; qui et ipsi infrequentes sunt; ut illud maneat, quod initio diximus, inter cœlum et terram, quatenus ad constantiam et mutationem, non multum interesse. Si quem autem æquabilitas et certitudo motus in corporibus cœlestibus apparens movet, veluti æternitatis comes individuus, præsto est oceanus, qui in æstu suo haud multo minorem constantiam ostendat. Postremo, si quis adhuc instet, negari tamen non posse, quin in ipsa superficie orbis terrarum et partibus proximis, infinitæ fiant mutationes, in cœlo non item; huic ita responsum volumus, nec nos hæc per omnia æquare: et tamen si regiones (quas vocant) superiorem et mediam aëris pro superficie aut interiore tunica cœli accipiamus quemadmodum spatium istud apud nos, quo animalia, plantæ, et mineralia continentur, pro superficie vel exteriori tunica terræ accipimus; et ibi quoque varias et multiformes generationes et mutationes inveniri. Itaque tumultus fere omnis, et conflictus, et perturbatio, in confiniis tantum cœli et terræ locum habere videtur. Ut in rebus civilibus fit; in quibus illud frequente usu venit, ut duorum regnorum fines continuis incursionibus et violentiis infestentur, dum interiores utriusque regni provinciæ securo pace atque alta quiete fruuntur. Nemo autem, si recte attenderit, religionem hic opponat. Nam ethnica jactantia solummodo prærogativa ista cœlum materiæ donavit, ut sit incorruptibile. Scripturæ autem sacræ æternitatem et corruptionem cœlo et terræ ex æquo, licet gloriam et venerationem disparem, attribuunt. Nam si legatur, "Solem et lunam fideles et æternos in cœlo testes esse:" legitur etiam, "Generationes migrare, terram autem in æternum manere." Quod autem utrumque transitorium sit, uno oraculo continetur, nempe "Cœlum et terram pertransire, verbum autem Domini non pertransire." Neque hæc nos novi placiti studio diximus, sed quod ista rerum et regionum conficta divortia et discrimina, ultra quam veritas patitur, magno impedimento ad veram philosophiam, et naturæ contemplationem fore, haud ignari, sed exemplo edocti providemus.

DE FLUXU ET REFLUXU MARIS.

CONTEMPLATIO de causis fluxus et refluxus maris, ab antiquis tentata, et deinde omissa, junioribus repetita, et tamen varietate opinionum magis labefactata quam discussa, vulgo levi conjectura refertur ad lunam, ob consensum nonnullum motus ejusdem cum motu lunæ. Attamen diligentius perscrutanti vestigia quædam veritatis se ostendunt, quæ ad certiora deducere possint. Itaque ne confusius agatur, primo distinguendi sunt motus maris, qui licet satis inconsiderate multiplicentur a nonnullis, inveniuntur revera tantum quinque; quorum unus tanquam anomalus est, reliqui constantes. Primus ponatur motus ille vagus et varius (quos appellant) currentium; secundus motus magnus oceani sexhorarius, per quem aquæ ad littora accedunt et recedunt alternatim bis in die, non exacte, sed cum differentia tali, quæ periodum constituat menstruum. Tertius

motus ipse menstruus, qui nil aliud est quam restitio motus (ejus quem diximus) diurni ad eadem tempora; quartus motus semimenstruus, per quem fluxus habent incrementa in noviluniis et pleniluniis magis, quam in dimidiis; quintus motus semestris, per quem fluxus habent incrementa auctiora et insignia in æquinocitiis. Atque de secundo illo motu magno oceani sexhorario sive diurno, nobis in præsentia sermo est præcipue et ex intentione, de reliquis solummodo in transitu et quatenus faciant ad hujusce motus explicationem. Primo igitur quod ad motum currentium attinet, dubium non est quin pro eo ac aquæ vel ab angustiis premuntur, vel a liberis spatiis laxantur, vel in magis declivia festinant, ac veluti effunduntur, vel in eminentiora incurunt ac inscendunt, vel fundo labuntur æquabili, vel fundi sulcis et inæqualitatibus perturbantur, vel in alios currentes incidunt, atque cum illis se miscent et compatiuntur, vel etiam a ventis agitantur, præsertim anniversariis sive statariis, qui sub anni certas tempestates redeunt, aquas ex his et similibus causis impetus et gurgites suos variare, tam consecutione ipsius motus atque latione, quam velocitate sive mensura motus, atque inde constituere eos quos vocant currentes. Itaque in maribus tum profunditas fossæ sive canalis, atque interpositæ voragine et rupes submarinæ, tum curvitates littorum, et terrarum prominentiæ, sinus, fauces, insulæ multis modis locatæ, et similia, plurima possunt, atque agunt prorsus aquas, earumque meatus et gurgites in omnes partes, et versus orientem, et versus occidentem, austrum versus similiter et septentriones, atque quaquaversum, prout obices illi aut spatia libera et declivia sita sint et invicem configurentur. Segregetur igitur motus iste aquarum particularis, et quasi fortuitus, ne forte ille in inquisitione, quam prosequimur, obturbet. Neminem enim par est constituere et fundare abnegationem eorum, quæ mox dicentur de motibus oceani naturalibus et catholicis, opponendo motum istum currentium, veluti cum thesibus illis minime convenientem. Sunt enim currentes meræ compressiones aquarum, aut liberationes a compressione: suntque, ut diximus, particulares et respectivi, prout locantur aquæ et terræ, aut etiam incumbunt venti. Atque hoc, quod diximus, eo magis memoria tenendum est, atque diligenter advertendum, quia motus ille universalis oceani, de quo nunc agitur, adeo mitis est et mollis, ut a compulsionibus currentium omnino dometur, et in ordinem redigatur, cedatque et ad eorum violentiam agatur et regatur. Id autem ita se habere ex eo perspicuum est vel maxime, quod motus simplex fluxus et refluxus maris in pelagi medio, præsertim per maria lata et exporrecta, non sentiatur, sed ad littora tantum. Itaque nihil mirum si sub currentibus (utpote viribus inferior) lateat et quasi destruat, nisi quod ille ipse motus, ubi currentes secundi fuerint, eorum impetum nonnihil juvet atque incitet; contra ubi adversi, modicum frænēt. Misso igitur motu currentium, pergendum est ad motus illos quatuor constantes, sexhorarium, menstruum, semimenstruum, et semestrem, quorum solus sexhorarius videtur fluxus maris agere et ciere, menstruus vero videtur tantummodo motum illum determinare et

restituere. Semimenstruus autem et semestris eandem augere et intendere. Etenim fluxus et refluxus aquarum, qui littora maris ad certa spatia inundat et destituit, et horis variis variat, et vi ac copia aquarum, unde reliqui illi tres motus se dant conspicuos. Itaque de illo ipso motu fluxus et refluxus sigillatim ac proprie (ut instituimus) videndum. Atque primo illud dari prorsus necesse est, motum hunc, de quo inquirimus, unum ex duobus istis esse, vel motum sublacionis et demissionis aquarum, vel motum progressus. Motum autem sublacionis et demissionis talem esse intelligimus, qualis invenitur in aqua bullienti, quæ in caldario attollitur et rursus residet. At motum progressus talem, qualis invenitur in aqua vecta in pelvi, quæ unum latus deserit, cum ad latus oppositum advolvitur. Quod vero motus iste neutiquam sit primi generis, occurrit illud imprimis, quod in diversis mundi partibus variant æstus secundum tempora; ut fiant in aliquibus locis fluxus et augmenta aquarum, cum alibi sint ad eas horas refluxus et decremēta. Debuerant autem aquæ, si illæ non progredierentur de loco in locum, sed ex profundo ebullirent, ibique simul se attollere, atque rursus simul se recipere. Videmus enim duos illos alios motus semestrem et semimenstruum per universum orbem terrarum simul perfungi atque operari. Fluxus enim sub æquinocitiis ubique augentur; non in aliis partibus sub æquinocitiis, in aliis sub tropicis; atque similis est ratio motus semimenstrui. Ubique enim terrarum invalescunt aquæ in noviluniis et pleniluniis, nullibi in dimidiis. Itaque videtur revera aquæ in duobus illis motibus plane attolli et demitti, et veluti pati apogæum et perigæum, quemadmodum cœlestia. Atque in fluxu et refluxu maris, de quo sermo est, contra fit: quod motus in progressu certissimum signum est. Præterea si fluxus aquarum ponatur esse sublacio, attendendum paulo diligentius quomodo ista sublacio fieri possit. Aut enim fiet tumor ab aucto quanto aquarum, aut ab extensione sive rarefactione aquarum in eodem quanto, aut per sublacionem simplicem in eodem quanto atque eodem corpore. Atque tertiam illud prorsus adjiciendum. Si enim aqua, qualis est, attollatur, ex hoc relinquatur necessario inane inter terram atque ima aquæ, cum non sit corpus quod succedat. Quod si sit nova moles aquæ, necesse est eam emanare atque scaturire e terra. Sin vero sit extensio tantum, id fiet vel per solutionem in magis rarum, vel appetitum appropinquandi ad aliud corpus, quod aquas veluti evocet et attrahat, et in sublimius tollat. Atque certe ista aquarum sive ebullitio, sive rarefactio, sive conspiratio cum alio quopiam corpore ex superioribus, non incredibilis videri possit in mediocri quantitate, atque adhibito etiam bono temporis spatio, in quo hujusmodi tumores sive augmenta se colligere et cumulare possint. Itaque excessus ille aquarum, qui inter æstum ordinarium, atque æstum illum largiorem semimenstruum, aut etiam illum alterum profusissimum semestrem notari possit, cum nec mole excessus inter fluxum et refluxum æquiparetur, atque habeat etiam bene magnum intervallum temporis ad incrementa illa sensim faciēda, nihil habeat alienum a ratione. Ut vero tanta erumpat moles aquarum,

quæ excessum illum, qui invenitur inter ipsum fluxum et refluxum, salvet, atque hoc fiat tanta celeritate, videlicet bis in die, ac si terra, secundum vanitatem illam Apollonii, respiraret, atque aquas per singulas sex horas efflaret, ac deinde absorberet; incommodum maximum. Neque moveatur quispiam levi experimento, quod putei nonnulli in aliquibus locis memorentur consensum habere cum fluxu et refluxu maris, unde suspicari quis possit, aquas in cavis terræ conclusas similiter ebullire, in quo casu tumor ille ad motum progressivum aquarum referri commode non possit. Facilis enim est responsio, posse fluxum maris accessione sua multa loca cava ac laxa terræ obturare atque opplere, atque aquas subterraneas vertere, etiam aërem conclusum reverberare, qui serie continuata hujusmodi puteorum aquas trudento attollere possit. Itaque hoc in omnibus puteis minime fit, nec in multis adeo, quod fieri debuit, si universa massa aquarum naturam haberet ebullientem per vices, et cum aestu maris consensionem. Sed contra raro admodum fit, ut inat miraculi fere habeatur; quia scilicet hujusmodi laxamenta et spiracula, quæ a puteis ad mare pertingunt, absque obturatione aut impedimento raro admodum inveniantur. Neque abs re est memorare quod referunt nonnulli, in fodinis profundis, non procul a mari sitis, aërem incassari et suffocationem minari ad tempora fluxus maris; ex quo manifestum videri possit non aquas ebullire (nullæ cum cernuntur) sed aërem retroverti. At certe aliud urget experimentum non contemnendum, sed magni ponderis, cui responsio omnino debetur; hoc est, quod diligenter observatum sit, idque non fortuito notatum, sed de industria inquisitum atque repertum, aquas ad littora adversa Europæ et Floridæ iisdem horis ab utroque littore refluxu, neque deserere littus Europæ cum advolvantur ad littora Floridæ, more aquæ (ut supra diximus) agitatæ in pelvi, sed plane simul ad utrumque littus attolli et demitti. Verum hujus objectionis solutio perspicue apparebit in iis, quæ mox dicentur de cursu et progressu oceani. Summa autem rei talis est, quod aquæ a mari Indico profectæ, et ab objectu terrarum veteris et novi orbis impeditæ, trudentur per mare Atlanticum ab austro in boream; ut non mirum sit eas ad utrumque littus simul ex æquo appellere, ut aquæ solent, quæ contrudentur a mari in ostia et canales fluminum, in quibus evidentissimum est motum maris esse progressivum quatenus ad flumina, et tamen littora adversa simul inundare. Verum id pro more nostro ingenue fatemur, idque homines attendere et meminisse volumus, si per experientiam inveniantur, fluxus maris iisdem temporibus ad littora Peruvix atque Chinæ affluere, quibus fluunt ad littora præfata Europæ et Floridæ, opinionem hanc nostram, quod fluxus et refluxus maris sit motus progressivus, abjudicandam esse. Si enim per littora adversa tam maris australis, quam maris Atlantici, fiat fluxus ad eadem tempora, non relinquuntur in universo alia littora, per quæ refluxus ad eadem illa tempora satisfiat. Verum de hoc judicio faciendum per experientiam (cui causam submissimus) loquimur tanquam securi. Existimamus enim plane, si summa hujus rei per universum terrarum orbem nobis cognita

foret, satis æquis conditionibus istud fœdus transigi, nempe ut ad horam aliquam certam fiat refluxus in aliquibus partibus orbis, quantum fiat fluxus in aliis. Quamobrem ex iis, quæ diximus, statuatur tandem, motus iste fluxus et refluxus esse progressivus.

Sequitur jam inquisitio ex qua causa, et per quem consensum rerum, oriatur atque exhibeatur iste motus fluxus et refluxus. Omnes enim majores motus (si sunt iidem regulares et constantes) solitarii, aut (ut astronomorum vocabulo utamur) ferini non sunt, sed habent in rerum natura cum quibus consentiant. Itaque motus illi, tam semimenstruus incrementi, quam menstruus restitutionis, convenire videntur cum motu lunæ. Semimenstruus vero ille sive æquinocialis cum motu solis. Etiam sublaciones et demissiones aquarum cum apogæis et perigæis cœlestium. Neque tamen continuo sequetur (idque homines advertere volumus) quæ periodis et curriculo temporis, aut etiam modo lationis conveniunt, ea natura esse subordinata, atque alterum alteri pro causa esse. Nam non eo usque progredimur, ut affirmemus motus lunæ aut solis pro causis poni motuum inferiorum, qui ad illos sunt analogi; aut solem et lunam (ut vulgo loquuntur) dominium habere super illos motus maris (licet hujusmodi cogitationes facile mentibus hominum illabantur ob venerationem cœlestium) sed et in illo ipso motu semimenstruo (si recte advertatur) mirum et novum prorsus fuerit obsequii genus, ut aestu sub noviluniis et pleniluniis eadem patiantur, cum luna patiatur contraria; et multa alia adduci possunt, quæ hujusmodi dominationum phantasias destruant, et eo potius rem deducant, ut ex materiæ passionibus catholicis, et primis rerum coagmentationibus consensus illi orientur, non quasi alterum ab altero regatur, sed quod utrumque ab iisdem originibus et concausis emanet. Veruntamen (utcunque) manet illud quod diximus, naturam consensu gaudere, nec fere aliquid monodicum, aut solitarium admittere. Itaque videndum de motu fluxus et refluxus maris sexhorario, cum quibus aliis motibus ille convenire aut consentire reperitur. Atque inquirendum primo de luna, quomodo iste motus cum luna rationes aut naturam misceat. Id vero fieri omnino non videmus, præterquam in restitutione menstrua: nullo modo enim congruit curriculum sexhorarium (id quod nunc inquiritur) cum curriculo menstruo; neque rursus fluxus maris passiones lunæ quascunque sequi deprehenduntur. Sive enim luna sit aucta lumine, sive diminuta, sive illa sit sub terra, sive super terram, sive illa elevetur super horizontem altius aut depressius, sive illa ponatur in meridiano, aut alibi, in nulla prorsus harum consentiunt fluxus atque refluxus.

Itaque, missa luna, de aliis consensibus inquiremus. Atque ex omnibus motibus cœlestibus constat, motum diurnum maxime cartum esse, et minimo temporis intervallo (spatio videlicet viginti quatuor horarum) confici. Itaque consentaneum est, motum istum, de quo inquirimus (qui adhuc tribus partibus diurno brevior est) proxime ad eum motum referri, qui est ex cœlestibus brevissimus; sed hoc rem minus premit. Illud vero longe magis nos movet, quod ita sit iste motus dispersitus, ut ad diurni motus rationes respondeat, ut licet motus aquarum sit motu diurno

quasi innumeris partibus tardior, tamen sit commensurabilis. Etenim spatium sexhorarium est diurni motus quadrans, quod spatium (ut diximus) in motu isto maris invenitur cum ea differentia, quæ coincidat in mensuram motus lunæ. Itaque hoc nobis penitus inædit, ac fere instar oraculi est, motum istum ex eodem genere esse cum motu diurno. Hoc igitur usi fundamento pergemus inquirere reliqua; atque rem omnem triplici inquisitione absolvi posse statuimus. Quarum prima est, An motus ille diurnus terminis cæli contineatur, aut delabatur, et se insinuet ad inferiora? Secunda est, An maria regulariter ferantur ab oriente in occidentem, quemadmodum et cælum? Tertia, Unde et quomodo fiat reciprocatio illa sexhoraria æstuum, quæ incidit in quadrantem motus diurni cum differentia incidente in rationes motus lunæ? Itaque quod ad primam inquisitionem attinet, arbitramur motum rotationis sive conversionis ab oriente in occidentem esse motum non proprie cælestem, sed plane cosmicum, atque motum in fluidibus magnis primarium, qui usque a summo cælo ad imas aquas veniatur, inclinatione eadem, incitatione autem (id est, velocitate et tarditate) longe diversa; ita tamen ut ordine minime perturbato minuatur celeritate, quo propius corpora accedunt ad globum terræ. Videtur autem primo probabile argumentum sumi posse, quod motus iste non terminetur cum cælo, quia per tantam cæli profunditatem, quanta interjicitur inter cælum stellatum et lunam (quod spatium multo amplius est, quam a luna ad terram) valeat atque vigeat iste motus, cum debitis decrementis suis; ut verisimile non sit naturam istiusmodi consensum, per tanta spatia continuatum, et gradatim se remittentem, subito deponere. Quod autem res ita se habeat in cælestibus, evincitur ex duobus, quæ aliter sequentur, incommodis. Cum enim manifestum sit ad sensum, planetas diurnum motum peragere, nisi ponatur motus iste tanquam naturalis ac proprius in planetis omnibus, confugiendum necessario est vel ad raptum primi mobilis, quod naturæ prorsus adversatur, aut ad rotationem terræ, quod etiam satis licenter excogitatem est, quoad rationes physicas. Itaque in cælo ita se res habet. Postquam autem a cælo discessum est, cerniter porro iste motus evidentissime in cometis humilioribus, qui, cum inferiores orbe lunæ sint, tamen ab oriente in occidentem evidenter rotant. Licet enim habeant motus suos solitarios et irregulares, tamen in illis ipsis conficiendis interim communicandis cum motu ætheris et ad eandem conversionem feruntur; tropicis vero non continentur fere, nec habent regulares spiras, sed excurrunt quandoque versus polos, sed nihilominus in consecutione ab oriente in occidentem rotant. Atque huiusmodi motus iste licet magna acceperit decremента (cum quo propius descendatur versus terram, eo et minoribus circulis conversio fiat, et nihilominus tardius) validus tamen utique manet, ut magna spatia brevi tempore vincere queat. Circumvolvuntur enim huiusmodi cometæ circa universum ambitum, et terræ, et æris inferioris, spatio viginti quatuor horarum, cum horæ unius aut alterius excessu. At postquam ad eas regiones descensus continuato perventum sit, in quas terra agit non solum communicatione naturæ et virtutis suæ (quæ

motum circulearem reprimit et sedat) sed etiam immissione materiali particularum substantiæ suæ per vapores et halitus crassos: iste motus immensus hebescit, et fere corrui, sed non propterea prorsus exinanitur aut cessat, sed manet languidus et tanquam latens. Etenim jam in confesso esse cœpit, navigantibus intra tropicos, ubi libero æquore motus æris percipitur optime, et ær ipse (veluti et cælum) majoribus circulis, ideoque velocius rotat, spirare auram perpetuam et jugem ab oriente in occidentem; adeo ut qui zephyro uti volunt, eum extra tropicos sæpius quærant et procurent. Itaque non extinguitur iste motus etiam in aère infimo, sed piger jam devenit et obcurus, ut extra tropicos vix sentiatur. Et tamen etiam extra tropicos in nostra Europa in mari, cælo sereno et tranquillo, observatur aura quadam solisequa, quæ ex eodem genere est; etiam suspicari licet, quod hic in Europa experimur, ubi flatus euri acris est et desiccans, cum contra zephyri sit generalis et humectans, non solum ex hoc pendere, quod ille a continente, iste ab oceano apud nos spiret; sed etiam ex eo, quod euri flatus, cum sit in eadem consequentia cum motu æris proprio, eum motum incitet et irritet, ac propterea aërem dissipet et rarefaciat: zephyri vero flatus, qui in contraria consequentia sit cum motu æris, aërem in se vertat, et propterea inspisset. Neque illud contemnendum, quod vulgari observatione recipitur, nubes, quæ feruntur in sublimi, plerumque movere ab oriente in occidentem, cum venti circa terram ad eadem tempora flant in contrarium. Quod si hoc non semper faciunt, id in causa esse, quod sint quandoque venti contrarii, alii in alto, alii in imo; illi autem in alto spirantes (si adversi fuerint) motum istum verum æris disturbent. Quod ergo cæli terminis non contineatur iste motus, satis patet.

Sequitur ordine secunda inquisitio; An aquæ ferantur regulariter et naturaliter ab oriente in occidentem? Cum vero aquas dicimus, intelligimus aquas coacervatas, sive massas aquarum, quæ scilicet tantæ sunt portiones naturæ, ut consensum habere possint cum fabrica et structura universi. Atque arbitramur plane, eundem motum massæ aquarum competere atque inesse, sed tardiore esse, quam in aère, licet ob crassitudinem corporis sit magis visibilis et apparens. Itaque ex multis, quæ ad hoc adduci possent, tribus ip præsens contenti erimus experimentis, sed iisdem amplis et insignibus, quæ rem ita esse demonstrant. Primum est, quod manifestus reperiatur motus et fluxus aquarum ab oceano Indico usque in oceanum Atlanticum, isque incitator et robustior versus fretum Magellanicum, ubi exitus datur versus occidentem; magnum itidem ex adversa parte orbis terrarum a mari Scythico in mare Britannicum. Atque hæ consequentiæ aquarum manifesto volvantur ab oriente in occidentem. In quo advertendum imprimis, in istis tantum duobus locis maria esse pervia et integrum circulum conficere posse; cum contra per medios mundi tractus, objectu duplici veteris et novi orbis absindantur et compellantur (tanquam in ostia fluminum) in duos illos alveos oceanorum geminorum Atlantici et australis, qui oceani exporriguntur inter austrum et septentriones; quod adiaphorum est ad motum con-

secutionis ab oriente in occidentem: ut verissime omnino capiatur motus verus aquarum ab istis, quas diximus, extremitatibus orbis, ubi non impediuntur, sed permeant. Atque primum experimentum hujusmodi est. Secundum autem tale.

Supponatur fluxum maris ad ostium freti Herculei fieri ad horam aliquam certam, constat accedere fluxum ad caput sancti Vincentii tardius, quam ad ostium illud; ad caput Finis-terræ, tardius, quam ad caput sancti Vincentii; ad Insulam Regis tardius, quam ad caput Finis-terræ; ad insulam Hechas tardius, quam ad Insulam Regis; ad ingressum canalisi Anglici tardius, quam ad Hechas; ad littus Normannicum tardius, quam ad ingressum canalisi. Hucusque ordinatim; ad Gravelingam vero, verso prorsus ordine (idque magno saltu) quasi ad eandem horam cum ostio freti Herculei. Hoc experimentum secundum ad experimentum primum trahimus. Existimamus enim (quemadmodum jam dictum est) in mari Indico, et in mari Scythico veros esse cursus aquarum, ab oriente scilicet in occidentem, pervios et integros; at in alveis maris Atlantici atque australis compulsos et transversos, et refractos ab objectu terrarum, quæ utrinque in longum ab austro ad boream exporriguntur, et nusquam, nisi versus extremitates, liberum dant exitum aquis. Verum compulsio illa aquarum, quæ causatur a mari Indico versus boream, et in opposito a mari Sythico versus austrum, spatiis immensum differunt ob differentem vim et copias aquarum. Univerfus igitur oceanus Atlanticus usque ad mare Britannicum cedit impulsioni maris Indici; at superior tantum Atlantici maris pars, nimirum ea quæ jacet versus Daniam et Norvegiam, cedit impulsioni maris Scythici. Hoc vero ita fieri necesse est. Etenim duæ magnæ insulæ veteris orbis et novi orbis eam sunt sortitæ figuram, atque ita exporriguntur, ut ad septentriones latæ, ad austrum acutæ sint. Maria igitur contra ad austrum magna occupant spatia, ad septentriones vero (ad dorsum Europæ et Asiæ atque Americæ) parva. Itaque ingens illa moles aquarum, quæ venit ab oceano Indico, et reflectit in mare Atlanticum, potis est compellere et trudere cursum aquarum continua successione quasi ad mare Britannicum, quæ successio est versus boream. At illa longe minor portio aquarum, quæ venit a mari Scythico, quæque etiam liberum fere habet exitum in cursu suo proprio versus occidentem ad dorsum Americæ, non potis est cursum aquarum compellere versus austrum, nisi ad eam, quam diximus, metam, nempe circa fretum Britannicum. Necesse est autem ut in motibus istis oppositis sit tandem aliqua meta, ubi occurrant et conficiantur, atque ubi in proximo mutetur subito ordo accessionis; quemadmodum circa Gravelingam fieri diximus, limite videlicet accessionis Indicæ et Scythicæ. Atque inveniri euripum quendam ex contrariis fluxibus circa Hollandiam, non solum ex ea (quam diximus) inversione ordinis horarum in fluxu, sed etiam peculiari et visibili experimento, a plurimis observatum est. Quod si hæc ita fiant, reditur ad id, ut necesse sit fieri, ut quo partes Atlantici et littora magis extenduntur ad austrum, et appropinquant mari Indico, eo magis fluxus antevertat in præcedentia, utpote qui oriatur a motu illo vero in mari Indico; quo

vero magis ad boream (usque ad limitem communem, ubi repelluntur, a gurgite antiastropho maris Scythici) eo tardius atque in subsequencia. Id vero ita fieri experimentum istud progressus a freto Herculeo ad fretum Britannicum, plane demonstrat. Itaque arbitramur etiam fluxum circa littora Africæ antevertere fluxum circa fretum Herculeum, et, verso ordine, fluxum circa Norvegiam antevertere fluxum circa Suediam; sed id nobis experimento aut historia compertum non est.

Tertium experimentum est tale; maria clausa ex altera parte, quæ sinus vocamus, si exporrigantur inclinatione aliqua ab oriente in occidentem, quæ in consequentia est cum motu vero aquarum, habent fluxus vigentes et fortes: si vero inclinatione adversa, languidos et obscuros. Nam et mare Erythræum habet fluxum bene magnum, et sinus Persicus magis recta petens occidentem, adhuc majorem. At mare Mediterraneum, quod est sinuum maximus, et hujus partes Tyrrhenum, Pontus, et Propontis, et similiter mare Balticum, quæ omnia reflectunt ad orientem, destituuntur fere, et fluxus habent imbecillos. At ista differentia maxime elucescit in partibus Mediterranei, quæ quamdiu vergunt ad orientem, aut flectunt ad septentriones (ut in Tyrrheno et in iis, quæ diximus, maribus) quiete agunt absque æstu multo: at postquam se converterint ad occidentem, quod fit in mari Adriatico, insignem recuperant fluxum. Cui accedit et illud, quod in Mediterraneo refluxus ille tenuis (qualis invenitur) incipit ab oceano, fluxus a contraria parte, ut aqua magis sequatur cursum ab oriente, quam refusionem oceani. Atque his tantum tribus experimentis in præsentia utemur ad inquisitionem illam secundam.

Possit tamen adjici probatio quædam consentanea cum his, quæ dicta sunt, sed argumentum ejusdem naturæ; ea est, ut petatur abstrusum hujusce motus ab oriente in occidentem, quem aquis astruximus, non solum a consensu cæli (de quo jam dictum est) ubi iste motus in flore est ac fortitudine præcipua, sed etiam a terra, ubi protinus videtur cessare, ita ut ista inclinatio sive motus vere sit cosmicus, atque omnia a fastigiis cæli usque ad interiora terræ transverberet. Intelligimus enim conversionem istam ab oriente in occidentem fieri scilicet (quemadmodum revera invenitur) super polos australem et borealem. Verissime autem diligentia Gilberti nobis hoc reperit; omnem terram, et naturam (quam appellamus terrestrem) non delinitam sed rigidam, et, ut ipse loquitur, robustam, habere directionem sive verticatem latentem, sed tamen per plurima exquisita experimenta se prodentem, versus austrum et boream. Atque hanc tamen observationem plane minimus, atque ita corrigimus, ut hoc asseratur tantum de exterioribus concretionibus circa superficiem terræ, et minime producat ad viscera ipsius terræ (nam quod terra sit magnes interim levi omnino phantasia arreptum est; fieri enim prorsus nequit, ut interiora terræ similia sint alicui substantiæ, quam oculus humanus videt, siquidem omnia apud nos a sole et celestibus laxata, subacta, aut infracta sint, ut cum iis, quæ talem nacta sunt locum, quo vis cælestium non penetret, neutiquam consentire possint) sed quod nunc agitur, superiores incrustationes sive concreciones terræ videntur consentire cum conversioni-

bus cœli, aëris, atque aquarum, quatenus consistentia et determinata cum liquidis et fluidis consentire queant, hoc est, non ut volvantur super polos, sed dirigantur, et vertantur versus polos. Cum enim in omni orbe volubili, qui vertitur super polos certos, neque habet motum centri, sit participatio quædam naturæ mobilis et fixæ; postquam per naturam consistentem, sive se determinantem, ligatur virtus volvendi; tamen manet, et intenditur, et unitur virtus illa et appetitus dirigendi se; ut directio et verticitas ad polos in rigidis, sit eadem res cum volubilitate super polos in fluidis.

Superest inquisitio tertia. Unde et quomodo fiat reciprocatio illa sexhoraria æstuum, quæ incidit in quadrantem motus diurni cum differentia quam diximus? Id ut intelligatur, supponatur orbem terrarum universum aqua cooperiri, ut in diluvio generali. Existimamus aquas, quippe ut in orbe integro, neque impedito, semper in progressu se commoturas ab oriente in occidentem singulis diebus ad certum aliquod spatium (idque profecto non magnum, ob exsolutionem et enervationem virium hujus motus in confiniis terræ) cum ex nulla parte objectu terræ impediuntur aquæ, aut cohibeantur. Supponatur rursus, terram unicam insulam esse, eamque in longitudine exporrigi inter austrum et septentriones, quæ forma ac situs motum ab oriente in occidentem maxime frænât et obstruit; existimamus aquas cursum suum directum et naturalem ad tempus porrecturas, sed rursus ab insula illa reperlussas paribus intervallis relapsuras; itaque unicum tantum fluxum maris in dies futurum fuisse, et unicum similiter refluxum, atque horum singulis circiter duodecim horas attributum iri. Atque ponatur jam (quod verum est et factum ipsum) terram in duas insulas divisam esse, veteris scilicet et novi orbis (nam terra australis situ suo rem istam non magnopere disturbat, quemadmodum nec Grœnlandia aut Nova Zembla) easque ambas insulas per tres fere mundi zonas exporrigi, inter quas duo oceani Atlanticus et australis interfluunt, et ipsi nunquam nisi versus polos pervii; existimamus necessario sequi, ut duo isti obices naturam duplicis reciprocationis universæ moli aquarum insinuent et communicent, et fiat quadrans ille motus diurni; ut aquis scilicet utrinque frænatis, fluxus et refluxus maris bis in die, per spatia scilicet sex horarum, se explicet, cum duplex fiat processio, et duplex itidem repercussio. Illæ vero duæ insulæ si instar cylindrorum aut columnarum, per quas exporrigerentur æquis dimensionibus et rectis littoribus, facile demonstraretur, et cuivis occurreret iste motus, qui jam tanta varietate posituræ terræ et maris confundi videtur et obscurari. Neque etiam est difficile conjecturam capere nonnullam qualem isti motui aquarum incitationem tribuere consentaneum sit, et quanta spatia in uno die conficere possit. Si enim sumantur (in æstimationem hujus rei) littora aliqua ex iis quæ minus montosa aut depressa sunt, et oceano libero adjacent, et capiatur mensura spatii terræ, inter metam fluxus et metam refluxus, interjacentis, atque illud spatium quadruplicetur propter æstus singulis diebus quater nos, atque is numerus rursus duplicetur propter æstus ad adversa littora ejusdem oceani, atque huic numero nonnihil in cumulum adjiciatur, propter

omnium littorum altitudinem, quæ ab ipsa fossa mari semper aliquantulum insurgunt; ista computatio illud spatium productura est, quod globus aquæ uno die, si liber ab impedimento esset, ac in orbe circa terram semper in progressu moveret, conficere possit; quod certe nil magnum est. De differentia autem illa, quæ coincidit in rationes motus lunæ, et efficit periodum menstruam; id fieri existimamus, quod spatium sexhorarium non sit mensura exacta reciprocationis; quemadmodum nec motus diurnus alicujus planetarum non restituitur exacte in horis viginti quatuor, minime autem omnium luna. Itaque mensura fluxus et refluxus non est quadrans motus stellarum fixarum, qui est viginti quatuor horarum, sed quadrans diurni motus lunæ.

## MANDATA.

Inquiratur utrum hora fluxus circum littora Africæ antevertat horam fluxus circa fretum Herculeum? Inquiratur utrum hora fluxus circa Norvegiam antevertat horam fluxus circa Suediam, et ille similiter horam fluxus circa Gravelingam?

Inquiratur utrum hora fluxus ad littora Brasilie antevertat horam fluxus ad littora Hispaniæ novæ et Floridæ?

Inquiratur utrum hora fluxus ad littora China non inveniatur ad vel prope horam fluxus ad littora Peruvie, et ad vel prope horam refluxus ad littora Africæ et Floridæ?

Inquiratur quomodo hora fluxus ad littora Peruviana discrepet ab hora fluxus circa littora Hispaniæ novæ, et particulariter quomodo se habeant differentie horarum fluxuum ad utraque littora isthmi in America; et rursus quomodo hora fluxus ad littora Peruviana respondeat horæ fluxus circa littora Chinæ?

Inquiratur de magnitudinibus fluxuum ad diversa littora, non solum de temporibus sive horis. Licet enim causentur fere magnitudines fluxuum per depressiones littorum, tamen nihilominus communicant etiam cum ratione motus veri maris, prout secundus est aut adversus.

Inquiratur de mari Caspio (quæ sunt bene magnæ portiones aquarum conclusæ absque ullo exitu in oceanum) si patiantur fluxum et refluxum, vel qualem, siquidem nostra fert conjectura aquas in Caspio posse habere fluxum unicum in die, non geminatum, atque talem ut littora orientalia ejusdem maris deserantur, cum occidentalia alluantur.

Inquiratur utrum fluxus augmenta in noviluniis et pleniluniis, atque etiam in æquinoxiiis, fiant simul in diversis mundi partibus? Cum autem dicimus *simul*, intelligimus non eadem hora, (variantur enim horæ secundum progressum aquarum ad littora, ut diximus,) sed eodem die.

## MORE.

Non producitur inquisitio ad explicationem plenam consensus motus menstrui in mari cum motu lunæ; sive illud fiat per subordinationem, sive per concausam.

## ZYZZYGIA.

Inquisitio præsens conjungitur cum inquisitione utrum terra moveatur motu diurno? si enim æstus maris sit tanquam extrema diminutio motus diurni, sequetur globum terræ esse immobilem, aut saltem moveri motu longe tardiore, quam ipsas aquas.

# INSTAURATIONIS MAGNÆ

## PARS QUARTA.

### SCALA INTELLECTUS, SIVE FILUM LABYRINTHI.

QUÆ EST,

#### INSTAURATIONIS MAGNÆ PARS QUARTA.

DIFFICILIS sane foret reprehensio eorum, quibus nihil sciri placuit, si decretum durum interpretatione molliore correxissent. Si quis enim asserat, hoc ipsum scire, recte acceptum, esse per causas scire, causarum autem cognitionem gliscere, et serie et veluti catena perpetua ad notissima naturæ scandere, adeo ut particularium rerum cognitio, absque exacta universæ naturæ comprehensione, proprie non absolvatur; non facile invenias, quod sano cum iudicio contradici possit. Nam et veram alicujus rei scientiam haberi posse, antequam mens in causarum explicatione plane consistat, minus consentaneum; et perfectam universi cognitionem humanæ naturæ attribueæ atque asserere, temerarium fortasse quiddam, atque impotentis cujusdam animi censi possit. Verum illi contra, nulla hujusmodi usi interpretatione aut moderatione, sensuum oracula prorsus prophanare non veriti sunt; quod cum summa rerum desperatione conjunctum est. Quod si verum omnino dicendum sit; etiamsi ab hac calumnia abstinuissent, tamen hæc ipsa lis intempestive et contentiosæ mota videatur, cum citra istam, quam intelligere videntur, ipsissimam veritatem, tantus humanæ industriæ pateat campus, ut ait res præpostera et quasi mentis commotæ et perturbatæ, de extremis obtinendis sollicitum, tantas in medio sitas utilitates prætermittere. Nam utcumque per veri et probabilis distinctionem, scientiæ certitudinem destruere, usum retinere, videri volunt, atque, quoad activam partem, delectum rerum illæsum relinquere; tamen, sublata ex animis hominum veritatis exquirendæ spe, proculdubio nervos inquisitioni humanæ inciderunt, et promiscua quærendi licentia, invenendi negotium in exercitacionem quandam ingenii et disputationis verterunt. Veruntamen negare plane non possumus, quin si qua nobis cum antiquis intercedat societas, ea cum hoc genere philosophiæ maxime conjuncta sit; cum multa ab illis de sensuum variationibus, et iudicii humani infirmitate, et de cohibendo et sustinendo assensu, prudenter dicta et animadversa probemus; quibus etiam innumera alia, quæ eodem

pertinent, adjungere possemus; adeo ut inter nos et illos hoc tantum intersit, quod illi nil vere sciri posse prorsus, nos nil vere sciri posse ea, qua adhuc gens humana ingressa est, via, statuamus. Neque vero hujus societatis nos pudet. Si enim in hunc cœtum recipiantur non solum ii, qui sententia et placito hoc tenent et opinantur, sed et illi, qui idem aut forma ipsa interrogandi et objiciendi præ se ferunt, aut conquerendo de rerum obscuritate, et indignando, fatentur, et quasi clamant, aut secreto animo agitant, et raris et occultis vocibus veluti insurrant; invenias in hoc numero viros ex antiquis longe maximos, et contemplationum principes, in quorum consortium includi neminem peniteat. Pronuntiandi enim confidentiam fortasse unus aut alter ex antiquis usurpavit; neque tamen invaluit ea ipsa, nisi haud ita pridem barbaris seculis, nunc autem factione quadam atque consuetudine et incuria retinetur. Sed tamen rursus in hac, de qua diximus, societate facile quis perspexerit, nos erga illos viros initiis opinionum conjunctos, exitu in immensum divisos esse. Etsi enim primo non multum dissentire videamur, quod illi incompetentiam humani intellectus simpliciter, non sub modo asseramus; nihilominus huc res redit, ut illi, nullum huic malo remedium inventientes aut sperantes, negotium deserant, et sensus certitudinem invadendo, scientiam ab imis fundamentis evertant: nos, novam viam afferentes, tum sensus tum mentis errores regere et restituere conemur. Itaque illi, jactam arbitrati aleam, ad ingenii quandam peregrinationem liberam et amœnam se vertunt; nobis ex opinione nostra difficilis et remota obvenit provincia, quæ ut generi humano felix et fausta sit, perpetuo precamur. Itaque initia viarum secundo libro descripsimus; eadem ipsi continuo ingressi, tertio phænomena universi et historiam tractavimus; in quo certe sylvas naturæ, et variatione infinita experimentorum veluti foliis opacas et obscuras, et observationum subtilitate, veluti virgultis et vepribus, implicatas, penetravimus et præterivimus. Atque nunc ad magis aperta fortasse, sed tamen ad magis

ardua pervenimus, ex sylvis scilicet ad radices montium. Nam ab historia ad universalia certo atque constanti tramite (licet via nova et intentata) duce-  
mus. Atque certe non male in vias contemplationum conveniret illud celebre et decantatum apud antiquos bivium vitæ activæ, ex quo via altera, primo ingressu plana et facilis, ducebat ad prærupta et impervia; altera, a principio ardua et suspensa, in plana desinebat. Nam eodem prorsus modo, qui jam inde a prima inquisitione immobilia quædam in scientiis principia prensabit, quibus acquiescens cætera veluti per otium expediat; illum, si modo perrexerit, nec nimium sibi placens aut displicens, ab inquisitione destiterit, prioris viæ fortuna manet. Qui autem judicium cohibere, et gradatim ascendere, et rerum, veluti montium juga, unum primo, deinde alterum, ac rursus alterum superare cum patientia vera et indefessa sustinuerit, ille ad summitates et vertices

naturæ mature perveniet, ubi et statio serena, et pulcherrimus rerum prospectus, et descensus molli clivo ducens ad omnes practicas. Itaque consilium nostrum est, veræ et legitimæ de rebus inquisitionis (ut in secundo libro præcepta) ita hic exemplaria proponere et describere pro varietate subjectorum; idque ea forma, quam cum veritate summum consensum habere putamus, atque ut probatam et electam tradimus. Neque tamen, more apud homines recepto, omnibus hujus formulæ partibus necessitatem quandam attribuimus, tanquam unicæ essent et inviolabiles. Neque enim hominum industriam et felicitatem veluti ad columnam alligandas existimamus. Atque nihil officit, quo minus ii, qui otio magis abundant, aut a difficultatibus, quas primo experientem sequi necesse est, liberi jam erunt, rem monstratam in potius perducant. Quin contra, artem veram adolescere statuimus.

### PRODROMI, SIVE ANTICIPATIONES PHILOSOPHIÆ SECUNDÆ :

#### INSTAURATIONIS MAGNÆ PARS QUINTA.

---

##### PRÆFATIO.

EXISTIMAMUS eum et amantis civis et viri prudentis personam bene simul sustinuisse, qui interrogatus, an optimas leges suis civibus dedisset, Optimas certe, dixit, ex iis, quas illi accepturi fuissent. Atque certe quibus non tantum bene cogitasse satis est (quod non multo secus est ac bene somniasse) nisi obtineant quoque, et rem ad affectum perducant, iis non optima utique, sed ex iis, quæ probari verisimile est, potissima quandoque eligenda sunt. Nobis vero, licet humanam rempublicam, patriam communem, summo prosequamur amore, tamen legislatoria illa ratione, et delectu uti liberum non est. Neque enim leges intellectui aut rebus damus ad arbitrium nostrum, sed tanquam scribæ fideles ab ipsius naturæ voce latas et prolatas excipimus et describimus. Itaque sive illæ placeant, sive par opinionum suffragia antiquentur, fides nostra omnino exsolvenda est. Neque tamen spem abjecimus, quin sint atque exoriantur apud posteros nonnulli, qui optima quæque capere et concoquere possint, et quibus ea perficere et colere curæ erit. Itaque ad illa ipsa tendere, atque fontes rerum et utilitatem aperire, et viarum indicia undique conquirere (invocata Numinis ope) nunquam, dum in vivis erimus, desistemus. Iidem nos de eo, quod ad omnes pertinere, et in commune prodesse possit, solliciti, dum ad majora contendimus, minora non aspernamur (cum illa remota, hæc parata esse soleant) nec potiora (ut arbitramur) afferentes, idcirco veteribus ac receptis, quominus illa apud plurimos valeant, intercedimus; quin etiam ea ipsa et aucta et emendata, et in honore esse cupimus. Neque enim homines, aut omnes aut omnino, aut statim a receptis et creditis abducere conamur. Sed quemadmodum sagitta aut missile fertur certe in processu, sed tamen interim conversiones suas perpetuo expedit progrediendo, et nihilominus rotando; ita et nos, dum ad ulteriora rapimur, in receptis et cognitis volvimur et circumferimur. Quamobrem nos quoque rationis ipsius communis et demonstrationum vulgarium (abdicato licet imperio earum) honesta opera utimur; atque ea, quæ nobis secundum eas inventa et judicata sunt, quæque plurimum et veritatis et utilitatis habere possunt, pari cum cæteris iure proponemus. Sed tamen neque per hoc iis, quæ de rationis nativæ et demonstrationum veterum incompetencia dicta sunt, derogatum quidquam intelligimus. Quin hæc potius adjunximus ad tempus, et in gratiam eorum, qui justa excusatione aut virium aut occupationum retardati, contemplationes suas intra veteres scientiarum plagas et provincias, aut saltem earum confinia contermina, sistere volent; eadem iis, qui veram naturæ interpretationem secundum indicia nostra accedent, eamque molientur, loco diviticulorum aut tabernaculorum in via præbitorum ad solatium et levamentum esse queant; atque interim humanas fortunas aliqua ex parte juvare, et mentes cogitationibus, quæ paulo arctiorem cognationem habeant cum natura, perfundere. Id vero ex facultate aliqua nostra, aut ejus fiducia, minime ominamur. Verum nobis dubium non est, si quis mediocris licet ingenii, sed tamen animi maturus, idola mentis suæ deponere, atque inquisitionem de integro sibi decernere, atque inter vera historiarum naturalis atque ejus calculos attente et diligenter et libere versari velit et possit; quin ille ipse, quisquis sit, longe altius in naturam penetraturus sit ex sese, et propriis et genuinis mentis viribus, denique ex meris anticipationibus suis, quam per omnigenam auctorum lectionem, aut meditationem abstractam infinitam, aut disputationes assiduas et repetitas; etsi machinas non admoverit, nec interpretandi formam secutus fuerit. Quare et simile quippiam nobis usu venire posse non diffidimus; præsertim cum accedat interpretandi experimentum et exercitatio; quam ipsum habitum mentis corrigere et mutare probabile est. Neque tamen hæc in eam partem accipi volumus, si fidem, quam antiquorum placitis denegavimus, nostris adhiberi postulemus. Quin contra testamur et profitemur, nos ipsos istis, quæ jam proponemus, qualiacunque ea sint, teneri minime velle, ut omnia philosophiæ nostræ secundæ et inductive tanquam integra serventur. Cogitata autem ipsa spargere, non methodo revincire visum est. Hæc enim forma pubescentibus tanquam a stirpe de integro scientiis debetur; atque ejus est, qui non artem constituere ex connexis, sed inquisitionem liberam instituere in singulis, in præsentia tantum velit.

## OPUSCULA PHILOSOPHICA.

FRANCISCI BACONI DE VERULAMIO

COGITATA ET VISA DE INTERPRETATIONE NATURÆ,

SIVE DE INVENTIONE RERUM ET OPERUM.

FRANCISCUS BACONUS sic cogitavit. Scientiam, in cuius possessione genus humanum adhuc versatur, ad certitudinem et magnitudinem operum non accedere. Medicos siquidem morbos complures insanabiles pronuntiare, et in reliquorum cura sæpius errare et deficere; alchymistas in spei suæ amplexibus senescere et immori: magorum opera fluxa nec fructuosa; mechanicas artes non multum lucis a philosophia petere, sed experientiæ telas, lentas sane ac humiles, paulatim continuare. Casum, auctorem rerum proculdubio utilem; sed qui per longas ambages et circuitus donaria sua in homines spargat. Itaque visum est ei; inventa hominum, quibus utimur, admodum imperfecta et immatura censi: nova vero hoc scientiarum statu, non nisi per seculorum spatia expectari; eaque ipsa, quæ hactenus humana exhibuit industria, philosophiæ haud attribui.

Cogitavit et illud; in iis rerum humanarum angustiis, id maxime et ad præsens deploratum et in futurum ominosum esse, quod homines, contra bonum suum, cupiunt ignorantiam ignominia eximere, et sibi per inopiam istam satisfieri. Medicus enim præter cautelas artis suæ (in quibus ad existimationem artis tuendam haud parum præsidii est) hanc generalem veluti totius artis cautelam advocat; quod artis suæ infirmitatem in naturæ calumniam vertit; et quod ars non attingit, id ex arte impossibile in natura supponit. Neque certe damnari potest ars, cum ipsa iudicet. Etiam philosophia, ex qua medicina ista (quam in manibus habemus) excisa est, habet et illa et in sinu nutrit quædam posita aut placita, in quæ si severius inquiratur, hoc omnino persuaderi volunt, nil arduum aut in natura imperiosum ab arte vel ope humana expectari debere. Ab hoc fonte illud: calorem astri sive solis, et calorem ignis toto genere differre: et illud, compositionem opus hominis, at misionem opus solius naturæ esse; et similia; quæ si diligentius notentur, omnino pertinent ad humanæ potestatis circumscriptionem malitiosam, et ad quæsitam et artificiosam desperationem, quæ non solum spei auguria, sed etiam experiendi aleas abiciat, et omnes industriæ stimulos et nervos incidat; dum de hoc tantum solliciti sunt, ut ars perfecta censeatur, et gloriæ vanissimæ et perditissimæ dant operam; scilicet, ut quicquid inventum non sit, id nec inveniri posse credatur. Al-

chymista vero ad artis suæ sublevationem errores proprios reos substituit, secum accusatorie reputando, se aut artis et auctorum vocabula non satis intellexisse, unde ad traditionum et ore tenus eloquiorum susurros animum applicat, aut in practicæ scrupulis, proportionibus, et momentis aliquid titubatum esse: unde experimenta felicioribus (ut putat) auspiciis in infinitum repetit. Ac interim cum inter experimentorum vertiginosas ambages, in inventa quædam, aut ipsa facie nova, aut utilitate non contemnenda, impingat; huiusmodi pignoribus animum pascit, eaque in majus ostentat et celebrat, reliqua spe sustentat. Magus, cum nonnulla supra naturam (pro suo nimirum captu) prorsus effici videat: postquam vim semel naturæ factam intelligit, imaginationi alas addit; remque magis et minus recipere vix putat; quare maximarum rerum sibi adeptionem spondet, non videns esse subjecta certi cuiusdam et fere definiti generis, in quibus magia et superstitio per omnes nationes et ætates potuerit et luserit. Mechanicus autem, si ei contigerit jam pridem inventa subtilius polire, vel ornare elegantius; aut, quæ separatim observaverit, componere et simul representare; aut res cum usu rerum commodius et feliciter copulare: aut opus majore, aut etiam minore, quam fieri consuevit, mole et volumine exhibere, se demum inter rerum inventores numerat. Itaque visum est ei, homines rerum et artium novarum inventionem, ut conatum inanem et suspectum, fastidire; vel credere, exstare quidem inventa nobilia, sed inter paucos summo silentio et religione quadam cohiberi: vel huc descendere, ut minores istas industrias et inventorum additamenta pro novis inventis æstiment. Quæ omnia eo redeunt, ut animos hominum a legitimo et constanti labore, et a nobilibus et genere humano dignis inventorum pensis avertant.

Cogitavit et illud; homines cum operum varietatem et pulcherrimum apparatus, quæ per artes mechanicas ad cultum humanum congesta sunt, oculis subjiciunt, eo inclinare, ut potius ad opulentia humanæ admirationem, quam ad inopiæ sensum accedant; minime videntes, primitivas hominis observationes et naturæ operationes, quæ animæ aut primi motus instar, ad omnem illam varietatem sint, nec multas nec alte petitas esse: cætera ad patientiam hominum et subtilem et ordinatum manus vel in-

strumentorum motum pertinere: atque in hac parte officinam cum bibliotheca mire congruere, quæ et ipsa tantam librorum varietatem ostendet, in quibus si diligentius introspicias, nil aliud, quam ejusdem rei infinitas repetitiones, reperias, tractandi modis et structura quadam novas, inventionem præoccupatas. Itaque visum est ei, opinionem copiarum inter causas inopiarum poni: et tum opera, tum doctrinas, ad intuitum numerosa, ad examen pauca esse.

Cogitavit et illud; eas, quas habemus, doctrinas ea ambitione et affectatione proponi, atque in eum modum efformatas ac veluti personatas in conspectum venire, ac si singulæ artes omni ex parte perfectæ essent, et ad exitum perductæ. Hujusmodi enim methodis, et iis partitionibus tradi, quæ omnia prorsus, quæ in illud subjectum cadere possunt, tractata complecti et concludere videantur. Atque licet membra illa male impleta, et quod ad vividum aliquem rerum succum attinet, destituta sint: totius tamen cujusdam formam et rationem præ se ferre, eoque rem perducere, ut pauca quædam, neque illa ex optimo delectu, recepta auctorum scripta pro integris ipsis et propriis artibus habeantur. Cum tamen primi et antiquissimi veritatis inquisitores, meliore fide ac eventu, scientiam, quam ex rerum contemplatione decerpere, et in usum condere statuebant, in aphorismos fortasse, sive breves, easdemque sparsas, nec methodis revinctas, sententias conjicere solerent: quæ cum et rerum inventarum nuda simulachra, et rerum non inventarum manifesta spatia et vacua indicarent, minus falebant: atque hominum ingenia et meditationes ad judicandum et ad inveniendum simul excitabant. At nunc scientias iis modis exhiberi, qui fidem usurpent, non iudicium sollicitent, et auctoritate tristi lætis inventionum conatibus intercedant: adeo ut omnis successio et devolutio disciplinarum, personas magistri et auditoris complectatur, non inventoris et ejus qui inventis addat: unde necessario evenire, ut scientiæ suis hæreant vestigiis, nec loco omnino moveantur. Quod et per multa jam secula usu venit, eoque ut non solum assertio maneat assertio, sed etiam quæstio maneat quæstio et eodem plane statu alatur. Quare visum est ei, columnas non ultra progrediendi magnopere fixas esse et quasi fatales, et mirum minime esse id haud obtineri, cuius adipiscendi homines nec spe nec desiderio teneantur.

Cogitavit et illud; quæ de hominum tum desperatione, tum fastu, dicta sunt, quod ad plerosque scientiarum sectatores attinet, nimis alte petita esse; turbam enim longe maximam prorsus aliud agere. Doctrinam siquidem vel animi et delectationis causa petere, vel ad usum et emolumentum professorium, vel etiam ad ornamentum et existimationis suæ adminiculum: quæ si ut finis scientiarum proponantur, tantum abest ut homines id velint, ut ipsa doctrinarum massa augmentum sumat, ut ex ea, quæ præsto est, massa nil amplius quærant, quam quantum ad usum destinatum vertere et decoquere possint. Si quæ autem in tanta multitudine scientiam affectu ingenuo et propter se expetat, invenietur tamen rerum potius varietatem, quam veritatem, aucupari. Quod si et veritatis sit inquisitor severior, illa ipsa tamen veritas erit hujusmodi, quæ res jam in lucem produ-

tas subtilius explicet, non quæ novam lucem excitet. Sin adhuc studium cujuspiam in tantum expandatur, ut et novam lucem ambiat: eam scilicet lucem adamabit, quæ ex longinquo contemplationes speciosas ostendet, non quæ ex propinquo opera et inventa nobilia demonstrat. Quare visum est ei, eodem rursus referri, scilicet mirum non utique esse, curriculum non confici, cum homines ad hujusmodi minora deflectant: multo magis cum nec ipsa meta adhuc ulli, quod sciat, mortalium posita sit et defixa. Metam autem non aliam esse, quam ut genus humanum novis operibus et potestatibus continuo dotetur.

Cogitavit et illud; inter ista scientiarum detrimenta, naturalis philosophiæ sortem præ omnibus minus æquam esse: ut quæ a laboribus hominum leviter occupata, facile deserta, nec majorem in modum culta et subacta sit. Postquam enim fides Christiana adolevit et recepta est, longe maximam ingeniorum partem ad theologiam se contulisse, hominumque ex hac parte studio et amplissima præmia proposita, et omnis generis adjuncta copiosissime subministrata esse. Quin et ævo superiore potissimas philosophorum commentationes in morali philosophia (quæ ethnicis magna ex parte vice theologiæ erat) consumptas esse: utrisque autem temporibus summa ingenia haud infrequenti numero ad res civiles se applicasse, præsertim durante magnitudine Romana, quæ ob imperii amplitudinem plurimorum operis indigebat. Eam ipsam vero ætatem, qua naturalis philosophia apud Græcos maxime florere visa est, fuisse particulam temporis minime diuturnam: ac subinde contradictionibus ac novorum placitorum ambitione corruptam et inutilem redditam. Ab illis autem usque temporibus neminem prorsus nominari, qui naturalem philosophiam ex professo colat, nec ejus inquisitioni immoriatur, adeo ut virum vacuum et integrum hæc scientia jamdiu non occupaverit, nisi quis forte monachi alicujus in cellula, aut nobilis in villula lucubrantis exemplum adduxerit, quod et rarissimum reperitur. Sed factum deinceps instar transitus cujusdam et pontisterinii ad alia, magnamque istam scientiarum matrem in ancillam mutatam esse, quæ medicinæ aut mathematicis operibus ministret, aut adolescentium immatura ingenia lavet et imbuat, veluti tinctura quadam prima, ut aliam rursus felicius et commodius excipiant. Itaque visum est ei, naturalem philosophiam, incumbentium paucitate, et festinatione, et tyrocinio destitutam jacere. Nec ita multo post visum est ei, hoc ad universum doctrinarum statum summpere pertinere: omnes enim artes et scientias ab hac stirpe revulsas, poliri fortassis aut in usum effingi, sed nil admodum crescere.

Cogitavit et illud; quam molestum ac in omni genere difficilem adversarium nacta sit philosophia naturalis, superstitionem nimirum, et zelum religionis cæcum et immoderatum. Comperit enim ex Græcis nonnullos, qui primum causas naturales fulminis et tempestatum insuetis adhuc hominum auribus proposuerunt, impietatis eo nomine damnatos: nec multo melius exceptos, sed in idem iudicium adductos, non capitis sane sed famæ, cosmographos, qui ex certissimis demonstrationibus, quibus nemo hodie sanus contradixerit, formam terræ rotundam tribue-

runt, et ex consequenti Antipodas asseruerunt, accusantibus quibusdam ex antiquis patribus fidei Christianæ. Quin et durio rem (ut nunc sunt res) conditionem sermonum de natura effectam ex temeritate theologorum scholarum, et eorum clientelis, qui cum theologiam (satis pro potestate) in ordinem redegerint, et in artis fabricam effinxerint; hoc insuper ausi sunt, ut contentiosam et tumultuariam Aristotelis philosophiam corpori religionis immiscuerint. Eodem spectare etiam, quod hoc seculo haud alias opiniones et disputationes magis secundis ventis ferri reperies, quam eorum, qui theologiæ et philosophiæ, id est, fidem et sensus, conjugium veluti legitimum, multa pompa et solennitate celebrant, et grata rerum varietate animos hominum permulcentes, interim divina et humana inauspicato permiscunt. Revera autem si quis diligentius animum advertat, non minus periculi naturali philosophiæ ex istiusmodi fallaci et iniquo fœdere, quam ex apertis inimicitias, imminere. Tali enim fœdere et societate recepta in philosophia tantum comprehendendi: aucta autem vel addita, vel in melius mutata, etiam severius et pertinacius excludi. Denique versus incrementa, et novas veluti oras et regiones philosophiæ, omnia ex parte religionis, pravarum suspicionum et impotentis fastidii plena esse. Alios siquidem simplicius subvereri, ne forte altior in naturam inquisitio ultra datum et concessum sobrietatis terminum penetret, traduces non recte ea, quæ de divinis mysteriis dicuntur, quorum multa sub sigillo divino clausa manent, ad occultam naturam, quæ nullo interdicto separantur: alios callidius conijcere, si media ignorentur, singula ad manum et virgulam divinam (quod religionis, ut putant, maxime divisi) facilius referri; quod nil aliud est, quam Deo per mendacium gratificari velle. Alios ab exemplo metuere, ne motus et mutationes philosophiæ in religionem incurrant et desinant. Alios denique sollicitos videri, ne in naturæ inquisitione aliquid inveniri possit, quod religionem labefactet. Quæ duo cogitata incredulitatem quandam sapientum et sapientiam animalem; posterius autem absque impietate ne in dubitationem aut suspicionem venire potest. Quare satis constabat, in huiusmodi opinionibus multum infirmitatis, quin et invidiæ et fermenti non parum, subesse. Naturalem enim philosophiam, post verbum Dei, certissimam superstitionis medicinam, eandem probatissimum fidei alimentum esse. Itaque merito religioni tanquam fidissimam et acceptissimam ancillam attribui: cum altera voluntatem Dei, altera potestatem manifestet. Neque errasse eum, qui dixerit: "Erratis nescientes Scripturas et potestatem Dei," informationem de voluntate, et meditationem de potestate, nexu individuo copulantes. Quæ licet verissima sint, nihilominus illud manet, in potentissimis naturalis philosophiæ impedimentis, ea, quæ de zelo imperito et superstitione dicta sunt, citra controversiam numerari.

Cogitavit et illud; in moribus et institutis academiæ, collegiorum, et similium conventuum, quæ ad doctorum hominum sedes et operas mutuas destinata sunt, omnia progressui scientiarum in ulterius adversa inveniri: frequentiam enim multo maximam professoriam primo, ac subinde meritoriam esse.

Lectiones autem et exercitia ita disposita, ut aliud a consuetis ne facile cuiquam in mentem veniat cogitare. Sin autem alicui inquisitionis et iudicii libertate uti contigerit, is se in magna solitudine versari statim sentiat. Sin et hoc toleraverit, tamen in capessenda fortuna industriam hanc et magnanimitatem sibi non levi impedimento fore experietur. Studia enim hominum in eiusmodi locis in quorundam auctorum scripta veluti relegata esse; a quibus si quis dissentiat, aut controversiam moveat, continuo ut homo turbidus et rerum novarum cupidus corripitur; cum tamen (si quis verus æstimator sit) magnum discrimen inter rerum civilium ac artium administrationem reperiat. Non enim idem periculum a nova luce ac a novo motu instare. Verum in rebus civilibus motum etiam in melius suspectum esse ob perturbationem, cum civilia auctoritate, consensu, fama, opinione, non demonstratione et veritate, constant. In artibus autem et scientiis, tanquam in metalli fodinis, omnia novis operibus et ulterioribus progressibus strepere debere. Atque recta ratione rem se ita habere. In vita autem visum est ei, doctrinarum politiam et administrationem, quæ in usu est, scientiarum augmenta et propaginem durissime premere et cohibere.

Cogitavit et illud; etiam in opinione hominum et sensu communi, multa ubique occurrere, quæ novas scientiarum accessiones libero aditu prohibeant. Maximam enim partem hominum, præsentibus non æquam, in antiquitatem propendere, ac credere, si nobis, qui nunc vivimus, ea sors obvenisset, ut quæ ab antiquis quæsitæ et inventa sunt, primi tentaremus, nos eorum pensa longo intervallo non fuisse æquatuos: credere similiter, si quis etiam nunc, ingenio suo confusus, inquisitionem de integro suscipere affectet, hunc huiusce rei eventum fore, ut aut in ipsa incidat, quæ ab antiquitate probata sunt; aut sane in alia, quæ, ab antiquitate jam pridem iudicata et rejecta, in oblivionem merito cessere. Alios, spreta omnino gente et facultate humana, utriusque temporis, sive antiqui sive novi, in opinionem labi curiosam et superstitosam; existimantes, scientiarum primordia a spiritibus manasse, et ab eorum dignatione et consortio similiter nova inventa auctoramentum habere posse. Alios, opinione magis sobria et severa, sed diffidentia graviore, de auctiore scientiarum statu plane desperare, naturæ obscuritatem, breviter vite, sensuum fallacias, iudicii infirmitatem, et experientorum difficultates et immensas varietates reputando. Itaque huiusmodi spei excessus, quæ majora, quam quæ habemus, spondet, esse impotentis animi et immaturi, atque læta scilicet principia, media ardua, extrema confusa habere, nec minorem desperationem præmii, quam facti, esse: scientias siquidem in magnis ingeniis proculdubio innasci et augeri; prætia autem et æstimationes scientiarum penes populum aut principes viros, aut alios mediocriter doctos, esse. Itaque non eorundem propositionum scientiarum et iudicium esse: unde fieri, ut ea tantum inventa vigeant, quæ populari iudicio et sensui communi accomodata sunt; ut in Democriti opinione de atomis usu venit, quæ, quia paulo remotior erat, lusu excipiebatur. Itaque altiores contemplationes naturæ, quæ, fere religionis

instar, duras sensibus hominum accedere necesse est, oriri aliquando posse, sed fere non multo post (nisi evidenti et excellenti utilitate demonstrantur et commendantur, quod huc usque factum non est) opinionum vulgarium ventis agitari et exstingui; adeo ut tempus, tanquam fluvius, levia et inflata vehere, gravia et solida mergere consueverit. Visum est ei itaque impedimenta melioris scientiarum status non tantum externa et adventitia, sed et innata et ex ipsis sensibus hausta esse.

Cogitavit et illud; etiam verborum naturam vagam et male terminatam intellectui hominum illudere, et fere vim facere: verba enim certa tanquam numismata esse, quæ vulgi imaginem et principatum repræsentent: illa siquidem secundum populares notiones et rerum acceptiones (quæ maxima ex parte erroneæ sunt et confusissimæ) omnia componere et dividere; ut etiam infantes, cum loqui discunt, infelicem errorum cabalam haurire et imbibere cogantur. Ac licet sapientiores et doctores se variis artibus ab hac servitute vindicare conentur, nova vocabula fingendo, quod durum, et definitiones interponendo, quod molestum est, nullis tamen viribus jugum excutere posse, quin infinitæ etiam in acutissimis disputationibus controversiæ de verbis moveantur, et quod multo deterius est, istæ ipsæ pravæ verborum signaturæ etiam in mentem radios suos et impressiones reflectant; nec tantum in sermone molestæ, sed etiam iudicio et intellectui infestæ sunt. Itaque visum est ei, inter internas causas errorum hanc ipsam ut gravem sane et innoxiam ponere.

Cogitavit et illud; præter communes scientiarum et doctrinarum difficultates, philosophiam naturalem, præsertim activam et operativam, etiam alia propria habere præjudicia et impedimenta. Non parvam enim existimationis jacturam et fidei fecisse per quosdam procuratores suos, leves et vanos, qui partim ex credulitate, partim ex impostura, humanum genus promissis onerarunt, vitæ prolongationem, senectutis retardationem, dolorum levationem, naturalium defectuum reparationem, sensuum deceptiones, affectuum ligationes et incitationes, intellectualium facultatum illuminationes, exaltationes, substantiarum transmutationes, motuum ad libitum multiplicationes, aëris impressiones et alterationes, rerum futurarum divinationes, remotarum repræsentationes, occultarum revelationes, et alia complura pollicitando. Verum de istis largitoribus opinari, non multum aberraturum, qui istiusmodi iudicium fecerit. Tantum nimirum interesse inter horum vanitates et veras artes in philosophia, quantum intersit inter pugnas Julii Cæsaris aut Alexandri; et rursus Amadisii ex Gallia, aut Arthuri ex Britannia, in historia. Constat enim clarissimos illos imperatores majora revera præstitisse, quam umbratiles isti heroës fecisse fingantur; sed modis et viis actionum minime fabulosis et prodigiosis. Itaque æquum non esse fidem veræ memoriæ derogare, quia illa a fabulis quandoque læsa et violata sit. Nam Ixionem e nube Centauros, nec ideo minus Jovem e vera Junone Heben et Vulcanum, virtutes scilicet admirandas et divinas, naturæ et artis, genuisse. Quæ licet vera comperiantur, et homines absque rerum

discrimine incredulos esse summæ sit imperitiæ: visum tamen est ei, veritatis aditum per hujusmodi commenta interclusum aut certe arctatum jampridem esse, et vanitatis excessus etiam nunc omnem magnanimitatem destruere.

Cogitavit et illud; reperiri in animo humano inclinationem quandam a natura insitam, et hominum opinione et disciplina nonnulla corroboratam, quæ naturalis philosophiæ, activæ nimirum et operativæ, progressus remorata sit et averterit. Eam esse opinionem sive æstimationem humidam et damnosam, minui nempe majestatem mentis humanæ, si in experimentis et rebus particularibus, sensui subjectis, et in materia terminatis, diu ac multum versetur: præsertim cum hujusmodi res ad inquirendum laboriosæ, ad meditandum ignobiles, ad dicendum asperæ, ad practicam illiberales, numero infinitæ, et subtilitate pusillæ videri soleant, et ob hujusmodi conditiones gloriæ artium minus sint accommodatæ. Quam opinionem, sive animi dispositionem, vires maximas sumpsisse ex illa altera opinione elata et commentitia; qua veritas humanæ mentis veluti indigena, nec aliunde commigrans; et sensus intellectum magis excitare, quam informare asserbatur. Neque tamen errorem hunc, et mentis (si verum nomen quæretur) alienationem ab iis ulla ex parte correctam, qui sensui debitas, id est, primas partes tribuerunt. Quin et hos quoque exemplo et facto suo, relicta prorsus naturali historia, et mundana perambulatione, omnia in ingenii agitatione posuisse, et inter opacissima mentis idola, sub specioso contemplationis et rationalium nomine, perpetuo volutasse. Quare visum est ei, istud rerum particularium repudium et divortium omnia in familia humana turbasse.

Cogitavit et illud; non tantum ex iis, quæ obstant, conjecturam capiendam; fieri enim posse, ut humani generis fortuna istas difficultates, et vincula perfregerit et superaverit. Itaque illud videndum ac penitus introspiciendum, qualis sit ea philosophia, quæ recepta sit, aut alia quæpiam ex antiquis, quæ instar tabulæ naufragii ad littora nostra impulsa sit. Atque invenit, philosophiam naturalem, quam a Græcis accepimus, pueritiam quandam scientiæ censerit: atque habere id quod proprium puerorum est, ut ad garriendum prompta, ad generandum inhabilis et immatura sit. Hujus autem philosophiæ jam consensu principem Aristotelem, intacta fere ac illibata natura, in communibus notionibus, atque earum inter se comparatione, collisione, et reductione, inutiliter versatum esse. Neque sane quicquam solidi ab eo sperari, qui etiam mundum e categoriis effecerit. Parum enim interesse, utrum quis materiam, formam, et privationem, an substantiam, qualitatem, et relationem principia rerum posuerit: verum istis sermonibus supersederi oportere. Nam et justam confutationem instituire (cum neque de principiis, nec de demonstrationum modis conveniat) immemoris esse. Et rursus hominem, tantam auctoritatem et fere dictaturam in philosophia adeptum, per satiram præstringere, levius pro dignitate sermonis instituti, et tamen superbum fore. Illum sane dialecticis rationibus, utpote a se (quod ipse licentius gloriatur) oriundis, naturalem philosophiam corru-

pisse. Verum ut illum mittamus, Platonem virum sine dubio altioris ingenii fuisse, ut qui et formarum cognitionem ambiret, et inductione per omnia (non ad principia tantum) uteretur: sed inutili utrobique ratione, cum inductiones vagas, formas abstractas prensaret et reciperet. Atque hujus philosophi si quis attentius et scripta et mores consideret, eum de philosophia naturali non admodum sollicitum fuisse reperiet, nisi quatenus ad philosophi nomen et celebratam tuendam, vel ad majestatem quandam moralibus et civilibus doctrinis addendam et adspargendam sufficeret. Eundem naturam non minus theologia, quam Aristotelem dialectica, inficere: et, si verum dicendum est, tam prope ad poetam, quam ille ad sophistam partes accedere. Atque horum placita ex ipsis fontibus haurire licere, cum opera eorum exstant. Reliquorum vero, Pythagoræ, Empedocli, Heracliti, Anaxagoræ, Democriti, Parmenidis, Xenophanis, et aliorum, diversam rationem esse, quod illorum opinioniones per internuntios quosdam, et famas, et fragmenta solummodo habeamus; atque ideo majore inquisitione, ac majore etiam judicii integritate (quæ sortis iniquitatem levet) opus esse. Sed tamen cum summa diligentia ac cura omnem de illis opinionibus auram captasse; ut quicquid de illis, vel dum ab Aristotele confutantur, vel dum a Platone, vel Cicerone citantur: vel in Plutarchi fasciculo, vel in Laërtii vitis, vel in Lucretii poemate, vel alicubi in quavis alia sparsa memoria et mentione inveniri possit, evoluisse: et cum fide et judicio librato examinasse. Ac primo sane dubium non esse, quin si opinioniones eorum in propriis exstarent operibus, majorem firmitudinem habituræ fuissent, cum theoriarum vires in apta et se mutuo sustentente partium harmonia, et quadam in orbem demonstratione consistant, ideoque per partes traditæ infirmæ sint: quare non contemptim de illis iudicium fecisse. Reperiisse etiam inter placita tam varia, haud pauca in observatione naturæ, et causarum assignatione non indiligenter notata; alios autem in aliis (ut fere fieri solet) feliciores fuisse. Tantummodo Pythagoræ inventa et placita (licet numeri ejus quiddam physicum innuant) talia majore ex parte fuisse, quæ ad ordinem potius quamdam religiosorum fundandum, quam ad scholam in philosophia aperiendam, pertinerent; quod et eventus comprobavit. Nam eandem disciplinam plus in hæresi Manichæorum et superstitione Mahumeti, quam apud philosophos, valuisse. Reliquos vero physicos certe fuisse; atque ex iis nonnullos, qui Aristotele longe et altius et acutius in naturam penetraverint. Atque illum scilicet Ottomannorum more in fratribus trucidandis occupatum fuisse; quod et ei ex voto successit. Verum et de Aristotele, et de reliquis istis Græcis, non dissimile iudicium fecit, esse nimirum hujusmodi placita ac theorias veluti diversa diversarum fabularum in teatro argumenta, in quandam verisimilitudinem, alia elegantius, alia negligentius, aut crassius conficta; atque habere quod fabularum proprium est, ut veris narrationibus concinniora et commodiora videantur. Neque in istis tantum exhibitis et publicatis theoriis, humani ingenii peregrinationes et errores se sistere aut finiri potuisse. Nisi enim mores hominum et affec-

tus, et rerum civilium inclinationes, hujusmodi novitatibus (etiam in contemplativis) adversæ et infensæ exstitissent, dubium minime esse, quin et aliæ multæ in naturali philosophia sectæ introductæ fuissent. Quemadmodum enim in astronomicis, et iis quibus terram rotari placet, et iis qui per eccentricos et epicyclos motus expediunt, eorum, quæ in cælis sub sensu apparent, patrocinia, et advocaciones æquæ et ancipites sunt; quin et tabularum calculi utrisque respondent: eodem modo et multo etiam facilius esse in naturali philosophia complures theorias excogitare, longe inter se ad invicem differentes, sed tamen singulis sibi constantes, et instantiarum vulgarium, quæ in ejusmodi quæstionibus judicia exercere solent, suffragatione abutentes, atque in diversa trahentes. Neque enim defuisse, qui nostra et patrum ætate novas philosophiæ naturalis fabricas meditati sunt. Nam Telesium nostra memoria scenam conscendisse, et novam fabulam egisse, magis argumento probabilem, quam plausibilem: et Fracastorium non ita pridem, licet novam sectam non elegerit, tamen libertate judicii et inquisitionis honestissime usum esse: Cardanum etiam non minus ausum, sed leviorum. Quin et nuper Gilbertum nostratem, cum naturam magnetis laboriosissime et magna judicii firmitudine et constantia, necnon experimentorum magno comitatu et fere agmine, perscrutatus esset, statim novæ in philosophia naturali sectæ immūnere cœpisse: nec Xenophanis nomen in ludibrium versus expavisse, in cujus sententiam inclinabat. Hos itaque, et si qui sunt, aut erunt, horum similes, antiquorum turbæ aggregandos, unam enim eandemque omnium rationem haberi. Esse nimirum homines secundum pauca pronuntiantes, et naturam leviter attingentes, nec ita se illi immiscentes, ut aut contemplationum veritatem, aut operum utilitatem assequi possint. Credere enim ex tot philosophiis, per tot annorum spatia elaboratis et cultis, ne unum quidem experimentum adduci posse, quod ad hominum statum levandum aut locupletandum spectet, et hujusmodi speculationibus vere acceptum referri possit. Quin contra, Aristotelis de quatuor elementis commentum, cui ipse potius auctoritatem quam principium dedit (quod avide a medicis acceptum, quatuor complexionum, quatuor humorum, et quatuor primarum qualitatum conjugationes post se traxit) tanquam malignum aliquod et infaustum sidus, infinitam et medicinæ, necnon compluribus mechanicis rebus, sterilitatem attulisse; quod homines per hujusmodi conceinnitates et compendiosas ineptias sibi satisfieri patientes, nil amplius curant. Quæstionum interim et controversiarum turbas circa hujusmodi philosophias undique sonare et volitare; adeo ut fabula illa de Scylla in eas ad vivum competere videatur, quæ virginis os et vultum extulit, ad uterum vero monstra latrantia succingebantur et adhærebant. Ita habere et istas doctrinas quædam primo aspectu speciosa, sed cum ad partes generationis ventum est, ut fructum ex se edant, tum nil præter lites et inquietas disputationes inveniri, quæ partus vicem obtineant. Atque illud interim notandum, quæ de placitorum rejectione dicta sunt, opinionibus tantum, non ingeniis auc-

torum aut laboribus derogare. Quanto enim quis ingenio et studio maxime valeat, eundem, si naturæ lucem et historiam, et rerum particularium evidentiam deserat, tanto magis in obscuriores et magis perplexos phantasiarum et idolorum recessus et quasi specus se detrudere et involvere. Neque insuper, generales philosophiarum theorias argui, ut particulares et inferiorum causarum assignationes, quæ in hujusmodi philosophorum operibus reddi et quæri solent, probentur: verum et has nihilo illis meliores esse, non tantum quod ab illis pendeant, sed quod et ipsæ nullam severitatem inquisitionis præ se ferant, ad paulo notiora et fere obvia deducentes, in quibus mens humana leviter acquiescat et sibi complaceat, verum ad interiora naturæ minime penetrantes. Atque hoc vitii (quod omnium instar est) semper habentes, ut experimenta, et effecta jam nota, cohærentia quadam et veluti reticulo connectant, ad eorum, quæ nota sunt, justam mensuram facto: sed neutiquam causam aliquam aut regulam demonstrent, quæ nova nec prius cognita effecta aut experimenta designet. Atque post has philosophiarum oras peragratas, se undique circumspicientem etiam ad antiquitatis penetralia oculos conjecisse, veluti versus tractum quandam nubilosum et obscurum. Atque scire se, si minus sincera fide agere vellet, non difficile esse hominibus persuadere, apud antiquos sapientes, diu ante Græcorum tempora, scientiam de natura, majore virtute, sed majore etiam fortasse silentio, floruisse: atque ideo solennius fore ea, quæ jam afferuntur, ad illa referre; ut novi homines solent, qui nobilitatem antiquæ alicujus prosapiæ per genealogiarum rumores et conjecturas sibi affingunt: sed se, rerum evidentia fretum, omnis imposturæ conditionem recusasse; et qualemcunque ipse opinionem de illis seculis habeat, tamen ad id quod agitur non plus interesse putare, utrum quæ jam inveniuntur, antiquis cognita, et per rerum vicissitudines occidentia et orientia sint, quam hominibus curæ esse debere, utrum novus orbis fuerit insula illa Atlantia, et veteri mundo cognita, an nunc primum reperta. Rerum enim inventionem a naturæ luce petendam, non ab antiquitatis tenebris repetendam esse. Interea venire alicui in mentem posse, de chemistarum arte sive philosophia taceri: quod se honoris causa fecisse; quia cum illis philosophiis, quæ prorsus operum effectæ sunt, conjungere noluerit; cum ipsa inventa nobilia non pauca exhibuerit et donarit. Verum fabulam illam in hanc artem non male congruere, de sene, qui filiis aurum in vinea defossum (nec satis scire quo loco) legaverit; unde illos ad vineam diligenter fodiendam versos esse, et aurum quidem nullum repertum, sed vindemiam ea cultura factam uberiorem. Simili modo et Chemiæ filios, dum aurum (sive vere sive secus) defossum invenire satagunt, movendo et experiendo haud parvo proventui hominibus et utilitati fuisse. Sed illorum inventa non alio modo, nec ratione aliqua meliore, quam artium mechanicarum principia et incrementa cœpisse, id est, per experientiam meram. Nam philosophiam et speculativam eorum, rem minus sanam esse; et illis, de quibus locuti jam sumus, philosophiarum fabulis duriorem. Utunque enim principiorum trias inventum non inutile fuerit, sed

rebus aliqua ex parte finitimum: tamen maxima ex parte eos, paucis distillationum experimentis assuetos, omnia in philosophia ad separationes et liberationes retulisse, verarum alterationum oblitos. Illam autem opinionis fabricam, qua veluti basi eorum philosophia nititur, nempe esse quatuor rerum matrices sive elementa, in quibus semina et species rerum fetus suos absolvant, atque hæc quadriformia esse, pro differentia nimirum cujusque elementi, adeo ut in cælo, aëre, aqua, terra, nihil inveniatur, quod non habeat in tribus reliquis conjugatum aliquod et parallelum: huic certe phantasticæ rerum naturalium phalangi peritum naturæ contemplatorem vix inter somnia sua locum daturum. Neque dissimiles esse rerum harmonias, quæ naturalis Magiæ cultoribus placuerunt; qui et ipsi per rerum sympathias et antipathias omnia expediunt; et ex otiosis et supinissimis conjecturis, rebus virtutes et operationes admirabiles affingunt. Verum et iis se parcere, quod inter tot fabulas, tamen opera aliquando exhibeant: licet ea fere hujusmodi sint, ut ad admirationem et novitatem, non ad fructum et utilitatem accommodata sint. Sed tamen et novitatis hunc usum plerumque esse, ut sinus naturæ non nihil excutiat, et luce saltem, si minus actu, juvet. Quare visum est ei, neque in Græcorum, neque in novorum hominum placitis, neque in alchemiæ aut naturalis magiæ traditionibus aliquid inveniri, quod ad opes humanas majorem in modum augendas spectet. Itaque hæc omnia vel oblivioni devovenda esse, vel popularibus studiis permittenda, dum veri scientiarum filii alio cursum dirigant.

Cogitavit et illud; etiam de demonstrationum modis videndum: demonstrationes enim potentia quadam philosophiam esse: atque prout illæ aut rectæ aut pravæ sint, inde doctrinas perfectas aut imperfectas sequi, probabile esse. Comperit autem, demonstrationes, quæ in usu sunt, nec plenas, nec fidas esse. Neque tamen sensibus derogandum, quod quidam fecerunt. Sensuum enim errores in singulis ad summam scientiarum non multum facere; quin et ab intellectu, fidelius informato, corrigi posse. Sed intellectum ipsum, natura sola fretum, sine arte et disciplina, rebus imparem et minorem, sine cunctatione pronuntiandum. Neque enim aut ita capacem esse, ut omnigenam particularium supellectilem ad informationem necessariam recipiat et disponat, neque ita vacuum et purum, ut rerum imagines veras et nativas, absque phantasia et tinctura admittat. Quin certissimum esse, tum generaliter mentem humanam instar speculi inæqualis esse, quæ rerum radios secundum propriæ sectionis angulos, et non superficie plana, suscipiat et reflectat: tum etiam cuique ex educatione, studiis, et natura sua, vim quandam seductoriæ, et quasi dæmonem familiarem adesse, qui mentem variis et vanis spectris ludat et turbet. Neque propterea ad opinionem Acatalepsiæ deveniendum. Cuilibet enim manifestum esse, nulla manus constantia, nec oculorum judicio maxime exquisito, lineam rectam, vel circulum perfectum describi posse: attamen admota regula, aut circino circumducto, rem præsto esse. Atqui in mechanicis manus hominum nudas ad quantula opera sufficere: easdem vi et ope instrumentorum vastia-

sima quæque ac rursus subtilissima vincere. Sequi igitur ut ad artem confugiendum, et de demonstratione, quæ per artem regitur, videndum sit. Atque de syllogismo, qui Aristoteli oraculi loco est, paucis sententiam claudendam. Rem esse nimirum in doctrinis, quæ in opinionibus hominum positæ sunt, veluti moralibus et politicis, utilem et intellectui manum quandam auxiliarem; rerum vero naturalium subtilitati et obscuritati imparem et incompetentem. Nam syllogismum certe ex propositionibus constare, propositiones ex verbis, verba notionum sive animi conceptuum testes et signacula esse. Quamobrem notiones ipsæ, quæ verborum animæ sunt, si vagæ, nesciæ, nec satis definitæ fuerint (quod in naturalibus longe maxima ex parte fieri consuevit) omnia ruerent. Restare inductionem, tanquam ultimum et unicum rebus subsidium et perfugium: neque immerito in ea spes sitas esse, ut quæ opera laboriosa et fida rerum suffragia colligere, et ad intellectum perferre possit. Verum et hujus nomen tantummodo notum esse; vim et usum homines hactenus latuisse. De inductione enim ita discernendum: in usu ejus atque etiam forma homines dupliciter peccasse; primo quod moræ impatientes et compendia viarum undique lustrantes, et quædam in certo ponere, circa quæ, tanquam circa polos, disputationes verterentur, properantes, eam tantum ad generalia scientiarum principia adhibuerunt, media per syllogismorum derivationes expedire temere sperantes. Rursus, quod de syllogismo accurate, de hac autem demonstratione cursim et negligenter inquirentes, formam ejusdem meditati sunt admodum simplicem et plane puerilem, quæ per enumerationem tantum procedat, atque propterea precario non necessario concludat. Itaque cum circa demonstrationes talia cogitet, mirum nemini videri posse, si in philosophia naturali sibi cum aliis, sive veteribus sive novis, non conveniat. Neque enim fieri posse (quod ille per jocum dixit) ut idem sentiant qui aquam et qui vinum bibunt. Illos enim liquorem imbibere crudum et ex intellectu vel sponte manantem, vel industria quadam haustum: se autem liquorem parare et propinare ex infinitis uvis, iisque maturis et tempestivis, et per racemos decerptis et collectis, et subinde in torculari pressis, et in vase repurgatis, et clarificatis, constantem, qui tamen ab omni inebriandi qualitate rectificetur, cum nil prorsus phantasiarum vaporibus tribuat aut relinquat. Quare visum est ei, philosophias illas, quas jamdudum diximus, non tantum propter operum sterilitatem, sed etiam propter demonstrationum infirmitatem et fallacias rejici, cum non solum a rebus desertæ, sed et ab auxiliis, quæ sibi paraverunt, destitutæ ac proditæ sint.

Cogitavit et illud; etiam de inveniendi modis, qui in usu sunt, separatim videndum, si modo aliqui sint. In hac enim parte non tam errores et devia, quam solitudinem et vacua inveniri; quod stupore quodam animum perculerit. Non ulli mortalium cordi aut curæ fuisse, ut ingenii et intellectus humani vires ad artes et scientias inveniendas et promovendas dirigeret, eoque viam muniret: sed omnia vel traditionum caligini, vel argumentorum vestigiis et turbini, vel casus et experientiæ undis et ambagibus permissa esse et permitti. Itaque non

sine causa fuisse, quod apud Ægyptios (qui rerum inventores, more apud antiquitatem recepto, consecrare solebant) tot brutorum effigies in templis reperirentur; cum animalia rationis expertia ex æquo fere cum hominibus naturæ operationum inventores fuerint, neque ad hoc homines sua prærogativa admodum usi sunt: sed tamen de iis, quæ sunt, videndum. Et primo de inveniendi modo simplici et inartificioso, quod hominibus familiare est, id non aliud esse, quam ut is, qui se ad inveniendum aliquid comparat et accingitur, primo quæ ab aliis circa illud dicta sint, inquiret et evolvat: deinde meditationem propriam addat. Verum ut quis vel aliorum fidei se committat, vel spiritum suum sollicitet, et fere invocet, ut sibi oracula pandat, rem prorsus sine fundamento esse, sequi inventionem quæ apud dialecticos recepta sit. Eam solummodo nomine tenuis, ad id, quod agitur, pertinere. Non enim principiorum et axiomatum esse, ex quibus artes constant, sed tantum eorum, quæ illis consentanea videntur. Dialecticam enim magis curiosos, et importunos, et sibi negotium facessentes, ad fidem et veluti sacramentum cuilibet arti præstandum notissimo responso rejicere. Restare experientiam meram, quæ, si occurrit, casus, si quæsitæ sit, experimentum nominatur. Atque hanc non aliud quam (quod aiunt) scopas dissolutas esse. Quin et eos, qui in aliqua natura vel operatione per multam et erraticam quandam experimentorum variationem, revelanda et in lucem educenda sedulo occupati sunt, aut attonitos stare, aut vertiginosos circumire, aliquando gestientes, aliquando confusos, atque semper invenire quod ulterius querant. Neque prorsus aliter fieri posse. Insciam enim et imperitam valde cogitationem esse, alicujus rei naturam in seipsis perscrutandi: eandem enim naturam in aliis latentem, in aliis manifestam et quasi palpabilem esse; atque in illis admirationem, in his ne attentionem quidem movere: veluti eam corporum naturam, quæ separationi resistit, in aquarum bullis rem sane subtilem, et fere ingeniosam videri, quæ hujus rei gratia in pelliculas quasdam in hæmisphærii formam effictas se conjiciunt. Eandem in ligno vel lapide non magnopere notari, sed solidi appellatione transmitti. Quare visum est ei, hominibus non tam ignorantiam, quam infelicitatem quandam, imputari, cum a curriculo et via per infortunium aut blandimenta deflexerint, non in ejusdem spatii minus se strenuos præstitierint.

Cogitavit et illud; finem aliquando desperationi, aut saltem querimoniis imponendum: ac illud potius videndum, an omnino cessandum, et iis, quæ habemus, utendum sit, an aliquid, ut melius res procedant, tentandum et molendum. Ac primum finis ipsius et propositi meritum et pretium intueri par esse, ut in materia dura et opere arduo major fiat industriæ accensio. Veniebat autem ei in mentem, antiquis seculis, rerum inventoribus (modum excedente hominum affectu et impetu) divinos honores attributos esse. Iis autem, qui in rebus civilibus merebantur, quales erant urbium et imperiorum conditores, legislatores, patriarum a diutinis malis liberatores, tyrannidum debellatores, et his similes, intra heroum modum honores stetisse. Nec immerito

hanc distinctionem praeis illis temporibus invaluisse, cum illorum beneficia ad universum genus humanum, horum ad certas regiones et definitas hominum sedes pertinerent: illa insuper sine vi aut perturbatione humanam vitam bearent: hæc vero non abaque tumultu et violentia fere introducta sint. Quod si particularis alicujus inventi utilitas ita homines affecerit, ut eum, qui universum genus humanum unico aliquo beneficio complecti posset, homine majorem putarent: at multo celsius inventum esse, quod alia omnia inventa particularia potentia quadam in se contineat, ac animam humanam carceribus liberet, eique vias aperiat, ut ad nova et ulteriora quæque ductu certo et recto penetrare possit. Quemadmodum enim seculis prioribus, cum homines in navigando per stellarum tantum observationes cursum dirigebant, eos veteris sane continentis oras legisse, aut maria aliqua minora et mediterranea trajecisse: necesse autem fuisse, usum acus nauticæ, ut ducem viæ magis fidum, innotuisse, antequam oceanus trajiceretur, et novi orbis regiones detegerentur. Simili prorsus ratione, quæ hucusque in artibus et scientiis hominum inventa sunt, potuisse instinctu, usu, observatione, meditatione, aperiri, utpote sensui propiora. Antequam vero ad remotiora et occultiora naturæ appellere liceat, necessario præcedere, ut melior et perfectior mentis humanæ usus et adoperatio inveniatur. Quare hujuscemodi inventum proculdubio temporis partum nobilissimum, et vere mæculum esse. Rursus in Scripturis sacris notabat Salomonem regem, cum imperio, auro, magnificentia operum, satellitio, famulitio, servorum et famulorum pulcherrima descriptione et ordine, classe insuper, nominis claritudine, et summa hominum admiratione floreret, nil horum tamen sibi gloriæ duxisse, verum ita pronuntiasset: "Gloriam Dei esse rem celare, gloriæ regis autem rem invenire:" non aliter ac si divina natura innocenti et benevolo puerorum ludo delectaretur, qui ideo se abscondunt ut inveniuntur: ac animam humanam sibi collusorem in hoc ludo, pro sua in homines indulgentia et bonitate, optaverit. Atque hanc inveniendi gloriæ eam esse, quæ humanam naturam nobilitet, nec interim cuiquam mortaliū molesta sit (ut civilia esse solent) nec conscientiam in aliquo remoretur aut mordeat, sed omnino meritum et beneficium sine alicujus perniciæ, injuria aut tristitia, deferat. Lucis enim naturam puram et absque maleficio esse; nam ejus perverti, ipsam non pollui. Rursus etiam hominum studia et ambitiones reputans, tria ambitionis genera periebat, si modo uni ex iis id nomen imponere fas sit; primam eorum qui ad propriam potentiam in patriis suis amplificandam magna contentione feruntur: atque hanc vulgarem esse et degenerem. Secundam eorum, qui patriæ suæ potentiam inter humanum genus provehere nituntur, quæ sane plus habet dignitatis, cupiditatis haud minus. Tertiam eorum, qui hominis ipsius sive humani generis potentiam et imperium in rerum universitatem instaurare et attollere conantur; quæ reliquis proculdubio et sanior est et augustior. Hominis autem imperium sola scientia constare: tantum enim potest quantum scit: neque ullas vires naturalium causarum catenam perfringere posse: naturam enim non aliter

quam parendo vinci. Cogitabat etiam et animo volebat, qualia sint, quæ de virtute ac vi inventorum tam simplici et mera, quam ea, quæ cum merito et beneficio conjuncta sit, cogitationem subire possunt. Ac illam quidem non in aliis manifestius occurrere, quam in tribus illis inventis, quæ et ipsa antiquis incognita, et quorum primordia etiam nobis obscura et ingloria sunt; artis nimirum imprimendi, pulveris tormentarii, et acus nauticæ. Hæc enim tria, numero scilicet pauca, ac inventu non multum devia, rerum faciem, et statum in orbe terrarum mutasse: primum in re literaria, secundum in re bellica, tertium in re navali, unde infinitas rerum mutationes secutas esse, attentius intuentibus conspicuas; ut non imperium aliquod, non secta, non stella majorem efficaciam et quasi influxum in res humanas habuisse videatur, quam ista mechanica habuerunt. Quod autem ad merita attinet, id optime percipi, si quis consideret, quantum intersit inter hominum vitam in exultissima aliqua Europæ provincia, et in regione aliqua novæ Indiæ maxime fera et barbara. Tantum sane ut merito hominem homini Deum esse, non solum ex auxilio et beneficio, sed ex status comparatione, dici possit. Atque hoc non solum, non cælum, non corpora, sed artes præstat. At non novum orbem scientiarum, et novum orbem terrarum in eo conventuros, ut vetera novis sint longe cultiora. Quin contra necesse esse, accessiones artium iis, quæ jam habemus, multo se ostendere præstantiores, ut quæ naturam non leviter inflectere, sed vincere et subigere, et in imis fundamentis concutere possint: fere enim perpetuo fieri, ut quod inventu sit obvium, id opere sit infirmum, cum radices demum rerum virtute valida, eadem situ abditæ sint. Si quis autem sit, cui, in contemplationis amorem et venerationem effuso, ista operum frequens, et cum tanto honore mentio, quiddam asperum et ingratum sonet, is pro certo sciat, se propriis desideriis adversari; etenim in natura, opera non tantum vitæ beneficia, sed et veritatis pignora esse. Et quod in religione verissime requiritur, ut fidem quis ex operibus monstret; idem in naturali philosophia competere, ut scientia similiter ex operibus monstretur. Veritatem enim per operum indicationem, magis quam ex argumentatione, aut etiam ex sensu et patefieri et probari. Quare unam eandemque rationem, et conditionis humanæ, et mentis dotandæ esse. Itaque visum est ei, quæ de finis, quem animo metimur et destinamus, dignitate dicta sunt, ea non verbis in majus aucta, sed vero minora esse.

Cogitavit et illud; quæ de finis excellentia dicta sunt, posse votis similia videri. Itaque videndum sedulo, quid spei affulgeat, et ex qua parte se ostendat: ac curandum, ne rei optimæ ac pulcherrimæ amore capti, severitatem judicii amittamus aut minuamus. Consentaneum enim esse, prudentiam civilem in hac parte adhibere, quæ ex præscripto diffidit, et de humanis in deterius conjicit. Leviores igitur spei auras rejiciendas: eas autem, quæ aliquid firmitudinis habere videntur, discutendas. Atque auguria rite capienti, primo illud occurrebat, hoc, quod agitur, ob boni naturam eminentem manifeste a Deo esse: atque in operibus divinis tenuissi-

ma quæque principia eventum trahere. Etiam ex natura temporis bene ominabatur: omnium enim consensu Veritatem Temporis filiam esse. Summæ igitur infirmitatis et pusillanimitatis esse, auctoribus infinita tribuere, auctori autem auctorum, atque omnis auctoritatis, Tempori, jus suum denegare. Neque solum de temporis communi jure, sed et de nostræ ætatis prærogativa bene sperabat. Opinionem enim, quam homines de antiquitate fovent, negligentem esse, ac vix verbo ipsi congruam. Antiquitatem enim proprie dici mundi ipsius senium, aut ætatem proveciorem. Atque revera consentaneum esse, quemadmodum majorem rerum humanarum notitiam et maturius iudicium ab homine sene expetamus, quam a juvene, ob experientiam, et eorum quæ vidit, et audivit, et cogitavit multitudinem: eodem modo et a nostra ætate (si vires suas nosset, et experiri et intendere vellet) majora, quam a priscis temporibus, sperari par esse; utpote ætate mundi grandiore, et infinitis experimentis, et observationibus cumulata et aucta. Neque pro nihilo æstimandum, quod per longinquas illas navigationes et peregrinationes, quæ nostra ætate increbuerunt, plurima in natura patuerunt, quæ novam philosophiæ lucem affundere possint. Quin et turbe hominibus esse, si globi materialis tractus, terrarum videlicet, marium, astrorum, nostris temporibus in immensum aperti et illustrati sint: globi autem intellectualis fines intra veterum inventa et angustias steterint. Etiam temporum conditionem in Europa, civilium rerum respectu, non alienam esse. Aucta Anglia, pacata Gallia, lassata Hispania, immota Italia et Germania. Itaque libratissimum regnum maximorum potentissimum, et incussum nationum nobilissimarum statu, res ad pacem, quæ scientiis instar tempestatum serenæ et benignæ est, inclinare. Neque ipsum rei literariæ statum hisce temporibus incommodum esse: sed et quandam opportunitatem præ se ferre, tum ob imprimendæ artis, antiquis incognitæ, cujus beneficio singulorum inventa et cogitata fulguris modo transcurrere queant, tum ob religionis controversias, quarum tædio fortasse homines ad Dei potestatem, sapientiam, et bonitatem in operibus suis contemplandum facilius animum adiacere possint. Si quis autem sit, qui consensu et temporis diuturnitate in veterum placitis moveatur, is, si in res acutius introspectat, ductores admodum paucos, reliquos sectatores tantum et numerum esse reperiet; homines nimirum, qui ab ignorantia ad præiudicium transierunt, neque in verum consensum (qui interposito iudicio fit) unquam coierunt. Atque ipsam temporis diuturnitatem recte consideranti in angustias parvas redigi. Nam ex viginti quinque annorum centuriis, in quibus memoria hominum fere versatur, vix quinque centurias seponi, quæ scientiarum proventui utiles et feraces fuerint, easque ipsas longe maxima ex parte aliis scientiis, non illa de natura satas et cultas fuisse. Tres enim doctrinarum revolutiones et periodos numerari: unam apud Græcos, alteram apud Romanos, ultimam apud occidentales Europæ nationes: reliqua mundi tempora bellis et aliis studiis occupata, et quoad scientiarum segetem sterilia et vasta inveniri. Atque de tempore sic cogitabat: etiam ex casu vi et natura huiusmodi divinationem sump-

sit. Casum nimirum proculdubio multis inventis principium dedisse, sumpta ex natura rerum occasione. Num ideo in ignis invento Prometheum novæ Indiæ ab Europæo disseñsisse, quod apud eos scilicet non est copia. Itaque in his, quæ præsto sunt, casum largius inventa exhibere; in iis, quæ ab usu quotidiano semota sunt, parcius sed utæque omnibus seculis parturire et parere. Neque enim causam videri, cur casus consensuisse putetur, aut effectus jam factus. Igitur ita cogitabat, si hominibus non quærentibus et aliud agentibus multa inventa occurrunt, nemini sane dubium esse posse, quin iisdem quærentibus, idque via et ordine, non impetu et desultorie, longe plura detegi necesse sit. Licet enim semel aut iterum accidere possit, ut quispiam in id forte fortuna incidat, quod magno conatu scrutantem antea fugit, tamen in summa rerum proculdubio contrarium inveniri. Casum enim operari raro, et sero, et sparsim; artem contra constanter, et compendio, et turmatim. Etiam ex inventis ipsis, quæ jam in lucem prodita sunt, de iis, quæ adhuc latent, conjecturam rectissime capi putabat. Eorum autem nonnulla ejus esse generis, ut antequam invenirentur, haud facile cuiquam in mentem venisset, de iis aliquid suspicari. Solere enim homines de novis rebus ad exemplum veterum et ad phantasiam ex iis præceptam hariolari: quod opinandi genus fallacissimum est, quandoquidem ea, quæ ex rerum fontibus petuntur, per rivulos consuetos non utique fluunt: veluti si quis, ante tormentorum igneorum inventionem, rem per effectus descripsisset, atque ita dixisset, inventum quoddam detectum esse, per quod muri etmunitiones quæque maximæ ex longo intervallo quaterentur et dejicerentur; homines sane de viribus tormentorum et machinarum per pondera, et rotas, et similia multiplicandis, multa et varia commentatos fuisse; de vento autem igneo vix unquam imaginationem aliquam occurruram fuisse; ut cujus exemplum non vidissent, nisi forte in terræ motu aut fulmine, quæ ut non imitabilia rejecissent. Eodem modo si ante filii bombycini inventionem, quispiam huiusmodi sermonem injecisset: esse quoddam filii generis aut vestium et supellectilis usum, quod filium lineum aut laneum longe tenuitate, ac nihilominus tenacitate, ac etiam splendore et mollitie excelleret, homines statim aut de serico aliquo vegetabili, aut de alicujus animalis pilis delicatioribus, aut de avium plumis et lanigine aliquid opinaturos fuisse: de vermibus autem alicujus textura, eaque tam copiosa et anniversaria, nil cogitatos. Quod si quis etiam de vermi verbum aliquod emisisset, ludibrio certe futurum fuisse: ut qui novas araneorum operas somniaret. Quare eandem et eorum, quæ in sinu naturæ adhuc recondita sunt, magna ex parte, rationem esse, ut hominum imaginationes et commentationes fugiant et fallant. Itaque sic cogitabat, si cujus spem de novis inventis cohibeat, quod, sumpta ex iis quæ præsto sunt conjectura, ea aut impossibilia, aut minus verisimilia putet, eum scire debere, se non satis doctum ne ad optandum quidem commode et apposite esse. Sed rursus cogitabat, esse ex jam inventis alia, diversæ et fere contrariæ naturæ, quæ fidem faciant, posse genus humanum nobilia inventa etiam ante pedes

posita præterire et transmittere. Utcunq̄ enim pulveris tormentarii, vel filii bombycini, vel acus nauticæ, vel sacchari, vel similia inventa quibusdam rerum et naturæ proprietatibus niti videantur; imprimendi certe artem nihil habere, quod non sit apertum, et fere obvium, et ex antea notis confiatum. Solere autem mentem humanam in hoc inventionis curriculo tam lævam et male compositam esse, ut in nonnullis primo diffidat, et non multo post se contemnat: atque primo incredibile videri, aliquid tale inveniri posse: postquam autem inventum sit, rursus incredibile videri, id homines tam diu fugere potuisse. Atque hoc ipsum quoque ad spem trahebat, superesse nimirum adhuc magnum inventorum cumulum, qui non solum ex operationibus incognitis eruendis, sed et ex jam cognitis transferendis et applicandis deduci possit. Etiam illa auspicia ut bona et læta acceperit, quæ in artibus mechanicis observavit, atque eorum successu, præsertim ad philosophiam comparato: artes enim mechanicas ut auræ cujusdam vitalis participes, quotidie crescere et perfici; philosophiam vero statuas more adorari et celebrari, nec moveri. Atque illas in primis auctoribus rudes et fere informes ac onerosas se ostendere: postea novas vires et commoditates adipisci. Hanc autem in primo quoque auctore maxime vigere, ac deinceps declinare. Neque aliam hujus contrarii successus causam veriolem esse, quam quod in mechanicis multorum ingenia in unum coeunt; in philosophia autem singulorum ingenia ab uno quopiam destruuntur. Nam postquam dedititii facti sunt, amplitudinem non addere, sed in uno orando aut stipando servili officio occupari. Quare omnem philosophiam, ab experientiæ radicibus, ex quibus primum pullulavit et incrementum cepit, avulsam, rem mortuam esse. Atque hac cogitatione arrectus, etiam illud notavit; facultates artium et scientiarum, aut empiricas, aut rationales, sive philosophicas, omnium concensu esse: has autem se non bene adhuc commissas et copulatas videre. Empiricos enim, formicæ more, congerere tantum et uti: rationales autem, aranearum more, telas ex se conficere. Apis vero rationem mediam esse, quæ materiam ex floribus tam horti quam agri eliciat, sed eam etiam propria facultate vertat et digerat. Neque absimile veræ philosophiæ opificium esse; quæ ex historia naturali et mechanicis experimentis præbitam materiam non in memoria integram, sed in intellectu mutatam et subactam, reponit. Neque se nescire, esse ex empiricorum numero, qui se non mere empiricos haberi volunt, et ex dogmaticis, qui se in experientia industrios et perspicaces videri ambiunt: verum hæc fuisse et esse quorundam hominum artificia, existimationem quandam, ut alteruter in sua secta excellere videatur, captantium: revera autem harum facultatum divortia et fere odia semper valuisse. Quare ex arctiore earum et sanctiore fœdere omnia fausta et felicia portendi putabat. Etiam illud libenter vidit: intuebatur nempe infinitas ingenii, temporis, facultatum expensas, quas homines in rebus et studiis (si quis vere judicet) inutilibus collocant, quarum pars quota, si ad sana et solida verteretur, nullam non difficultatem superare posset. Neque esse quod homines particularium multitudinem re-

formident, cum artium phænomena manipuli instar sint ad ingenii commenta, semel ab evidentiâ rerum disjuncta et distracta. Atque hæc, quæ dicta sunt, singula impulsu quemdam ad spem faciendam habere: ante omnia autem certissimam spem esse ex præteriti temporis erroribus. Atque (quod etiam quispiam de civili statu non prudenter administrato dixit) quod ad præterita spectando pessimum, id ipsum ad futura optimum esse. Cessantibus enim hujusmodi erroribus (ad quod ipsa monita primum gradum præstant) maximam rerum conversionem fore. Quod si homines per tanta annorum spatia viam tenuissent, nec tamen ulterius progredi potuissent, ne spem quidem ullam subesse potuisse. Tunc enim manifestum fuisse, difficultatem in materia et subjecto (quæ nostræ potestatis non sunt) non instrumento (quod penes nos est) hoc est, in rebus istis earumque obscuritate, non in animo humano et ejus adoperatione, esse. Nunc autem apparere, viam non aliqua mole aut strue imperviam, sed ab humanis vestigiis deviam esse: itaque solitudinis metum paulisper offundere, nec ultra minari. Postremo et illud statuit, si spei multo imbecillior et obscurior aura ab isto novo continente spiraverit, tamen experiendum fuisse. Non enim pari periculo rem non tentari, et non succedere: cum in illo ingentis boni, in hoc pusillæ humanæ operæ jactura vertatur. Verum et dictis et non dictis visum est ei, spei abunde esse, non tantum homini industrio ad experiendum, sed etiam prudenti et sobrio ad credendum.

Cogitavit et illud, studio accenso et spe facta, de modis perficiendi videndum esse. Hæc itaque sunt, quæ ei circa hoc generaliter visa sunt: quæ etiam nudis et apertis sententiis claudere et complecti consentaneum putavit. Visum est ei, plane ab iis, quæ jam facta sunt, diversa faciendâ; itaque rerum præteritarum redargutionem ad futura vice oraculi fungi. Visum est ei, theorias et opiniones, et notiones communes, quantum rigore mentis et constantia obtineri potest, penitus aboleri: et intellectum planum et æquum ad particularia de integro accedere: ut fere non alius ad regnum naturæ, quam ad regnum cœlorum, pateat aditus; ad quod nemini nisi sub persona infantis ingredi liceat. Visum est ei, particularium sylvam et materiem, et numero, et genere, et certitudine, aut subtilitate, ad informationem sufficientem colligi et congeri, tum ex naturali historia, tum ex experimentis mechanicis, atque ex iis potissimum, quia natura plenius se prodit, cum ab arte tenetur et urgetur, quam in libertate propria. Visum est ei, eandem materiam ea ratione in tabulas atque in ordinem redigi et digeri, ut intellectus in eam agere, atque opus suum exsequi possit: cum nec Verbum divinum in rerum massam absque ordine operatum sit; visum est a particularibus, in tabulas relatis, ad novorum particularium inquisitionem minime confestim transeundum (quod tamen et ipsum res utilis sit, et instar experientiæ cujusdam literatæ) sed ad generales et communes comprehensiones prius procedendum, et naturali sane intellectus processui eatenus indulgendum. Sed simul visum est ei, intellectus motum et impetum naturalem, sed pravum,

a particularibus ad comprehensiones superiores et magis generales (qualia sunt principia quæ vocantur artium et rerum) salendi, et reliqua descendendo per media expediendi, omnino cohibendum: sed comprehensiones proximas primo, ac deinceps medias eliciendas et inveniendas, atque per gradus continuos, et scalam veram ascendendum: fere enim contemplationum et intellectus vias in bivium illud moralium, antiquis decantatum, coincidere: alteram enim viam, primo ingressu planam, ad avia ducere, alteram, a principio arduam et suspensam, in plana desinere. Visum est ei, talem inductionis formam introduci, quæ ex aliquibus generaliter concludat; ita ut instantiam contradictoriam inveniri non posse demonstraret: ne forte secundum pauciora, quam par est, et ex iis, quæ præsto sunt, pronuntiemus, et (quod unus ex antiquis dixit) scientiam in mundis propriis et non in mundo communi quæramus. Visum est ei, eam tantum comprehensionem probari et recipi, quæ non ad mensuram facta sit, et aptata particularium, ex quibus elicitor: sed amplior aut latior sit, eamque amplitudinem sive latitudinem suam ex novorum particularium designatione, quasi fideiussione quadam, firmet. Ne vel in jam notis tantum hæreamus, vel laxiore fortasse complexu umbras et formas abstractas preñsemus. Visum est ei, multa præter hæc inveniri, quæ non tam ad perfectionem rei, quam ad operis compendium, ac etiam ad messem humanam inde accelerandam insigniter faciant. Quæ omnia utrum recte cogitata sint an secus, ab opinionibus (si opus sit) provocandum et effectis standum.

Cogitavit et illud; rem quam agit, non opinionem, sed opus esse, eamque non sectæ alicujus, aut placiti, sed utilitatis et amplitudinis immensæ fundamenta jacere. Itaque de re non modo perficienda, sed et communicanda et tradenda (qua par est cura) cogitationem suscipiendam esse. Reperit autem, homines in rerum scientia, quam sibi videntur adepti, interdum proferenda, interdum occultanda, famæ et ostentationi servire: quin et eos potissimum, qui minus solida proponunt, solere ea, quæ adferunt, obscura et ambigua luce venditare, ut facilius vanitati suæ velificare possint. Putare autem, se id tractare, quod ambitione aliqua aut affectione pollere minime dignum sit: sed tamen necessario eo decurrendum esse (nisi forte rerum et animorum

valde imperitus esset, et prorsus inexplorato viam inire vellet) ut satis meminerit, inveteratos semper errores, tanquam phreneticorum deliramenta, arte et ingenio subverti, vi et contentione efferari. Itaque prudentia ac morigeratione quadam utendum (quanta cum simplicitate et candore conjungi potest) ut contradictiones ante exstinguantur quam excitentur. Ad hunc finem parare se de natura opus, quod errores minima asperitate destruere, et ad hominum sensus non turbide accedere possit; quod et facilius fore, quod se non pro duce gesturus, sed ex natura ipsa lucem præbiturus et sparsurus sit, ut duce postea non sit opus. Sed cum tempus interea fugiat, et ipse rebus civilibus plus, quam vellet, immistus esset, id longum videri: præsertim cum incerta vitæ cogitaret, et aliquid in tuto collocare festinaret. Venit ei itaque in mentem, posse aliquid simplicius proponi, quod in vulgus non editum, saltem tamen ad rei tam salutis abortum arcendum satis fortasse esse possit. Atque diu et acriter rem cogitanti et perpendenti, ante omnia visum est ei, tabulas inveniendi, sive legitimæ inquisitionis formulas, hoc est, materiam particularium ad opus intellectus ordinatam, in aliquibus subjectis proponi, tanquam ad exemplum, et operis descriptionem fere visibilem. Neque enim aliud quicquam reperiri, quod aut vera viæ, aut errorum devia in clariore luce ponere; aut ea quæ afferuntur nihil minus, quam verba esse, evidentius demonstrare possit: neque etiam quod magis fugiendum esset, ab homine, qui aut rei diffideret, aut eam in magis accipi aut celebrari cuperet. Fieri autem posse ut si destinata perficere non detur, ut sunt humana tamen ingenia firmiora et sublimiora, etiam absque majoribus auxiliis, ab oblatiis monita, reliqua ex se et sperare et potiri possint. Fere enim se in ea esse opinione, nempe (quod quispian dixit) prudentibus hæc satis fore, imprudentibus autem ne plura quidem. Visum est autem, nimis abruptum esse, ut a tabulis ipsis docendi initium sumatur. Itaque idonea quadam præfari oportuisse, quod et jam se fecisse arbitratur; nec univerra, quæ huc usque dicta sunt, alio tendere. Postremo visum est ei, si quid in his, quæ dicta sunt, aut dicentur, boni inveniatur, id tanquam adipem sacrificii Deo dicari, et hominibus ad Dei similitudinem, sano affectu et charitate hominum bonum procurantibus.

## E P I S T O L A

### THOMÆ BODLEI AD FRANCISCUM BACONUM,

QUA CANDIDE EXPENDIT EJUS "COGITATA ET VISA:"

LATINE VERSA EX ANGLICO, AB ISAACO GRUTERO.

FINITO, quod mihi statueram, tempore, cum laxius te ferari opinarer, bis terve in procinctu steti, ut gratias acturus te adirem, potius id a me fieri debere

ratus coram, quam per literas. Sed proposito semper injecta fuerunt obstacula, ut et nunc Fulhami me detinet gravioris momenti negotium, quod sen-

tentiam quoque meam scripto mandandam persuasit. Non dubitas, quin Cogitata et Visa tua legerim; testor id factum a me summa cum voluptate, cum id præcipui amoris argumentum interpreter, quod habeas me in tuorum numero, quibus censendos offers ingenii tui nondum evulgatos labores. Quo nomine fer me, quæso, hæc dicentem. Primo, si intimo erga te affectui, ingenium tuum, actiones et sermones id pretium diceretur, quod tui in me amoris est, liceat hæc mutuis illigata complexibus sociari. Sed omnis excluditur paritas, ubi ea sortis nostræ disparitas est, et tam longe dissident, quibus favor utriusque noster probare se nititur. Me itaque quod attinget, ex sese illa æstimari permitto, et æterno observantiæ nexu habebis me tibi devinctissimum. Ad operis tui argumentum ut accedam, est id ampla maxime insignium speculationum congeries, ut in admirationem me rapiat (qua perpetuo me defixum tenebis) quod civilibus negotiis occupatissimus et summe acciti otii, quibus nullum prorsus cum declamatis in schola dogmatibus commercium est, quicquid tamen optimæ frugis reconducit scientiarum præcipuæ, id omne accuratissimo selectu transtuleris in libri tui materiam. Quanquam enim alicubi prorsus declines a trita et pervulgata in scholis docendi ratione, quæ apud nullius non gentis et sæculi sapientes habita fuit unica veri norma; tamen et in illis, et quicquid toto moliris opere, artificem te nobis probas versatili dexteritate. De me id fateor exerte, si institutum spectetur qua in eruditionis latifundia excurrit, excerptandam me litteratorum gregi. Cum tamen ita prompte vocatis ad tui tractatus censuram amicis audire libenter velle videaris, si quid mihi aut aliis occurrerit decretorio confodiendum stylo, eo me redactum sentio, ut iudicium meum dissimulare non liceat, aperteque contestor ex eorum me numero, qui solidiora esse statuunt artium nostrarum fundamenta, quam tota dissertationis tuæ series admittit. Primo enim cum objicis sinistros eventus et errores practicæ medicinæ, non ignoras mali id redundare ex neglecta artis regula. Nam ne centesimus quidem medicæ cautionis observantem se præbet; et ea aliquando ægri corporis constitutum est, ut exacte doceri medicum non patiatur. Paucos enim reperias, qui rebus sic sese habentibus recte se explicent. Est et ubi malum ex se arti cedere nescit, quod in multis morbis accidens esse nosti; quandoque et in abdito causa, quam nullæ deprehendant conjecturæ. Quicquid sit; ego mihi persuadeo, illud practicæ medicinæ (prout hodie exercetur) probrum refundi in profitentium incuriam ad inscitiam, aut aliam ingenii mei caliginem, quod minus felices habeat successus. Pauci enim medicos agentium ita in arte sua exercitati sunt, ut quidem quæ ex arte præscribunt flagitant. Atque hæc licet ad eam perfectionem non assurgat, admirandis tamen sanitatis adminiculis abundat, ut per tot seculorum decursum exploratissimæ fidei docuerunt experimenta, quæ regiam velut viam pandunt ad commendatissimam per te quoque scientiam. Alchymia et magia axiomatibus quibusdam constant sane dignis, quæ assensum impetrent. Sed tota artificum industria ita subtilitatem et imposturas miscet, ut non tantum fraus et fraudum fabri contemptum incurrant, sed et ludibriis excipiantur.

Atque hic ut in solido locetur quod instituti tui pars est potissima, videntur mihi exempla tua fuisse petenda ex iis quæ liberales tradunt scientiæ, sepositis quæ sunt de raro contingentibus, et, ut in confesso est, facile refutari possunt; sed convertendam fuisse censorii styli aciem in ea quæ generalia præstruunt et tanquam non subvertenda axiomata et canones defenderunt nobilissima omnis ævi ingenia. Apud eruditos enim nihil certius, quam illud artium genus, cui scholastica olim natio nomen dedit *quadriviales*, positiones suas per irrefutabiles demonstrationes asseruisse. In aliis quoque, *triviales* dictis, eas nobis supersunt regulæ velut per manus traditæ, quæ plerumque fine suo, in quem scientia quæque collineat, non excedunt. Jam vero si nos consilio tuo ductiles præbeamus, id est, communes notiones homini insitas exuamus, deletisque omnibus actionibus nostris, operibus et maximis, repuerascere conemur, quo liceat intrare regnum naturæ, ut ex sacri codicis præscripto enitendum nobis est ad *regnum celorum*, me quidem iudice, nihil certius est, quam sic præcipiti gradu eundem esse in barbariam, unde post aliquot seculorum millia nihilo instructiores emergamus theoreticis adjumentis, quam nunc sumus. Nam ita demum vere secundam ordiremur pueritiam, facti tabula rasa, ubi, deletis priorum principiorum vestigiis, resuscitare jubemur novi mundi primordia, et ab experimentis operum et sensuum (hanc enim in particularibus insiatis probandi viam) colligere quod in intellectu efformetur in notionem generalem, ex decantato illo apud omnes effato, "In intellectu nihil esse, quod non prius fuerit in sensu." Neque verisimilitudine careat, posse nobis evenire, ut si ratio ineatur eruditionis, cum finienda erit Platonici anni revolutio, longe ea infra istud, quo nunc censetur, pretium decrevisse videri possit. Quod doctrinam nobis spondes excellentiorem, quam hodie inter nos viget, ab experimentis petendam, si latentes naturæ sinus pertentare et aperire liberet, stabilita in particularibus fide, non magis ad rem facit, quam si eo incites, quod naturalis hominem instinctus rapit sine admotis exteriori hortationibus. Neque enim aliud patitur ratio, quam ut infinita sint membra in omnibus mundi partibus (neque enim hic cogitationes nostræ intra Europæ terminos cohibendæ sunt) quæ viam insistent quo digitum intendis, tam acri et sollicita diligentia ut magis intendi nequeat industria. Omnibus enim insita est sciendi cupiditas, non ita exsatianda, quin exardescat vehementius, ut hydrops sibi indulgens crescit. Sed quomodo aures præbituros persuadere paranti, evertendas prorsus quibus solide constitutis inhærent sententias et universim admista theoretica, tam suis, quam majorum, experimentis superestructa, non video adferri quo inducar ut credam. Porro asserere mihi licet non invita, ut opinor, probabilitate, si tacitas intra cogitationes ad examen revocetur, quantum exuberent naturæ documenta usu comperta per totum, qua expanditur, universum, quinque aut sex ista, quæ venditas selecta et a te probata, et hodiernæ curiositati deberi vis, misere se tuerentur inter aliquot centena naturæ arcana, quibus in lucem quotidie protrahendis aut solertia ministra est, aut favet casus, et comparari possunt aut partim

præferri iis, quæ a te designata sunt. Sed demus, sequatur assensus posse a te conferri quod ad scientiarum faciat augmentum, et universalis apud nos theoriæ notiones et axiomata fingamus extincta, suffectis noviter repertis; quid beneficii redundabit ex hac mutatione in eruditionem et scientias? Nihil certius, quam nova hæc, et quæ in eorum appendicem veniunt, ubi semel recepta fuerint, commendantibus inventoribus, et illorum asseclis gratiam priscam sensim amissura, et oblivioni tradenda, ex naturæ scito fluxus illos et refluxus alternantis, atque ita ex temporum decursu penitus habitura interitum; fortasse etiam aliis idem, quod tu nunc venditas, agitantibus, nimirum propositis adminiculis, quibus exactius limentur augendæ scientiæ. Semper enim quæ majoribus fuerunt probro, in minoribus renasci solent. Quare frustra est, quisquis ab illorum exercitationibus et tota commentandi industria aliud speraverit, quam quod priscæ observationis sit, ut fido nobis et per scripta tradito relatu constat. Hic in mentem mihi venit quod notat Paterculus, ubi de excellentissimis Græcorum et Romanorum ingeniis agit, cum florentissimæ essent ipsorum res, hanc dari posse non improbabilem causam, quæ ea pesium dedit, ut postea docuit eventus, natura "quod summo studio petitum est, adscendit ad summum, difficilisque in perfecto mora est." Adeo ut homines, si senserint ulteriore se prohiberi adcensu, in ipso constitutos fastigio, sponte descendant, abdicatisque exercitationibus quibus plurimum inest momenti, nova affectent, tanquam occupata ab aliis materia, in qua prius laborabant. Et præsertim id eloquentiæ fatum fuit illis temporibus, ut cum posteriores desperarent posse a se præteriri priores, aut eos æquari, sequeretur neglectus et contemptus priscæ exercitationis, et per aliquot secula sermo et stylus contraheret sordes et rubiginem, donec ultima periodus novam reduxit faciem, emergentibus et se incitantibus illustribus ingeniis ad resumendos recens animatæ diligentiæ impetus, propellendosque in summum perfectionis fastigium labores non in eloquentiæ duntaxat studio, sed et quousque se porrigunt scientiarum omnium pomœria. Neque enim falli illum puto, quisquis existimaverit, artes omnes, prout publice nunc docentur, nullo non ævo extitisse, non tamen pari in omnibus locis mensura, neque eodem loco semper pari numero, sed ex temporum genio mutationibus obnoxio, nunc auctiores florentioresque, nunc inexcusitate et cum tenebrosæ institutionis methodo rudi.

Ratio ex me si quæretur, facit pro me doctrina Aristotelis et aliorum elaboratissimi ingenii virorum, a quibus supersunt nobis plurima adminicula; unde id probetur et ad liquidum deducatur, quod aliis in rebus idem in artibus contingere, darique ortum et interitum; congrua prorsus, si me interpretem audias, sententia ei, quod dici solet: "Nihil novum sub sole," et quæ non in facta magis quam dicta quadrat, "Ut nihil neque dictum neque factum sit, quod non et dictum et factum prius."

Patrocinatur 2<sup>o</sup>. etiam celebris illa Salomonis ad filium querela in prurientes suo seculo voluminum fabros, non alio sensu accipienda, quam quod magna eorum pars et fuerint observationes et in qualibet

literatura artificiosi instar syntagmatis. Neque ex tam ampla congerie vel pulvisculus superest, si excipias quædam sacri codicis, posteritati relicta. Et anne tunc quidem per tot scriptorum millia, qui Salomonis ævum antecessere, reperiri potuit quidquam novitatis titulo donandum? Habenda tamen ei fides est, cum ait, non obstantibus quæ vel sua ferebant, vel priora tulerant tempora, non potuisse dici, "Ecce novi quid." Unde id colligo, cum per omnia secula et in omnibus artibus et scientiis eadem fuerint in hominibus labor, exercitatio, et cognitio, cum iis, quæ nostro videmus tempore, etsi mutationum æstu fluctuantia, prout temporum et locorum occasionisque variat ratio, et incalescit scriptorum industria, intendi et remitti solita tam in theoreticis suis quam practicis, si assentimur tibi, primo, ut scientia nostra rejiciatur tanquam dubia et incerta, (quod affirmas duntaxat non minus argumentorum robore,) deinde ut abdicentur axiomata nostra et maximæ, generalesque assertiones, a majoribus quasi per manus traditæ, quæ tamen (aliter enim hæc intelligi nequeunt) subtilissimis omnis ævi iudicis comprobata sunt: ultimo, ut excogitetur ratio, quæ nos, jam factos abecedarios, per tortuosas particularium experimentorum ambages provehat ad cognitionem ex solide collectis generalibus, unde nova exsculpantur artium principia, finis erit ut exuti, quas nunc habemus, disciplinis, et fatigati redeuntibus in circulum laboribus, illuc tendamus, unde incepimus, eoque deducamus felicitatis quæ nos in integrum restituat. Res ea est tot seculorum, quot ante nos transacta fluxerunt, ut tandem in perfectionis meta consistamus. Neque ita hic censor sedeo, quasi fastidiose explodam quicquid augendis per nova inventa impenditur scientiis, cum conatus iste nobilis sit, neque summa laude fraudandus, ob beneficium quo in præsens perfrui licet. Nunquam defuit mundo ingens illorum agmen qui novis excogitandis operam dederunt, neque futura carebunt secula, in quibus industria pertinax et excellens hæc in parte peperit nobis ea, quæ in admirationem rapiunt, captum popularem et spem transgressa. Nostræ tamen notiones et axiomata tam ab iis, quam ab eruditorum eminentissimis, semper cum gratiis recepta sunt.

Vides quam in me fiduciam tua creavit humanitas; si in ista tui impugnandi licentia lasciviente protervia efferor, quam de erecta tua indole concepi opinio, et libertate, quam hic amicorum præcipuis indulges, eo me impulit alioquin resistantem. Et quanquam, equi instar sub auriga rector, non recedam a veteri et trita via, quam sedulo calceavi, ita tamen sentio de tuis cogitatis, et fateri me res ipsa cogit, tecum et cum mundo iniquius te egisse, cum tantas opes domestico carcere damnatas invidisti publico usui. Licet enim persuasum habeam quoad tenorem et subjectum præcipuæ dissertationis, nulla in academia te reperturum tribunal, quod erroris te absolvere sustineat; tamen negari non potest, tractatum tuum ubique scatere conceptibus selectæ frugis super præsentis statu scientiarum, et ingeniosissimis commentationibus super adjunctis eas promovendi, ut efficacissime eum trahat, quicumque earum rerum studio capitur, penitusque explorandi gignat hæud

iners desiderium, non ut eo tantum enitatur quod in pervalgatis hodie scientiis summum est, sed ut altius quasi feratur in ipsa latentis naturæ viscera, omnesque ingenii et iudicii nervos intendant, donec D. Pauli illud perfecerit "consectari meliora dona." Utinam hanc ingressus esses viam (votum id auribus tuis depono) cum primum ad hæc studia animum

adjiceres, vir longe alterius scholæ! nihilominus utcunque hæc se habeant, cum id tibi firmum fixumque sedeat, et patriæ fidem tuam probes, toto affectu precor, quod sæpissime facio, ut paria meritis tuis obtingant. Quod, spero, affluet aliquando plenis honorum et felicitatis rivis.

*Fulhami, Feb. 19, 1607.*

## DESCRIPTIO GLOBI INTELLECTUALIS.

### CAPUT I.

*Partitio universalis humanæ doctrinæ in historiam, poësin, philosophiam, secundum triplicem facultatem mentis; memoriam, phantasiam, rationem; quodque eadem partitio competat etiam in theologicis: cum idem sit vas (nempe intellectus humanus) licet materia et insinuatio sint diversa.*

PARTITIONEM doctrinæ humanæ eam deligimus, quæ triplici facultati intellectus respondeat. Tres itaque ejus partes a nobis constituuntur: historia, poësis, philosophia: historia ad memoriam refertur: poësis ad phantasiam: philosophia ad rationem. Per poësin autem nihil aliud intelligimus hoc loco, quam historiam fictam. Historia proprie individuorum est; quorum impressiones sunt mentis humanæ primi et antiquissimi hospites: suntque instar primæ materiæ scientiarum. In his individuis, atque in hac materia, mens humana assiduo se exercet, interdum ludit. Nam scientia omnis, mentis et exercitatio et officium; poësis ejusdem lusus censi possit. In philosophia mens mancipatur rebus; in poësi solvitur a nexu rerum, et expatiatur, et fingit quæ vult. Hæc vero se ita habere facile quis cernat, qui simpliciter tantummodo, et pingui quadam contemplatione intellectualium origines petat. Etenim individuorum imagines excipiuntur a sensu, et in memoria figuntur. Abeunt autem in memoriam tanquam integræ, eodem quo occurrunt modo. Has rursus retrahit et recollit mens; atque (quod officium ejus proprium est) portiones earum componit et dividit. Habent enim individua singula aliquid inter se commune, atque aliud rursus diversum et multiplex. Ea vero compositio atque divisio vel pro arbitrio mentis fit, vel prout invenitur in rebus. Quod si fiat pro arbitrio mentis, atque transferuntur portiones illæ ad placitum, in similitudinem quandam individui, phantasie opus est, quæ, nulla naturæ aut materiæ lege et necessitate astricta, ea, quæ in rerum natura minime conveniunt, conjungere: quæ vero nunquam separantur, discernere potest; ita tamen ut intra primas illas ipsas individuorum portiones coërceatur. Nam eorum, quæ nulla ex parte se sensui obtulerunt, non est phantasia, ne somnium profecto. Quod si eædem individuorum portiones componantur et dividantur, pro

ipsa rerum evidentia, et prout vere in natura se produnt, aut saltem pro captu cujusque se prodere notantur, eæ partes rationis sunt: atque universa hujusmodi dispensatio rationi attribuitur. Ex quo liquido constat, ex tribus hisce fontibus esse tres illas emanationes historiæ, poësis, et philosophiæ; neque alias, aut plures esse posse. Nam sub philosophiæ nomine complectimur omnes artes et scientias, et quicquid denique a singularum rerum occurru per mentem in generales notiones collectum et digestum est. Neque alia censemus ad doctrinam partitione, quam illa superiore, opus esse. Informationes enim oraculi, et sensus, et re proculdubio, et modo insinuandi differunt; sed tamen spiritus humanus unus atque idem est: perinde ac si diversi liquores, atque per divisa infundibula, tamen in unum atque idem vas recipiantur. Quare et theologiam ipsam aut ex historia sacra constare asserimus, aut ex præceptis et dogmatibus divinis, tanquam perenni quadam philosophia. Ea vero pars, quæ extra hanc divisionem cadere videtur, (quæ est prophetia,) et ipsa historiæ species est cum prærogativa divinitatis, in qua tempora conjunguntur, ut narratio factum præcedere possit; modum autem enuntiandi et vaticiniorum per visiones, et dogmatum cælestium per parabolas, participat ex poësi.

### CAPUT II.

*Partitio historiæ in naturalem et civilem; ecclesiastica et literaria sub civili comprehensa. Partitio historiæ naturalis in historiam generationum, prætergenerationum, et artium, et triplici statu naturæ, liberæ videlicet, aberrantis, et constrictæ.*

HISTORIA aut naturalis est, aut civilis. In naturali naturæ res gestæ et facinora memorantur; in civili, hominum. Elucent proculdubio divina in utrisque, sed magis in humanis, ut etiam propriam in historia speciem constituent, quam sacram aut ecclesiasticam appellare consuevimus. Itaque eam civili attribuimus; at primo de naturali dicemus. Naturalis historia rerum singularium non est; non quod perperam a nobis positum sit historiam versari in individuis, quæ loco et tempore circumscribuntur. Nam proprie ita se res habet. Sed cum promiscua sit rerum naturalium similitudo, adeo ut si unum noris, omnia noris;

superfluum quiddam esset et infinitum de singulis dicere. Itaque sicubi absit illa promiscua similitudo, recipit etiam historia naturalis individua; ea scilicet, quorum non est numerus, aut natio quædam. Nam et solis, et lunæ, et terræ, et similibus, quæ unica sunt in specie sua, rectissima conscribitur historia; nec minus eorum, quæ insigniter a specie sua deflectunt, et monstrosa sunt; quandoquidem in illis, descriptio et cognitio ipsius speciei nec sufficit nec competit. Itaque hæc duo individuum genera historia naturalis non rejicit: ut plurimum autem (quemadmodum dictum est) in speciebus versatur. At partitionem historiæ naturalis molimur ex vi et conditione ipsius naturæ, quæ in triplici statu posita invenitur, et tanquam regimen subit trinum. Aut enim libera est natura, ac sponte fusa, atque cursu consueto se explicans, cum scilicet ipsa natura per se nititur, nullatenus impedita aut subacta: ut in cælis, animalibus, plantis, et universo naturæ apparatu; aut rursus illa a pravitatibus et insolentis materiæ contumacis et rebellis, atque ab impedimentorum violentia, de statu suo plane convellitur et detruditur, ut in monstris et heteroclitis naturæ: aut denique ab arte et ministerio humano constringitur, et fingitur, et plane transfertur, et tanquam novatur, ut in artificialibus. Etenim in artificialibus natura tanquam facta videtur, et conspicitur prorsus nova corporum facies et veluti rerum universitas altera. Itaque tractat historia naturalis aut libertatem naturæ, aut errores, aut vincula. Quod si cuiquam molestum sit artes dici naturæ vincula, cum potius liberatores et vindices censi debeant, quod naturam in nonnullis suæ intentionis compotem faciant, impedimentis in ordinem redactis: nos vero hujusmodi delicias et pulchra dictu nil moramur; id tantum volumus et intelligimus, naturam per artem, tanquam Proteum, in necessitate poni id agendi, quod absque arte actum non fuisset: sive illud vis vocetur et vincula, sive auxilium et perfectio. Partiemur itaque historiam naturalem in historiam generationum; historiam prætergenerationum; et historiam artium, quam etiam mechanicam et experimentalem appellare consuevimus. Libenter autem historiam artium ut historiæ naturalis speciem constituimus; quia inveteravit prorsus mos disserendi et opinio, ac si aliud quippiam esset ars a natura, ut artificialia a naturalibus segregari debeant, tanquam toto genere discrepantia: unde et illud mali, quod plerique historiæ naturalis scriptores perfunctos se putant, si historiam animalium, aut plantarum, aut mineralium confecerint, omissis artium mechanicarum experimentis (quæ longe maximi ad philosophiam momenti sunt); tum etiam illabitur animis hominum subtilius aliud malum; nempe ut ars censeatur solummodo ut additamentum quoddam naturæ; cujus scilicet ea sit vis, ut naturam vel inchoatam perficere, vel inclinatam emendare possit; minime vero radicitus transmutare, atque in imis concutere; quod plurimum rebus humanis desperationis intulit. At contra illud penitus animis hominum insidere debuerat, artificialia a naturalibus non forma aut essentia, sed efficiente tantum, differre; homini vere in naturam plane nullius rei potestatem esse, præterquam motus: ut corpora scilicet naturalia aut

admoveat, aut amoveat; reliqua naturam intus per se transigere. Itaque ubi datur debita admotio corporum naturalium aut remotio, omnia potest homo, atque ars: ubi non datur, nihil. Rursus autem modo corporum fiat debita illa admotio, aut remotio, in ordine ad aliquem effectum, sive hoc per hominem et artem fiat, sive naturaliter absque homine, parum refert. Neque hoc illo fortius est, veluti si quis ex aspersione aquæ simulacrum iridis super parietem excitet, non minus obsequente utitur natura, quam cum idem fit in aëre ex nube roscida. Contra vero, cum aurum invenitur in arenulis purum, æque sibi ipsi ministrat natura, ac si aurum purum per fornacem et ministerium hominis excoqueretur. Aliquando autem ministerium ex lege universi aliis animalibus deputatur: neque enim minus artificiale quiddam est mel, quod fit mediante industria apis, quam saccharum, quod hominis, atque in manna (quod similis est generis) natura seipsa contenta est. Itaque cum una atque eadem sit natura, ejus autem vis per omnia valeat, neque unquam illa a seipsa desciscat; omnino tanquam ex æquo subordinata tantum ad naturam poni debent hæc tria, cursus naturæ; expansio naturæ; et ars sive additus rebus homo; ideoque in historia naturali ea omnia una et continua narrationum serie involvi par est: quod etiam Caius Plinius magna ex parte fecit; qui historiam naturalem pro dignitate complexus est, sed complexam indignissime tractavit. Atque hæc sit naturalis historiæ partitio prima.

### CAPUT III.

*Partitio historiæ naturalis, ex usu et fine suo: quodque finis longe nobilissimus historiæ naturalis sit ministratio prima ad condendam philosophiam; et quod hujusmodi historia (quæ scilicet sit in ordine ad eum finem) desideretur.*

CÆTERUM historia naturalis ut subjecto triplex (quemadmodum diximus) ita usu duplex est. Adhibetur enim aut propter cognitionem rerum ipsarum, quæ historiæ mandantur, aut tanquam materia prima philosophiæ. Nobilissimus autem finis historiæ naturalis is est; ut sit inductionis veræ et legitimæ suppellex atque sylvæ; atque satis trahat ex sensu ad instruendum intellectum. Illa enim altera, quæ aut narrationum jucunditate delectat, aut experimentorum usu juvat, atque hujusmodi voluptatis aut fructus gratia quæsitæ est; inferioris profecto notæ est, et genere ipso vilior, præ ea, cujus ea est vis et qualitas, ut propria sit parasceve ad condendam philosophiam. Hæc enim demum ea est historia naturalis, quæ veræ et activæ philosophiæ solida et æterna basis constituitur; quæque lumini naturæ puro et minime phantastico primam accensionem præbet; cujus quoque neglectus et genius non placatus, acies illas larvarum, ac veluti regna umbrarum, quæ in philosophiis volitare cernuntur, cum maxima et calamitosa operum sterilitate nobis pessimo fato immisit. Affirmamus autem, et plane testamur, historiam naturalem, qualis in ordine esse debeat ad istum finem, non haberi, sed desiderari,

atque inter omnia poni oportere. Neque vero aciem mentis alicujus perstringant aut magna antiquorum nomina, aut magna novorum volumina, ut querelam istam nostram minus justam cogitet. Satis enim scimus haberi historiam naturalem, mole amplam, varietate gratam, diligentia sæpius curiosam. Attamen si quis ex ea fabulas, et antiquitatem, atque auctorum citationes et suffragationes, lites item inanes et controversias, philologiam denique, et ornamenta eximat (quæ ad convivales sermones hominumque doctorum noctes potius, quam ad instituendam philosophiam, suæ accommodata) profecto ad nihil magni res recidat. Itaque thesaurus quidam potius ad eloquentiam a nonnullis, quam solida et fida rerum narratio quæri et parari videtur. Præterea, non multum ad rem faciat memorare aut nosse florum, iridis, aut tulipæ, aut etiam concharum, aut canum, aut accipitrum eximias varietates. Hæc enim hujusmodi nil aliud sunt, quam naturæ lusus quidem et lascivia: et prope ad individuorum naturam accedunt. Itaque habent cognitionem in rebus ipsis exquisitam; informationem vero ad scientias tenuem et fere supervacuum. Atque hæc sunt tamen illa, in quibus naturalis historia vulgaris se jactat. Cum autem degeneraverit historia naturalis ad aliena, et rursus luxuriata sit in superfluis; tamen e contra magnæ utique et solidæ ejusdem partes aut prorsus prætermisissæ sunt, aut negligenter et leviter tractatæ: universa vero inquisitione sua et congerie, nullo modo ad eum, quem diximus, finem (condendæ scilicet philosophiæ) apta et qualificata reperitur. Id in membris ipsius optime apparebit, atque ex comparatione ejus historiæ, cujus descriptiones hominibus sub oculos jam proponemus, ad eam, quæ habetur.

CAPUT IV.

*Incipit tractatus qualis esse debeat historia desiderata; nempe historia naturalis ad condendam philosophiam. Id ut clarius explicetur, primo subjungitur partitio historiæ generationum. Ejus constituuntur partes quinque: prima, cœlestium. Secunda, meteororum. Tertia, terræ et maris. Quarta, collegiorum majorum, sive elementorum aut massarum. Quinta, collegiorum minorum sive specierum. Historia vero virtutum primarum rejicitur donec explicatio primæ illius partitionis generationum, prætergenerationum, et artium, sit absoluta.*

QUANQUAM vero e fide nostra esse censemus, hujus ipsius historiæ, quam desideramus, confectionem non aliis relinquere, sed nobis ipsis desumere, propterea quod quo magis hæc res omnium industriæ patere videatur, eo major subest metus, ne ab instituto nostro aberrent; ideoque eam ut tertiam instaurationis nostræ partem designavimus: tamen ut institutum nostrum de explicationibus sive representationibus omissorum, perpetuo servemus; atque etiam, si quid nobis humanitus acciderit, ut aliquid in tuto positum sit; sententiam nostram et consilia de hac re jam hoc loco subjungere visum est. Historiæ generationum,

sive naturæ solutæ, quinque partes constituimus; eæ sunt historia ætheris, historia meteororum et regionum quas vocant aëria. Etenim tractum sub-lunarem ad superficiem usque terræ, et corpora in eo locata, historiæ meteororum attribuimus. Etiam cometis cujuscunque generis (utcunque se habeat rei veritas) tamen ordinis causa, locum inter meteora assignamus. Tertio subit historia terræ et maris, quæ conjuncta globum constituunt unicum. Atque hucusque rerum natura distribuitur ex locis et locatis: reliquæ duæ partes substantias rerum distinguunt, vel massas potius. Congregantur enim corpora connaturalia ad majores et minores massas: quæ collegia rerum majora et minora appellare consuevimus: habentque in politia mundana rationes inter se tanquam tribus et familiæ. Itaque quarto ordine ponitur historia elementorum sive collegiorum majorum; quinto et ultimo historia specierum sive collegiorum minorum. Elementa enim eo sensu accipi volumus, ut intelligantur non exordia rerum, sed tantum corporum connaturalium massæ majores. Majoritas autem illa accidit propter texturam materiæ facilem, simplicem, obviam et paratam; cum species a natura parce suppeditentur, propter texturam dissimilem, atque in plurimis organicam. Virtutum vero illarum, quæ in natura censi possint tanquam cardinales et catholicæ, densi, rari, levis, gravis, calidi, frigidi, consistentis, fluidi, similis, dissimilis, specificati, organici, et similium, una cum motibus ad illa facientibus, uti antitypiæ, nexus, coitionis, expansionis, et reliquorum (quorum historiam omnino congeri et confici volumus, etiam priusquam ad opus intellectus deveniatur) virtutum et motuum historiam, ejusque conficiendæ modum tum tractabimus, postquam explicationem triplicis illius partitionis, generationum, prætergenerationum, et artium absolverimus. Neque enim eam scilicet intra triplicem illam nostram partitionem includimus, cum non proprie sit historia, sed inter historiam et philosophiam veluti terminus medius. Jam vero de historia cœlestium, et deinceps de reliquis dicemus atque præcipiemus.

CAPUT V.

*Resumitur tractanda historia cœlestium; qualis et esse debeat in genere, et quod legitima hujusce historiæ ordinatio versetur in triplici genere præceptorum; videlicet, de fine, de materia, ac de modo conficiendæ hujusmodi historia.*

HISTORIAM cœlestium simplicem esse volumus, nec dogmatibus imbutam; sed veluti suspensa vi et doctrina theoriarum; quæque solummodo phænomena ipsa sincera complectatur, et separata, quæ jam dogmatibus fere concreverunt; denique quæ narrationes proponat eo prorsus modo, ac si nihil ex artibus astronomiæ et astrologiæ decretum esset, sed experimenta tantum et observationes exacte collecta et perspicue descripta forent. In quo genere historiæ nihil adhuc invenitur, quod nostro respondeat voto. Hujusmodi quiddam tantummodo cursim et licenter attigit Caius Plinius: sed optima foret ea

historia cœlestium, quæ ex Ptolemæo, et Copernico, et doctoribus astronomiæ scriptoribus exprimi et erui possit, si artem experimento plane spoliis, adjunctis etiam recentiorum observationibus. Quod si cui mirum videatur, nos tanto labore parta, aucta, emendata, rursus ad primam imperitiam, et nudarum observationum simplicitatem retrahere velle; nos vero nulla cum priorum inventorum jactura, tamen longe majus opus movemus; neque enim calculos aut prædictiones tantum meditatur, sed philosophiam; eam scilicet, quæ de superiorum corporum non motu solummodo, ejusque periodis, sed substantia quoque et omnimoda qualitate, potestate, atque influxu, intellectum humanum informare, secundum rationes naturales atque indubitatas, absque traditionum superstitione et levitate, possit; atque rursus in motu ipso invenire atque explicare, non quid phænomenis sit consentaneum, sed quid in natura penitus repertum, atque actu et re ipsa verum sit. Facile autem quis cernat, et eos, quibus terram rotari placet, et eos contra, qui primum mobile, et veterem constructionem tenuerunt, æqua fere et anticipiti phænomenorum advocacione niti. Quin et ille novæ constructionis nostra ætate auctor, qui solem secundi mobilis, quemadmodum terram primi mobilis centrum constituit, ut planetæ in propriis suis conversionibus circa solem choreas ducere videantur (quod ex antiquioribus nonnulli de Venere et Mercurio suspicati sunt) si cogitata ad exitum perduxisset, belle profecto rem conficere potuisse videtur. Neque vero nobis dubium est, quin et aliæ hujusmodi constructiones ingenio et acri cogitatione adinveniri possint. Neque illis, qui ista proponunt, admodum placet, hæc, quæ adducunt, prorsus vera esse, sed tantummodo ad computationes et tabulas conficiendas commode supposita. At nostra ratio alio spectat; non enim concinnationes, quæ variæ esse possunt, sed veritatem rei quærimus, quæ simplex est. Ad hoc vero historia phænomenorum sincera viam aperiret, infecta dogmate obstruet. Neque illud tacemus, nos in hac ipsa historia cœlestium, ad normam nostram facta et congesta, spem per se ponere veritatis circa cœlestia inveniendæ; sed multo magis in observatione communium passionum et desideriorum materiæ in utroque globo. Etenim ista æthereorum et sublunarium quæ putantur divortia, commenta nobis videntur et superstitio cum temeritate; cum certissimum sit complures effectus, veluti expansionis, contractionis, impressionis, cessionis, congregationis ad massas, attractionis, abactionis, assimilationis, unionis, et similium, non solum hic apud nos, sed et in fastigiis cœli, et in visceribus terræ locum habere. Atque non alii interpretes magis fidi adhiberi aut consuli possunt, ut intellectus humanus et ad profunda terræ, quæ omnino non cernuntur, et ad alta cœli, quæ plerumque fallaciter cernuntur, penetret. Itaque optime antiqui, qui Proteum illum multiformem, etiam vatem ter maximum fuisse retulerunt; qui futura, præterita, et occulta præsentium novisset. Nam qui materiæ passionis catholicas novit, atque per hæc novit quid esse possit; non poterit non nosse etiam quid fuerit, quid sit, et quid futurum sit, secundum summas rerum. Itaque plurimum spei et præsidii

ad contemplationem cœlestium in physicis rationibus collocamus: per physicas rationes intelligendo non eas quæ vulgo esse putantur, sed tantum doctrinam circa illos appetitus materiæ, quos nulla regionum aut locorum diversitas distrahere aut disternare queat. Neque propterea (ut ad propositum revertamur) ulli diligentia parci volumus, quæ circa phænomenorum ipsorum cœlestium narrationes et observationes possit impendi. Nam quanto uberius suppetat apparentiarum hujusmodi copia, tanto omnia erunt et magis in promptu et firmiora. De quo antequam plura dicamus, est plane quod gratulemur et mechanicorum industriæ, et doctorum quorundam hominum curæ et alacritati, quod jam nuper per instrumentorum opticorum veluti scaphas et naviculas nova tentari cœperint cum cœlestibus phænomenis commercia. Atque hoc inceptum et fine et aggressu nobile quoddam et humano genere dignum esse existimamus: eo magis quod hujusmodi homines et ausu laudandi sunt et fide; quod ingenue et perspicue proposerunt quomodo singula illis constiterint. Superest tantum constantia cum magna judicii severitate, ut et instrumenta mutant; et testium numerum augeant; et singula, et sæpe experiantur, et varie, denique ut et sibi ipsi objiciant, et aliis patefaciant quicquid in contrarium objici possit, et tenuissimum quemque scrupulum non spernant; ne forte illis eveniat, quod Democrito et aniculæ suæ evenit circa ficus mellitas, ut vetula esset philosopho prudentior, et magnæ et admirabilis speculationis causæ tanbasset error quispiam tenuis et ridiculus. At ista tanquam præfati in genere, accedamus ad descriptionem historiæ cœlestium magis explicatam; ut ostendamus quæ et qualia circa cœlestia quæri oporteat. Primo igitur quæstiones naturales, aut saltem ex iis nonnullas, easque præcipuas proponemus: iis usus humanos, quales verisimile est ex cœlestium contemplatione educi posse, adjiciemus; hæc utraque tanquam historiæ scopum, ut quibus historiam cœlestium componere curæ erit, norint quid agatur, easque quæstiones una cum operibus illis et effectis habeant in animo et intueantur; unde talem instituant et parent historiam, qualis ad judicia hujusmodi quæstionum, et præbitionem hujusmodi fructus et utilitatem erga genus humanum, sit accommodata. Quæstiones autem intelligimus ejus generis, quæ de facto naturæ quærant, non de causis. Hoc enim pertinet proprie ad historiam. Deinde distincte monstrabimus in quibus historia cœlestium consistat: quæque ejus sint partes; quæ res apprehendendæ aut exquirendæ, quæ experimenta sint comparanda et procuranda, quæ observationes adhibendæ et pensandæ, proponentes tanquam topica quædam inductiva, sive articulos ad interrogandum de cœlestibus. Postremo præcipiemus nonnulla non solum de eo, quod quæri oporteat, sed et de hoc, quomodo quæsitae debeant pensitari, etiam exhiberi, atque in literas referri, ne primæ inquisitionis diligentia pereat in successione, aut, quod pejus est, infirmis et fallacibus initiis nitantur progressus qui sequentur. In summa, dicemus et ad quid quæri debeat circa cœlestia, et quid, et quomodo.

CAPUT VI.

*Quod quæstiones philosophicæ circa cœlestia, etiam quæ præter opinionem sunt, et quodammodo duræ, recipi debeant: proponuntur vero quinque quæstiones circa systema ipsam; videlicet, an sit systema? et, si sit, quod sit centrum ejus, et qualis profunditas, et qualis connexio, et qualis partium collocatio?*

EXISTIMABIMUR autem plerisque proculdubio reliquias quæstionum veterum, jampridem quasi tumulo conditas et sepultas, rursus eruere, et fere manes earum evocare, iisque novas insuper quæstiones adspargere. Sed cum ea, quæ adhuc habetur circa cœlestia, philosophia nihil habeat firmitudinis; cumque illud nobis perpetuo ratum et fixum sit, omnia novo legitimæ inductionis judicio sistere; cumque si forte quæstiones aliquæ a tergo relinquantur, tanto minus operæ et diligentia consumetur in historia, propterea quod supervacuum fortasse videbitur ea inquirere, de quibus quæstio non fuerit mota; necesse habemus quæstiones, quas ubique porrigit rerum natura, in manus accipere. Quin quo minus certi sumus de quæstionibus per viam nostram determinandis, eo nos minus difficiles præbemus in iisdem recipiendis. Exitum enim rei videmus. Prima igitur ea quæstio est, An sit systema? Hoc est, An mundus sive universitas rerum sit globosa secundum totum, cujus sit centrum aliquod? An potius globi particulares terræ et astrorum spargantur; et singuli suis hæreant radicibus, absque systemate, et medio sive centro communi. Atque certe jactavit schola Democriti et Epicuri, auctores suos mœnia mundi diruisse. Neque tamen id prorsus secutum est ex iis, quæ ab illis dicta sunt. Nam Democritus cum materiam sive semina copia infinita, attributis et potestate finita, eademque agitata, nec ab æterno quovis modo locata, posuisset, vi ipsa illius opinionis adductus est, ut mundos multiformes, ortui et interitui obnoxios, alios melius ordinatos, alios male hærentes, etiam tentamenta mundorum et intermundia statueret. Sed tamen ut hoc receptum fuisset, nihil officiebat quin illa pars materiae, quæ deputata est huic ipsi mundo, qui nostro generi est conspicuus, obtinerit figuram globosam. Necesse enim fuit ut singuli ex illis mundis figuram aliquam acciperent. Etsi enim in infinito medium aliquod esse nequeat, tamen in partibus infiniti rotunda figura subsistere potest, non minus in mundo aliquo quam in pila. Verum Democritus sector mundi bonus fuit, in integralibus autem mundi etiam infra mediocres philosophos. At opinio illa, de qua nunc loquimur, quæ destruebat et confundebat systema, fuit Heraclidis Pontici, et Ecphanti et Nicetæ Syracusani, et præcipue Philolai, atque etiam nostra ætate Gilberti, et omnium (præter Copernicum) eorum, qui terram planetam et mobilem, et tanquam unam ex astris, crediderunt. Atque ille opinio hanc vim habet, ut planetæ et stellæ singulæ, atque etiam aliæ innumeræ, quæ conspectum nostrum ob distantiam fugiunt, necnon aliæ, quæ nobis sunt invisibiles propter

naturam non lucentem sed opacam, suos quæque sortitæ globos, et formas primarias, per expansionem istam, quam suspicimus, immensam, sive vacui sive corporis cujusdam tenuis et fere adiafiori, tanquam insulæ in pelago immenso spargantur et pendeant, atque super centrum non commone aliquod, sed quæque globi sui proprii volent; aliæ simpliciter, aliæ cum motu nonnullo centri progressivo. Atque illud maxime durum est in hac opinione, quod tollunt quietem sive immobile e natura. Videtur autem, quemadmodum sunt in universo corpora, quæ rotant, id est, motu feruntur infinito et perpetuo; ita et ex opposito debere esse corpus aliquod, quod quiescat: quibus interponitur media natura eorum quæ feruntur recta, cum motus rectus partibus globorum conveniat, et rebus exulantibus extra patrias suas, quæ ad globos connaturalitatis suæ movent, ut cum iis unitæ ipsæ quoque aut rotent aut quiescant. Verum huic quæstioni (nempe an sit systema?) finem dabunt ea, quæ circa motum terræ, an scilicet terra stet aut rotet? atque circa substantiam astrorum, an sit solida aut flamma? et circa æthera, sive spatia cœli interstellaria, an sint corporea aut vacua? decerni poterunt. Nam si terra stet, et cœli motu diurno circumvolvantur, proculdubio est systema: quod si terra rotet, tamen non prorsus evincitur non esse systema, propterea quod aliud possit poni centrum systematis, videlicet sol, aut aliud quippiam. Rursus, si unicus globus terræ sit densus et solidus, videtur materia universi coire et densari ad centrum illud: quod si inveniantur luna aut alii ex planetis constare etiam ex materia densa et solida, videntur ex eo coire densa non ad centrum aliquod, sed sparsim et quasi fortuito. Postremo, si ponatur vacuum coacervatum in spatiis interstellaribus, videntur globi singuli habere circa se effluvia tenuiora, et deinde vacuum. Quod si et illa spatia corpore replentur, videtur esse unio densorum in medio, et rejectio tenuiorum ad circumferentiam. Plurimum autem confert ad scientias, nosse conjugationes quæstionum, propterea quod in aliquibus invenitur historia sive materia inductiva ad eas dirimendas, in aliquibus non item. Dato vero systemate, proxime accedit quæstio ea secunda, quod sit centrum systematis? Enimvero si aliquis ex globis locum centri occupare debeat, occurrunt globi imprimis duo, qui naturam medii sive centri præferre videntur, terra et sol. Pro terra suffragantur aspectus noster et inveterata opinio, atque illud omnium maxime, quod cum densa coëant in angustum, rara in latum diffundantur (area autem omnis circuli contrahatur ad centrum) videtur sequi quasi necessario, ut angustia circa medium mundi statuatur, ut proprius locus et tanquam unicus ad corpora densa. Pro sole autem facit ratio illa, quod cujus partes sunt in systemate maximæ et potissimæ, ei is locus assignari debeat, ex quo ipse in universum systema maxime agere et se communicare possit. Quando vero is sit sol, qui mundum vivificare plurimum videatur, impertiendo calorem et lucem; rite omnino atque ordine videri possit collocatus in medio mundi. Accedit et illud, quod sol manifeste habeat assectatores Venerem et Mercurium, etiam, ex sententia Tychonis, planetas re-

liquos; adeo ut plane videatur sol centri naturam sustinere posse, et vices gerere in aliquibus; eo propius abest, ut universi centrum constitui possit; quæ Copernici assertio fuit. Veruntamen in systemate Copernici multa et magna inveniuntur incommoda; nam et quod triplici motu terram oneravit, incommodum magnum, et quod solem a cœstu planetarum divulsit, cum quibus tot habet passiones communes, similiter durum; et quod tantum immobilis introduxit in naturam, ponendo solem et stellas immobiles præsertim corpora maxime omnium lucida et radiantia; et quod lunam terræ tanquam in epicyclo adhærere voluit; et alia nonnulla, quæ ille sumit, ejus sunt viri, qui quidvis in natura fingere, modo calculi bene oedant, nihili putet. Quod si detur motus terræ, magis consentaneum videatur, ut tollatur omnino systema, et spargantur globi secundum eos, quos jam nominavimus, quam ut constituatur tale systema, cujus sit centrum sol: idque consensus seculorum et antiquitatis potius arripuit et approbavit. Nam opinio de motu terræ nova non est, sed ab antiquis repetita, quemadmodum diximus; at illa de sole, ut sit centrum mundi, et immobile, prorsus nova est, (excepto uno versiculo male traducto,) et primo a Copernico introducta. Sequitur tertia quæstio de profunditate systematis; non ut aliqua ejus mensura capiatur perfecta, sed ut in certo ponatur; an cœlum stellatum sit instar unius regionis, sive, ut vulgo loquuntur, orbis; an vero stellæ fixæ quas vocant, sint aliæ aliis sublimiores immensa quadam profunditate? Neque enim illo modo fieri potest, ut illæ sint paræ altitudinis, si hoc intelligatur exacte; stellæ enim proculdubio non sunt sitæ tanquam in plano, quæ habeant dimensionem quandam tantum in superficie, instar macularum aut bullarum; sed sunt illæ globi integri, magni atque profundi. Itaque cum tam disparis reperiantur esse magnitudinis, omnino necesse est, ut aliæ ex iis magis quam aliæ promineant, vel sursum versus, vel deorsum; nec fieri potest ut aut per superiora aut inferiora una conjungantur superficie. Hoc vero si fiat in partibus stellarum, temerarium plane esset asserere etiam in corpore integro stellas non esse alias aliis altiores; sed ut hoc verum sit, tamen asseri potest crassities quædam definita (licet insignis) ejus regionis, quæ vocatur sphaera sive cœlum stellatum, quæ hujusmodi prominentias et altitudinis gradus quodammodo terminet; videmus enim ex apogæis et perigæis planetarum, singulis eorum cœlis competere crassitiem notabilem, per quæ ascendant et descendant. At quæstio ista tantum eo spectat, utrum stellæ aliæ sint super alias, tanquam planeta super planetam, et quasi in diversis orbibus. Atque hæc quæstio illi alteri quæstioni de motu aut statu terræ similiter affinis est. Nam si stellæ moveantur motu diurno circa terram, quandoquidem eæ universæ pari incitatione, et uno veluti spiritu agantur, (cumque in planetis plane constet prout variatur in sublimitate et humilitate situs, ita etiam variari in celeritate et tarditate motus,) probabile est stellas, velocitate cursus paræ, etiam in una regione ætheris locari, cujus licet crassities sive profunditas ponatur esse magna, tamen non sit tanta ut faciat ad discrimen incitationis sive celeritatis in motu; sed ut per eam regionem

universam omnia potentur, tanquam vinculo connaturalitatis devincta, pariter rotare, vel saltem cum discrepantia tali, quæ ad aspectum nostrum propter distantiam deferri non possit. Quod si terra moveatur, stellæ vel stare poterunt, quod Copernico placuit, aut, quod longe magis verisimile est, et a Gilberto introductum, illæ poterunt singulæ rotare super centrum suum in loco suo, absque aliquo motu centri sui, quemadmodum et ipsa terra, si modo illum motum diurnum terræ ab adactitiis illis duobus motibus, quos Copernicus superaddidit, sejungas. Utrumvis autem horum si fiat, nihil prohibet, quia stellæ aliæ supra alias sint donec aspectum nostrum effugiant. Quarta proponitur quæstio de nexu sive connexionem systematis. Atque de natura et essentia corporis vel rei, quæ æther purus censetur, et astris interjacet, postea inquiremus. Nunc tantum de coheræntia systematis dicemus. Ejus rei ratio est triplex. Aut enim datur vacuum, aut contiguum, aut continuum; itaque primo quæritur, an sit vacuum coæservatum in spatiis interstellaribus? Id quod Gilbertus disserte posuit, atque etiam antiquorum nonnulli ex iis, qui globos spargi sine systemate opinati sunt, innuere videntur; præsertim ii, qui astrorum corpora compacta asseruere. Opinio talis est, globos universos, tam astra, quam terram, ex materia solida et densa constare. Illos autem in proximo circumdari genere quodam corporum, quæ sint ipsi globo aliquatenus connaturalia, sed tamen magis imperfecta, languida, et attenuata, quæque nil aliud sint, quam globorum ipsorum effluvia et emanationes; qualia sunt vapores et halitus, atque adeo ær ipse, si conferantur terræ: hæc effluvia ad distantiam circa unumquemque globum non magnam pertingere, reliquum intervallum (quod longe amplissimum est) inane esse. Cui opinioni illud fidem astruere possit, quod ex tam immensa distantia corpora astrorum conspiciuntur. Si enim universum illud spatium plenum esset, præsertim corporum, quæ proculdubio raritate et densitate valde inæqualia sunt, tanta foret radiorum refractionis, ut ad visum nostrum pertingere non possint; cum si longe maxima ejus spatii pars vacua sit, facilius sane perferri consentaneum est. Atque revera hæc quæstio magna ex parte pendebit ex quæstione, quam statim adducemus de substantia stellarum, An sit densa, vel tenuis et explicata? Nam si substantia earum sit solida, videbitur utique natura circa globos eorumque confinia tantummodo fere occupata esse et sollicita: spatia vero interjacentia deserere, et tanquam prætermittere. Itaque non absimile vero fuerit, globos circa centrum spissiores, circa superficiem laxiores, in ambientibus et effluviis quasi deficientes, in vacuo tandem terminari. Contra, si natura astrorum sit tenuis et flammea, apparebit naturam tenuis non esse solummodo densi decrementum, sed per se potentem et primariam, non minus quam naturam solidi, eamque et in stellis ipsis, et in æthere, et in aëre vigere, ut vacuo illo coæservato non sit opus. Pendebit quoque ista quæstio de vacuo in spatiis interstellaribus ex quæstione illa, quæ pertinet ad principia naturæ. An detur vacuum. Neque tamen hoc ipsum nisi adhibita distinctione. Aliud enim est negare vacuum simpliciter, aliud negare vacuum coæservatum

Longe enim firmiores sunt eæ rationes, quæ adduci possunt ad astruendum vacuum intermistum ad laxamentum corporum, quam quæ asserunt vacuum coærvatam, sive in spatiis majoribus. Neque hoc solum vidit Hero, vir ingeniosus et mechanicus, sed etiam Leucippus et Democritus, inventores opinionis de vacuo, quam Aristoteles argutiis quibusdam obsidere et expugnare conatur; qui duo philosophi acutissimi certe et celeberrimi ita vacuum intermistum dant, ut vacuum coærvatam tollant. Ex sententia enim Democriti vacuum terminatur et circumscribitur, ut ultra certos fines non detur distractio sive divisio corporum, non magis quam compulsio aut compactio. Licet enim in iis quæ ex Democrito habemus, hoc nunquam diserte positum sit, tamen hoc dicere videtur, cum corpora, æque ac spatia, infinita constituit; ea usus ratione aliter, (si spatium scilicet infinitum, corpora finita essent) corpora nunquam hæsuræ. Itaque propter co-infinitatem materiæ cum spatio necessario compingitur vacuum ad terminos certos, quæ videtur ejus fuisse opinio vera et recte intellecta, ut scilicet constituatur finis quidam explanationis sive expansionis corporum per vacuum copulatum; neque vacuum detur solitarium, aut corpore non obsessum.

Quod si non detur vacuum instar solutionis continuitatis in systemate, tamen cum tanta inveniatur in partibus et regionibus systematis corporum diversitas, ut sint tanquam alterius gentis et patriæ, oritur quæstio secunda quæ ad connexionem systematis pertinet; ea est, An æther purus sit unus perpetuus sive continuus fluor, an vero constet ex pluribus contiguis? Neque vero nostrum est de verbis arguari, sed intelligimus per contiguum, corpus quod superjacet nec miscetur: neque rursus intelligimus contignationem duram, qualem vulgus astronomorum commiscitur, sed qualem possint recipere fluores, ac si argento vivo supernataret aqua, aquæ oleum, oleo ær. Nemini enim dubium esse potest, quin in immenso illo tractu ætheris puri sint eximie differentie quoad raritatem et densitatem, et alia non pauca; sed utrolibet dato (id est, continuo sive contiguo) hoc fieri potest. Nam satis constat, nec in mari ipso aquam in summo et aquam in imo ejusdem esse consistentiæ et saporis; in aëre vero, inter aërem terræ conterminum, et aërem superiorem plurimum interest, et tamen unus et integer est et perpetuus fluor. Itaque deducitur quæstio ad hoc, utrum differentie in tractu ætheris puri se insinuent gradatim et fluxu quodam continuo; an constituantur et distribuantur ad certos et notabiles limites, ubi corpora conjunguntur, quæ non sint commiscibilia, quemadmodum apud nos ær incumbit aquæ. Enimvero simplicius contemplanti videtur totum istud purum et liquidum corpus, in quo globi terræ et astrorum, tanquam in vastissimo pelago, pendunt et natant, quodque interjunctum illis globis quanto ipso et spatio, quod occupat, globorum mensuras quasi innumeris partibus superat, esse indivisa quædam res et summe unita. Verum naturam diligentius intuenti illud plane constabit, consuesse naturam ad spatia nonnulla per gradus, deinde subito per saltus procedere, atque hunc processum alternare. Aliter si quis vere introspectat, nulla possit constitui fabrica

rerum, nulla figura organica, si per gradus insensibiles perpetuo procederetur. Itaque processus ille per gradus intermundiis competere possit, non mundo, ad cujus constructionem necesse est longe dissimilia discludi alia ab aliis, et tamen approximari. Itaque terram et aquas excipit et contingit ær, corpus longe diversum, et tamen in proximo locatum, non primo limus, deinde vapor, aut nebula, dein ær purus; sed confestim ær absque medio. In aëre vero et æthere (illa enim duo jungimus) diaspertitio maxime omnium insignis et radicalis sumi posse videtur ex natura magis aut minus susceptiva naturæ stellaris. Itaque tres secundum genera videntur esse regiones maximæ notabiles a globo terræ ad fastigia cœli; nimirum tractus aëris, tractus cœli planetarum, et tractus cœli stellati. Atque in infimo tractu natura stellaris non consistit; in medio consistit, sed coit ad globos singulos, in supremo spargit se per globos plurimos, adeo ut per summitates ejus videatur transire, quasi in empyreum integrum. Neque interim obliviscendum ejus quod paulo ante diximus, consuesse naturam processum graduatum et persultorium alternare, adeo ut regionis primæ confinia communicent cum secunda, et secundæ cum tertia. Nam et in aëre sublimiore, postquam ær cœperit esse ab effluviis terræ defæcior, et a cœlestium magis attenuatus, tentat et experitur consistere flamma; ut in cometis humilioribus sit, qui sunt mediæ cujusdam naturæ inter naturam stellarem consistentem et evanidam; et rursus videtur cœlum circa solem fortasse stellescere et transire incipere in naturam cœli stellati. Nam possint illæ maculæ, quæ in sole observatione certe fida et diligenti deprehensæ sunt, esse rudimenta quædam materiæ stellaris: at in cœlo Jovis etiam stellæ absolutæ et perfectæ conspiciuntur, licet, propter parvitatem, absque commoditate perspicillorum invisibiles, et rursus in summitatibus cœli stellati ex innumeris micationibus ætheris inter stellas numeratas (cujus aliæ causæ satis frigidæ reddi solent) videtur natura stellaris magis fundi et continuari. Verum de his in questionibus, quas mox proponemus de substantia et astrorum et cœli interstellaris, plura dicemus. Hæc enim quæ diximus, pertinent tantum ad quæstiones de nexu systematis. Superest quinta quæstio de collocatione partium systematis, sive de ordine cœlorum. Atque dato quod non sit systema, sed sparguntur globi, aut dato quod sit systema, cujus sit centrum sol; aut etiamsi videantur astronomi de aliquo novo systemate, tamen manet utique inquisitio, qui planeta ad alium planetam sit magis propinquus aut remotus; et similiter qui planeta magis aut minus elongetur a terra aut etiam a sole. Quod si recipiatur systema veterum, non videtur causa cur magnopere insistatur inquisitioni novæ de quatuor cœlis superioribus, stellarum fixarum scilicet, Saturni, Jovis, et Martis. Nam de eorum positura atque ordine et seculorum consensus suffragatur; nec phænomenon ullum adversatur; atque rationes motuum (unde sumitur de altitudinibus cœlorum præcipua probatio) accommodatæ sunt, et nusquam turbant. Verum de Sole, Venere, et Mercurio, et Luna etiam, secundum systema veterum dubitatum est ab antiquis; atque apud

recentiores quoque de Venere et Mercurio ambigunt, uter planeta sit altero superior. Nam pro Venere ut sit superior, stat illa ratio, quod tardius nonnihil movet, et pro Mercurio quod alligatur ad distantiam propiorem a sole, unde quis asserat debere eum proxime ad solem collocari. De luna vero nemo unquam dubitavit, quin locata sit proxime ad terram, licet variatum sit de appropinquatione ejus ad solem. Neque serio contemplantem fugere debet aliud genus quæstionis, pertinens ad constitutionem systematis; hæc est, utrum planeta alter alterum per vices supergrediatur quandoque, et quandoque rursus subeat; id quod de Venere per demonstrationes quasdam non indiligentes evinci videtur, ut illa aliquando inveniat super solem locata, aliquando subter. Atque omnino recte quæritur, utrum apogæum humilioris planetæ perigæum superioris non secet, ejusque fines subintret. Restat ultima quæstio de collocatione partium systematis, hoc est, utrum sint plura et diversa centra in systemate, et plures tanquam choreæ, cum præsertim non solum terra primi mobilis, sol (ex sententia Tycho-nis) secundi mobilis, verum etiam Jupiter minorum et nuperorum illorum errorum ex Galilæo centrum constituatur. Atque hæc sunt quæstiones illæ quinque, quæ de systemate ipso proponendæ videntur, an sit videlicet systema, et quod sit centrum ejus, et quanta profunditas, et qualis nexus ejus, et quis ordo in collocatione partium.

De extimis vero cæli, et cælo aliquo empyreo theses aut quæstiones non conficimus. Neque enim istarum rerum est historia, aut exstat phænomenon ullum. Itaque quæ de iis sciri possunt, ea per consecutionem tantum, ac nullatenus per inductionem sciri possunt. Erit igitur talis inquisitionis et tempus congruum, et ratio et motus quidam. De cælis vero et spatiis immateriatis, religioni omnino standum et permittendum. Quæ enim a Platonicis, et nuper a Patritio (ut diviniore scilicet habeantur in philosophia) dicuntur non sine superstitione manifesta, et jactantia, et quasi mente turbata, denique ausu nimio, fructu nullo, similia Valentini iconibus et somniis; ea nos pro rebus commentitiis et levibus habemus. Nullo modo enim ferenda est moriæ apotheosis, tanquam Divi Claudii: quin pessimum est, et plane pestis et tabes intellectus, si vanis accedat veneratio.

## CAPUT VII.

*Sequuntur quæstiones de substantia cælestium; qualis, videlicet, sit substantia cælestium in genere comparata ad corpora sublunaria, et qualis substantia ætheris interstellaris comparata ad corpus stellæ; et qualis sit substantia astrorum ipsorum comparata ad invicem, et comparata ad ignem nostrum, et in natura propria; et qualis sit substantia galaxiæ, et macularum nigrarum in hemisphærio antarctico. Tum proponitur quæstio prima, an sit heterogenea inter cælestia et sublunaria, et qualis ea esse possit?*

ABSOLUTIS quæstionibus de systemate, pergendum ad quæstiones de substantia cælestium. Nam de sub-

stantia cælestium inquirunt præcipue philosophia, et de causis motus eorum: de motu ipso vero et ejus accidentibus astronomia: de influxu et potestate utraque. Debuerat autem esse cautum inter astronomiam et philosophiam, ut astronomia præferat hypotheses, quæ maxime expeditæ ad compendia calculorum; philosophia vero quæ proxime accedunt ad veritatem naturæ. Atque insuper, ut astronomiæ hypotheses ad commoditatem suam, rei veritati nullo modo præjudicent, vicissim ut philosophiæ decreta tabia sint, quæ sint super phænomena astronomiæ omnino applicabilia. At nunc contra fit, videlicet ut astronomiæ figmenta in philosophiam invecta sint, eamque corruerint; et philosophorum speculationes circa cælestia sibi tantum placeant, et astronomiam fere deserant, cælestia generaliter intuentes, verum ad phænomena particularia atque eorum causas nullo modo se applicantes. Itaque cum utraque scientia (qualis nunc habetur) sit res levis et perfunctoria, fortius omnino figendus est pes; ac si ista duo, quæ propter angustas hominum contemplationes, et usum professorum, per tot secula disjungi consueverunt, una atque eadem res sint, atque in unum scientiæ corpus conflata. Itaque proponitur prima ea quæstio, an substantia cælestium sit heterogenea ad substantiam inferiorum? Nam Aristotelis temeritas et cavillatio nobis cælum peperit phantasticum, ex quinta essentia, experte mutationis, experte etiam caloris. Atque misso in præsentii sermone de quatuor elementis, quæ quinta essentia illa supponit, erat certe magnæ ejuſdem fiduciæ, cognitionem inter elementaria, quæ vocant, et cælestia prorsus dirimere, cum duo ex elementis, aër videlicet et ignis, cum stellis et æthere tam bene conveniant, nisi quod moris erat illi viro ingenio abuti, et sibi ipsi negotium facescere, et obscuriora malle. Neque tamen dubium est quin regiones sub luna positæ et supra, una cum corporibus quæ sub iisdem spatiis continentur, multis et magnis rebus differant. Neque rursus hoc certius est, quam illud, corporibus utriusque regionis inesse complures communes inclinationes, passiones, et motus, ut, salva naturæ unitate, ista distinguere potius debeamus, quam discernere. Quod vero attinet ad illam heterogeniæ partem, ut cælestia penantur æterna, inferiora corruptibilia; videtur sententia illa sub utraque parte fallere, quod nec cælo ea competat æternitas, quam fingunt, neque terræ ea mutabilitas. Siquidem de terra vere rem reputanti, iudicium minime faciendum ex illis quæ nobis sunt conspicua, cum nihil ex corporibus, quæ oculis humanis videt, erutum sit aut ejectum ex magis profundo, quam spatio fortasse trium miliarium ad plurimum; quod res nihili est, collatum ad ambitum globi terrestris universi. Itaque nihil obstat quin intima terræ pari prædita sint æternitate ac ipsum cælum. Enimvero si terra pateretur mutationes in profundo, fieri non potest quin consequentiæ earum mutationum etiam in nostra regione, quam calcamus, majores casus parituræ fuissent, quam fieri videmus. Etenim earum, quæ nobis se dant conspiciendas, mutationum hic versus superficiem terræ fere se ostendit quasi semper simul causa aliqua manifesta desuper imposita, ex tempestatibus cæli, per imbres, fervores, et similia, ut terra ipsa ex se et vi propria

nulli admodum mutationi causam præbere videatur. Quod si concedatur (quod certe verisimile est) etiam terram ipsam non solum cœlestia in regiones aëris agere, aut frigora expirando, aut ventos emittendo, aut hujusmodi alia; tamen et ista omnis varietas referri potest ad regiones terræ ex propinquo, in quibus plurimas evenire mutationes et vices nemo sanus negaverit. Verum fatendum omnino est, ex phænomenis terræ longe maxime penetrare in profundum terræ-motus, et, quæ ejus sunt generis, eruptiones aquarum, eructationes ignium, hiatus et abruptiones terrarum, et similia; quæ tamen ipsa videntur non insurgere ex longinquo, cum plurima ipsorum parvum aliquod spatium in superficie terræ occupare soleant. Quanto enim latius spatium in facie terræ occupat terræ-motus, sive aliud quippiam hujusmodi, tanto magis radices et origines ejus ad viscera terræ penetrare putandum est; et quanto angustius, minus. Quod si quis afferat, fieri quandoque terræ-motus, qui amplos et spatiosos regionum tractus quatiat, prorsus ista est. At illi certe raro eveniunt, suntque ex casibus majoribus. Itaque æquiparari possunt cometis sublimioribus, qui et ipsi infrequentes sunt. Neque enim id agitur, ut terræ simpliciter asseratur æternitas, sed ut illud appareat (quod initio diximus) inter cœlum et terram, quatenus ad constantiam et mutationem, non multum interesse. Neque operæ pretium est arguere de æternitate ex rationibus motus, quemadmodum enim motus circularis terminis non indiget, ita nec quies; atque æque susceptivum est æternitatis, ut densa in loco et congregatione magna connaturalitatis suæ consistant, quam ut tenuia rotent: cum partes avulsæ amborum ferantur recta. Etiam illud in argumentum sumi potest, quod terræ interiora corruptioni magis obnoxia non sint, quam ipsum cœlum; quod ibi aliquid deperire solet, ubi aliquid refici potest. Cum vero imbres, et quæ de alto decidunt, quæ faciem superiorem terræ renovant, nullo modo penetrare possint ad interiora terræ, quæ tamen ipsæ stant mole sua, et quanto suo; necessario fieri, ut nihil deperdatur, quando nihil adsit quod succedat. Postremo, mutabilitas, quæ in extimis terræ deprehenditur, videtur et ipsa per accidens esse. Nam incrustatio illa parva, quæ ad milliaria pauca deorsum extendi videtur (inter quos terminos præclaræ illæ officinæ et fabricæ, plantarum nempe et mineralium, concluduntur) nullam fere recipent varietatem, multo minus tam pulchra et elaborata artificia, nisi ea pars terræ a cœlestibus pateretur et perpetuo vellicaretur. Quod si quis existimet calorem et vim activam solis et cœlestium universæ terræ crassitudinem transverberare posse; is superstitiosus et fanaticus censeri possit; cum liquido pateat quam parvo objectu ea retundi et cohiberi possint. Atque de constantia terræ hactenus: videndum jam de mutabilitate cœlestium.

Primo igitur non ea utendum est ratione, mutationes in cœlo non fieri, quia sub aspectum nostrum non veniunt. Aspectum enim frustat et loci distantia, et lucis sive excessus sive defectus, et corporis subtilitas aut parvitas; neque enim scilicet si oculus in circulo lunæ positus esset, hic quæ apud nos in superficie terræ fiunt mutationes, veluti inundationes,

terræ-motus, ædificia, structuræ aut moles, cernere posset; quæ parvæ festucæ rationem non exæquant ad tantam distantiam. Neque ex eo, quod cœlum interstellare diaphanum sit, et stellæ noctibus serenis eadem numero et facie cernuntur, quis facile pronunciet universum corpus ætheris limpidum, purum, et immutabile esse. Nam et aër innumeras varietates suscipit, æstus, frigoris, odorum, et omnigenæ misturæ cum vaporibus subtilioribus; neque propterea exiit diaphanum; similiter nec imagini aut faciei illi cœli credendum. Nam si magnæ illæ nubium moles, quæ cœlum interdum involvunt, et solis et astrorum conspectum tollunt a nobis, propter propinquitatem ipsarum ad visum nostrum, in superioribus cœli partibus penderent, neutiquam illæ faciem cœli sereni mutarent: nam nec ipsæ cerni possent propter distantiam, nec ullam eclipsin facere in astris, propter corporum parvitatem respectu magnitudinis astrorum. Quin et corpus ipsum lunæ, nisi qua parte lumen excipit, faciem cœli non mutat, ut si lumen illud abesset, tantum corpus nos latere plane posset. At contra liquido patet ex massis corporum, quæ mole et magnitudine spatiorum distantiam vincere, et propter materiam luminosam aut splendidam visum nostrum lacessere possint, admirandas in cœlo accidere mutationes atque insolentias. Id enim perspicitur in cometis sublimioribus, iis nimirum, qui et figuram stellæ induerunt absque coma, neque solum ex doctrina parallaxium supra lunam collocati esse probantur, sed configurationem etiam certam et constantem cum stellis fixis habuerunt, et stationes suas serarunt, neque erroneas fuerunt; quales ætas nostra non semel vidit; primo in Cassiopea, iterum non ita pridem in Ophiucho. Quod vero hujusmodi constantia, quæ conspicitur in cometis, fiat ob sequacitatem ad aliquod astrum, quæ Aristotelis opinio fuit, qui similem rationem esse posuit cometæ ad astrum unicum, et galaxiæ ad astra congregata (utrumque falso) id jam olim explosum est, non sine nota ingenii Aristotelis, qui levi contemplatione hujusmodi res confingere ausus est. Neque vero ista mutatio in cœlestibus circa stellæ novas locum tenet solummodo in iis stellis, quæ videntur esse naturæ evanidæ, sed etiam in iis, quæ morantur. Nam et in stella illa nova Hipparchi, apparitionis mentio facta est apud veteres, disparitionis nequaquam. Etiam conspici nuper cœpit stella nova in pectore Cygni, quæ jam per duodecim annos integros duravit, ætatem cometæ (qualis habetur) longo intervallo supergressa, nec adhuc diminuta aut adornans fugam. Neque illud rursus proprium et perpetuum est, ut veteres stellæ mutationem prorsus non patiantur, sed tantum stellæ recentioris epiphaniæ, in quibus nil mirum si mutatio eveniat, cum ipsa generatio et origo ipsarum immemorialis non sit. Missa enim Arcadam fabula de prima epiphania lunæ, qua se jactant illi fuisse antiquiores, non dequant exempla in rerum memoria satis fida, cum sol per tres vices, absque incidentia eclipsis, aut interpositione nubium, aère liquido et sereno prodiit vultu mutato per multos dies, neque tamen similiter affectus, semel luce exili, bis subfusca. Talia enim evenerunt anno DCCXC, per septemdecim dies, et temporibus Justiniani per annum dimidium,

et post mortem Julii Cæsaris per complures dies. Atque Julianæ illius obtenebrationis manet testimonium illud insigne Virgiliti:

“ Ille etiam extincto miseratus Cæsare Romam,  
Cum caput obscura nitidum ferrugine textit,  
Impiaque æternam timuerunt secula noctem.”

Varronis vero, hominis in antiquitate peritissimi, narratio quæ invenitur apud Augustinum de stella Veneris: illam scilicet tempore Ogygis regis mutavisse colorem, magnitudinem, et figuram, dubiæ fidei esse potuit, ni simile eventum celebri spectaculo ætate nostra MDLXXVIII recurrisset. Nam tum quoque per annum integrum novatio facta est memorabilis in stella Veneris, quæ conspiciebatur magnitudine et splendore insolitis, rubedine Martem ipsum superabat, et figuram sæpius mutabat, facta quandoque triangularis, quandoque quadrangularis, etiam rotunda, ut in ipsa massa et substantia prorsus pati videretur. Quin etiam stella illa ex veteribus, quæ in coxa Caniculæ sita est, quam ipse se vidisse dicit Aristoteles, comæ nonnihil habentem, eamque comam præsertim obiter intuenti vibrantem, mutata jam videtur et comam deposuisse, cum nihil ejusmodi jam nostra ætate deprehendatur. Adde etiam quod complures mutationes cœlestium, præsertim in stellis minoribus, ex neglectu observationum facile præterlabuntur, et nobis pereunt. At promptum erit sciolo alicui ista ad vapores et dispositionem mediæ referre: sed mutationes, quæ corpus astri alicujus constanter et æquabiliter et diu obsidere deprehenduntur, et una cum astro circumvolvi; omnino in astro ipso, aut saltem in æthere propinquo statui debent, non in regionibus aëris inferioribus; cujus rei etiam argumentum sumitur plane validum, quod hujusmodi mutationes raro fiunt, et longis intervallis annorum; quæ autem in aëre fiunt per interpositionem vaporum, frequentius. Quod si quis judicium faciat ex ordine cœli, atque motus ipsius æquabilitate, cœlum immutabile esse, atque certitudinem illam periodorum et restitutionum sumat in æternitatis tessera non dubiam, cum substantiæ corruptibili vix competere videatur motus constantia; is paulo attentius dispicere debuerat, istam reditionem rerum per vices, et tanquam in orbem per tempora certa, etiam hic infra apud nos reperiri in nonnullis; maxime in æstu oceani: differentia autem minores, quæ in cœlestibus esse possunt, ut periodicis, et restitutionibus suis, aspectum nostrum et computationes nostras fugiunt. Neque magis motus ille circularis cœli in argumentum æternitatis sumi potest; quod scilicet lationis circularis non sit terminus; motus autem immortalis substantiæ immortalis convenit. Nam etiam cometæ inferiores, subter lunam locati, rotant, idque ex vi propria; nisi quis forte credere malit commentum illud de alligatione ad astrum. Enimvero si placeat argumentari de æternitate cœlestium ex motu circulari, id ad universitatem cœli trahi debuit, non ad partes cœli; etenim aër, mare, terra, massis æterna, partibus caduca. Quin potius, contra, non ita bene ominari licet de æternitate cœli ex motu illo rotationis; quia ille ipse motus non est perfectus in cœlo, nec restituit se exacte in circulo integro et puro, sed cum declinationibus, sinuationibus, et spiris. Porro si quis illud, quod diximus de

terra, retorqueat (videlicet quod mutationes, quæ in ea fiunt, per accidens fieri disseruimus, eo quod terra patiatur a cœlo) atque asserat contrariam esse rationem cœli, cum cœlum nullo modo pati possit vicissim a terra, quandoquidem omnis emissio a terra citra cœlum desinat, ut probabile sit cœlum, ultra omnem vim inimicam sepositum, susceptivum esse æternitatis, cum a natura opposita minime concutatur aut labefactetur; is non contemnenda quedam objicit. Neque enim ii sumus, qui Thaletis simplicitatem revereamur, qui ignes cœlestes depascere vapores e terra et oceano sublimatos, atque inde ali et refici opinatus est, (illi vero vapores recidunt fere simili quanto ac ascenderunt, neque reficiendis et terræ et globis cœlestibus ullo modo sufficiunt, neque prorsus in tam altum pervenire possint,) sed tamen utcumque terræ effluvia materiata longe infra cœlum se sistant, nihilominus, si terra sit primum frigidum, ex sententia Parmenidis et Telesii, non facile quis affirmet, aut certo, ad quam altitudinem vis illa ad-versatrix et rivalis cœli se insinuet seriatiim et per successionem, præsertim cum tenuia naturam et impressionem frigidi et calidi imbibant, et longe perferant. Sed tamen dato quod cœlum non patiatur a terra; nil obstat, quin cœlestia a se invicem pati possent et immutari, sol nimirum a stellis, stellæ a sole, planetæ ab utrisque, universæ ab æthere circumfuso, præsertim in desinentiis globorum. Præterea videtur opinio de æternitate cœli magnas vires sumpsisse ex ipsa machina et constructione cœli, quam astronomi plurima cum satagentia introduxerunt. Cautum enim magnopere videtur ex ea ut cœlestia nil patientur, præter simplicem rotationem, in cæteris consistent nec perturbentur. Itaque corpora astrorum in orbibus suis tanquam clavis fixa posuerunt. Singulis autem declinationibus, sublationibus, depressionibus, sinuationibus ipsorum tot circulos perfectos convenientis crassitudinis attribuerunt, circulorum eorum et concava et convexa egregie tornantes et polientes, ut in eis nil eminent, nil asperum inveniatur, sed alter inter alterum receptus, et ob levorem exacte contiguus, et tamen labi facilis moveat placide et feliciter, quæ immortalis scilicet ingeniatio summovet omnem violentiam et perturbationem, individuas profecto corruptionis prænuntias. Nam certe si corpora tanta, qualia sunt globi astrorum, æthera secant, neque tamen perpetuo meant per easdem ætheris partes, sed per partes et tractus longe diversos, cum aliquando superna invadant, aliquando versus terram descendant, aliquando vertant se ad austrum, aliquando ad boream, periculum est proculdubio ne fiant plurimæ in cœlo impressiones, et concussiones, et reciprocationes, et fluctus, atque inde sequantur condensationes et rarefactiones corporum, quæ generationibus et alterationibus viam præstinent et præstruant. Quandoquidem vero ex rationibus physicis, atque insuper ex phænomenis ipsis plane constabit hoc posterius verum esse, atque commenta illa priora astronomorum de quibus diximus (si quis sanam mentem sumat) naturæ prorsus illudere videantur, et rerum reperiantur inania: consentaneum est, ut etiam opinio de æternitate cœlestium, quæ cum illis conjuncta est, idem subeat judicium. Quod si quis hic religionem opponat, illi

responsum volumus, ethnicam jactantiam tantummodo istam æternitatem cœlo soli attribuere, Scripturas sacras æternitatem terræ et cœlo ex æquo. Neque enim legitur solum, "solem et lunam æternos et fideles testes in cœlo esse," sed et illud, "generationes advenire et migrare, terram autem in æternum manere." De natura autem labili et caduca utriusque uno simul oraculo conclusum est: "cœlum et terram pertransire;" "verbum autem Domini non pertransire." Deinde, si quis adhuc instet, negari tamen non posse, quin in ipsa superficie orbis terrarum, et partibus proximis, infinitæ fiant mutationes, in cœlo non item; huic ita occurrimus; nec nos hæc per omnia æquare, et tamen si regiones (quas vocant) superiorem et mediam aëris, pro superficie aut interiore tunica cœli accipiamus, quemadmodum spatium istud apud nos, quo animalia, plantæ, et mineralia continentur, pro superficie vel exteriori tunica terræ accipimus; et ibi quoque varias et multiformes generationes inveniri. Itaque tumultus fere omnis, et conflictus, et perturbatio in confiniis tantum cœli et terræ locum habere videtur; ut in rebus civilibus fit, in quibus illud frequenter usu venit, ut duorum regnorum fines continuis incursionibus et violentiis infestentur, dum interiores utriusque regni provinciæ diutina pace fruuntur, et bellis tantum gravioribus et rarioribus commoventur. Quod vero ad illam alteram partem heterogeneæ cœlestium attinet (prout asseritur ab Aristotele) quod calida non sint, ne forte sequatur conflagratio Heracliti, sed quod calefaciant per accidens, conterendo et diverberando aërem, nescimus quid sibi velit hujusmodi deservit experientia, idque contra consensum veterum. Sed in illo minime novum est, ut unum aliquid ab experientia abripiat, et statim naturæ insultet, pusillanimus simul et audax. Verum de hoc mox dicemus in quæstione, utrum astra sint veri ignes? fusius vero et accuratius in consiliis nostris circa historiam virtutum, ubi origines et cunabula calidi et frigidi tractabimus, mortalibus adhuc incognita et intacta. Atque quæstio de heterogenea cœlestium ad hunc modum proposita sit. Damnare enim sententiam Aristotelis absque comperendinatione res fortasse postulat, sed nostrum non patitur institutum.

Altera proponitur quæstio, Quale sit contentum spatiorum interstellarium? Illa enim aut vacua sunt, quod Gilbertus sensit, aut repleta corpore, quod sit ad astra instar aëris ad flammam; quod familiariter accedit ad sensum; vel repleta corpore homogeneo cum ipsis astris, lucido et quodammodo empyreo, sed secundum minus, lucis scilicet non tam præfulgidæ et vibrantis: id quod sibi velle videtur recepta opinio, quod stella sit pars densior sphaeræ suæ. Nihil autem officit quo minus lucidum sit diaphanum ad transmittendam lucem magis fortem. Nam acute notavit Telesius etiam aërem communem continere aliquid in se lucis, eo usus argumentum, quod sint quædam animalia, quæ noctu vident, quorum scilicet visus ad tenuem hujusmodi lucem recipendam et fovendam sit proportionatus. Nam actum lucis absque ulla luce, vel ex ipsa spiritus visivi luce interna fieri minus credibile esse. Sed et flamma ipsa diaphana conspicitur, etiam ad transmittendam

speciem corporis opaci, ut in filis lucernarum patet; multo magis ad transmittendam speciem lucis intensioris. Etiam ex flammis aliæ alii sunt pellucidiore. Idque accidit vel ex natura corporis inflammati, vel ex copia. Nam flamma sevi aut ceræ magis luminosa est, et (si ita loqui licet) magis ignea, at flamma spiritus vini magis opaca, et tanquam aërea, præsertim si in parva sit quantitate, ut flamma seipsam non inspisset. At nos hujus rei etiam experimentum fecimus; videlicet accipientes candelam ceream, eamque in situla erigentes (situla idcirco usi metallica, ut corpus candelæ a flamma, quæ circumfundenda erat, posset muniri) situlam vero in patera, ubi erat parum spiritus vini, collocantes, tumque primo candelam, deinde spiritum vini accendentes; ubi facile erat cernere flammam candelæ coruscantem et candidam per medium flammæ spiritus vini infirmæ et vergentis ad diaphanum. Atque pari ratione cernuntur sæpius per cœlum trabes lucidæ lucem manifestam ex se præbentes, et tenebras noctis insigniter illustrantes; per quarum corpora tamen datur conspiciere astra. Attamen ista inæqualitas stellæ et ætheris interstellaris non bene definitur per tenue et densum, ut stella scilicet sit densior, æther tenuior. Nam generaliter hic apud nos flamma aëre est corpus subtilius, magis, inquam, expansum, et minus habens materiæ pro spatio quod occupat; quod etiam in cœlestibus obtinere probabile est. Durior vero est error, si stellam sphaeræ partem esse intelligant veluti clavo fixam, et æthera stellæ deferens. Hoc enim fictitium quiddam est, quemadmodum et orbium contiguatio illa quæ describitur. Nam corpus stellæ in cursu suo aut æthera secat, aut ut æther ipse rotat simul æqualiter. Si enim inæqualiter rotet, etiam stellam secare æthera necesse est. Fabrica autem illa orbium contiguorum, ut concavum exterioris orbis recipiat convexum interioris, et tamen, propter lævorem utriusque, alter alterum in conversionibus suis, licet inæqualibus, non impediat, realis non est; cum perpetuum et continuum sit corpus ætheris, quemadmodum et aëris; et tamen quia magna reperitur in utroque corpore diversitas, quatenus ad raritatem et alia, regiones ipsorum docendi gratia rectissime distinguantur. Itaque recipiatur sexta quæstio secundum hanc nostram explicationem. Sequitur quæstio altera nec ea simplex; de substantia ipsorum astrorum. Primo enim quæritur, An sint alii globi sive massæ ex materia solida et compacta, præter ipsam terram? Sana enim mente proponitur ea contemplatio in libro de facie in orbe lunæ, non esse verisimile, in dispersione materiæ naturam quicquid compacti corporis erat in unicum terræ globum conclusisse, cum tantus sit exercitio globorum ex materia rara et explicata. Huic vero cogitationi tam immoderate indulsit Gilbertus (in quo tamen habuit præcursoros vel duces potius nonnullos ex antiquis) ut non solum terram et lunam, sed complures alios globos, solidos et opacos, per expansionem cœli inter globos lucentes, sparsos asserat. Neque opinio ejus hic stetit, sed et globos illos lucentes ad aspectum, nimirum solem et clarissima quæque astra, ex materia quapiam solida, licet magis splendida et æquali, constitui existimavit, lucem primitivam cum

lumine, quod ejus censetur imago, confundens, (nam et nostrum mare ex sese lucem ad distans proportionatum ejaculari censuit,) nullam autem conglobationem agnovit Gilbertus, nisi in materia solida, cujus corpora illa circumfusa rara et tenuia, effluvia quædam tantum essent, et tanquam defectiones; et deinde vacuum. Verum diligentissimi cujusque et maxime sobrii investigatoris naturæ animum perstringere posset cogitatio illa de luna, quod sit ex materiâ solida. Nam et lucem reverberat, nec lucem transmittit, et propriæ lucis tanquam expertus est, et plana est inæqualitatis; quæ omnia solidorum sunt. Videmus enim æthera ipsum et ærem, quæ tenuia sunt corpora, solis lucem excipere, sed minime reflectere, quod luna facit. Solis vero radiorum is est vigor, ut densas admodum nubes, quæ materiæ sunt aquæ, trajicere et penetrare possit; lunam tamen neutiquam. At lux lunæ ipsius in eclipsibus aliquibus cernitur nonnulla licet obscura; in noviluniis autem et ætatibus lunæ, nulla, præter partem irradiatam a sole. Porro, flammæ impuræ et fæculentæ (ex quo genere substantiæ Empedocles constare lunam opinatus est) sunt certe inæquales, sed tamen eæ inæqualitates non locantur, sed mobiles plerumque sunt; cum maculæ in luna constantes putentur. Accedit quoque quod maculæ illæ etiam suas subinæqualitates habere deprehendantur per specilla optica, ut jam plane multipliciter figurata reperiatur luna, et selenographia illa sive typus lunæ, quem animo agitabat Gilbertus, jam ex Galilæi et aliorum industria præsto esse videatur. Quod si luna ex materia quapiam solida constitui possit ut terræ affinis, aut fæx cœli (hujusmodi quædam jactantur) videndum rursus an illa sit in hoc genere sola. Nam et Mercurius quandoque repertus est in conjunctione solis, tanquam macula quædam, sive pusilla eclipsis. At maculæ illæ nigricantes, quæ in hemisphærio antarctico inveniuntur, suntque fixæ, non secus ac galaxia, majorem injiciunt dubitationem de globis opacis, etiam in partibus cœli sublimioribus. Nam quod illud in causa sit, quia cœlum in illis locis sit tenue et tanquam perforatum, id minus verisimile est; propterea quod hujusmodi decremescitum et tanquam privatio rei visibilis ex tanta distantia visum nostrum nullo modo percutere possit, cum etiam reliquum corpus ætheris invisibile sit, nec nisi per comparisonem ad corpora stellarum cernatur. Illud fortasse magis probabile foret, nigrores illos luminis imputare, quia rariores inveniuntur stellæ circa eam partem cœli, quemadmodum circa galaxiam crebriores; ut alter locus continenter luminosus videatur, alter umbrosus. Magis enim committi videntur ignes cœlestes in antarctico hemisphærio, quam in nostro; majores siquidem stellas habeat, sed pauciores, et spatia interstellaria majora. Verum ipsa traditio de maculis illis non admodum fida est, saltem non tam magna circa eam observationem adhibita est diligentia, ut consequentiæ inde deduci adhuc debeant. Illud magis premit inquisitionem præsentem, quod possint esse plures globi opaci per æthera sparsi, qui omnino non cernuntur. Nam et luna ipsa in primis orbitibus, quatenus illustratur a sole, visum sane ferit, cornu et labro illo tenui circuli extimi, in profundo autem minime, sed

cernitur eadem specie tanquam reliquus æther: et stellulæ illæ erraticæ circa Jovem a Galilæo (si fides constet) repertæ, merguntur ad visum nostrum in pelago illo ætheris, tanquam insulæ minores et non conspicuæ; similiter et illæ stellulæ, quarum glomeratio effecit galaxiam, si singulæ sparsim, non congregatæ conferunt, collocatæ essent, prorsus conspectum nostrum effugerent; quemadmodum et complures aliæ, quæ noctibus serenis, præsertim per hiemem, micant; etiam nebulosæ illæ stellæ sive foramina ad præsepe jam distinctæ per specilla numerantur; quin per eadem specilla in fonte lucis omnium purissimo (solem dicimus) macularum, et opaci, et inæqualitatis scrupulus nonnullus objectus esse videtur. Quod si nihil aliud, certe gradatio ipsa inter astra cœlestia quoad lucem, a clarissimis descendens et pertingens ad obscura et caliginosa, eo rem deducit, ut fidem faciat posse esse et globos omnino opacos. Minor enim gradus esse videtur a stella nebulosa ad opacam, quam a stella clarissima ad nebulosam. Aspectus autem noster plane fallitur et circumscribitur. Quicquid enim spargitur in cœlo, neque habet magnitudinem insignem, atque etiam lucem vividam et fortem, latet, nec faciem cœli mutat. Neque vero imperiti cujusquam animi percipiant, si in dubium veniat utrum globi ex materia compacta pensiles sisti possint. Nam et terra ipsa in medio æris, rei mollissimæ, circumfusi pensilis natat: et magnæ nubium aquosarum moles et grandinis congeries hærent in regionibus æris, et inde magis dejiciuntur, quam descendunt, antequam terræ vicinitatem persentiant. Itaque optime notavit Gilbertus, corpora gravia post longam a terra distantiam motum versus inferiora paulatim exuere, utpote qui a nullo alio corporum appetitu, quam illo coëundi et se congregandi ad terram (quæ est corporum cum iisdem connaturalium massa) ortum habet, atque intra orbem virtutis suæ terminatur. Nam quod de motu ad terræ centrum asseritur, esset profecto virtuosum genus nihili, quod tanta ad se raperet; neque corpus nisi a corpore patitur. Itaque questio ista de globis opacis et solidis, licet nova et ad opiniones vulgares durior recipiatur; atque una conjungatur questio illa vetus, nec tamen decisa, Quæ ex astris lucem promant primitivam, atque ex sese? et Quæ rursus ex illustratione solis, quarum altera consubstantialia videntur soli, altera lunæ? Denique omnem inquisitionem de diversitate substantiæ astrorum ad invicem, quæ multifaria videtur, cum alia rutila, alia plumbea, alia candida, alia splendida, alia nebulosa manifesto et constanter cernantur, ad septimam questionem intelligimus referri. Altera questio ea est, An astra sint veri ignes? quæ tamen questio desiderat prudentiam quandam intelligendi. Aliud est enim dicere, astra esse veros ignes; aliud, astra (sint licet veri ignes) cunctas exercere vires atque easdem edere actiones, quas ignis communis. Neque propterea ad ignem aliquem notionalem aut phantasticum deveniendum est, qui nomen ignis retineat, proprietates abneget. Nam et noster ignis, si in tali quanto, quale est quantum astri, in æthere collocaretur, differentes daturus fuerit operationes ab iis, quæ reperiuntur hic apud nos; cum entia longe diversas nanciscantur virtutes, et ex quanto

suo et ex consitu sive collocatione sua. Etenim massæ majores, hoc est, corpora connaturalia, quæ congregantur in tali quanto, quod habeat analogiam ad summam universi, induunt virtutes cosmicas, quæ in portionibus suis nullatenus reperiuntur. Nam oceanus, qui est aquarum congregatio maxima, fluit et refluat; at stagna et lacus, minime. Similiter universa terra pendet, portio terræ cadit. Collocatio autem entis plurimi ad omnia momenti est et in portionibus majoribus et minoribus, propter contiguitatem et adjacentiam, vel amicam vel inimicam. At multo majorem etiam evenire necesse est actionum diversitatem inter ignem astrorum et nostrum, quia non tantum in quanto et collocatione, sed etiam in substantia, aliquatenus varietur. Ignis enim astrorum purus, integer, et natus; at ignis noster degener, qui tanquam Vulcanus in terram dejectus ex casu claudicat. Si quis enim advertat, habemus ignem apud nos extra locum suum, trepidum, contrariis circumfusum, indigum, et stipem alimenti, ut conservetur, emendicantem, et fugientem. At in cælo existit ignis vere locutus, ab impetu alicujus contrarii disjunctus, constans ex se, et similibus conservatus, et proprias operationes libere et absque molestia peragens. Itaque nihil opus fuit Patrio, ut formam flammæ pyramidalem, qualis apud nos invenitur, salvaret, comminisci superiorem partem astri, quæ versus æthera vertitur, posse esse pyramidalem, licet inferior pars, quæ a nobis conspicitur, sit globosa. Nam pyramis illa flammæ per accidens est ex coactione et constrictione aëris, siquidem flamma circa fomitem suum plenior, ab inimicitia aëris sensim constringitur et effingitur in formam pyramidis. Itaque in flamma, basis flammæ lata est, vertex acutus; in fumo, contra, inferius acutum, vertex latus, et tanquam pyramis inversa; quia aër fumum recipit, flammam comprimit. Quare consentaneum est flammam apud nos esse pyramidalem, in cælo globosam. Similiter et flamma apud nos corpus momentaneum est, in æthere permanens et durabilis. Attamen et apud nos flamma et ipsa manere possit in forma sua et subsistere, nisi a circumfusis perderetur, quod manifestissimum est in flammis majoribus. Omnis enim portio flammæ, in medio flammæ sita, et flamma undique circumdata, non perit, sed eadem numero manet inextincta, et cælum rapide petens; at in lateribus laboratur atque abinde orditur extinctio. Cujus rei modus (flammæ interioris scilicet permanentia in figura globosa, et flammæ exterioris vanescentia et pyramis) in flammis bicoloribus experimento demonstrari possit. Quin etiam de ipso ardore flammæ inter cælestem et nostram plurimum variari potest. Nam flamma cælestis libenter et placide explicatur, tanquam in suo, at nostra tanquam in alieno compingitur et ardet et furit. Omnis etiam ignis constipatus, et incarceratus, fit ardentior. Enimvero et radii flammæ cælestis postquam ad corpora densiora et magis obstinata pervenerint, et ipsi lenitatem suam deponunt, et fiunt magis adurentes. Itaque non debuit Aristoteles conflagrationem Heracliti orbi suo metuere, licet astra veros ignes statuisset. Poterit igitur ista quæstio recipi secundum hanc explicationem. Sequitur altera quæstio, An astra alantur atque etiam an augeantur,

minuantur, generentur, exstinguantur? Atque certe ex veteribus aliquis observatione quadam plebeia ali astra putavit, instar ignis, atque aquas et oceanum et humiditatem terræ depascere, atque ex vaporibus et halitibus reparari. Quæ certe opinio non videtur digna esse, ut quæstioni materiam subministret. Nam et vapores hujusmodi longe citra astrorum altitudines deficiunt. Neque illorum tanta est copia, ut et aquis et terræ per pluvias et rores reparandis, atque insuper tot et tantis globis cælestibus reficiendis sufficere ullo modo queant; præsertim cum manifestum sit terram et oceanum humore evidenter per multa jam secula non decrescere, ut tantundem reponi videatur, quantum exsorbetur. Neque etiam ratio alimenti astris tanquam igni nostro competit. Ubi enim aliquid deperit et decedit, ibi etiam reponitur quippiam et assimilatur. Quod genus assimilationis ex tartarismis est, et ex contrariorum aut dissimilium circumfusione ortum ducit. At in astrorum mole similari et interiore nil tale evenit non magis, quam in visceribus terræ, quæ nec ipsa aluntur, sed substantiam suam servant secundum identitatem, non secundum assimilationem. Attamen de utrimque oris corporum sidereorum recte datur quæstio, Utrum ea uno eodemque tenore maneant, aut æthera circumfusum deprædentur, atque etiam inficiant? Quare eo sensu de alimoniis astrorum etiam queri poterit. De augmentis vero et diminutionibus astrorum in toto suo, recte adjungitur quæstio; licet rara admodum fuerint phænomena, quæ illi dubitationi occasionem præbere possint. Primo enim exemplum nullum, neque simile aliquid inter ea, quæ apud nos reperiuntur, huic quæstioni patrocinantur; cum globus noster terræ et aquarum non videatur suscipere, secundum totum suum, augmentationem aut diminutionem evidentem aut insignem; sed molem suam et quantum suum servare. At stellæ apparent ad aspectum nostrum interdum majore, interdum minore corpore. Verum est, sed illa majoritas et minoritas stellæ vel ad longinquitatem et ad vicinitatem refertur, ut in apogæis et perigæis planetarum, vel ad constitutionem medii. Quæ vero fit ex constitutione medii facile dignoscitur, quod non alicui certæ stellæ, sed omnibus ex æquo apparentiam mutet, ut fit noctibus hiemalibus, gela intensiore, quando stellæ auctæ videntur magnitudine, quia vapores et parcius surgunt et fortius exprimuntur, et universum corpus aëris nonnihil condensatur, et vergit ad aqueum sive crystallinum, quod species exhibet majores. Quod si forte fuerit aliqua particularis interpositio vaporum inter aspectum nostrum et astrum certum, quæ speciem astri ampliet, (quod in sole et luna frequenter et manifeste fit, et in reliquis accidere potest,) ea apparentia nec ipsa fallere potest, quia mutatio illa magnitudinis non durat, neque sequitur astrum, nec cum corpore ejus movetur, verum astrum ab ea cito liberatur, et solitam recuperat speciem. Veruntamen quamvis ista ita se habeant, tamen cum et olim temporibus præcis, atque etiam ætate nostra, celebri et magno spectaculo magna novatio facta fuerit in stella Veneris et magnitudine et colore, atque etiam figura; cumque mutatio, quæ astrum aliquod certum perpetuo et constanter sequitur, et cum corpore ejus cir-

cumvolvi cernitur, necessario statui debeat in astro ipso, et non in medio; cumque ex observationum neglectu multa, quæ in cælo fiunt conspicua, prætereantur et nobis pereant; istam partem quæstionis nonæ recte admitti censemus. Ejusdem generis est altera pars quæstionis, Utrum astra per longos seculorum circuitus nascantur et dissipentur? nisi quod major suppetat phænomenorum ubertas, quæ hanc quæstionem provocat, quam illam de augmentis; sed tamen in uno genere tantum. Nam quoad veteres stellas, omni seculorum memoria nec alicujus earum ortus primus notatus est, (exceptis iis, quæ Arcades de luna olim fabulati sunt,) nec aliqua ex iis desideratur. Earum vero, quæ cometæ habitæ sunt, sed forma et motu stellari, et prorsus veluti stellæ novæ, et apparitiones vidimus, atque etiam ab antiquis accepimus, et disparitiones, dum aliis hominibus tanquam consumptæ visæ sunt, aliis tanquam assumptæ, (utpote quæ ad nos devectæ tanquam in perigæis, postea ad sublimiora remearunt,) aliis vero tanquam rarescentes existimatæ sunt, atque in æthere solutæ. Verum universam quæstionem de stellis novis ad eum locum rejicimus, ubi de cometis dicemus. Superest quæstio altera, de galaxia videlicet, An galaxia sit glomeratio astrorum minimorum, aut corpus continuatum, et pars ætheris, mediæ naturæ inter ætheream et sideream? Nam opinio illa de exhalationibus jamdiu exhalavit, non sine nota ingenii Aristotelis, qui tale aliquid confingere ausus est, rei tam constanti et fixæ imponendo naturam transitoriam et variam. Quin et finis etiam hujus quæstionis, prout a nobis proponitur, adesse jam videtur, si iis credimus, quæ Galilæus tradidit, qui confusam illam lucis speciem in astra numerata et locata digessit. Nam quod galaxia non tollit aspectum astrorum, quæ intra ipsam inveniuntur, illud certe litem non dirimit, nec rem inclinat in alterutram partem; id tantummodo fortasse abnegat, non collocari galaxiam inferius æthere stellato. Hoc enim si foret, atque insuper corpus illud continuatum galaxiæ aliquam haberet profunditatem, aspectum nostrum interceptum iri consentaneum esset. Si vero pari collocetur altitudine cum stellis, quæ per eam conspiciuntur, nil obstat quin stellæ spargi possint in ipsa galaxia non minus, quam in reliquo æthere. Itaque et istam quæstionem recipimus. Atque hæc sex quæstiones pertinent ad substantiam celestium; qualis scilicet sit substantia cæli in genere, et qualis ætheris interstellaris, et qualis galaxiæ, et qualis astrorum ipsorum, sive conferantur ad invicem, sive ad ignem nostrum, sive ad corpus proprium. At de numero, magnitudine, figura, et distantia astrorum præter phænomena ipsa et quæstiones historicas, de quibus postea dicetur, problemata philosophica fere simplicia sunt. De numero scilicet sequitur quæstio altera, An is sit numerus astrorum qui videtur, quique Hipparchi diligentia notatus et descriptus est, et in globi celestis modulum conclusus? Nam et satis frigida est ratio ea, quæ redditur innumeræ illius multitudinis stellarum occultarum et tanquam invisibilium, quæ noctibus serenis præsertim per hiemem conspici solet; ut illæ apparentiæ scilicet sint non stellæ minores, sed radiationes tantum, et micationes, et

tanquam spicula stellarum cognitarum; et nova jam censa sunt plebecolæ cælestis capita a Galilæo non solum in illa turba, quæ galaxiæ nomine insignitur, verum etiam inter stationes ipsas et ordines planetarum. Stellæ autem invisibiles fiunt aut propter corporis parvitatem, aut propter opacitatem, (nam tenuitatis nomen non admodum approbamus, cum flamma pura sit corpus eximiæ tenuitatis,) aut propter elongationem et distantiam. De auctario autem numeri astrorum per generationem stellarum novarum, quæstionem, ut prius, ad locum de cometis rejicimus. Quod vero ad magnitudinem astrorum attinet, ea, quæ est secundum apparentiam, magnitudo pertinet ad phænomena, vera autem ad inquisitionem philosophicam, solo illo contenta problemate duodecimo: Quæ sit vera magnitudo cujusque astri, vel mensurata, vel saltem collata? Facilius enim est inventu et demonstratu, globum lunæ esse globo terræ minorem, quam globum lunæ in ambitu tot millia passuum continere. Itaque tentandum et contendendum, ut exactæ magnitudines inveniuntur; illæ si minus haberi possint, utendum comparatis. Capiuntur autem atque concluduntur magnitudines veræ vel ab eclipsibus et umbris vel ab extensionibus tam luminis quam aliarum virtutum, quas corpora quæque pro ratione magnitudinis longius aut propius ejaculantur et diffundunt; vel postremo per symmetriam universi, quæ portiones corporum connaturalium ex necessitate quadam temperat et terminat. Minime vero standum iis, quæ ab astronomis de veris magnitudinibus astrorum tradita sunt (licet videatur esse res magnæ et accuratæ subtilitatis) satis licenter et incaute; sed exquirendæ (si quæ se ostendunt) probationes magis fidæ et sinceræ. Magnitudo vero et distantia astrorum se invicem indicant ex rationibus opticis; quæ tamen et ipsæ excuti debent. Ista autem de vera magnitudine astrorum quæstio numero duodecima est. Sequitur quæstio altera de figura, An astra sint globi, hoc est, concervationes materiæ in figura solida rotunda? Videntur autem ad apparentiam tres se ostendere figuræ astrorum, globosa et crinita, ut sol; globosa et angulata, ut stellæ (crines vero et anguli ad aspectum tantum referuntur, forma globosa tantum ad substantiam); globosa simpliciter, ut luna. Neque enim conspicitur stella oblonga, aut triangularis, aut quadrata, aut alterius figuræ. Atque secundum naturam videtur ut massæ rerum majores, ad conservationem sui et veriore unionem, se congregent in globos. Decima quarta quæstio pertinet ad distantiam; Quæ sit vera distantia alicujus stellæ in profundo cæli? Nam distantie planetarum tam ad invicem quam cum stellis fixis laterales, sive per ambitum cæli, reguntur a motibus earum. Quemadmodum autem superius de magnitudine astrorum diximus, si exacta magnitudo et plane mensurata haberi non possit, utendum esse magnitudine comparata; idem de distantis præcipimus; ut si exacte capi distantia non possit (exempli gratia a terra ad Saturnum, vel ad Jovem) tamen ponatur in certo Saturnum esse Jove sublimiorem. Neque enim systema cæli quoad interius, scilicet ordo planetarum quoad altitudines, omnino sine controversia est, neque quæ nunc obti-

nuerunt, olim credita sunt. Atque etiam adhuc lis pendet de Mercurio et Venere, utra sit sublimior. Inveniuntur autem distantiae aut ex parallaxibus, aut ex eclipsibus, aut ex rationibus motuum, aut ex apparentiis diversis magnitudinum. Etiam alia

auxilia huic rei comparanda sunt, quæ humana queat industria comminisci. Præterea crassitudines sive profunditates sphaerarum pertinent etiam ad distantias.

## THEMA CÆLI.

Cum vero tanta reperiantur undequaque incommoda, satis habendum si asseratur quippiam, quod minus durum sit. Constituemus itaque et nos thema universi, pro modo historiarum, quæ nobis hactenus cognita est, omnia integra servantes iudicio nostro, postquam historia et per historiarum philosophia nostra inductiva magis adulta sit. Proponemus autem primo quædam de materia cœlestium, unde motus et constructio ipsorum melius intelligi possit, postea de motu ipso (quod nunc præcipue agitur) quæ cogitata et visa nobis sunt proferemus. Videtur itaque natura rerum in dispartitione materię disclusisse tenuia a crassis, atque globum terræ crassis, omnia vero ab ipsa superficie terræ et aquarum ad ultima cœli usque tenuibus sive pneumaticis assignasse, tanquam geminis rerum classibus primariis, non æquis scilicet, sed convenientibus portionibus. Neque vero vel aqua in nubibus hærens, vel ventus in terra conclusus naturalem et propriam rerum collocationem confundit. Hæc vero differentia tenuis vel pneumatici, et crassi vel tangibilis, omnino primordialis est, et ea qua maxime utitur systema universi. Sumpta autem est ex rerum conditione omnium simplicissima, hoc est, copia et paucitate materię pro exporrectione sua. Pneumatica vero, quæ hic apud nos inveniuntur, (de iis loquimur, quæ simplicia et perfecta existunt, non composita et imperfecte mixta,) sunt plane illa duo corpora, aer et flamma. Ea vero ut corpora plane heterogenea ponenda sunt, non, ut vulgo putatur, quod flamma nil aliud sit, quam aer incensus. His vero respondent in superioribus natura ætherea et siderea, sicut et in inferioribus aqua et oleum, et magis in profundo mercurius et sulphur, et generaliter corpora cruda et pingua, vel aliter corpora flammam exhorrentia et concipientia (sales vero compositæ naturæ sunt ex partibus crudis simul et inflammabilibus). Istæ vero duæ magnæ rerum familiæ, ærea et flamma, videndum quo fœdere universi partem longe maximam occupaverint, et quas partes habeant in systemate. In aëre terræ proximo flamma vivit tantum vitam momentaneam, et affatim perit. Postquam autem aer cœperit esse ab effluviis terra defæcior et bene attenuatus, natura flammæ per varios casus tentat et experitur in aëre consistere, et quandoque acquirit durationem nonnullam, non ex successione, ut apud nos, sed in identitate; quod in aliquibus cometis humilioribus ad tempus obtinet, quæ sunt mediæ fere naturæ inter flammam successivam et consistentem; non tamen figitur aut con-

stat flammea natura, antequam perventum fuerit ad corpus lunæ. Eo loco flamma extingubile illud deponit, et se tuetur utcunque, sed tamen infirma et sine vigore est ejusmodi flamma, et parum habens radiationis, nec propria natura vivida, nec a contraria natura admodum excitata. Etiam integra non est, sed ex compositione cum substantia ætherea (qualis ibi invenitur) maculosa et interpolata. Neque in regione Mercurii admodum feliciter collocata est flamma, cum ex coadunatione sua parvum tantummodo planetam conficere potis sit, eumque cum magna et perturbata varietate et fluctu motuum, tanquam ignem fatuum laborantem et conflictantem, nec se a solis præsiidiis, nisi per parva spatia, disjungi sustententem. Atque postquam ad regionem Veneris est ventum, incipit roborari flammea natura et clarescere, et in globum bene amplum congregari; qui tamen et ipse famulatur soli, et longius ab eo recedere exhorret. In solis autem regione tanquam in solio collocatur flamma: media inter flammam planetarum, fortior etiam et vibrantior quam flammæ fixarum propter majorem antiperistasin, et intensissimam unionem. At flamma in regione Martis etiam robusta cernitur, solis vicinitatem rutilatione referens, sed jam sui juris, et quæ per integrum cœli diametrum se a sole disjungi patiatur. In regione autem Jovis flamma contentione paulatim deponens, magis placida videtur et candida, non tam ex natura propria, (ut stella Veneris, quippe ardentior,) sed ex natura circumfusa minus irritata et exasperata; in qua regione verisimile est illud, quod reperit Galilæus, cœlum incipere stellescere, licet per stellas parvitate sua invisibiles. In Saturni autem regione rursus natura flammæ videtur nonnihil languescere et hebescere, utpote et a solis auxiliis longius remota, et a cœlo stellato in proximo exhausta. Postremo flammea et siderea natura, æthereæ naturæ victrix, cœlum dat stellatum, ex natura ætherea et siderea, (quemadmodum globus terræ ex continenti et aquis,) varie sparsis conflatur, versa tamen et subacta atque adeo assimilata substantia ætherea, ut sidereæ sit prorsus patiens et subserviens. Itaque tres reperiuntur a terra ad fastigia cœli regiones generales, et tria tanquam tabulata, quoad naturam flammeam. Regio extinctionis flammæ; regio coadunationis flammæ; et regio dispersionis flammæ. Atque de contiguo et continuo argutari in corporibus mollibus et fluoribus, plebeium omnino foret. Illud tamen intelligendum, consuesse naturam ad spatia quædam per gradus, deinde subito per saltus proce-

dere, atque hujusmodi processum alternare; aliter nulla posset fieri fabrica, si per gradus insensibiles perpetuo procederetur. Quantus enim saltus (quoad explicationem materiæ) a terra et aqua ad aërem vel maxime crassum et nebulosum? Atque hæc tamen natura tam distantia corpora loco et superficie conjunguntur, sine medio aut intervallo. Nec minor saltus (quoad naturam substantialem) a regione aëris ad regionem lunæ, ingens similiter a cœlo lunæ ad cœlum stellatum. Itaque si quis continuum et contiguum acceperit non ex modo nexus, sed ex diversitate corporum connexorum, tres illas, quas diximus, regiones in limitibus suis pro contiguis tantum haberi queant. Jam vero videndum liquido et perspicue, hæc nostra de substantiis systematis theoria, quæ et qualia neget, et quæ et qualia affirmet, ut facilius teneri vel destrui possit. Negat illud vulgatum, flammam esse aërem incensum; affirmando corpora illa duo, aërem et flammam, plane esse heterogenea, instar aquæ et olei, sulphuris et mercurii. Negat vacuum illud coacervatum Gilberti inter globos sparsos, sed spatia vel aërea vel flamma natura repleri. Negat lunam esse corpus aqueum, vel densum vel solidum, sed ex natura flamma, licet lenta, et enervi, primum scilicet rudimentum et sedimentum ultimum flammæ cœlestis; cum flamma (secundum densitatem) non minus quam aër et liquores, in numeros recipiat gradus. Affirmat, flammam vere et libenter locatam figi et constare, non minus quam aërem vel aquam, nec esse rem momentaneam et successivam tantum in mole sua, per renovationem et alimentum, ut hic fit apud nos. Affirmat flammam habere naturam coitivam vel congregativam in globos, quemadmodum natura terrea, minime similem aëri et aquæ, quæ congregantur in orbibus et interstitiis globorum, sed nusquam in globos integros. Affirmat, eandem naturam flammeam in loco proprio (id est) cœlo stellato spargi glomerationibus infinitis, ita tamen ut non exuat dualitas illa, ætheris et sideris, nec continuetur flamma in empyreum integrum. Affirmat, sidera veras flammæ esse, sed actiones flammæ in cœlestibus neququam trahendas ad actiones flammæ nostræ, quarum pleræque per accidens tantum perfunguntur. Affirmat ætherem interstellarem et sidera habere rationes ad invicem aëris et flammæ, sed sublimatas et rectificatas. Atque de substantia thematis sive systematis universi, hujusmodi quædam occurrunt. Nunc de motibus cœlestium dicendum, cujus gratia hæc adduximus. Consentaneum videtur ut quies non tollatur e natura, secundum aliquod totum (nam de particulis nunc non est sermo). Hoc (missis argutiis dialecticis et mathematicis) ex eo maxime liquet, quod incitationes et celeritates motuum cœlestium remittant se per gradus, ut desinturæ in aliquod immobile, et quod etiam cœlestia participant ex quiete secundum polos; et quod, si tollatur immobile, dissolvitur et spargitur systema. Quod si sit coacervatio quædam et massa naturæ immobilis, non videtur ulterius quærendum, quin ea sit globus terræ. Compactio enim densa et arctata materiæ inducit dispositionem erga motum torpescentem et eversam; quemadmodum contra explicatio laxa, promptam vel habilem. Neque male intro-

ducta est a Telesio (qui instauravit philosophiam Parmenidis et disputationes in libro de primo frigido) in naturam non certe coessentialitas et conjugatio, (quod ille vult,) sed tamen affinitas et conspiciatio, videlicet ex altera parte, calidi, lucidi, tenuis, et mobilis; et, ex parte opposita, frigidi, opaci, densi, et immobilis; ponendo sedem primæ conspiciationis in cœlo, secundæ in terra. Quod si ponatur quies et immobile, videtur etiam poni debere motus absque termino et summe mobile, maxime in naturis oppositis. Is motus est fere rotationis, qualis invenitur in genere in cœlestibus. Agitatio enim in circulo terminum non habet, et videtur manare ex appetitu corporis, quod movet solummodo ut moveat, et se sequatur, et proprios petat amplexus, et naturam suam excitet, eaque fruatur, et propriam operationem exercent; cum contra, latio in recta, itinera videatur, et movere ad terminum cessationis, sive quietis, et ut aliquid assequatur, et dein motum suum deponat. Itaque de motu isto rotationis, qui est motus verus et perennis, et cœlestibus vulgo putatur proprius, videndum quomodo se expediat, et quo moderamine se incitet, et frænnet, et qualia omnino patiatur. Quæ dum explicamus, formositatem illam mathematicam, (ut motus reducatur ad circulos perfectos, sive eccentricos, sive concentricos,) et magniloquium illud, (quod terra sit respectu cœli instar puncti, non instar quanti,) et complura alia astronomorum inventa commentitia, ad calculos et tabulas relegabimus. At primo motus cœlestium dividemus: alii cosmici sunt, alii ad invicem. Eos dicimus cosmicos, quos cœlestia ex consensu non cœlestium tantum, sed universitatis rerum nanciscuntur. Eos ad invicem, in quibus alia corpora cœlestia ex aliis pendent. Atque vera et necessaria est ista divisio. Terra itaque stante, (id enim nunc nobis videtur verius,) manifestum est cœlum motu diurno circumferri, cujus motus mensura est spatium viginti quatuor horarum vel circiter; consequentia autem ab oriente in occidentem; conversio super puncta certa, (quos polos vocant,) australe et boreale. Etenim non jactantur cœli super polos mobiles, nec rursus alia sunt puncta quam quæ diximus. Atque hic motus vere videtur cosmicus, atque ideo unicus, nisi quatenus recipit et decremента et declinationes; secundum quæ decremента et declinationes transverberat motus iste universum rerum mobilium, et permeat a cœlo stellato usque ad viscera et interiora terræ; non raptu aliquo prehensivo, aut vexativo, sed consensu perpetuo. Atque iste motus in cœlo stellato perfectus est et integer, tam mensura justa temporis, quam restitutione plena loci. Quanto autem deceditur e sublimi, tanto iste motus imperfectior est, respectu tarditatis, et respectu etiam aberrationis a motu circulari. Ac primo de tarditate dicendum separatim. Affirmamus Saturnum motu diurno tardius moveri, quam ut circumferatur aut restituatur ad idem punctum intra viginti quatuor horas; sed cœlum stellatum incitatus ferri, et prævertere Saturnum eo excessu, qui intra tot dies, quot annos conficiunt triginta, universo cœli ambitu respondeat. Similiter de reliquis planetis dicendum, pro diversitate periodorum cujusque planetæ; adeo ut motus diurnus cœli stellati (in ipsa periodo,

absque respectu ad magnitudinem circuli) sit fere per horam unam velocior, quam motus diurnus lunæ. Si enim luna cursum suum viginti quatuor diebus posset expedire, tum excessus ille horæ integræ foret. Itaque motus decantatus adversitatis et renitentiae ab occidente in orientem, qui attribuitur planetis tanquam proprius, verus non est, sed tantum per apparentiam, ex præcursione cœli stellati occidentem versus, et relictione a tergo planetarum versus orientem. Quo posito, manifestum est velocitatem istius motus cosmicum, ordine non perturbato, descendendo decrescere, ut quo propius quique planeta appropinquet ad terram, eo tardius moveat; cum recepta opinio ordinem perturbet et invertat: et motum proprium tribuendo planetis, in illud absurdum incidat, ut planetæ, quo propinquiores sint ad terram (quæ est sedes naturæ immobilis) eo velocius moveri ponantur, id quod per remissionem violentiæ primi mobilis, astronomi excusare nugatorie et infeliciter conantur. Quod si cui mirum videatur, tantis spatiis, quanta sunt a cœlo stellato ad lunam, motum istum tam parvis partibus, minus scilicet hora unâ, quæ est motus diurni pars vigesima quarta, decrescere; succurrit illud, quod singuli planetæ minores circulos, quo terræ propiores sint, conficiant, et breviori ambitu rotent; ut, addito decremento magnitudinis circuli ad decrementum temporis sive periodi, motus iste insigniter decrescere cernatur. Atque hæc de velocitate seorsum locuti sumus, perinde ac si planetæ positi (exempli gratia, sub æquinoctio, aut aliquo ex parallelis) anteverterentur tantum a cœlo stellato, et ab invicem, sed tamen sub eodem illo circulo. Hæc enim simplex foret relictio absque obliquitate. At manifestum est planetas non solum impari gradu contendere, sed nec ad idem punctum circuli reverti, verum deflectere versus austrum et boream, cujus deflectionis limites sunt tropici; quæ deflectio nobis circumulum obliquum, et diversam politatem ejus progenuit; quemadmodum illa celeritatis inæqualitas motum illum renitentiae. Neque vero hoc etiam commento naturæ rerum opus est, cum recipiendo lineas spirales (id quod proxime accedit ad sensum et factum) res transigatur, et ista salventur. Atque (quod caput rei est) spiræ istæ nil aliud sunt quam defectiones a motu circulari perfecto, cujus planetæ sunt impatientes. Prout enim substantiæ degenerant puritate et explicatione, ita degenerant et motus. Evenit autem, quemadmodum in celeritate sublimiores planetæ feruntur velocius, humiliores tardius; ita etiam ut sublimiores planetæ propiores conficiant spiras, quæque circulos propius referant; humiliores vero, spiras magis disjunctas et hiantes. Deceditur enim perpetuo descendendo magis ac magis, et a flore illo velocitatis, et a perfectione motus circularis, ordine nusquam perturbato. In eo tamen planetæ conspirant (utpote corpora multum retinentia naturæ communis, licet aliter differentia) ut habeant eosdem limites deflexionis. Neque enim Saturnus intra tropicos remeat, neque luna extra tropicos exspatiatur, (et tamen de exspatiatione stellæ Veneris non negligendum quod ab aliquibus traditum et notatum est,) sed universi planetæ, sive sublimiores, sive humiliores, postquam ad tropicos perventum est, se vertunt et retexunt,

per tæsi minoris spiræ, qualis subeunda foret, si polis magis appropinquant; eamque jacturam motus, veluti destructionem naturæ suæ, exhorrentes. Utunque enim in cœlo stellato et stellæ prope polos, et stellæ circa æquinoctium, ordines et stationes suas servant, aliæ ab aliis in ordinem redactæ, summa et æquabili constantia; planetæ nihilominus videntur esse hujusmodi mixtæ naturæ, ut nec breviorum gyrum omnino, nec ampliore liberiter ferant. Atque ista videntur nobis paulo meliora circa motus cœlestes, quam raptus et motuum repugnantia, et diversa politas zodiaci, et inversus ordo celeritatis, et hujusmodi, quæ nullo modo cum natura rerum conveniunt, licet pacem qualem qualem colant cum calculis. Neque ista non viderunt astronomi præstantiores, sed arti suæ intenti, et circa perfectos circulos inepti, et subtilitates captantes, et philosophiæ malum morigeri, naturam sequi contempserunt. Verum istud sapientium arbitrium imperiosum in naturam, est ipsa vulgi simplicitate et credulitate deterius; si quis manifesta, quia sunt manifesta, fastidit. Et tamen ingens est illud malum, et latissime patet, ut ingenium humanum, cum par rebus esse non possit, supra res esse malit. Jam vero inquirendum utrum motus iste unicus et simplex, in circulo et spira, ab oriente in occidentem, super polos certos australem et borealem, desinat et terminetur cum cœlo, an etiam deducatur ad inferiora? Neque enim liberum erit hujusmodi placita confingere hic in proximo, qualia supponunt in cœlestibus. Itaque si in his regionibus quoque reperitur ille motus, apparebit etiam in cœlo eum talem esse secundum naturam communem sive cosmicam; qualem nos illam experimur. Primo itaque plane constat, illum cœli terminis non contineri. Verum hujusce rei demonstrationes et evidentiæ in anticipatione nostra de fluxu et refluxu maris plene tractavimus; itaque ad illam homines rejicimus; et hoc veluti posito et concesso, ad reliquos motus cœlestium pergemus. Eos autem non cosmicos, sed ad invicem esse diximus. Quatuor sunt genera motuum in cœlestibus visibilium, præter eum quem diximus cosmicum, qui est motus diurnus per spiras intra tropicos. Aut enim attolluntur stellæ altius, et rursus dimittuntur humilior, ut sint longius et propius a terra: aut flectunt se et sinuant per latitudinem zodiaci, excurrendo magis ad austrum, aut magis ad boream, atque efficiendo eos, quos vocant, dracones: aut incitatione atque etiam consecutione motus (hæc enim duo conjungimus) variant; gradiendo aliquando celerius, aliquando tardius, aliquando in progressu, aliquando in regressu; aliquando etiam stando et morando, aut ad distantiam aliquam a sole magis aut minus alligantur et circumscribuntur. Horum causas et naturas reddemus tantum in genere et per capita: id enim hoc loco nostrum postulat institutum. Verum ad hoc ut viam præmuniamus et aperiamus, dicendum aperte quid sentiamus de quibusdam tam placitis philosophicis quam hypothesibus astronomicis, et de observationibus etiam astronomorum per varia secula, ex quibus artem suam instaurant; quæ omnia videntur nobis esse erroris et confusionis plena. Sunt itaque axiomata, sive potius placita nonnulla, quæ a philosophis accepta, et in

astronomiam translata, et male credita, artem currerunt. Simplex autem erit reiectio et iudicium nostrum; neque enim tempus refutationibus terere convenit. Horum primum est, quod omnia supra lunam inclusive sint incorruptibilia, neque novas generationes aut mutationes ullo modo patiantur: de quo alibi dictum est, quod sit superstitio et vaniloquium. Verum ex hoc fonte illud ingens malum, quod ex omni anomalia novas atque, ut putant, emendatas confingant astronomi theorias, et rebus sæpius tanquam fortuitis applicent causas æternas et invariabiles. Secundum est, quod cælo (cum sit scilicet ex essentia quinta et minime elementari) non competant actiones illæ turbulentæ, compressionis, relaxationis, repulsionis, cessionis, et similia, quæ videntur progigni a mollitia quadam corporum et duritia, quæ habentur pro qualitatibus elementaribus. Hæc vero assertio est abnegatio insolens et licentiosa rerum et sensus. Ubicunque enim corpus naturale positum sit, ibi est antitypia quoque, idque pro modo corporis. Ubicunque vero corpora naturalia, et motus localis, ibi vel repulsio, vel cessio, vel sectio; hæc enim, quæ dicta sunt, compressio, relaxatio, repulsio, cessio, cum multis aliis, sunt passiones materiæ catholicæ ubique locorum. Attamen ex hoc fonte nobis emanavit illa multiplicatio circulorum perplexorum ad libitum, quos tamen volunt ita et consignari inter se, et alios intra alios moveri et verti, tanto lævore et lubricitate, ut nulla nihilominus sit impeditio, nulla fluctuatio; quæ omnia phantastica plane sunt et rebus insultant. Tertium est, quod singulis corporibus naturalibus singuli competant motus proprii; et si plures inveniantur motus, omnes, excepto uno, sint aliunde, et ex movente aliquo separato. Quo falsius quicquid nec excogitari potest, cum universa corpora ex multiplici rerum consensu motibus etiam pluribus prædita sint, aliis dominantibus, aliis succumbentibus, aliis etiam latentibus nisi provocentur; proprii autem rerum motus nulli sint nisi mensuræ exactæ, et modi motuum communium. Atque hinc rursus nobis prodiit primum mobile separatum, et cæli super cælos, et inædificationes novæ continentur, ut motuum tam diversorum præstationibus sufficere possint. Quartum est, quod omnes motus cælestium dispensentur per circulos perfectos; quod onerosum valde est, et portenta illa eccentricorum et epicyclorum nobis peperit; cum tamen, si naturam consulis, motus ordinatus et uniformis sit circuli perfecti; motus vero ordinatus, sed multiformis, qualis invenitur in cælestibus compluribus, sit aliarum linearum; meritoque Gilbertus hæc deridet, quod non verisimile sit naturam confinxisse rotas, quæ, exempli gratia, in circuitu contineant milliare unum aut alterum, ad hoc ut feratur pila palmariæ. Tantulæ enim magnitudinis videtur esse corpus planetæ ad eos, quos ad deferendum illud fingunt, circulos. Quintum est, quod stellæ sint partes orbis sui tanquam clavo fixæ. Hoc vero evidentissime est commentum eorum, qui mathematica, non naturam tractant, atque motum corporum tantum stupide intuentes, substantiarum omnino obliviscuntur. Ista enim fixatio, particularis est affectus rerum compactarum et consistentium, quæ firmas habent prehensiones ob

pressuras partium. Inopinabile autem prorsus est si transferatur ad mollia vel liquida. Sextum est, quod stella sit densior pars orbis sui; illæ vero neque partes sunt, neque densiores. Non enim homogenea sunt cum æthere, et gradu tantum, sed plane heterogenea, et substantia differunt; atque ea quoque substantia quoad densitatem rarior est, et magis explicata quam ætherea. Sunt et alia complura placita ejusdem vanitatis; sed hæc ad id, quod agitur, sufficient. Atque hæc de placitis philosophiæ circa cælestia dicta sint. Quod vero ad hypotheses astronomorum attinet, inutilis fere est earum redargutio, quæ nec ipsæ pro veris asseruntur, et possint esse variæ, et inter se contrariæ, ut tamen phænomena æque salvent, et concinnent. Itaque sit cautum, si placet, inter astronomiam et philosophiam, tanquam fœdere convenienti et legitimo, ut scilicet astronomia præhabeat hypotheses, quæ maxime expedite sunt ad compendia computandi, philosophia eas, quæ proxime accedunt ad veritatem naturæ, atque ut astronomiæ hypotheses rei veritati non præjudicent, et philosophiæ decreta talia sint, quæ sint super phænomena astronomiæ explicabilia. Atque de hypothesibus ita esto. At de observationibus astronomicis, quæ accumuluntur assidue, quæque jugiter a cælo tanquam aquæ scaturient, illud omnino homines monitos volumus; ne forte de illis verum sit, quod eleganter fingitur de musca Æsopi, quæ sedens super temonem currus Olympici; "Quantum," inquit, "pulverem ego excito!" Ita observatio aliqua pusilla, eaque quandoque instrumento, quandoque oculo, quandoque calculo titubans, quæque possit esse propter veram aliquam in cælo mutationem, novos cælos, et novas sphaeras, et circulos excitat. Neque hæc eo dicimus, quod remitti debeat aliqua industria observationum et historiæ, quam omnibus modis acuendam et intendendam esse dicimus, sed tantummodo ut adhibeatur prudentia, et summa, et sedata iudicii maturitas, in abjiciendis aut mutandis hypothesibus. Itaque patefacta jam via de motibus ipsis dicemus pauca et in genere. Quatuor autem genera esse diximus motuum majorum in cælestibus. Motum per profundum cæli attolentem et demittentem; motum per latitudinem zodiaci exspatiantem ad austrum et boream; motum per consequentiam zodiaci citum, tardum, progressivum, retrogradum, statarium; et motum elongationis a sole. Neque objiciat quispiam, motum illum secundum latitudinis, sive draconum, potuisse referri ad motum illum magnum cosmicum, cum sit inclinatio alternans versus austrum et boream, quod et spiræ illæ de tropico in tropicum similiter sunt, nisi quod ille motus sit tantum spiralis, iste vero etiam sinuosus et minoribus multo intervallis. Neque enim hoc nos fugit. Sed plane non sinit constans et perpetuus motus solis in ecliptica absque latitudine et draconibus, qui tamen sol communicat cum cæteris planetis quoad spiras inter tropicos, nos in hac opinione versari. Itaque alii fontes et hujus et reliquorum trium motuum quærendi sunt. Atque hæc sunt illa, quæ circa motum cælestium nobis videntur minus habere incommodi. Videndum vero quid negent, et quid affirmant. Negant terram rotare. Negant esse in cælestibus duos motus ab oriente in occiden-

tem alterum; atque affirmant anteversionem et relictionem. Negant obliquum circulum et diversam politatem ejus; et affirmant spiras. Negant primum mobile separatum et raptum; et affirmant consensum cosmicum tanquam commune vinculum systematis. Affirmant motum diurnum inveniri non in cœlo, sed et in aère, aquis, etiam extimis terræ, quoad verticitatem. Affirmant consecutionem et volubilitatem illam cosmicam in fluidis esse verticitatem et directionem in consistentibus, usquequo perveniat ad immobile sincerum. Negant stellas figi tanquam nodos in tabula. Negant eccentricos, epicyclos, et hujusmodi fabricas esse reales. Affirmant motum magneticum sive congregativum vigere in astris, ex quo ignis ignem evocat et attollit. Affirmant in cœlis planetarum, corpora planetarum velocius moveri et rotare, quam reliquum cœli, in quo siti sunt, quod utique rotat, sed tardius. Affirmant ex ea inæqualitate fluctus, et undas, et reciprocatōnes ætheris planetarum, atque ex iis varios motus

educi. Affirmant necessitatem in planetis volvendi celerius et tardius, prout locantur in cœlo sublimius aut humilior, idque ex consensu universi. Sed simul affirmant tædium præternaturalis incitationis in planetis, et majoris et minoris circuli. Affirmant solisequium ex natura inopinosa in ignibus infirmioribus Veneris et Mercurii; cum etiam inventæ sint a Galilæo stellulæ errantes Jovis asseclæ. Ista autem nos tanquam in limine historiæ naturalis et philosophiæ stantes prospicimus, quæ quanto quis magis se immerserit in historiam naturalem, tanto fortasse probabit magis. Attamen testamur iterum nos hic teneri nolle. In his enim, ut in aliis, certi viæ nostræ sumus, certi sedis nostræ non sumus. Hæc vero interfati sumus, ne quis existimet nos vacillatione judicii, aut inopia affirmandi negativæ quæstiones malle. Itaque tenebimus, quemadmodum cœlestia solent, (quando de iis sermo sit,) nobilem constantiam.

## PARTIS INSTAURATIONIS SECUNDÆ

### DELINEATIO ET ARGUMENTUM.

MEMORES\* autem instituti nostri, omnia perspicue proponemus, atque ordine non perturbato. Patet itaque hujus partis destinatio et distributio. Destinatur huic parti doctrina de meliore ac perfectione usu rationis, quam huc usque hominibus sit cognita aut monstrata, eo consilio, ut per hoc intellectus humanus (quantum conditio mortalitatis recipit) exaltetur, et facultate amplificetur ad naturæ obscuritatem vincendam, et interpretandam. Namque ipsi interpretationi naturæ attribuntur libri tres; tertius, quartus, et sextus; siquidem quintus, qui ex anticipationibus est secundum usum rationis communem, ad tempus tantum sumitur, et deinceps postquam figi cœperit, atque ex usu rationis legitimo verificari, et transfertur, et commigrat in sextum. Huic vero libro secundo committitur intellectus ipse, ejusque cura et regimen, omnisque apparatus, atque instructio ad veram rationis administrationem conducens, describitur. Atque licet nomen ipsum logicæ, sive dialecticæ, propter depravationes, apud nos ingratum fere sonet, tamen ut homines per consueta tanquam manu ducamus, est certe ars ea, quam adducimus, ex genere logicæ, quæ et ipsa (vulgaris inquam) auxilia et præsidia intellectu parat et molitur. Differt autem nostra a logica vulgari, tum aliis rebus, tum præcipue tribus; videlicet initiis inquirendi, ordine demonstrandi, atque fine et officio. Nam et inquisitionis initium altius sumit, ea subjiciendo examini, quæ logica vulgaris veluti ex fide aliena, et auctoritate cæca recipit; principia, notio-

nes primas, atque ipsas informationes sensus, et ordinem demonstrandi plane invertit, propositiones et axiomata ab historia et particularibus ad generalia, per scalam ascensionum, continenter subvehendo et excitando, non protinus ad principia, et magis generalia advolando, atque ab illis medias propositiones deducendo et derivando. Finis autem hujus scientiæ est, ut res et opera, non argumenta et rationes probabiles, inveniatur et judicentur. Quare institutum hujus libri secundi hujusmodi est. Nunc distributionem ejusdem similiter proponemus. Quemadmodum in generatione luminis requiritur, ut corpus lumen recepturum poliatur, atque deinde in debito ad lucem situ sive conversione ponatur, antequam lucis ipsius fiat immissio; prorsus ita est operandum. Primo enim mentis area æquanda, et liberanda ab eis, quæ hactenus recepta sunt; tum conversio mentis bona et congrua facienda est ad ea, quæ afferuntur; postremo menti præparatæ informatio exhibenda. Atque pars destruens triplex est, secundum triplicem naturam idolorum, quæ mentem obsident. Illa enim aut adscititia sunt, idque dupliciter; nimirum quæ immigrarunt in mentem eamque occuparunt, vel ex philosophorum placitis atque sectis; vel rursus ex perversis legibus et rationibus demonstrationum; aut ea quæ menti ipsi et substantiæ ejus inhærentia sunt atque innata. Sicut enim speculum inæquale veros rerum radios ex sectione propria immutat: ita et mens, quando a rebus per sensum patitur, in motibus suis expediendis,

\* In priori editione *Delineationem* hanc et *Argumentum* præcesserat tractatus, cui titulus, *Indicia vera de Interpretatione Naturæ*, quem, cum nullus alius sit quam *Novi Organæ præfatio*, noluimus hic loci repetere.

hauquaquam optima fide, rerum naturæ suam naturam inserit et immiscet. Itaque primus imponitur labor, ut omnis ista militia theoriarum, quæ tantas dedit pugnas, mittatur ac relegetur. Accedit labor secundus, ut mens a pravis demonstrationum vinculis solvatur. Hunc excipit tertius, ut vis ista mentis seductoria coërceatur, atque idola innata vel evellantur, vel, si evelli non possint, ita tamen indicentur, atque pernoscantur, ut variationes restitui possint. Inutilis enim et fortasse damnosa fuerit errorum in philosophiis demolitio et destructio, si ex prava complexione mentis novi errorum surculi, et fortasse magis degeneres, pullulerint; neque prius absistendum, quam omnis spes præcidatur, ex usu rationis communi, aut ex vulgaris logicæ præsidiiis et auxiliis, philosophiæ absolvendæ, aut majorem in modum amplificandæ; ne forte errores non abiciamus, sed permutemus. Itaque pars ista, quam destruentem appellamus, tribus redargutionibus absolvitur; redargutione philosophiarum; redargutione demonstrationum; et redargutione rationis humanæ nativæ. Neque nos fugit, absque tanto motu accessiones non parvas ad scientias a nobis fieri potuisse, atque aditu fortasse ad laudem molliore. Verum nos nescii quando hæc alicui alii in mentem ventura sint, fidem nostram in integrum liberare decrevimus.

Post aream mentis æquatam, sequitur ut mens ponatur in conversione bona, et veluti in adpectu benevolo ad ea quæ proponemus. Cum enim in re nova valeat ad præjudicium, non solum præoccupatio fortis opinionis veteris, verum etiam præceptio sive præfiguratio falsa rei, quæ affertur, etiam huic malo remedium adhibendum est, atque mens non tantum vindicanda, sed et præparanda. Ea præparatio nihil aliud est quam ut veræ habeantur de eo, quod adducimus, opiniones, ad tempus tantummodo, et tanquam usurariae, donec res ipsa pernoscat. Atque hoc in eo fere situm est, ut pravæ et sinistrae suspensiones, quales ex prænotionibus receptis (veluti ex atra bile quadam epidemica) mentes hominum subituras facile conijcimus, arceantur atque intercipientur, quod ait ille :

“—ne qua  
Occurrat facies inimica, atque omnia turbet.”

Primo igitur si quis ita cogitet, occulta naturæ veluti signo divino clausa manere, atque ab humana sapientia interdicto quodam separari, dabimus operam ut hæc opinio infirma atque invida tollatur, eoque rem perducemus, simplici veritate freti, ut non solum ne qua oblatret superstitio, verum etiam ut religio in partes nobis accedat. Rursus si cui hujusmodi quippiam in mentem veniat opinari, magnam illam et sollicitam moram in experientia, et in materiæ et rerum particularium undis, quam hominibus imponemus, mentem veluti in Tartarum quandam confusio- nis dejicere, atque ab abstractæ sapientiæ serenitate et tranquillitate, ut a statu multo diviniore, submo- vere, docebimus atque in perpetuum, ut speramus, stabiliemus (non sine rubore, ut existimamus, omnis scholæ, quæ meditationibus inanibus atque ab omni essentia desertissimis apotheosis quandam attribuere non veretur) quantum inter divinæ mentis ideas et humanæ mentis idola intersit. Quin etiam illis,

quibus, in contemplationis amorem effusis, frequens apud nos operum mentio asperum quiddam atque ingratum et mechanicum sonat, monstrabimus quan- tum illi desideriis suis propriis adversentur, cum puritas contemplationum, atque substructio et inventio operum prorsus eisdem rebus nitantur, ac simul perficiantur. Adhuc si quis hæsitet, atque istam scientiarum ab integro regenerationem, ut rem sine exitu, et vastam, et quasi infinitam accipiat, ostende- mus eam contra censi debere potius errorum et vastitatis terminum et verum finitorem; atque planum faciemus, inquisitionem rerum particularium justam et plenam, demptis individuis, et gradibus rerum, et variationibus minutis, (id quod ad scientias satis est,) atque inde debito modo excitatas notiones sive ideas, rem esse multis modis magis finitam, et habilem, et comprehensibilem, et sui certam, et de eo, quod confectum est, atque eo, quod superest, gnaram, quam speculationes et meditationes ab- tractas, quarum revera nullus est finis, sed perpetua circulatio, volutatio, et trepidatio. Atque etiam si quis sobrius (ut sibi videri possit) et civilis prudentia diffidentiam ad hæc transferens, existimet hæc, quæ dicimus, votis similia videri, quæque spei nimis indulgeant, revera autem ex philosophiæ statu ma- tato nil aliud secuturum, quam ut placita fortasse transferantur, res autem humanæ nihilo futuræ sint auctiores; huic fidem, ut putamus, faciemus, nil minus agi, quam placitum aut sectam, nostramque rationem ab iis, quæ hucusque in philosophia et scientiis præbita sunt, toto genere differre: operum autem certissimam messem sponderi, ni homines muscum sive segetem herbidam demetere præocce- parent, atque affectu puerili et conatu fallaci operum pignora intempestive captaverint. Atque ex his, quæ diximus, pertractatis, satis cautum de præjudicio fore existimamus illius generis, quod ex prava et iniqua rei, quæ adducitur, perceptione conflatur, atque una secundam partem, quam præparantem appellamus, absolvi; postquam et ex parte religionis et ex parte contemplationis abstractæ, et ex parte prudentiæ naturalis, atque ejus comitatu, diffidentia, et sobrietate, et similibus, omnis adversa aura cot- ticerit, et reflare desierit. Attamen ut omnibus numeris completa adhibeatur præparatio, illud de- esse videtur, ut languor ipse mentis et torpor ex rei miraculo contractus tollatur. Hæc autem mala dispositio mentis tantum per causarum indicationem aufertur: sola enim causarum cognitio miraculum rei, et stuporem mentis solverit. Itaque omnes impedimentorum malitias et molestias, quibus inter- clusa philosophia vera remorata est, signabimus, ut minime mirum sit humanum genus erroribus tam diuturnis implicatum, atque exercitum fuisse. In qua parte etiam illud opportune ad spem so- lido argumento fovendam patebit, nimirum hæc vera illa naturæ interpretatio, quam molimus, merito maxime difficilis, tamen multo maximam difficultatis partem in iis subesse, quæ in potestate nostra sunt atque corrigi possunt, non in iis, quæ extra potestatem nostram sita existunt; in mente (inquam) non in rebus ipsis, aut in sensu. Quod si cui supervacua videatur accurata ista nostra, quam adhibemus ad mentes præparandas, diligentia,

atque cogitet hoc quiddam esse ex pompa, et in ostentationem compositum, itaque cupiat rem ipsam, missis ambagibus et præstructionibus, simpliciter exhiberi; certe optabilis nobis foret (si vera esset) hujusmodi insinulatio. Utinam enim tam proclive nobis esset difficultates et impeditamenta vincere, quam fastum inanem et falsum apparatus deponere. Verum hoc velimus homines existiment, nos hand inexplorato viam in tanta solitudine inire, præsertim cum argumentum hujusmodi præ manibus habeamus, quod tractandi imperitia perdere, et veluti exponere nefas sit. Itaque ex perpenso et perspecto tam rerum quam animorum statu, duriores fere aditus ad hominum mentes, quam ad res ipsas, invenimus, ac tradendi labores inveniendi laboribus haud multo leviores experimur, atque quod in intellectuales res nova fere est, morem gerimus, et tam nostras cogitationes quam aliorum simul bajulamus. Omne enim idolum vanum arte, atque obsequio, ac debito accessu subvertitur; vi et contentione atque incursione subita et abrupta efferatur. Neque hoc ideo tantum fit, quod homines vel admiratione auctorum captivi, vel propria fiducia tumidi, vel assuetudine quadam renitentes, se æquos præbere nolint. Si quis libentissime sibi æquitatem imperare voluerit, atque omne præjudicium veluti ejuraverit, tamen et tali mentis dispositioni nequiquam propterea fidere oporteret. Nemo enim intellectui suo ex arbitrio voluntatis suæ imperat, neque philosophorum (ut prophetarum) spiritus philosophis subjecti sunt. Itaque non aliorum æquitas, aut sinceritas, aut facilitas, sed nostra propria cura atque morigeratio et insinuatō nobis præsidio esse possit. Qua in re accedit et alia quædam difficultas ex moribus nostris haud parva, quod constantissimo decreto nobis ipsi sancivimus, ut candorem nostrum et simplicitatem perpetuo retineamus, nec per vana ad vera aditum quæramus, sed ita obsequio nostro moderemur, ut tamen non per artificium aliquod vafrum, aut imposturam, aut aliquid simile imposturam, sed tantummodo per ordinis lumen, et per novorum super saniores partem veterum solertem insitionem, nos nostrorum votorum compotes fore speremus. Itaque eo redimus, ut hanc præmuniendi diligentiam minorem potius pro tantis difficultatibus, quam minus necessariam esse judicemus. Missa autem jam parte præparante, ad partem informantem veniemus, atque artis ipsius, quam adducimus, figuram simplicem et nudam proponemus.

Quæ ad intellectum perficiendum, ad interpretationem naturæ faciunt, dividuntur in tres ministrationses, ministrationsem ad sensum, ministrationsem ad memoriam, et ministrationsem ad rationem. In ministrationse ad sensum tria docebimus. Primo, quomodo bona notio constituat et eliciatur, ac quomodo testatio sensus, quæ semper est ex analogia hominis, ad analogiam mundi reducatur et rectificetur; neque enim multum sensui tribuimus in perceptione immediata, sed quatenus motum sive alterationem rei manifestat. Secundo, quomodo ea, quæ sensum effugiunt aut subtilitate totius corporis, aut partium minutis, aut loci distantia, aut tarditate, vel etiam velocitate motus, aut familiaritate objecti, aut alias, in ordinem sensus redigantur, atque ejus

judicio sistantur, ac insuper in casu, quo adduci non possunt, quid faciendum, atque quomodo huic destinationi vel per instrumenta, vel per graduum observationem peritam, vel per corporum proportionatorum ex sensibilibus ad insensibilia indicationes, vel per alias vias ac substitutiones, sit subveniendum. Postremo loco de historia naturali, et de modo experimentandi dicemus, qualis sit ea historia naturalis, quæ ad philosophiam condendam sufficere possit; et rursus qualis experimentatio, deficiente historia, necessario sit suscipienda: ubi etiam quædam de provocanda et figenda attentione admiscebimus. Multa enim in historia naturali atque experimentis, notitia ipsa adesse jampridem, usu abesse solent, propter vim animi apprehensivam minime excitatam. His tribus ministratio ad sensum absolvitur. Aut enim sensui materia præbetur, aut juvamentum; nimirum vel ubi deficit, vel ubi declinat. Materię, historia, et experimenta, defectui sensus substitutiones; declinationi rectificationes debentur. Ministratio ad memoriam hoc officium præstat, ut ex turba rerum particularium, et naturalis historiæ generalis acervo, particularis historia excerpatur, atque disponatur eo ordine, ut iudicium in eam agere, et opus suum exercere possit. Etenim vires mentis sobrie æstimandæ, neque sperandum ut eæ in rerum infinitate discurrere possint. Manifestum autem est, memoriam tum in rerum multitudine comprehendenda incapacem et incompetentem; tum in rerum delectu, quæ ad inquisitionem aliquam definitam faciant, suggerendo imparatam atque inhabilem esse. Quod autem ad prius malum attinet, facilis est mendi ratio; unico enim remedio absolvitur; ut nulla nisi de scripto inquisitio aut inventio recipiatur. Perinde enim est ut quis interpretationem naturæ in aliquo subjecto, memoria sola nixus, complecti velit, ac si computationes ephemeridis memoriter tenere aut perficere tentet. Quinetiam satis liquet quantum memoriæ et mentis discursui tribuamus, cum nec de scripto inventionem, nisi per tabulas ordinatas, probemus. De posteriore igitur magis laborandum. Atque certe postquam subjectum inquisitioni constitutum et terminatum sit, atque a corpore rerum abscissum et in confusum constitit, (in quo habemus nonnulla, quæ utiliter præcipiamus,) ministratio ista ad memoriam tribus operis sive officii consistere videtur. Primo docebimus qualia sint ea, quæ circa subjectum datum sive propositum (discurrendo per historiam) inquiri debeant, quod est instar topicæ. Secundo, quo ordine illa disaponi oporteat, et in tabulas digeri. Neque tamen ullo modo speramus veram rei venam, quæ ex analogia universi sit jam a principio, inveniri posse, ut eam partitio sequatur; sed tantum apparentem, ut res aliquo modo secetur in partes. Citius enim emergit veritas et falsitate, quam e confusione, et facilius ratio corrigit partitionem, quam penetrabit massam. Tertio itaque ostendemus, quo modo et quo tempore inquisitio sit reintegranda, et chartæ sive tabulæ præcedentes in chartas novellas transportandæ, et quoties inquisitio sit repetenda. Etenim primas chartarum series vel sequelas super polos mobiles verti statuimus, et tantum probationes esse et tentamenta inquisitionis; siquidem mentem in naturam rerum jus suum persequi et obti-

nere posse, nisi repetita actione, plane diffidimus. Itaque ministratio ad memoriam tribus (ut diximus) doctrinis absolvitur; de locis inveniendi, de methodo contabulandi, et de modo instaurandi inquisitionem.

Superest ministratio ad rationem, cui ministraciones duæ priores subministrant. Nullum enim per eas constituitur axioma, sed tantum notio simplex cum historia ordinata; certo verificata per ministrationem primam, atque ita repræsentata per secundam, ut tanquam in potestate nostra sit. Atque ministratio ad rationem ea maxime probari meretur, quæ rationem ad opus suum exequendum, et finem obtinendum optime juvabit. Opus autem rationis natura unicum; fine et usu geminum est. Aut enim scire et contemplari, aut agere et efficere, homini pro fine est. Itaque aut causæ expetitur cognitio et contemplatio; aut effecti potestas et copia. Quamobrem dati effectus vel naturæ in quovis subjecto causas nosse intentio est humanæ scientiæ. Atque rursus, super datam materiæ basin effectum quodvis sive naturam (inter terminos possibiles) imponere vel superinducere, intentio est humanæ præsentis. Atque hæ intentiones, acutius inspicienti et vere æstimanti, in idem coincidunt. Nam quod in contemplatione instar causæ est, in operatione est instar medii; scimus enim per causas, operamur per media. Et certe si media universa, quæ ad opera quælibet requiruntur, homini optato ad manum suppeterent, nil opus foret magnopere ista separatim tractare. Verum cum operatio humana in multo majores angustias compellatur, quam scientia, propter individui multiplices necessitates et inopias; adeo ut ad partem operativam requiratur sæpius non tam sapientia universalis et libera de eo quod fieri potest, quam prudentia sagax et solers ad delectum eorum quæ præsto sunt; ista tractatu feliciter disjungi consentaneum est. Quare et ministrationis eandem partitionem faciemus, ut aut parti contemplativæ, aut activæ ministretur. Atque quod ad partem contemplativam attinet, ut verbo dicamus, in uno plane sunt omnia. Hoc ipsum non aliud est, quam ut verum constituatur axioma, sive idem copulatum; hæc enim est veritatis portio solida, cum simplex notio instar superficiæ videri possit. Hoc autem axioma non elicitur aut efformatur, nisi per inductionis formam legitimam et propriam; quæ experientiam solvat et separet, atque per exclusiones et rejections debitas necessario concludat. Vulgaris autem inductio (a qua tamen principiorum ipsorum probationes petuntur) puerile quiddam est, et precario concludit, periculo ab instantia contradictoria exposita; adeo ut dialectici de ea nec serio cogitasse videantur, fastidientes, et ad alia properantes. Illud interim manifestum est, quæ per inductionem cujusvis generis concluduntur, simul et inveniri et iudicari, nec a principiis aut mediis pendere, sed mole stare sua, neque aliunde probari. Multo magis necesse est ea, quæ ex vera inductionis forma excitantur, axiomatica esse seipsis contenta, atque ipsis principiis, quæ vocantur, certiora et firmiora. Atque hoc genus inductionis illud est, quod interpretationis formulam appellare consuevimus. Itaque præ omnibus doctrinam de constitutione axiomatis et formula interpretandi diligenter et perspicue complectimur.

Restant tamen, quæ huic rei serviunt, tria maximi omnino momenti, sine quorum explicatione inquisitionis istius præscriptum, licet potestate validum, tamen usu operosum censi possit. Ea sunt, inquisitionis ipsius continuatio, variatio, et contractio; ut nihil in arte aut abruptum, aut incongruum, aut pro humanæ vitæ brevitate longum relinquatur. Docerimus itaque primo usum axiomatum (jam per formulam inventorum) ad alia axiomata inquirenda et excitanda, quæ superiora et magis generalia sint: ut per veros et nusquam intermissos gradus scale adscensoriæ ad unitatem naturæ perveniantur. In quo tamen adjiciemus modum eadem axiomata superiora per experientias primas examinandi et verificandi, ne rursus ad conjecturas, et probabilia, atque idola prolabamur. Atque hæc est ea doctrina, quam inquisitionis continuationem appellamus. Variatio autem inquisitionis sequitur naturam diversam, aut causarum, quarum gratia inquisitio instituitur; aut rerum ipsarum, sive subjectorum, in quibus inquisitio versatur. Itaque missis causis finalibus, quæ naturalem philosophiam prorsus corruperunt, initia sumemus ab inquisitione variata sive accommodata formaram; quæ res pro desperata hucusque abjecta est, idque merito. Neque enim ulli obvenire possit tanta facultas aut felicitas, ut ex anticipationibus et dialecticis argumentationibus alicujus rei formam eruat. Sequuntur inquisitiones materiarum et efficientium. Cum autem efficientia et materias dicimus, non efficientia remota, et materias communes (qualia in disputationibus agitantur) sed efficientia propria, et materias preparatas intelligimus. Id ne sæpius subtilitate inutili repetatur, inventionem latentis processus subtexemus. Latentem autem processum appellamus seriem et ordinem mutationis; rem scilicet ex efficientis motu et materiæ fluxu consistam. Quæ autem secundum subjecta fit inquisitionis variatio, ex duabus rerum conditionibus ortum habet; aut ex natura simplicis et compositi, (alia enim accommodatur inquisitio ad res simplicia, alia ad compositas et decompositas et perplexas,) aut ex historiæ copia et inopia, quæ ad inquisitionem peragendam parari possit. Ubi enim historia abundat, expedita est ratio inquisitionis; ubi tenuis est, in arcto est labor, et multifaria industria et arte opus habet. Itaque per ista, quæ jam dicta sunt tractata, variationem inquisitionis absolvi putamus. Restat inquisitionis contractio, ut non tantum in inviis via, sed et in viis compendium, et tanquam linea recta, quæ per ambages et flexus secet, ex indicia nostris innotescat. Hoc autem (veluti et omnis ratio compendiarum) maxime in rerum delectu consistit. Dux autem invenimus veluti rerum prærogativas, quæ ad inquisitionis compendia plurimum faciunt; prærogativam instantiæ, et prærogativam inquisiti. Itaque docerimus primo quales sint illæ instantiæ, sive experimenta, quæ ad illuminationem præ cæteris excellent, adeo ut paucæ idem, quod aliæ plures præstant. Hoc enim et moli ipsius historiæ, et discurrendi laboribus parcat. Deinde etiam explicabimus, qualia sint ea inquisita, a quibus interpretationem auspiciari oporteat, utpote quæ prædisposita sequentibus faciem quandam præferunt aut ob exquisitam certitudinem in se, aut ob naturam univer-

saalem, aut ob necessitatem ad probationes mechanicas. Atque hic ministratiōni, quæ ad contemplativam partem spectat, finem imponimus. Activam autem partem ac ejus ministratiōnem triplici doctrina claudemus, si prius duo monita ad aperiendas hominum mentes præmittamus. Horum primum est, in inquisitione ea, quæ fit per formulam, inter contemplativam partem activam ipsam perpetuo intercurrere. Hoc enim fert rerum natura, ut propositiones et axiomata, a magis generalibus per argumentationem dialecticam deducta et derivata ad particularia et opera, obscure admodum et incerto innuant. Quod autem ex particularibus axioma educitur, ad nova particularia, tanquam correspondentia, manifesto et constanti tramite ducat. Alterum hujusmodi est, ut meminerint homines in inquisitione activa necesse esse rem per scalam descensoriam (cujus usum in contemplativa sustulimus) confici. Omnis enim operatio in individuis versatur, quæ infimo loco sunt. Itaque a generalibus per gradus ad ea descendendum est. Neque rursus fieri potest, ut per axiomata simplicia ad ea perveniatur; omne enim opus atque ejus ratio ex coitione axiomatum diversorum instituitur et designatur. Itaque hæc præfati ad triplicem illam doctrinam activam veniemus; quarum prima proponit modum inquisitionis distinctum et proprium, ubi non jam causa, aut axioma, sed operis alicujus effectio ex intentione est, atque inquisitioni subicitur. Secunda ostendit modum conficiendi tabulas practicas generales, per quas omnigenæ operum designationes facilius et promptius deducantur. Tertia subjungit modum quendam inquirendi sive inveniendi opera, imperfectum certe, sed tamen non inutilem, quo ab experimento ad experimentum procedatur absque constitutione axiomatis. Nam quemadmodum ab axioma ad axioma, ita etiam ab experimento ad experimentum datur et aperitur quædam via ad inveniendum instabilis et lubrica, sed tamen non prorsus silentio prætermittenda. Jam igitur et practicam ministratiōnem quoque, quæ in distributione ultima posita est, absolvimus. Atque hæc est hujusce secundi libri aperta et brevis delineatio. Quibus explicatis, thalamum nos mentis humanæ et universi, pronuba divina bonitate, plane constituissæ confidimus. Epithalamii autem votum sit, ut ex eo connubio auxilia humana, tanquam stirps heroum, quæ necessitates et miserias hominum aliqua ex parte debellant et doment, suscipiatur et deducatur. Sub finem tamen quædam de laborum consociatione et successione subjiciemus. Tunc enim demum homines vires suas noscent, cum non eadem infiniti, sed omnia alii præstabunt. Neque sane de futuris ætatibus spem abjecimus, quin exoriantur qui ista a tenuibus profecta initiis in majus provehant. Illud enim occurrit, hoc quod agitur, ob boni naturam eminentem, manifeste a Deo esse. In divinis autem operibus minima quæque principia eventum trahunt.

Atque in radargutione ipsa philosophiarum, quam paramus, nescimus fere, quo nos vertamus, cum via, quæ aliis in confutationibus patuit, nobis interclusa sit. Nam et tot et tanta se ostendunt errorum agmina, ut ea non strictim, sed confertim evertere et

summovere necesse sit; et si propius accedere, et cum singulis manum conserere velimus, id frustra fuerit; sublata disputationis lege, cum de principiis non consentiamus; et multo magis quod ipsas probationum et demonstrationum formas et potestates rejiciamus. Quod si (id quod solum relinqui videtur) ea, quæ nos asserimus, a sensu ipso et experientia educere et excitare conitiamur; rursus eodem revolvimur; et obliiti eorum, quæ de animorum præparatione dicta sunt, contrariam ingressi viam inveniamur; nam in res ipsas abrupte et directo incidamus, ad quas viam quandam aperiri et subterni, propter obfirmatas animorum præoccupationes et obsessions, necesse esse decrevimus. Sed tamen propterea ipsi nos minime deseremus; sed aliquid comminisci et tentare, quod proposito nostro consentaneum sit, conabimur; tum signa quædam adducentes, ex quibus de philosophiis judicium fieri possit; tum interim inter ipsas philosophias, portenta errorum nonnulla, et mera animorum ludibria ad earum auctoritatem labefactandam notantes. Neque tamen nos fugit, fortius hujusmodi errorum aëra figi, quam ut eis per saturam derogetur; præsertim cum viris doctis non sit nova aut incognita ea confidentiæ et jactantiæ species, quæ opiniones abjicit, non frangit. Sed nec nos aliquid levius aut inferius, quam pro rei, quæ agitur, majestate afferemus, neque ex hoc genere redargutionis prorsus fidem facere, sed tantum patientiam et æquanimitem, idque in ingeniis tantum altioribus et firmioribus, conciliare speramus. Neque enim quispiam ex isto assiduo et perpetuo errorum contubernio ita se recipere potest, et ad nostra cum tanta benevolentia et animi magnitudine accedere, ut non cupiat habere interim quæ de veteribus et receptis cogitet et opinetur. Sane in tabellis non alia inscripseris nisi priora deleveris; in mente ægre priora deleveris, nisi alia inscripseris.

Itaque huic desiderio subveniendum putavimus, atque hæc prorsus eo spectant (ut quod res est aperte eloquamur) ut volentes ducant, non ut nolentes trahant. Omnem violentiam (ut jam ab initio professi sumus) abesse volumus: atque quod Borgin facete de Caroli octavi expeditione in Italiam dixit, Gallos venisse in manibus cretam tenentes, qua diversoria notarent, non arma, quibus perrumperent. Similem quoque inventorum nostrorum et rationem et successum animo præcipimus; nimirum ut potius animos hominum capaces et idoneos seponere et subire possint, quam contra sentientibus molesta sint. Verum in hac parte, de qua jam loquimur, quæ ad redargutionem philosophiarum pertinet, feliciter sane levati sumus, casu quodam opportuno et mirabili. \*Nam dum hæc tractarem, intervenit amicus meus quidam ex Gallia rediens, quem cum salutassem, atque ego illum, ille me, de rebus nostris familiariter interrogassemus: Tu vero inquit, vacuis tuis ab occupationibus civilibus intervallis, aut saltem remittentibus negotiis, quid agis? Opportune, inquam, nam ne nil me agere existimes, meditor instaurationem philosophiæ, ejusmodi, quæ nihil inanis aut abstracti habeat, quæque vitæ humanæ condi-

\* Quæ abhinc sequuntur, in priori editione tractatulum faciunt, cui titulus *Redargutio Philosophiarum*.

tiones in melius provehat. Honestum profecto opus, inquit: et quos socios habes? Ego certe, inquam, profecto nullos: quin nec quenquam habeo, quo eum familiariter de hujusmodi rebus colloqui possim, ut me saltem explicem et exacuam. Duræ, inquit, partes tuæ sunt: et statim addidit, atque tamen scito hæc aliis curæ esse. Tum ego lætatus: Guttula, inquam, me aspersisti, atque animam reddidisti. Ego enim anum quandam fatidicam non ita pridem conveni, quæ mihi nescio quid obmurmurans, vaticinata est, fœtum meum in solitudine periturum. Vis, inquit, ut tibi narrem quæ mihi in Gallia circa hujusmodi negotium evenerunt. Libentissime, inquam, atque insuper gratiam habeo.

Tum retulit se Parisiis vocatum a quodam amico suo, atque introductum in concessum virorum, qualem, inquit, vel tu videre velles; nihil enim in vita mihi accidit jucundius. Erant autem circiter quinquaginta viri, neque ex iis quisquam adolescens, sed omnes ætate profectiones, quique vultu ipso dignitatem cum probitate singuli præ se ferrent. Inter quos aiebat se cognovisse nonnullos honoribus perfunctos, atque alios ex senatu; etiam antistites sacerorum insignes, atque ex omni fere ordine eminentiore aliquos; erant etiam quidam, ut aiebat, peregrini ex diversis nationibus. Atque cum ille primo introisset, invenit eos familiariter inter se colloquentes; sedebant tamen ordine aedilibus dispositis, ac veluti adventum alicujus expectantes.

Neque ita multo post ingressus est ad eos vir quidam, aspectus (ut ei videbatur) admodum placidi et sereni, nisi quod oris compositio erat tanquam miserantis; cui cum omnes assurrexissent, ille circumspiciens et subridens: Nunquam, inquit, existimavi potuisse fieri, ut otium omnium vestrum, cum singulos recognosco, in unum atque idem tempus coincideret; idque quomodo evenerit, satis mirari non possum. Cumque unus ex cœtu respondisset, eum ipsum hoc otium illis fecisse, cum quæ ab ipso expectarent illi ducerent omni negotio potiora: Atque ut video, inquit, universa illa jactura ejus, quod hic consumetur, temporis, quo certe vos separati multis mortalibus profuissetis, ad meas rationes accedet. Quod si ita est, videndum profecto ne vos diutius morer: simul conedit, absque suggesto ut cathedra, sed ex æquo cum cæteris, atque hujusmodi quædam apud eum concessum verba fecit; nam aiebat, qui hæc narrabat, se illa tum excepisse, ut potuit, licet cum apud se una cum illo amico suo, qui eum introduxerat, ea recognosceret, fateretur ea longe inferiora iis, quæ tum dicta essent, visa esse. Exemplum autem orationis, quam excerpserat, quod circa se habebat, proferebat. Illud ita scriptum erat.

Vos certe, filii, homines estis et mortales; nec conditionis vestræ tantum pœniteat, si naturæ vestræ satis meminertis. Deus, mundi conditor et vestrum, animas vobis donavit mundi ipsius capaces, nec tamen eo ipso satiandas. Itaque fidem vestram sibi seposuit, mundum sensui attribuit: neutra autem oracula clara esse voluit, sed involuta, ut vos exerceret, quandoquidem excellentiam rerum rependeret. Atque de rebus divinis optima de vobis spero: circa humana autem, metuo vobis, ne diuturnus error vos usu ceperit. Existimo enim hoc apud vos penitus

credi, vos statu uti scientiarum florente et bono. Ego rursus moneo vos, ne eorum quæ habetis aut copiam, aut utilitatem, quasi ad magnum aliquod fastigium evecti, et votorum compotes, aut laboribus perfuncti, accipiatis. Idque sic considerate.

Si in omnem illam scriptorum varietatem, qua scientiæ tument et luxuriantur, de eo quod afferent interpellentis, et stricte, et presse examinatis, ubique reperietis ejusdem rei repetitiones infinitas: verbis, ordine, exemplis, atque illustratione, diversas; rerum summa et pondere ac vera potestate prælibatas ac plane iteratas; ut in pompa paupertas sit, et in rebus jejunis fastidium. Atque si vobiscum familiariter loqui et jocari hac de re liceat, videtur doctrina vestra cœnæ illi hospitii Chalcidensis simillima, qui cum interrogaretur unde tam varia venatio? respondit, illa omnia ex mansueto sue esse facta. Neque enim negabitis universam istam copiam nil aliud esse, quam portionem quandam philosophiæ Græcorum, eamque certe minime in saltu aut silvis naturæ nutritam, sed in scholis et cellis, tanquam animal domesticum saginatum. Quod si a Græcis iisque paucis abscedatis, quid tandem habent vel Romani, vel Arabes, vel nostri, quod non ab Aristotelis, Platonis, Hippocratis, Galeni, Euclidis, Ptolemæi inventis derivetur, aut in eadem recidat? Itaque videtis in sex fortasse hominum cerebellis et animulis spes et fortunas vestras sitas esse. Neque vero idcirco Deus vobis animas rationales indidit, ut suas partes (fidem scilicet vestram quæ divinis debetur) hominibus deferretis: neque sensus informationem firmam et validam attribuit, ut paucorum hominum opera, sed ut sua demum opera, cœlum et terram, contemplaremini; laudes suas celebrantes, et hymnum auctori vestro canentes, iis etiam viris, si placet (nihil enim obstat) in chorum acceptis.

Quinetiam ista ipsa doctrina, usu vestra, origine Græca, quæ tanta pompa incedit, quota pars fuit illa sapientiæ Græcorum? Ea enim varia fuit; varietas autem ut veritati non acquiescit, ita nec errorem figit, sed ad veritatem est instar iridis ad solem, quæ omnium imaginum est maxime infirma, et quasi perditata, sed tamen imago. Verum et hanc quoque varietatem nobis extinxit (Græcus et ipse) Aristoteles: credo, ut discipuli res gestas æquaret. Atque discipuli præconium (si recte memini) tale celebratur:

“Felix terrarum prædo, non utile mundo  
Editus exemplum, terras tot posse sub uno  
Esse viro.”—

An et magister, felix doctrinæ prædo? Acerbe illud, sed quæ sequuntur optime. Nullo enim modo ille utilis rebus humanis, qui tot egregia ingenia, tot, inquam, libera capita in servitum redegerit. Itaque, filii, de copia vestra audistis quam arcta, quam ad paucos redacta. Divitiæ enim vestræ sunt paucorum census. De utilitate jam attendite.

Atque tandem ad mentes et sensus vestros, non dicam impetrabimus (vos enim benevoli) sed struemus aut machinabimur, res siquidem difficilis? Quo fomite, qua accensione lumen nobis innatum excitabimus, idque a præstigiis luminis adventitii et infusi liberabimus? Quo modo, inquam, nos vobis dabimus, ut vos vobis reddamus? Inf-

nita præjudicia facta sunt, opiniones haustæ, receptæ, sparsæ. Theologi multa e philosophia ista sua fecerunt, et speculativam quandam ab utraque doctrina coagmentatam condiderunt. Viri civiles, qui ad existimationis suæ fructum pertinere putant, ut docti habeantur, multa ubique ex eadem scriptis suis et orationibus inspergunt. Etiam voces, filii, et verba ex dictamine ejusdem philosophiæ, et secundum ejus præscripta et placita, apposite conficta sunt, adeo ut simul ac loqui didiceritis, (felicem dicam an infelicem,) hanc errorum cabalam haurire et imbiberi necesse fuerit. Neque hæc tantum consensu singulorum firmata, sed et institutis academiæ, collegiorum, ordinum, fere rerumpublicarum veluti sancita est.

Huic itaque jam subito renunciabitis? Idne sumus vobis auctores? Atqui ego, filii, hoc non posulo, neque hujusmodi philosophiæ vestræ fructus moror, aut eos vobis interdico, neque in solitudinem aliquam vos abripiam. Utimini philosophia, quam habetis, disputationes vestras ex ejus uberibus alite, sermones ornate, graviore apud vulgus hominum hoc ipso nomine estote. Neque enim philosophia vera ad hæc multum utilis vobis erit: non præsto est, nec in transitu capitur, nec ex prænotionibus intellectui blanditur, non ad vulgi captum (nisi per utilitatem et opera) descendit. Servate itaque et illam alteram, et, prout commodum vobis erit, adhibete: atque aliter cum natura, aliter cum populo negotiamini. Nemo enim est, qui plus multo, quam alius quis, intelligit, quin ad minus intelligentem tanquam personatus sit, ut se exuat, alteri det. Verum illud vos familiariter pro more nostro moneo, "Habete Laidem, dummodo a Laide non habeamini." Judicium sustinete, aliis vos date, non dedite; et vos melioribus servate. Atque videmus minus quiddam vobis imponere, quod hæc, quæ in manibus habetis, usu vobis et honore manebunt: ideoque æquiore animo passuri estis, eadem de veritate et utilitate in dubium vocari.

Verum etiamsi vos optime animati essetis, ut quæcumque hactenus didicistis aut credidistis, sprete opinionibus, ac etiam rationibus vestris privatis, vel hoc ipso loco deposituri sitis, modo de veritate vobis constaret; attamen hac quoque ex parte hæremus: neque habemus fere quo nos vertamus; ut fidem vobis rei tam inopinatæ et novæ faciamus. Certe disputationis lex penitus sublata est, cum de principiis nobis vobiscum non conveniat. Etiam spes ejusdem præcisæ est, quia de demonstrationibus, quæ nunc in usu sunt, dubitatio injecta est, atque accusatio suscepta. Atque hoc animum statu veritas ipsa vobis non tuto committitur. Itaque intellectus vester præparandus antequam docendus, animi sanandi antequam exercendi sunt, area denique purganda antequam inædificanda: atque ad hunc finem hoc tempore convenistis. Qna igitur industria aut commoditate hoc negotium discutiemus aut agemus? Non desperandum.

Inest profecto, filii, animæ humanæ, utcumque occupatæ et obsessæ, aliqua pars intellectus pura et veritatis hospita; estque ad eam aliqua molli clivo orbita deducens. Agite, filii, vos et ego viros doctos, si quid in hoc genere sumus, exuamus; et faci-

amus nos tanquam aliquos e plebe; et omissis rebus ipsis, ex signis quibusdam externis conjecturas capiamus. Hæc enim saltem nobis cum hominibus communia sunt.

Doctrina vestra, ut dictum est, fluxit a Græciis. Qualis natio? Nil mihi rei cum convitio est, filii; itaque quæ de ea dicta sunt ab aliis, nec repetam, nec imitabor. Tantum dico eam nationem fuisse semper ingenio præproperam, more professoriam, quæ duo sapientiæ et veritati sunt inimicissima. Nec præterire fas est verba sacerdotis Ægyptii, præsertim ad virum e Græcia excellentem prolata, ab auctore etiam nobili e Græcia relata. Is sacerdos certe verus vates fuit, cum diceret, "Vos Græci semper pueri." Annon bene divinatum est? Verissime certe, Græcos pueros æternos esse: idque non tantum in historia, et rerum memoria, sed multo magis in rerum contemplatione. Quidni enim sit instar pueritiæ ea philosophia, quæ garrire et causari noverit, generare et procreare non possit: disputationibus inepta, operibus inanis? Mementote ergo (ut ait propheta) rupis ex qua excisi estis, et de natione, cujus auctoritatem sequimini, quod Græca sit, interdum cogitate.

Sequitur temporis nota, qua philosophia ista vestra nata est et prodiit. Ætas erat, filii, cum illa condita fuit, fabulis vicina, historiæ egena, peregrinationibus et notitia orbis parum informata aut illustrata, quæque nec antiquitatis venerationem, nec temporum recentium copiam habebat, sed utraque dignitate et prærogativa carebat. Etenim antiquis temporibus credere licet fuisse divinos viros, qui altiora, quam pro hominum communi conditione, saperent. Nostram autem ætatem, fateri necesse est, præ illa de qua loquimur (ut taceam ingeniorum et meditationum fructus et labores) etiam duorum fere mille annorum eventis et experientia, et duarum tertiarum orbis notitia auctam esse. Itaque videte quam anguste habitaverint, vel potius conclusa fuerint illius ætatis ingenia, si rem vel per tempora, vel per regiones computetis. Neque enim mille annorum historiam, quæ digna historiæ nomine sit, habebant; sed fabulas et somnia. Regionum vero tractuumque mundi quotam partem noverant, cum omnes hyperboreos, Scythas; omnes occidentales, Celtas, indistincte appellarent; nil in Africa ultra citimam Æthiopiæ partem, nil in Asia ultra Gangem, multo minus novi orbis provincias, ne per auditum sane aut fama nossent: imo et plurima climata et zonas, quibus populi infiniti spirant et degunt, tanquam inhabitabiles ab illis pronuntiatæ sint? Quinetiam peregrinationes Democriti, Platonis, Pythagoræ, non longinquæ profecto, sed potius suburbanæ, ut magnum aliquid celebrantur.

Atque experientia, filii, ut aqua, quo largior est, eo minus corrumpitur. Nostris autem temporibus (ut scitis) oceanus sinus laxavit, et novi orbis patuere, et veteris orbis extrema undique innotescunt, idque distincte ac proprie. Itaque ex ætatis et temporis natura, veluti ex nativitate et genitura philosophiæ vestræ, nil magni de ea Chaldæi prædixerint?

De hominibus videamus. Qua in re optimo fato hoc fit (neque id artificio aliquo nostro cautum est, sed

ipsa res hoc non solum patitur, verum etiam postulat) ut et illis honor servetur, et nos modestiam nostram tueri et retinere possimus, et tamen fidem liberare. Nos enim, filii, nec invidiæ nec jactantiæ nobis conscii sumus, nec de ingenii palma, nec de placitorum regno contendimus: longe alia nostra ratio est, et finis, hocque mox aperietur. Itaque antiquorum ingeniis, excellentiæ, facultati, nihil detrahimus, sed generi ipsi, viæ, instituto, auctoritati, placitis, necessario derogamus. Immensum enim est, quantum scientiarum progressum deprimant, atque opinio copiæ inter maximas causas inopiæ reperitur.

Atque duo sunt, viri, filii, quorum placita ex libris eorum propriis haurire licet. Plato et Aristoteles: utinam illud et reliquorum nonnullis contigisset. Sed Aristoteles, Othomannorum more, regnare se non potuisse existimavit, nisi fratres trucidasset. Idque ei non statim sane, sed postea ex voto nimis feliciter successit. De his itaque duobus pauca dicere instituimus. Xenophontem autem tertium non adjungimus, suavem scriptorem et virum excellentem. Verum cum illis, qui philosophiam tanquam ingenii peregrinationem amœnam et jucundam, non tanquam provinciam laboriosam et sollicitam susceperunt, nobis non multum rei est.

Itaque hos duos viros, Platonem et Aristotelem, si quis inter maxima mortalium ingenia non numeret, aut minus perspicit, aut minus æquus est. Ingenia certe illorum capacia, acuta, sublimia. Sed tamen videndum primo, cujus generis philosophantium censeri possint. Invenio enim tria genera apud Græcos eorum, qui philosophiæ cultores habiti sint. Primum erat Sophistarum, qui per plurimas civitates instituta professione, et per singulas mansitantes, adolescentes, recepta mercede, sapientia imbuere professi sunt, quales fuere Gorgias, Protagoras, Hippias; quos Plato ubique exagitat, et fere in comœdiæ morem deridendos propinat. Neque enim hi rhetores tantum erant, aut orationum conscriptores, sed universalem rerum notitiam sibi arrogabant. Secundum erat eorum, qui majore fastu et opinione, locis certis et sedibus fixis, scholas aperiebant, atque placita et sectam condentes aut excipientes, auditores, sectatores, successores insuper habebant. Ex quo genere erant Plato, Aristoteles, Zeno, Epicurus. Nam Pythagoras etiam auditores traxit, et sectam constituit, sed traditionum potius quam disputationum plenam, et superstitioni quam philosophiæ propiorem. Tertium autem genus erant eorum, qui, remoto strepitu et pompa professoria, serio veritatis inquisitioni, et rerum contemplationi dediti (et tanquam Endymion) solitarii, et quasi sopiti, sibi philosophabantur; aut adhibitis paucis (quibus idem amor erat) in colloquiorum suavitate destinata perficiebant: neque Galatææ more, cujus lusus in undis, disputationum procellis se oblectabant. Atque tales fuere Empedocles, Heraclitus, Democritus, Anaxagoras, Parmenides. Neque enim reperietis hos scholas aperuisse, sed tandem speculationes et inventa sua in scripta redegit, et posteris transmisit.

Nunc autem videtis certe, filii, quæ res agatur. Ego enim duo prima genera (utcumque se invicem obnegent et proscindant) tamen natura rei ipsius

connexa esse statuo. Itaque non hæsitabo apud vos dicere, me locum Platoni et Aristoteli tribuere inter Sophistas; sed tanquam ordinis emendati et reformati. Eandem enim rem prorsus video. Aberat fortasse loci mutatio et circumcursatio, et mercedis indignitas, et inepta ostentatio: atque lucet in illis certe quiddam solennius et nobilius; sed aderat schola, auditor, secta. Itaque genus ipsum profecto cernitis. Jam vero de viris ipsis aliquid separatim dicamus, institutum servantes, ut, missis rebus, ex signis conjiciamus.

Itaque ab Aristotele exorari, memoriam vestram, filii, testamur, si in physicis ejus et metaphysicis non sæpius dialecticæ quam naturæ voces audiat. Quid enim solidi ab eo sperari possit, qui mundam tanquam e categoriis effecerit? Qui negotium materiæ et vacui, et raritatis et densitatis, per distinctionem actus et potentiæ transegerit? Qui animæ genus non multo melius, quam ex vocibus secundæ intentionis, tribuerit? Verum hæc ad res ipsas penetrant. Itaque ab hujusmodi sermone abstinendum. Nam cum confutationem justam instituire immemor plane sit: ita et opiniones tanti hominis per satiram perstringere superbum foret. Signa autem in illo non bona, quod ingenium incitatum et se proripiens, nec alienæ cogitationis nec propriæ fere patiens, quod questionum artifex, quod contradictionibus continuus, quod antiquitati infestus et insultans, quod quæsitæ obscuritas est; alia plurima, quæ omnia magisterium sapiunt, non inquisitionem veritatis.

Quod si quis ad hæc, censuram rem proclivem fortasse esse; illud interim constare, post Aristotelis opera edita, pleraque antiquorum veluti deserta exolevisse: apud tempora autem, quæ sequuta sunt, nil melius inventum esse: magnum itaque virum Aristotelem, qui utrumque tempus ad se traxerit: atque verisimile esse philosophiam in eo ipso tanquam sedes fixas posuisse, ut nihil restet nisi ut conservetur et ornatur. Ego, filii, cogitationem hanc esse existimo hominis vel imperiti, vel partibus infecti, vel desidis. Est enim (ut dicit Scriptura) desidia quadam, quæ sibi prudens videtur et septemplacii rationum pondere gravior. Atque proculdubio (si verum omnino dicendum est) ista desidia hujus opinionis invenietur pars vel maxima; dum humanæ naturæ ingenita superbia, vitiis propriis non solum ignoscens, verum etiam cultum quadam prophanum attribuens; laborum et inquirendi et experiendi fugam pro ea, quæ prudentiæ comes sit, diffidentia veneretur: neque ita multo post socordia singulorum judicium et auctoritatem universorum representet et effingat.

Nos vero primo illud interrogamus. An ob illud vir magnus Aristoteles, quod utrumque tempus traxerit? Certe magnus. Itane? At non major quam impostorum maximus. Impostura enim, atque adeo principis imposturæ, Antichristi, hæc prærogativa singularis est. "Veni," inquit Veritas ipsa, "in nomine Patris mei, nec recipitis me: si quis venerit nomine suo, eum recipietis." Audistisne, filii? Sensu non proprio certe, sed pio et vero, qui in nomine paternitatis aut antiquitatis venerit, non receptum iri; qui autem priora prosternendo, destruendo, auctoritatem sibi usurpaverit, et in nomine

proprio venerit, eum homines sequi. Atque si quis unquam in philosophia in nomine proprio venit, is est Aristoteles, per omnia sibi auctor, quique antiquitatem ita despexit, ut neminem ex antiquis vel nominare fere dignetur, nisi ad confutationem et opprobrium. Quin et disertis verbis dicere non erubescit (bene ominatus certe etiam in maledicto) verisimile esse majores nostros ex terra aliqua aut limo procreatos fuisse, ut ex opinionibus et institutis eorum stupidia, et vere terreis conjicere licet.

Neque tamen illud verum est, antiquorum philosophorum opera, postquam Aristoteles de iis ex auctoritate propria triumphasset, statim extincta fuisse. Videmus enim qualis fuerit opinio de prudentia Democriti post Cæsarem tempora,

“ — Cujus prudentia monstrat,  
Magnos posse viros, et magna exempla duros,  
Verrecum in patria, crassoque sub aëre nasci.”

Atque satis constat sub tempora excultiora imperii Romani, plurimos antiquorum Græcorum libros incolumes mansisse. Neque enim tantum potuisset Aristoteles (licet voluntas ei non defuerit) ut ea deleret, nisi Attila, et Gensericus, et Gothi ei in hac re adjutores fuissent. Tum enim postquam doctrina humana naufragium perpessa esset, tabula ista Aristotelicæ philosophiæ, tanquam materiæ alicujus levioris et minus solidæ, servata est, et extinctis æmulis recepta.

At quod de consensu homines sibi fingunt, id et infidum et infirmum est. An vos, filii, temporis partus habetis numeratos et descriptos in fastis, eos, inquam, qui perierunt, latuerunt, aut aliis orbis partibus innotuerunt? An et abortus qui nunquam in lucem editi sunt? Itaque desinant homines angustias suas mundo et seculis attribuire et imponere. Quid si de suffragiis ipsis litem moveamus, et negemus verum et legitimum consensum esse, cum homines addicti credunt, non persuasi judicant? Transierunt, filii, ab ignorantia in præjudicium: hæc demum est illa coitio potius quam consensus. Postremo, si de isto consensu non diffiteamur, sed eum ipsum ut suspectum rejiciamus, an nos inter morbum istum animorum grassantem et epidemicum sanitatis penitebit? Pessimum certe, filii, omnium augurium est de consensu in rebus intellectualibus, exceptis divinis, cum veritas descendit cœlitus. Nihil enim multis placet, nisi aut imaginationem feriat, ut superstitio; aut notiones vulgares, ut doctrina sophistarum: tantumque consensus iste a vera et solida auctoritate abest, ut etiam violentam præsumptionem inducat in contrarium. Optime enim Græcus ille, *Quid peccavi?* cum complauderent.

Quod si is esset vir, qui putatur esse, Aristoteles, tamen nullo modo vobis auctor sim, ut unius hominis cogitata et placita instar oraculi recipiatis. Quæ enim, filii, est ista voluntaria servitus? tantone auditoribus monachi illius ethnici deteriores estis, ut illi suum *ipse dixit* post septennium deponerent, vos illud post annos bis mille retineatis? Atque necistum ipsum præclarum auctorem habuissetis, si antiquitatis studium valuisset; et tamen eadem in illum lege et conditione uti veremini. Quin si me audietis, dictionem istam non modo huic homini, sed et cuivis

mortalium, qui sunt, qui erunt, in perpetuum negabitis; atque homines in recte inventis sequemini; ut videntes lucem, non in omnibus promiscue, ut cæci ducem. Neque certe vos virium poniteat, si experiamini: neque enim Aristotele in singulis, licet forte in omnibus, inferiores estis. Atque quod caput rei est, una certe re illum longe superatis, exemplis videlicet, et experimentis et monitis temporis. Nam ut ille (quod narrant) librum confecerit, in quo ducentarum quinquaginta quinque civitatum leges et instituta collegerit; tamen non dubito quin unius reipublicæ Romanæ mores et exempla plus ad prudentiam et militarem et civilem contulerint, quam omnia illa. Similia etiam et in naturali philosophia evenerunt. Itane vero animati estis, ut non tantum dotes vestras proprias, sed etiam temporis dona projiciatis? Itaque vindicate vos tandem, et vos rebus addite, neque accessio unius hominis estote.

De Platone vero ea nostra sententia est; illum, licet ad rempublicam non accessisset, sed a rebus civilibus administrandis quodammodo refugisset propter temporum perturbationes, tamen natura et inclinatione omnino ad res civiles propensum, vires eo præcipue intendisse; neque de philosophia naturali admodum sollicitum fuisse; nisi quatenus ad philosophi nomen et celebritatem tuendam, et ad majestatem quandam moralibus et civilibus doctrinis addendam et aspergendam sufficeret. Ex quo fit, ut quæ de natura scripsit, nil firmitudinis habeant. Quinetiam naturam theologia non minus, quam Aristoteles dialectica, infecti et corrupti. Optima autem in eo signa (si cætera consensissent) quod et formarum cognitionem ambiret, et inductione per omnia, non tantum ad principia, sed etiam ad medias propositiones uteretur: licet et hæc ipsa duo vere divina, et ob quæ nomen divini non dico tulit sed meruit, corruerit et inutilia reddiderit, dum et formas abstractas prensaret, et inductionis materiam tantum ex rebus obviis et vulgaribus desumeret: quod hujusmodi scilicet exempla (quia notiora) disputationibus potius convenirent. Itaque cum ei diligens naturalium rerum contemplatio et observatio deesset, quæ unica philosophiæ materia est, nil mirum si nec ingenium altum, nec modus inquisitionis felix magnopere profecerint. Verum nos ex signorum consideratione, nescio quomodo, in res ipsas prolabimur: non enim facile separari possunt, neque ea ingrata vobis auditu fuisse arbitramur.

Quin etiam fortasse et illud insuper scire vultis quid de reliquis illis sentiamus, qui alienis, non propriis scriptis nobis noti sunt, Pythagora, Empedocle, Heraclito, Anaxagora, Democrito, Parmenide, aliis. Atque hac de re, filii, nil reticebimus, sed animi nostri sensum integrum et sincerum vobis aperiemus. Scitote itaque, nos summa cum diligentia et cura omnes vel tenuissimas auras circa horum virorum opiniones et placita captasse: ut quicquid de illis vel dum ab Aristotele confutantur, vel dum a Platone et Cicerone citantur, vel in Plutarchi fasciculo, vel in Laërtii vitis, vel in Lucretii poemate, vel in aliquibus fragmentis, vel in quavis alia sparsa memoria et mentione, inveniri possit, evolverimus, neque cursim aut contemptim, sed cum fide et deli-

beratione, examinaverimus. Atque dubium profecto non est, quin si opiniones eorum, quas nunc per internuncios quosdam minime fidos solummodo habemus, in propriis exstarent operibus, ut eas ex ipsis fontibus haurire liceret, majorem firmitudinem habituræ fuissent; cum theoriarum vires in apta et se mutuo sustentente partium harmonia et quadam in orbem demonstratione consistant, ideoque per partes traditæ infirmæ sint.

Neque negamus nos reperire, inter placita tam varia, haud pauca in contemplatione naturæ et causarum assignatione non indiligenter notata. Alios autem in aliis (ut fere fieri solet) constat feliciores fuisse. Quod si cum Aristotele conferantur, plane censemur fuisse ex iis nonnullos, qui in multis Aristotele longe et acutius et altius in naturam penetraverint; quod fieri necesse fuit, cum experientiæ cultores magis religiosi fuerint, præsertim Democritus, qui ob naturæ peritiam etiam magus habitus est. Veruntamen nobis necesse est, si simpliciter et absque persona vobiscum agere stat decretum, nomina ista magna brevi admodum sententia transmittere: esse nimirum hujusmodi philosophorum placita ac theorias, veluti diversarum fabularum in theatro argumenta, in quandam veri similitudinem, alia elegantius, alia negligentius aut crassius conficta: atque habere quod fabularum proprium est, ut veris interdum narrationibus concinniora et commodiora videantur, et qualia quis libentius crederet. Sane cum isti famæ et opinioni tanquam scenæ minus servirent quam Aristoteles et Plato et reliqui e scholis, puriores fuere ab ostentatione et impostura, atque eo nomine saniores; cætera similes erant. Una enim quasi navis philosophiæ Græcorum videtur, atque errores diversi, causa errandi communes.

Quinetiam nobis minime dubium est, si penes populum et civitates liberas res mansissent, fieri non potuisse ut humani ingenii peregrinationes popularibus auris velificantes, utcumque inter tam numerosa et varia theoriarum commenta se sistere aut continere potuissent. Quemadmodum enim in astronomiis, et iis quibus terram rotari placet, et eis qui per veterem constructionem tenuerint, phænomenorum in cœlis patrocina æqua sunt, quin et tabularum calculi utriusque respondent: eodem modo, ac multo etiam facilius est in naturali philosophia complures theorias excogitare inter se multum differentes, sed tamen singulas sibi constantes, et experientiam et præsertim instantias vulgares, quæ in quæstionibus philosophicis (ut nunc fit) iudicia exercere solent, in diversum trahentes et pro testibus citantes.

Neque enim defuerunt etiam nostra ætate, in nostris, inquam, frigidis præcordiis atque tempore, quo res religionis ingenia consumserint, qui novas philosophiæ naturalis fabricas meditati sunt. Nam Telesius ex Consentia scenam conscendit, et novam fabulam egit, argumento profecto magis probabilem, quam plausu celebrem. Et Gilbertus ex Anglia, cum naturam magnetis laboriosissime et magna inquisitionis firmitudine et constantia, necnon experimentorum magno comitatu et fere agmine perscrutatus esset, statim imminebat et ipse novæ philosophiæ condendæ, nec Xenophanis nomen in Xenomanem per ludibrium versum expavit, in cuius sen-

tentiam inclinabat. Quin et Fracastorius, licet ætatem non condiderit, tamen libertate iudicii honeste usus est; eadem ausus est Cardanus, sed levior.

Atque existimo, filii, vos ad istam, quam ex nobis auditis, tam latam et generalem opinionem et auctorum rejectionem obstupescere. Licet enim de nobis bene existimetis, tamen vereri videmini, ut invidiam hujusce rei nobiscum una sustinere possitis. Quin et ipsi (credo) miremini et animi pendetis, quorsum res hæc evasura sit, et quam tandem conditionem vobis afferamus. Itaque diutius suspensos vos non tenebimus: atque simul et vos admiratione, et nos invidia, ut speramus, nisi admodum iniqua fuerit, exsolvemus. Atque meministis profecto etiam ab initio nos tale quiddam significasse. Antiquis non certe auctoritatem et fidem (id enim perniciosum) sed honorem ac reverentiam intacta et imminuta fore; tametsi possemus pro jure nostro, neque eo ipso alio quam omnium, si quid apud eos non recte inventum aut positum sit, id reprehendere aut notare. Sed res ipsa hoc non postulat, fato quodam, ut arbitramur, ad invidiam et contradictionem extinguendam et depellendam meliore.

Audite itaque, filii, quæ jam dicemus. Nos si profiteamur nos meliora afferre quam antiqui, eadem quam antiqui viam ingressos, nulla verborum arte efficere possimus, quin inducatur quædam ingenii, vel excellentiæ vel facultatis comparatio sive contentio: non ea quidem illicita aut nova; sed impar ob virium nostrarum modum; quem eum esse satis sentimus, ut non solum antiqua, sed et vivis cedat. Cum autem (ut simpliciter apud vos loquamur) claudus in via (quod dici solet) cursorem extra viam antevertat, commutata ratio est. Atque de via (mementote) non de viribus quæstio oritur, nosque indicis non iudicis partes sustinemus. Itaque aperte vale jussu omni fuco et artificio, fatemur nos in hac opinione esse, omnia omnium ætatum ingenia, si in unum coierint, eo quo nunc res geritur modo, hoc est (ut clare loquamur) ex meditatione et argumentatione, in scientiis magnos processus facere non posse. Quin neque hic finis, sed addimus insuper, quanto quis ingenio plus valet, eundem, si naturæ lucem, id est, historiam et rerum particularium evidentiâ intempèstive deserat, tanto in obscuriores et magis perplexos phantasiarum recessus, et quasi specus se detrudere et involvere.

Annon forte animadvertistis, filii, quanta ingeniorum et acumina et robora apud philosophos scholasticos, otio et meditationibus luxuriantes, et ob tenebras ipsas in quibus enutriti erant feroces, quales nobis telas araneorum pepererint, textura et subtilitate filii mirabiles, usus et commodi expertes. Etiam illud simul affirmamus; nostram quam ad artes adducimus rationem, et inquisitionis formam talem esse, quæ hominum ingenia et facultates, ut hæreditates Spartanæ fere æquet. Nam quemadmodum ad hoc, ut linea recta aut circulus perfectus describatur, plurimum est in manus ac visus facultate, si per constantiam manus et oculorum iudicium tantum res tentetur; sin per regulam admotam, aut circinum circumductum, non item; eadem ratione, et in contemplatione rerum, quæ mentis viribus solum incumbit, homo homini præstat vel maxime.

In ea autem, quam nos adhibemus, non multo major in hominum intellectu eminet inæqualitas, quam in sensu inesse solet. Quin et ab ingeniorum acumine et agilitate (ut dictum est) dum suo motu feruntur, periculum metuimus, atque in eo toti sumus, ut hominum ingeniis non plumas aut alas, sed plumbum et pondera addamus. Nullo enim modo videntur homines adhuc nosse, quam severa sit res veritatis et naturæ inquisitio; quamque parum hominum arbitrio relinquat. Neque tamen nos peregrinum quiddam, aut mysticum, aut Deum tragicum ad vos adducimus. Nil enim aliud est nostra via, nisi literata experientia, atque ars sive ratio naturam sincere interpretandi, et via vera a sensu ad intellectum.

Verum annon videtis, filii, quid per hæc, quæ diximus, effectum sit? Primum, antiquis suis honores manent. Nam in iis, quæ in ingenio et meditatione posita sunt, illi mirabiles viros se præstitere; neque nobis sane eam viam ingressis longo intervallo eorum progressus æquare, ut arbitramur, vires suffecissent. Deinde, intelligitis profecto, minus quiddam esse hanc rejectionem auctorum generalem; quam si alios rejecissemus, alios probassemus. Tum enim iudicium quoddam exercissemus; cum nunc tantummodo (ut dictum est) indicium faciamus. Postremo etiam perspicitis quid nobis prorsus relinquatur; sive nos aliquid sumere, sive aliis aliquid nobis tribuere liceat.

Non ingenii, non excellentiæ, non facultatis laus, sed fortuna quædam, ea magis vestra quam nostra, cum res sit potius usu fructuosa, quam inventionem admirabilis. Nam uti vos fortasse miramini, quando hoc nobis in mentem venire potuerit; ita et nos vicissim miramur, quomodo idem aliis in mentem jam pridem non venerit; non ulli mortalium cordi aut curæ fuisse, ut intellectui humano auxilia et præsidia ad naturam contemplandam et experientiam digerendam compararet; sed omnia vel traditionum caligini, vel argumentorum vertigini et turbini, vel casus et experimentorum undis et ambagibus permixta esse, nec mediam quandam viam inter experientiam et dogmata aperiri potuisse? Sed tamen mirari desinimus, cum in multis rebus videre liceat, mentem humanam tam lævæ et male compositam esse, ut primo diffidat, et paulo post se contemnat: atque primo incredibile videatur, aliquid tale inveniri posse; postquam autem inventum sit, rursus incredibile videatur id homines tam diu fugere potuisse: sed ut quod res est proferamus; huic rei de qua nunc agimus impedimento fuit non tam rei obscuritas aut difficultas, quam superbia humana, cui natura ipsa magna ex parte eaque potiore sordescit: quæque homines eo dementiae provehit, ut spiritus proprios, non spiritum naturæ consulant; ac si artes facerent, non invenirent.

Atque, filii, inter istam vestram tanquam per status antiquorum deambulationem, fieri potest ut aliquam partem porticum notaveritis velo esse discretam. Ea sunt penetralia antiquitatis ante doctrinam Græcorum. Sed quid me vocatis ad ea tempora, quorum et res et rerum vestigia aufugerunt? Annon antiquitas illa instar famæ est, quæ caput inter nubila condit et fabulas narrat, facta et infecta simul canens? Atque satis scio, si minus sincera fide agere vellem, non difficile foret hominibus persua-

dere, apud antiquos sapientes, diu ante Græcorum tempora, scientias et philosophiam majore virtute, licet majore etiam fortasse silentio, floruisse, idque solennius mihi foret ea quæ jam afferuntur ad illa referre, ut novi homines solent, qui nobilitatem aliquid veteris prospiciæ per genealogiarum rumores et conjecturas sibi affingunt.

Verum nobis stat sententia, rerum evidentia fretis, omnem imposturæ conditionem, quantumvis sit licet bella et commoda, recusare. Itaque iudicium nostrum de illis seculis non interponimus; illud obiter dicimus, licet poetarum fabulæ versatilis materiæ sint, tamen nos non multum arcani aut mysterii hujusmodi narrationibus subesse haud cunctanter pronuntiassetis; si ab iis inventæ a quibus traditæ sunt; quod nos secus esse existimamus: pleræque enim traduntur tanquam prius creditæ et cognitæ, non tanquam novæ ac tunc primo oblatæ: quæ res earum existimationem apud nos auxit, ac si essent reliquiæ quædam sacræ temporum meliorum. Verum utunque ea res se habet, non plus interesse putamus, (ad id quod agitur), utrum quæ jam proponuntur, aut illis fortasse majora, antiquis etiam innotuerint; quam hominibus curæ esse debeat, utrum novus orbis fuerit insula illa Atlantis, et veteri mundo cognita, an nunc primum reperta, rerum enim inventio a naturæ luce petenda, non e vetustatis tenebris repetenda est.

Jam vero, filii, etiam sponte, non fortasse interpellati, ab expectatione vestra de philosophia chemicarum opinionem subjungemus. Etenim illa vestra philosophia, disputationibus potens, operibus invalida, artis chemicæ nonnullam existimationem apud quosdam peperit. Atque sane quod ad practicam chemicarum attinet, fabulam illam in eam competere existimamus, de sene, qui filiis suis aurum in vinea defossam (nec se satis scire quo loco) legaverit: unde illos protinus ad vineam fodendam incubuisse; atque auri quidem nihil repertum, sed vindemiam ea cultura factam fuisse uberiorem: simili modo et chemiæ filii, dum aurum (sive vere, sive secus) in naturæ arvo additum et quasi defossam, laboriose, eruere conantur: multa moliendo et tentando, magno proventui hominibus et utilitati fuere, et compluribus inventis non contemnendis vitam et res humanas donavere.

Veruntamen speculationem eorum rem levem et minus sanam esse iudicamus. Nam ut ille adolescentulus delicatus cum scalum in littore reperisset, navem ædificare concupivit: ita et hi, arti suæ indulgentes, ex paucis fornacis experimentis philosophiam condere aggressi sunt. Atque hoc genus theoriarum et sæpius et manifestius vanitatis coarctatur quam illud alterum: quod certe magis sobrium et magis tectum est; nam philosophia vulgaris omnia percurrans, et nonnihil fere de singulis degustans, se apud maximam hominum partem optime tuetur. Qui autem ex paucis, quibus ipse maxime insuevit, reliqua comminiscitur, is et re ipsa errat magis, et apud alios levior est; atque ex hoc genere philosophiam chemicam esse censemus.

Certe illa opinionis fabrica, quæ eorum philosophiæ basis est, esse nimirum quatuor rerum matricum sive elementum, in quibus semina rerum sive

species fœtus suos absolvunt, atque producta eorum quadriformia esse, pro differentia scilicet cujusque elementi: adeo ut in cœlo, aëre, aqua, terra, nulla species inveniatur, quæ non habeat in tribus reliquis conjugatum aliquod et quasi parallelum, (nam hominem etiam pantomimum effecerunt, ex omnibus conflatum, abusi elegantia vocabuli microcosmi,) hoc, inquam, commentum neminem iudicio sedatum post se traxerit: quin et existimamus huic phantasticæ rerum naturalium phalangi peritum naturæ contemplatorem vix inter somnia sua locum daturum.

Verum illud non incommode accidit ad præcavendum, quod hæc philosophia (ut cœpimus dicere) erroris genere, veluti antistropha vulgari philosophiæ sit: vulgaris enim philosophia ad materiam inventionis parum ex multis, hæc multum e paucis decerpit. Nos tamen, filii, libenter Paracelsum hominem, ut conjicere licet, satis vocalem nobis præconem exoptemus, ut illud lumen naturæ, quod toties inculcat, celebret, et proclamet.

Atque mentio chemistarum nos admonet, ut aliquid etiam de magia naturali ea, quæ nunc hoc vocabulum solenne et fere sacrum inquinavit, dicamus: ea enim inter philosophos chemicos in honore esse consuevit. Quæ nobis in hujusmodi sermone inferior videtur, quam ut condemnetur: sed levitate ipsa effugiat. Quid enim illa ad nos, cujus dogmata plane phantasia et superstitio; opera præstigiæ et imposturæ? nam inter innumera falsa, si quid ad effectum perducitur, hujusmodi semper est, ut sit ad novitatem et admirationem conficta, non ad usum aut accommodata aut destinata. Etenim evenit fere semper de magicis experimentis, quod poëta lascivus ludit, "pars minima est ipsa puella sui;" quemadmodum autem philosophiæ proprium est efficere, ut omnia minus quam sint admiranda videantur propter demonstrationes; ita et imposturæ non minus proprium est, ut omnia magis quam sunt admiranda videantur propter ostentationem et falsum apparatus. Atque ista tamen vanitas nescio quo modo contemnitur et recipitur: unde enim satyrion ad venerem, pulmones vulpis ad phthisim, nisi ex hac officina? Verum nimis multa de nugis; nimis sane, si, ut ineptæ, ita innoxie essent.

Resumamus orationis filium, et philosophiam, quam in manibus habemus, ex signis excutiamus; ista enim, filii, inseri oportuit ad intellectus vestri præparationem, quæ res sola nunc agitur. Duplex enim est animorum præoccupatio seu mala inclinatio ad nova, quando ea proponi contingeret: una ab insita opinione de placitis receptis, altera ab anticipatione sive præfiguratione erronea de re ipsa quæ affertur, ac si pertineret ad aliqua ex jam pridem damnatis et rejectis, aut saltem ad ea quæ animus ob levitatem aut absurditatem fastidit.

Itaque jam reversi de signis dispiciamus. Atque, filii, inter signa nullum est magis certum aut nobile quam ex fructibus. Quemadmodum enim in religione cavetur, ut fides ex operibus monstretur, idem etiam ad philosophiam optime traducitur, ut vana sit quæ sterilis. Atque eo magis, si loco fructuum uvæ vel oliivæ producat disputationum et contentionum carduos et spinas: de vestra autem philoso-

phia vereor ne nimis vere cecinerit poëta non solum illo carmine;

"Infelix lolium et steriles dominantur avenæ:"

sed et illo;

"Candida succinctam latrantibus inguina monstra."

Videtur enim illa ex longinquo visa virgo, specie non indecora, sed partibus superioribus: habet enim generalia quædam non ingrata, et tanquam invitantia; cum vero ad particularia ventum sit, veluti ad uterum et partes generationis, atque ad id ut aliquid ex se edat, tum demum, loco operum et actionum, quæ contemplationis proles est digna et legitima, monstra illa invenias resonantia, et oblatrantia, et ingeniorum naufragiis ferosa.

Atque hujus mali auctor imprimis Aristoteles, alitrix ista vestra philosophia. Illi enim vel ludo vel gloriæ erat quæstiones minus utiles, primo subornare, deinde confodere; ut pro assertore veritatis contradictionum artifex sit. Pessimo enim et exemplo et successu scientia traditur per quæstiones subministratas, earumque solutiones. Qui enim bene affirmat et probat, et constituit et componit; is errores et objectiones longe summovet et veluti eminus impedit et abigit; qui autem cum singulis colluctatur, is exitum rei nullum invenit, sed disputationes serit. Quid enim opus sit ei, qui unum humanis et veritatis corpus clarum et radiosum in medio statuit, parva quædam et pallida confutationum ellychnia ad omnes errorum angulos circumferre; solventi alia dubia, alia per ipsam illam solutionem excitanti ac veluti generanti? verum id curæ, ut videtur, præcipue fuit Aristoteli, ut homines haberent parata in singulis quæ pronuntiarent, quæ responderent, et per quæ se expedirent, potius, quam quid penitus crederent, aut liquido cogitarent, aut vere scirent. Philosophia autem vestra tam bene auctorem refert, ut quæstiones, quas ille movit, illa figat et faciat æternas; ut quæri videatur, non ut veritas eruatur, sed ut disputatio alatur: adeo ut Nasicæ sententia illa Catonis præponderet. Neque enim illud agitur, ut, temporis progressu sublatis dubiis, tanquam hostibus a tergo, ad ultiores provincias penetraret; sed ut perpetuæ istæ quæstiones, tanquam Carthago, militiam istam disputandi exerceant.

Quod vero ad operum fructum et proventum atinet; existimo ex ista philosophia, per tot annorum spatia laborata et culta, ne unum quidem experimentum adduci posse, quod ad hominum statum levandum et locupletandum spectet, et philosophiæ speculationibus vere acceptum referri possit: adeo ut brutorum animalium instinctus plura inventa pepererint, quam doctorum hominum sermones. Sane Celsus ingenue et prudenter fatetur experimenta medicinæ primo inventa fuisse, ac postea homines circa ea philosophatos esse, et causas explorasse, et assignasse; non ordine inverso evenisse, ut ex philosophia et causarum cognitione ipsa experimenta deprompta essent; neque hic finis. Non male enim merita esset philosophia ista de practica, licet eam experimentis non auxisset; si tamen usum ejus castiorem et prudentiorem reddidisset

(quod fortasse facit) atque interim ejus incrementis et progressibus nihil obfuisse. Illud autem magis damnosum, et perniciosum, quod inventa non solum non edat, sed etiam opprimat et extinguat.

Nam affirmare licet, filii, verissime, Aristotelis de quatuor elementis commentum, rem certe obviam et pinguem, quia hujusmodi corpora in maxima quantitate et mole cernuntur (cui tamen ille potius auctoritatem quam principium dedit; cum Empedoclis esset, a quo etiam melius erat positum, quod postea avide a medicis arreptum, quatuor complexionum, quatuor humorum, quatuor primarum qualitatum conjugationes post se traxit); tanquam malignum et infaustum sidus, infinitam, et medicinæ, et compluribus rebus mechanicis sterilitatem attulisse, dum homines, per hujusmodi concinnitates et compendiosas ineptias sibi satisfieri patientes, nil amplius curant: et vivas et utiles rerum observationes prorsus omiserunt. Itaque si illud verum, "Ex fructibus eorum," videtis certe quo res redierit.

Agite vero, filii, et signa ex incrementis capiamus: certe si ista doctrina plane instar plantæ a stirpibus suis revulsæ non esset, sed gremio et utero naturæ adhæreret, atque ab eadem aleretur; id minime eventurum fuisset, quod per annos bis mille jam fieri videmus, ut scientiæ in eodem fere statu maneat et hæreant, neque augmentum aliquod memorabile sumpserint. Poliuntur fortasse nonnunquam ab aliquo, et illustrantur, et accommodantur, (dum tamen interim ab infinitis lacerentur, et deformantur, et inquinantur,) sed utcumque non dilatantur, aut amplificantur. In artibus autem mechanicis contra evenire videmus; quæ ut spiritu quodam repletæ vegetant et crescunt, primo rudes, deinde commodæ, post excultæ, sed perpetuo auctæ: philosophiæ autem et scientiæ intellectus, statuarum more, adorantur et celebrantur, sed non moventur. Quinetiam in primo nonnunquam auctore maxime florent: et deinceps declinant, et exarescunt.

Neque vero mirum est ista discrimina inter mechanicam et philosophiam conspici, cum in illa singularum ingenia misceantur, in hac cumpantur et destruantur. Quod si quis existimet, scientiarum, ut rerum cæterarum, esse quendam statum, idque fere in tempus unius auctoris incidere, qui beneficio temporis usus, et suæ ætatis princeps, inspectis reliquis scriptoribus et judicatis, scientias ipsas absolvat et perficiat; quod postquam factum sit, juniores rite palmas secundas petere ut hujusmodi auctoris opera vel explicent vel digerant, vel pro sui seculi rationes palato accommodent et vertant: næ ille majorem rebus humanis prudentiam, et ordinem, et felicitatem tribuit, quam experiri fas est, res enim casum recipit, nisi quod vanitas hominum etiam fortuita in deterius detorquet. Nam vere sic se res habet; postquam scientia aliqua multorum observatione et diligentia, dum alius alia apprehendit, per partes tentata serio et tractata sit, tum exoriri aliquem mente fidentem, lingua potentem, methodo celebrem, qui corpus unum ex singulis pro suo arbitrio efficiat et posteris tradat: plerisque corruptis et depravatis, et cum certissima omissione omnium, quæ altiores et digniores contemplationes exhibere possint, ut opinionum immo-dicarum et extravagantium: et posteri rursus, facili-

tate rei et compendio gaudentes, sibi gratulantur ac nil ulterius quærunt, sed ad illa ministeria servilia, quæ diximus, se convertunt. Verum nobis, filii, pro certo sit, quæ in natura fundata sunt, ut aquas perennes, perpetuo novas scaturigines et emanationes habere; quæ autem in opinione versantur, variari fortasse sed non augeri.

Habemus et aliud signum, si modo signi appellatio in hoc competit: cum potius testimonium sit, imo testimoniorum omnium validissimum, hoc est, propriam auctorum, quorum fidei vos committitis, confessionem et judicium. Nam et illi ipsi, qui dictaturam quandam in scientiis invaserunt, et tanta fiducia de rebus pronunciant; tamen per intervalla, cum ad se redeunt, ad quærimonia demum de naturæ subtilitate, rerum obscuritate, humani ingenii infirmitate, et similia se convertunt: neque propterea, filii, hæc modestiæ aut humilitati, virtutibus in rebus intellectualibus omnium felicissimis, deputetis: non tam faciles, aut boni fueritis: cum contra ista non confessio, sed professio, sive prædicatio ex superbia, invidia, atque id genus affectibus ortum pro certo habeat; id enim prorsus volunt, quicquid in scientiis sibi ipsis aut magistris suis incognitum aut intactum fuerit, id extra terminos possibles poni et removeri: hæc est illa modestia atque humilitas.

Itaque pessimo fato res geritur. Nil enim in his rerum humanarum angustiis aut ad præsens magis deploratum, aut in futurum magis ominosum est, quam quod homines ignorantiam etiam ignominie (ut nunc fit) eximant, atque artis suæ infirmitatem in naturæ calumniam vertant: et quicquid ars illa sua non attingit, id ex arte scitu aut factu impossibile supponant. Neque sane damnari potest ars, cum ipsa judicet; ex hoc fonte haud paucas opiniones et placita in philosophia reperiat, quæ nihil aliud, quam quæsitam istam, et artificiosam, et in cognoscendo, et in operando desperationem, ad artis decus et gloriam perditissimo hoc modo tuendum, sapiant et foveant.

Hinc schola Academica, quæ acatalepsiæ ex professo tenuit, et homines ad sempiternas tenebras damnavit. Hinc opinio, quod formæ sive veræ rerum differentiæ inventu impossibiles sunt; ut homines in atriis naturæ perpetuo obambulent, nec intra palatium aditum sibi muniant. Hinc positiones illæ infirmissimæ, calorem solis et ignis toto genere differre, atque compositionem opus hominis, misionem opus solius naturæ esse: ne forte ars naturam, ut Vulcanus Minervam sollicitare aut expugnare tentet aut speret; et compluria hujusmodi, quæ tam ad confessionem tenuitatis propriæ, quam ad repressionem industriæ alienæ, pertinent.

Itaque neutiquam vobis, filii, pro amore et indulgentia nostra consulero, ut cum rebus non solum desperatis, sed et desperationi devotis fortunas vestras misceatis. Verum, filii, tempus fugit, dum capti amore et rerum et vestrum circumvectamur, ac omnia movemus, et initiationem hanc vestram, instar Aprilis aut veris cujusdam, ad congelationem omnem et obstinationem solvendam et aperiendam esse cupimus.

Restat signum certissimum de modis. Modi enim faciendi sunt, potentia, res ipsæ; et prout bene aut

prave institutæ fuerint, ita res et effecta se habent. Itaque si modi hujus vestræ philosophiæ condendæ nec debiti sint nec probabiles, non videmus quam spem foveatis, nisi credulam et levem. Atque certe, filii, si obeliscus aliquis magnitudine insignis ad triumphum fortasse aut hujusmodi magnificentiæ decus transferendus esset, atque id homines nudis manibus tentarent; annon eos helleboro opus habere cogitaretis? quod si numerum operariorum augerent, atque hoc modo se valere posse confiderent, annon tanto magis? Quod si etiam delectum adhiberent, et imbeciliores separarent, et robustis tantum et vigentibus uti vellent, et hinc demum se voti compotes fore præsumerent; aut, ne hoc quidem contenti, etiam artem athleticam consulerent, ac omnes cum manibus et lacertis et nervis ex arte bene unctis et medicatis adesse juberent; annon prorsus eos dare operam, ut cum ratione quadam et prudentia insanirent, clamaretis? et tamen simili homines malesano impetu feruntur in intellectualibus, dum intellectum veluti nudum applicant, et ab ingeniorum vel multitudine vel excellentia magna sperant, vel etiam dialecticis, quæ mentis quædam athletica censi possit, ingeniorum nervos roborant: neque machinas adhibent, per quas vires et singulorum intendantur, et omnium cœant.

Atque ut menti debita auxilia non subministrant, ita nec naturam rerum debita observantia prosequuntur. Quid enim dicemus, an nihil aliud est philosophiam condere, quam ex paucis vulgaribus et obviis experimentis de natura judicium facere; ac dein tota secula in meditationibus volutare? Atque, filii, nesciebam nos tam naturæ fuisse familiares, ut ex tam levi et perfunctoria salutatione ea nobis aut arcana sua patefacere aut beneficia impertire dignaretur. Certe nobis perinde facere videntur homines, ac si naturam ex longinqua et præalta turri despiciant et contemplantur; quæ imaginem ejus quandam, seu nubem potius imagini similem, ob oculos ponat: rerum autem differentias (in quibus res hominum et fortunæ sitæ sunt) ob earum minutias et distantiam intervallum confundat et abscondat. Et tamen laborant et nituntur, et intellectum tanquam oculos contrahunt, ejusdemque aciem meditatione figunt, agitatione acuunt, quietiam artes argumentandi, veluti specula artificiosa, comparant, ut istiusmodi differentias et subtilitates naturæ mente comprehendere et vincere possint. Atque ridicula certe esset et præfracta sapientia et sedulitas, si quis, ut perfectius et distinctius cerneret, vel turrim conscendat, vel specula applicet, vel palpebras adducat, cum ei liceat, absque universa ista operosa et strenua machinatione et industria, fieri voti compos per rem facilem, et tamen ista omnia beneficio et usu longe superantem: hoc est, ut descendat et ad res propius accedat. Atque certe in intellectus usu similis nos exercet imprudentia.

Neque, filii, postulare debemus ut natura nobis obviam eat: sed satis habemus, si accedentibus nobis, idque cultu debito, se conspiciendum det. Quod si cui in mentem veniat opinari tale quippiam, etiam antiquos atque ipsum Aristotelem proculdubio a meditationum suarum principio magnam vim et copiam exemplorum sive particularium paravisse, atque ean-

dem viam, quam nos veluti novam indicamus et signamus, revera iniisse et confecisse, adeo ut actum agere videri possimus: certe, filii, hæc de illis cogitare non est integrum: formam enim et rationem suam inquirendi et ipsi profiterentur et scripta eorum imaginem expressam præ se ferunt. Illi enim statim ab inductionibus nullius pretii ad conclusiones maxime generales, tanquam disputationum polos, advolabant, ad quarum constantem et immotam veritatem reliqua expediebant. Verum scientia constituta, tum demum siqua controversia de aliquo exemplo vel instantia mota esset, ut positus suis refragante: non id agebant ut positum illud emendaretur; sedposito salvo hujusmodi instantias quæ negotium faciebant, aut per distinctionem aliquam subtilem et sapientem in ordinem redigebant, aut per exceptionem plane (homines non mali) dimittebant. Quod si instantiæ aut particularis rei non contradictoriæ reconciliatio, sed obscuræ ratio quæreretur, eam ad speculationes suas quandoque ingeniose accommodabant: quandoque misere torquebant: quæ omnis industria et contentio res sine fundamento nobis videtur.

Itaque nolite commoveri, quod frequens alicubi inter nonnulla Aristotelis scripta inveniat exemplorum et particularium mentio. Noveritis enim, id sero, et postquam decretum fuisset, factum fuisse: illi enim mos erat non liberam experientiam consilere, sed captivam ostentare; nec eam ad veritatis inquisitionem promiscuam et æquam, sed ad dictorum suorum fidem sollicitatam et electam adducere. Neque rursus tale aliquid vobiscum cogitate, eam, quam nos tantopere desideramus, differentiarum subtilitatem in distinctionibus philosophorum scholasticorum haberi, atque adeo elucescere: neque enim existimetis ab hac præpostera subtilitate primæ negligentiam et festinationem et temeritatem subventum esse. Longe abest, filii, ut hoc fieri possit; quin, credite mihi, quod de fortuna dici solet, id de natura verissimum est, eam a fronte capillatam, ab occipitio calvum esse. Omnis enim ista sera subtilitas et diligentia, postquam verum tempus observationis præterierit, naturam prensare aut captare potest, sed nunquam apprehendere aut capere.

Equidem satis scio, idque vos non ita multo post experiemini: postquam veræ et nativæ rerum subtilitati, et differentiis in experientia signatis et expressis, et sensui subjectis, aut saltem per sensum in lucem extractis, paululum insueveritis; continuo subtilitatem illam alteram disputationum et verborum, quæ cogitationes vestras non sine magna admiratione occupavit et tenuit, quasi pro re ludicra, et larva quadam, et incantatione, habituri sitis.

Quare, missis istis philosophiis abstractis, vos et ego, filii, rebus ipsis nos adjungamus: neque ad sectæ condendæ gloriam animum adjiciamus; sed utilitatis et amplitudinis humanæ curam serio suscipiamus; atque inter mentem et naturam connubium castum et legitimum (pronuba misericordia divina) firmemus; precati etiam Deum, cujus numine et nutu hæc fiunt, quique ut hominum et rerum, ita luminum et consolationum pater est, ut ex illo connubio, non phantasiæ monstra, sed stirps herodum, quæ monstra domet et extinguat, hoc est, inventa

salutaria et utilia ad necessitates humanas (quantum fieri datur) debellandas et relevandas, suscipiantur. Hoc epithalamii votum sit.

Certe, filii, facultates, artium et scientiarum omnium consensu, aut empiricæ, aut rationales sunt. Has autem bene commistas et copulatas adhuc videre non licuit. Empirici enim, formicæ more, viderunt tantum et utuntur. Rationales autem, araneorum more, telas ex se conficiunt. Apis ratio media est, quæ materiam ex floribus tam horti quam agri elicit, sed simul etiam eam propria facultate vertit et digerit. Neque absimile veræ philosophiæ opificium est, quæ ex historia naturali et experimentis mechanicis præbitam materiam, non in memoria integram, sed in intellectu mutatam et subactam reponit. Itaque hujusmodi mellis cœlestia dona sperate: neque dicite cum pigro, "Leo est in via!" sed vincula quæ vos præmunt excutite, et vos recipite.

Atque sane, post virtutem vestram propriam, nihil animos vobis magis addiderit, quam si industrium, et felicitatem, et facinora ætatis nostræ cogitetis. Nos nostrum *plus ultra* antiquorum *non ultra* haud vane opposuimus: nos iidem, contra antiquorum *non imitabile fulmen esse; imitabile fulmen esse*, minime dementes, sed sobrii, ex novarum machinarum experimento et demonstratione, pronuntiamus. Quin et cœlum ipsum immitabile fecimus. Cœli enim est, circumire terram: quod et nostræ navigationes pervicerunt. Turpe autem nobis sit, si globi materiali tractus, terrarum videlicet et marium, nostris temporibus in immensum aperti et illustrati sint: globi autem intellectualis fines inter veterum inventa et angustias steterint.

Neque parvo inter se nexu devincta et conjugata sunt ista duo, perlustratio regionum et scientiarum. Plurima enim per longinquas navigationes et peregrinationes in natura patuerunt, quæ novam sapientiæ et scientiæ humanæ lucem affundere possint, et antiquorum opiniones et conjecturas experimento regere. Eadem duo non ratione solum, sed etiam vaticinio conjuncta videntur. Nam eo prophetæ oraculum haud obscure spectare videtur: ubi de novissimis temporibus loquutus, illud subjungit, "Multi pertransibunt, et multiplex erit scientia:" ac si orbis terrarum pertransitus sive peragratio, et scientiarum augmenta sive multiplicatio, eidem ætati et seculo destinarentur.

Præsto etiam est imprimendi artificium, veteribus incognitum, cujus beneficio singulorum inventa fulguris modo transcurrere possint, et subito communari ad aliorum studia excitanda, et inventa miscenda. Quare utendum est ætatis nostræ prærogativa, neque committendum, ut, cum hæc tanta vobis adsint, vobis ipsi desitis. Nos autem, filii, ab animorum vestrorum præparatione auspiciati, in reliquis vobis non deerimus. Probe enim novimus tabellas mentis a tabellis communibus differre. In iis non alia inscripseris, nisi priora deleveris; in illis priora ægre deleveris, nisi nova inscripseris.

Itaque rem in longum non differemus: illud itidem vos monentes, ne tanta vobis de nostris inventis polliceamini, quin meliora a vobis ipsis speretis. Nos enim Alexandri fortunam nobis spondemus, (neque

vanitatis nos arguat) antequam rei exitum audiatis,) illius enim res gestæ recenti memoria ut portentum accipiebantur.

Ita enim loquitur unus ex æmulis oratoribus: "Nos certe vitam humanam non degimus; sed in id nati sumus, ut posteri de nobis portenta prædicent." Sed postquam deferbuisset ista admiratio, atque homines rem attentius introspexisset, operæ pretium est animadvertere quale iudicium de eo faciat scriptor Romanus, "Nil aliud quam bene ausus est vana contemnere." It et nos simile quiddam a posteris audiemus; postquam emancipati, et sui jam facti, et proprias vires experti, initia nostra magnis intervallis superaverint. In quo sane iudicio illud recte, nostra nil magni esse: illud non recte, si ausis tribuant quæ humilitati debentur: humilitati (inquam) et privationi cuidam istius humanæ superbiæ, quæ universa perdidit, quæque volucres quædam meditationes loco divinæ in rebus signaturæ consecravit. Hac enim ex parte revera nobis gratulamur, et eo nomine felices nos et bene de genere humano meritos esse existimamus, quod ostendimus, quid vera et legitima spiritus humani humiliatio possit. Verum quid nobis ab hominibus debeatur, ipsi viderint; nos certe nos nostraque vobis debemus.

Omnibus qui aderant digna magnitudine generis et nominis humani oratio visa est, et tamen libertati quam arrogantia, propior. Ita autem inter se colloquebantur: se instar eorum esse, qui ex locis opacis et umbrosis in lucem apertam subito exierint, cum minus viderant quam prius; sed cum certa et læta spe facultatis melioris.

Tum ille qui hæc narrabat; Tu vero quid ad ista dicis? inquit. Grata sunt (inquam) quæ narrasti. Atque (inquit) si sunt, ut dicis, grata, si tu forte de his rebus aliquid scripseris, locum invenias ubi hæc inseras, neque peregrinationis nostræ fructus perire patiaris. Æquum postulas, inquam, neque obliviscar.

---

FRANCISCI BACONI

## APHORISMI ET CONSILIA,

DE

AUXILIIS MENTIS, ET ACCENSIONE LUMINIS NATURALIS.

HOMO, naturæ minister et interpres, tantum facit et intelligit, quantum de ordine naturæ opere vel mente observaverit; nec amplius novit aut potest.

Manus hominis nuda, quantumvis robusta et constans, ad opera pauca et facile sequentia sufficit: eadem, ope instrumentorum, multa et reluctantia vincit. Similis est et mentis ratio.

Instrumenta manus, motum aut cient aut regunt; et instrumenta mentis intellectui aut suggerunt aut cavent.

Super datam materiæ basim naturam quamvis imponere, intra terminos possibiles, intentio est humanæ potentiæ. Similiter dati effectus in quovis subjecto causas nosse, intentio est humanæ scientiæ: quæ intentiones in idem coincidunt. Nam quod in

contemplatione instar causæ est, in operatione instar medii est.

Qui causam alicujus naturæ, veluti albedinis aut caloris, in certis tantum subjectis novit, ejus scientia imperfecta est. Et qui affectum super certam tantum materiam ex iis, quæ sunt susceptibiles, inducere potest; ejus potentia pariter est imperfecta.

Qui causas naturæ alicujus in aliquibus subjectis tantum novit, is efficientem aut materiata causam novit, quæ causæ fluxæ sunt, et nihil aliud, quam vehicula et causæ formam deferentes. Qui autem unitatem naturæ in materiis dissimillimis comprehendit, is formas rerum novit.

Qui efficientes et materiatas causas novit, is jampridem inventa componit aut dividit, aut transfert aut producit; etiam ad nova inventa in materia aliquatenus simili et præparata pertingit: terminos rerum altius fixos non movet.

Qui formas novit, is quæ adhuc facta non sunt, qualia nec naturæ vicissitudines, nec experimentales cognitionis unquam in actum produxissent, neque cogitationem humanam subitura fuissent, detegit et educit.

Eadem est veritatis et potestatis via et perfectio; hæc ipsa ut formæ rerum inveniantur; ex quarum notitia sequitur contemplatio vera et operatio libera.

Formarum inventio simplex est et unica, quæ procedit per naturarum exclusionem sive rejectionem. Omnes enim naturæ, quæ aut data natura præsentem abeunt, aut data natura absente adsunt, ex forma non sunt; atque post rejectionem aut negationem completam, manet forma et affirmatio. Exempli gratia, si caloris formam inquiras, et aquam calentem invenias, nec lucidam, rejice lumen: si ærem tenuem invenias, nec calidum, rejice tenuitatem. Hoc breve dictu est; sed longo circuitu ad hoc pervenitur.

Prolatio verborum contemplativa aut operativa re non differunt. Cum enim hoc dicis, lumen non est ex forma caloris; idem est si dicas: in calore producendo non necesse est, ut etiam lumen producas.

*[Reliqua non erant perfecta.]*

Neque hæc numine nostro eunt. Tu, Pater, conversus ad opera, quæ fecerunt manus tuæ, vidisti quod omnia essent bona valde: homo autem conversus ad opera, quæ fecerunt manus suæ, vidit quod omnia essent vanitas et vexatio spiritus. Itaque si in operibus tuis sudabimus, facies nos gratulationis tuæ et sabbati tui participes. Supplices rogamus ut hæc mens nobis constet; atque ut per manus nostras familia humana novis elemosynis tuis dotetur. Hæc æterno amori tuo commendamus, per Jesum nostrum, Christum tuum, nobiscum Deum.

## DE INTERPRETATIONE NATURÆ

### SENTENTIÆ XII.

#### DE CONDITIONE HOMINIS.

1. Homo, naturæ minister et interpres, tantum facit aut intelligit, quantum de naturæ ordine re vel

mente observabit, ipse interim naturæ legibus ob-sessus.

2. Terminus itaque humanæ potentiæ ac scientiæ in dotibus, quibus ipse præditus est a natura ad movendum et percipiendum, tum etiam in statu rerum præsentium. Ultra enim has bases illa instrumenta non proficiunt.

3. Dotes hæ per se tenues et ineptæ, rite tamen et ordine administratæ tantum possunt, ut res a sensu et actu remotissimas judicio et usui coram sistant, majoremque et operum difficultatem et scientiæ obscuritatem superent, quam quis adhuc optare didicerit.

4. Una veritas, una interpretatio: sensus autem obliquus, animus alienus, res importuna; ipsum tamen interpretationis opus magis declinans quam difficile.

#### DE IMPEDIMENTIS INTERPRETATIONIS.

5. Quisquis dubitationis impos, et asserendi avidus, principia demum statuet probata (ut credit) concessa et manifesta, ad quorum immotam veritatem cætera ut pugnancia vel obsecundantia recipiet vel rejiciet, is res cum verbis, rationem cum insania, mundum cum fabula commutabit, interpretari non poterit.

6. Qui omnem rerum distinctionem, quæ in constitutis vulgo speciebus, vel etiam inditis nominibus elucescit, non miscuerit, confuderit, et in massam redegerit, non unitatem naturæ, non legitimas rerum lineas videbit, non interpretari poterit.

7. Qui primum et ante alia omnia animi motus humani penitus non explorarit, ibique scientiæ meatus et errorum sedes accuratissime descriptas non habuerit, is omnia larvata et veluti incantata reperiet, fascinum ni solverit, interpretari non poterit.

8. Qui in rerum obviarum et compositarum causis exquirendis, veluti flammæ, somnii, febris, versabitur, nec se ad naturas simplices conferet, ad istas primo, quæ populari ratione tales sunt; deinde etiam ad eas, quæ arte ad veriore simpliciter reductæ sunt et veluti sublimatæ, is fortasse si cætera non peccat, addet inventis quædam non spernanda, et inventis proxima. Sed nil contra majores rerum secularitates movebit, nec interpres dicendus erit.

#### DE MORIBUS INTERPRETIS.

9. Qui ad interpretandum accesserit, ita se comparet et componat; sit nec novitatis, nec consuetudinibus, vel antiquitatis sectator, nec contradicendi licentiam, nec auctoritatis servitutem amplectatur. Non affirmandi sit properus, nec in dubitationem solutus, sed singula gradu quodam probationis insignita provehat. Spes ei laboris, non otii auctor sit; res non raritate, difficultate, aut laude, sed veris momentis æstimet. Privata negotia personatus administret, rerum tamen provisos subvenerans. Errorum in veritates, et veritatum in errores subingressus prudenter advertat, nihil contemnens aut admirans. Naturæ suæ commoditates norit. Naturæ aliorum morem gerat, cum nemo lapidi impingenti succenseat. Uno veluti oculo rerum naturas, altero humanos usus pererret. Verborum mixtam naturam et juvenentis et nocuentis imprimis participem distincte sciat.

Artem inveniendi cum invento adolescere statuat. Sit etiam in scientia, quam adeptus est, nec occultanda nec proferenda vanus, sed ingenuus et prudens: tradatque inventa non ambitiose aut maligne, sed modo primum maxime vivaci et vegeto, id est, ad injurias temporis munitissimo, et ad scientiam propagandum fortissimo, deinde ad errores pariendos innocentissimo, et ante omnia, qui sibi legitimum lectorem seponat.

## DE OFFICIO INTERPRETIS.

10. Ita moratus et comparatus interpretis ad hunc modum procedat. Conditionem hominis reputabit, impedimenta interpretationis removebit, tum ad opus accinctus historiam parabit et ordinatas chartarum sequelas, unaque usus, co-ordinationes, occurrentias et schedulas instituet. Rerum solitudinem et sui similitudinem representabit. Quin et rerum delectum habebit, quæque maxime primitivæ sunt vel instantes, id est, vel rerum aliarum inventioni, vel humanis necessitatibus præcipue conducunt, præordinabit. Instantiarum etiam præeminentias observabit, quæ ad operis compendium plurimum possunt. Atque ita instructus re-ordinationes demum, et chartas novellas, ac ipsam interpretationem facilem jam et sponte sequentem, imo mente fere præreptam, mature et feliciter aggredietur et perficiet. Quod ubi fecerit, continuo veros, æternos, et simplicissimos naturæ motus, ex quorum ordinato et calculatissimo progressu infinita hæc tum præsentia, tum omnis ævi varietas emergit, pura et nativa luce videbit et numerabit. Interimque ab initio operis humanis rebus multa et incognita, veluti fœnus, assidue recipere non omitet. Sed hinc denuo totus in humanos usus rerumque præsentium statum conversus et intentus, omnia diversa via et ad actionem ordinabit et disponet. Naturis secretissimis alias declaratorias, et absentissimas alias superinductorias assignabit. Et deinde tandem veluti altera natura plerumquitate condet, quarum errores pro monstris sint, salva etiam tamen sibi artis prærogativa.

## DE PROVISU RERUM.

11. Tu autem spe et studio languidis hæc hauris, fili, mirarisque si tanta supersit operum fructuosissimorum et prorsus incognitorum ubertas, ea non antehac, aut jam subito esse inventa, simul etiam, cujusmodi ea sint, nominatim requiris, visque tibi aut immortalitatem, aut indolentiam, aut voluptatem transportantem promitti. Verum tu tibi largire, fili, spemque ex scientia acupabere, ut ex ignorantia desperationem cœpiet. An etiam arte adoptandum est opus? At dubitationis tuæ, quoad licet, satisfaciam, moremque tibi geram. Quod hæc subito nota sint, nil mirum, fili. Scientia celeris, tempus tardi partus est. Etiam nobilia, quæ ante hæc inventa sunt, non luce prioris cognitionis sensim, sed casu (ut loquuntur) affatim inventa sunt. In mechanicis autem est quædam rei jam inventæ extensio, sed novæ inventionis nomen non meretur. Non longum, fili, sed ambiguum est iter. Quod autem

hæc non ante hoc tempus in conspectum se dedisse aio, an tibi compertum est quantum omni antiquitati, vel omnibus in regionibus, vel etiam singulis hominibus innotuerit? Sed fere assentior tibi, fili, teque altius manu ducam. Non dubitas quin si homines non forent, multa eorum, quæ arte (ut loquuntur) facta sunt, defutura fuissent, ut statuum marmoream, stragulam vestem. Age vero et homines, an non habent et ipsi suos motus, quibus obtemperant? sane, fili, magis subtiles, et difficilius a scientia comprehensos, sed æque certos. Profecto, iniquis, homines voluntati parent. Audio, sed hoc nihil est. Qualis causa est fortuna in universo, talis est voluntas in homine. Si quid ergo nec sine homine producit, et jacet etiam extra hominis vias, an non nihilo æquale est? Homo etiam in quædam veluti occurrentia impingit, alia fine præviso et mediis cognitis exsequitur. Mediorum tamen notitiam ex obviis sumit. Quo igitur in numero reponitur ea, quæ nec effectum obviium, nec operationis modum et lucem ex obviis sortiuntur. Talia opera Epistemes vocantur, id est, scientiæ filiæ, quæ non alias in actum veniunt, quam per scientiam et interpretationem meram, cum nihil obviium contineant. Inter hæc autem et obvia quot gradus numerari putas? Tene, fili, et obsigna.

12. Postremo loco tibi consulo, fili, quod factio imprimis opus est, hoc est ut mente illuminata et sobria interpretationem rerum divinarum et naturalium distinguas, neve has ullo modo inter se committi patiare. Satis erratum est in hoc genere. Nihil hic nisi per rerum inter se similitudines addicitur: Quæ licet dissimilimæ videantur, premunt tamen similitudinem germanam interpreti notam. Deus autem tibi tantum similis est absque tropo. Quare nullam ad ejus cognitionem hinc lucis sufficientiam exspecta. Da fidei, quæ fidei sunt.

## CAPUT I.

## TRADENDI MODUS LEGITIMUS.\*

REPERIO, fili, complures in rerum scientia, quam sibi videntur adepti, vel proferenda, vel rursus occultanda neutiquam e fide sua ac officio se gerere. Eodem damno, licet culpa fortasse minore, peccant et illi, qui probe quidem morati, sed minus prudentes sunt, nec artem ac præcepta tenent, quo quæque modo sint proponenda. Neque tamen de hac tradentium scientias sive malignitate sive incitia querela est instituenda. Sane si rerum pondera docendi imperitia fregissent, non immerito quis indignetur. Rerum vero ineptis docendi importunitatem vel jure deberi existimandum est. Ego autem longe ab his diversus te impertiturus, non ingenii commenta, nec verborum umbras, nec religionem admistam, nec observationes quasdam populares, vel experimenta quædam nobilia in theoriæ fabulas concinnata; sed revera naturam cum foetibus suis tibi addicturus et mancipaturus, num videor dignum argumentum præ manibus habere, quod tractandi vel ambitione, vel

\* In prior editione caput istud sic inscribitur: "Temporis partus masculus," sive "De interpretatione naturæ," lib. iii.

1. "Perpolitio et applicatio mentis."  
2. "Lumen nature; seu formula interpretationis."  
3. "Natura illuminata; sive veritas rerum."

inascitia, vel vitio quovis polluam? Ita sim, fili, itaque humani in universum imperii angustias nunquam satis deploratas ad datos fines proferam (quod mihi ex humanis solum in votis est) ut tibi optima fide, atque ex altissima mentis meæ providentia, et exploratissimo rerum et animorum statu hæc traditurus sim modo omnium maxime legitimo. Quis tandem (inquietus) est modus ille legitimus? Quin tu mitte artes et ambages, rem exhibe nudam nobis, ut iudicio nostro uti possimus. Atque utinam, fili suavissime, eo loco sint res vestræ, ut hoc fieri posset. An tu censes, cum omnes omnium mentium aditus ac meatus obscurissimis idolis, iisque alte hærentibus et inustis, obsessi et obstructi sint, veris rerum et nativis radiis sinceræ et politas areas adesse? Nova est ineunda ratio, qua mentibus obductissimis illabi possimus. Ut enim phreneticorum deliramenta arte et ingenio subvertuntur, vi et contentione efferantur omnino; ita in hac universali insaniam nos gerendus est. Quid? leviores illæ conditiones, quæ ad legitimum scientiæ tradendæ modum pertinent, an tibi tam expeditæ et faciles videntur? ut modus innocens sit, id est, nulli prorsus errori ansam et occasionem præbeat? ut vim quandam insitam et innatam habeat tum ad fidem conciliandam, tum ad pellendas injurias temporis, adeo ut scientia ita tradita veluti planta vivax et vegeta quotidie serpat et adolescat? ut idoneum et legitimum sibi lectorem seponat, et quasi adoptet? atque hæc omnia præstiterim necne, ad tempus futurum provoco.

## CAPUT II.

PLANE autem non dissimulo, fili, mihi quopiam submovendos esse philosophastros istos poëtis ipsis fabulosiores, stupratores animorum, rerum falsarios; et multo etiam magis horum satellites et parasitos, professoriam illam et meritoriam turbam. Quis carmen præit, ut hoc oblivioni devoveam? quod enim veritati silentium, si isti brutis suis et inarticulatis rationibus obstrepant? Verum tutius forsitan fuerit nominatim eos damnare, ne, cum tanta auctoritate vigeant, non nominati excepti videantur; neve quis putet cum inter ipsos tam gravia et internecina exerceantur odia, et tanta dimicatione certetur, me ad has larvarum et umbrarum pugnas alteri parti velut subsidio missum. Itaque citetur Aristoteles, pessimus sophista, inutili subtilitate attonitus, verborum vile ludibrium. Ausus etiam, tum cum forte mens humana ad veritatem aliquam casu quopiam tanquam secunda tempestate delata acquiesceret, injicere durissimas animis compedes, artemque quandam insaniam componere, nosque verbis addicere. Quin et ex istius sinu educti nobis sunt, ac enutriti, vaferimi illi nugatores, qui cum a perambulatione mundana, ac omni rerum ac historiae luce se avertissent, ex hujus maxime præceptorum et positionum ductili admodum materia, et ingenii inquieta agitatione, numerosissimas scholarum quisquillas nobis exhibuere. Iste autem horum dictator tanto illis accusator, quod etiam in historiae apertis versatus, subterraneæ alicujus specus opacissima idola retulit. Atque super ipsam quidem historiam rerum parti-

cularium quasdam veluti operas araneorum exstruxit, quas causas videri vult, cum sint nullius prorsus roboris vel pretii. Quales etiam nostra ætate multa cum satagentia fabricavit Hieronymus Cardanus, uterque rebus ac sibi discors. Ne vero, fili, cum hanc contra Aristotelem sententiam fero, me cum rebelle ejus quodam neoterico Petro Ramo conspirasse augurere. Nullum mihi commercium cum hoc ignorantie latibulo, perniciosissima literarum timea, compendiorum patre; qui cum methodi suæ et compendii vinculis res torqueat et premat, res quidem, si qua fuit, elabitur protinus et exsilit; ipse vero aridas et desertissimas nugas stringit. Atque Aquinas quidem cum Scoto et sociis etiam in non rebus rerum varietatem effinxit, hic vero etiam in rebus non rerum solitudinem æquavit. Atque hoc hominis cum sit, humanos tamen usus in ore habet impudens, ut mihi etiam pro sophistis prævaricari videatur. Verum hos missos faciamus. Citetur jam et Plato, cavillator urbanus, tumidus poëta, theologus mente captus. Tu certe dum rumores nescio quos philosophicos limares et simul committeres, ac scientiam dissimulando simulares, animosque vagis inductionibus tentares et exsolveres, vel litteratorum vel civilium virorum convivii sermones, vel etiam sermonibus quotidianis gratiam et amorem subministrare potuisti. Verum cum veritatem humanæ mentis incolam, veluti indigenam nec aliunde commigrantem mentireris, animosque nostros ad historiam et res ipsas nunquam satis applicatos et reductos averteres, ac se subingredi, ac in suis cæcis et confusissimis idolis volutare contemplationis nomine doceres, tum demum fraudem capitalem admisisti. Deinde etiam tu scelere haud minore stultitiæ apothéosin introduxisti, et vilissimas cogitationes religione munire ausus es. Nam levius malum est, quod philologorum parens exstitisti, ac tuo docta et auspiciis plurimi ingenii, fama et cognitionis rerum populari et molli jucunditate capti et contenti, severiorem veri pervestigationem corruerunt. Inter quos fuisse Marcus Cicero, et Annæus Seneca, et Plutarchus Chæronæus, et complures alii neutiquam his pares. Nunc ad medicos pergamus; video Galenum, virum angustissimi animi, desertorem experientiæ, et vanissimum causatorem. Tune, Galene, is es, qui medicorum inascitiam et desidiam etiam infamiam eximis, et in tuto collocas, artis ac officii eorum finitor ignavissimus? qui tot morbos insanabiles statuendo, tot ægrotorum capita proseribis, horumque spem, illorum industriam præcidis? O canicula, O pestis! Tu mistionis commentum naturæ prærogativam; tu inter calores astri et ignis seditionem avidè arripiens et ostentans, ubique humanam potestatem malitiose in ordinem redigis, et ignorantiam desperatione in æternum munire cupis. Do indignitati tuæ ne te amplius morer. Abducas etiam tecum licet socios tuos et fœderatos Arabes, dispaeratoriorum conditores, qui pari cum cæteris in theoriis amentia copiosius quidem e supinissimis conjecturis medicinarum vulgarium pollicita magis quam auxilia composuere. Nec non cape comites perfunctoriam neotericorum turbam. Heus nomenclator, suggere! Atqui respondet, ne dignos esse quorum nomina teneat. Sane ut inter hujuscemodi nuga-

tores gradus quosdam agnosco, pessimum et absurdissimum genus eorum, qui methodo et acriologia universam artem comprehendunt, quibus vulgo ob elocutionem et ordinem applauditur; qualis est Fernelius. Minus incommodi sunt, qui majorem observationum et experimentorum varietatem et proprietatem ostendunt, licet stultissimis causationibus dilutam et immersam, ut Arnoldus de Villa Nova, et alii id genus. Intueor ab altera parte cohortem chemistarum, inter quos se ante alios jactat Paracelsus, qui audacia meruit ut separatim cœreatur. Atque superiores illi, quos modo perstrinximus, mendacia, tu monstra. Quæ tu novis Bacchi oracula in meteoricis fundis, æmule Epicuri? Ille tamen in hac parte tanquam indormiscens et aliud agens, opiniones veluti sorti committit. Tu omni sorte stultior in absurdissimi cujusque mendacii verba jurare paratus es. Verum alia tua videamus. Quas tu fructuum elementorum tuorum inter se imitationes, quas correspondentias, quæ parallela somnias, idolorum conjugator fanaticæ? Nam hominem scilicet pantomimum effecisti. Quam præclare autem sunt interpunctiones illæ, quibus naturæ unitatem lacerasti, species nimirum tuæ? Quare facilius Galenum fero elementa sua ponderantem, quam te somnia tua ornantem. Illum enim occultæ rerum proprietates, te communes et promiscuæ qualitates exigant. Nos interim miseros, qui inter tam odiosas ineptias degimus! Principiorum autem triadem, commentum haud ita prorsus inutile et rebus aliqua ex parte finitimum, quam importune inculcat homo imposturæ peritissimus? Audi adhuc crimina graviora. Tu divina naturalibus, sacris profana, fabulis hæreses miscendo, veritatem (sacrilege impostor) tum humanam, tum religiosam polluisti. Tu lumen naturæ (cujus sanctissimum nomen toties impuro ore usurpans) non abscondisti, ut sophistæ, sed extinxisti. Illi experientiæ desertores, tu proditor. Tu evidentiam rerum crudam et personatam contemplationi ex præscripto subjiciens, et substantiarum Proteos pro motuum calculis quærens, scientiæ fontes corrumpere, et humanam mentem exuere conatus es; et ambages et tædia experimentorum, quibus sophistæ adversi, empirici impares sunt, novis et adacititiis auxiliisti; tantum abest ut experientiæ representativam secutus sis, aut noveris. Nec non magorum hiatus ubique pro viribus amplificasti, importunissimas cogitationes spe, spem promissis premens, imposturæ tum artifex tum opus. Invideo tibi, Paracelse, e sectatoribus tuis unum Petrum Severinum virum non dignum qui istis ineptiis immoriatur. Tu certe, Paracelse, ei plurimum debes, quod ea, quæ tu (asinorum adoptivæ) rudere consueveras, cantu quodam et modulatione, et gratisimo vocum discrimine, jucunda et harmonica effecit, et mendaciorum odia in fabellæ oblectamenta traduxit. Tibi vero, Severine, veniam do, si sophistarum doctrinam, non solum operum effctam, verum desperationem ex professo captantem, pertæsus, alia rebus nostris labentibus firmamenta quæstivisti. Cumque Paracelsica ista se obtulissent, et ostentationum præconiis et obscuritatis subterfugiis, et religionis affinitatibus, et alio fuco commendata, te in hoc non rerum fontes, sed spei hiatus jactu

quodam indignationis dedisti. Rite et ordine feceris, si ab ingenii placitis ad naturæ scita te transtuleris, tibi non modo artem brevem, sed et vitam longam porrectura.

Jam cæteros chemistas sententia in Paracelsum lata defixos cerno obstupescere. Agnoscunt profecto decreta sua, quæ iste magis promulgavit, quam posuit, ac arrogantia pro cautelis (haud plane ex antiqua disciplina) communit. Ubi sane magna mentiendi reciprocaione inter se conciliati largas ubique spes ostentant, et per experientiæ quidem devia vagi, in quædam utilia casu, non ductu, quandoque impinguntur. In theoriis vero iisdem ab arte sua (utpote fornacis discipuli) non recesserunt. Verum ut delicatus ille adolescentulus cum scalum in littore reperisset, navem ædificare concupivit: ita carbonarii isti ex pauculis distillationum experientis philosophiam condere aggressi sunt, ubique istis separationum et liberationum absentissimis idolis obnoxiam. Nec hos tamen uno ordine omnes habeo: siquidem utile genus eorum est, qui de theoriis non admodum solliciti, mechanica quadam subtilitate rerum inventarum extensionesprehendunt; qualis est Bacon. Sceleratum et sacrum eorum, qui undique theoriis suis plausus conquirunt, ambientibus etiam et pro iis supplicantibus religione, spe et impostura. Talis est Isaac Hollandus, et turbæ chemistarum pars longe maxima. Age, citeur jam Hippocrates, antiquitatis creatura, et annorum venditor. In cujus viri auctoritatem cum Galenus et Paracelsus magno uterque studio, velut in umbram asini, se recipere contendat, quis non cachinnum tollat? Atque iste homo certe in experientia obtutu perpetuo hæere videtur, verum oculis non natantibus et anquirentibus, sed stupidis et resolutis. Deinde a stupore visu parum recollecto idola quædam non immania quidem illa theoriarum, sed elegantiora ista, quæ superficiem historiæ circumstant, excipit, quibus haustis tumens et semisophista, et brevitate (de illius ætatis more) tectus, oracula demum (ut his placet) pandit, quorum ii se interpretes haberi ambiunt; cum revera nihil aliud agat, quam aut sophistica quædam per abruptas et suspensas sententias tradens redargutioni subducat; aut rusticorum observationes supercilio donet. Atque ad hujus quidem viri instituta, non tam improba quam inutilia, proxime (ut etiam vulgo creditur) accedit Cornelius Celsus, sed intencior sophista, et historiæ modificatæ magis obstrictus, idem moralem moderationem scientiæ progressibus aspergens, et errorum extrema amputans, non prima evellens. Atque de istis verissima quidem hæc sunt. Nunc autem sciscitantem te audio, fili, an non forte deterior, ut fit, voluere? Præsertim cum status scientiæ sit semper fere Democraticus? An non tempus, veluti flumen, levita et inflata ad nos devexit, solida et gravia demersit? Quid veteres illi veritatis inquisitores Heraclitus, Democritus, Pythagoras, Anaxagoras, Empedocles, et alii, alienis, non propriis scriptis noti? Quid denique de silentio et secretis antiquitatis statuis? Ego, fili, ut tibi ex more meo, (id est, usu tuo,) respondeam, antiquitatis fragmentum unum aut alterum (inventorum dico, non librorum) agnosco: idque ipsum tamen magis ut diligentiae et ingenuitatis

specimen, quam scientiæ auctoris. De iis vero rebus, quæ cum vestigiis suis aufugere, si innumerem laboriosa esse ista conjecturarum aucupia, nec consentaneum me utilitates in posterum humano generi parantem ad antiquitatis philologiam retrogredi, sat scio pro modestia tua acquiesceres. Veruntamen ut perspicere possis, quam res præsentibus bifrontes vates sint, quamque et futuras et præteritas coram sistant, decrevi utriusque temporis tabulis (quæ non tantum scientiæ decursus et fluxus, sed et alios rerum provisos complectantur) tibi gratificari. Neque tu hoc quale sit (antequam videas) augurere. Non enim cadit in te vera hujusce rei anticipatio: nec si minus ad manus tuas veniat, requiras. Gratificor enim (inquam) quibusdam vestrum hac in re, fili, et delicatioribus spiritus concilio. Omnino scientia ex naturæ lumine petenda, non ex antiquitatis obscuritate repetenda est. Nec refert quid factum fuerit, illud videndum quid fieri possit. An tu, si regnum tibi armis et victori bello subjugatum traderetur, quæstiones neceles utrum majores tui illud tenerint necne, et genealogiarum rumores sollicitares? Atque hæc de antiquitatis penetralibus dicta sunt. De istis vero sectarum ducibus, quos nominasti, et compluribus aliis id genus, facilis sententia est. Errori varietas, veritati unitas competit. Ac nisi temporum politiæ et provisos ejusmodi ingeniorum peregrinationibus adversiores exstitissent, multæ etiam aliæ errorum oræ fuissent peragratae. Immensum enim pelagus veritatis insulam circumluit; et supersus adhuc novæ ventorum idolorum injuriæ et dissectiones. Quinetiam nudius tertius Bernardinus Telesius scenam conscendit, et fabulam novam egit, nec plausu celebrem, nec argumento elegantem. An non vides, fili, tum eccentricorum et epicyclorum ingeniatores, tum terræ aurigas, æqua et incipiti phænomenorum advocacione gaudere? Prorsus ita et in universalibus theoriis fit. Nam veluti si quis, lingua tantum vernacula uti sciens (advertite, fili, nam simile est admodum) scripturam ignoti sermonis capiat, ubi paucula quædam verba sparsim observans suæ linguæ vocabulis sono et literis finitima, illa quidem statim ac fidenter ejusdem esse significationis ponit, (licet ab ea sæpius longissime recedant,) postea ex iis invicem collatis reliquum orationis sensum, multo ingenii labore, sed et multa libertate, divinat: omnino tales et isti naturæ interpretes inveniuntur. Nam idola quisque sua (non jam scenæ dico, sed præcipue fori, et specus) veluti linguas vernaculas diversas, ad historiam afferentes, confestim quæ simile aliquid sonant, arripiunt, cætera ex horum symmetria interpretantur.

Atque jam tempus est, fili, ut nos recipiamus et expiemus, utpote qui tam profana et polluta (licet importandi animo) attractaverimus. Ego vero adversus istos omnes minora, quam pro ipsorum sonantissimo reatu, dixi. Tu tamen fortasse minus istam redargutionem intelligis. Nam pro certo habeas, fili, sententias istas, quas adversus istos tuli, nihil minus esse quam contumeliam. Ego enim non, ut Velleius apud Ciceronem, declamator et philologus opiniones cursim perstringens, et magis abiciens quam frangens, velut Agrippa, neotericus homo, in istiusmodi sermone ne nominandus quidem, sed tri-

vialis scurra, et singula distortuens, et lussu propinans, (me miserum, qui hominum defectu cum brutis me conferre necesse habeam!) ita me gessi. Verum sub maledicti velo miras accusationum animas, et singulari artificio in singula fere verba contractas, et reductas, et exquisitissima oculi acie in ipsa criminum ulcera directas et vibratas postmodum respiciens videbis. Atque cum isti criminibus et reatu valde inter se mixti et implicati forent, tamen singulos indiciis maxime propriis, iisdem autem capitalibus, reos feci. Mens enim humana, fili, rerum incurisibus et observationibus turgida, varias admodum errorum species molitur, et educit. Aristoteles vero velut unius est speciei planta procerior, sic et Plato et alii deinceps. At confutationes particulares requiris. Næ illud peccatum fuerit largiter in humani generis fortunam auream pignus imperii, si ego ad umbrarum fugacissimarum insecutionem deflecterem. Unum, fili, in medio ponendum est veritatis lumen clarum et radiosum, quod omnia colustret, et errores universos momento dispellat. Non infirmi quidam et pallidi lychni ad singulos errorum et mendaciorum angulos et sinus circumferendi sunt. Quare quod petebas detestare, fili, nam profanum est valde. Subinde vero interrogantem te audio, Num quæ isti universi asseruerunt, omnia prorsus vana et falsa fuere? Atqui, fili, infelicitatem jam narras, eamque prodigiosam, non ignorantiam. Nemo enim non quandoque in aliquod verum impingitur. Heraclitum, cum scientiam ab hominibus in mundis privatis, non in mundo communi quæsitam diceret, bene in philosophiæ introitu litasse video. Democritum, cum naturæ immensam varietatem et infinitam successione tribuens, se e regione sisteret cæterorum fere philosophorum, secularitatibus deditissimorum, et mancipiorum consuetudinis, et hac oppositione utrumque mendacium in se collidendo perderet, et veritati inter extrema viam quandam aperiret, non infeliciter philosophatum esse reputo. Pythagoræ numeros etiam boni omnis loco pono. Dindamum Indum quod morem Antiphysin dixerit, laudo. Quin et Epicurum adversus causarum (ut loquuntur) per intentiones et fines explicationem, disputantem licet pueriliter, et philologicè, tamen non invitus audio. Etiam Pyrrhonem et Academicos vacillantes, et e lintre loquentes, et erga idola se gerentes veluti amatores quosdam morosos (qui amasios suos semper probris afficiunt, nunquam deserunt) animi et hilaritatis gratia adhibeo. Nec immerito. Cæteros enim idola prorsum agunt, hos vero in orbem; quod jocosius est. Denique Paracelsum et Severinum cum tantis clamoribus homines ad experientiæ suggestum convocant, præcones mihi exopto. Quid igitur? Num veritatis compotes isti? Nihilominus. Et rusticorum, fili, proverbia nonnulla apposite ad veritatem dicuntur. Sus rostro si forte humi A literam impresserit, num propterea suspicabere integram tragediam, veluti literam unam, ab ea posse describi? Longe alia est ratio, fili, veritatis, quæ est ex scientiæ analogia, alia quæ ex idoli sectione enuntiatur. Illa constans et quota gemina, hæc discors et solitaria. Quod etiam in operibus fit. Pulvis tormentorum si ductu, non casu (ut loquuntur) et impactu inventum fuisset, non

solitarium, sed cum multa inventorum nobilium (quæ sub eundem meridianum cadunt) frequentia prodiisset. Sic et alia tum opera, tum posita. Quare moneo, si forte idolum aliquod alicujus istorum meam, id est, rerum veritatem aliquo in puncto secuerit, noli aut de iis majora, aut de me inferiora cogitare, cum satis appareat ex reliquorum ignorantia ipsa illa non ex scientiæ analogia eos dixisse. Adhuc instas, fili, num ergo universas istorum chartas thuri et odoribus amicalia fieri jubes? Non illud dixerim. Manet enim paulisper aliquis eorum usus, tenuis quidem et angustus, et longe alius quam in quem destinatæ erant, ac nunc usurpantur, sed tamen aliquis. Adde et alias multas chartas illis celebritate obscuriores, usu præstantiores esse. Aristotelis et Platonis moralia plerique mirantur: sed Tacitus magis vivas morum observationes spirat. Verum quæ tandem utilitas ex chartis capi possit, quæque aliæ aliis utilitate antecedant, quæque minima pars sint chartarum munera eorum, quæ ad interpretationem naturæ conferunt, suo loco dicitur. Postremo, fili, ita te quærentem audio, Num tu te in istorum omnium locum sufficis? Respondebo, atque id non dissimulanter, et ex intimo sensu meo. Ego, fili suavissime, tibi sanctum, castum, et legitimum connubium cum rebus ipsis firmabo. Ex qua consuetudine (supra omnia epithalamiorum vota) beatissimam prolem vere heroum (qui infinitas humanas necessitates, omnibus gigantibus, monstris, et tyrannis exitiosiores, subacturi sunt, et rebus vestris placidam, et festam securitatem, et copiam conciliaturi) suscipies. Ego, vero, fili, si te jam jam animo ab idolis non repurgato, vertiginosis experientiæ ambagibus committerem, næ tu ducem cito desiderares. Idola autem exuere simplici præcepto meo sine rerum notitia, ne, si velles maxime, posses. In tabulis nisi priora deleveris, non alia inscripseris. In mente contra: nisi alia inscripseris, non priora deleveris. Atque ut hoc fieri posset, ut idola hospitii exueres, tamen periculum omnino est, ut ab idolis viæ non initiatus obruare. Nimis duci assuevisti. Etiam Romæ firmata semel tyrannide semper postea sacramentum in senatus populique Romani nomen irritum fuit. Confide, fili, et da te mihi, ut te tibi reddam.

---

## DE INTERPRETATIONE NATURÆ

### PROCEMIUM.

Ego cum me ad utilitates humanas natum existimarem, et curam reipublicæ inter ea esse, quæ publici sunt juris, et velut undam aut auram omnibus patere interpretarer, et quid hominibus maxime conducere posset quæsi, et ad quid ipse a natura optime factus essem, deliberavi. Inveni autem nil tanti esse erga genus humanum meriti, quam novarum rerum et artium, quibus hominum vita excolatur, inventionem et auctoramentum. Nam et priscis temporibus, apud homines rudes, rudium rerum inventores et monstratores consecratos fuisse, et in deorum numerum optatos, animadverti; et acta heroum, qui

vel urbes condiderunt, vel legumlatores exstiterunt, vel justa imperia exercuerunt, vel injustas dominationes debellarunt, locorum et temporum angustiis circumscripta esse notavi: rerum autem inventionem, licet minoris pompæ sit res, ad universalitatis et æternitatis rationem magis accommodatam esse censeo. Ante omnia vero si quis non particulare aliquod inventum, licet magnæ utilitatis, eruat, sed in natura lumen accendat, quod ortu ipso oras rerum, quæ res jam inventas contingunt, illustret, dein paulo post elevatum abstrusissima quæque patefaciat et in conspectum det, is mihi humani in universum imperii propagator, libertatis vindex, necessitatum expugnator, visus est. Me ipsum autem ad veritatis contemplationem, quam ad alia, magis fabricatum deprehendi, ut qui mentem et ad rerum similitudinem (quod maximum est) agnoscendum satis mobilem, et ad differentiarum subtilitates observandas satis fixam et intentam haberem, qui et quærendi desiderium, et dubitandi patientiam, et meditandi voluptatem, et asserendi cunctationem, et respiscendi facilitatem, et disponendi sollicitudinem tenerem, quique nec novitatem affectarem, nec antiquitatem admirarer, et omnem imposturam odissem. Quare naturam meam cum veritate quandam familiaritatem et cognationem habere judicavi. Attamen cum genere et educatione rebus civilibus imbutus essem, et opinionibus aliquando, utpote adolescens, labefactarer, et patriæ me aliquid peculiare, quod non ad omnes alias partes æquo pertineat, debere putarem, speraremque me, si gradum aliquem honestum in republica obtinerem, majore ingenii et industriæ subsidio quæ destinaveram perfecturum, et artes civiles didici, et qua debui modestia amicis meis, qui aliquid possent, salva ingenuitate, me commendavi. Accessit et illud, quod ista, qualiacunque culturam penetrant; subiit vero spes me, natum religionis statu haud admodum prospero, posse, si civilia munia obirem, et aliquid ad animarum salutem boni procurare. Sed cum studium meum ambitioni deputaretur, et ætas jam consisteret, ac valetudo affecta et malæ tarditatis meæ me admoneret, et subinde reputarem me officio meo nullo modo satisfacere, cum ea, per quæ ipse hominibus pro me prodesse possem, omitterem, et ad ea, quæ ex alieno arbitrio penderent, me applicarem, ab illis cogitationibus me prorsus alienavi, et in hoc opus ex prioro decreto me totum recepi; nec mihi animum minuit, quod ejus, quæ nunc in usu est, doctrinæ et eruditionis declinationem quandam et ruinam in temporum statu prospicio; tametsi enim barbarorum incursiones non metuam, (nisi forte imperium Hispanum se corroboraverit, et alios armis, se onere oppreserit et debilitarit,) tamen ex bellis civilibus (quæ mihi videntur, propter mores quosdam, non ita pridem introductos, multas regiones peragratura) et ex sectarum malignitate, et ex compendiaris istis artificiiis et cautelis, quæ in eruditionis locum surreperunt non minor in literas et scientias procella videbatur impendere. Nec typographorum officina his malis sufficere queat. Atque ista quidem imbellis doctrina, quæ otio alitur, præmio et laude efflorescit, quæ vehementiam opinionis non sustinet, et artificiiis et imposturis elu-

ditur, iis quæ dixi impedimentis obruitur. Longe alia ratio est scientiæ, cujus dignitas utilitatibus et operibus munitur. Ac de temporum injuriis fere securus sum, de hominum vero injuriis non laboro. Si quis enim me nimis altum sapere dicat, respondeo simpliciter, in civilibus rebus esse modestiæ locum; in contemplationibus veritati. Si quis vero opera statim exigit, aio sine omni impostura, me, hominem non senem valetudinarium, civilibus studiis implicatum, rem omnium obscurissimam sine duce ac luce aggressum, satis profecisse, si machinam ipsam ac fabricam extruxerim, licet eam non exercuerim aut moverim. Ac eodem candore profiteor, interpretationem naturæ legitimam in primo adscensu, antequam ad gradum certum generalium perventum sit, ab omni applicatione ad opera puram ac sejunctam servari debere. Quin et eos omnes, qui experientiæ se undis aliqua ex parte dederunt, cum animo parum firmi, aut ostentationis cupidi essent, in introitu operum pignora intempestive investigasse, et inde exturbatos, et naufragos fuisse scio. Si quis autem pollicitationes saltem particulares requirat, is noverit homines per eam, quæ nunc in usu est, scientiam, ne satis doctos ad optandum quidem esse. Quod autem minoris momenti res est, si quis ex politicis judicium suum in

istiusmodi re inserere præsumat, quibus moris est ex personæ calculis singula æstimare, vel ex similibus conatus exemplis conjecturam facere, illi dictum volo et illud vetus, claudum in via, cursorem extra viam antevertere, et de exemplis non cogitandum, rem enim sine exemplo esse. Publicandi autem ista ratio ea est, ut quæ ad ingeniorum correspondentias captandas, et mentium areas purgandas pertinent, edantur in vulgus et per ora volitent; reliqua per manus tradantur cum electione et judicio. Nec me latet, usitatum et tritum esse impostorum artificium, ut quædam a vulgo secernant, nihilo iis incertiis, quas vulgo propinant, meliora. Sed ego sine omni impostura ex providentia sana prospicio ipsam interpretationis formulam, et inventa per eandem, intra legitima et optata ingenia clausa, vegetiora et munitiora futura. Ipse vero alieno periculo ista molior. Mihi enim nil eorum, quæ ab externis pendunt, cordi est. Neque enim famæ auceps sum, nec hæresiarcharum more sectam condere gratum habeo, et privatum aliquid emolumentum ex tanta molitione captare ridiculum et turpe duco. Mihi sufficit meriti conscientia, et ipsa illa rerum effectio, cui ne fortuna ipsa intercedere possit.

## DE PRINCIPIIS ATQUE ORIGINIBUS,

SECUNDUM FABULAS CUPIDINIS ET CŒLI:

SIVE

PARMENIDIS ET TELESII,

ET PRÆCIPUE

## DEMOCRITI PHILOSOPHIA,

TRACTATA IN FABULA.

DE CUPIDINE.

Quæ de Cupidine sive Amore ab antiquis memorata sunt, in eandem personam convenire non possunt; quin etiam ab ipsis ponuntur Cupidines duo, et longo sane intervallo discrepantes; cum unus ex iis Deorum antiquissimus, alter natu minimus fuisse diceretur. Atque de antiquo illo nobis in præsentia sermo est. Narrant itaque Amorem illum omnium Deorum fuisse antiquissimum atque adeo omnium rerum, excepto Chao, quod ei cœvum perhibetur. Atque Amor iste prorsus sine parente introducitur. Ipse autem cum Cœlo mixtus, et deos et res universas progenit. A nonnullis tamen ovo prognatus incubante Nocte traditus est. Ejus vero attributa ponuntur diversa, ut sit infans perpetuus, cæcus, nudus, alatus, sagittarius. Vis autem ejus præcipua, et propria, ad corpora unienda valet: etiam claves

ætheris, maris, et terræ ei deferebantur. Fingitur quoque et celebratur alter Cupido minor, Veneris filius, in quem attributa antiquioris transferuntur, et propria multa adjiciuntur.

Fabula ista, cum sequenti de cœlo, brevi parabola complexu proponere videtur doctrinam de principiis rerum et mundi originibus, non multum dissidentem ab ea philosophia, quam Democritus exhibuit; nisi quod videatur aliquanto magis severa, et sobria, et perpurgata. Ejus enim viri, licet acutissimi et diligentissimi, contemplationes gliacebant tamen, et modum tenere nesciæ erant, nec se satis stringebant aut sustinebant. Atque etiam hæc ipsa placita, quæ in parabola delitescunt, quamvis paulo emendatiora, talia sunt, qualia esse possunt illa, quæ ab intellecta sibi permisso, nec ab experientia continenter et gra-

datum sublevato, profecta videntur; nam illud vitium existimamus etiam prisca secula occupasse. In primis autem intelligendum est, quæ hic afferuntur, conclusa et prolata esse ex auctoritate rationis humanæ solummodo, et sensus fidem secuta: cujus jampridem cessantia et deficientia oracula merito rejiciuntur, postquam meliora et certiora mortalibus ex parte verbi divini affulserint. Itaque Chaos illud, quod Cupidini cœvum erat, massam sive congregationem materiæ inconditam significabat. Materia autem ipsa, atque vis et natura ejus, denique principia rerum in Cupidine ipso adumbrata erant. Ille introducit sine parente, id est, sine causa: causa enim effectus veluti parens est; idque in tropis familiare et fere perpetuum est, ut parens et proles causam et effectum denotent: materiæ autem primæ, et virtutis atque actionis propriæ ejus causa nulla esse potest in natura (Deum enim semper excipimus) nihil enim hac ipsa prius. Itaque efficiens nulla, nec aliquid naturæ notius; ergo nec genus, nec forma. Quamobrem quæcunque tandem sit illa materia, atque ejus vis et operatio, res positiva est et surda, atque prorsus ut invenitur accipienda, nec ex prænotione aliqua judicanda. Etenim modus si sciri detur, tamen per causam sciri non potest, cum sit post Deum causa causarum ipsa incausabilis. Est enim terminus quidam verus et certus causarum in natura; atque æque imperiti est et leviter philosophantis, cum ad ultimam naturæ vim et legem positivam ventum sit, causam ejus requirere aut fingere; ac in iis, quæ subordinata sunt, causam non desiderare. Quare Cupido ab antiquis sapientibus ponitur in parabola sine parente, id est, sine causa. Neque nihil in hoc est; imo haud scimus an non res omnium maxima. Nil enim philosophiam peræque corruptit, ac illa inquisitio parentum Cupidinis; hoc est, quod philosophi principia rerum, quemadmodum in natura inveniuntur, non receperunt et amplexi sunt, ut doctrinam quandam positivam, et tanquam fide experimentalis; sed potius ex legibus sermonum, et ex dialecticis et mathematicis conclusivunculis, atque ex communibus notionibus, et hujusmodi mentis extra naturam expatiationibus, ea deduxerunt. Itaque philosophanti quasi perpetuo hoc animo agendum est, non esse parentes Cupidini, ne forte intellectus ad inania deflectat; quia in hujusmodi perceptionibus universalibus gliscit animus humanus, et rebus et se ipso abutitur, et dum ad ulteriora tendit, ad proximiora recidit. Cum enim, propter angustias suas, iis, quæ familiariter occurrunt, et quæ una et subito mentem subire et ferire possunt, maxime moveri conserit; fit ut cum ad ea, quæ secundum experientiam maxime universalis sunt, se extendit, et nihilominus acquiescere nolit; tum demum tanquam adhuc notiora appetens, ad ea, quæ ipsum plurimum affecerint, aut illaqueaverint, se vertit, et ea ut magis causativa et demonstrativa, quam ipsa illa universalis, sibi fingit.

Itaque quod prima rerum essentia, vis et Cupido sine causa sit, jam dictum est. De modo vero ejus rei (quæ causam non recipit) videndum. Modus autem et ipse quoque perobscurus est; idque a parabola ipsa monemur, ubi eleganter fingitur Cupido, ovum Nocte incubante exclusum. Certe sanctus

philosophus ita pronuntiat: "Cuncta fecit Deus pulchra tempestatibus suis, et mundum tradidit disputationibus eorum; ita tamen ut non inveniat homo opus quod operatus est Deus a principio usque ad finem." Lex enim summa essentiae atque naturæ, quæ vicissitudines rerum secat et percurrit, (id quod ex verborum complexu describi videtur; "opus quod operatus est Deus a principio usque ad finem,") vis scilicet primis particulis a Deo indita, ex cujus multiplicatione omnis rerum varietas emergat et conflatur, cogitationem mortalium perstringere potest, subire vix potest. Aptissime autem refertur illud de ovo Noctis ad demonstrationes per quas Cupido iste in lucem editur. Quæ enim per affirmativas concluduntur, videntur partus lucis; quæ vero per negativas et exclusiones, ea tanquam a tenebris et nocte exprimuntur et educuntur. Est autem iste Cupido vere ovum exclusum a Nocte; notitia enim ejus (quæ omnino haberi potest) procedit per exclusionem facta, quædam ignoratio est, et tanquam nox, quoad id quod includitur. Quare præclare Democritus atomos sive semina, atque eorum virtutem, nullius rei similia, quæ sub sensum cadere posset, asseruit; sed ea prorsus cæca et clandestina natura insignit. Itaque de ipsis pronuntiavit:

"—Neque sunt igni simulata, neque ulli Præterea rei, quæ corpora mittere possit Sensibus, et nostros adjectu tangere tactus."  
LUCR. I. 688.

Et rursus de virtute eorum:

"At primordia gignundis in rebus oportet Naturam clandestinam cæcamque adhibere Emineat ne quid, quod contra pugnet et obstat."  
Ib. 778.

Itaque atomi neque ignis scintillis, neque aquæ guttis, neque auræ bullis, neque pulveris granis, neque spiritus aut ætheris minutis, similes sunt. Neque vis et forma eorum aut grave quiddam est aut leve, aut calidum aut frigidum, aut densum aut rarum, aut durum aut molle, qualia in corporibus grandioribus inveniuntur; cum istæ virtutes, et reliquæ id genus compositæ sint et conflatæ. Neque similiter motus naturalis atomi, aut motus ille est descensus, qui appellatur naturalis, aut motus illi oppositus (plagæ) aut motus expansionis et contractionis, aut motus impulsiois et nexis, aut motus rotationis celestium, aut quispiam ex aliis motibus grandiorum, simpliciter. Atque nihilominus et in corpore, atomi elementa omnium corporum, et in motu et virtute atomi initia omnium motuum et virtutum insunt. Veruntamen in hoc ipso, nimirum de motu atomi, collato ad motum grandiorum, philosophia parabolæ a philosophia Democriti dissentire videtur. Democritus enim non omnino parabolæ tantum, sed et sibi quoque impar, et fere contrarius reperitur in iis, quæ amplius ab eo circa hoc dicta sunt. Debit enim motum heterogeneum atomo tribuere non minus, quam corpus heterogeneum et virtutem heterogeneam. Verum ille motus duos, descensus gravium, et ascensus levium, (quem per plagam sive percussionem magis gravium pellendo minus gravia in superius expediebat,) delegit ex motibus grandiorum, quos atomo ut primitivos communicaret. Parabola

autem heterogeneam et exclusionem ubique tuetur, tam substantia quam motu. At parabola ulterius innuit, harum, de quibus diximus, exclusionum finem aliquem et modum esse; neque enim perpetuo nox incubat. Atque Dei certe proprium est, cum de ejus natura inquiritur per sensum, ut exclusiones in affirmativis non terminentur. Alia vero est hujus rei ratio, ea scilicet ut post debitas exclusiones et negationes, aliquid affirmetur, et constituatur, et ut ovum quasi a tempestiva et matura incubatione excludatur; neque tantum ovum excludatur Nocte, sed etiam ex ovo excludatur persona Cupidinis; hoc est, ut non tantum educatur et extrahatur hujusce rei notio quædam ex ignorantia, verum etiam notio distincta et confusa. Atque de demonstrationibus, quales eæ circa materiam primam esse possint, hæc habuimus, quæ cum sensu parabolæ maxime convenire arbitramur. Veniendum igitur ad Cupidinem ipsum, materiam scilicet primam, et dotes ejus, quas tanta circumstat nox; et videndum quid parabola ad illam lucis afferat. Neque nos fugit, opiniones hujusmodi duras et fere incredibiles ad hominum sensus et cogitationes accedere. Atque ejus certe rei periculum jam factum esse plane cernimus in hac ipsa Democriti philosophia de atomis, quæ quia paulo acutius et altius in naturam penetrabat, et a communibus notionibus erat remotior, a vulgo pueriliter accipiebatur; sed et philosophiarum aliarum, quæ ad vulgi captum magis accedebant, disputationibus, tanquam ventis, agitata, et fere extincta est. Et tamen etiam ille vir suis temporibus summa admiratione floruit, et Pentathlus dictus est ob multiplicem scientiam, et inter omnes philosophos, omnium consensu, maxime physicus est habitus, ut magi quoque nomen obtineret. Neque Aristotelis pugna et dimicationes (qui Ottomannorum more de regno suo philosophiæ anxius erat, nisi fratres trucidasset; cui etiam curæ erat, ut ex ejus verbis liquet, ne quid posterius scilicet dubitarent) tantum sua violentia, nec etiam Platonis majestas et solennia tantum reverentia potuerunt, ut philosophiam hanc Democriti delerent. Sed dum illa Aristotelis et Platonis strepitu et pompa professoria in scholis circumsonarent et celebrarentur, hæc ipsa Democriti apud sapientiores, et contemplationum silentia et ardua arctius complexos, in magno honore erat. Certe in seculis illis Romanæ doctrinæ, illa Democriti et mansit et placuit; cum Cicero ejus viri ubique summa cum laude mentionem faciat, et non ita multo post præconium illud poetæ, qui videtur ex temporis sui judicio (ut solent illi) de eo locutus esse, conscriptum sit et existet.

“ — Cujus prudentia monstrat  
Magnos posse viros, et magna exempla duros,  
Vercum in patria crassoque sub aëre nasci.”  
Juv. Sat. x. 48.

Itaque non Aristoteles aut Plato, sed Gensericus et Attila et barbari hanc philosophiam pessunderunt. Tum enim, postquam doctrina humana naufragium perpassa esset, tabulæ istæ Aristotelicæ et Platonice philosophiæ, tanquam materiæ cujusdam levioris et magis inflatæ, servatæ sunt, et ad nos pervenerunt, dum magis solida mergerentur, et in oblivionem fere venirent. Nobis vero digna videtur Democriti phi-

losophia, quæ a neglectu vindicetur, præsertim quando cum auctoritate prisici seculi in plurimis consentiat. Primo itaque describitur Cupido ut persona quædam; eique attribuuntur infantia, alic, sagittæ, alia, de quibus sigillatim postea dicemus. Sed hoc interim sumimus; antiquos proposuisse materiam primam (qualis rerum principium esse potest) formatam et dotatam, non abstractam, potentialem, informem. Atque certe materia illa spoliata, et passiva, prorsus humanæ mentis commentum quoddam videtur, atque inde ortum, quia intellectui humano illa maxime esse videntur, quæ ipse potissimum haurit, et quibus ipse plurimum afficitur. Itaque fit ut formæ (quas vocant) magis existere videantur, quam aut materia, aut actio: quod illa latet, hæc fluit; altera non tam fortiter impingitur, altera non tam constanter in hæret. Imagines autem illæ, contra, et manifestæ et constantes putantur; adeo ut materia illa prima et communis tanquam accessorium quiddam videatur, et loco suffulcimenti; actio autem quævis tanquam emanatio tantum a formæ; atque prorsus primæ partes formis deferantur. Atque hinc fluxisse videtur formarum et idearum regnum in essentiis, materia scilicet addita quadam phantastica. Aucta etiam sunt ista superstitione nonnulla (errorem, intemperantiam, ut fit, secuta) et ideæ abstractæ quoque introductæ, et earum dignitates; tanta confidentia et majestate, ut cohors somniantium vigilantes fere oppresserit. Verum ista ut plurimum evanuerunt, licet alicui, nostro hoc seculo, curæ fuerit, ea sponte inclinantia, fuleire et excitare majore ausu (ut nobis videtur) quam fructu. Verum quam præter rationem materia abstracta principium ponatur, (nisi obstent præjudicia,) facile perspicitur. Formas siquidem separatas quidam actu subsistere posuerunt, materiam separatam nemo; ne ex iis, qui eam ut principium adhibuerunt; atque ex rebus phantasticis entia constituere durum videtur ac perversum, neque inquisitioni de principiis consonum. Neque enim quaeritur quomodo naturam entium commodissime cogitatione complectamur, aut distinguamus, sed quæ sint vere entia prima et maxime simplicia, ex quibus cætera deriventur. Primum autem ens non minus vere debet existere, quam quæ ex eo fiunt, quodammodo magis. Authopostaton enim est, et per hoc reliqua. At quæ dicuntur de materia illa abstracta, non multo meliora sunt, quam si quis mundum et res ex categoriis et hujusmodi dialecticis notionibus, tanquam ex principiis, fieri asserat. Parum enim interest, utrum quis mundum fieri ex materia et forma, et privatione dicat, an ex substantia et qualitatibus contrariis. Sed omnes fere antiqui, Empedocles, Anaxagoras, Anaximenes, Heraclitus, Democritus, de materia prima in cæteris dissidentes, in hoc convenerunt, quod materiam activam, forma nonnulla, et formam suam dispensantem, atque intra se principium motus habentem, posuerunt. Neque aliter cuiquam opinari licebit, qui non experientiæ plane desortor esse velit. Itaque hi omnes mentem rebus submiserunt. At Plato mundum cogitationibus, Aristoteles vero etiam cogitationes verbis, adjudicavit; vergentibus etiam tum hominum studiis ad disputationes et sermones, et veritatis inquisitionem severiorem missam facienti-

bus. Quare hujusmodi placita magis toto genere reprehendenda quam proprie confutanda videntur. Sunt enim eorum, qui multum loqui volunt, et parum scire. Atque abstracta ista materia est materia disputationum, non universi. Verum rite et ordine philosophanti, naturæ plane faciendæ est dissectio non abstractio, (qui autem secare eam nolunt, abstrahere coguntur,) atque omnino materia prima ponenda est conjuncta cum forma prima, ac etiam cum principio motus primo, ut invenitur. Nam et motus quoque abstractio infinitas phantasias peperit, de animis, vitis, et similibus, ac si iis per materiam et formam non satisfaceret, sed ex suis propriis penderent illa principia. Sed hæc tria nullo modo discernenda, sed tantummodo distinguenda; atque asserenda materia (qualiscunque ea sit) ita ornata, et apparatus, et formata, ut omnis virtus, essentialis, actio, atque motus naturalis ejus consecutio et emanatio esse possit. Neque propterea metuendum, ne res torpeant, aut varietas ista, quam cernimus, explicari non possit, ut postea docebimus. Atque quod materia prima nonnulla sit, demonstratur a parabola in hoc, quod Cupidinis est persona quædam. Ita tamen ut materia ex toto sive massa materiæ quondam informis fuerit: chaos enim informe; Cupido persona quædam. Atque hæc cum sacris literis optime conveniunt. Neque enim scriptum est, quod Deus hylen in principio creavit, sed cælum et terram.

Subjungitur etiam descriptio nonnulla status rerum, qualis fuerit ante opera dierum, in qua distincta mentio fit terræ et aquæ, quæ sunt nomina formarum; sed tamen quod massa secundum totum erat informis. Verum introducitur in parabolam Cupido ita personatus ut sit tamen nudus. Itaque post illos, qui materiam ponunt abstractam, proxime (sed in contrarium) peccant illi, qui eam ponunt non exutam. Atque de hac re quædam adpersimus in iis, quæ de demonstrationibus, quales in materiam primam conveniant, et de heterogenea ipsius materiæ a nobis jam dicta sunt. At hic, quem nunc ingrediemur, est proprius ejus rei tractandæ locus. Videndum ergo ex iis, qui principia rerum in materia formata fundaverunt, quinam sint illi, qui formam materiæ tribuerint nativam et nudam, et qui rursus superfusam et indutam. Inveniuntur autem omnino quatuor opinantium sectæ. Prima est eorum, qui unum quippiam asserunt rerum principium, diversitatem autem entium constituunt in natura ejusdem principii fluxa et dispensabili. Secunda eorum, qui principium rerum ponunt substantiam unicum, idque fixum et invariabile, diversitatem entium deducunt per hujusmodi principii diversas magnitudines, figuras, et posituras. Tertia eorum, qui plura constituunt rerum principia; et diversitatem entium ponunt in eorum temperamento et mitione. Quarta eorum, qui infinita aut saltem numerosa constituunt rerum principia, sed specificata et effigiata; quibus nihil opus ut comminiscantur aliquid, quod res deducat ad multiplex, cum naturam jam a principio disgregent. Inter quos secunda secta nobis videtur solummodo Cupidinem exhibere, ut est, nativum et exutum. Prima vero introducit eum tanquam velo discretum. Tertia tunicatum. Quarta etiam chlamidatum et

fere sub larva. Atque de singulis pauca dicemus ad meliorem parabolæ explicationem. Primo igitur ex iis, qui unum rerum principium statuerunt, neminem invenimus, qui illud de terra affirmaret. Obstabat scilicet terræ natura quieta, et torpens, et minime activa, sed cœli et ignis et reliquorum patiens; ne id cuiuspiam in mentem veniret asserere. Attamen prisca sapientia Terram proximam a Chao ponit, Cœlique primo parentem, deinde nuptam; ex quo conjugio omnia. Neque propterea hoc accipiendum, ac si veteres unquam statuissent terram principium essentialis; sed principium vel originem potius schematismi sive systematis. Itaque hanc rem ad parabolam sequentem de cœlo rejicimus; ubi de originibus inquiremus; quæ est inquisitio ad illam de principia posterior.

At Thales aquam principium rerum posuit. Videbat enim materiam præcipue dispensari in humido, humidum in aqua. Consentaneum autem esse illud rerum principium ponere, in quo virtutes entium et vigores, præsertim elementa generationum et instaurarionum, potissimum invenirentur. Genituras animalium humidam; etiam plantarum semina et nuclea, quamdiu vegetarent, nec effœta essent, tenera et mollia. Metalla quoque liquecere et fluere, et esse tanquam terræ succos concretos, vel potius aquas quasdam minerales. Terram ipsam imbribus aut irrigatione fluviorum fecundari et instaurari, nihilque aliud videri terram et limum, quam fœces et sedimenta aquæ. At aërem planissime esse aquæ expirationem atque expansionem. Quin et ignem ipsum non concipi, neque omnino durare aut ali, nisi ex humido et per humidum. Pinguedinem autem illam humidi, in qua flamma et ignis sustentantur et vivunt, videri quandam aquæ maturitatem et concoctionem. Corpus rursus et molem aquæ per universum, ut fomitem communem, dispertere. Oceanum terræ circumfundi: vim maximam aquarum dulcium subterraneam, unde fontes et fluvii, qui venarum instar aquas per terræ et faciem et viscera deportent. At immensas vaporum et aquarum congregationes in supernis esse, utque aliam quandam aquarum universitatem, utpotè a qua inferiores aquæ, atque adeo oceanus ipse, reparantur et reficiantur: etiam ignes cœlestes existimabat aquas illas et vapores depascere; neque enim aut sine alimento subsistere, aut aliunde ali posse: figuram autem aquæ, quæ in ejus particulis (guttis videlicet) cernitur, eandem cum figura universi esse, rotundam nempe et sphericam; quin et undulationem aquæ etiam in aëre et flamma notari et percipi; motum denique aquæ habilem, nec torpescentem, nec præfestinam: numerosissimam autem piscium et aquatiliam generationem. Sed Anaximenes aërem delegit, quod unum esset rerum principium. Nam si moles in constituendis rerum principia spectanda sit, videtur aër longe maxima universi spatia occupare. Nisi enim detur vacuum separatum, aut recipiatur superstitio illa de heterogenea cœlestium et sublunarium; quicquid a globo terræ ad ultima cœli extenditur spatii, atque astrum aut meteorum non est, aërea substantia compleri videtur. Atque globi terrestris domicilium instar puncti ad cœli ambitum censetur. In æthere vero ipso, quantula portio in stellis conspergitur? Cum

in citimis sphaeris singulae conspiciantur, in ultima licet ingens earum numerus sit, tamen praesentia spatii interstellaribus, exiguam quiddam spatii siderum appareat; ut omnia tanquam in vastissimo aëris pelago natate videantur. Neque parva est ea portio aëris et spiritus, quae in aquis et cavis terrae locis sedem et moram habet; unde aquae fluorem suum recipiunt. Quin et extenduntur quandoque et intumescunt; terrae autem non solum porositas sua accidit, sed etiam tremores et concussiones, evidenter signa venti et aëris inclusi. Quod si media quaedam natura sit propria principiorum, ut tantae varietatis possit esse susceptiva; ea prorsus in aëre reperiri videtur. Est enim aër tanquam commune rerum vinculum, non tantum quia ubique praesto est, et succedit, et vacua possidet, sed multo magis quod videtur esse naturae cujusdam mediae et adiaphorae. Hoc enim corpus illud est, quod lucem, opacitatem, omniumque colorum tincturas, et umbrarum eclipses excipit et vehit; quod sonorum etiam harmonicorum, et (quod multo majus est) articulorum impressiones et signaturas motu accuratissimo discriminat; quod odorum differentias, non tantum generales illas suavis et foetidi, gravis, acuti, et similia, sed proprias et specificatas, rosae, violae, subit nec confundit; quod ad celebres et potentissimas illas qualitates calidi, frigidi, etiam humidi, sicci, quodammodo aequum se praebet, in quo vapores aquei, halitus pingues, spiritus salium, metallorum fumi, suspensa volant. Denique in quo radii caelestes, et arctiores rerum consensus et discordiae, secreto comitantur, et obmurmurant, ut sit aër veluti Chaos secundum, in quo tot rerum semina agant, errent, tentent, atque experiantur. Postremo, si viam genialem et vivificantem in rebus consulas, quae ad rerum principia manuducat eaque manifestet, etiam aëris potiores partes esse videntur; adeo ut aëris et spiritus et animae vocabula usu nonnunquam confundantur. Idque merito cum vitae paulo adultioris (exceptis scilicet rudimentis illis vitae in embryonibus et ovis) respiratio aliqua comes sit veluti individuus; adeo ut pisces, concreta et conglaciata aquarum superficie, suffocentur. Etiam ignis ipse, nisi ab aura circumfusa animetur, extinguitur, nihilque aliud videtur, quam aër attritus, irritatus et incensus; quemadmodum aqua e contra videri possit aëris coagulum et receptus. Etiam terram perpetuo aërem exhalare, neque ut per aquam in formam aëris transitum faciat opus habere. Heraclitus vero magis acutus, sed minus credibilis, ignem rerum principium posuit. Neque enim naturam mediam, quae maxime vaga et corruptibilis esse solet, sed naturam summam et perfectam, quae corruptionis et alterationis terminus quidam sit, ad rerum principia constituenda quaesivit. Videbat autem maximam rerum varietatem et perturbationem in corporibus solidis et consistentibus inveniri. Talia enim corpora organica esse possunt, et veluti machinae quaedam; quae etiam ex figura innumeras variationes nanciscuntur, qualia sunt corpora animalium et plantarum. Etiam in his ipsa ea quoque, quae organica non sunt, tamen si acutius introspiciantur, valde esse dissimilia reperiuntur. Quanta enim dissimilitudo inter partes animalium illas ipsas, quae vocantur similes?

Cerebrum, humorem crystallinum, albuginem oculi, os, membranam, cartilaginem, nervum, venam, carnem, pinguedinem; medullam, sanguinem, spermata, spiritum, chylum, reliqua? Etiam inter partes vegetabilium, radicem, corticem, caulem, folium, florem, semen, et similia? At fossilia organica non sunt certe, sed tamen et in una specie varie commista sunt, et ad invicem admodum copiosam varietatem ostendunt. Quamobrem basis illa diversitatis entium, ampla, lata, et exporrecta, in qua tantus rerum apparatus elucescit et observatur, constituit videtur in natura solida et consistenti. Corpora vero liquorum, vis schematismi organici plane deserit. Neque enim reperitur per totam istam naturam visibilem, aut animal, aut planta, in corpore mere fluido. Ergo numerosissima illa varietas a natura liquida absconditur et subducitur. Manet nihiloominus varietas non parva, ut in tanta diversitate fusilium, succorum, distillatorum, et hujusmodi, manifestum est. At in aëris et pneumaticis corporibus arctatur multo magis varietas, et obducitur promiscua quaedam rerum similitudo. Certe vis illa colorum et saporum, quibus liquores quandoque distinguuntur, omnino cessat; odorum vero manet, atque aliarum nonnullarum, ita tamen ut transeant, confundantur, et minus haereant; adeo ut in universum quo magis ad ignis naturam fiat appropinquatio, tantum de varietate depereat. At postquam ad ignis naturam ventum est, ejusque rectificati et purioris, omne organum, omnisque proprietas, omnis dissimilitudo exiit, atque natura tanquam in vertice pyramidalis in unum coire videtur, atque ad terminum actionis suae propriae pervenisse. Itaque incensionem sive ignescentiam Pacem nominavit, quia naturam componeret; generationem autem Bellum, quia ad multiplex deduceret. Atque ut ista ratio (qua res a varietate ad unum, et ab unitate ad varium, fluminis instar, fluere et refluxum) aliquo modo explicari posset: ignem ei densari et rarecere placuit, ita tamen ut rarecentia illa versus naturam igneam actio esset naturae directa et progressiva; densatio autem veluti retrogradatio naturae et destitutio. Utrumque fato et certis periodis (secundum summam) fieri censebat: ut mundi istius, qui volvitur, futura sit quandoque conflagratio, et deinde instauratio, atque incensionis et generationis series perpetua et successio. Ordinem autem (si quis diligenter versetur in tenui ea, quae de hoc viro atque ejus decretis ad nos pervenit, memoria) diversum statuit incensionis et extinctionis. In scala enim incensionis nihil ab iis, quae vulgata sunt, discessit; ut progressus rarecentiae et extenuationis esset a terra ad aquam, ab aqua ad aërem, ab aëre ad ignem; at non idem decursus; sed ordinem plane invertit. Ignem enim per extinctionem terram educere asserbat, tanquam faeces quasdam atque fuligines ignis: eas deinceps uditatem concipere et colligere, unde aquae fiat effluviolum, quae rursus aërem emittat et exspiret; ut ab igne ad terram mutatio fiat in praecipuum non gradatim.

Atque haec, aut iis meliora, cogitabant illi, qui unum rerum principium statuerunt, naturam simpliciter intuiti, non contentiose. Atque laudandi sunt, quod vestem unicam Cupidini tribuerint, in quod

nuditati proximum est; atque hujusmodi vestem, quæ est (ut diximus) veli cuiuspiam instar, non profecto telæ spissioris. Vestem autem Cupidinis appellamus formam aliquam materiæ primæ attributam, quæ asseratur esse cum forma alicujus ex entibus secundis substantialiter homogenea. Ista autem quæ de aqua, aëre, igne, ab istis asseruntur, non firmis admodum rationibus nixa, reprehendere non fuerit difficile; neque causa videtur cur de singulis disseramus, sed tantum in genere. Primo itaque videntur antiqui illi in inquisitione principiorum, rationem non admodum acutam instituisse, sed hoc solummodo egisse, ut ex corporibus apparentibus et manifestis, quod maxime excelleret, quærent; et, quod tale videbatur, principium rerum ponerent; tanquam per excellentiam, non vere aut realiter. Putabant enim hujusmodi naturam dignam, quæ sola esse diceretur qualis apparet: cætera vero eandem ipsam naturam esse existimabant, licet minime secundum apparentiam; ut vel per tropum locuti, vel tanquam fascinati videantur, cum impressio fortiori reliqua traxerit. At vere contemplantem, æquum se præbere oportet ad omnia, atque principia rerum statuere, quæ etiam cum minimis et rarissimis, et maxime desertis quibuscumque entium convenient, non tantum cum maximis et plurimis et vigentibus. Licet enim nos homines entia, quæ maxime occurrunt, maxime miremur, tamen naturæ sinus ad omnia laxatur. Quod si principium illud suum teneant non per excellentiam, sed simpliciter; videntur utique in duriores tropum incidere; cum res plane deducatur ad æquivocum, neque de igne naturali, aut naturali aëre, aut aqua, quod asserunt, prædicari videatur, sed de igne aliquo phantastico et notionali, (et sic de cæteris,) qui nomen ignis retineat, definitionem abneget. Porro videntur et illi in eadem incommoda compelli, quæ assertores materiæ abstractæ subeunt. Ut enim illi materiam potentialem et phantasticam ex toto, ita et isti ex parte introducunt. Ponunt etiam materiam quoad aliquid (principium illud nempe suum) formatam et actualem; quoad reliqua tantum potentialem. Neque aliquid lucri fieri per istud genus principii unici videtur magis, quam per illud materiæ abstractæ; nisi quod habetur aliquid quod obversetur ad intellectum humanum, in quo cogitatio humana magis defigatur et acquiescat, et per quod notio principii ipsius paulo plenior sit, reliquorum omnium abstrusior et durior. Sed scilicet illa ætate prædicamenta regnum non acceperant, ut potuisset principium illud materiæ abstractæ latere sub fide et tutela prædicamenti substantiæ. Itaque nemo ausus est confingere materiam aliquam plane phantasticam, sed principium statuerunt secundum sensum; aliquod ens verum; modum autem ejus dispensandi (liberius se gerentes) phantasticum. Nihil enim inveniunt, imo nec comminiscuntur, quo appetitu aut stimulo, aut qua ratione, via, aut ductu, istud principium suum a se degeneret, et rursus se recipiat. At cum tanti appareant per universum contrariorum exercitus, densi, rari, calidi, frigidi, lucidi, opaci, animati, inanimati, et aliorum plurimorum, quæ se invicem oppugnant, privant, perimunt: hæc omnia ab uno quopiam rei materiæ fonte manare putare, neque

tamen ullum ejus rei modum ostendere, speculationis cuiusdam attonitæ videtur, et inquisitionem deserentis. Nam si de re ipsa per sensum constaret, ferendum esset, licet modus esset in obscuro; rursus si modus vi rationis erutus esset aliquis habilis et credibilis, discedendum fortasse ab apparentiis; sed minime postulandum ut iis assentiamus, quorum nec entia per sensum manifesta, neque explicationes per rationem probabiles. Præterea, si unum esset rerum principium, debuerat ejus conspici in omnibus rebus nota quædam, et tanquam partes potiores, et prædominantia nonnulla; neque inveniri principatum ullum, quod principio ex diametro opponatur. Etiam in medio collocari debuerat, ut omnibus commodius sui copiam faceret, et per ambitum se diffunderet. At horum nihil esse in illis placitis invenitur. Nam terra, quæ a principii honore separatur, et excluditur, videtur suscipere et fovere naturas illis tribus principalibus oppositas, cum ad mobilitatem et lucidam naturam ignis opponat naturam quietam et opacam; ad tenuitatem et mollitiem aëris, opponat similiter naturam densam et duram; et ad humiditatem et sequacitatem aquæ, naturam siccam, rigidam et asperam; atque ipsa quoque terra medium locum occupavit, cæteris deturbatis. Porro, si unicum esset rerum principium, debuerat et illud tum ad rerum generationem, tum ad earum dissolutionem, æquum præbere naturam. Tam enim est principii, ut res in illud solvantur, quam ut res ex illo gignantur. At hoc non fit; sed ex iis corporibus aër et ignis ad materiam generationis præbendam inepta videntur, ad eorum resolutionem excipiendam parata. At aqua contra ad generationem benigna et alma, ad resolutionem sive restitutionem magis aliena et aversa; id quod facile cerneretur, si imbres paulisper cessarent. Quin et putrefactio ipsa nullo modo res ad aquam puram et crudam redigit. Sed longe maximus error, quod constituerunt principium corruptibile et mortale. Id enim faciunt, cum principium introducunt tale, quod naturam suam in compositis deserat et deponat.

“ Nam quodcumque suis mutatum finibus exit,  
Continuo hoc mors est illius, quod fuit ante.”

Verum hac ratione magis nobis opus erit statim, cum ad illam tertiam sectam, quæ plura decrevit rerum principia, sermo jam ordine devecus sit; quæ certe secta plus roboris habere videri possit, plus præjudicii certe habet. Itaque ad opiniones non secundum genus et in communi, sed singulas accedemus.

ITAQUE ex iis, qui plura principia dixerunt, separabimus eos, qui infinita asserunt. Ille enim locus de infinito ad parabolam Cœli pertinet. Verum ex antiquis Parmenides duo rerum principia, ignem et terram, dixit, sive cœlum et terram. Solem enim et sidera, verum ignem esse asseruit, eumque purum et limpidum, non degenerem, qualis apud nos est ignis, qui, tanquam Vulcanus in terram dejectus, ex casu claudicat. Parmenidis vero placita instauravit seculo nostro Telesius, vir Peripateticis rationibus (si aliquid illæ essent) potens et instructus, quas etiam in illos ipsos vertit; sed affirmando impeditus, et

destruendo quam astruendo melior. Ipsius vero Parmenidis inventorum parca admodum et perexilis memoria. Attamen fundamenta similis opinionis plane jacta videntur in libro, quem Plutarchus de primo frigido conscripsit; qui tractatus videtur ex aliquo tractatu antiquo, qui tunc temporis exstabat, jam periit, descriptus et desumptus. Habet enim non pauca et acutiora et firmiora, quam solent esse auctoris ipsius, qui ea vulgavit; a quibus monitus atque excitatus videtur Telesius, ut ea et studiose arriperet, et strenue persequeretur in suis de natura rerum commentariis. Placita autem hujus sectæ sunt hujusmodi. Primas formas ac prima entia activa, atque adeo primas substantias, calorem et frigus esse; eadem nihilominus incorporea existere; sed subesse materiam passivam et potentialem, quæ corpoream molem præbeat, atque sit utriusque naturæ ex æquo susceptiva, ipsa omnis actionis expers. Lucem pullulationem caloris esse, sed calor dissipati, qui coëundo multiplicatus, sit robustus et sensibilis. Opacitatem similiter destitutionem et confusionem naturæ radiantis ex frigore. Rarum et densum caloris et frigoris texturas et veluti telas esse; calorem vero et frigus eorum effectores et opifices, densante opus frigore et inspissante, divellente autem calore et extendente. Ex ejusmodi texturis indi corporibus dispositionem erga motum, vel habillem vel aversam: raris videlicet promptam et habillem, densis torpescentem et aversam. Itaque calorem per tenue motum excitare et peragere, frigus per densum motum compescere et sedare. Quare esse et poni quatuor naturas coëssentiales atque conjugatas, easque duplices, ordinem eum, quem diximus, ad invicem servantes, (fons enim calor et frigida, cæteræ emanationes,) sed tamen perpetuo concomitantes et inseparabiles. Eas esse, calidum, lucidum, rarum, mobile: et quatuor rursus his oppositas, frigidum, opacum, densum, immobile. Sedes vero et contignationes primæ conjugationis, in cœlo, sideribus, ac præcipue in sole statui; secundæ in terra. Cœlum enim e summo integroque calore et materia maxime explicata, esse calidissimum, lucidissimum, tenuissimum, maxime mobile. Terram contra, ex frigore integro et irrefracto, et materia maxime contracta, frigidissimum, tenebrosissimum, densissimum, penitus immobilem, ac summo pere motum exhorrentem. Summitates vero cœli naturam suam integram atque illæsam servare, diversitatem nonnullam inter se admittentes, sed a contrarii violentia et insultu penitus semotas: similem per ima sive intima terræ constantiam esse, extrema tantum, ubi contrariorum sit appropinquatio et concursus, laborare, et ab invicem pati et oppugnari. Cœlum itaque tota mole et substantia calidum et omnis contrariæ naturæ prorsus expers, sed inæqualiter; aliis partibus scilicet magis calidum, aliis minus. Stellatum enim corpus intensius calidum, interstellare remissius; quin et stellis ipsis alias aliis ardiores, et ignis magis vividus et vibrantis: ita tamen ut contraria natura frigoris, aut aliquis ejus gradus, nunquam eo penetret; recipere enim diversitatem naturæ, contrarietatem non recipere. Neque vero de calore aut igne cœlestium, qui est integer et nativus, ex igne communi judicium omnino

feri. Ignem enim nostrum extra locum suum, tepidum, contrariis circumfusum, indignum, et stipem alimenti, ut conservetur, emendicantem, et fugientem. At in cœlo vero locatum, ab impetu alicujus contrarii disjunctum, constantem, ex se et similibus conservatum, et proprias operationes libere et absque molestia peragentem. Item cœlum omni parte lucidum, sed secundum magis et minus. Cum enim sint ex stellis notis et numeratis, quæ nisi cœlo sereno conspici non possint, atque in galaxia sint nodi minutarum stellarum, quæ albedinem quandam conjunctæ, non corpus lucidum distinctæ repræsentent; nemini dubium esse posse, quin et sint stellæ complures, quoad nos invisibiles; atque adeo universum cœli corpus luce præditum sit, licet fulgore non tam robusto et vibrante, nec radiis tam confertis et constipatis, ut tanta spatia distantiarum vincere queat, et ad nostrum aspectum pervenire. Ita rursus cœlum universum ex substantia tenui et rara, nil in ea contrarium, nil illibenter compactum, sed tamen alia parte materiam magis explicatam, alia minus explicatam sortiri. Postremo, motum cœli eum inveniri, qui rei maxime mobili competat, conversionis nimirum sive rotationis; motus enim circularis absque termino est, et sui gratia. Motus in linea recta ad terminum, et ad aliquid; et tanquam ut quiescat. Itaque universum cœlum motu circulari ferri, nec ullam ejus partem hujus motus expertem esse; sed tamen quemadmodum et in calore, et in luce, et raritate cœli versatur inæqualitas, ita et in motu eandem notari; adeoque magis insigniter, quia observationem humanam magis lacessit et sustinet, ut etiam calculos pati possit. Motum autem orbicularem et incitatione differre posse, et latione; et incitatione, ut sit celerior aut tardior; latione, ut sit in circulo perfecto, aut aliquid habeat spiræ, neque se plane restituat ad eundem terminum (nam linea spiralis ex circulo et recta composita est). Itaque hæc ipsa cœlo accidere, varietatem nempe incitationis, et deflexionem a restitutione, sive spiralitatem. Nam et stellæ inerrantes et planetæ impariter properant; et planetæ evidenter a tropico in tropicum deflectunt, atque quo sublimiora cœlestia sunt, eo et majorem incitationem sortiuntur, et propiorem spiram. Nam si phænomena simpliciter, atque ut conspiciuntur, accipiuntur, et ponatur motus diurnus unus naturalis et simplex in cœlestibus, et formositas illa mathematica (ut motus redigantur ad circulos perfectos) contemnatur, et recipiantur lineæ spirales; et contrarietates illæ motuum in consecutione, ab oriente in occidentem, (quem vocant primi mobilis,) et rursus ab occidente in orientem (quem vocant motum proprium planetarum) redigantur in unum, salvando differentiam temporis in restitutione per præfestinationem et derelictionem, et diversam politatem zodiaci per spiras; manifestum est hoc, quod diximus, evenire. Exempli gratia, ut luna, quæ est planetarum infima, incedat et tardissime, et per spiras maxime raras et hiantes. Atque talis quædam natura portio illius cœli, quæ fit (propter distantiam a contrario) firma et perpetua, huic sectæ videri possit. Utrum vero veteres terminos servarit Telesius, ut talia esse putaret, quæcunque supra lunam collocantur, cum luna ipsa; an

altius vim inimicam ascendere posse, perspicue non ponit. At terræ (quæ est oppositæ naturæ contigatio et sedes) portionem itidem maximam, intemeratam et inconcussam statuit, et quo cælestia non penetrent. Eam vero qualis sit, non esse cur inquireat, ait. Sat esse ut quatuor illis naturis, frigiditate, opacitate, densitate, et quiete, iisque absolutis, et nullatenus imminutis dotata judicetur. Partem autem terræ versus superficiem ejus, veluti quendam corticem, aut incrustationem, generationi rerum assignat; omniaque entia, quæ nobis quovis modo innotuerunt, etiam ponderosissima, durissima, et altissime demersa, metalla, lapides, mare, ex terra per calorem cæli aliqua ex parte versa et subacta, et quæ nonnihil caloris, radiationis, tenuitatis, et mobilitatis jam conceperit, et denique ex media inter solem et terram puram natura participet, consistere. Itaque necesse est ut terra illa pura infra profundissima maris, minerarum, et omnis generati deprimitur; et a terra illa pura usque ad lunam, aut altiora fortasse, media quædam natura ex temperamentis et refractionibus cæli et terræ collocetur. Postquam autem interiora utriusque regni satis munisset, expeditionem et bellum molitur. Nam in spatiis illis intra extrema cæli et intima terræ omnem tumultum, et confictum, et tartarissimum inveniri, ut fit in imperiis, in quibus illud usu venit, ut fines incursionibus et violentiis infestentur, dum interiores provinciæ secura pace fruuntur. Has itaque naturas, et earum concreciones, sese assidue generandi et multiplicandi, et quaquaversum offundendi, et molem materiæ universam occupandi, et sese mutuo oppugnandi et invadendi, et propriis se sedibus deturbandi et ejiciendi, et sese in iis constituendi, præterea et alterius naturæ vim, et actiones, et proprias etiam percipiendi etprehendendi, et ex hujusmodi perceptione se movendi et accommodandi, appetitum et facultatem habere, atque ex ista decertatione, omnium entium, atque omnis actionis et virtutis varietatem deduci. Videtur tamen alicubi, licet titubanter et strictim, aliquid dotis materiæ impertiri; primo ut non augeatur nec minuatur, per formas et activa entia, sed summa universali constet: deinde ut motus gravitatis sive descensus ad illam referatur: etiam quiddam de nigredine materiæ injicit. Illud autem perspicue; calorem et frigus eadem vi et copia, in materia explicata vires remittere, in complicata intendere, cum mensuram non suam sed materiæ impleant. Modum vero excogitat atque explicat Telesius, quo ex hoc certamine et lucta induci atque expediri possit tam fœcunda et multiplex entium generatio. Ac primo cavet terræ, inferiori scilicet principio, ac ostendit quid in causa sit, cur a sole terra jampridem destructa, et absorpta non sit, nec in futurum esse possit. Caput huic rei distantiam ponit terræ a stellis fixis immensam, a sole ipso satis magnam, et, qualis esse debeat, bene mensuratam. Secundo, declinationem radiorum solis a perpendiculari, habito respectu ad partes terræ diversas; quod videlicet supra majorem partem terræ sol nunquam sit in vertice aut incidentia radiorum perpendicularis; adeo ut universum terræ globum vigore aliquo caloris notabili nunquam occupet. Tertio, obliquitatem motus solis, in transcurso per zodiacum, habito respectu ad easdem terræ

partes, unde calor solis in qualicunque vigore non assiduo ingeminatur, sed per intervalla majora redit. Quarto, celeritatem solis respectu motus diurni, qui tantum ambitum tam exiguo temporis spatio conficit, unde minor mora caloris, neque momentum aliquod temporis, in quo calor constet. Quinto, continuationem corporum inter solem et terram, quod sol non per vacuum integras caloris dimittat vires, sed per tot corpora renitentia permeans, et cum singulis satagens, et dimicans, in immensum langueat et enervetur; tanto magis, quod quo longius procedat atque debilior evadat, eo corpora inveniat magis inobsequentia, maxime omnium, postquam ad terræ superficiem ventum est, ubi videtur non solum renitentia, sed plane quædam repulsio. Processum vero immutationis talem asserit. Bellum plane inexpugnabile atque internecivum esse; neque contrarias istas naturas ullo symbolo convenire, neque per tertiam, præterquam hylen. Itaque utramque naturam hoc ipsum appetere, niti, contendere, ut alteram plane perdat, seque solam et suam materiæ indat; ut sit solis opus (quod perspicue et sæpe dicit) plane terram vertere in solem, et vicissim opus terræ, solem vertere in terram; neque hoc officere quin omnia certo ordine, definitis temporibus, et justis mensuris fiant; atque actio quæque cursu debito incipiat, moliat, vigeat, langueat, cesset. Quod tamen per leges fœderis aut concordix ullas non fieri, sed omnino per impotentiam: omne enim plus et minus in virtute et actione non ab intentionis moderamine, (quæ integrum quiddam concupiscit,) sed ab oppositæ naturæ ictu et fræno esse; operationis diversitatem et multipliciter, atque etiam perplexitatem, omnino propter unum ex tribus istis evenire; vim caloris, dispositionem materiæ, modum subactionis; quæ tamen tria nexu quodam inter se implicantur, atque sibi ipsis concausæ sunt. Calorem ipsum, vi, copia, mora, medio, successione differre: successione vero ipsam in plurimis variari, accedentia, recedentia, sive intentione, remissione, saltu, gradu, reditu, sive repetitione per majora aut minora intervalla; atque hujusmodi alterationibus. Calores itaque prorsus vi et natura longe diversissimos esse, prout puriores vel impuriores, habita ratione ad primum fontem (solem videlicet) facti sint. Neque calorem omnem calorem fovere: sed postquam gradibus bene multis ad invicem distent, se mutuo non minus, quam frigora, perimere ac perdere, et proprias actiones agere, et alterius actionibus adversari atque opponi; ut minores calores ad multo majores constituat Telesius tanquam prodores et perfugas, et cum frigore conspirantes. Itaque vividum illum calorem, qui in igne est, et vibratur, exilem illum calorem, qui in aqua serpit, omnino interimere; atque similiter calorem præternaturalem humorum putridorum in corpore humano, calorem naturalem suffocare et extinguere. Copiam vero caloris plurimum interesse, manifestius esse, quam ut explicatione egeat. Neque enim unam aut alteram ignis prunam æque vehementer, ac multas concervatas, calefacere; maxime autem insigniter copix caloris effectum demonstrari in multiplicatione caloris solis per reflexionem radiorum; numerus enim radiorum conduplicatur per reflexionem simplicem, multiplicatur per variam. Copix caloris vero debet adscribi vel addi et unio,

quod etiam obliquitate et perpendiculo radiorum optime ostenditur, cum quo propius et ad acutiores angulos radius directus et reflexus cœat, eo validiorem caloris ictum jaciât. Quin et sol ipse, cum inter majores illos et robustiores stellarum fixarum ignes, regulum, caniculam, spicam, versatur, valentiores fervores effiat. Moram vero caloris evidentissime maximi momenti operationem esse, cum omnes virtutes naturales tempora colant, observent, ut ad vires actuandas tempus requiratur nonnullum, ad roborandas bene multum. Itaque moram caloris, calorem æqualem in progressivum et inæqualem convertere, quia calor et antecedens et subsequens simul conjugantur; id et in fervoribus autumnalibus, quia fervoribus solstitialibus, et in horis æstivis pomeridianis, quia horis ipsis meridianis ardentiores sentiuntur, manifestum esse; etiam in frigidioribus regionibus debilitatem caloris, mora et longitudine dierum æstivis temporibus quandoque compensari. At medii potentiam et efficaciam in calore deferendo insignem esse. Hinc enim tempestatum temperiem magnopere variam, ut cœlum indicibili inconstantia per dies æstivos algidum nonnihil, per dies hiemales sudum quandoque inveniat; sole interim iter suum et spatia sua constanter et legitime servante; etiam segetes et uvas flantibus austris, et cœlo nubiloso, magis mutari. Atque omnem cœli secundum varias annorum revolutiones dispositionem et excretionem aliquando pestilentem et morbidam, aliquando salubrem et amicam, hinc causam et originem sumere; medio scilicet aère variante, quæ dispositionem ex ipsa vicissitudine et alteratione tempestatum diversam, longa fortasse serie, colligit. Successionis vero caloris atque ordinis, quo calor calorem consequitur, ut multiplicem rationem, ita summam virtutem esse. Neque solem tam numerosas et prolificam generationem educere potuisse, nisi corporis solis moventis configuratio versus terram et terræ partes plurimæ inæqualitatis et variationis particeps esset. Nam et circulariter movetur sol, et rapide et ex obliquo, et se rexit, ut et absens sit et præsens, et propior et remotior, et magis ex perpendiculo, et magis ex obliquo, et citius rediens et tardius; neque ullo temporis momento calor emanans a sole sibi constet, neque brevi intervallo usquam (nisi sub ipsis tropicis) se restituat; ut tanta variatio generantis cum tanta varietate generati optime conveniat. Cui addi posse medii sive vehiculi naturam diversissimam. Cætera quoque quæ de inæqualitate et gradibus caloris unici dicta sunt, posse ad vicissitudines et varietates successionis in caloribus diversis referri. Itaque Aristotelem non male generationem et corruptionem rerum obliquæ viæ solis attribuisse, eamque ut efficientem causam earum constituisse, si libidine pronuciandi, et arbitrum naturæ se gerendi, et res ad placitum suum distinguendi et concinnandi, recte inventum non corrupisset. Illum enim et generationem et corruptionem (quæ nunquam prorsus privativa, sed generationis alterius prægnans est) inæqualitati caloris solis secundum totum, hoc est, accedentiæ et recedentiæ solis conjunctim, non generationem accedentiæ, corruptionem recedentiæ divisim assignare debuisset; quod pinguitur et ex vulgi fere judicio fecit. Quod si cui mirum videatur, generationem rerum soli attribui, cum sol ignis esse

asseratur et supponatur, ignis autem nil generet; id leviter objici. Somnium enim plane esse illud de heterogenea calorum solis et ignis. Infinitas enim esse operationes, in quibus actio solis et actio ignis conveniant; ut in maturatione fructuum, conservatione plantarum tenerarum, et elementis cœli assuetarum, in regionibus frigidis, exclusione ovorum, restitutione urinarum ad claritatem, (calorem enim solis et animalis conjungimus,) resuscitatione animalculorum frigore obrigentium, evocatione eorum et vaporum, et id genus. Sed nihilominus ignem nostrum malum mimum esse; nec solis actiones bene imitari, aut prope attingere, cum solis calor tribus dotatus sit proprietatibus, quæ ignis communis ægre ullo artificio repræsentare possit. Primo, quod sit ob distantiam, gradu ipso minor et blandior; hoc vero ejusmodi esse, ut aliquo modo æquiparari possit; caloris enim talis modus magis incognitus est, quam imparabilia. Secundo, quod per tot et talia media fluens et gliscens, dissimilarem quandam et generativam vim mutuatur et obtineat; maxime vero quod tam regulari inæqualitate augeatur, minuatur, accedat, recedat, nunquam vero subsultorie aut præcipitanter sibi succedat. Quæ duo postrema ab igne fere sunt inimitabilia, licet industria perspicaci et perpensa res provehi possit. Atque hujusmodi quædam de diversitate calorum a Telesio dicuntur.

Frigidi autem, contrarii nempe principii, atque dispensationis ejus vix meminit: nisi forte quæ de dispositione materiæ jam secundo loco dicentur, ea huic rei satisfacere posse putaverit; quod tamen facere non debuit, quandoquidem frigus nullo modo privationem caloris, sed omnino principium activum, caloris æmulum, et tanquam competitorem, videri voluit. Quæ autem de materiæ dispositione disseruit, eo pertinet ut ostendant quomodo materia a calore patiatur, et subigatur, et vertatur, missa frigoris mentione aut cura. De frigore autem (nos enim in omnium inventis summa cum fide, et tanquam faventes, versamur) hujusmodi quædam dicere potuit. Sedem frigidi immotam et fixam ad structuram caloris mobilem et versatilem optime convenire: tanquam incudem ad malleum. Nam si utrumque principium varietatem et alterationem habuisset, genuissent proculdubio entia horaria et momentanea. Etiam immensas regiones calidi (cœlum scilicet) compacta natura globi, terræ, et circumjacentium, nonnihil compensari; cum non spatia, sed copia materiæ in spatiis, spectetur; frigidi vero naturam, virtutes, et rationes merito aut silentio præteriri, aut brevi sermone transmitti debere, cum nil certi et explorati de eo haberi possit per experientiam. Habemus enim ignem communem, tanquam solis vicarium; qui caloris naturam manifestet. At frigidi telluris nulla est substitutio, quæ in manu hominis sit, et adhibeatur præsto ad experimentum. Etenim illos horrores et rigores frigidi, qui ex globo et ambitu terræ hiemalibus temporibus, et in regionibus frigidissimis expirant in aërem, tepores plane et balnea esse, præ natura primi frigidi, in visceribus terræ inclusi; ut frigus illud, cujus homines sensum et potestatem habeant, simile quiddam sit, ac si calorem nullum alium haberent præter eum, qui a sole æstivis diebus, et in calidis regionibus emanat; qui ad ignes fornacis ardentis collatus, refrigerium quoddam

censeri possit. Sed in iis, quæ subdititia sunt, minus morandum. Videndum igitur deinceps, qualia sint ea, quæ a Telesio dicuntur circa dispositionem materiæ, in quam calor agat; cuius ea est vis, ut actionem ipsam caloris promoveat, impediatur, immutetur. Ejus ratio quadruplex. Prima differentia sumitur ex calore præinexistente, aut non præinexistente. Secunda, ex copia aut paucitate materiæ. Tertia, ex gradibus subactionis. Quarta, ex clausura, vel apertura corporis subacti. Quod ad primam attinet, supponit Telesius in omnibus entibus, quæ nobis cognita sunt, subesse atque latitare calorem nonnullum, licet ad tactum minime deprehendatur, qui calor cum novo aut superveniente calore conjungitur; quin et ipse ab eodem adventitio calore ad actiones, quas peragendas etiam in proprio modulo excitatur atque incenditur. Hujus rei argumentum esse insigne, quod nullum scilicet sit ex entibus, non metallum, non lapis, non aqua, non aer, quod non ex tactu, atque etiam ab admotione ignis, aut corporis calidi, caleascit. Quod factum iri verisimile non est, nisi calor præinexistens et latens, præparatio quædam esset ad calorem novum et manifestum. Etiam illud magis et minus, nempe facilitatem aut tarditatem in calore concipiendo, quod in entibus invenitur, secundum modum caloris præinexistentis competere. Aërem enim parvo calore tepescere, atque eo, qui in corpore aquæ non percipiatur, sed sensum fugiat: etiam aquam citius tepescere, quem lapidem, aut metallum, aut vitrum. Nam quod aliquod ex istis, metallum scilicet aut lapis, citius tepescere videatur quam aqua, id tantum in superficie fieri, non in profundo; quia corpora consistentia minus communicabilia sunt in partibus suis, quam liquida. Itaque extima metalli citius caleferi quam extima aquæ, universam autem molem, tardius. Secunda differentia ponitur in coærvatione et exorptione materiæ. Ea si densa fuerit, fit ut caloris vires magis uniantur, et per unionem magis angeantur et intendantur; contra, si laxior fuerit, ut magis disgregentur, et per disgregationem magis minuantur et enerventur. Itaque fortiore esse calorem metallorum ignitorum, quam aquæ ferventis, etiam quam flammæ ipsius, nisi quod flamma per tenuitatem magis subintret. Nam flammam carbonum sive lignorum, nisi flatu excitetur, ut per motum facilius impellatur et penetret, non admodum furere: quin et nonnullas flammæ (qualis est spiritus vini, inflammati præsertim in exigua quantitate et dispersa) adeo lenis caloris esse, ut ad manum fere toleretur. Tertia differentia, quæ sumitur ex subactione materiæ, multiplex est; gradus enim subactionis memorantur ab eo quasi septem; quorum primus est, lentor, qui est dispositio materiæ exhibens corpus ad majorem violentiam nonnihil obsequens, et compressio, et præcipue extensionis patiens, flexibile denique aut ductile. Secundus, mollities, cum majore violentia nil opus est, sed corpus etiam levi impulsione atque ad tactum ipsum sive manum cedit absque evidenti renitentia. Tertia, viscositas sive tenacitas, quæ est principium quoddam fluoris. Videtur enim corpus viscosum ad contactum et complexum alterius corporis incipere fluere et continuari, nec se ipso finire, licet sponte et ex sese non fluat: fluidum enim sui sequax est, viscosum alterius

magis. Quarta, ipse fluor, cum corpus spiritus interioris particeps in motu versatur libens et seipsum sequitur, atque ægre definitur, aut consistit. Quinta, vapor, cum corpus attenuatur in intactile, quod etiam majore cum agilitate et mobilitate cedit, fluit, undulat, trepidat. Sexta, halitus, qui vapor est quidam magis coctus et maturus, et ad igneam naturam recipiendam subactus. Septima, aer ipse; aërem autem contendit Telesius omnino calore nativo, neque eo parvo aut impotenti, præditum esse; quod etiam in frigidissimis regionibus aer nunquam congelatur aut concrecit. Etiam illud evidenti indicio esse, aërem in natura propria calidum esse, quod omnis aer clausus, et ab universitate aëris divulsus, et sibi permissus, teporem manifeste colligit, ut in lana et rebus fibrosis. Etiam in locis clausis et angustis aërem ad respirationem sentiri quodam modo suffocativum, quod a calido est. Atque hæc propterea fieri quod aer clausus, sua natura uti incipiat, cum aer foras et sub dio refrigeretur a frigore, quod globus terræ perpetuo immittit et efflat. Quin etiam aërem nostrum communem tenui quadam cœlestium dote insigniri, cum habeat nonnihil in se lucis; quod ex visu animalium, quæ noctu et in locis obscuris cernere possunt, ostenditur. Atque talis est Telesio dispositionis materiæ series, in mediis videlicet; siquidem extrema, videlicet ex altera parte corpora dura et rigida, ex altera, ignis ipse, tanquam termini mediorum non recensentur. Sed præter hosce gradus simplices magnam accipitur diversitatem in dispositione materiæ ex corpore similari et dissimilari, cum scilicet portiones materiæ in uno corpore compositæ et coadunatæ, vel ad unum ex gradibus supradictis æqualiter referri possunt, vel ad diversa impariter. Longe enim maximam inde sequi in operatione caloris differentiam. Itaque quartam illam differentiam necessario adhiberi ex natura ac etiam positura corporis, in quod calor agat, clausa, aut porosa et aperta. Quando enim in aperta et exposita operatur calor, operatur seriatiim et per singula, attenuando et simul educendo et separando. Cum vero in oclusa et compacta operatur secundum totum, et secundum massam, nulla facta jactura caloris, sed calore novo et vetere se conjungentibus et plane conspirantibus; unde fit ut potentiores et magis intrinsecas et exquisitas alterationes et subactiones conficiat. Verum de hoc plura mox dicentur, cum de modo subactionis disseremus. Sed interim atagit et æstuat Telesius, et miris modis implicatur, ut expediat modum divortii et separationis qualitatum suarum primarum connaturalium, caloris, lucis, tenuitatis, et mobilitatis, ac quaternionis oppositæ prout corporibus accidunt; cum corpora alia inveniantur calida, aut ad calorem optime præparata, sed eadem inveniantur quoque densa, quæta, nigra; alia tenuia, mobilia, lucida, sive alba, sed tamen frigida; et similiter de cæteris, una quapiam qualitate in rebus existente, reliquis non competentibus; alia vero duabus ex istis naturis participant, duabus contra priventur, varia admodum permutatione et consortio. Qua in parte Telesius non admodum feliciter perfungitur, sed more adversariorum suorum se gerit; qui cum prius opinantur quam experiuntur, ubi ad res particulares ventum est, ingenio et rebus abutuntur, atque tam ingenium,

quam res, misere lacerant et torquent; et tamen alacres et (si ipsis credas) victores, suo sensu utcumque abundant. Concludit autem rem per desperationem, et votum illud significans, licet et caloris vis et copia, et materiæ dispositio, crasso modo, et secundum summas distingui et terminari possint; tamen exactas et accuratas eorum rationes, et distinctos et tanquam mensuratos modos extra inquisitionis humanæ aditus sepositos esse; ita, tamen, ut (quomodo inter impossibilia) diversitas dispositionis materiæ melius, quam caloris vires et gradus, perspicui possint; atque nihilominus in his ipsis (si qua fata sinant) humanæ et scientiæ et potentiæ fastigium et culmen esse. Postquam autem desperationem plane professus esset, tamen in vota precesque non cessat. Ita enim dixit: Qui porro calor vel quantus, hoc est, quod caloris robor, et quæ ejus copia, quam terram et quæ entia in qualia invertat, minime inquirendum videtur, ut quod homini nulla (ut nobis videtur) innotescere queat ratione. Qui enim vel caloris vires, et calorem ipsum veluti in gradus partiri, vel materiæ, cui inditus est, copiam quantitatemque distincte percipere, et certis determinatisque caloris viribus copiæque, certam materiæ quantitatem, dispositionemque, certasque actiones, aut centra, certæ materiæ quantitati, certisque actionibus, certam determinatamque caloris copiam assignare liceat? Utinam id otio fruente et perspicaciore præditi ingenio, et quibus in summa tranquillitate rerum naturam perscrutari licuerit, assequantur: ut homines non omnium modo scientes, sed omnium fere potentes fiant! Honestus paulo quam solent ejus adversarii, qui quicquid artes, quas ipsi pepere-runt, non assequuntur, id ex arte omnino impossibile statuunt, ut nulla ars damnari possit, cum ipsa et agat et iudicet. Restat tertium quod erat, subactionis videlicet modus. Hoc triplici dogmate absolvit Telesius. Primum est, id quod antea a nobis obiter est notatum, nullam prorsus symbolizationem intelligi (ut in Peripateticorum doctrina) per quam res tanquam concordia quadam foveantur et conspirent. Omnem enim generationem, atque adeo omnem effectum in corpore naturali, victoria, et prædominantia, non pacto aut fœdere transigi. Id quod novum non est, cum etiam Aristoteles in doctrina Empedoclis hoc ipsum notaverit. Quod scilicet cum Empedocles litem et amicitiam, rerum principia efficientia statuisset, tamen in explicationibus suis causarum, inimicitia fere utatur, alterius tanquam oblitus. Secundum est, calorem actione sua propria perpetuo vertere ens in humidum, et quod calori siccitas nullo modo coëat, nec frigori humiditas. Idem enim esse attenuare et humectare, atque quod maxime tenue, id etiam maxime humidum esse; cum per humidum intelligatur id quod facillime cedit, abit in partes, et rursus se restituit, atque ægre finitur aut consistit. Quæ omnia magis insunt flammæ, quam aëri; qui a Peripateticis constituitur maxime humidus. Itaque calorem, humidum perpetuo allicere, depascere, extendere, indere, generare; contra, frigus omnia agere in siccitatem, concretionem, duritiem; ubi vult Aristotelem et hebetem in observatione, et sibi discordem, et erga experientiam imperiosum, et libidinosum videri, quod calorem cum siccitate copulet.

Nam quod aliquando entia desiccet calor, id per accidens fieri; nimirum in corpore dissimilari, et ex partibus aliis magis crassis, aliis magis tenuibus cogmentato, eliciendo, et (per attenuationem) exitum dando parti tenuiori, dum pars crassior inde cogatur, et magis se constringat: quæ tamen ipsa pars crassior, si advenerit calor ferocior, et ipsa fluit, ut in lateribus manifestum est. Primo enim calor non ita fervens lutum cogit in lateres, tenuiore parte evaporata. At fortior calor etiam illam substantiam lateritiâ solvit in vitrum. Atque hæc duo dogmata veluti errorum redargutiones censeari possunt; tertium plane affirmat, neque id solum, sed et perspicue distinguit subactionis modum. Is duplex est, vel rejiciendo, vel vertendo; atque alteruter ex iis modiis perducitur in actum secundum vim caloris et dispositionem materiæ. Cujus rei tamen duo videntur tanquam canones. Unus, quod cum calidum et frigidum magna mole, et tanquam justo exercitu concurrunt, sequitur ejectio. Nam entia, veluti acies, loco moventur et impelluntur. Ubi vero minore quantitate res geritur, tum sequitur versio; nam interimuntur entia, et naturam potius quam locum mutant. Hujus rei insigne et nobile exemplum esse in regionibus aëris superioribus, quæ licet ad calorem cœlestem magis appropinquent, tamen frigidiores inveniuntur, quam confinia terræ. In illis enim locis, postquam propius ad sedem primi calidi ventum est, calor se colligens universam frigoris vim, quæ ascenderat, simul ejicit et detrudit, et aditu prohibet. Quin etiam similiter fieri posse, ut sint per profunda terræ calores vehementiores, quam in superficie; postquam scilicet ad sedem primi frigidi appropinquatio facta est, quod se excitans, magno impetu calidum rejicit, et fugit, et in se vertit. Alter canon est, quod in aperto sequitur ejectio; in clausa versio. Hoc autem insigniter conspici in vasibus ocellosis, ubi emissio corporis attenuati (quod spiritum fere vocamus) prohibita et retrusa profundas et intrinsecas in corporibus alterationes et fermentationes generat. At hoc ipsum similiter fieri, cum corpus ob partium compactionem sibi ipsi instar vasis oclusi est. Atque hæc sunt quæ Telesio, et fortasse Parmenidi, circa rerum principia, visa sunt; nisi quod Telesius hylen addidit de proprio; peripateticis scilicet notionibus depravatus.

Atque similia veri fuissent, quæ a Telesio dicuntur, si homo tollatur e natura et simul artes mechanicæ, quæ materiam vexant, atque fabrica mundi simpliciter spectetur. Nam pastoralis quædam videtur ista philosophia, quæ mundum contemplatur placide, et tanquam per otium. Siquidem de systemate mundi disserit non male, de principiis imperitissime. Quin et in ipso quoque systemate ingens est lapsus, quod tale constituat systema, quod videri possit æternum, nec supponat chaos, et mutationes schematismi magni. Sive enim ea est Telesii philosophia, sive peripateticorum, sive quæ alia, quæ in eum modum systema instruat, libret, muniat, ut non videatur fluxisse a chaos; ea levior philosophia videtur, atque omnino ex angustiis pectoris humani. Nam omnino secundum sensum philosophanti materiæ æternitas asseritur; mundi (qualem eum intuemur) negatur: quod et prisæ sapientiæ, et ei, qui ad ipsam proxime accedit, Democrito visum est.

Idem sacræ literæ testantur. Illud præcipue interest; quod illæ etiam materiam a Deo; hi ex sese statuunt. Tria enim videntur esse dogmata, quæ scimus ex fide, circa hanc rem. Primo, quod materia creata sit ex nihilo. Secundo, quod eductio systematis fuerit per verbum omnipotentis, neque quod materia se ipsa eduxerit e chao in schematismum illum. Tertio, quod schematismus ille (ante prævaricationem) fuerit optimus ex iis, quæ materia (qualis creata erat) suscipere posset. At philosophiæ illæ ad nullum horum ascendere potuerunt. Nam et creationem ex nihilo exhorrent, et hunc schematismum post multas ambages et molimina materiæ eductum sentiunt; nec de optimitate laborant, cum schematismus asseratur occiduus et variabilis. In his itaque fidei atque ejus firmamentis standum. Utrum vero materia illa creata, per longos seculorum circuitus, ex vi primo indita, se in illum optimum schematismum colligere et vertere potuisset, (quod missis ambagibus ex verbi imperio continuo fecit,) non inquirendum fortasse est. Tam enim est miraculum, et ejusdem omnipotentis representatio temporis, quam efformatio entis. Videtur autem natura divina utraque omnipotentis emanatione se insignire voluisse: primo, operando omnipotenter super ens et materiam, creando scilicet ens e nihilo: secundo, super motum et tempus, anticipando ordinem naturæ et accelerando processum entis. Verum hæc ad parabolam de cælo pertinent, ubi, quæ nunc breviter perstringimus, fusiús disseremus. Itaque ad principia Telesii pergendum. Atque utinam hoc saltem semel et inter omnes conveniret, ne aut ex non entibus entis, aut ex non principiis principia, constitui placeret, neque manifesta recipiatur contradictio. Principium autem abstractum non est ens; rursus ens mortale non est principium; ut necessitas plane invincibilis hominum cogitationes (si sibi constare velint) compellat ad atomum, quod est verum ens, materiatum, formatum, dimensum, locatum, habens antitypiam, appetitum, motum, emanationem. Idem per omnium corporum naturalium interitus manet inconcussum et æternum. Nam cum tot et tam variæ sint corporum majorum corruptiones, omnino necesse est, ut quod tanquam centrum manet immutabile, id aut potentiale quiddam sit, aut minimum; at potentiale non est. Nam potentiale primum reliquorum, quæ sunt potentialia, simile esse non potest, quæ aliud actu sunt, aliud potentia. Sed necesse est ut plane abstractum sit, cum omnem actum abneget, et omnem potentiam contineat. Itaque relinquatur ut illud immutabile, sit minimum; nisi forte quis asserat omnino principia nulla existere; sed rem alteram alteri pro principiis esse, legem atque ordinem mutationis constantia esse et æterna, essentiam ipsam fluxam et mutabilem. Atque satius foret hujusmodi quiddam diserte affirmare, quam studio æternum aliquod principium statuendi, in durius incommodum incidere, ut idem principium ponatur phantasticum. Illa enim prior ratio aliquem exitum habere videtur, ut res mutentur in orbem; hæc prorsus nullum, quæ notionalia et mentis adminicula habet pro entibus. Et tamen quod hoc ipsum nullo modo fieri possit, postea docuimus. Telesio tamen hyle placuit, quam ex juniore ævo postnatam in Parmenidis philosophiam transtu-

lit. At certamen instituit Telesius agentium suorum principiorum, mirum, et plane iniquum, et copiis et genere bellandi. Nam quod ad copias attinet, terra ei est unica, at cæli exercitus ingens; etiam terra puncti fere instar; cæli vero spatia et regiones immensæ. Neque huic incommodo illud subvenire queat, quod terra et connaturalia ejus ex materia maxime compacta asserantur, cælum contra et æthera ex materia maxime explicata. Licet enim plurimum certe intersit, tamen hæc res nullo modo copias vel longo intervallo æquabit. Et robur dogmatis Telesii versatur in hoc vel præcipue, si tanquam æqualis portio hyles (secundum quantum, non secundum exporrectionem) utrique principio agentis assignetur, ut res durare possint, et systema constitui et stabiliri. Quicunque enim cum Telesio sentiet in cæteris, et exsuperantiam hyles præsertim tam amplo excessu, in uno principio, ad alterum recipiet; hærebit, nec se omnino explicabit. Itaque in dialogo Plutarchi De Facie in Orbe Lunæ, sana mente proponitur illa consideratio, non esse verisimile, in dispersione materiæ, naturam quicquid compacti corporis erat in unicum terræ globum conclusisse, tot interim volventibus globis astrorum. Huic vero cogitationi tam immoderate indulsit Gilbertus, ut non solum terram et lunam, sed complures alios globos solidos et opacos, per expansionem cæli, inter globos lucentes, sparsos assereret. Quin et ipsi peripatetici, postquam cælestia suo statu; sublunaria autem per successionem et renovationem æterna posuissent, non confisi sunt se hoc dogma tueri posse, nisi elementis veluti æquas materiæ portiones assignassent. Hoc est enim illud, quod de decupla illa portione, qua ambiens elementum interius elementum superet, consomniant. Neque ista eo adducimus, quod nullum ex iis nobis placeat, sed ut ostendamus inopinabile quiddam esse; atque cogitationem prorsus male mesuratum, si quis terram, contrarium agens cælo principium statuatur: quod Telesius fecit. Atque hoc ipsum durius multo invenitur, si quis, præter quantum ipsum, disparem virtutem et actum cæli et terræ intueatur. Perdita enim omnino sit dimicationis conditio, si ex altera parte telorum hostilium ictus perferantur, ex altera non pertingant, sed citra, cadant. At liquet plane solis vires in terram mitti; terræ autem vires usque ad solem venire nemo spondeat. Etenim inter omnes virtutes, quas natura parit, illa lucis et umbræ longissime emittitur, ex maximo spatio sive orbe circumfunditur. Umbra autem terræ citra solem terminatur, cum lux solis, si terra diaphana esset, globum terræ transverberare possit. Nominatum calidum, frigidum (de quibus nunc est sermo) nunquam deprehenduntur tam magna spatia vincere, in virtute sua perferenda, quam lux et umbra. Itaque si umbra terræ non pertingit ad solem, multo minus frigidum terræ eo aspirare posse consentaneum est. Id si ita sit, nempe ut sol et calidum in quædam corpora media agat, quo contrarii principii virtus non ascendat, nec ullo modo eorum actum impediat; necesse est ut illa (sol, inquam, et calidum) proxima quæque occupent, et dein remotiora quoque conjungant, ut tandem futura sit Heracliti conflagratio, solari et cælesti natura gradatim versus terram et confinia ejus descendente et magis appropinquante. Neque illa

admodum conveniunt, ut vis illa naturam suam imponendi et multiplicandi, et alia in se vertendi, quam Telesius principiis attribuit, non operetur in similia æque aut magis quam in contraria; ut cælum jam excandescere debuerit, et stellæ inter se committi. Verum ut propius accedamus, quatuor omnino demonstrationes proponendæ videntur, quæ Telesii philosophiam de principiis plane convellere et destruere possint, etiam singulæ, multo magis conjunctæ. Harum prima est, quod inveniatur in rebus nonnullæ actiones et effectus, etiam ex potentissimis et latissime diffusis, quæ ad calorem et frigus nullo modo referri possint. Proxima, quod inveniatur naturæ nonnullæ, quarum calor et frigus sint effectus et consecutiones; neque id ipsa per excitationem caloris præinexistentis, aut admotionem caloris advenientis; sed prorsus per quæ calor et frigus in primo esse ipsorum indantur et generentur. Itaque principii ratio in iis ex utraque parte deficit, tum quia aliquid non ex ipsis, tum quia ipsa ex aliquo. Tertia, quod etiam ea quæ a calore et frigore originem ducunt, (quæ certe sunt quamplurima,) tamen procedunt ab illis, tanquam ab efficiente et organo, non tanquam a causa propria et intima. Postremo, quod conjugatio illa quatuor connaturalium omnino permiscetur et confunditur. Quare de his sigillatim dicemus. Atque alicui fortasse vix operæ pretium videri possit, nos in philosophia Telesii arguenda tam diligenter versari, philosophia scilicet non admodum celebri aut recepta. Verum nos hujusmodi fastidia nil moramur. De Telesio autem bene sentimus, atque eum ut amantem veritatis, et scientiis utilem, et nonnullorum placitorum emendatorem et novorum hominum primum agnoscimus. Neque tamen nobis cum eo res est tanquam Telesio, sed tanquam instauratore philosophiæ Parmenidis, cui multa debetur reverentia. Sed illud in primis in causa est, quod hæc fusius agamus, quod in eo, qui primus nobis occurrit, complura disserimus, quæ ad sequentium sectarum (de quibus postmodum tractandum erit) redargutionem transferri possint, ne sæpius eadem dicere sit necesse. Sunt enim errorum (licet diversorum) fibræ miris modis inter se implicatæ et intextæ, quæ tamen sæpenumero una redargutione, tanquam falce, demeti et succidi possint. Verum ut occæpimus dicere, videndum quales inveniuntur in rebus virtutes et actiones, quæ ad calidum et frigidum nullo rerum consensu aut ingenii violentia trahi possint. Primo itaque sumendum quod a Telesio datur, materiæ summam æternam constare, nec augeri aut minui. Hanc ille dotem, qua materia se servat, et sustinet, transmittit, ut passivam, et tanquam ad rationem quanti potius, quam ad formam et actionem, pertinentem, ac si nihil opus esset eam calori et frigori deputare, quæ agentium tantum formarum, et virtutum fontes ponuntur; materiam enim non simpliciter, sed omni agente virtute destitui et exui. Atque hæc asseruntur magno mentis errore, et prorsus mirabili, nisi quod consensus atque opinio pervulgata et inveterata miraculum tollit. Nil enim simile fere inter errores reperitur, quam ut quis virtutem istam materiæ inditam, per quam ipsa se ab interitu vindicat, adeo ut minima quæque materiæ portio, nec universa mundi mole obrui, nec omnium agentium vi et impetu destrui, aut ullo

modo annihilari, et in ordinem redigi queat; quin et spatii nonnihil occupet, et renitentiam servet cum dimensione impenetrabili, et ipsa vicissim aliquid moliat, nec se deserat; pro agente virtute non habeat, cum contra sit omnium virtutum longe potentissima, et plane insuperabilis, et veluti merum fatum et necessitas. Hanc autem virtutem nec conatur Telesius ad calidum et frigidum referre. Atque hoc recte; neque enim scilicet aut incendium, aut torpor, et congelatio huic rei aliquid addunt vel detrahunt, nec super eum aliquid possunt, cum ipsa interim et in sole, et ad centrum terræ, et ubique vigeat. Sed in eo lapsus videtur, quod molem materiæ certam et definitam agnoscit; ad virtutem, qua se numeris suis tueatur, cæcutit, eamque (profundissimis peripateticorum tenebris immersus) accessorii loco ducit, cum sit maxime principalis, corpus suum vibrans, aliud submovens, solida et adamantina in seipso, atque unde decreta et possibilis et impossibilis emanant auctoritate inviolabili. Schola itidem vulgaris eam facili verborum complexu pueriliter prensat, satisfactum huic cogitationi putans, si duo corpora in eodem loco non posse esse pro canone ponat, virtutem autem istam, atque ejus modum, nunquam apertis oculis contemplatur, et ad vivum dissectat; parum scilicet gnara, quanta ex ea pendeant, et qualis lux inde scientiis exoriatur. Verum (quod nunc agitur) ista virtus quantacunque extra Telesii principia cadit. Transeundum jam ad virtutem illam, quæ ad priorem hanc est tanquam antiastrophæ, eam scilicet quæ nexum materiæ tuetur. Ut enim materia a materia obrui non vult, ita nec materia a materia divelli. Atque nihilominus utram hæc naturæ lex sit æque ac illa altera preëmptoria, magnam habet dubitationem. Telesio enim, quem admodum et Democrito, vacuum coæcervatum et sine meta dari placuit, ut entia singularia contiguum suum deponant, nonnunquam et deserant, ægre (ut aiunt) et illibenter, sed majore nempe aliqua violentia domita et coacta; idque ille nonnullis experimentis demonstrare contendit, ea potissimum adducens, quæ passim citantur ad abnegandum et refellendum vacuum, eaque tanquam extrahens et amplians eo modo, ut entia videri possint in levi aliqua necessitate posita, contiguum illud tenere; sin majorem in modum torqueantur, vacuum admittent; sicuti in clepsydris aqueis, in quibus si foramen, per quod aqua descendere possit, minutius sit, spiraculo egebunt, ut aqua descendat; sin latius, etiam absque spiraculo, aqua in foramen majore mole incumbens, et vacuum supra nil morata, deorsum fertur. Similiter in follibus, in quibus si ea comprimamur et ocladas, ut nullus illabenti aëri aditus pateat, ac postea eleves et expandas, si pellis gracilis sit et debilis, dirumpitur pellis; si crassa et frangi inepta, non item; et alia hujusmodi. Verum experimenta ista nec exacte probata sunt, nec inquisitioni omnino satisfaciunt, aut questionem terminant, atque licet per illa Telesius se addere rebus et inventis putet, et quod ab aliis confusius observatum est, subtilius distinguere nitatur, tamen nullo modo par rebus evadit, nec exitum rei evolvit, sed in mediis prorsus deficit; quod ex more est et ipsi et Peripateticis, qui ad experimenta contuenda instar nocturnarum sunt, neque id tam ob facultatis imbecillitatem, sed ob

cataractas opinionum, et contemplationis plenæ et fixæ impatientiam. Quæstio vero ista (ex maxime arduis) quousque detur vacuum, et ad quæ spatia fieri possit seminum vel coitio vel distractio, et quid sit in hoc genere peremptorium et invariabile, ad locum ubi de vacuo tractandum erit, rejicimus. Neque enim vacuum interest ad id quod nunc agitur, utrum natura vacuum penitus respuat, an entia (ut emendatius se loqui putat Telesius) mutuo contactu gaudeant. Illud enim planum facimus, istam sive vacui fugam, sive contactus cupidinem, nullo modo a calido et frigido pendere, nec a Telesio ipsi adscribi, nec ex rerum ulla evidentia illis adscribi posse; cum materia loco mota aliam prorsus materiam trahat, sive illa sit calida sive frigida, sive liquida sive sicca, sive dura sive mollis, sive amica sive inimica, adeo ut corpus calidum, corpus gelidissimum citius attraxerit ut ei adsit, quam se ab omni corpore disjungi et deseri patiat. Nam vinculum materiæ fortius est, quam dissidium calidi et frigidi. Et sequacitas materiæ non curat diversitatem formarum specialium: Itaque nullo modo hæc virtus nexus ab illis principiis calidi et frigidi. Sequuntur virtutes duæ invicem oppositæ, quæ regnum hoc principiorum (ut videri possit) ad calidum et frigidum detulerunt, sed jure male enucleato; eas, dicimus, per quas entia se aperiant et rarefaciunt, dilatant et expandunt, ita ut majus spatium occupent, et se in majorem spheram conjiciant; aut rursus se claudunt et condensant, coarctant et contrahunt, ita ut spatiis decedant, et in minorem spheram se recipiant. Ostendendum itaque est, quatenus ista virtus a calido et frigido ortum habeat, et quatenus eorsum moretur, nec cum illa rationes misceat. Atque verissimum est quod affirmat Telesius, rarum et densum caloris et frigoris esse veluti officina propria: longe enim maximæ sunt illorum partes ad hoc, ut corpora majus et minus spatium occupent; sed tamen confusius ista accipiuntur. Videntur enim corpora quandoque ab una spatiatione naturali in alteram migrare et se transferre, idque libenter et tanquam volentia et formam mutantia; quandoque autem tantummodo a naturali spatiatione depulsa, et manente forma veteri in consuetam spatiationem reverti. Atque virtus illa progressiva in novum spatium a calido et frigido fere rugitur. At virtus altera restitutiva non item, siquidem expandit se aqua in vaporem et ærem, oleum similiter et pinguis in halitum et flammam ex vi caloris: nec (si perfecte transmigraverint) reverti satagunt; quin et ær ipse ex calore intumescit et extenditur. Quod si migratio fuerit semiplena, post caloris abscessum, in se facile recidit; ut etiam in virtute restitutiva partes frigoris et caloris sint nonnullæ. At quæ non mediante calore, sed violentia aliqua extensa sunt et distracta, etiam absque ulla frigoris accessione, aut diminutione caloris, in priora spatia (cessante violentia) cupidissime revertuntur; ut in exsuctione ovi vitrii, et follibus levatis. Id vero in solidis et crassis longe evidentiuss est. Nam si distendatur pannus vel chorda, remota vi, magna velocitate resiliunt; atque eadem est compressionis ratio. Nam ær violentia aliqua contrusus et incarcerationis multo conatu erumpit; atque adeo omnis ille motus mechanicus, quo durum a duro percussitur, qui vulgo motus vio-

lenti nomine appellatur, per quem res solidæ mittuntur et volant per ærem et aquam, nihil aliud est, quam nixus partium corporis emissi ad se expediendum a compressione; et tamen nusquam hic apparent vestigia calidi et frigidi. Neque est, quod quis arguetur ex doctrina Telesii hoc modo, ut dicat; esse singulis spatiationibus naturalibus assignatam portionem quandam calidi et frigidi, ex certa quadam analogia: itaque fieri posse ut tametsi nihil addatur caloris, tamen si spatia materiata extendantur aut contrahantur, res eodem recidat, quia plus et minus imponitur materiæ in spatio, quam pro ratione caloris et frigoris. Verum ista licet non absurda dictu, tamen sunt eorum, qui semper aliquid comminisci solent, ut quod semel visum est teneant, nec naturam et res persequuntur. Nam si addatur calor et frigus hujusmodi corporibus extensis aut compressis, idque majore mensura, quam pro ratione et natura corporis ipsius, veluti si pannus ille tensus calefiat ad ignem, tamen nullo modo rem compensabit, nec impetum restitutionis extinguet. Itaque planum jam fecimus, istam virtutem spatiationis, ex calore et frigore in parte notabili non pendere, cum tamen sit ipsa illa virtus, quæ plurimum auctoritatis his principiis tribuerit. Sequuntur duæ virtutes, quæ omnibus in ore sunt, atque longe et late patent, per quas scilicet corpora massas sive congregationes majores rerum connaturalium petunt, in quarum observatione, ut in reliquis, aut nugantur homines, aut plane aberrant. Schola enim communis satis habet si motum naturalem a violento distinguat; et gravia deorsum, levia sursum ferri ex motu naturali pronuntiet. Verum parum proficiunt ad philosophiam hujusmodi speculationes. Ista enim natura, ars, violentia, compendia verborum sunt, et nugæ. Debuerunt autem hunc motum non tantum ad naturam referre, sed etiam affectum et appetitum particularem et proprium corporis naturalis in hoc ipso motu querere. Sunt enim et alii motus complures naturales ex passionibus rerum longe diversis. Itaque res secundum differentias proponenda est. Quin et ipsi illi motus, quos violentos appellant, magis secundum naturam appellari possint, quam iste quem vocant naturalem; si sit illud secundum naturam quod est fortius, aut etiam quod est magis ex ratione universi. Nam motus iste ascensus et descensus, non admodum imperiosus est, nec etiam universalis, sed tanquam provincialis et secundum regiones; quin et aliis motibus obsequens et subjectus. Quod vero gravia deorsum ferri aiunt, levia sursum, idem est ac si dicerent, gravia esse gravia, levia levia. Quod enim prædicatur, id ex vi ipsa termini in subjecto assumitur. Si vero per grave densum, per leve rarum intelligunt, promovent nonnihil, ita tamen ut ad adjunctum et concomitans potius, quam ad causam, rem deducant. Qui vero gravium appetitum ita explicant, ut ad centrum terræ illa ferri contendant, levia ut ad circumferentiam et ambitum cœli, tanquam ad loca propria; asserunt certe aliquid, atque etiam ad causam innuunt; sed omnino perperam. Loci enim nullæ sunt vires, neque corpus nisi a corpore patitur, atque omnis incitatio corporis, quæ videtur esse ad se collocandum, appetit atque molitur configurationem versus aliud corpus, non collocationem aut situm simplicem.

FRANCISCI BACONI EQUITIS AURATI,

PROCURATORIS SECUNDI JACOBI REGIS MAGNÆ BRITANNIÆ,

DE

SAPIENTIA VETERUM,

LIBER,

AD INCLYTAM ACADEMIAM CANTABRIGIENSEM.

---

ILLUSTRISSIMO VIRO COMITI SARISBURIENSI,

SUMMO THESAURARIO ANGLIÆ, ET CANCELLARIO ACADEMIÆ CANTABRIGIENSIS.

Quæ academiam Cantabrigiensi dicantur, tibi jure cancellarii accrescunt; quæ autem a me proficiisci possunt omnia, tibi nomine proprio debentur. Illud magis videndum, num ista, ut tibi debita, ita etiam te digna sint: atque quod in illis minimum est, ingenium auctoris, id propter tuum propensum in me animum nihil officiet; cætera dedecori non erunt. Nam si tempus spectetur; antiquitas primæva summam venerationem habet: si docendi forma; parabola veluti arca quædam est, in qua pretiosissima quæque scientiarum reponi consueverunt: si operis materia; ea philosophia est, vitæ scilicet atque animæ humanæ decus secundum. Fas sit enim dixisse, quamvis philosophia, seculo nostro veluti per senium repuerascens, adolescentibus et fere pueris relinquatur; eam tamen omnium rerum, post religionem, gravissimam, atque natura humana maxime dignam esse plane censeo. Etiam politica, in qua te mirabilem præbes et facultate, et meritis, et sapientissimi regis judicio, ab eodem fonte emanat, ejusque pars magna est. Quod si cui ista, quæ afferro, vulgata esse videantur: certe quid effecerim, judicium meum non est; id tamen secutus sum, ut, manifesta, et obsoleta, et locos communes prætervectus, aliquid etiam ad vitæ ardua et scientiarum arcana conferam. Erunt itaque captui vulgari vulgaria: altiores autem intellectum fortasse non deserent, sed potius (ut spero) deducunt: verum dum huic operi dignitatem nonnullam astruere conor, quod ad te dicatum sit; periculum est, ne modestiæ fines transeam, cum a me sit susceptum. Tu vero illud tanquam pignus affectus erga te mei, et observantiæ, et animi maxime devoti accipies, eique præsidium nominis tui imperties. Quare cum tot et tanta sustineas, tempora tua diutius non morabor; sed finem faciam, tibi felicia omnia comprecatus, et perpetuo futurus.

Tibi, et studio suo, et beneficiis tuis devinctissimus,

FRA. BACONUS.

## ALMÆ MATRI

## INCLYTÆ ACADEMIÆ CANTABRIGIENSI.

CUM sine philosophia me certe nec vivere juvet; merito vos in magno honore habeo, a quibus mihi ista vitæ præsidia et solatia fluxerint. Itaque hoc nomine, et me, et mea vobis debere profiteor, quo minus mirum sit, si vos vestris remunerem; ut motu naturali redeant a quo traxerint originem. Et tamen, nescio quomodo, rara videntur vestigia vos retrorsum spectantia: cum infinita a vobis profecta sint. Nec nimium mihi sumam (ut opinor) si sperem, propter rerum usum mediocre, quod nostrum vitæ genus et institutum necessario traxit, nonnullam ad hominum doctorum inventa, per hæc nostra, factam esse accessionem. Equidem in ea opinione sum, contemplationes, in vitam activam translatas, nonnihil novi decoris et vigoris acquirere; et suppetente uberiore materia, et magis altas fortasse radices agere, aut certe magis proceras et frondosas evadere. Neque vos (ut arbitror) ipsi nostis, quam late pateant vestra, quamque ad multa pertineant. Æquum est tamen omnia vobis attribui, atque in vestrum honorem cedere, cum accessiones quæque principiis magna ex parte debeantur. Neque vero ab homine occupato aliquid exquisitum, aut otii miracula, et prærogativas requiretis; sed et hoc amori meo summo erga vos et vestra tribuetis, quod intra rerum civilium spinas hæc non prorsus perierint, sed vobis vestra servata sint. Valete.

Alumnus vester amantissimus,

FRA. BACONUS.

## PRÆFATIO.

ANTIQUITATEM primævam (exceptis quæ in sacris literis habemus) oblivio et silentium involvit: silentia antiquitatis fabulæ poëtarum exceperunt: fabulis tandem successere scripta quæ habemus; adeo ut antiquitatis penetralia et recessus a sequentium seculorum memoria et evidentia, tanquam velo fabularum, discreta et separata sint; quod se interposuit et objecit medium inter ea, quæ perierunt, et ea, quæ extant. Equidem existimo plerosque in ea opinione fore, me delicias ac ludos facere; atque similem fere licentiam in transferendis fabulis usurpare, ac ipsi poëtæ sibi sumpserint in fingendis; quod pro meo jure sane facere possem; ut contemplationibus magis arduis hæc, ad voluptatem sive meditationis propriæ, sive lectionis aliensæ, aspergerem. Neque me latet quam versatilis materia sit fabula, ut huc illuc trahi, imo et duci possit; quantumque ingenii commoditas et discursus valeat, ut quæ nunquam cogitata sint, belle tamen attribuantur. Etiam illa cogitatio animum subit, usum hujusce rei jampridem contaminatum esse: multi enim, ut inventis et placitis suis antiquitatis venerationem acquirerent, poëtarum fabulas ad ea traducere conati sunt: atque vetus illa vanitas et frequens, nec nuper nata, aut raro usurpata est. Nam et olim Chrysippus stoicorum opinionis vetustissimis poëtis, veluti somniorum aliquis interpres, ascribere solebat; et magis insulse chemici ludos et delicias poëtarum in corporum transformationibus, ad fornacis experimenta transtulerunt. Hæc (inquam) cuncto nobis satis et explorata et expensa sunt; omnemque ingeniorum circa allegorias levitatem et indulgentiam perspeximus et notavimus, neque propterea omnino de sententia decedimus. Primo enim absit ut paucorum ineptiæ et licentia, parabolarum honori in genere detrahant. Hoc enim prophanum quiddam sonat et audax, cum hujusmodi velis et umbris religio gaudeat, ut qui eas tollat, commercia divinorum et humanorum fere interdicat. Verum de humana sapientia videamus. Fateor certe ingenuè et libenter, me in hanc sententiam propendere, ut non paucis antiquorum poëtarum fabulis mysterium et allegoriam jam ab origine subesse putem; sive captus veneratione prisici seculi; sive quod in nonnullis fabulis reperio tantam et tam evidentem cum significato similitudinem et conjunctionem, tum in textura ipsa fabulæ, tum in proprietate nominum, quibus personæ sive actores fabulæ insigniti et veluti inscripti prodeunt; ut sensum illum ab initio præceptum et cogitatum fuisse, et de industria adumbratum, nemo constanter negaverit. Quis enim ita durus est et ad aperta cæcutiens, ut, cum audiat *Famam*, gigantibus extinctis, tanquam sororem posthumam progenitam esse, non illud ad murmur partium et famas seditiosas, quæ, sopitis rebellionibus, ad tempus vagari solent, referat? Aut cum audiat *Typhonem* gigantem nervos Jovis secnisse et abstulisse, ac Mercurium eos suffuratum esse, et Jovi reddidisse; non statim advertat hoc ad rebelliones prævalidas pertinere, quæ regibus nervos et pecuniarum et auctoritatis incidunt, ita tamen, ut per sermonum comitatem et prudentia edicta animi subditorum, non ita multo post, quasi furtim reconcilientur et vires regibus restituantur? Aut cum audiat, in illa memorabili *Deorum* contra gigantes expeditione, asinum Sileni cum ruderet maximi momenti ad profligandos gigantes fuisse; non liquido cogitet hoc de vastis rebellium conatibus, qui plerumque per inanes rumores et terrores vanos dissipantur, confectum fuisse? Etiam nominum conformitas et judicium cui tandem hominum ob-

scurum esse potest? cum Metis uxor Jovis plane consilium sonet; Typhon tumorem; Pan universam; Nemesis vindictam; et similia. Neque illud quenkam moveat, si aliquid interdum historiæ subeat, aut si nonnulla ornamenti gratia addita sint, aut si tempora confundantur, aut si ex una fabula quippiam transferatur in aliam, et nova allegoria inducatur. Necessæ enim fuit hæc fieri, cum inventa virorum fuerint, qui et ætate disjuncti, et instituto diversi erant; cum alii antiquiores, alii recentiores fuerint, alii rursus naturam rerum, alii res civiles sibi proponerent. Habemus etiam et aliud sensus occulti et involuti signum non parvum, quod nonnullæ ex fabulis tam absurdæ narratione ipsa et insulsæ inveniantur, ut parabolam etiam ex longinquo ostentent, et veluti clament. Quæ enim probabilis est fabula, etiam ad voluptatem et historiæ similitudinem conficta existimari potest: quod autem nulli in mentem venisset cogitare, aut narrare, id in alios usus quæsitum videtur. Quale enim figmentum illud; Jovem Metin in uxorem accepisse, eamque statim ut gravidam sensisset comedis, unde ipse gravidus fieri cœpit, et Palladem armatam ex capite peperit? Equidem existimo nulli mortalium obvenire vel somnium tam extra cogitationis vias situm et monstrosum. Ante omnia illud apud nos maxime valuit, et plurimum ponderis habuit, quod ex fabulis complures nullo modo nobis videntur ab eis inventæ, a quibus recitantur et celebrantur, Homero, Hesiodo, reliquis; si enim liquido nobis constitisset eas ab illa ætate atque illis auctoribus manasse, a quibus commemorantur et ad nos devenerunt, nil magni certe aut excelsi ab hujusmodi origine nobis (ut nostra fert conjectura) exspectare aut suspicari in mentem venisset. Verum, si quis attentius rem consideret, apparebit, illas tradi et referri tanquam prius creditas, et receptas, non tanquam tum primo excogitatas et oblatas. Quinetiam cum diversis modis a scriptoribus fere cœvis referantur, facile cernas, quod commune habent, ex veteri memoria desumptum; in quo variant, ex singulorum ornatu additum. Atque hæc res existimationem earum apud nos auxit, ac si nec ætatis, nec inventionis potætarum ipsorum essent: sed veluti reliquæ sacræ, et auræ tenues, temporum meliorum; quæ ex traditionibus nationum magis antiquarum in Græcorum tubas et fistulas incidissent. Quod si quis obstinato animo contendat, allegoriam in fabula semper subditiâ et impositam, nec omnino nativam et genuinam fuisse: ei molesti non erimus, sed gravitatem illam judicii, quam affectat, licet hebetiorem et fere plumbeam, remitemus; atque illum (si modo dignus sit) alio modo, tanquam de integro adoriemur. Duplex apud homines repertus est atque increbuit parabolæ usus, atque, quod magis mirum sit, ad contraria adhibetur. Faciunt enim parabolæ ad involucrum et velum; faciunt etiam ad lumen et illustrationem. Atque misso illo usu priore, (potius quam lites suscipiamus,) et receptis fabulis antiquis, tanquam rebus vagis et ad delectationem compositis; manet tamen proculdubio posterior iste usus, neque ulla ingenii violentia nobis extorqueri possit, neque impediât quisquam, (qui sit mediocriter doctus,) quin protinus recipiatur modus iste docendi, tanquam res gravis et sobria, atque omnis vanitatis experta, et scientiis apprime utilis, imo et quandoque necessaria; nimirum ut in inventis nobis, et ab opinionibus vulgaribus remotis et penitus abstrusis, aditus ad intellectum humanum magis facilis et benignus per parabolas quæretur. Itaque antiquis sæculis, cum rationis humanæ inventa, et conclusiones etiam eæ quæ nunc tritæ et vulgatæ sunt, tunc temporis novæ et insuetæ essent, omnia fabularum omnigenum, et ænigmatum, et parabolarum, et similitudinum plena erant: atque per hæc docendi ratio, non occultandi artificium, quæsitum est; rudibus scilicet tunc temporis hominum ingenia, et subtilitatis, nisi quæ sub sensum cadebat, impatientibus et fere incapacibus. Nam ut hieroglyphica litera, ita parabolæ argumentis erant antiquiores. Atque etiam nunc, si quis novam in aliquibus lucem humanis mentibus affundere velit, idque non incommode et aspere, prorsus eadem via insistendum est, et ad similitudinum auxilia confugiendum. Quare quæ dicta sunt, ita claudemus. Sapientia prisca sæculi, aut magna aut felix fuit: magna, si de industria excogitata est figura sive tropus: felix, si homines, aliud agentes, materiam et occasionem tantæ contemplationum dignitati præbuere. Operam autem nostram (si quid in ea sit quod juvet) in neutra re male collocatam censebimus. Aut enim antiquitatem illustrabimus, aut res ipsas. Neque nescius esse possem hanc rem ab aliis tentatam esse: sed tamen, ut, quod sentiam, eloquar, idque non fastidioso, sed libere, ejus decus et virtus ex hujusmodi laboribus, licet magnis et operosis, fere perierit; dum homines, rerum imperiti et non ultra locos certos communes docti, parabolæ sensus ad vulgaritatem quædam et generalia applicaverunt, atque earundem vim veram, et proprietatem genuinam, ac indagationem altiore, non attigerunt. Nos autem erimus (ni fallimur) in rebus vulgatis novi; et aperta et plana a tergo relinquentes, ad ulteriora et nobiliora tendemus.

---

#### I. CASSANDRIA, SIVE PARRHESIA.

NARRANT Cassandram ab Apolline adamatam fuisse, atque variis artificibus ejus desideria elusisse, spes nihilominus fovisse quousque donum divinationis ab eo extorsisset; tum vero, nactam quod ab initio dissimulatione sua quævisisset, preces ejus aperte rejecisse: illum, cum quod temere largitus erat nullo modo revocare posset, et tamen vindicta arderet, nec fœminæ callidæ ludibrio esse vellet, muneri suo præ-

nam addidisse; ut illa quidem vera semper prædiceret, sed nemo ei crederet: itaque vaticiniis ejus veritas affuit; fides defuit: quod illa perpetuo experta est etiam in excidio patriæ suæ, de qua sæpius monuerat, nemine auscultante aut credente.

Fabula de intempestiva et inutili libertate consiliorum et monitorum conficta videtur: qui enim ingenio sunt pervicaci et aspero, nec se Apollini, id est,

deo harmoniæ, submittere volunt, ut rerum modos et mensuras, sermonumque veluti tonos acutos et graves, aurium etiam magis peritarum et magis vulgarium differentias, tempora denique tum loquendi, tum silendi, ediscant et observent; licet sint prudentes et liberi, et consilia afferant sana et bona, nunquam tamen fere suasu et impetu suo proficiunt, neque ad res tractandas efficaces sunt; sed potius exitium eis, apud quos se ingerunt, maturant, et tum demum post calamitatem et eventum ut vates et in longum prospicientes celebrantur. Atque hujus rei exemplum eminet in M. Catone Uticensi. Ille enim interitum patriæ, et tyrannidem primo ex conspiratione, deinde ex contentione Cæsaris cum Pompeio secutam, diu ante, tanquam e specula prævidit, et tanquam ex oraculo prædixit: sed nil profecit interim, verum obfuit potius, et mala patriæ acceleravit. Id quod prudenter advertit, et eleganter describit M. Cicero, cum ad amicum ita scribat: "Cato optime sentit, sed nocet interdum reipublicæ: loquitur enim tanquam in republica Platonis, non tanquam in fæce Romuli."

## II. TYPHON, SIVE REBELLIS.

NARRANT poëtæ Junonem, indignatam quod Jupiter Palladem ex sese sine ea peperisset, omnes deos atque deas precibus fatigasse, ut ipsa etiam sine Jove partum ederet: et postquam violentiæ et importunitati ejus annuissent, terram illa concussit, ex quo motu Typhon natus est, monstrum ingens et horrendum. Ille serpenti veluti nutritio datus est, ut ab eo aleretur. Nec mora, postquam adolevisset, quin bellum Jovi moveret. In eo conflictu Jupiter in potestatem gigantis venit, qui illum, in humeros sublatum, in regionem remotam et obscuram transportavit, et concisis nervis et manuum et pedum, et secum abreptis, mancum et mutilatum reliquit. Mercurius autem nervos Jovis Typhoni suffuratus est, atque eos Jovi restituit. Jupiter confirmatus, bellum rursus impetiit; ac primum fulmine vulneravit, ex cujus sanguine serpentes nati sunt. Tum demum ruentem et fugientem, Ætnam super eum jaculatus, mole montis oppressit.

Fabula de fortuna regum varia et rebellionibus, quæ in monarchiis quandoque evenire consueverunt, conficta est. Reges enim regnis suis, ut Jupiter Junoni, veluti matrimonii vinculo juncti recte censentur: sed accidit nonnunquam ut imperandi consuetudine depravati, et in tyrannidem vergentes, omnia ad se trahant, et contempto ordinum et senatus sui consensu, ex sese pariant: id est, ex arbitrio proprio et imperio mero cuncta administrent. Id populi ægre ferentes, et ipsi moliuntur caput aliquod rerum ex sese creare et extollere. Ea res ex occultata sollicitatione nobilium et procerum fere initia sumit, quibus conniventibus, tum populi suscitatio tentatur; ex qua tumor quidam rerum (per Typhonis infantiam significatus) sequitur. Atque iste rerum status ab insita plebis pravitate et natura maligna (serpente regibus infestissimo) nutricatur. Defectione autem viribus coalita, postremo res in apertam rebellionem erumpit; quæ, quia infinita mala et regibus et populis infligit, sub dira illa Typhonis effigie repræsentatur, in qua centum capita

ob divisas potestates, ora flammantia ob incendia, anguium cingula ob pestilentias, (præsertim in obsidionibus,) manus ferreæ ob cædes, ungues aquilini ob rapinas, corpus plumis contectum ob perpetuos rumores, et nuncios et trepidationes, et hujusmodi. Atque interdum rebelliones istæ tam prævalidæ sunt, ut reges cogantur, tanquam a rebellibus transportati, relictis regni sedibus et urbibus primariis, vires contrahere, et in remotam aliquam et obscuram provinciam ditionis suæ se recipere, nervis et pecuniarum et majestatis accisis: sed tamen non ita multo post, fortunam prudenter tolerantes, virtute et industria Mercurii nervos recipiunt, hoc est, affabiles facti, et per edicta prudentia, et sermones benignos, reconciliatis subditorum animis et voluntatibus, tandem alacritatem ad impensas conferendas, et novum auctoritatis vigorem excitant. Nihilominus, prudentes et cauti, aleam fortunæ tentare plerumque nolunt, et a pugna abstinent; sed tamen operam dant ut aliquo facinore memorabili exstimationem rebellium frangant. Quod si ex voto succedat, illi, vulneris accepti conscii, et rerum suarum trepidi, primo ad fractas et inanes minas, veluti serpentum sibilos, se vertunt: deinde, rebus desperatis, fugam capeant. Atque tum demum, postquam ruere incipiunt, tutum est et tempestivum regibus copiis, et universa mole regni, tanquam Ætnæ monte, eos persequi et opprimere.

## III. CYCLOPES, SIVE MINISTRI TERRORIS.

NARRANT Cyclopes ob feritatem et immanitatem primo a Jove in Tartarum detrusos, et perpetuo carceri adjudicatos fuisse: verum postea Tellus Jovi persuasit, ei non abs re fore, si eos vinculis liberaret, et eorum opera ad fulmina fabricanda uteretur. Quod et factum est, atque illi officiosi et industrii fulmina atque alia terroris instrumenta assiduo opere et minaci strepitu fecerunt. Tempore autem labente evenit, ut Jupiter Æsculapio Apollinis filio succenseret, ob hominem medicina a morte excitatum; iram autem tegens, (quia parum justa indignandi causa suberat ob facinus pium et celebre,) Cyclopes in eum secreto instigavit, qui, nihil cunctati, fulmine eum interemere: in ejus rei vindictam, Apollo, Jove non prohibente, sagittis eos confecit.

Fabula ad regum facta pertinere videtur. Illi enim ministros sævos, et sanguinarios, et exactores, primo suppliciiis afficiunt, et a rebus summovent: postea, ex consilio Telluris, id est, ignobili et parum honorifico, prævalente utilitate, eos rursus adhibent, sicubi aut executionum severitate aut exactionum acerbitate opus est. Illi, natura truces, et ex priore fortuna exasperati, et satis sentientes quid ab illis expectetur, miram diligentiam in hujusmodi rebus præstant; sed parum cauti, et ad gratiam ineundam et acupandam præcipites, aliquando ex secretis principum nutibus et incertis mandatis invidiosam aliquam executionem peragunt. Principes autem invidiam declinantes, et satis gnari hujusmodi instrumenta nunquam sibi defutura, eos destituunt: et propinquis et amicis eorum, qui penas subierunt, atque horum delationibus et vindictæ, et odio populari eos relinquunt, unde magno plausu, ex prosperis in reges votis et acclamationibus, sero magis quam immerito pereunt.

## IV. NARCISSUS, SIVE PHILAUTIA.

NARCISSUS fuisse traditur forma et venustate mirabilis, sed suberat superbia ingens, et fastidium intolerandum. Itaque cum sibi placeret, alios despiceret, vitam egit solitariam in sylvis et venationibus, cum paucis comitibus, quibus ipse omnia erat. Assectabatur etiam cum ubique nympha Echo. In hoc vitæ instituto fatale ei erat ad fontem quandam limpidum venire, et juxta eum sub æstum mediæ diei decumbere. Cum autem in aqua imaginem propriam aspexisset, in contemplationem sui, ac deinde in admirationem effusus et raptus, nullo modo ab hujusmodi spectro et simulacro distrahi poterat; sed perpetuo defixus obtorpuit; ac tandem in florem nominis sui conversus est; qui flos ineunte vere se ostendit, et diis inferis, Plutoni, Proserpinæ, et Eumenidibus sacer est.

Fabula illorum et ingenia et fortunas representare videtur, qui, sive ob formam, sive ob aliquas alias dotes, quibus ab ipsa natura, nulla accedente industria propria, ornati et insigniti sunt, effuse seipsos amant, et quasi deperunt. Cum hoc enim animi statu conjunctum fere est, ut non multum in publico, aut in rebus civilibus versentur; cum in eo vitæ genere necesse sit occurrere multos neglectus et vilipendia, quæ animos eorum dejicere et turbare possint. Itaque vitam plerumque degunt solitariam, et privatam, et umbratilem, cum perpauco comitum delectu, eoque ex iis, qui illos magnopere colere et admirari videntur, quique illis veluti echo in omnibus dictis suis assentantur, et verborum obsequia præstant. Ex hac consuetudine depravatos et inflatos, et tandem admiratione sui ipsius attonitos, mira occupat desidia et inertia, ut prorsus torpeant, et omni vigore et alacritate destituantur. Eleganter autem sumitur flos vernus ad hujusmodi ingeniorum similitudinem, cum illa ingenia sub initia sua floream et celebrentur, sed ætate confirmata expectationem de iis conceptam destituant et frustrantur. Eodem pertinet, quod flos ille diis inferis sacer sit; quia homines talis indolis ad omnia inutiles prorsus evadunt. Quicquid autem nullum ex se fructum edit, sed (veluti via navis in mari) transit et labitur, id apud antiquos umbris et diis inferis consecrari solebat.

## V. STYX, SIVE FŒDĒRA.

PERVULGATA est narratio, et in compluribus fabulis interponitur, de unico illo juramento, quo dii superi se obstringere solebant, cum penitentia locum sibi nullo modo relinqui volebant. Illud juramentum nullam majestatem cœlestem, nullum attributum divinum advocabat et testabatur; sed Stygem, fluvium quandam apud inferos, qui atria Ditis, multis spiris interfusus, cingebat. Hæc enim formula sacramenti sola, neque præter eam alia quæpiam firma habita est et inviolabilis: scilicet incumberet pœna perjuri, diis imprimis metuenda, ut qui fefellisset, ad deorum convivia per certa annorum spatia non accederet.

Fabula de fœderibus et pactis principum conficta videtur: in quibus illud nimio plus, quam oporteret, verum est, fœdera, quacunque solemnitate et religione

juramenti munita, parum firma esse; adeo ut fere ad existimationem quandam, et famam, et ceremoniam magis, quam ad fidem, et securitatem, et effectum adhibeantur. Quin si accesserint etiam affinitatis vincula, veluti sacramenta naturæ, si merita mutua, tamen omnia infra ambitionem, et utilitatem, et dominationis licentiam esse, apud plerosque reperiuntur. Tanto magis, quod principibus facile sit, per prætextus varios et speciosos, cupiditates suas et fidem minus sinceram (nemine rerum arbitro, cui ratio sit reddenda) tueri et velare. Itaque unum assumitur verum et proprium fidei firmamentum, neque illud divinitas aliqua cœlestis: ea est necessitas (magnum potentibus numen) et periculum status, et communicatio utilitatis. Necessitas autem per Stygem eleganter representatur, flumen fatale et irremediabile. Atque hoc numen advocavit ad fœdera Iphicrates Atheniensis, qui quoniam inventus est, qui ea aperte loqueretur, quæ plerique tacite animo volvunt, non abs re sit, ipsius verba referre. Is cum Lacedæmonios varias cautiones, et sanctiones, et fœderum firmamenta et vincula excogitare et proponere animadverteret, interfatus: "Unum" (inquit) "Lacedæmonii, nobis vobiscum vinculum, et securitatis ratio esse possit, si plane demonstratis, vos ea nobis concessisse, et inter manus posuisse, ut vobis facultas lædendi nos, si maxime velletis, minime suppetere possit." Itaque si facultas lædendi sublata sit, aut si ex fœdere rupto periculum ingruat perditionis, aut diminutionis status, aut vectigalium, tum demum fœdera rate et sancta, et tanquam juramento Stygis confirmata censi possint: cum metas subsit interdicti illius et suspensionis a conviviis deorum; sub quo nomine imperii jura et prærogativæ, et affluentia et felicitas antiquis significantur.

## VI. PAN, SIVE NATURA.

ANTIQU\* universam naturam sub persona Panis diligentissime descriperunt; hujus generationem in dubio relinquunt. Alii enim asserunt eum a Mercurio genitum; alii longe aliam generationis formam ei tribuunt; aiunt enim procos universos cum Penelope rem habuisse, ex quo promiscuo concubitu Pana communem filium ortum esse. Atque in hæc posteriore narratione, proculdubio, aliqui ex recentioribus veteri fabulæ novem Penelopes imposuere, quod et frequenter faciunt, cum narrationes antiquiores ad personas et nomina juniora traducunt, idque quandoque absurde et insulse; ut hic cernere est; cum Pan ex antiquissimis diis, et longe ante tempora Ulysis fuerit, atque insuper Penelope ob matronalem castitatem antiquitati venerabilis haberetur. Neque prætermittenda est tertia illa generationis explicatio: quidam enim prodiderunt eum Jovis et Hybreos, id est, contumeliæ, filium fuisse. Utcunque orto, Parce illi sorores fuisse perhibentur. Effigies autem Panis talis ab antiquitate describitur: cornutus, cornibus usque ad cœlum fastigiatis, corpore toto hispidus et villosus, barba imprimis promissa. Figura biforma, humana quoad superiora, sed semifera, et in capræ pedes desinens. Gestabat autem insignia potestatis, sinistra fistulam, ex septem calamis com-

\* Fabula hæc invenitur, in libro secundo "De Augmentis Scientiarum," aucta et locupletata.

pectam; dextra pedum, sive lignum, superius curvum et inflexum; induebatur autem chlamyde ex pelle pardalis. Potestates ei et munera hujusmodi attribuntur, ut sit deus venatorum, etiam pastorum, et in universum rucicolarum: præses item montium: erat etiam proximus Mercurio nuncius deorum. Habebatur insuper dux et imperator nympharum, quæ circa eum perpetuo choreas ducere et tripudiare solebant: comitabantur et Satyri, et his seniores Sileni. Habebat etiam potestatem terrores immitendi, præsertim inanes, et superstitiosos, qui et Panici vocati sunt. Res gestæ autem ejus non multæ memorantur: illud præcipuum, quod Cupidinem provocavit ad luctam, a quo etiam in certamine victus est. Etiam Typhonem gigantem retibus implicavit et cohibuit: atque narrant insuper, cum Ceres, mœsta et ob raptam Proserpinam indignata, se abscondisset, atque dii omnes ad eam investigandam magnopere incubuissent, et se per varias vias dispersiti essent; Pani solummodo ex felicitate quadam contigisse ut inter venandum eam inveniret et indicaret. Ausus est quoque cum Apolline de victoria musices decertare, atque etiam, Mida iudice, prælatus est: ob quod iudicium Midas asininas aures tulit, sed clam et secreto. Amores Panis nulli referuntur, aut saltem admodum rari, quod mirum inter turbam deorum, prorsus tam profuse amatoriam, videri possit. Illud solummodo ei datur, quod Echo adamaret, quæ etiam uxor ejus habita est, atque unam etiam nympham, Syringam nomine, in quam, propter iram et vindictam Cupidinis (quem ad luctam provocare non reveritus esset) incensus est. Neque etiam prolem ullam suscepit, (quod similiter mirum est, cum dii, præsertim masculi, prolifici admodum essent,) nisi quod ei tribuatur tanquam filia, muliercula quædam ancilla, Iambe nomine, quæ ridiculis narratiunculis oblectare hospites solebat; ejusque proles ex conjuge Echo esse, a nonnullis existimabatur.

Fabula nobilis, si quæ alia, atque naturæ arcanis et mysteriis gravis, et quasi distenta.

Pan (ut et nomen ipsum etiam sonat) universitatem rerum, sive naturam, repræsentat et proponit. De hujus origine duplex omnino sententia est; atque adeo esse potest: aut enim a Mercurio est, verbo scilicet divino (quod et sacræ literæ extra controversiam ponunt, et philosophis iis, qui magis divini habitus sunt, visum est) aut ex confusis rerum seminibus. Qui enim unum rerum principium posuerunt, aut ad Deum illud retulerunt; aut si materiæ principium volunt, illud tamen potentia varium asseruerunt: adeo ut omnis hujusmodi controversia ad illam distributionem reducat, ut mundus sit, vel a Mercurio, vel a procis omnibus.

“ Namque canebat uti magnum per inane coacta  
Semina terrarumque, animæque, marisque fuissent,  
Et liquidi simul ignis: ut his exordia primis  
Omnia, et ipse tener mundi concreverit orbis.”

VIRG. Ecl. vi. 31.

Tertia autem generatio Panis ejusmodi est, ut videntur Græci aliquid de Hebræorum mysteriis, vel per Ægyptios internuncios, vel utcumque, inaudivisse; pertinet enim ad statum mundi non in meris natalibus suis, sed post lapsum Adami, morti et corrup-

tioni expositum et obnoxium factum. Ille enim status Dei et pacati proles fuit, ac manet. Itaque triplex ista narratio de generatione Panis etiam vera videri possit, si rite et rebus et temporibus distinguatur: nam iste Pan, quem intuemur et contemplamur, ac nimio plus quam oportet colimus, ex verbo divino, mediante confusa materia (quæ et ipsa a Deo creata erat) et subintrante prævaricatione et corruptione, ortum habet.

Naturæ rerum, fata rerum, sorores vere perhibentur et ponuntur; naturalium siquidem causarum catenæ ortus rerum, et durationes, et interitus, et depressiones, et eminentias, et labores, et felicitates, et fata denique omnia, quæ rebus accidere possunt, trahunt.

Cornua autem mundo attribuntur. Quod cornua hujusmodi ab imo latiora, ad verticem acuta sint; id eo spectat, quod omnis rerum natura instar pyramidis acuta sit: individua enim infinita sunt; ea colliguntur in species et ipsas multiplices; species rursus insurgunt in genera; atque hæc quoque ascendendo in magis generalia contrahuntur, ut tandem natura tanquam in unum coire videatur. Neque mirum est Panis cornua etiam cœlum ferire; cum summitates naturæ sive ideæ universales etiam ad divina quodammodo pertingant. Paratus enim et propinquus est transitus a metaphysica ad theologiam naturalem.

Corpus autem naturæ elegantissime et verissime depingitur hirsutum, propter rerum radios; radii enim sunt tanquam naturæ crines, sive villi, atque omnia fere vel magis vel minus radiosa sunt; quod in facultate visus manifestissimum est, nec minus in omni virtute et operatione ad distans; quicquid enim operatur ad distans, id etiam radios emittere recte dici potest; sed maxime omnium prominet barba Panis, quia radii corporum cœlestium maxime ex longinquo operantur et penetrant. Quin et Sol, quando, parte superiore ejus nube obvoluta, radii inferius erumpunt, ad aspectum barbatus cernitur.

Etiam corpus naturæ rectissime describitur bifforme, ob differentiam corporum superiorum et inferiorum. Illa enim, ob pulchretudinem et motus æqualitatem et constantiam, necnon imperium in terram et terrestria, merito sub humana figura repræsentantur: hæc autem, ob perturbationem et motus incompositos et quod a cœlestibus regantur, bruti animalis figura contenta esse possunt. Eadem corporis descriptio pertinet ad participationem specierum. Nulla enim natura simplex videri potest, sed tanquam ex duobus participans et concreta. Habet enim homo nonnihil ex bruto, brutum nonnihil ex planta, planta nonnihil ex corpore inanimato, omniaque revera biformia sunt et ex specie superiore et inferiore compacta. Acutissima autem est allegoria de pedibus capræ, propter motum ascensionis corporum terrestrium versus regiones aëris et cœli: capra enim animal scansionum est, eaque e rupibus pendere, atque in præcipitiis hæere amat; quod etiam res, licet inferiori globo destinata, miris modis faciunt, ut in nubibus et meteoris manifestissimum est.

Insignia autem in manibus Panis duplicia. Alterum harmoniæ, alterum imperii. Fistula enim

ex septem calamis concentum rerum et harmoniam, sive concordiam cum discordia mixtam, quæ ex septem stellarum errantium motu conficitur, evidenter ostendit. Pedum autem illud etiam nobilis translatio est; propter vias naturæ partim rectas, partim obliquas. Præcipue autem lignum, sive virga, versus superiorem partem curva est; quia omnia providentiæ divinæ opera in mundo fere per ambages et circuitus fiunt; ut aliud agi videri possit, aliud interim revera agatur; ut Josephi venditio in Ægyptum, et similia. Quinetiam in regimine humano omni prudente, qui ad gubernacula sedent, populo convenientia per prætextus et vias obliquas felicius quæ volunt, quam ex directo, superinducunt et insinuant; adeo ut omnis imperii virga sive bacillum vere superius inflexum sit. Vestis Panis et amiculum ingeniose admodum ex pelle pardalis fuisse fingitur; propter maculas ubique sparsas; cælum enim stellis, maria insulis, tellus floribus consperguntur; atque etiam res particulares fere variegatæ esse solent circa superficiem, quæ veluti rei chlamys est.

Officium autem Panis nulla alia re tam ad vivum proponi atque explicari poterit, quam ut Deus venatorum sit: omnis enim naturalis actio, atque adeo motus et processus, nihil aliud quam venatio est. Nam et scientiæ et artes opera sua venantur, et concilia humana fines suos, atque res naturales omnes vel alimenta sua tanquam prædam, vel voluptates suas tanquam solatium, venantur, idque modis peritis et sagacibus.

“Torva læna lupum sequitur, lupus ipse capellam.  
Florentem cytisum sequitur lasciva capella.”

Etiam ruricularum in genere Pan deus est, quia hujusmodi homines magis secundum naturam vivunt, cum in urbibus et aulis natura a cultu nimio corruptatur; ut illud poëtæ amatorum verum sit,

“Pars minima est ipsa puella sui.”

Montium autem imprimis præses dicitur Pan, quia in montibus et locis editis natura rerum panditur, atque oculis et contemplationi magis subicitur. Quod alter a Mercurio deorum nuncius sit Pan, ea allegoria plane divina est, cum proxime post verbum Dei, ipsa mundi imago divinæ potentiæ et sapientiæ præconium sit. Quod et poëta divinus cecinit: “Cœli enarrant gloriam Dei, atque opera manuum ejus indicat firmamentum.”

Pana autem oblectant nymphæ; animæ scilicet; deliciæ enim mundi, animæ viventium sunt: ille autem merito earum imperator, cum illæ naturam quæque suam veluti ducem sequantur, et circa eam cum infinita varietate, veluti singulæ more patrio, saltent et choreas ducant, motu neutiquam cessante. Una perpetuo comitantur Satyri et Sileni; senectus scilicet et juvenus; omnium enim rerum est ætas quædam hilaris et saltatrix; atque rursus ætas tarda et bibula: utriusque autem ætatis studia vere contemplanti (tanquam Democrito) fortasse ridicula et deformia videntur, instar satyri alicujus aut Sileni. De panicis autem terroribus prudentissima doctrina proponitur: natura enim rerum omnibus viventibus indidit metum, ac formidinem, vitæ atque essentiæ

susæ conservatricem, ac mala ingruentia vitantem et depellentem: verumtamen eadem natura modum tenere nescia est; sed timoribus salutaribus semper vanos et inanes admiscet, adeo ut omnia (si intus conspici darentur) Panicis terroribus plenissima sint; præsertim humana, quæ superstitione (quæ vere nihil aliud, quam panicus terror, est) in immensum laborant; maxime temporibus duris et trepidis et adversis.

Quod vero attinet ad audaciam Panis, et pugnam per provocationem cum Cupidine; id eo spectat, quia materia non caret inclinatione et appetitu ad dissolutionem mundi et recidivationem in illud Chaos antiquum, nisi prævalida rerum concordia (per amorem sive Cupidinem significata) malitia et impetus ejus cohiberetur et in ordinem compelleretur: itaque bono admodum hominum et rerum fato fit, ut illud certamen Pan adversum experiat, et victus abscedat. Eodem prorsus pertinet et illud de Typhone in retibus implicato; quia utcumque aliquando vasti, et insoliti rerum tumores sint, (id quod Typhon sonat,) sive intumescant maria, sive intumescant nubes, sive intumescat terra, sive alia, tamen rerum natura hujusmodi corporum exsuperantias atque insolentias reti inextricabili implicat et coëret, et veluti catena adamantina devincit.

Quod autem inventio Cereris huic deo attribuitur, idque inter venationem; reliquis diis negatur, licet sedulo quærentibus et illud ipsum agentibus; monitum habet verum admodum et prudens; hoc est, ne rerum utilium ad vitam et cultum inventio, qualis fuit segetum, a philosophiis abstractis, tanquam diis majoribus, expectetur, licet totis viribus in illud ipsum incumbant; sed tantummodo a Pane, id est, experientia sagaci et rerum mundi notitia universali, quæ etiam casu quodam ac veluti inter venandum in hujusmodi inventa incidere solet.

Illud autem musices certamen, ejusque eventus, salutarem exhibet doctrinam, atque eam quæ rationi et judicio humano gestienti et se efferenti sobrietatis vincula injicere possit. Duplex enim videtur esse harmonia et quasi musica: altera providentiæ divinæ, altera rationis humanæ. Judicio enim humano, ac veluti auribus mortalium, administratio mundi et rerum, et judicia divina secretiora sonant aliquid durum et quasi absoum: quæ incerta licet asininis auribus merito insigniatur, tamen et ipsæ illæ aures secreto, nec palam gestantur: neque enim hujus rei deformitas a vulgo conspicitur aut notatur.

Postremo, minime mirum est, si nulli amores Pani attribuantur, præter conjugium Echus; mundus enim se ipso, atque in se rebus omnibus fruitur: qui amat autem, frui vult, neque in copia desiderio locus est. Itaque mundi amores esse nulli possunt, nec potiendi cupidus, cum se ipso contentus sit, nisi fortasse sermones: ii sunt nympha, Echo, aut, si accuratiores sint, Syringa. Inter sermones autem, sive voces, excellenter ad conjugium mundi sumitur sola Echo; ea enim demum vera est philosophia, quæ mundi ipsius voces fidelissime reddit, et veluti dictante mundo conscripta est; et nihil aliud est, quam ejusdem simulacrum et reflexio, neque addit quicquam de proprio, sed tantum iterat et resonat. Ad mundi etiam sufficientiam et perfectionem perti-

net, quod prolem non edat: ille enim per partes generat; per totum autem quomodo generare possit, cum corpus extra ipsum non sit? Nam de filia ejus putativa, muliercula illa, est sane ea adjectio quædam ad fabulam sapientissima; per illam enim repræsentantur eæ, quæ perpetuis temporibus passim vagantur, atque omnia implent, vaniloquæ de rerum natura doctrinæ, re ipsa infructuosæ, genere quasi subditiæ, garrulitate vero interdum jucundæ, interdum molestæ et importunæ.

#### VII. PERSEUS, SIVE BELLUM.

PERSEUS\* traditur fuisse a Pallade missus ad truncandam Medusam, quæ populis plurimis ad occidentem in extremis Hiberiæ partibus maximæ calamitati fuit. Monstrum enim hoc tam dirum atque horrendum fuit, ut aspectu solo homines in saxa verteret. Erat autem e Gorgonibus una ac sola mortalis Medusa: cum passivæ reliquæ non essent. Itaque Perseus, ad tam nobile facinus se comparans, arma ac dona a tribus diis accepit: talares alas a Mercurio, a Plutone galeam, scutum a Pallade et speculum. Neque tamen, licet tanto apparatu instructus, ad Medusam recta perrexit: sed primum ad Græas divertit; eæ sorores ex altera, parente Gorgonibus erant. Atque Grææ istæ canæ jam a nativitate erant et tanquam vetulæ. Oculus autem iis tantummodo et dens erat omnibus unicus, quos prout exire foras quamque contigerat, vicissim gestare, reversæ autem iterum deponere solebant: hunc itaque oculum, atque hunc dentem illæ Perseo commodarunt. Tum demum cum se abunde ad destinata perficienda instructum judicaret, ad Medusam properavit impiger et volans: illam autem dormientem offendit; neque tamen aspectui ejus (si evigilaret) se committere audebat, sed cervice reflexa, in speculum Palladis inspiciens, atque hoc modo ictus dirigens, caput ei abscidit. Ex sanguine autem Medusæ fuso statim Pegasus alatus emicuit. Caput autem abscissum Perseus in scutum Palladis inseruit, cui etiamnum sua mansit via, ut ad ejus intuitum omnes ceu attoniti aut siderati obrigerent.

Fabula de belligerandi ratione et prudentia conficta videtur. Atque in ipsa de bello suscipiendo et de genere belli eligendo deliberatione, tria proponit præcepta sana et gravia, tanquam ex consilio Palladis. Primo ut de subjugatione nationum finitimarum quis non admodum labore. Neque enim eadem est patrimonii et imperii amplificandi ratio. Nam in possessionibus privatis vicinitas prædiorum spectatur: sed in propagando imperio occasio et belli conficiendi facilitas et fructus loco vicinitatis esse debent. Certe Romani, quo tempore occidentem versus vix ultra Liguriam penetraverant, orientis provincias usque ad montem Taurum armis et imperio complexi sunt. Itaque Perseus, licet orientalis, tamen longinquam expeditionem usque ad extrema occidentis minime detrectavit. Secundo, curæ esse debet, ut justa et honorifica subsit belli causa: id enim et alacritatem tum militibus, tum populis impensas conferentibus addit: et societates aperit et conciliat, et plurimas denique commoditates habet. Nulla

\* Fabula hæc invenitur, in libro secundo "De Augustis Scientiarum," aucta et locupletata.

autem belli causa magis pia sit, quam debellatio tyrannidis, sub qua populus succumbit, et prosternitur sine animis et vigore, tanquam sub aspectu Medusæ. Tertio, prudenter additur, quod cum tres Gorgones fuerint, (per quas bella repræsentantur,) Perseus illam delegerit, quæ fuerit mortalis; hoc est, bellum ejus conditionis, quod confici et ad exitum perducere posset, nec vastas aut infinitas spes persecutus est. Instructio autem Persei ea est, quæ ad bellum unice confert et fortunam fere trahit. Accepit enim celeritatem a Mercurio, occultationem consiliorum ab Orco, et providentiam a Pallade. Neque caret allegoria, eaque prudentissima, quod alæ illæ celeritatis talares, non axillares fuerint, atque pedibus, non humeris additæ: quia non tam in primis aggressibus, quam in eis quæ sequuntur, et primis subsidio sunt, celeritas requiritur: nullus enim error in bellis magis frequens est, quam quod prosecutiones et subsidiarii impetus initiorum alacritati non respondent. Etiam illa providentiæ divisio (nam de galea Plutonis, quæ homines invisibiles reddere solebat, parabola manifesta est) ingeniosa videtur, de scuto et speculo; neque enim ea providentia solum adhibenda est, quæ cavet instar scuti, sed illa altera, per quam hostium vires, et motus, et consilia cernuntur, instar speculi Palladis. Verum Perseo, ut cunque copiis aut animis instructo, restat aliud quiddam maximi per omnia momenti antequam incipiatur bellum, nimirum ut divertat ad Græas. Grææ autem proditiones sunt, bellorum scilicet sorores, non germanæ illæ quidem, sed generis nobilitate quasi impares. Bella enim generosa, proditiones degeneres et turpes. Earum descriptio elegans est; ut canæ a nativitate sint et tanquam vetulæ, propter perpetuas proditorum curas et trepidationes: earum autem vis (antequam in manifestam defectionem erumpant) aut in oculo, aut in dente est: omnis enim factio, a statu quopiam alienata, et specularum, et mordet: atque hujusmodi oculus et dens tanquam communis est. Nam quæ didicerunt et noverunt, fere per manus factionis ab uno ad alterum transeunt et percurrunt. Et quod ad dentem attinet, uno fere ore mordent, et similem cantilenam canunt, ut si unum audias, omnes audias. Itaque Perseo conciliandæ sunt istæ Grææ, ut oculum et dentem ei commodent: oculum ad indicia, dentem ad rumores serendos, et invidiam conflandam, et animos hominum sollicitandos. His itaque dispositis et præparatis, sequitur ipsa belli actio. In ea Medusam dormientem invenit: prudens enim belli susceptor semper fere hostem assequitur imparatum et securitati propiorem: atque nunc tandem speculo Palladis opus est; plurimi enim ante ipsa pericula res hostium acute et attente introspicere possunt; sed in ipso periculi articulo præcipuus est usus speculi, ut modus periculi cernatur, terror non offundatur (quod per illum intuitum capite averso significatur). A bello perfecto sequuntur effecta duo: primum Pegasi illa generatio et exuscitatio, quæ satis evidenter Famam denotat, quæ per omnia volat et victoriam celebrat; secundum gestatio capitis Medusæ in scuto; siquidem nullum præsidii genus huic ob præstantiam comparari possit. Unicum enim facinus insigne et memorabile, feliciter gestum et perpetratum, om-

nes inimicorum motus cohibet, atque malevolentiam ipsam stupidam reddit.

#### VIII. ENDYMION, SIVE GRATIOSUS.

PASTOR Endymion traditur a Luna fuisse adamat: novum autem et singulare erat consuetudinis genus, siquidem ille decumbebat in nativa quadam specu sub saxis Latmiis; Luna autem haud raro de cœlo perhibetur descendisse, et sopiti oscula petiisse, ac rursus in cœlum se recepisse. Neque tamen otium istud et somnus in detrimentum fortunarum ejus cedebat, sed Luna interim effecit, ut pecus ejus pinguesceret admodum, ac numero etiam felicissime auctum esset, ut nulli pastorum greges essent lætiores, aut numerosiores.

Fabula ad ingenia et mores principum pertinere videtur. Illi enim, cogitationum pleni et in suspensiones propensi, non facile ad consuetudinem vitæ interiori recipiunt homines, qui sunt perspicaces, et curiosi, et quasi animo vigilantes, sive exsomes: sed potius eos, qui ingenio sunt quieto et morigeri, et quod placitum est illis patiuntur, et nil ultra inquirunt, sed se veluti ignaros, et nil sentientes, et quasi sopitos præbent; denique magis obsequium simplex, quam observantiam callidam, præstant. Etenim cum hujusmodi hominibus principes de majestate sua, veluti Luna de orbe superiore, descendere, et personam (quam perpetuo gerere instar oneris cujusdam sit) deponere, et familiariter versari, libenter consueverunt, idque se tuto facere posse putant. Id quod in Tiberio Cæsare, principe omnium maxime difficili, præcipue annotatum fuit: apud quem illi solummodo gratiosi erant, qui notitiam morum ejus revera habebant, sed pertinaciter et quasi stupide dissimulabant. Quod etiam Ludovico undecimo Francorum regi, principi cautissimo et callidissimo, in moribus erat. Neque ineleganter in fabula ponitur antrum illud Endymionis: quia fere usitatum est illis, qui hujusmodi gratia apud principes florent, habere recessus aliquos amœnos, quo illos invitent ad otium et animi remissionem, absque fortunæ suæ mole. Qui autem in hoc genere gratiosi sunt, plerumque rem suam bene agunt: nam principes, licet fortasse ad honores eos non evehant, tamen, cum vero affectu, nec propter utilitatem tantum illos diligant, munificentia sua eos ditare consueverunt.

#### IX. SOROR GIGANTUM, SIVE FAMA.

MEMORANT poëtæ, Gigantes e terra procreatos bellum Jovi et superis intulisse, et fulmine disjectos et devictos fuisse. Terram autem, deorum ira irritatam, in vindictam natorum suorum Famam progenuisse, extremam gigantibus sororem.

“ Illam Terra parens, ira irritata deorum,  
Extremam (ut perhibent) Cœo Enceladoque sororem,  
Progeniuit.”

ÆN. IV. 178.

Hujus fabulæ ea sententia videtur esse: per terram, naturam vulgi significarunt, perpetuo tumidam et malignam versus imperantes, et res novas parturientem: hæc ipsa, occasionem adepta, rebelles parit et seditiosos, qui principes ausu nefario exturbare et dejicere machinantur; quibus oppressis,

eadem plebis natura, deterioribus favens, et tranquillitatis impatiens, rumores gignit, et susurros malignos, et famas querulas, et famosos libellos, et cætera id genus, ad invidiam eorum qui rebus præstant: ut actiones rebellium, et famæ seditiosæ genere et stirpe non differant; sed veluti seru tantum, cum istæ muliebres videantur, illæ viriles.

#### X. ACTÆON ET PENTHEUS, SIVE CURIOSUS.

CURIOSITAS humana in secretis rimandis, et eorum notitia appetitu male sano concupiscenda, et prensanda, duplici exemplo apud antiquos coërcetur: altero Actæonia, altero Penthei. Actæon, cum Dianam imprudens et casu sine veste vidisset, in cervum versus, a canibus, quos alebat, dilaceratus est. Pentheus, cum sacrificiorum Bacchi occultorum, conscensa arbore, spectator esse voluisset, furore percitus est. Fuit autem Penthei dementia ejus generis, ut res congeminasse existimaret, et duo soles et rursus duæ Thebæ ei ob oculos viderentur; adeo ut, cum Thebas properaret, statim alteris Thebis conspectis retraheretur: atque hoc modo perpetuo et irrequiete sursum et deorsum ferretur.

“ Eumenidum veluti demens videt agmina Pentheus,  
Et solem geminum, et duplices se ostendere Thebas.”

ÆN. IV. 469.

Fabularum prima, ad secreta principum; secunda, ad secreta divina pertinere videtur. Qui enim principibus non admissi, et præter eorum voluntatem secretorum conscii sunt, odium certissimum apud eos consequuntur. Itaque gnari se peti, et occasiones captari, vitam degunt, cervorum more, timidam et suspicionibus plenam. Quin et illud sæpius accidit, ut a servis et domesticis, in gratiam principum, accusentur et subvertantur. Ubi enim principis offensio manifesta est; quot servi, tot fere proditores esse consueverunt; ut Actæonia fatum illos maneat. Alia est Penthei calamitas. Qui enim ausu temerario, mortalitatis parum memores, per excelsa naturæ et philosophiæ fastigia (tanquam arbore conscensa) ad mysteria divina aspirant, his pœna proposita est, perpetuæ inconstantiae, et judicii vacillantis et perplexi. Cum enim aliud sit lumen naturæ, aliud divinum; ita cum illis fit, ac si duos soles viderent. Cumque actiones vitæ et decreta voluntatis ab intellectu pendeant, sequitur etiam ut non minus voluntate, quam opinione, hæsent, nec sibi omnino constant: itaque et duas Thebas similiter vident. Per Thebas enim actionum fines describuntur (cum Thebis Pentheo esset domus et perfugium). Hinc fit, ut nesciant quo se vertant, sed, de summa rerum incerti et fluctuantes, tantum subitis mentis impulsibus in singulis circumagantur.

#### XI. ORPHEUS, SIVE PHILOSOPHIA.

FABULA de Orpheo vulgata, nec tamen interpretem fidem per omnia sortita, philosophiæ universæ imaginem refert videtur. Persona enim Orphi, viri admirandi et plane divini, et omnis harmoniæ periti, et modis suavibus cuncta vincens, et trahentis, ad philosophiæ descriptionem facili transitu traducitur. Labores enim Orphi labores Herculis, quemadmodum opera sapientiæ opera fortitudinis, dignitate et

potentia superant. Orpheus, ob amorem uxoris, morte immatura præreptæ, fretus lyra, ad inferos descendere sibi in animum induxit, ut manes deprecaretur, neque spe sua decidit. Nam, placatis manibus et delinitis suavitate cantus, et modulationibus, tantam apud eos potuit, ut ei uxorem secum abducere indultum sit! ea tamen lege, ut illa eum a tergo sequeretur, ipse autem antequam ad luminis oras peruentum esset ne respiceret. Quod cum ille nihilominus, amoris et curæ impatientia (postquam fere in tuto esset) fecisset, rupta sunt fœdera: atque illa ad inferos gradu præcipiti relapsa est. Ab illo tempore Orpheus, mœstus, et mulierum osor, in solitudines profectus est, ubi eadem cantus et lyræ dulcedine primo feras omnigenas ad se traxit, adeo ut, naturam suam exuentes, nec irarum aut ferocitatis memores, nec libidinis stimulis et furoribus præcipites actæ, nec ingluviem satiare, aut prædæ inhiare amplius curantes, in morem theatri, illum circumstarent, benignæ et mansuetæ inter se factæ, et tantum lyræ concentui aures præbentes. Neque is finis, sed tanta musicæ vis et potentia fuit, ut etiam sylvas moveret, et lapides ipsos, ut illa quoque se transferrent, et sedes suas circa eum, ordine et modo decenti, ponerent. Hæc ei cum ad tempus feliciter et magna cum admiratione cessissent; tandem Thraciæ mulieres stimulis Bacchi percitæ, primo cornu raurum et immane sonans inflarunt: ex eo, propter strepitum, musicæ sonus amplius audiri non potuit: tum demum soluta virtute, quæ ordinis et societatis istius erat vinculum, turbari cœptum est, et feræ singulæ ad naturam suam redierunt, et se invicem ut prius persecutæ sunt; neque lapides aut sylvæ suis mansere locis: Orpheus autem ipse tandem a mulieribus furentibus discerptus est, et sparsus per agros; ob cuius mortis mœrorem Helicon (fluvius Musis sacer) aquas sub terram indignatus condidit, et per alia loca caput rursus extulit.

Sententia fabulæ ea videtur esse. Duplex est Orphei cantio: altera ad placandos manes; altera ad trahendas feras et sylvas. Prior ad naturalem philosophiam, posterior ad moralem et civilem aptissime refertur. Opus enim naturalis philosophiæ longe nobilissimum, est ipsa restitutio et instauratio rerum corruptibilium, et (hujusce rei tanquam gradus minores) corporum in statu suo conservatio, et dissolutionis et putredinis retardatio. Hoc si omnino fieri detur, certe non aliter effici potest, quam per debita et exquisita naturæ temperamenta, tanquam per harmoniam lyræ, et modos accuratos. Et tamen cum sit res omnium maxime ardua, effectu plerumque frustratur; idque (ut verisimile est) non magis aliam ob causam, quam per curiosam et intempestivam sedulitatem et impatientiam. Itaque philosophia, tantæ rei fere impar, atque ideo merito mœsta, vertit se ad res humanas, et in animo hominum, suasu et eloquentia, virtutis, et æquitatis, et pacis amorem insinuans, populorum cœtus in unum coire facit; et juga legum accipere, et imperiis se submittere, et affectuum indomitum oblivisci, dum præceptis et disciplinæ auscultant, et obtemperant: unde paulo post ædificia extruuntur, oppida conduntur, agri et horti arboribus conseruntur; ut lapides et sylvas non abs re convocari et

transferri dictum sit. Atque ista rerum civilium cura rite atque ordine ponitur post experimentum corporis mortalis restituendi sedulo tentatum, et ad extremum frustratum: quia mortis necessitas inevitabilis, evidentiis proposita, hominibus ad æternitatem meritis et nominis fama quærendam animos addit. Etiam prudenter in fabula additur, Orpheum a mulieribus et nuptiis alieno animo fuisse, quia nuptiarum delinimenta, et liberorum charitates, homines plerumque a magnis et excelis erga republicas meritis avertunt, dum immortalitatem propagine, non factis, assequi satis habent. Verum et ipsa sapientiæ opera, licet inter humana excellent, tamen et suis periodicis clauduntur. Evenit enim ut postquam regna et republicæ ad tempus floruerint, subinde perturbationes, et seditiones, et bella orientur; inter quorum strepitus primo leges conticescunt, et homines ad naturæ suæ depravationes redeunt; atque etiam in agris, atque oppidis vastitas conspicitur. Neque ita multo post (si hujusmodi furores continuenter) literæ etiam, et philosophia certissime discerpitur: adeo ut fragmenta tantum ejus, in paucis locis, tanquam naufragii tabulæ, inveniantur, et barbara tempora ingruant; Heliconis aquis sub terra mersis; donec, debita rebus vicissitudine, non iisdem fortasse locis, sed apud alias nationes erumpant et emanent.

## XII. CŒLUM, SIVE ORIGINES.

TRADUNT poëtæ Cœlum antiquissimum deorum extitisse; hujus partes generationis a filio Saturno falce demessas fuisse. Saturnum autem sobolem numerosam generasse: sed filios continuo devorasse, tandem vero Jovem exitum effugisse, et adultum patrem Saturnum in Tartarum detrusisse, et regnum accepisse; quin etiam patris genitalia eadem falce, qua ille Cœlum exsecuerat, abscidisse, atque in mare projecisse, inde Venerem natam esse. Postea vero Jovis regnum vix confirmatum, duo memorabilia bella excepisse. Primum, Titanum, in quibus debellandis Solis operam (qui solus ex Titanibus Jovis rebus favebat) egregiam fuisse: secundum, Gigantum, qui et ipsi fulmine et Jovis armis disjecti sunt; quibus domitis, Jovem securum regnasse.

Fabula videtur ænigma de origine rerum, non multum discrepans ab ea philosophia, quam postea Democritus amplexus est, qui apertissime omnium æternitatem materiæ asseruit, æternitatem mundi negavit; in quo aliquanto proprius ad veritatem verbi divini accessit, cujus narratio materiam informem ante opera dierum statuit. Sententia fabulæ hujusmodi est. Cœlum esse concavum illud, sive ambitum, quod materiam complectitur. Saturnum autem materiam ipsam, quæ omnem generandi vim parenti præscidit. Summam enim materiæ perpetuæ eandem esse; neque ipsam quantum naturæ crescere aut minui. Agitationes autem et motus materiæ, primo imperfectas et male cohærentes rerum compages produxisse, et veluti tentamenta mundorum: dein ævi processu fabricam ortam esse, quæ formam suam tueri et conservare posset. Itaque priorem ævi distributionem per regnum Saturni significari, qui ob frequentes rerum dissolutiones, et breves durationes, filiorum suorum devorator ha-

bitus est: secundam autem per regnum Jovis, qui continuas istas et transitorias mutationes in Tartarum detrusit; qui locus perturbationem significat. Is locus videtur esse spatium inter ima cœli et interiora terræ medium; quo intervallo perturbatio et fragilitas et mortalitas sive corruptio maxime versatur. Atque durante priore illa generatione rerum, quæ sub regno Saturni tenuit, Venerem natam non fuisse. Donec enim in universitate materiæ discordia esset concordia potior et valentior, mutatio per totum necessario facta est, atque in ipsa fabrica integrali. Tales vero generationes rerum extiterunt, antequam Saturnus exsectus esset. Hunc vero generationis modum cessantem alter ille modus continuo exceperit, qui per Venerem fit, adulta et prævalida rerum concordia: ut mutatio tantum per partes procedat, integra et inconcussa fabrica universali. Saturnum tamen detrusum et deturbatum, non peremptum et extinctum narrat, quia mundum in antiquam confusionem, et interregna relabi posse, opinio Democriti erat: quod Lucretius ne suis temporibus eveniret deprecatus est:

“Quod procul a nobis flectat fortuna gubernans,  
Et ratio potius, quam res, persuadeat ipsa.”  
Lib. v. 198.

Postquam autem mundus mole et vi sua consisteret, tamen otium ab initio non fuisse. Nam secutos primum in cœlestibus regionibus motus notabiles, qui virtute, solis in cœlestibus prædominante, ita sopiti sunt, ut mundi status conservaretur: postea similiter in inferioribus; per inundationes, tempestates, ventos, terræ motus magis universales, quibus etiam oppressis et dissipatis, magis pacata ac durabilis rerum conspiratio et tranquillitas accrevit. Verum de ista fabula utrumque pronunciari potest, et fabulam philosophiam continere, et philosophiam rursus fabulam. Novimus enim (ex fide) hæc omnia nil aliud esse, quam sensus jam pridem cessantia et deficientia oracula: cum mundi et materia et fabrica ad creatorem verissime referatur.

### XIII. PROTEUS, SIVE MATERIA.

NARRANT poëtæ Proteum Neptuno pastorem fuisse; eundemque senem et vatem; vatem scilicet præstantissimum et veluti ter maximum. Noverat enim non futura solummodo, sed et præterita et præsentia, adeo ut, præter divinationem, etiam omnis antiquitatis et omnium secretorum nuncius ac interpretæ esset. Morabatur autem sub ingenti specu. Ibi ei mos erat sub meridiem gregem suum phœcarum numerare, atque deinde somno se dare. Qui autem opera ejus aliqua in re uti volebat, is non alio modo apud eum valere poterat, nisi eum manicis comprehensum vinculis constringeret. Ille contra, ut se liberaret, in omnes formas, atque rerum miracula, ignem, lympham, feras, se vertere solebat; donec tandem in pristinam formam restitueretur.

Sensus fabulæ ad abdita naturæ et conditiones materiæ pertinere videtur. Sub Protei enim persona materia significatur, omnium rerum post Deum antiquissima. Materia autem sub cœli concavo, tanquam sub specu, habitat. Neptuni autem mancipium est, quia omnis materiæ operatio et dispensatio in liquidis præcipue exercetur. Pecus autem, sive

gregis Protei, non aliud videtur esse, quam species ordinariæ animalium, plantarum, metallorum, in quibus materia videtur se diffundere et quasi consumere; adeo ut postquam istas species effinxerit, et absolverit (tanquam penso completo) dormire et quiescere videatur, nec alias amplius species moliri, tentare, aut parare. Atque hæc est Protei pecoris numeratio, et subinde somnus. Hoc autem sub meridiem, non auroram et vesporem, fieri dicitur; id est, cum tempus jam venerit, quod speciebus ex materia debite præparata et prædisposita perficiendis et excludendis maturum sit, et quasi legitimum, et inter rudimenta earum et declinationes medium; quod nos satis scimus ex historia sacra sub tempus ipsum creationis fuisse; tum enim per virtutem illam divini verbi “Producat,” materia ad imperium Creatoria, non per ambages suas, sed subito confluit, et opus suum in actum affatim perduxit, ac species constituit. Atque hucusque fabula narrationem suam de Proteo libero et soluto cum pecore suo complet. Nam universitas rerum, cum structuris et fabricis specierum ordinariis, est materiæ non constrictæ aut devinctæ, et gregis materiæ facies. Nihilominus si quis peritus naturæ minister vim adhibeat materiæ, et materiam vexet, atque urgeat, tanquam hoc ipso destinato et proposito, ut illam in nihilum redigat; illa contra (cum annihilatio, aut interitus verus, nisi per Dei omnipotentiam fieri non possit) in tali necessitate posita in miras rerum transformationes et effigies se vertit: adeo ut tandem veluti in orbem se mutet, et periodum impleat, et quasi se restituat, si vis continuetur. Ejus autem constrictionis seu alligationis ratio magis facilis erit et expedita, si materia per manicas comprehendatur, id est, per extremitates. Quod autem additur in fabula, Proteum vatem fuisse, et trium temporum gnarum, id cum materiæ natura optime consentit. Necesse est enim, ut qui materiæ passiones et processus noverit, rerum summam et earum, quæ factæ sunt, et quæ fiunt, et quæ insuper futurae sunt, comprehendat, licet ad partes et singularia cognitio non extendatur.

### XIV. MEMNON, SIVE PRÆMATUREUS.

MEMORANT poëtæ Memnonem Auroræ filium fuisse. Ille armorum pulchritudine insignis, et aura populari celebris, ad bellum Trojanum venit, et ad summa ausu præcipiti festinans et anhelans, cum Achille, Græcorum fortissimo, certamen singulare iniiit, atque ejus dextra occubuit. Hunc Jupiter miseratus aves lugubre quiddam et miserabile perpetuo quiritantes ad exsequias ejus et funeris decus excitavit; ejusdem status quoque, solis orientis radiis percussa, sonum flebilem edere solita fuisse perhibetur.

Fabula ad adolescentum summæ spei calamitosos exitus pertinere videtur. Illi enim tanquam Auroræ filii sunt; atque inanium et externorum specie tumidi, majora fere viribus audent, atque heroës fortissimos lacessunt, et in certamen deponunt, et impari congressu succumbentes, exstinguuntur: horum autem mortem infinita commiseratio sequi solet; nil enim inter fata mortalium tam flebile est, tamque potens ad misericordiam commovendam, quam virtutis flos immaturo exitu præcisus. Neque enim

prima ætas ad satietatem scilicet, aut ad invidiam usque duravit, quæ mostitiam in obitu lenire, aut misericordiam temperare possit; quinetiam lamentationes et plactus non solum tanquam aves illæ funebres circa rogos eorum volitant, sed et durat hujusmodi miseratio et producitur: maxime autem per occasiones et novos motus, et initia magnarum rerum, veluti per solis radios matutinos, desideria eorum renovantur.

## XV. TITHONUS, SIVE SATIETAS.

ELEGANS fabula narratur de Tithono, eum ab Aurora adamatum fuisse, quæ perpetuam ejus consuetudinem exoptans, a Jove petit, ut Tithonus nunquam mori posset: verum incuria muliebri oblita est petitioni suæ et illud inserere, ut nec senectute gravaretur. Itaque moriendi conditio ei erepta est, senium autem secutum est mirum et miserandum, quale consentaneum est, evenire ei, cui mors negatur, ætas perpetuo ingravescit. Adeo ut Jupiter, hujusmodi sortem miseratus, tandem eum in cicadam converterit.

Hæc fabula ingeniosa adumbratio et descriptio voluptatis esse videtur; quæ a principio, velut sub tempus Auroræ, adeo grata est, ut homines vota faciant ut gaudia hujusmodi sibi perpetua et propria sint, obliti satietatem et tædium eorum, instar senii, ipsis non cogitantibus obventura. Adeo ut ad extremum, cum actiones voluptariæ homines deserant, cupido vero et affectus non moriantur, fieri solet ut homines sermonibus tantum et commemorationibus earum rerum, quæ eis integra ætate voluptati fuerunt, se oblectent. Quod in libidinoso et viris militaribus fieri videmus, cum illi impudicos sermones, hi facinora sua retractant, cicadarum more, quarum vigor tantum in voce est.

## XVI. PROCUS JUNONIS, SIVE DEDECUS.

NARRANT poëtæ Jovem, ut amoribus suis potiretur, multas et varias formas sumpsisse, tauri, aquilæ, cyeni, imbris aurei; cum autem Junonem sollicitaret, vertisse se in formam maxime ignobilem, atque contemptui et ludibrio expositam. Ea fuit miseriacuculi, imbre et tempestate madefacti et attoniti, tremebundi, et semimortui.

Prudens fabula est, et ex intimis moribus desumpta. Sensus vero talis, ne homines nimium sibi placeant, existimantes virtutis suæ specimen eos apud omnes in pretio et gratia ponere posse. Id enim succedere pro natura et moribus eorum, quos ambiunt et colunt; qui si homines sunt nullis ipsi dotibus et ornamentis insigniti; sed tantum ingenio sunt superbo et maligno, (id quod sub figura Junonis repræsentatur,) tum vero norint sibi exuendam prorsus esse omnem personam, quæ vel minimum præ se ferat decoris et dignitatis: atque decipere se plane, si alia via insistant; neque satis esse si obsequii deformitatem præstant, nisi omnino se in personam abjectam et degenerem mutant.

## XVII. CUPIDO, SIVE ATOMUS.

QUÆ de Cupidine sive Amore dicta sunt a poëtis, in eandem personam proprie convenire non possunt: ita tamen discrepant, ut confusio personarum rejici-

atur, similitudo recipiatur. Narrant itaque Amorem omnium deorum fuisse antiquissimum, atque adeo omnium rerum, excepto Chao, quod ei cœvum perhibetur; Chaos autem a priscis viris nunquam divino honore, aut nomine Dei insignitur. Atque Amor ille prorsus sine parente introducit; nisi quod a nonnullis ovum Noctis fuisse traditur. Ipse autem ex Chao et deos et res universas progenit. Ejus autem attributa ponuntur numero quatuor, ut sit infans perpetuus, cæcus, nudus, sagittarius. Fuit et Amor quidam alter, Deorum natu minimus, Veneris filius; in quem etiam antiquioris attributa transferuntur, et quodam modo competunt.

Fabula ad cunabula naturæ pertinet et penetrat. Amor iste videtur esse appetitus, sive stimulus materiæ primæ, sive (ut explicatius loquamur) motus naturalis atomi. Hæc enim est illa vis antiquissima et unica, quæ ex materia omnia constituit et affingit. Ea omnino sine parente est; id est, sine causa. Causa enim effectus veluti parens est: hujus autem virtutis causa nulla potest esse in natura (Deum enim semper excipimus). Nihil enim hac ipsa prius; itaque efficiens nulla: neque aliquid naturæ notius; ergo nec genus nec forma; quamobrem quæcunque ea tandem sit, positiva est et surda. Atque etiam si modus ejus et processus sciri daretur; tamen per causam sciri non potest; cum sit post Deum causa causarum, ipsa incausabilis. Neque fortasse modum ejus intra inquisitionem humanam sisti, aut comprehendendi posse sperandum est; itaque merito fingitur ovum a Nocte exclusum; certe sanctus philosophus ita pronuntiat: "Cuncta fecit pulchra tempestatibus suis, et mundum tradidit disputationibus eorum, ita tamen ut non inveniat homo opus, quod operatus est Deus a principio usque ad finem." Lex enim summaria naturæ, sive virtus istius Cupidinis, indita primis rerum particulis a Deo ad coitionem, ex cujus repetitione et multiplicatione omnis rerum varietas emergit et conflatur; cogitationem mortalium perstringere potest, subire vix potest. Philosophia autem Græcorum invenitur in rerum materiatis principiis investigandis magis acuta et sollicita; in principiis autem motus (in quibus omnis operationis vigor consistit) negligens et languida. In hoc autem, de quo agimus, prorsus cæcutire et balbutire videtur: etenim Peripateticorum opinio, de stimulo materiæ per privationem, fere non ultra verba tendit, et rem potius sonat, quam signat. Qui autem hoc ad Deum referunt, optime illi quidem, sed saltu, non gradu ascendunt: est enim proculdubio unica et summaria lex, in quam natura coit, Deo substituta: ea ipsa, quæ in superiore textu illo verborum complexu demonstratur. "Opus, quod operatus est Deus a principio usque ad finem." Democritus autem, qui altius rem perpendit, postquam atomum dimensionem nonnulla, et figura instruxerat, unicum Cupidinem sive motum primum ei attribuit simpliciter, et ex comparatione alterum. Omnia enim ad centrum mundi ferri putavit proprie; quod autem plus materiæ habet, cum celerius ad centrum feratur, illud, quod minus habet, percussione summovere et in contrarium pellere. Verum ista meditatio angusta fuit, et ad pauciora quam par erat respiciens. Neque enim aut corporum cœlestium in

orbem conversio aut, rerum contractiones et expansiones ad hoc principium reduci, aut accommodari posse videntur. Epicuri autem opinio de declinatione atomi et agitatione fortuita, ad nugas rursus et ignorationem rei lapsa est. Itaque nimio plus quam optarem, illud apparet, istum Cupidinem nocte involvi. Itaque de attributis videamus. Elegantissime describitur Cupido infans, pusillus et perpetuus; composita enim grandiora sunt et ætatem patiuntur; prima autem rerum semina, sive atomi, minuta sunt, et in perpetua infantia permanent. Etiam illud verissime, quod nudus; cum composita universa recte cogitanti personata et induta sint; nihilque proprie nudum sit præter primas rerum particulas. Illa autem de cæcitate Cupidinis sapientissima allegoria est. Iste enim Cupido (qualiscunque is sit) minimum videtur habere providentiæ; sed secundum illud, quod proximum sentit, gressum et motum suum dirigere; ut cæci palpando solent; quo magis admirabilis est providentia illa summa divina, quia ex rebus providentia maxime vacuis et expertibus et quasi cæcis, certa tamen et fatali lege, istum ordinem et pulchritudinem rerum educit. Ultimum attributum ponitur, quod sagittarius sit, hoc est, quod ista virtus talis sit, ut operetur ad distans. Quod enim ad distans operatur, tanquam sagittam emittere videtur: quisquis autem atomum asserit, atque vacuum (licet istud vacuum intermixtum ponat, non segregatum) necessario virtutem atomi ad distans introducit: neque enim, hac dempta, aliquis motus (propter vacuum interpositum) excitari posset, sed omnia torperent et immobilia manerent. Quod autem ad juniorem illum Cupidinem attinet, merito ut minimus deorum natu traditur, cum non ante species constitutas vigere potuisset. In illius autem descriptione allegoria ad mores deflectit et traducitur. Subest tamen quædam ejus cum illo antiquo conformitas. Venus enim generaliter affectum conjunctionis et procreationis excitat; Cupido ejus filius affectum ad individuum applicat. Itaque a Venere est generalis dispositio, a Cupidine magis exacta sympathia: atque illa a causis magis propinquis pendet; hæc autem a principiis magis altis et fatalibus, et tanquam ab antiquo illo Cupidine, a quo omnis exquisita sympathia pendet.

#### XVIII. DIOMEDES, SIVE ZELUS.

DIOMEDES cum magna et eximia gloria floreret et Palladi percarus esset, exstimulatus ab ea est, (et ipse promptior quam oportebat,) ut si forte Veneri in pugna occurreret, illi neutiquam parceret; quod et ille audacter exsecutus est, et Veneris dextram vulneravit. Hoc facinus ille ad tempus impune tulit, et rebus gestis clarus et inclutus in patriam rediit; ubi domestica mala expertus, ad externos in Italiam profugit. Ibi quoque initia satis prospera habuit, et regis Dauni hospitio, et donis cultus et ornatus est, et multæ illi statuæ per eam regionem constructæ. Sed sub primam calamitatem, quæ populum, ad quem diverterat, afflixit, statim subiit Daudum cogitatio, se intra penates suos duxisse hominem impium, et diis invisum, et theomachum, qui deam, quam vel tangere religio erat, ferro invaserat et violaverat. Itaque ut patriam suam piaculo

obstrictam liberaret, nihil hospitii jura reveritus, cum ei jus religionis videretur antiquius, Diomedem subito obruncat; statuas et honores ejus prosterni et aboleri jubet. Neque hujusmodi gravem casum vel miserari tutum erat; sed et ipsi comites ejus, cum mortem ducis sui lugerent, et questibus omnia implerent, in aves quasdam ex genere olorum mutati sunt, qui et ipsi sub mortem suam quiddam dulces et lugubres sonant.

Habet hæc fabula subjectum rarum et fere singulare. Neque enim memoriæ proditum est in aliqua alia fabula, heroem ullum præter unum Diomedem ferro violasse aliquem ex diis. Atque certe videtur fabula imaginem in illo depinxisse hominis et fortunæ ejus, qui ex professo hunc finem actionum suarum sibi proponit et destinat, ut cultum aliquem divinum, sive sectam religionis, licet vanam et levem, vi et ferro insectetur et debellet. Quanquam enim cruenta religionis dissidia veteribus incognita essent, (cum dii ethnici zelotypia, quod est Dei veri attributum, non tangerentur,) tamen tanta et tam lata videtur fuisse priusculi sapientia, ut quæ experiundo non nosset, tamen meditatione et simulacris comprehenderent. Qui itaque sectam aliquam religionis, licet vanam et corruptam, et infamem, (id quod sub persona Veneris significatur,) non vi rationis et doctrinæ, et sanctitate vitæ, atque exemplorum et auctoritatum pondere, corrigere et convincere; sed ferro et flamma, et pœnarum acerbitate excindere, et exterminare nituntur: incenduntur fortasse ad hoc ipsum a Pallade; id est, prudentia quadam acri et judicii severitate, quarum vigore et efficacia hujusmodi errorum fallacias et commenta penitus introspiciunt: et ab odio pravitatis et zelo bono; et ad tempus fere magnam gloriam adipiscuntur, atque a vulgo, (cui nihil moderatum, gratum esse potest,) ut unici veritatis et religionis vindices, (cum cæteri tepidi videantur et meticulosi,) celebrantur et fere adorantur. Attamen hæc gloria et felicitas raro ad exitum durat: sed omnis fere violentia, nisi morte celeri vicissitudines rerum effugiat, sub finem improspera est. Quod si eveniat ut rerum commutatio fiat, et secta illa proscripita et depressa vires acquirat et insurgat, tum vero hujusmodi hominum zeli et contentiones damnantur, et nomen ipsum odio est, et omnes honores eorum in opprobrium desinunt. Quod autem ab hospite interfectus est Diomedes; id eo spectat, quod religionis dissidium, etiam inter conjunctissimos, insidias et prodiones excitet. Illud vero de luctu ipso, et querimoniis minime toleratis, sed supplicio affectis, hujusmodi est, ut moneat, in omni fere scelere miserationi hominum locum esse, ut etiam qui crimina oderunt, personas tamen et calamitates reorum, humanitatis causa, commiserentur; extremum autem malorum esse, si misericordiæ commercia interdicanter. Atque tamen in causa religionis et impietatis, etiam miserationes hominum notari et suspectas esse. Contra vero comitum Diomedis, id est, hominum, qui ejusdem sunt sectæ et opinionis, querimoniæ et deplorationes arguunt admodum et canores esse solent, instar olorum, aut avium Diomedis; in quo etiam illa pars allegoriæ nobilis est et insignis; eorum, qui propter causam religionis supplicia subeunt, voces sub tempore mortis, tanquam

cycneas cantiones, animos hominum mirum in modum fleetere, et in memoriis et sensibus eorum diutissime inhærere et permanere.

XIX. DÆDALUS, SIVE MECHANICUS.

SAPIENTIAM atque industriam mechanicam, atque in illa artificia illicita, et ad pravos usus detorta, antiqui adumbraverunt sub persona Dædali, viri ingeniosissimi, sed execrabilis: hic ob condiscipulum et æmulum occisum exulaverat, gratus tamen in exilio regibus et civitatibus erat, atque multa quidem et egregia opera tam in honorem deorum, quam ad exornationem et magnificentiam urbium et locorum publicorum extruxerat et effinxerat; sed tamen nomen ejus maxime celebratur ob illicita. Fabricam enim libidini Pasiphaës subministravit, ut cum Tauro misceretur; adeo ut ab hujus viri scelerata industria et ingenio pernicioso monstrum illud Minotaurus, pubem ingenuam devorans, ortum traxerit infelicem ac infamem. Atque ille malum malo tegens et cumulans, ad securitatem hujus pestis labyrinthum excogitavit et extruxit: opus fine et detestatione nefarium, artificio insigne et præclarum: ac postea rursus, ne malis artibus tantum innotesceret; atque ut scelerum remedia (non solum instrumenta) ab eodem peterentur; etiam consilii ingeniosi auctor erat de filo, per quod errores labyrinthi retexerentur. Hunc Dædalum Minos magna cum severitate atque diligentia et inquisitione persecutus est; ille tamen semper et perfugia et effugia reperiebat. Postremo cum volandi peritiam filium Icarum edocuiasset, ille novitius, et artem ostentans, a cælo in aquam decidit.

Parabola videtur esse ejusmodi. In ipso introitu ejus ea, quæ apud excellentes artifices excubat, et miris modis dominatur, invidia notatur; nullum enim genus hominum ex invidia, eaque acerba, et tanquam interneciva, magis laborat. Accedit nota de genere pœnæ infictio minus politice et provide: ut Dædalus exulet. Etenim opifices præclari id habent, ut apud omnes fere populos sint acceptissimi: adeo ut exilium præstanti artifice vix supplicii loco sit. Nam aliæ vitæ conditiones et genera extra patriam non facile florere possunt. Artificum autem admiratio propagatur et augetur apud externos et perigrinos, cum insitum animis hominum sit illud, ut populares suos, quoad opificia mechanica, in minori pretio habeant. De usu autem artium mechanicarum, quæ sequuntur, manifesta sunt; multum enim illis debet vita humana, cum plurima et ad religionis apparatus, et ad civilium decus, et ad universæ vitæ culturam, ex illarum thesauris collata sint: veruntamen ex eodem fonte emanant instrumenta libidinis, atque etiam instrumenta mortis. Missa enim arte lenonum, venena quæsitissima, atque tormenta bellica, atque hujusmodi pestes, (quæ mechanicis inventis debentur,) probe novimus, quantum Minotaurum ipsum sævitia et pernicie superarint. Pulcherrima autem allegoria est de labyrintho, qua natura generalis mechanicæ adumbratur. Omnia enim mechanica, quæ magis sunt ingeniosa et accurata, instar labyrinthi censi possunt; propter subtilitatem, et variam implicationem, et obviam similitudinem, quæ vix ullo iudicio, sed tantum ex-

perientiæ filo regi et discriminari possunt. Nec minus apte adjicitur, quod idem ille, qui labyrinthi errores invenit, etiam fili commoditatem monstravit; sunt enim artes mechanicæ, veluti usus ambiguus, atque faciunt et ad nocumentum, et ad remedium, et fere virtus earum seipsam solvit et retexit. Artificia autem illicita, atque adeo artes ipsas sæpius persequitur Minos; hoc est, leges, quæ illas damnant et earum usum populis interdiciunt. Nihilominus illæ occultantur et retinentur, et ubique et latebras et receptum habent; quod et bene notatum est in re non multum dissimili a Tacito suis temporibus, de mathematicis et genethliacis, "genus" (inquit) "hominum, quod in civitate nostra semper et retinebitur et vetabitur." Et tamen artes illicitæ et curiosæ cujuscunque generis tractu temporis, cum fere quæ polliceantur non præstant, (tanquam Icarum de cælo,) de existimatione sua decidunt et in contemptum veniunt, et nimia ipsa ostentatione pereunt. Et certe si verum omnino dicendum est, non tam feliciter legum frænibus coërentur, quam coarguuntur ex vanitate propria.

XX. ERICHTHONIUS, SIVE IMPOSTURA.

FABULANTUR poëtæ Vulcanum pudicitiam Minervæ sollicitasse, atque subinde cupidine incensum, vim adhibuisse, atque in ipsa lucta semen in terram effudisse, ex quo Erichthonium natum esse, qui (partes superiores) decora et grata erat corporis compage, femora autem et tibiæ suberant in anguillæ similitudinem, exilia et deformia: cujus deformitatis cum ipse sibi conscius esset, eum primum currum usum invenisse, ut quod in corpore magnificum erat, ostentaret, probrum autem tegeret.

Hujus fabulæ miræ et prodigiôsæ ea sententia esse videtur: artem, quæ sub persona Vulcani ob multiplicem ignis usum representatur, quoties per corporum omnimodas vexationes, naturæ vim facere, eamque vincere ac subigere contendat, (natura autem sub persona Minervæ, ob operum solertiam adumbratur,) ad votum et finem destinatum raro pertinere; sed tamen multa machinatione et molitione (tanquam lucta) intercidere atque emitti generationes imperfectas, et operæ quædam manca, aspectu speciosa, usu infirma et claudicantia; quæ tamen impostores multo et fallaci apparatu ostentant, et veluti triumphantes circumducunt. Qualia fere et inter productiones chemicas, et inter subtilitates et novitates mechanicas sæpius notare licet; præsertim cum homines potius propositum urgentes, quam ab erroribus suis se recipientes, cum natura colluctentur magis quam debito obsequio et cultu ejus amplexus petant.

XXI. DEUCALION, SIVE RESTITUTIO.

NARRANT poëtæ, extinctis prorsus prisca orbis incolis per diluvium universale, cum soli restarent Deucalion et Pyrrha, qui ardebant desiderio pio et inclyto instaurandi generis humani, eos hujusmodi oraculum excepisse: voti compotes futuros, si ossa matris acciperent et post se jacerent; quod illis primo magnam tristitiam et desperationem incussit: cum, æquata rerum facie per diluvium, sepulchri perscrutatio omnino res sine exitu esset: sed tandem

intellexerunt lapides terræ (cum tellus omnium mater habeatur) ab oraculo significari.

Fabula arcanum naturæ recludere videtur, et errorem animo humano familiarem corrigere; hominis enim imperitia iudicat rerum renovationes sive instaurationes, ex earundem putredine et reliquiis (ut Phœnicem ex cinere propria) suscitari posse, quod nullo modo convenit, cum hujusmodi materiæ spatia sua confecerint, et ad initia ipsarum rerum prorsus ineptæ sint. Itaque retrocedendum ad principia magis communia.

#### XXII. NEMESIS, SIVE VICES RERUM.

NEMESIS traditur fuisse dea, omnibus veneranda, potentibus et fortunatis etiam metuenda. Ea Noctis et Oceani filia fuisse perhibetur. Effigies autem ejus describitur talis. Alata erat, etiam coronata; in manibus autem gestabat dextra hastam e fraxino, sinistra phialam, in qua inclusi erant Æthiopes: insidebat autem cervo.

Parabola ejusmodi esse videtur; nomen ipsum Nemesis vindictam, sive retributionem satis aperte significat: hujus enim deæ officium, et administratio in hoc sita erat, ut beatorum constanti et perpetuæ felicitati, instar tribuni plebis, intercederet, ac illud suum *Voto* interponeret: neque solum insolentiam castigaret, verum etiam rebus prosperis, licet innocentibus et moderatis, rerum adversarum vices rependeret; ac si neminem humanæ sortis ad convivia deorum admitti mos esset, nisi ad ludibrium: eodem cum illud capitulum apud C. Plinium perlego, in quo ille infortunia et miseria Augusti Cæsaris collegit, quem omnium hominum fortunatissimum existimabam, quique artem etiam quandam utendi et fructu fortuna habebat, ac cujus in animo nil tumidum, nil leve, nil molle, nil confusum, nil melancholicum, annotare licet, (ut ille etiam sponte mori aliquando destinasset,) hanc deam magnam et præpotentem esse judicavi, ad cujus aram talis victima tracta esset. Parentes hujus deæ fuere Oceanus et Nox; hoc est, rerum vicissitudo, et iudicium divinum obscurum et secretum; etenim vices rerum per oceanum apte repræsentantur, ob perpetuum fluxum et refluxum: occulta autem providentia, per noctem rite proponitur. Nam etiam apud ethnicos nocturna illa Nemesis, cum scilicet iudicium humanum a divino discors esset, in observatione erat.

“—Cedit et Ripheus, justissimis unus  
Qui fuit ex Teucris, et servantissimus æqui.  
Diis aliter visum.”

Æn. ii. 427.

Alata autem describitur Nemesis, ob subitas rerum conversiones, nec ante prævisas; nam in omni rerum memoria illud fere usuevit, ut homines magni et prudentes per ea discrimina perierint, quæ maxime contempserint. Certe, cum M. Cicero, a Decimo Bruto, de Octavii Cæsaris minus sincera fide et animo exulcerato monitus esset; illud tantum respicit: “Te autem, mi Brute, sicut debeo, amo, quod istud, quicquid est, nugarum me scire voluisti.” Etiam corona Nemesis insigniter, ob naturam vulgi invidam et malignam: quando enim fortunati et potentes ruunt, tum fere vulgus exultat, et Nemesin

coronat. Hasta autem in dextra ad eos pertinet, quos Nemesis acta percudit et transfigit. Quos autem calamitate et infortunio non mactat, illis tamen spectrum illud atrum et infaustum in sinistra ostentat: observantur enim proculdubio mortalibus, etiam in summo fastigio felicitatis positis, mora, et morbi, et infortunio, et amicorum perfidiæ, et inimicorum insidiæ, et rerum mutationes, et hujusmodi; veluti Æthiopes illi in phiala: certe Virgilius, cum prælium Actiacum describit, de Cleopatra illud eleganter subjungit:

“Regina in mediis, patrio vocat agmina sistro;  
Necum etiam geminos a tergo respicit angues.”  
Æn. viii. 696.

Verum non multo post, quocumque se illa verteret, tota agmina Æthiopum obversabantur. Ad extremum prudentur additur, Nemesin cervo insidere, quia vivax admodum animal est cervus; atque fieri fortasse potest, ut qui juvenis fato ereptus sit, Nemesin prævertat et effugiat; cui autem diuturna obvenit felicitas et potentia, is proculdubio Nemesi subjicitur, ac veluti substernitur.

#### XXIII. ACHELOUS, SIVE PRÆLIUM.

NARRANT antiqui, cum Hercules et Achelous de nuptiis Dejaniræ contenderent, rem ad certamen deductam esse. Achelous autem, cum varias et multiplices formas tentasset, (nam hoc ei facere licebat,) tandem Herculi sub forma tauri torvi et frementis occurrit, et ad pugnam separavit: Hercules vero, solitam retinens figuram humanam, in eum impetum fecit; res cominus gesta est: eventus autem talis fuit, ut Hercules alterum ex cornibus tauro fregerit: ille majorem in modum dolens et perterritus, ut cornu illud suum redimeret, permutatione facta, cornu Amalthææ sive copię Herculi largitus est.

Fabula ad belli expeditiones pertinet; apparatus enim belli ex parte defensiva (qui per Acheloum proponitur) varius admodum et multiformis est. Nam invadentis species unica est et simplex, cum ex exercitu solo aut classe fortasse constet: regio autem, quæ in solo proprio hostem expectat, infinita molitur, oppida munit, diruit, plebem ex agris et villis in urbes et castella cogit, pontes exstruit, prosperit, copias et commeatu comparat, distribuit, in fluviis, portibus, collium faucibus, sylvis, et aliis rebus innumeris occupata est, ut novas rerum facies quotidie induat et experiatur; ac tandem cum abunde munita et instructa fuerit, tauri pugnacis formam et minas ad vivum repræsentet. Ille autem qui invadit, prælium captat, et in hoc maxime incumbit, inopiam in terra hostili metuens: quod si fiat ut, prælio commisso, acie victor sit, et tanquam cornu hosti frangat; tum proculdubio illud assequitur, ut hostis trepidus et existimatione diminutus, ut se explicet, et vires suas reparat, in munitiora se recipiat; atque urbes et regiones victori ad populandum et diripiendum relinquat; quod vere instar cornu illius Amalthææ censeri possit.

#### XXIV. DIONYSUS, SIVE CUPIDITAS.

NARRANT \* Semelen Jovis pellicem, postquam

\* Fabula hæc invenitur, in libro secundo “De Augmentis Scientiarum,” aucta et locupletata.

juramento eum inviolabili ad votum indefinitum obstrinxisset; petiisse ut ad amplexus suos accederet talis, qualis cum Junone consuesset: itaque illa ex conflagratione periit. Infans autem quem in utero gestabat, a patre exceptus, in femur ejus insutus est, donec menses fœtui destinatos completeret; ex quo tamen onere Jupiter nonnihil claudicabat: itaque puer, quod Jovem, dum in femore ejus portaretur, gravaret et pungeret, Dionysi nomen accepit. Postquam autem editus esset, apud Proserpinam per aliquot annos nutritus est; cum vero adultus esset, ore fere muliebri conspiciebatur, ut sexus videretur tanquam ambigui: etiam exstinctus et sepultus erat ad tempus, et non ita multo post revixit. Atque prima juvena vitis culturam, atque adeo vini confectionem et usum primus invenit et edocuit; ex quo celebris factus et inclutus, orbem terrarum subjugavit et ad ultimos Indorum terminos perrexit: curru autem vehebatur a tigribus tracto: circa eum subsultabant dæmones deformes, Cobali vocati, Acratus, et alii: quin et Musæ comitatu ejus se addebant. Uxorem autem sibi sumpsit Ariadnen a Theseo desertam et relictam. Arbor ei sacra erat hedera. Etiam sacerorum et ceremoniarum inventor et institutor habebatur, ejus tamen generis quæ et fanaticæ erant et plenæ corruptelarum, atque insuper crudeles. Furores quoque immittendi potestatem habebat. Certe in orgiis ejus a mulieribus furore percitis duo viri insignes discerpti narrantur, Pentheus et Orpheus; ille dum, arbore conscensa, spectator eorum quæ agerentur esse voluisset; hic cum lyram pulsaret. Atque hujus Dei res gestæ cum Jovis rebus fere confunduntur.

Fabula videtur ad mores pertinere, ut nihil in philosophia morali melius inveniatur. Describitur autem sub persona Bacchi natura cupiditatis, sive affectus et perturbationis. Mater enim cupiditatis omnis, licet nocentissimæ, non alia est, quam appetitus et desiderium boni apparentis: concipitur vero semper cupiditas in voto illicito prius temere concesso, quam intellectu et judicato. Postquam autem affectus effervescente cœperit, mater ejus (natura scilicet boni) ex nimio incendio destruit et perit: cupiditas autem, dum immatura est in anima humana (quæ ejus genitor est, et per Jovem repræsentatur) et nutricatur et occultatur, præcipue in animæ parte inferiore tanquam femore; atque animum pungit et convellit et deprimit; adeo ut decreta et actiones ex ea impediuntur et claudicent. Atque etiam postquam consensu et habitu confirmata est, et in actus erumpit, tamen apud Proserpinam ad tempus educatur; id est, latebras quærit, atque clandestina est et quasi subterranea, donec, remotis pudoris et metus frænis, et coalita audacia, aut virtutis alicujus prætextum sumit, aut infamiam ipsam contemnit. Atque illud verissimum est, omnem affectum vehementiorem tanquam ambigui sexus esse. Habet enim impetum virilem, impotentiam autem muliebrem. Etiam illud præclare, Bacchum mortuum reviviscere. Videntur enim affectus quandoque sopiti atque extincti, sed nulla fides habenda est eis, ne sepultis quidem; siquidem præbita materia et occasione resurgunt.

Atque de inventione vitis parabola prudens est:

omnis enim affectus ingeniosus est et sagax ad investigandum fomites suos; ante omnia autem, quæ hominibus innotuere, vinum ad perturbationes cujuscunque generis excitandas et inflammandas potentissimum est et maxime efficax; atque est eis instar fomitis communis. Elegantissime autem ponitur affectus provinciarum subjigator, et expeditionis infinitæ susceptor. Nunquam enim partis acquiescit, sed appetitu infinito neque satiabili ad ulteriora tendit et novis inhiat. Etiam tigres apud affectus stabulant et ad currum jugantur; postquam enim affectus aliquis curulis esse cœpit, non pedestris, et victor rationis et triumphator, in omnia, quæ adversantur aut se opponunt, crudelis est et indomitus et immitis. Facetum autem est, quod circa currum subsultant illi dæmones ridiculi. Omnis enim affectus progignit motus in oculis, et ore ipso et gestu, indecoros et inconditos, subsultorios et deformes, adeo ut qui sibi in aliquo affectu, veluti ira, insultatione, amore, videatur magnificus et tumidus, aliis tamen sit turpis et ridiculus. Conspiciuntur etiam in affectu comitatu Musæ. Neque enim reperitur ullus fere affectus, cui non blandiatur aliqua doctrina. Hac enim in re ingeniorum indulgentia Musarum majestatem minuit, ut, cum duces vitæ esse debeant, sint affectuum pedisequæ.

Atque imprimis nobilis est illa allegoria, Bacchum amores suos in eam effudisse, quæ ab alio relictæ erat. Certissimum enim est, affectum id petere et ambire, quod experientia repudiavit. Atque norint omnes, qui, affectibus suis servientes et indulgentes, pretium potiundi in immensum augent, sive honores appetant, sive fortunas, sive amores, sive gloriam, sive scientiam, sive alia quæcunque, se res relictas petere, et a compluribus per omnia fere secula post experimentum dimissas et fastiditas. Neque mysterio caret, quod hedera Baccho sacra fuerit. Hoc enim duplici modo convenit. Primum, quod hedera hieme virescat; deinde, quod circa tot res, arborea, parietes, ædificia serpat, ac circumfundatur, ac se attollat. Quod ad primum enim attinet, omnis affectus, per renitentiam et vetitum, et tanquam antiperistasin, (veluti per frigus brumæ hedera,) virescit et vigorem acquirit. Secundo affectus prædominans omnes humanas actiones, et omnia humana decreta, tanquam hedera, circumfunditur, atque iis se addit et adjungit et immiscet. Neque mirum est si superstitiosi ritus Baccho attribuantur, cum omnis fere malesanus affectus in pravis religionibus luxurietur: aut si furores ab eo immitti putentur; cum omnis affectus et ipse furor brevis sit, et, si vehementius obsideat et incumbat, in insaniam terminetur. Illud autem de Pentheo et Orpheo laceratis evidentem habet parabolam; cum affectus prævalidus, et inquisitioni curiosæ et admonitioni salutari et liberæ asperrimus atque insensissimus sit. Postremo illa confusio personarum Jovis et Bacchi ad parabolam recte traduci potest; quandoquidem res gestæ nobiles et claræ, et merita insignia et gloriosa, interdum a virtute et recta ratione et magnanimitate, interdum a latente affectu, et occulta cupiditate (utcunque famæ et laudis celebritate efferantur) proveniant: ut non facile sit distinguere facta Bacchi a factis Jovis.

## XXV. ATALANTA, SIVE LUCRUM.

ATALANTA cum velocitate excelleret, de victoria cursus cum Hippomene certamen iniit. Conditiones certaminis erant; victori Hippomeni conjugium Atalantæ, mors victo. Neque dubia victoria videbatur, cum Atalantæ insuperabilis in cursu præstantia multorum exitio insignita fuisset. Itaque Hippomenes ad dolos animum adjecit. Paravit autem tria mala aurea, eaque secum portavit. Res geri cœpit; præcurrit Atalanta; ille, cum se a tergo relictum cerneret, artis non immemor, ex malis aureis unum ante conspectum Atalantæ projecit; non recta quidem, sed ex transverso, ut illam et moraretur, atque insuper de via deduceret; illa, cupiditate muliebri, et mali pulchritudine illecta, omisso stadio, post malum cucurrit, et ad illud tollendum se submisit. Hippomenes interim spatium stadii non parvum confecit, eamque post se reliquit. Illa tamen rursus naturali pernicitate jacturam temporis resarcivit, atque iterum emicuit: sed cum Hippomenes secundo et tertio hujusmodi moras ei injecisset, tandem victor astutia, non virtute evasit.

Fabula videtur allegoriam insignem proponere de certamine artis cum natura. Ars enim, per Atalantam significata, virtute propria, si nihil obstet et impediatur, longe natura velocior est, et veluti cursus citatoris; et celerius ad metam pervenit. Hoc enim in omnibus fere effectis patet; cernas fructus ex nucleis tarde, ex insitione celeriter provenire; cernas lutum in generatione lapidum tarde, in torrefactione laterum cito durescere: etiam in moralibus, dolorum oblivionem et solatia diuturnitas temporis, quasi ex beneficio naturæ, inducit; philosophia autem (quæ veluti ars vivendi est) diem non exspectat, sed præstat et representat. Verum istam artis prærogativam et vigorem, infinito rerum humanarum detrimento, mala aurea retardant. Neque reperitur ex scientiis aut artibus aliqua, quæ cursum suum verum et legitimum ad finem suum, tanquam ad metam constanter produxerit; sed perpetuo artes incepta præcidunt, et stadium deserunt, et ad lucrum et commodum declinant, instar Atalantæ.

“Declinat cursus, aurumque volubile tollit.”

Itaque mirum minime est, si arti non datum sit naturam vincere, et victam ex pacto illo et lege certaminis perimere aut destruere; sed contrarium eveniat, ut ars in naturæ potestate sit, atque veluti nupta mulier conjugii pareat.

## XXVI. PROMETHEUS, SIVE STATUS HOMINIS.

TRADUNT antiqui hominem fuisse opus Promethei, atque ex luto factum, nisi quod Prometheus particulas ex diversis animalibus massæ admiscuerit. Ille autem cum opus suum beneficio suo tueri vellet, neque conditor solum generis humani videri, verum etiam amplificator, ad cælum ascendit furtim, fascies secum portans ex ferula, quibus ad currum solis admodis et accensis, ignem ad terram detulit, atque cum hominibus communicavit. Ob tantum Promethei meritum memorant homines parum gratos fuisse. Quinetiam, conspiratione facta, et Prometheus et inventum ejus apud Jovem accusarunt. Ea res non

perinde accepta, atque æquum videri possit. Nam ipsa accusatio Jovi et superis admodum cordi fuit. Itaque delectati non solum ignis usum hominibus indulserunt, verum et novum munus, omnium maxime amabile et optabile (perpetuam nimirum juventam) hominibus donarunt: illi, gestientes et inepti, donum deorum asello imposuerunt. Inter redeundum autem laborabat asellus siti gravi et vehementi; cumque ad fontem quandam pervenisset, serpens fonti custos additus, eum a potu prohibuit, nisi illud, quodcunque esset, quod in dorso portaret, pacisci vellet: asellus miser conditionem accepit, atque hoc modo instauratio juventutis, in pretium haustus passillæ aquæ, ab hominibus ad serpentes transmissa est. Verum Prometheus, a malitia sua non abscedens, atque hominibus, post præmium illud eorum frustratum, reconciliatus, animo vero erga Jovem exulcerato, dolos etiam ad sacrificium adhibere veritus non est. Atque duos aliquando tauros Jovi dicitur immolasse, ita tamen ut in alterius pelle carnes et adipem amborum incluserit, alteram pellem ossibus tantummodo suffarcinavit; atque deinde religiosus scilicet et benignus Jovi optionem concessit. Jupiter, vafritiem et malam fidem ejus detestatus, sed nactus occasionem ultionis, ludibrium illud tauri elegit, atque ad vindictam conversus, cum se insolentiam Promethei reprimere non posse animadverteret, nisi hominum genus (quo opere ille immensum turgebat et efferebatur) afflixisset, Vulcano imperavit, ut fœminam componeret pulchram et venustam, cui etiam dii singuli dotes suas impertierunt, quæ idcirco Pandora vocata est. Huic fœminæ inter manus vasculum elegans posuerunt, in quo omnia mala et ærumnas incluserant; subsidebat autem in imo vase Spes. Illa cum vasculo suo ad Prometheus primo se contulit; eum captans, si forte ille vas accipere vellet et aperire: quod ille cautus et astutus rejecit. Itaque ad Epimetheum Promethei fratrem (sed diversæ admodum indolis) spreto deflexit. Ille, nihil cunctatus, vas temere aperuit; cumque mala illa omnigena evolare cerneret, sero sapiens, magna contentione et festinatione vasi operculum suum rursus indere conatus est, vix tamen ultimam et in fundo residentem Spem servare potuit. Postremo Prometheo Jupiter plurima et gravia impetans, quod ignis olim furtum fecisset, quod Jovis majestatem in sacrificio illo doloso ludibrio habuisset; quod donum ejus aspernatus esset, novo etiam addito crimine, quod Palladem vitare tentasset, eum in vincula conjecit, et ad perpetuos cruciatus damnavit. Erat enim jussu Jovis adductus ad montem Caucasum, atque ibi columnæ alligatus, ut nullo pacto se movere posset: aderat autem aquila, quæ jecur ejus interdiu rostro tundeat atque consumeat, noctu autem quantum comesum erat, renascebatur; ut nunquam doloris materia deficeret. Memorant tamen hoc supplicium aliquando finem habuisse: Hercules enim in poculo, quod a sole acceperat, navigato oceano, ad Caucasum pervenit, atque Prometheus liberavit, aquila sagittis confixa. Instituta autem sunt, in honorem Promethei, apud nonnullos populos, lampadiferorum certamina, in quibus decurrentes accensas faces ferebant, quas si exstingui contigisset, victoriam sequentibus cedebant et se subdu-

cebant, atque is demum palmam accepit, qui primus facem accensam ad metam usque detulisset.

Fabula contemplationes plurimas veras atque graves, et præ se fert, et premit. Nonnulla enim in ea jampridem recte notata, alia plane intacta sunt. Prometheus providentiam liquido et diserte significat: atque in rerum universitate sola desumpta et delecta est ab antiquis hominis fabrica et constitutio, quæ providentiæ attribuitur tanquam opus proprium. Hujus rei non solum illud in causa esse videtur, quod hominis natura mentem suscipit, atque intellectum providentiæ sedem; atque durum quodammodo videtur et incredibile ex principiis brutis et surdis excitare, et educere rationem et mentem, ut fere necessario concludatur providentia animæ humanæ indita esse, non sine exemplari, et intentione, et auctoramento providentiæ majoris: verum et hoc præcipue proponitur, quod homo veluti centrum mundi sit, quatenus ad causas finales; adeo ut, sublato e rebus homine, reliqua vagari sine proposito videantur et fluctuari, atque, quod aiunt, scopæ dissolutæ esse, nec finem petere. Omnia enim subserviunt homini, isque usum et fructum ex singulis elicit et capit. Etenim astrorum conversiones, et periodi, et ad distinctiones temporum, et ad plagarum mundi distributionem faciunt. Et meteora ad præægia tempestatum, et venti tum ad navigandum, tum ad molas, et machinas: et plantæ atque animalia cujuscumque generis, aut ad domicilia hominis et latebras, aut ad vestes, aut ad victum, aut ad medicinam, aut ad levandos labores, aut denique ad delectationem et solatium referuntur: adeo ut omnia prorsus non suam rem agere videantur, sed hominis. Neque temere additum est, in massa illa et plasmate particulas ex diversis animantibus desumptas, atque cum luto illo temperatas et confusas fuisse; quia verissimum est, omnium rerum, quas universum complectitur, hominem rem maxime compositam esse et decompositam, ut non immerito ab antiquis mundus minor vocatus sit. Quamvis enim verbi microcosmi elegantiam chemici nimis putide et ad literam acceperint et detorserint, dum in homine omnem mineram, omne vegetabile, et reliqua, aut aliquid eis proportionatum, subesse volunt; manet tamen illud solidum et sanum quod diximus, corpus hominis omnium entium et maxime mixtum, et maxime organicum reperiri, quo magis admirandas virtutes et facultates suscipit, et nanciscitur: simplicium enim corporum vires paucae sunt, licet certæ et rapidæ, quia minime per misturam refractæ, et comminutæ, et libratæ existunt: virtutis autem copia et excellentia in mistura et compositione habitat. Atque nihilominus homo in originibus suis videtur esse res inermis et nuda, et tarda in juvamentum sui, denique quæ plurimis rebus indigeat. Itaque festinavit Prometheus ad inventionem ignis, qui omnibus fere humanis necessitatibus et usibus suppeditat et ministrat levamenta et auxilia: ut si forma formarum anima, si instrumentum instrumentorum manus, etiam auxilium auxiliorum sive opis opum ignis dici mereatur. Hinc enim operationes quamplurimæ; hinc artes mechanicæ; hinc scientiæ ipsæ infinitis modis adjuvantur. Modus autem furti ignis apte describitur, atque ex natura rei. Is fuisse per-

hibetur per virgam ex ferula ad currum solis admotam. Ferula enim ad percussionem et plagas adhibetur, ut luculenter significetur, ignis generationem per corporum violentas percussiones et collisiones fieri, ex quibus attenuantur materiæ, et in motu ponuntur, et ad calorem cœlestium suscipiendum præparantur, ignemque, veluti ex curru solis, modis clandestinis, ac quasi furtim decerpunt et rapiunt. Sequitur parabolæ pars insignis. Homines, loco gratulationis et gratiarum actionis, ad indignationem et expostulationem versos esse, atque accusationem et Promethei et ignis apud Jovem instituisse; eamque rem Jovi acceptissimam fuisse, adeo ut hominum commoda ob hoc nova munificentia cumulaverit. Quorsum enim ista criminis ingrati erga auctorem suum animi (quod vitium omnia fere complectitur) approbatio et remuneratio? Res alio spectare videtur. Hoc enim vult allegoria; incusationem et naturæ suæ, et artis, per homines factam, ex optimo mentis statu proficisci, atque in bonum cedere; contrarium diis invisum et infaustum esse. Qui enim naturam humanam vel artes receptas in immensum extollunt, et effusi sunt in admirationem earum rerum, quas habent et possident, et scientias, quas profitentur aut colunt, perfectas prorsus censi volunt, illi primo adversus divinam naturam minus reverentes sunt, cujus perfectioni sua fere æquiparant; deinde iidem erga homines magis sunt infructuosi, cum se ad fastigium rerum jam pervenisse putent, et tanquam perfuncti ulteriora non quærant. Contra qui naturam et artes deferunt, et accusant, et querimoniarum pleni sunt, illi vere et magis modestum animi sensum retinent, et perpetuo ad novam industriam, et nova inventa extimulantur. Quo mihi magis mirari libet hominum inscitiam et malum genium, qui, paucorum arrogantis servuli, istam peripateticorum philosophiam, portionem Græcæ sapientiæ, nec eam magnam, in tanta veneratione habent, ut omnem ejus incusationem non solum inutilem, sed suspectam et fere periculosam reddiderint. Atque magis probandus est et Empedocles, qui tanquam furens, et Democritus, qui magna cum verecundia, queruntur, omnia abstrusa esse, nihil nos scire, nil cernere, veritatem in profundis puteis immersam, veris falsa miris modis adjuncta atque intorta esse (nam academia nova modum prorsus excessit) quam Aristotelis schola fidens et pronunciatrice. Itaque monendi sunt homines, delationem naturæ et artis diis cordi esse, et novas elemosynas, et donaria a divina benignitate impetrare; et incusationem Promethei, licet auctoris et magistri, eamque acrem et vehementem, magis sanam et utilem, quam gratulationem effusam, esse; denique opinionem copiæ inter maximas causas inopiæ reponi. Quod vero attinet ad doni genus, quod homines in præmium accusationis dicuntur accepisse, (flore juvenutis videlicet non deciduum,) ejusmodi est, ut videantur antiqui de modis et medicinis ad senectutis retardationem et vitæ prolongationem facientibus non desperasse; sed illa utique numerasse potius inter ea, quæ per hominum inertiam et incuriam, licet semel accepta, periire aut frustrata sunt; quam inter ea, quæ plane negata et nunquam concessa fuerint. Significant enim et innuunt, ex ignis vero

usu, atque ex artis erroribus bene et strenue accusatis et convictis, munificentiam divinam ad hujusmodi dona hominibus non defuisse; ipsos sibi deesse, cum hoc deorum munus asello imposuerint lento et tardigrado; ea videtur esse experientia, res stupida et plena moræ, ex cujus gradu tardo et testudineo antiqua illa querimonia de vita brevi et arte longa nata est. Atque certe nos in ea sumus opinione, facultates illas duas, dogmaticam et empiricam, adhuc non bene conjunctas et copulatas fuisse, sed nova deorum munera aut philosophiis abstractis, tanquam levi volucris; aut lentæ et tardæ experientiae, tanquam asello, imposita esse: in quo tamen de asello illo non male ominandum est, nisi interveniat illud accidens viæ et sitis. Existimamus enim, si quis experientiae, veluti certa lege et methodo, constanter militet, neque inter viam experientia, quæ vel ad lucrum faciunt, vel ad ostentationem, hauriendi siti corripatur, adeo ut ad ea comparanda onus suum deponat et distrahat; eum munificentiae divinæ auctæ et novæ bajulum non inutilem fore. Quod vero donum illud ad serpentes transierit, ea videtur adjectio ad fabulam ornatus fere gratia, nisi forte illud inseruerint, ut homines pudeat, se cum igne illo suo et tot artibus ea in se transferre non posse, quæ natura ipsa compluribus aliis animalibus largita est. Etiam illa subita hominum cum Prometheo reconciliatio, postquam spe sua decidissent, monitum habet utile et prudens: notat enim hominum levitatem et temeritatem in experimentis novis. Ea enim si statim non succedant et ad vota respondeant, præpropere festinatione homines incepta deserunt, et præcipites ad vetera recurrunt, iisque reconciliantur. Descripto statu hominis quoad artes et intellectualia, parabola transit ad religionem; culturam enim artium cultus divinorum comitatus est; quem statim hypocrisis occupavit et polluit. Itaque sub duplici illo sacrificio eleganter repræsentatur persono vere religiosi et hypocritæ. Alteri enim inest adeptus, Dei nimirum portio, ob inflammationem et suffitum, per quod affectus et zelus, ad gloriam Dei incensus atque alta petens, significatur; insunt viscera charitatis, insunt carnes bonæ et utiles. In altero nihil præter ossa arida et nuda reperiuntur, quæ nihilominus pellem faciunt, et hostiam pulcherrimam, et magnificam imitantur; per quæ recte notantur externi et inanes ritus, et cæremoniæ jejunæ, quibus homines cultum divinum onerant et infant, res ad ostentationem potius compositæ, quam ad pietatem facientes. Neque satis est hominibus hujusmodi ludibria Deo offerre, nisi ea etiam illi imponant et imputent, ac si ipse illa elegerit et præscripserit. Certe propheta sub Dei persona de hac optione expostulat: "Num tandem hoc est illud jejunium, quod elegi, ut homo animam suam in diem unum affligat, et caput instar junci demittat?" Post statum religionis, parabola se vertit ad mores et humanæ vitæ conditiones. Atque pervulgatum est illud, et tamen recte positum, per Pandoram significari voluptatem et libidinem, quæ post vitæ civilis artes, et cultum, et luxum, veluti ex dono ignis, et ipsa incensa est. Itaque Vulcano, qui similiter ignem repræsentat, opificium voluptatis deputatur. Ab illa autem infinita mala et in animos, et in corpora, et

fortunas hominum una cum sera poenitentia fluxerunt; neque tantum in status singulorum, verum etiam in regna et republicas. Ab eodem enim fonte bella, et tumultus, et tyrannides ortum traxere. Verum operæ pretium est animadvertere, quam belle et eleganter fabula duas humanæ vitæ conditiones, et veluti tabulas sive exempla, sub personis Promethei et Epimethei depinxerit. Qui enim sectam Epimethei sequuntur, illi improvidi, neque in longum consulentes; quæ in præsentia suavia sunt, prima habent, atque multis sane propter hoc angustiis, et difficultatibus, et calamitatibus premuntur, et perpetuo fere cum illis conflictantur; interim tamen genium suum placant, atque insuper ob rerum imperitiam multas inanes spes intra animum volvant, quibus tamen, veluti suavibus insomniis, se delectant, atque miserias vitæ suæ condunt. Promethei autem schola, homines nimirum prudentes, et in futurum prospicientes, multa scilicet mala et infortunio caute submovent et rejiciunt; verum cum hoc bono illud conjunctum est, ut multis voluptatibus et varia rerum jucunditate se privent, et genium suum fraudent, atque, quod multo pejus est, curis, et sollicitudine, et timoribus intestinis se crucient et conficiant: alligati enim necessitatis columnæ, innumeris cogitationibus, (quæ, quia volucres admodum sunt, per aquilam significantur,) iisque pungentibus, et jecur mordentibus, et corrodentibus vexantur; nisi forte aliquando, veluti noctu, exiguam quampiam animi remissionem et quietem nanciscantur; ita tamen ut statim subinde redeant novæ anxietates et formidines. Itaque paucis admodum utriusque sortis beneficium contigit, ut providentiæ commoda retinuerint, sollicitudinis et perturbationis malis se liberarint: neque id quisquam assequi potest, nisi per Herculem, id est, fortitudinem et animi constantiam, quæ in omnem eventum parata, et cuiusque sorti æqua, prospicit sine metu, fruitur sine fastidio, et tolerat sine impatientia. Atque illud notatu dignum est, virtutem hanc Prometheo non innatam, sed adventitiam fuisse, atque ex ope aliena: nulla enim ingenua et naturalis fortitudo tantæ rei par esse possit. Sed hæc virtus ab ultimo oceano, atque a sole accepta et advecta est: præstatur enim a sapientia, tanquam a sole, et a meditatione inconstantis ac veluti undarum humanæ vitæ, tanquam a navigatione oceani; quæ duo Virgilius bene conjunxit:

"Felix, qui potuit rerum cognoscere causas,  
 Quique metus omnes et inexorabile fatum  
 Subjecit pedibus, strepitumque Acherontis ævari."  
 Georg. II. 490

Elegantissime autem additur ad hominum animos consolandos et confirmandos, heroem istum ingentem in poculo sive urceo navigasæ: ne forte naturæ suæ angustias et fragilitatem nimium pertimescant aut causerent; ac si hujusmodi fortitudinis et constantis capax omnino non esset; de quo ipso Seneca bene ominatus est, cum dicat, "Magnum est habere simul fragilitatem hominis, et securitatem Dei." Sed jam retrocedendum est ad illud, quod consulto præterivimus, ne ea, quæ inter se connexa sunt, abrumperemus: hoc est, de novissimo illo Promethei crimine, quod pudicitiam Minervæ sollicitasset. Nam et ob hoc delictum gravissimum certe et maximum

illam pœnam laniationis viscerum subiit. Illud non aliud esse videtur, quam quod homines, artibus et scientia multa inflati, etiam sapientiam divinam sensibus et rationi subjicere sæpius tentent; ex quo certissime sequitur mentis laceratio et stimulatio perpetua et irrequieta. Itaque mente sobria et submissa distinguenda sunt humana et divina; atque oracula sensus et fidei; nisi forte et religio hæretica, et philosophia commentitia hominibus cordi sit. Restat ultimum illud de ludis Promethei cum tædis ardentibus. Hoc rursus ad artes et scientias pertinet, sicut ignis ille, ad cujus memoriam et celebrationem hujusmodi ludi instituti sunt; atque continet in se monitum, idque prudentissimum, ut perfectio scientiarum a successione, non ab unius alicujus pernicitate aut facultate, expectetur. Etenim qui ad cursum et contentionem velocissimi et validissimi sunt, ii ad faciem suam accensam servandam fortasse minus sunt habiles, cum a cursu rapido æque, ac nimis tardo, periculum extinctionis imminet. Isti autem luminum cursus et certamina jampridem intermissa videntur, cum scientiæ in primis quibusque auctoribus, Aristotele, Galeno, Euclide, Ptolemæo, maxime florere cernantur; atque successio nil magni effecerit aut fere tentaverit. Atque optandum esset, ut isti ludi in honorem Promethei sive humanæ naturæ instaurarentur, atque res certamen et æmulationem et bonam fortunam reciperet, neque ex unius cujuspiam face tremula atque agitata penderet. Itaque homines monendi sunt, ut se ipsi excuscent, et vires atque etiam vices suas experiantur, neque in paucorum hominum animulis et cerebellis omnia ponant. Hæc sunt illa, quæ in fabula ista vulgari et decantata nobis adumbrari videntur; neque tamen inficiamur, illi subesse haud pauca, quæ ad Christianæ fidei mysteria miro consensu innuant; ante omnia navigatio illa Herculis in urceo ad liberandum Prometheum, imaginem Dei Verbi, in carne, tanquam fragili vasculo, ad redemptionem generis humani properantis, præ se ferre videtur. Verum nos omnem in hoc genere licentiam nobis ipsi interdiciamus, ne forte igne extraneo ad altare Domini utamur.

XXVII. ICARUS VOLANS; ITEM SCYLLA ET CHARYBDIS,  
SIVE VIA MEDIA.

MEDIOCRITAS, sive via media, in moralibus laudatissima est; in intellectualibus minus celebrata, sed non minus utilis et bona; in politicis tantum suspecta, et cum judicio adhibenda. Morum autem mediocritates per viam Icaro præscriptam; intellectualium autem per viam inter Scyllam et Charybdim, ob difficultatem et periculum, decantatam ab antiquis notantur. Icaro præcepit pater, cum mare esset prætervolandum, ut viam aut nimis sublimem, aut nimis humilem caveret. Cum enim alæ cera essent conglutinatæ, periculum erat si altius efferetur, ne cera ex solis ardore liquefieret; sin ad vaporem maris propius se submitteret, ne ab humore cera minus tenax efficeretur. Ille vero ausu juvenili in celsiora contendit, atque in præceps lapsus est.

Parabola facilis et vulgata est: virtutis enim via inter excessum et defectum recto tramite aperitur. Neque mirum erat si Icarum, juvenili alacritate

gestientem, excessus perdidit. Excessus enim fere juvenum; defectus senum, vitia esse solent. Ex semitis tamen malis et noscivis elegit Icarus (si plane pereundum erat) meliorem. Defectus enim recte æstimantur excessibus praviore. Quandoquidem excessui nonnihil magnanimitatis subsit, et cognationis cum cœlo, ad instar volucris: defectus vero humi serpat, instar reptilis. Præclare Heraclytus: "Lumen siccum, optima anima." Nam si ex humo humorem contrahat anima, prorsus deprimitur et degenerat: interim tamen modus adhibendus est, ut ab illa siccitate laudata lumen reddata subtilius, non corripiatur incendium. Atque hæc cuivis fere nota sunt. At via illa in intellectualibus inter Scyllam et Charybdim certe et peritiam navigandi et felicitatem desiderat. Si enim in Scyllam incidant naves, illiduntur cautibus: sin in Charybdim, absorbentur. Cujus parabolæ ea videtur esse vis, (quam nos breviter perstringemus, tametsi infinitam trahat contemplationem,) ut in omni doctrina et scientia, earumque regulis et axiomatibus, modus teneatur inter distinctionum scopulos, et universalium voragines. Hæc enim duo naufragiis ingeniorum et artium famosa sunt.

XXVIII. SPHINX, SIVE SCIENTIA.

TRADITUR Sphinx fuisse monstrum specie multiforme; facie et voce virginis; pennis volucris, unguibus gryphi: jugum autem montis in agro Thebano tenebat et vias obsidebat: mos autem ei erat viatores ex insidiis invadere ac comprehendere: quibus in potestatem redactis, ænigmata quædam obscura et perplexa proponebat, quæ a Musis præbita et accepta putabantur. Ea si solvere et interpretari miseri captivi non possent; hæsitantes, et confusos in illis, magna sævitia dilaniabat. Hæc calamitas cum diu grassaretur, præmium propositum est a Thebanis (ipsum Thebarum imperium) viro qui Sphingis ænigmata explicare possit (neque enim alia superandæ illius ratio erat). Tanto pretio excitatus Œdipus, vir acer et prudens, sed pedibus læsis et perforatis, conditionem accepit, et experiri statuit. Postquam autem fidens animi et alacer se coram Sphinge stitisset; illa ab eo quæsitivæ, quale tandem illud animal esset, quod primo quadrupes natum, postea bipes factum esset, deinde tripes, ad extremum rursus quadrupes. Ille præsentis animo respondit, illud in hominem competere, qui sub ipsum partum et infantiam quadrupes provolvitur et vix repere tentat, nec ita multo post erectus et bipes incedit; in senectute autem baculo innititur et se sustentat, ut tanquam tripes videatur; extrema autem ætate decrepitis senex labantibus nervis, quadrupes decumbit, et lecto affigitur. Itaque vero responso victoriam adeptus, Sphingem interemit; cujus corpus asello impositum, veluti in triumpho ducebatur; ipse autem ex pactis rex Thebanorum creatus est.

Fabula elegans, nec minus prudens est; atque videtur conficta de scientia, præsertim conjuncta practicæ. Siquidem scientia non absurde monstrum dici possit, cum ignorantibus et imperitis prorsus admirationi sit. Figura autem et specie multiformis est, ob immensam varietatem subjecti, in qua scientia

versatur: vultus et vox affingitur muliebris ob gratiam et loquacitatem: adduntur alæ, quia scientiæ et earum inventa momento discurrunt et volant, cum communicatio scientiæ sit instar luminis de lumine, quod affatim incenditur. Elegantissime autem attribuantur ungues acuti et adunci; quia scientiæ axiomata et argumenta penetrant mentem, eamqueprehendunt et tenent ut movere et elabi non possit: quod et sanctus philosophus notavit: "Verba sapientum" inquit, "sunt tanquam aculei, et veluti clavi in altum defixi." Omnis autem scientia collocata videtur in arduis et editis montium. Nam res sublimis merito putatur et excelsa, et ignorantiam tanquam ex superiore loco despiciens, atque etiam late et undequaque speculatur et prospicit, ut in verticibus montium fieri solet. Vias autem obsidere fingitur scientia, quia ubique in itinere isto, sive peregrinatione vitæ humanæ, materia et occasio contemplationis se ingerit et occurrit. Proponit autem Sphinx quæstiones et ænigmata mortalibus varia et difficilia, quæ accepit a Musis. Ea tamen quamdiu apud Musas manent, sævitia fortasse carent; donec enim nullus alius finis meditationis et disquisitionis sit præter ipsum scire, intellectus non premitur, nec in arcto ponitur, sed vagatur et exspatiatur, atque in ipsa dubitatione et varietate nonnullam jucunditatem et delectationem sentit: sed postquam a Musis hujusmodi ænigmata ad Sphingem transmissa sunt, id est, ad practicam, ut instet et urgeat actio, et electio, et decretum: tum demum ænigmata molesta et sæva esse incipiunt, et, nisi solvantur et expediuntur, animos hominum miris modis torquent et vexant, et in omnes partes distrahunt et plane lacerant. Proinde in ænigmatibus Sphingis duplex semper proponitur conditio; non solventi mentis laceratio; solventi imperium. Qui enim rem callet, is fine suo potitur, atque omnis artifex operi suo imperat. Ænigmatum autem Sphingis duo in universum sunt genera: ænigmata de natura rerum, atque ænigmata de natura hominis; atque similiter in præmium solutionis sequuntur duo imperia: imperium in naturam, et imperium in homines; verè enim philosophiæ naturalis finis proprius et ultimus est, imperium in res naturales, corpora, medicinas, mechanica, alia infinita; licet schola, oblati contenta, et sermonibus tumefacta, res et opera negligat et fere projiciat. Verum ænigma illud Œdipodi propositum, ex quo ille imperium Thebanum adeptus est, pertinebat ad naturam hominis: quisquis enim naturam hominis prorsus introspexit, ille faber fere fortunæ suæ esse potest, et ad imperandum natus est. Id quod de Romanis artibus bene pronunciatum est:

"Tu regere imperio populos, Romane, memento;  
Hæ tibi erunt artes."

Æn. vi. 851.

Itaque apposite illud, quod Augustus Cæsar signo Sphingis, sive de industria, sive fortuito usus est. Ille enim (si quis unquam) in politica excelluit, et in vitæ suæ curriculo plurima nova ænigmata de natura hominis felicissime solvit, quæ nisi dexter et paratus solvisset, multoties non procul ab imminente pernicie et exitio abfuisset. Atque additur in fabula Sphingis devictæ corpus in asellum impositum fuisse.

Elegantissime certe, cum nihil sit tam acutum et abstrusum, quin postquam plane intellectum et deinceps pervulgatum sit, etiam tardo imponi possit. Neque illud prætermittendum, debellatam esse Sphingem a viro pedibus clavato: etenim nimis cito pede et celeri gradu ad ænigmata Sphingis homines properare solent: unde fit, ut (prævalente Sphinge) potius per disputationes ingenia et animos lacerent, quam per opera et effectus imperent.

#### XXIX. PROSERPINA, SIVE SPIRITUS.

Narrant Plutonem, postquam regnum inferorum ex partitione illa memorabili accepisset, de nuptiis alicujus e superis desperasse, si eas per colloquia, aut modos suaves tentaret; ut ad raptum consilia sua dirigere ei fuerit necesse. Itaque captata oportunitate Proserpinam Cereris filiam, virginem pulcherrimam, dum flores Narcissi in Siciliæ pratis colligeret, subito incursu rapuit, atque quadrigis secum ad subterranea asportavit; ei magna reverentia præbita est, ut et domina Ditis vocata sit. Ceres autem, ejus mater, cum filia sibi unice dilecta nunquam comparuisset, supra modum mœsta et anxia, tædam accensam ipsa manu præ se ferens, universum orbis terrarum ambitum peragravit, ut filiam investigaret et recuperaret. Id cum frustra fuisset, accepto forte indicio quod ad inferos devecta esset, multis lachrymis et lamentationibus Jovem fatigavit, ut illa ei restitueretur. Atque tandem pervicit, ut si illa nihil eis iis, quæ apud inferos essent, degustasset, tum eam abducere liceret. Ea conditio matris desiderio adversa fuit; Proserpina enim grana tria ex malo granato gustasse comperta est. Neque idcirco Ceres destitit, quin preces et ploratus de integro resumeret. Postremo itaque ei indulgentum est, ut Proserpina, dispersitis temporibus et alternis vicibus, sex menses cum marito, alteris sex cum matre esset. Hanc Proserpinam postea Theseus et Pirithous eximia audacia thalamo Ditis deducere tentarunt. Cum autem in itinere super saxo apud inferos defessi consedissent, eis resurgere minime licuit, sed æternum sedebant. Proserpina itaque inferorum regina mansit; in cujus honorem etiam additum est privilegium magnum; cum enim ab inferis revocare gradum illis, qui eo descendissent, fas non esset, adscripta est huic legi exceptio singularis; ut si quis ramum aureum in donum Proserpinæ attulisset, ei ob hoc ire et redire liceret. Is ramus unicus erat in ingenti et opaco luco, neque stirps erat, sed vici instar in aliena arbore frondebat, atque avulso illo alter non deficiebat.

Fabula ad naturam pertinere videtur, atque vim et copiam illam in subterraneis divitem et frugiferam, ex qua hæc nostra pullulant, et in quam rursus solvuntur et redeunt, perscrutat. Per Proserpinam antiqui significarunt spiritum illum æthereum, qui sub terra (per Plutonem representatur) clauditur et detinetur, a superiore globo divulsus, quod non male expressit ille:

"Sive recens tellus, seductaque nuper ab alto  
Æthere, cognati retinebat semina cœli."

Ille spiritus raptus a terra fingitur, quia minime cohibetur ubi tempus et moram habet ad evolandum,

sed subita confractione et comminutione tantum compingitur et figitur, perinde ac si quis aërem aquæ commiscere tentet; quod nullo modo efficere possit, nisi per agitationem celerem et rapidam: hac enim ratione videmus illa corpora conjungi in spuma, aëre tanquam raptò ab aqua. Neque inelanger additur, Proserpinam flores Narcissi in vallibus colligentem raptam fuisse: quia Narcissus a torpore sive stupore nomen sumit: atque tum demum spiritus ad raptum materiæ terrestri magis præparatus est et opportunus, cum coagulari incipit, ac veluti torporem colligere. Recte autem tribuitur honor ille Proserpinæ, qualis nulli uxori deorum, ut Ditis Domina sit, quia ille spiritus plane omnia in illis regionibus administrat, stupido et quasi ignaro Plutone. Hunc autem spiritum æther, ac vis cœlestium (per Cererem adumbrata) infinita sedulitate elicere, atque sibi restituere contendit. Fax autem illa ætheris, sive tæda ardens in manu Cereris, proculdubio solem denotat, qui circa terræ ambitum luminis officio fungitur, atque maximi omnium esset ad Proserpinam recuperandam momenti, si omnino hoc fieri posset. Illa tamen hæret, et manet: cujus ratio sequitur accurate et excellenter proposita in pactis illis Jovis et Cereris. Primum enim certissimum est, duos esse modos spiritus in materia solida et terrestri cohibendi: alterum per constipationem sive obstructionem, qui est mera incarceration et violentia: alterum per ministrationem proportionati alimenti, atque id fit sponte et libenter. Postquam enim spiritus inclusus depascere incepit atque se alere, evolare protinus non festinat: sed veluti in terra sua figitur: atque hæc est degustatio Proserpinæ ex malo granato; quæ si non fuisset, jam pridem a Cerere, cum face illa sua orbem terrarum peragrante, abducta fuisset. Spiritus enim, qui subest metallis et mineralibus, compingitur fortasse præcipue per massæ soliditatem; qui autem in plantis est et animantibus, in corpore poroso habitat, et aperta effugia habet, nisi per illum modum degustationis libenter detineretur. Secundum autem pactum de semestri consuetudine non aliud est, quam elegans descriptio dispartitionis anni; cum spiritus ille, per terram perusus, quoad res vegetabiles mensibus sætatis apud superiora degat, atque mensibus hiemis ad subterranea redeat. Quod vero attinet ad conatum illum Thesei et Pirithoi abducendæ Proserpinæ, id eo spectat, quod sæpius fiat, ut spiritus subtiliores, qui ad terram in multis corporibus descendunt, nequitiam illud efficiant ut spiritum subterraneum exsugant, et secum uniant, et evahant; sed contra ipsi coagulentur, neque amplius resurgant; ut Proserpina per eos aucta incolis et imperio sit. De virga autem illa aurea, vix videtur sustinere posse impetum chemistarum, si in nos hac ex parte irruant; cum illi ab eodem lapide suo, et auri montes, et restitutionem corporum naturalium, veluti a portis inferorum, promittant. Verum de chemica, atque lapidis illius procis perpetuis, certo scimus theoreticam eorum esse sine fundamento; suspicamus etiam practicam esse sine certo pignore. Itaque missis illis, de ista postrema parabolæ parte hæc nostra sententia est. Nobis certe compertum est ex compluribus antiquorum figuris, eos conservatio-

nem atque instaurationem quadantenus corporum naturalium pro re desperata non habuisse, sed potius pro re abstrusa et quasi avia. Atque idem sentire hoc etiam loco videntur, cum virgulam istam inter infinita virgulta ingentis et densissimæ sylvæ collocarunt; auream autem finxere, quia aurum durationis tessera est: insitivam, quia ab arte hujusmodi effectus sperandus est, non ab aliqua medicina, aut modo simplici aut naturali.

## XXX. METIS, SIVE CONSILIUM.

NARRANT poëtæ antiqui Jovem cepisse in uxorem Metin, cujus nomen non obscure consilium significat: eam autem ex illo gravidam factam fuisse: quod cum ille sensisset, partum ejus nullo modo expectasse, sed utique eam devorasse, unde et ipse prægnans factus sit: puerperium autem mirum fuisse; nam ex capite, sive cerebro Palladem armatam peperisse.

Hujus fabulæ monstrosæ et primo auditu insulsi-  
sissimæ sensus arcanum imperii continere videtur, qua arte, scilicet, reges se versus concilia sua gerere soleant, ut auctoritas et majestas eorum non solum illibata conservetur, verum apud populum augeatur et extollatur. Nam reges se cum conciliis suis vinculo veluti nuptiali copulare et conjungere, et de rebus maximis cum eis deliberare, recto et prudente instituto consueverunt; idque majestatem eorum nequitiam imminuere haud abs re judicant: verum cum res jam ad decretum spectat, quod instar partus est, concilii partes non ultra tendere sinunt, ne acta ex concilii arbitrio pendere videantur. Verum, tum demum reges (nisi hujusmodi res sit ut invidiam a se derivare cupiant) quicquid a concilio elaboratum et veluti in utero efformatum est, in se transferre consueverunt, ut decretum et executio (quæ, quia cum potestate procedit et necessitatem infert, eleganter sub figura Palladis armatæ involvitur) ab ipsis emanare videatur. Neque satis est ut hoc ab auctoritate regum et eorum voluntate soluta, et libera, et non obnoxia, profectum videatur; nisi etiam hoc sibi reges sumant, ut ex capite eorum, id est, ex judicio et prudentia propria, decreta nata existimentur.

## XXXI. SIRENES, SIVE VOLUPTAS.

FABULA de Sirenibus ad perniciosas illecebras voluptatis recte, sed sensu vulgatissimo, transfertur. Nobis autem videtur sapientia veterum, tanquam uvæ male calcatæ; ex quibus licet nonnihil exprimitur, tamen potissima quæque resident et prætermittuntur. Sirenes Acheloi et Terpsichores, unus ex Musis, filiæ fuisse narrantur: eæ primis temporibus alatæ erant: sed inito temere cum Musis certamine victæ, alis mulctatæ sunt. Ex pennis autem evulsis Musæ coronas sibi fecerunt: adeo ut ab eo tempore Musæ cum capitibus alatis procederent, præter unam Sirenium matrem. Mora autem Sirenium erat in insulis quibusdam amœnis: illæ vero e specula naves adventantes cum conspicerent, cantu navigantes primo detinebant, deinde alliciebant, exceptos autem necabant. Neque simplex erat cantilena, sed singulos modis maxime naturæ eorum convenientibus captabant. Tanta autem pestis erat, ut insulæ Sirenium etiam longe intuentibus alberent ex ossibus

cadaverum inhumatorum. Huic malo remedium repertum est genere et modo duplex; alterum ab Ulysæ, alterum ab Orpheo: Ulysses sociis omnino aures cera obturari jussit; ipse, cum experimentum rei facere vellet, periculum autem depellere, se ad malum navis alligari voluit, interminatus, ne quis eum, licet rogatus, solveret: Orpheus vero, missis hujusmodi vinculis, clara voce deorum laudes cantans ad lyram, voces Sirenium retudit, et extra omne periculum fuit.

Fabula ad mores pertinet, atque minime obscura sane, nec tamen inelegans parabola videtur. Voluptates ex copia rerum ac affluentia; atque ex hilaritate sive exultatione animi proveniunt: illæ olim primis ipsis illecebris subito, et tanquam alata, mortales rapere solebant. Doctrina autem et eruditio hoc saltem effecit, ut animus humanus se non nihil cohibeat, et exitum rei secum perpendat; itaque alas voluptatibus detraxit. Hoc autem in Musarum decus et honorem egregium cessit: postquam enim philosophiam contemptum voluptatum inducere posse nonnullorum exemplo patuit; statim res sublimis visa est, quæ animam veluti humo affixam attollat et evehat, et hominum cogitationes (quæ in capite vigent) pennatas et veluti æthereas faciat. Sola Sirenium mater pedestris, et sine aliis mansit; ea proculdubio nil aliud est, quam doctrinæ leves et ad jucunditatem inventæ et adhibitæ; quales videntur Petronio illi in pretio fuisse, qui postquam sententiam mortis accepisset, in ipsis atriis mortis delicias quæsit, cumque etiam literas in solatium adhibere vellet, nil (inquit Tacitus) legit eorum, quæ ad constantiam faciunt, sed leves versus. Ex hoc genere est illud:

" Vivamus, mea Lesbia, atque amemus,  
Rumoresque sentum severiorum  
Omnes unius æstimemus assis."

CATULL. Eleg. v.

Et illud:

" Jura senes norint, et quid sit fasque nefasque  
Inquirant tristes, legumque examina servant."

Hujusmodi enim doctrinæ alas Musarum coronis rursus detrahente, et Sirenibus restituere velle videntur. Habitare autem perhibentur Sirenes in insulis, quia voluptates fere recessus quærunt, atque hominum cœtus sæpe vitant: Sirenium autem cantus omnibus decantatus est, ejusque perniciet et artificium varium: itaque interprete hæc non egent. Illud magis acutum de ossibus veluti clivis albetibus et longinquo visis: ex quo illud significatur, exempla calamitatum, licet clara et conspicua, contra voluptatum corruptelas non multum proficere. Restat de remediis parabola, non abstrusa ea quidem, sed tamen prudens et nobilis. Proponuntur enim mali tam callidi, et tam violenti, remedia tria: duo a philosophia; tertium a religione. Atque primus effugii modus est, ut quis principiis obstet, atque omnes occasiones, quæ animum tentare et sollicitare possint, sedulo devitet: id quod obturatio illa aurium denotat; atque hoc remedium ad animos mediocres et plebeios necessario adhibetur, tanquam ad comites Ulyssis. Animi autem celsiores etiam versari inter medias voluptates possunt, si decreti constantia se muniant: quin et per hoc, virtutis suæ experimentum magis exquisitum capere gaudent; etiam voluptatum ineptias et insanias perdiscunt, potius contemplantes quam obsequentes: quod et Salomon de se professus est, cum enumerationem voluptatum, quibus diffuebat, ea sententia claudat: "Sapientia quoque perseveravit mecum." Itaque hujusmodi heroës inter maximas voluptatum illecebras se immobiles præstare, atque in ipsis earum præcipitiis se sustinere queant; tantum, ad Ulyssis exemplum, interdictis perniciosis suorum consiliis et obsequiis, quæ animum maxime omnium labefactare et solvere possint. Præstantissimum autem in omni genere est remedium Orphei; qui laudes deorum cantans et reboans, Sirenium voces confudit et summovit: meditationes enim rerum divinarum voluptates sensus non tantum potestate, sed etiam suavitate, superant.

## NOVA ATLANTIS.

### OPUS IMPERFECTUM.

#### LECTORI S.

FABULAM hanc (Novæ Atlantis) eo animo confixit honoratissimus auctor, ut in ea modulum quendam et descriptionem collegii, ad interpretationem naturæ, et operum magnitudinem ac potentiam, instituti, exhiberet: idque nomine Domus Salomonis, sive Collegii operum sex dierum, insigniret. Atque eoque sermonis filum produxit, donec hoc conficeret. Modulus, fateor, pro more poetices, grandior et celsior est, quam qui in omnibus imitationi pateat; veruntamen in plerisque industria hominum sibi non diffidat. In animo etiam habuit, hac ipsa in fabula, librum "De Legibus, sive de optimo civitatis statu," exarasse: sed cum opus hoc prolixum futurum prævideret; necnon historiæ naturalis colligendæ, aliarumque "Instaurationis" partium contexendarum (quas longe potiores duxit) desiderio abriperetur; hic pedem fixit. Hæc habui in mandatis; lege, et vale.

GUIL. RAWLEY.

NAVIGAVIMUS e Peruvia, ubi per annum integrum commorati sumus: petebamus autem Chinam, et Japoniam; commeatum in duodecim menses nobiscum portantes; atque per spatium quinque mensium, et amplius, ventis secundis ab ortu flantibus, licet lenioribus et remissioribus, usi sumus. Tum vero vertit se ventus, et ab occidente per multos dies constanter spiravit; adeo ut progredi lente admodum possemus, atque de reditu quandoque cogitaremus. Sed tunc rursus orti sunt austri fortes et vehementes, cum inclinatione nonnulla in orientem; qui nos (quantum fieri potuit) contra nitentes, versus septentrionem compulerunt: quo tempore commeatus noster (etsi parce admodum eum distribuissimus) penitus absumptus. Itaque, cum nos ipsos in medio vastissimæ per universum orbem aquarum eremi positos videremus absque commeatu, perditos nos plane putabamus, et mortem propinquam expectabamus. Attamen corda nostra, et voces ad Deum in cælis levavimus; qui mirabilia sua in profundis monstrat; eum precantes, pro misericordia sua, ut, quemadmodum in principio congregationes aquarum mandavit, et aridam apparere fecerat; ita nunc quoque terram nobis ostenderet, ne periremus. Contigit autem, ut die sequente, sub vesperi, intra modicam distantiam, cerneremus, septentrionem versus, tanquam nubes spissas: quæ nobis de terra spem iniecerunt, satis gnaris, tractum illum maris australis penitus incognitum fuisse; atque insulas, et continentes, adhuc non detectas, complecti potuisse. Itaque cursum, tota illa nocte, eo direximus, ubi terra se, ut conjiciebamus, ostenderat: atque illucescente die postero manifestum fuit, id, quod videramus, terram revera fuisse, depressam quidem et sylvosam: quod eam magis obscuram monstraverat. Atque post sesqui-horæ navigationem portum tutum appulimus; portum urbis cujusdam, non magnæ quidem, sed pulchre exstructæ, et quæ, ex qua parte mare spectabat, elegantiam magnam præ se tulit. Nos vero singula momenta tarda æstimantes, quibus a terra abessemus, ad litus properavimus, et ad descensum in terram nos comparavimus. Confestim illi vidimus nonnullos ex populo urbis, cum bacillis in manibus, qui nutu et signis nos in terram descendere prohibuerunt: absque tamen clamoribus, aut ferocia. Unde haud parum contristati, quid faciendum esset apud nos deliberamus. Interim perrexit versus nos scapha haud magna, octo circiter viros vehens; quorum unus in manu gestabat baculum ex arundine lutea, ad utrumque finem cæruleo colore imbutum; qui navem nostram fidenter conscendit. Cumque vidisset unum e nostris obviam illi prodeuntem, e sinu extraxit rotulum quandam pergamenæ, (sed pergamena nostra paulo flavioris, atque ad instar foliorum codicillorum splendentis, alias autem mollis satis et flexibilis,) eique in manum dedit, qui primus e nostris se obtulerat. In quo rotulo, lingua Hebraica prisca, Græca quoque prisca, Latina satis pura, et Hispanica, scripta erant hæc verba: "In terram ne descendatis; nedum quispiam e vestris. Quin et discesum ab his oris maturate, intra sexdecim dies, nisi licentia vobis diutius morandi concedatur. Interea, si aqua vobis opus sit

dulci, aut commeatu, aut medicina, et curatione pro ægrotis, aut si navis vestra reparatione indigeat, singula, quibus caretis, in scriptis exhibete. Nos autem officiis ullis misericordiæ vobis non deerimus." Rotulus iste sigillo firmatus erat ex alis Cherubim, minime expansis, sed deorsum pendentibus, et juxta eas cruce. Hoc tradito, minister ille discessit, et unum ex famulatio suo nobiscum reliquit, qui responsum nostrum reportaret. Cum jam apud nos de hac re deliberaremus, timidi et anxii hærebamus. Arceri a descensu in terram, et moneri de præpropero nostro discessu; male nos affligerunt. Contra, cum videremus populum illum linguas externas callere, tantaque humanitate præditum esse, consolationi nobis erat non exigua: ante omnia, signum crucis, instrumento appositum, singulari gaudio nos affecit, tanquam salutis augurium manifestum. Responsum a nobis est lingua Hispanica, navem nostram satis commode se habere, quandoquidem malacias, et ventos contrarios potius experti essemus, quam tempestates: quantum ad ægrotos nostros, eos plurimos esse, quin et graviter laborantes, ita ut nisi descensus in terram illis permitteretur, de vita periclitarentur. Alia, quibus carebamus, speciatim exhibuimus, adentes, adesse nobis merces pauculas, quas si eis emere placeret, necessitatibus nostris subveniri posse, ne illis oneri essemus. Obtulimus servo præmium exiguum in ducatis, et holoserici charmosyni parcelam, quæ ministro superiori offerretur; sed ille non accepit, imo vix aspicere sustinuit: atque ita in alia parva scapha, quæ ad eum missa fuit, discessit.

Tribus plus minus horis elapsis postquam servus responsum nostrum accepit, lembo versus nos devectus est vir (ut videbatur) ex magistratibus. Indutus erat toga cum manicis amplis, ex cameloto, coloris cærulei pulcherrimi, splendidioris multo, quam nos in Europa habemus: tunica interior viridis erat; et similiter galerus ejus, qui factus erat in figuram turbani, eleganter compositi, neque prægrandis, qualia solent esse Turcica; atque capillorum suorum cincinni infra oram turbani dependebant. Vir sane aspectu venerabilis. Vectus est in lembo, aliqua ex parte inaurato, quatuor solummodo viris, in eodem lembo, comitatus. Alius autem a tergo sequebatur, in quo erant viri circiter viginti. Quamprimum intra spiculi jactum venisset, signis quibusdam e lembo moniti sumus, ut aliquos e nostris ad illum mitteremus. Id quod statim fecimus in navis nostræ scapha; virum ex nostris (uno excepto) primarium mittentes, et quatuor cum illo. Cumque circiter sex virgatas a lembo abessemus, jubebant ut nos sisteremus, nec propius accederemus. Quod et fecimus. Tum vero vir, quem modo descripsi, in pedes se erexit, et alta voce Hispanicè interrogavit; Nedes Christiani estis? Respondimus: Christianos nos esse: minus metuentes, quia signum crucis in instrumento illo videramus. Ad quod responsum, dexteram ille versus cælum sustulit, et deinde leniter ad os suum adduxit; qui gestus in usu illis est cum Deo gratias agunt. Tunc autem perrexit: "Si jurabitis (unusquisque vestrum) per merita Servatoris, piratas vos non esse: nec sanguinem humanum effudisse, sive jure, sive vi, intra spatium quadraginta dierum, ultimo elapsorum, licentiam obtine-

bitis in terram descendendi." Respondimus, paratos nos omnes esse ad illud iuramentum præstandum. Unde unus ex comitatu ejus, qui videbatur notarius esse, illud in scriptum redegit. Quo facto, alter e comitatu viri illius primarii, qui in eodem lembo vehebatur, postquam dominus in aurem ei quidpiam locutus esset, alta voce dixit: "Dominus meus hoc vobis notum esse velit, non ex superbia, aut fastu esse, quo minus navem vestram conscendat; sed, quia ex responso vestro innotescit plurimos inter vos se male habere, a conservatore sanitatis in urbe monitus erat, ut ad aliquam distantiam colloqueretur." Submisso capite nos inclinavimus, et respondimus: servos ejus humillimos nos omnes esse; magnoque honori ducere, et singulari suæ humanitati tribuere, id quod jamdudum factum esset: sed sperare nos, morbum illum, quo ægroti nostri laborant, contagiosum minime esse. Ita vir ille primarius reversus est. Paulo post adfuit notarius, et navem nostram conscendit; in manu sua fructum quandam ejus regionis tenens, aurantio non absimilem, verum colore magis in coccineum vergente, qui odorem spirabat suavissimum. Illum (ut videtur) gestabat, ut ei contra contagionem antidoti vice esset. Exhibuit autem nobis iuramentum: per Jesum Dei filium, et merita ejus; ac deinde nobis dixit, postero die, ante solis exortum, affuturum, qui nos accerseret, ac ad domum peregrinorum perduceret, ubi præsto nobis essent quæcunque necessaria, sive pro ægrotis, sive pro sanis. Sic a nobis discessit: cumque ei aureos aliquos obtulissemus, subridens dixit: "se binum salarium pro una opera accipere non debere." Quorum verborum (ut arbitrator) in sensus erat, quod salarium e publico ob operam suam reciperet. Nam (ut postea intellexi) officiarium, qui præmia accipit, hominem bini salarii vocant.

Postero mane diluculo accessit ad nos minister ille, qui primus cum arundine sua nos adierat, et retulit: se venisse, ut ad domum peregrinorum nos deduceret: se autem horam anticipasse, ut commoditatem integri diei ad negotia nostra haberemus. "Si autem," inquit, "mihî auscultabitis, primo mecum aliquos vestrum mittetis, qui locum circumspeciant, et quomodo optime ad vos recipiendos accommodari possit: postea autem ægrotos vestros accersetis, et reliquos, quos in terram descendere vultis." Gratias ei egimus, et diximus, curam hanc, quam pro peregrinis miseris suscepit, Deum pro certo remuneraturum. Itaque sex e nostris cum comitati sunt. Præiit ille, et respiciens ad nos, dixit perhumane certe: se servum nostrum tantummodo esse; et viæ ducem. Duxit autem nos per tres plateas, pulchras admodum: atque per totam, quam pertransivimus, viam haud pauci e populo ad utrumque latus congregati sunt, ordine stantes; verum more adeo civili, ut viderentur non tam ad otiosum spectaculum convenisse, quam ut adventum nostrum gratularentur. Multi autem ex iis, cum incederemus, brachia sua paululum aperuerunt: quo gestu utuntur cum adventum alicujus sibi gratum esse significare volunt. Domus peregrinorum ædificium est speciosum et spatiosum, exstructum ex lateribus, nostris colore paulo magis purpureis; cum fenestris decoris, aliquibus ex vitro, aliquibus autem ex panno

linteo delicato, oleo intincto. Deduxit nos primo in cœnaculum satis elegans, super gradus locatum: tunc autem a nobis quæsit: quot numero essemus? et, quot e nostris ægroti? Respondimus: universum numerum, tam sanorum, quam ægrotorum, esse ad unum et quinquaginta homines: ex quibus ægroti erant septedecim. Rogavit nos, ut aliquantisper præstolaremur, dum ad nos rediret. Quod post horam circiter fecit. Tum vero adduxit ad cubacula visenda, quæ nobis parata erant, numero novendecim: computatione scilicet inita (quemadmodum videtur) ut quatuor ex illis cubiculis, quæ reliquis nonnihil præstabant, quatuor ex primariis nostris exciperent, in quibus seorsum cubarent; reliquorum quindecim singula binis assignarentur. Cubicula elegantia erant, et lucida, nec non suppellectili satis lauta ornata. Tum demum in porticum longam divertimus; qualia solent esse dormitoria monachorum; ubi ostendit nobis, per latus unum integrum (nam latus adversum nihil aliud erat, quam paries, et fenestra) cellas septendecim, nitidas, partitiones habentes ex cedro. Quæ porticus, cum cellis, numero quadraginta (multo scilicet pluribus, quam nobis opus erat) instituta erat ad usum infirmorum. Simulque monuit, quod quamprimum aliqui ex ægrotis convalesceret, transferri posset et cella in cubiculum. Ad quem usum parata erant decem alia cubacula, præter illa, de quibus ante diximus. Hoc facto, in cœnaculum nos reduxit, et attollens paululum arundinem suam, (quod in more illis erat, quoties ministri mandata superiorum referunt,) ita ad nos locutus. "Notum vobis facio, consuetudinem regni hujus postulare, ut post diem instantem, et crastinum, (quos vobis ad transferendos e navi homines, et res vestras, permittimus,) contineatis vos ipsos intra fores hæc in triduum. Veruntamen hoc vos non perturbet, neque propterea intra carcerem vos compingi existimate: sed potius indultum hoc esse, quo ab itinere vestro spiritus recreetis et reficiatis. Nullius rei egebitis: quin et sex famuli assignati sunt, qui vobis ministrent, et negotia vestra expediant." Gratias ei egimus cum omni affectu et humilitate; et diximus: "Deus proculdubio in hac terra manifestatur." Obtulimus ei etiam viginti aureos, sed ille quoque subridens, hoc solum dixit: "Quid, vultis me esse hominem bini salarii?" Sic abiit. Paulo post, prandium nostrum allatum est: quod certe satis lautum, et salubrem victum, tam respectu ciborum, quam potus, exhibuit: meliorem certe et uberiorem, quam pro modulo collegii ullius, quantum novi, in Europa. Potus erat trium generum: unumquodque eorum bonum et salubre: vinum ex uvis: potus ex granis, qualis est apud nos cerevisia, sed clarus et limpids: et siceræ genus ex fructu quodam ejus regionis confectum, potus sane gratissimus, et miri refrigerii. Allata etiam est nobis magna copia aurantiorum illorum coccineorum, in usum ægrotorum: aiebant enim, ea præsens et efficax esse remedium contra ægritudinem in navigatione contractam. Præterea, pyxidem nobis tradidit, pillulis albescentibus sive cineritiis, plenam: monuitque ut ægroti nostri unam earum, singulis noctibus, in introitu lecti, sumerent: quas dixerat sanitatem eorum acceleraturas. Proximo die, cum a labore et opere circa vecturam homi-

num, et rerum nostrarum e navi, requievimus, visum est mihi, socios nostros in unum convocare: cum autem convenissent, ita eos allocutus sum: "Amici mei charissimi, nosecamus nos ipsos, et quo loco res nostræ sint. Viri sumus, in terram projecti e mari, sicut Jonas e ventre balenæ, cum in alto veluti sepulti essemus. Jam vero licet terram rursus calcamus, inter vitam tamen et mortem medii consistimus. Etenim fines, et veteris, et novi orbis, prætervecti sumus. Atque utrum nobis Europam rursus conspiciere dabitur, soli Deo notum. Miraculo quodam huc advecti sumus, atque a miraculo prope aberit, si hinc abvehamus. Quocirca, salutem præteritam, ac pericula præsentia et futura animo recolentes, ad Deum nos convertamus, corda levemus, et vias nostras singuli corrigamus. Præterea ad populum Christianum, pietatis et humanitatis plenum, venimus: curemus (quæso) ne illam faciei confusionem super nos inducamus, ut coram illis vitia nostra, aut malos mores palam faciamus. Adhuc restat amplius: illi enim (etsi sub humanitatis forma) nos hujusce domus claustris ad triduum concluserunt, quis novit, numnam hoc faciant, quo morum nostrorum experimentum sumant: quos si repererint pravos, confestim exulare nos jubebunt; sin probos, moram hic longiorem indulgebunt: quos enim assignarunt, famuli isti, quidni etiam speculatorum vices agant? Itaque, propter amorem Dei, atque si charum nobis sit bonum animarum et corporum nostrorum, ita nos geramus, ut et pacem cum Deo habeamus, et gratiam in oculis populi hujus inveniamus." Socii nostri una voce mihi de iis, quæ admonueram, gratias egerunt, promiseruntque sobrie se et modeste victuros, absque scandalo vel minimo. Itaque tres illos dies læti, et curis vacui, peregrimus, nihil solliciti de eo, quod nobis post triduum illud contingere posset: quo etiam dierum curriculum assidue propter convalescentiam ægrorum nostrorum exhilarati sumus; qui se, veluti in probaticam aliquam, divina sanandi virtute præditam, missos existimabant: tam celeriter siquidem et constanter convalescebant.

Crastino post illud triduum elapsus venit ad nos homo novus, quem antea non videramus, veste cœrulea amictus, quemadmodum et prior, nisi quod turbanum ejus album esset, cum cruce parva rubea in vertice. Habuit etiam liripipium circa collum, ex linteo purissimo. Sub introitum suum paululum se inclinavit, et brachia sua nonnihil explicavit. Nos vero eum resalutavimus modo admodum humili et submisso, ab ore ejus sententiam, vel vitæ, vel mortis expectantes. Postulavit, ut cum paucis aliquibus hominum nostrorum colloqueretur. Itaque sex tantum manserunt, cæteri se subduxerunt. Tum ille: "Ego quidem domus hujus peregrinorum officio præpositus sum; vocatione autem presbyter Christianus. Itaque jam accessi, ut operam meam vobis in omnibus præstarem, tanquam peregrinis, sed præcipue tanquam Christianis. Nonnulla habeo, quæ vobis referam, quæ (ut arbitrator) non illibenter audietis. Status iste licentiam vobis dedit per sex septimanas ulterius commorandi. Neque vos conturbet, si quidem negotia vestra spatium amplius postulent: nam neque lex ipsa regni in hac parte rigida est; tum vero minime dubito, quin et ipse vobis compendi-

nationem temporis istius, prout res vestræ flagitant, procurare possem. Quin et insuper narro vobis domum hanc peregrinorum isto tempore sat ditescere, et pecunia numerata bene instrui: reditus enim suos accumulavit jam per septem et triginta annos: tot enim effluerunt, ex quo peregrinus aliquis ad has partes appulerat: itaque de impensis vestris solliciti ne sitis. Sumptus, quamdiu hic manseritis, e publico ærario ministrabitur: neque vel punctum temporis, hujus rei causa, de mora vestra decedet. Quantum vero ad merces, quas adduxisse dicitis, nullæ vobis imponentur conditiones duræ, sed justis pretiis eas vendetis, valorem earum accipientes, vel in mercibus aliis, vel in auro et argento: nostri enim nihil interest. Sin vero quicquam sit, quod a statu isto petere velitis, illud nos ne celetis. Reperietis enim nos responsum tale relaturos, quo vultus vester minime decidat, aut contristetur. Hoc tantum vobis edico, ne quis vestrum karanna longius (illa apud eos sesquimillari æquivalet) a mœniis urbis abscedat, sine licentia speciali." Respondimus, postquam nos vicissim intuitu essemus, gratiosam hanc et quasi paternam benignitatem admirantes, non habere nos, quod diceremus, cum et gratiis agendis verba non suppeterent, et prænobilis ejus et inopinata munificentia omnia, quæ a nobis petenda essent, præoccupasset. Nos certe cogitationem illam subire, quasi effigiem salutis æternæ in cœlis ante oculos haberemus: siquidem, qui paulo ante in faucibus mortis constituti eramus, adductos jam esse in locum, ubi consolationes perpetuæ et nil aliud spirant. Quantum ad mandatum nobis impositum, obedientiam summam præstituros, etsi fieri non posset, quin corda nostra ardentissimo sanctam illam et felicem terram ulterius visendi desiderio inflammarentur. Adjecimus, linguas prius faucibus nostris adhæsuras, quam nos mentionem vel personæ ejus venerandæ, vel gentis hujus universæ, in precibus nostris omitteremus. Supplicavimus etiam ei, ut nos in numero servorum suorum, verorum merito et fidorum, reputaret, jure non minore, quam quo unquam mortales mortalibus devincti fuerint: itaque nos ipsos, et omnia nostra ad pedes ejus humiliter projicere. Dixit, "sacerdotem se esse, et sacerdotis mercedem expectare:" id est, fratrum amorem nostrum, et bonum animarum et corporum nostrorum. Ita a nobis discessit, non sine lacrymis, præ teneritudine animi obortis; nos quoque reliquit gaudio et affectu gratitudinis confusos et perculosos, atque invicem dicebamus, nos venisse in terram quandam angelorum, qui nobis quotidie apparebant, et consolationibus præveniebant, quas ne cogitare quidem potuissemus, nedum expectare.

Die proximo, horam circiter decimam matutinam, denuo nos invisit præpositus: et post salutationes utrinque factas dixit familiariter: se venisse, ut nos visitaret, et tempus nobiscum tereret. Tum cathedram poposcit, et consedit. Nos autem, numero decem (nam cæteri aut inferiores erant, aut foras abierant) circa eum sedimus: ac deinde ita exorsus est. Nos de insula hac Bensalem (ita enim eam vocant lingua sua) hoc habemus, quod ob situm insulæ nostræ solitarium, et leges peregrinantibus e nobis impositas de terra hac celandæ, et raram exterorum admissionem in regionem nostram, nobis

quidem maxima pars orbis habitabilis nota sit, ipsi vero aliis penitus simus incogniti. Itaque cum quaestiones illis aptiores sunt, qui minus norunt, consentaneum est magis, ut vos me interrogetis, quam ut ego vos." Respondimus: nos illi gratias maximas referre, quandoquidem hanc nobis licentiam indulgeret: tum ex iis, quæ jam observavimus, facile nos conicere, non esse rem in mundanis cognitu digniorem, quam statum et conditionem terræ hujus felicissimæ. Sed ante omnia (diximus) cum ab extremis terræ oris jam convenerimus, nec non in regno cœlesti nos olim conventuros speremus (eo quod utrinque Christiani simus) scire avemus, quandoquidem terra ista in tantum dissita sit, et vastitas et incognitis maris tractibus divisa, a terra illa, in qua Servator noster, dum in carne fuit, versabatur: quis tandem hujus gentis apostolus, et quibus modis ad fidem conversa fuerit? Facile erat, ex vultu ejus perspicere, gratam illi imprimis fuisse hanc quaestionem nostram: "Cor meum (inquit) vobis mirifice attraxistis, quod quaestionem hanc primo in loco proponitis: indicat enim, vos quaerere primum regnum Dei: atque libenter, et breviter, postulato huic vestro satisfaciam."

"Annos circa viginti ab ascensione Domini factum est, ut conspiceretur a populo Renfusæ (urbis maritimæ ad orientalem plagam regionis nostræ sitæ) noctu (nox autem erat nubila, sed placida) juxta mille passus a littore, columna lucis præalta; non figura pyramidali, sed veluti cylindri, e pelago versus cœlum erecta, et in vertice ejus crux lucis ampla, corpore columnæ aliquanto splendidior. Ad spectaculum hoc tam mirabile congregatus est (ut fit) populus urbis super arenas maris, et stabat paulisper attonitus: verum paulo post scaphis parvis plurimi se commiserunt, ut rem tanti stuporis propius inspicerent. Verum, postquam scaphæ intra sexaginta circiter a columna virgatas advenissent, ecce omnes subito se sistebant, nec ulterius procedere poterant: ita tamen, ut in circuitu movere, sed non accedere propius liceret: adeo ut scaphæ veluti in theatro starent, lucem hanc tanquam scenam cœlestem spectaturæ. Evenit autem forte fortuna, ut in scapharum una adesset quispiam ex sapientibus nostris, societatis nimirum domus Salomonis: quæ domus sive collegium (fratres mei charissimi) oculus plane est hujusce regni; qui postquam aliquandiu columnam hanc, una cum cruce, attente et devote contemplatus esset, in faciem se prostravit, et dein se in genua erigens, manusque ad cœlum attolens, hujusmodi preces fudit:"

"Domine Deus cœli et terræ; ex gratia tua speciali ordinis nostri hominibus dignatus es opera tua creationis, et eorum secreta nosse; atque dijudicare (quantum generationibus hominum datur) inter miracula divina, opera naturæ, effectus artis, et illusiones dæmonum, cum imposturis omnimodis. Agnosco et testor coram hoc populo, rem hanc, quam ante oculos intuemur, esse digitum tuum, et miraculum verum. Quoniam autem e libris nostris didicimus, miracula nunquam a te edita, nisi ob finem aliquem divinum, et excellentem (etenim leges naturæ leges tuæ sunt, a quibus nisi magnam ob causam minime recedias) humillime obsecramus, ut

signum hoc magnum nobis fortunæ, atque ejus interpretationem et usum in misericordia concedas; id quod, dum idem ad nos mittas, tacite et secreto polliceris."

"Postquam ita precatus est, continuo scapham, in qua vehebatur, solutam sensit et mobilem, cæteris adhuc veluti ligatis manentibus. Illud in signum certum licentiæ appropinquandi interpretatus, scapham fecit placide, et cum silentio, versus columnam, remigio impelli. Verum antequam ad illam pervenisset, columna cum cruce lucis dissipata est, et se undique tanquam in firmamentum quoddam stellarum multarum vertit: quæ etiam et ipsæ brevi evanuerunt: neque aliud restabat spectandum, præter arcam quandam parvam ex cedro, siccam quidem, neque aqua ullatenus madefactam, etsi nataret. In parte autem ejus priore versus sapientem, ramus palmæ, exiguus quidem et viridis, crecebat. Is postquam plurima cum veneratione arcam in scapham suam recepisset, ecce arca sponte se aperuit, in qua reperti sunt liber et epistola: uterque in membrana pura scriptus, et sindonibus linteis involutus. Liber continebat canonicos libros universos Veteris et Novi Testamenti, prout vos illos habetis (etenim satis scimus quos libros ecclesiæ apud vos recipiant) atque apocalypsis ipsa, et nonnulla alia ex Novi Testamenti scriptis, quæ eo tempore edita non erant, nihilominus eo libro continebantur. Quod vero ad epistolam, illa in hæc verba scripta erat:"

"Ego Bartholomæus, servus Altissimi, et apostolus Jesu Christi, monitus sum ab angelo, qui in visione gloriæ mihi apparuit, ut arcam hanc maris fluctibus committerem. Itaque testor, et annuntio, ei populo, ad quem Deus ordinaverit hanc arcam appellere; eo ipso die ad eos venire salutem, et pacem, et bonam voluntatem a Patre, et Domino Jesu."

"Præterea in duobus his scriptis, tam libro, quam epistola, operatus est Deus miraculum insignè, illi, quod apostolis ostendit (dono originali linguarum) non dissimile. Etenim, cum eo tempore in hac terra viverent Hebræi, Persæ, et Indi, præter ipsos indigenas, singuli in libro illo, ac epistola, legerunt, ac si in lingua cujusque propria scripta fuissent. Hoc pacto (fratres mei) servata est hæc terra ab infidelitate (quemadmodum et reliquiæ mundi veteris servatæ fuerint ab aquis) per arcam, ope apostolicæ et miraculosæ evangelizationis sancti Bartholomæi." Atque hic loqui desiit, quando nuncius quidam venit, qui eum accersivit. Sicque eo colloquio nihil aliud intervenit.

Die postero, statim a prandio, rursus ad nos venit præpositus; seque excusavit, dicens, se pridie a nobis subito et inopinato avocatum, nunc vero rediisse, ut illud compensaret, tempusque nobiscum una innumeret, si modo gratum nobis consortium ejus aut colloquium fuerit. Respondimus, "Imo illud tam gratum nobis accedit, ut nec miseriarum præteritarum, nec periculorum futurorum memores simus, quamdiu colloquio ejus fruamur." Addidimus, existimare nos horam unam, sermones cum illo conserendo insumptam, annis integris vitæ nostræ prioris præstare. Inclinavit se paululum, et postquam consedissemus, dixit: "Bene habet, quaesti-

ones vestræ sunt." Tum unus e nostris, parva interposita mora, ita dixit: esse rem quandam, cujus cognoscendi quidem avidi, interrogandi autem timidi essemus, ne forte nimio plus præsumpsisse videremur: veruntamen singulari ejus erga nos humanitate confirmatos (cum nos vix pro exteris ducamus, qui servi ejus addictissimi et devotissimi sumus) ejus proponendi libertate usuros, humillime obstantes, ut si responsione vix dignaretur, quæstioni tamen ignosceret, licet eam rejiceret. Dixit: nos observasse satis, et memoria adhuc tenere, verba illa ab ipso prolata, terram hanc felicem, in qua jam pedem figimus, paucis admodum cognitam esse, atque nihilo secius plerasque orbis nationes satis nosse: id quod verum esse plane perspiciebamus, quandoquidem linguas Europæ callerent, et res nostras in plurimis intelligerent, cum nos e contra in Europa, post tot et tam remotas navigationes, hac ætate postrema susceptas, nihil prorsus de hac insula inaudiverimus. Hoc mirari satis non posse, cum nationes omnes, aut per peregrinationes in partes externas, aut per adventus exterorum ad eas, sibi invicem innotescant. Licet autem, qui in natione externa peregrinatur, plus notitiæ et informationis visu nanciscatur, quam domi manens a peregrinante, auditu solo, addiscere possit; attamen, utroque modo, notitiam mutuam, aliqua ex parte, haberi posse. Verum quantum ad hanc insulam, nunquam nova ad nos allata de alicujus navis ab ea ad oras nostras appulsu, nedum ad littora Europæ, neque ad littora Indiarum, occidentalis aut orientalis: neque aliquid accepisse de navi ulla, cujuscunque ea populi sit, quæ a terra hac redierit. In hoc autem illud, quod admirationem movet, non consistere, situm enim ejus (ut dominatio sua dixerat) in tam vasti pelagi conclavi secreto, huic rei in causa esse posse; verum ut illa contra notitiam linguarum, librorum, rerum haberent, gentium ab iis tam immensis spatiis dissitarum, id omnem admirationem superare, neque nobis quomodo fieri hoc possit, ullo modo in mentem venire: nobis siquidem divinarum mentium et potestatum, non autem hominum quorumvis conditionem videri, ut ipsæ occultæ et invisibiles lateant, cæteris interim illarum visui patentibus, et velut in aprico positis. Ad hæc verba præpositus placide subrisit, et dixit: non sine causa veniam nos hujus quæstionis petere, siquidem innuere, ac si terram hanc non aliam, quam terram magorum, duceremus, quæ spiritus aëros in omnes partes emitteret: quorum ope et famulatio quæcunque in aliis regionibus gererentur pernosceret. Omnes uno ore humiliter respondimus, vultu tamen ita composito, ut eum non alias, quam joco, hoc dixisse præ nobis ferremus: nos sane facile in eam cogitationem venire, esse aliquid in hac natione plane supernaturale; illud tamen potius angelicum, quam magicum, ducere: verum ut perspicue apud dominationem suam eloqueremur, quid tandem illud fuerit, quod scrupulum hunc, ne quæreremus, injecisset, nihil ex hac re sapuisse, sed quoniam in sermone præterito eum innuisse meminimus, gentem istam de silentio erga peregrinos per leges cavisse. Ad hoc respondit: "Recte quidem meministis: itaque in iis, quæ proferre apud vos instituo, nonnulla

reservanda sunt, quæ omnino revelare licitum non est: haud pauca tamen supererunt, quæ satisfactionem vobis abunde præstabant.

"Intelligetis igitur (id quod vobis fortasse vix credibile videbitur) ter mille circiter abhinc annis, aut paulo plus, navigationes orbis terrarum (præsertim in regiones remotas) majores fuisse, et magis strenue susceptas, quam hodierno die. Ne existimetis, nescire me, quantum apud vos creverint navigationes intra annos centum et viginti proxime elapsos: satis mihi hoc cognitum. Et tamen, majores (inquam) fuerunt, eo tempore, quam nunc. Sive conservatio illa reliquiarum humani generis, per arcam, a diluvio universalium hanc navigandi confidentiam hominibus indiderit, sive aliud quid in causa fuerit. Sed utcunque, hoc, quod dico, verum est. Phœnices, ac præcipue Tyrii magnas habebant classes. Similiter habebant et Carthaginienses, colonia ipsorum, quamvis ad occidentem magis sita sit. Ab oriente vero, classes Ægyptiorum, et Palæstinæ, potentes erant, et numerosæ. China autem, et Atlantis magna (quam vos Americam vocatis) quæ nunc yuncas tantum et canoas habent, vi magna abundabant, illis diebus, navium grandiorum. Insula hæc nostra (ut ex fidelibus ejus ætatis historiis plane liquet) instructa tum fuit navibus mille quingentis, iisque fortibus, et magnæ capacitatis. De hoc, quod loquor, apud vos exigua admodum, aut nulla est memoria, at nobis pro certo cognitum est.

"Eo etiam tempore, ad insulam hanc naves et carinæ earum omnium, quas modo nominabam, nationum appulerunt. Atque, ut fieri solet, naves illæ præter populares suos vehebant multos ex aliis regionibus, quæ ipsæ maritimæ non erant; veluti Persas, Chaldæos, Arabes; ita ut omnes fere nationes potentes et celebres locum hunc adierint: ex quibus nonnullas habemus stirpes, et tribus tenues, usque in hodiernum diem. Quod vero ad naves nostras attinet, in omnes propemodum oras navigarunt, tam ad fretum vestrum, quod columnas Herculis appellatis, quam ad alias, tum Mediterranei, tum Atlantici maris, regiones: veluti ad Paguinum, (civitatem in China antiquissimam,) quæ eadem est cum Cambalu, et Quinze, ad orientale pelagus sita, non procul a finibus Tartariæ orientalis.

"Eodem præterea tempore, et seculo integro insequente, aut amplius, populi magnæ Atlantidis potentes admodum erant. Etsi enim narratio et descriptio, a viro magno vestri orbis facta, (scilicet, progeniem Neptuni sedes suas ibi fixisse,) tum de magnificis, templo, palatio, urbe, et colle, quin et de multiplicibus pulchrorum et magnorum fluviorum spiris, (quæ, tanquam totidem torques, templum illud et urbem cingebant,) ac denique de grandibus illis insignibus ascensus, per quos ad eadem perveniebatur, veluti per scalam quandam cœli, sit fabulosa et poëtica: hoc tamen veritatis immiscetur, regionem illam Atlantidis, tam illam Peruvia, tunc Coyam vocatam, quam illam alteram regni Mexicani, tunc dictam Tirambel, regna fuisse armis, classe, et opibus, potentia et superba. Tam (inquam) potentia, ut eodem tempore (vel saltem intra spatium decem annorum) duas magnas expeditiones navales susceperint: hi nimirum de Tirambel, per Atlanticum

mare, usque ad mare Mediterraneum, illi autem de Coya per mare Australe, usque ad hanc insulam nostram. De priore autem expeditione videtur auctor ille vester aliquid a sacerdote Ægyptio, quem citat, hausisse. Pro certo enim expeditio talis fuit. Utrum vero Athenienses antiqui illi fuerint, qui copias illas repulerunt et profigarunt, atque hæc eis gloria tribuenda, non habeo quid dicam: illud extra omnem dubitationem, nec navem, nec virum, unquam ab ea expeditione rediisse, neque meliore fortuna usa esset classis illa Coyæ, quæ nos invasit, nisi in hostes elementiores incidisset. Etenim rex insulæ hujus (nomine Altabin) vir prudens, et imperator in bello optimus, cui tum hostium, tum propriæ vires, satis exploratæ erant, ita rem gessit, ut copias eorum terrestres, postquam in terram descendisset, a classe eorum intercluderet, atque veluti indagine utrasque copias cingeret majori exercitu, quam illorum fuit, et terrestri et navali, sicque eos ad deditioem absque prælio compelleret: cumque in potestate sua essent, haud duriores condiciones imposuit, quam jurjurandum ab iis exigendo, se in posterum, contra illum, nunquam arma laturus: quo facto eos incolumes omnes dimisit. Veruntamen vindicta divina, non multo post, superbos illos ausus ulta est, siquidem, intra curriculum centum annorum, aut minus, Atlantis illa magna omnino perditæ et destructa fuit: non terræ motu absorpta, ut vir ille vester affirmat, (etenim tractus ille totus terræ motibus parum est obnoxius,) sed per particulare diluvium, sive inundationem; quandoquidem etiam hodierno die regiones illæ majores habeant amnes, atque etiam montes altiores, qui aquas in planities effundant, quam alia pars quæcunque orbis veteris. Sed illud verum est, inundationem illam non fuisse profundam, non amplius forsan, in pluribus locis, quam ad quadraginta pedes; unde factum, ut licet homines et bestias undique demerserit, silvestres nihilominus habitatores quidam montium evaserint. Aves quoque in tuto fere fuerunt, ad montes aut arbores præaltas convolando. Homines vero, licet in aliquibus locis ædificia haberent altiora, quam quo aquæ pervenire possint; inundatio tamen illa, licet minime profunda, diuturna certe fuit. Unde, qui in valle degebant, propter penuriam cibi, et rerum aliarum necessariarum, fame et inopia perirent. Itaque ne miremini, si America habitatorum tam rara sit, neque si populus ejusdem adeo simplex et barbarus existat. Etenim rationem sic instituere debetis; populum Americanum novum esse, et recentem (inquam) præ cæteris orbis habitatoribus, annis non minus mille. Tantum enim temporis intercesserat inter diluvium universale, et illud Americæ particulare. Siquidem tenues illæ et raræ humani generis reliquiæ, quæ in montibus manserant, in inferiores regionis partes tarde sobolem dederunt; cumque essent homines feri, et omnium rerum rudes (neutiquam Noacho, et filiis ejus similes, qui familia erant, ex universo orbe electa) ad literas, artes, et vitæ cultum, posteris transmittendum, non sufficiebant. Atque insuper, cum in habitationibus suis montanis (propter asperitum frigus regionem illorum) pellibus ursorum, tigridum, et caprorum magnorum et hirsutorum, qui in illis partibus abundant, vestire se consuevis-

sent, postea autem in vallem descendentes, intolerabiles ibi fervores ferre non possent, neque vestium magis levium ulla copia eis præsto esset, coacti sunt morem nude incedendi introducere, qui apud illos usque in hodiernum diem in usu est. Solummodo magna voluptate, et desiderio afficiuntur avium plumas gestandi; atque hoc proculdubio a traditione, et exemplo majorum, qui in montibus habitabant, hauserunt; qui ad hunc forte usum allecti fuerunt ex innumera avium multitudine, alta petentium, cum ima aquis stagnarent. Videtis (fratres) per casum hunc majorem, et temporis quasi miraculum, commercium nostrum cum Americanis cessasse, cum ipi amplius non essent, cum quibus, supra omnes mortales, commercium antea habuimus, utpote regioni nostræ proximis. Quantum vero ad alias orbis partes, manifestissimum est, seculis succedentibus, sive propter bella mota, sive ex periodo et vicissitudine temporum, navigationes ubique majorem in modum elanguisse: præcipue autem navigationes longinquas; propterea quod triremes, et ejusmodi carinæ, quæ oceanum vix tolerare possent, in usum venire cœperunt. Hinc igitur, quam ob causam, notitia illa regionis nostræ, quæ a navigantibus ad nos acquiri potuit, multis abhinc seculis defecerit, clare cernitis; nisi forsan raro eventu talis appulsus obtigerit, quemadmodum ante dies paucos vester. Jam vero de navigationis nostræ in alias partes cessatione aliam vobis causam assignare oportet. Neque enim denegare possum (si verum fateri cupiam) quin apparatus et instructio nostra navalis, numero et robore navium, abundantia nautarum, peritia gubernatorum, et aliis rebus quibuscunque, æque hodie valet, ac olim valebat. Itaque, quid in re sit, quod domi jam sedeamus, separatim vobis declarabo: atque hoc propius accedet ad questionem vestram, quam initio proposuistis, elucidandam.

“Regnavit in hac insula, ante annos mille nongentos, rex, cujus memoriam supra alios omnes maxime colimus et veneramur: non superstitione, sed tanquam divini cujusdam instrumenti, licet hominis mortalis. Nomen ei fuit Salomona. Eum autem pro legislatore hujus gentis ducimus. Regi isti cor Deus indidit latum, et in bonis inscrutabile: qui in illud totus incumbere, ut regnum et populum suum bearet. Itaque, cum secum reputaret, quam sufficiens, et (ut dicam) substantiva, terra hæc ex sese fuerit ad seipsam sustentandam, absque opibus aut copiis exterorum; quippe quæ in circuitu quinque mille et sexcenta milliaria, plus minus, contineret; et maxima ex parte ferax imprimis esset, et bonitate soli præstaret: atque rursus perpendens classem et naves regni, non sequitur applicari et exerceri posse, tam per piscationem, quam per transportationem et vecturam de portu in portum; necnon per navigationes ad insulas quasdam adjacentes, et imperio huic et legibus subditas: tum vero in memoriam revocans, quam felix et florens, eo tempore, regni hujus status fuerit; ita ut mille modis in deterius, sed vix ullo modo in melius, mutari posset; nihil omnino deesse putabat, quo fines suos nobiles plane et heroicos assequeretur, nisi ut quantum humana providentia efficere posset) res illas, quæ suo tempore tam feliciter essent fundatæ et

stabilitate, perpetuitate donaret. Quocirca inter leges alias suas fundamentales, leges plurimas sanxit de introitu exterorum interdicens; qui eo tempore (licet post calamitatem Americanam) satis frequens erat: isthoc instituto, quia a novitatibus et mixturis morum metuebat. Verum est, interdictum simile, de introitu exterorum, scito veteri apud Chineses valuisse, atque etiamnum valere. Sed ibi res est despicibilis, eosque reddidit gentem curiosam, imperitam, timidam, et ineptam. At legislator noster, in lege sua condenda, diversum longe adhibuit temperamentum. Primum enim, jura humanitatis omnia sarta tecta servavit, in institutis et foundationibus suis pro levamine et solatio peregrinorum afflictorum; quod et vos experti estis." Ad quod dictum, ut par erat, consurreximus omnes, nosque inclinavimus. Ille perrexit: "Rex idem, cupiens factis humanitatis consilia politica adjungere; atque humanitati minime convenire putans, ut exteri inviti detinerentur, nec minus rationibus status non convenire, ut redirent, et insulæ hujusce arcana evulgarent, hanc viam inivit. Constituit, ut ex exteris, quibus permissum foret in terram hanc descendere, qui abire vellent, non prohiberentur; qui autem manere præoptarent, condiciones et vivendi facultates a statu reciperent; in qua re visu tam acri polluit, ut, post tot seculorum spatia a lege hac condita, memoriam nullam habeamus, ne vel unicæ duntaxat navis, quæ reditum prætulit; atque tredecim tantum virorum, temporibus diversis, qui in nostris navibus reverti elegerunt. Quid autem pauci illi, qui sic redierunt, de regione hac propararint, nos fugit. Facile autem existimare potestis, quicquid retulerint, non aliter quam pro insomnio quodam habitum esse. Navigationes autem nostras ad partes externas visum est legislatori nostro penitus coercere. In China hoc non fit. Etenim Chineses, quo volunt, et possunt, navigant. Quod satis ostendit, legem illorum, de exteris arceendis, a puillanimitate sola, et metu provenire. Interdictio autem hæc nostra unam tantum recipit restrictionem, eamque certe admirabilem: bonum enim, quod a communicatione cum exteris trahi possit, conservat, malum autem evitat. Id vobis nunc aperiam. Atque hic videbor aliquantisper ab eo, quod agitur, digredi: sed mox hoc ipsum ad rem pertinere perspicietis. Intelligetis itaque (amici mei præcari) inter acta illius regis unum maxime eminere. Illud est, fundatio sive institutio ordinis cujadam et societatis, quam nos Domum Salomonis vocamus. Nobilissimam dico (quantum nos arbitramur) omnium, per terrarum orbem, foundationem, atque regni hujusce luminare magnum. Domus hæc studiis et contemplationibus operum et creaturarum Dei dicata est. Putant nonnulli, nomen traxisse a fundatore, paululum corruptum: ac si deberet dici Salomonæ domus: verum archiva ipsa authentica sic scriptum habent, prout in sermone quotidiano nunc profertur. Itaque nomen fluxisse arbitrator a rege illo Hebræorum, qui apud vos celebris est, nobis autem non ignotus. Habemus enim portiones aliquas operum suorum, quæ apud vos desiderantur. Historiam illam naturalem dico, quam conscripsit "De plantis omnibus, a cedro Libani, usque ad hyssopum, quæ de pariete egreditur, atque

de omnibus rebus, quibus vita et motus inest." Hinc animum meum cogitatio illa subiit, regem nostrum, quandoquidem se in multis cum rege illo Hebræorum consentire sensit, (qui multis ante eum annis vixerat,) ejus titulo foundationem hanc honorasse. Atque in hanc opinionem præcipue adducor, quod in historiis admodum antiquis invenio, societatem hanc interdum Domum Salomonis vocari, interdum autem Collegium operum sex dierum. Unde persuasum habeo, regem illum nostrum præcellentem ab Hebræis addidicisse, Deum mundum hunc, et omnia quæ ei insunt, sex dierum spatio creasse, ideoque cum domum illam institueret ad inquisitionem et inventionem naturæ veræ et interioris rerum omnium, quo Deus conditor majorem reciperet gloriam, ob fabricam earum; homines autem uberiorem perciperent fructum in usu earum; indidisse etiam ei illud alterum nomen, nimirum, Collegii operum sex dierum. Verum, ut redeamus tandem ad id quod nunc agitur. Postquam rex omnem subditis navigationem interdixisset, præterquam in partes huic imperio subditas, hanc nihilominus ordinationem sancivit; nimirum, singulis duodenis annis mittendas ex hoc regno naves binas, in partes orbis diversas: in utraque navium harum tres ex fraternitate Domus Salomonis seorsum vehendos: his in mandatis dandum, ut nos, de rebus, et statu locorum illorum, ad quos appellerent, certiores facerent, præcipue autem de scientiis, artibus, manufacturis, et inventionibus mundi universi: utque in reditu libros, instrumenta, exemplaria in unoquoque genere, ad nos perferrent: navibus, postquam in terram fratres exposuissent, redeundum; fratribus autem usque ad novam missionem peregre manendum: naves hæc non aliis mercibus instruendas, quam commeatus copia bona, nec non thesauri satis larga quantitate, in usum fratrum, ad res eas coëmendas, et homines tales remunerandos, quibus opus esset. Jam vero, ut vobis proferam modos, quibus vulgus nautarum coërentur, ne in terris, ad quas appellant, dignoscantur: aut quibus modis, in terram expositi, sub nomine nationum aliarum lateant; aut ad quæ loca navigationes nostræ designatæ sint: aut quæ loca novis rursus missionibus præfigantur, atque alias hujus generis circumstantias, quæ ipsam practicam partem spectant, mihi proloqui fas non est: neque multum certe ad quæstionem vestram conducet. Sic itaque videtis, commercium nos instituisse, non pro auro, argento, et gemmis, non pro sericis, aut aromatibus, neque pro aliis quibusvis rebus crassis, sed tantum pro creatura Dei prima, luce scilicet: luce, inquam, in quacunque tandem terræ regione prorumpente et germinante.

Cumque hæc dixisset, contuit: nos etiam aliquandiu silebamus. Revera enim omnes attoniti eramus, cum audiremus res tam mirabiles oratione tam probabili recenseri. Ille autem, animos nostros cogitationibus aliquibus gravidis sentiens, partui autem non maturus, civiliter admodum nos explicuit; et ad quæstiones de itinere, et fortunis nostris deflexit: sub finem autem dixit, recte nos facturos, si consultationem inter nos iniremus de tempore pro mora nostra a statu petendo. In quo jussit minime verecundari nos; tempus enim, quodcumque nobis postulare visum fuerit, ipse non dubitabat se impe-

traturum; ad quod dictum surreximus omnes, et humiliter fimbriam liripipii sui exoculari cœpimus. Ille autem renuit, et continuo a nobis discessit. Postquam vero inter homines nostros evulgatum fuit, statum illum conditiones exteris, qui manere vellent, largiri solere; vix ulli eorum persuadere potuimus, ut navem nostram curarent, aut quo minus præpositum mox adirent ad conditiones petendas. Sed, non sine magna difficultate, eos tandem cohibuimus, donec ex consensu, quid faciendum esset, statueremus.

Jam autem tanquam liberos nos rebamur, cum metum omnem extremæ ruinæ depulsum vidimus. Jucundissime item viximus: civitatem ipsam, nec non pomœrium illud, quod nobis concessum erat, perambulantes: in quo, quæcunque visu digna, aut grata erant, perquirebamus, et spectabamus. Interea familiaritatem cum plurimis ex civitate, iisque non ex inferiore ordine, contraximus: inter quos humanitatem tantam perspeximus, adeoque consuetudinem tam jucundam et liberam peregrinos veluti in sinu amplectendi, et fovendi, ut vix abesset, quin oblivionem nobis omnium eorum, quæ in patriis nostris chara antea erant, induceret. Quin et quotidie incidimus in res observatu et relatu dignissimas. Certe si ullibi terrarum speculum sit, quod oculos hominum allicere debeat, et detinere, illud exhibet hæc regio. Evenit die quodam, ut duo ex nostris invitarentur ad festum quoddam (quod vocant) familiæ. Mos autem celebrandi festum illud cœneri merito possit maxime pius, ex ipsa naturæ lege depromptus, et veneratione dignus: monstrans proculdubio nationem illam omni bonitate referatam esse. Qui talis est: concessum est per leges regni cuivis, cui vivere contigerit dum triginta e corpore suo prognatos simul superstites viderit, eosque omnes tertium ætatis annum egrossos, festum hoc celebrare. Quod ex publico sumptu fit. Pater familiæ (quem Tirsanum vocant) biduo ante festum, tres ex amicis suis, quos eligere placuerit, sibi advocat, ac insuper magistratus civitatis, aut oppidi, ubi festum celebratur, præsentia honoratur: omnes autem ex familia utriusque sexus adessee jubentur. Per dies hosce duos Tirsanus cum amicis illis suis, et magistratu, circa bonum familiæ consultationem init. Tunc si quæ discordiæ, aut lites, in familia obortæ sint, terminantur, et sedantur. Tunc si qui ex familia in paupertatem redacti fuerint, aut quovis modo afflictii, iisdem subveniendi, et necessarium victum suppeditandi ratio initur. Tunc si qui eorum vitis addicti, aut genus vitæ iners et pravum agant, reprehenduntur, et censuram subeunt. Quintiam circa nuptias, et vitæ conditionem alicui eorum maxime convenientem, consilium tunc capitur; et alia similia tractantur, et decernuntur. Magistratus ideo assidet, ut decreta et mandata Tirsani, si quis forte ex familia non pareat, auctoritate sua muniat, et executioni demandat: licet hoc raro admodum requiratur, tantam, nimirum, ordini naturæ obedientiam præstant. Tunc etiam Tirsanus ex filiis suis unum eligit, qui cum eo in domo sua perpetuo vivat; qui exinde vocatur filius vitis. Ratio nominis postea patebit. Die festo, post liturgiam divinam celebratam, progreditur Tirsanus in aulam quandam amplam, ubi solennia festi peraguntur: quæ aula a

parte superiori gradum habet unicum ascensus. Illic ad parietem, in medio, collocatur cathedra, cum mensa, et peristromate super eam: supra cathedram extenditur conopeum, rotundum, vel ovatum, ex hedera; hedera certe præ nostra plurimum albescente colore, non absimili folio populi, quam vocamus argenteam: sed aliquanto magis splendido: viret enim per hiemem. Conopeum autem filis argenteis et byssinis diversorum colorum, quæ hedera colligant, eleganter contextitur; atque opificium plerumque est alicujus ex filiabus familiæ; in vertice reticulo tenui ex bysso et argento velatur, verum materia conopei hedera vera est: ex qua, post solennitatem finitam, amici familiæ folium aliquod, aut ramusculum, decerpere amant. Progreditur Tirsanus, prole sua universa stipatus, masculis præeuntibus, fœminis a tergo insequentibus. Sin mater familiæ fuerit, quæ prolem universam peperit, collocatur ad dextrum latus cathedræ, orchestra quædam cooperta cum ostio secreto, et fenestris, ubi illa clam sedet. Tirsanus, postquam ingressus fuerit, in cathedra illa considet, universa familia juxta parietem, tam a tergo, quam a lateribus aulæ, super gradum ascensus, secundum ordinem ætatis, non habito sexus discrimine, se sistente, et super pedes erecta. Cum consederit (aula interim frequentia haud parva referta, sed sine turba aut strepitu) post moram nonnullam ingreditur ab inferiori parte aulæ taratannus, (quod verbum apud eos significat haraldum,) cujus latera tegunt adolescentuli duo; quorum unus rotulum gerit ex splendente illa lutea membrana, alter botrum uvarum aureum cum pedicillo sive caule longa. Haraldus, et uterque adolescentulus, palliis sericis coloris thalassini vestiuntur; verum pallium haraldi radios habet aureos, et dimittitur adeo ut terram nonnihilo verrat. Haraldus, ter se aliquantulum inclinans, accedit usque ad gradum ascensus, ibique primo in manum sumit rotulum. Rotulus iste charta regia est, et redditum, privilegiorum complurium, exemptionum, et insignium honorificorum, patrifamiliæ concessorum, dona continet: inscribitur autem semper: "Tali, amico nostro dilecto, et creditori:" qui titulus, a rege, in hoc solummodo casu tribuitur. Aiunt enim regem nulli debitorem esse, nisi ob propagationem subditorum. Sigillum huic chartæ affixum est regis effigies, auro insculpta: atque quamvis hujusmodi chartæ, ex officio, et tanquam jure, expediuntur, pro arbitrio tamen, secundum numerum et dignitatem familiæ, variantur. Hanc chartam perlegit haraldus voce alta; dumque legitur, Tirsanus se in pedes erigit, a duobus filiorum suorum, quos delegent, supportatus. Tum haraldus super gradum ascendit, et Tirsano chartam in manus tradit: quo facto, ab omnibus, qui absunt, acclamatio magna fit lingua sua, quæ hoc significat, "Felices sunt populi Beasalem." Deinde haraldus ab adolescentulo altero botrum uvarum recipit, qui (ut diximus) aureus est, tam caule, quam uvæ ipsis, sed uvæ eleganter colorantur: atque, si masculi ex familia numero excedant fœminas, uvæ purpureæ sunt, cum sole parvo in vertice posito: sin fœminæ mares, uvæ virides sunt, cum luna crescente in vertice. Uvæ autem numerum liberorum familiæ exæquant. Iste etiam racemus aureus ab haraldo traditur Tirsano; qui eus-

dem statim filio illi, quem antea elegerat ut secum in domo maneret, tradit: is autem perpetuo eum ante patrem gestat, quoties in publicum progreditur, tanquam insigne honoris: atque inde nomen (ut dictum est) filii vitis accipit. Peracta hac solemnitate, Tirsanus se recipit, atque post moram aliquam interjectam rursus ad prandium egreditur, ubi sedet sub conopeo solus, neque cuivis ex liberis, cujuscunque gradus aut dignitatis, una sedere conceditur: nisi forte fuerit ex domo Salomonis. Servitium mensæ præstant masculi ex familia, qui hoc faciunt, quoties ei aliquid subministrant, in genua procumbentes: femine autem tantum juxta parietem circumstant. Pars aulæ, quæ infra gradum est, mensas habet utrinque sitas pro convivis, quibus decore admodum, et ordine bono, ministratur: sub finem autem prandii (quod apud illos in maximis suis solennitatibus, non ultra sesqui-horam durat) cantatur hymnus, pro ingenio componentis variatus, (habent enim poetas optimos,) subjectum vero ejus perpetuo sunt laudes Adami, Noachi, et Abrahami: quorum primi duo universi generis humani parentes exstiterunt, tertius, pater fidelium. Concluditur tamen semper cum gratiarum actione propter nativitatem Servatoris nostri: in quo universæ terræ generationes benedictionem consequuntur. Finito prandio, Tirsanus iterum se recipit: atque solus subducitur in locum interiorum, ubi preces secretas fundit: dein progreditur tertio, ut benedictionem suam impertiat universis liberis suis, qui eum circumstant, ut prius. Tum eos nominatim ad se singulos vocat, prout ei placuerit, licet raro ætatis ordo immutetur. Persona, quæ vocatur (mensa prius semota) continuo in genua ante cathedram procumbit: pater autem manus capiti ejus imponit, atque ei benedicit in hæc verba: "Fili Bensalem (aut filia Bensalem) pater tuus dicit: ille, per quem aurem vilem hausisti, verbum loquitur: Benedictiones Patris æterni, Principis pacis, et Columbæ sanctæ, descendant super te, et dies peregrinationis tuæ reddant multos et bonos." Hanc benedictionem singillatim impertit. Quod si aliqui ex liberis masculis virtute et meritis præcellerint, (modo numerum duorum non excedant,) post benedictionem generalem, seorsum eos vocat: manus autem super humeros eorum extendens, illis stantibus, sic infit: "Fili, bene habet quod natus es, da Deo gloriam, et in finem persevera." Atque una ei monile tradit, in figuram spicæ frumenti formatum: quod is semper postea in fronte turbani, aut galeri sui, portat. Hoc peracto, ad musicam et saltationem, et hilaritates id genus alias, apud eos usitatas, pro residuo diei se accingunt. Atque iste est modus festum illud celebrandi.

Intra paucos dies sequentes, amicitiam et familiaritatem cum mercatore quodam civitatis illius, cui nomen Joabin, contraxi. Erat autem Judæus et circumcisius. Paucas enim quasdam Judæorum stirpes inter eos nunc degentes habent, quibus religionem suam permittunt: quam veniam facilius indulgere possunt, quandoquidem Judæi illi a Judæis in reliquis orbis partibus moribus longe diversi sunt. Nam cum Judæi alii nomen Christi odio habeant, atque adversus populum, inter quem degunt, secretam et inveteratam malitiam foveant, hi contra Ser-

vatori nostro attributa plurima sublimia reddunt, nationem autem Bensalem amant impensissime. Sane vir iste, de quo loquor, confiteri semper solebat, Christum natum fuisse ex virgine, atque homine mero majorem extitisse: tum narrare solebat, quod Deus eum Seraphim, qui thronum suum stipant, præfecit: vocabat eum etiam quandoque viam lacteam, quandoque Eliam Messie, et aliis compluribus nominibus magnis eum insigniebat. Quæ omnia, licet divina Christi majestate longe inferiora sint, a stylo tamen Judæorum cæterorum multum differunt. Regionis autem Bensalem laudandæ idem nullum faciebant finem: quin et credi voluit, ex traditione quorundam Judæorum illic degentium, populum Bensalem ex stirpe Abrahami, per alium filium, quem Nachoram vocat, fuisse: quin et Mosem, per secretam quandam cabalam, leges illas, quibus populus de Bensalem hodie utitur, condidisse: atque in adventu Messie, cum consessurus sit Hierosolymis in throno suo, regem Bensalem ad pedes ejus sessurum; cæteris regibus ad distantiam longam amotis. Veruntamen, somnia ista Judaica si seponas, vir fuit admodum prudens, et doctus, et consilii profundi; quique legum et consuetudinum gentis illius Bensalem perquam gnarus extitit. Inter sermones alios, die quodam, forte dixeram, me relatione illa, quam e quibusdam ex nostris acceperam, circa consuetudinem illorum in celebrando festo, quod vocant, familiæ, magnopere delectatum esse; neque enim videbar mihi unquam de solemnitate aliqua inaudivisse, in qua natura tam insigniter præsideret. Quoniam vero familiarum propagatio ex nuptiali copula procedit, cupiebam aliquid ex eo rescire, tum circa leges et consuetudines ipsorum circa nuptias; tum utrum matrimonia intemerata conservarent; tum denique utrum polygamia inter illos interdiceretur. Quandoquidem nationes, quæ subditorum propagationi tantopere studerent, polygamiam plerumque tolerarent. Ad hæc respondit: "non sine causa certe institutionem illam excellentem festi familiæ laudas. Quin et experientia apud nos comprobatum est, familias illas, quæ ex festi illius benedictione participarunt, mirifice postea semper floruisse. Verum arrige aures modo, et narrabo tibi quod scio. Intelliges, sub sole vix reperiri gentem ullam tam castam, quam hæc de Bensalem: nec ab omni labe, et pollutione adeo puram. Virginem mundi plane dixerim. Memini me legisse, in uno ex libris vestris Europæis, de sancto inter vos eremita, qui spiritum fornicationis videre cupiit, atque parvum, deformem, et turpem Æthiopem illico ei apparuisse: quod si spiritum castitatis Bensalem videre expetisset, proculdubio in forma Cherub alicujus pulchri et gloriosi ei apparuisset. Nihil enim inter mortales pulchrum, aut admiratione dignum, præ gentis istius animis castissimis. Quamobrem notum tibi velim, nulla inter eos esse lupanaria, prostibula nulla, nullas mretrices conductitias, neque aliquid hujusmodi. Imo non sine detestatione quadam mirantur, vos in Europa talia tolerare. Aiunt vos nuptias de officio suo deturbasse: nuptiæ enim in remedium concupiscentiæ illicitæ institutæ sunt; concupiscentia autem naturalis ad nuptias instar stimuli est. Verum cum hominibus remedium, corruptis suis cupiditatibus magis gratum,

adsit, nuptiæ fere expelluntur. Itaque, innumeros apud vos videre est, qui uxores non ducunt, sed cœlibatum potius impurum, et libidinosum, præoptant, quam jugum matrimonii honorabile. Multi insuper, qui uxores ducunt, sero hoc faciunt, cum juventutis flos et robur evanuerint. Sin forte matrimonium contrahant, quid aliud est matrimonium illis, quam mercatura mera? in quo affinitas, aut dos, aut existimatio quæritur, cum desiderio nonnullo (sed tamen tanquam rei indifferentis) sobolis: minime autem fidelis illa inter virum et fœminam nuptialis unio, quæ principio instituta est, in mentem venit. Neque etiam fieri potest ut illis, qui tam magnam partem ætatis et roboris sui adeo viliter consumpserunt, liberi (pars nostri altera) omnino in pretio sint. Quin et durante vinculo matrimonii, numnam res hæc in melius vertitur, ut fieri debuit, si excessus isti necessitatis solummodo causa tolerarentur? Nequaquam: manent autem desideria eadem etiam post matrimonium, in matrimonii ipsius dedecus et opprobrium. Neque enim lupanarium frequentatio, aut consuetudines meretriciæ, in maritis magis, quam in cœlibem vitam agentibus, puniuntur. Ad novos autem amores proclivitas, et meretriciorum amplexuum delectatio (ubi peccatum in artem conversum est) nuptias reddit rem insipidam, et veluti onus, aut tributum quoddam. Audiunt, hæc a vobis defendi, utpote ad majora mala evitanda tolerata: veluti, adulteria, virginum constuprationem, libidinem contra naturam, et similia. Verum prudentiam hanc censent esse præposteram: eamque vocant conditiones Lothi; qui, ut hospites a contumelia eximeret, filias obtulit. Imo ulterius dicunt, ex hoc parum aut nihil lucri fieri, cum vitia eadem, et appetitus pravi usque maneant et abundant; quandoquidem libido illicita instar fornacis sit, ubi, si flammam omnino contineas, illicio exstinguitur: sin exitus aliquis detur, furit. Quantum vero ad amores masculorum, istos ne fando quidem norunt, neque tamen amicitias per universum orbem magis fideles, et inviolatas, reperies. Atque (ut verbo dicam, sicut antea quoque dixi) non ullibi legi tantam vigere castitatem, quantam in hac terra. Quin et sermo apud eos usitatus est, Qui impudicus est, sui reverentiam perdit: reverentia autem sui, secundum Deum et religionem, vitiorum omnium frænum potentissimum."

Hæc cum dixisset, Judæus ille, vir egregius, paulisper tacuit. Atque ego, licet audiendi magis, quam loquendi, cupidus, decorum tamen existimans, ut dum ille aliquantisper respiraret, ipse protinus non silerem, hoc tantum dixi, me ad eum verbis illis usurum, quibus usa est ad Eliam vidua Sareptana, venisse eum ad revocanda in memoriam nobis peccata nostra; quodque ingenue confiteri oportet, abundare justitiam Bensalem plus, quam Europæorum. Ad quæ verba paululum se inclinavit, et sermonem hoc modo continuavit:

"Leges etiam habent circa nuptias complures, prudentissimas sane et honestissimas. Polygamiam non tolerant. Sanxerunt, ut nec nuptiæ celebrentur, nec contractus de nuptiis futuris fiant, nisi post mensem a tempore, quo uterque mutuo se primum conspexerunt. Nuptias absque consensu parentum factas,

irritas quidem non habent, sed hæreditate malectant: etenim talium nuptiam liberos duabus tertiis hæreditatis privant. Equidem, in libro cujusdam e vestris, de republica quadam imaginaria, legi, ubi matrimonium contracturis se invicem nudos conspiciere permittitur. Hoc illi non probant. Etenim contumeliæ loco ducunt, ut quis, post notitiam tam familiarem rejiciatur: veruntamen, propter defectus in viris et mulieribus complures secretos, qui matrimonium postea infelix reddere possint, more utuntur magis civili: prope oppida singula, stagna duo habent; quæ vocant stagna Adami et Evæ; ubi permisum est, uni ex amicis viri, atque itidem alteri ex amicis fœminæ, spectare eos separatim in balneo lavantes."

Dumque hoc modo colloqueremur, venit quidam, qui nuncius videbatur, indutus tunica picta et inaurata; qui Judæum allocutus est. Unde ad me vertit, et dixit, "Ignosceas mihi, obsecro; sine mora hinc accersor." Postridie mane rursus ad me venit Judæus, lætabundus, ut videbatur, et dixit: "Perlatus heri est nuncius ad præfectum arbis, intra dies septem accessurum huc unum ex patribus domus Salomonis. Duodecim jam anni elapsi sunt, ex quo ullum eorum hic vidimus. Adventus ejus solennis futurus, causa in occulto. Carabo, ut tibi et sociis tuis locus commodus appareat, unde celebritatem ingressas ejus spectare possitis." Gratias ei egi, et dixi, nuncium hunc de accessu ejus mihi pergratissimum esse.

Die constituto ingressus est pater. Vir fuit staturæ, et ætatis, mediocris, aspectu decorus, vultum præ se ferens quasi miserantia. Vestitus erat toga, ex panno nigro, sincero, cum manicis largis, et capa. Vestis interior ex lino erat, elegantissimo certe et albissimo, usque ad pedes demissa, cum balteo itidem candido, ex lino. Liripipium etiam gestabat circa collum, ex lino purissimo. Chirothecas habebat sumptuosas, et gemmis ornatas. Calceos hyacinthinos ex holoserico. Collum usque ad humeros nudum. Galeris figura galeæ erat, aut monteræ, ut vocant Hispani: sub qua propendebant cincinni ejus, subripsi, et modo decenti compositi. Color eorum subniger, quemadmodum et barbæ, quæ in figuram rotundam tonsa erat. Vehabatur autem in cathedra splendida, sine rotis, lecticæ more, binis equis, magnifice phaleratis ex holoserico cœruleo, auro intexto, cathedram ad utrumque finem sustentantibus: una cum duobus cursoribus, ad utrumque latum cathedræ, pari ornata. Cathedra ex œdro erat, inaurata, atque crystallo ornata: nisi quod pars anterior quadras haberet ex sapphiris, auro interstinctis; posterior autem similis ex smaragdus coloris Peruvianis. Etiam in medio verticis cathedræ sol erat, ex auro radians: et in fronte ejus Cherub parvus, alis expansis, ex auro itidem. Operimentum cathedræ erat pannus, ex filis aureis, cum serico cœruleo. Cathedram præbant quinquaginta juvenes, in tunicis laxis ex serico albo, ad tibiam mediam, et tibialibus ex serico itidem albo, calceis autem ex holoserico cœruleo, et galeris ex eodem, cum plumis elegantibus diversorum colorum, galearum ambientibus, in formam chordæ. Proxime ante cathedram incedebant duo viri, capitibus nudis, ves-

titi linteo albo, usque ad talos demisso, et succincti, calceis itidem ex holoserico cœruleo: qui gestabant, alter crucem, alter pedum pastorale: neutrum ex metallo, sed crucem ex xylobalsamo, pedum ex cedro. Equites comitabantur nulli, nec ante, nec pone cathedram, ea (credo) ratione, ut tumultus omnis, et strepitus, evitarentur. Post cathedram sequebantur magistratus et fraternitates urbis. Sedebat solus, super pulvinar, ex holoserico quodam hirsutiore, coloris cœrulei: sub pedibus autem vestem stragulam habebat ex serico item colorum diversorum, similem Persicæ quidem, sed elegantiore. Dextram, qua ibat, sustulit nudam, populo benedicens, sed cum silentio. Plateæ ita erant ordinatæ, ut via ampla pateret, nullibi interclusa: neque (credo) acies unquam in exercitu ordinata melius fuit, quam populus, eo tempore, in plateis. Quin et intra fenestras ipsas non indecenter stabant spectatores, sed quisque velut ordine suo locatus. Celebritate finita, Judæus mihi dixit: "Per aliquot jam dies detinebor, quo minus vobiscum pro solito, et ut cupio, versari possim: eo quod a præfecto urbis munus mihi demandatum est ut viro huic summo inservirem." Triduo post, Judæus ad me reversus est, et dixit: "Bonis avibus hac adventis: pater enim domus Salomonis de vestra in hac urbe mora certior factus est: mihi que mandavit, ut renunciem vobis, se universam societatem vestram ad conspectum suum admissurum, seorsum etiam, cum uno aliquo vestrum, quem ad hoc deligetis, collocaturum. Cui rei diem perendinum designavit. Quoniam autem vos benedictione sua impertire in animo habet, tempus ante-meridianum præstituit." Die et hora præfixis venimus: ego autem a sociis meis ad privatum ibid colloquium deputatus sum. Invenimus eum cubiculo specioso, aulæis splendentibus instructo, et tapetibus strato, absque ullo gradu ascensus ad cathedram ubi sedebat. Sedebat super solium humile, magnifice ornatum, supra caput autem habebat conopeum ex serico cœruleo, auro eleganter intertexto. Conclave hominibus vacuum erat, nisi quod ab utroque latere solii, honoris ergo, stabat servus, albis vestibus indutus. Vestis ejus interior similis fuit illi, qua amictum eum vidimus in platea. Sed loco togæ, indutus erat pallio, cum capa, ex panno nigro, admodum sincero, circa humeros revincto. Sub ingressum nostrum, prout edocti fueramus, inclinavimus nos submisse: cumque prope solium accessissemus, erexit se in pedes, dextram ejus, exuta chirotheca, attollens, in modum benedicens: nos autem singuli fimbriam liripipii sui, proni exosculati sumus. Hoc facto, reliqui ex sociis meis recesserunt, ego autem solus mansi. Tunc innuit adolescentulis, ut illi quoque se subducerent, meque juxta assidere voluit, atque lingua Hispanica, ad hunc modum, exorsus est.

"Benedicat tibi Deus, fili mi: gemma præcipua ex iis, quas habeo, te impertiar: etenim haud gravabor, propter Dei et hominum amorem, statum verum domus Salomonis tibi revelare. Fili, ut perspicue cognoscas statum verum domus Salomonis, hoc ordine procedam. Primo declarabo finem foundationis nostræ: secundo apparatus et instrumenta, quibus ad opera instruimur: tertio, officia distincta, et func-

tiones, quæ sociis nostris assignantur: postremo, ordinationes, et ritus, quibus utimur.

"Finis foundationis nostræ est cognitio causarum, et motuum, ac virtutum interiorum in natura, atque terminorum imperii humani prolatio ad omne possibile.

"Apparatus autem, et instrumenta nostra, hæc sunt, Habemus cavernas amplas et profundas, diversarum altitudinum. Profundissimæ earum deprimuntur usque ad sexcentas orgyas. Atque nonnullæ ex iis effossæ sunt subter magnos montes, adeo ut si altitudinem montis atque altitudinem cavernæ simul conferas, profunditatem habent aliquæ earum trium milliarium. Reperimus enim altitudinem montis, usque ad planum, et altitudinem cavernæ a plano, idem revera esse; utrumque æque a sole, et radiis celestibus, et aëre aperto, remotum. Has cavernas regionem infimam vocamus. Iisdem autem utimur ad omnes coagulationes, indurationes, refrigerationes, et conservationes corporum. Utimur etiam iis ad mineras naturales imitandas; atque ad productionem novorum metallorum artificialium ex materiis et cæmentis, quæ ibi præparamus et in multos annos sepelimus. Utimur illis quandoque (quod mirum videri possit) ad curationem quorundam morborum, et prolongationem vitæ, in aliquibus eremitis, qui illic vivere præoptant, bene instructi omnibus rebus necessariis; qui certe vivacissimi sunt; a quibus etiam multa addiscimus.

"Habemus etiam alias sepulturas corporum naturalium, et materiarum, non in concavo aliquo, sed in ipsa terra contigua, ubi complura cementa condimus, ut Chineses condunt porcellanam suam. Sed nos ea habemus majori varietate, et nonnulla ex iis elegantiora, quam porcellana Chinesis. Quin et habemus stercorationum, et fimorum varietatem magnam, item congestionum et massarum aliarum, quæ terram impingunt, et fertilem reddunt.

"Habemus turres præaltas, quarum altissimæ usque ad altitudinem semi-milliarias, linea perpendiculari, insurgunt. Nonnullæ vero earum supra montes excelsos sitæ, ita ut, si altitudinem montis et altitudinem turris simul componas, extenditur altitudo in aliquibus earum usque ad tria milliaria ad minimum. Hæc autem loca regionem supremam appellamus, æstimantes aëris tractum universum, inter supremam et infimam, pro regione aëris media. Utimur his turribus, prout altitudinibus et sitibus earum diversis convenit, ad insolationes, refrigerationes, conservationes, et ad meteora diversa spectanda, veluti ventos, pluvias, nives, grandines, et aliqua ex meteoris ignitis. Atque etiam supra eas, in aliquibus locis, sita sunt habitacula eremitarum, quos quandoque visitamus, atque insuper, quid observare debeant, edocemus.

"Habemus lacus magnos, tam salcos, quam dulces: utimur autem iis ad suppetendos nobis pisces, aves item palustres et aquaticas, omnis generis. Utimur etiam iis ad sepulturas corporum nonnullorum naturalium. Differentiam enim operationis invenimus in rebus, quæ in terra sepeliuntur, aut in aëre subterraneo, et iis, quæ in aqua submerguntur. Habemus stagna, in quorum nonnullis aqua dulcis percolatur ex salsa: in aliis autem per artem aqua

dulcis in salsam mutatur. Habemus insuper rupes in medio maris, et loca quædam aprica ad littora ipsa, pro quibusdam operibus efficiendis, in quibus aura maris requiritur. Habemus quoque gurgites rapidos, et cataractas, ad usum complurium motuum violentorum: ad similem usum habemus machinas complures, quæ ventos excipiant, multiplicent, et roborent.

“ Habemus etiam puteos multos, et fontes artificiales, ad imitationem naturalium scaturiginum et balneorum factos vitriolo, sulphure, chalybe, ære, plumbo, nitro, et aliis mineralibus tinctos: habemus insuper puteos et receptacula parva, ad rerum multarum infusionem; ubi aqua (currrens scilicet) virtutem corporum melius et vivacius, quam in vasis, et catinis, excipit. Inter quos habemus aliquos, in quibus conficitur aqua, quam vocamus, paradisi, per præparationes quasdam nostras valde salubris et efficax facta ad sanitatem et longævitatē.

“ Habemus etiam ædificia ampla et spatiosa; in quibus imitamenta et repræsentationes meteororum exhibemus: veluti, nivis, grandinis, pluvie, pluviarum artificialium ex corporibus mistis, non aquis; tonitruum, fulgurum, coruscationum, et generationum insectorum et animalculorum in aëre, veluti ranarum, muscarum, locustarum, et aliorum.

“ Habemus etiam cubacula nonnulla, quæ cubacula sanitatis vocamus, ubi aërem ad libitum tingimus, et temperamus, prout ad curationes complurium morborum, et conservationem valetudinis, conducere, et proprium esse, iudicamus.

“ Habemus etiam balnea pulchra, et ampla, ex diversis mixturis, ad curationem complurium morborum, et corporis humani restaurationem ab arefactione; alia item ad roborationem, et confortationem nervorum, partium vitalium, atque ipsius corporis succi et substantiæ.

“ Habemus etiam pomaria, et hortos amplos et varios, in quibus non tam nobis cordi est pulchritudo ambulacrorum et similium, quam varietas terræ et soli, diversis arboribus et herbis proprii. Aliqui autem eorum arboribus et baccis consiti sunt, ad potuum complura genera faciendā, præter vineas. In his etiam experimenta facimus in sitionum, et inoculationum, arborum tam sylvestrium, quam fructiferarum, quæ multos et magnos effectus producant. Atque efficimus per artem, in iisdem pomariis et hortis, ut fructus et flores proveniant citius aut serius, quam pro tempestate sua: item, ut minoribus intervallis pullulent, germinent, et fructum ferant, quam natura sua consueverunt. Arborea etiam et plantas grandiores efficimus, quam pro natura sua; et fructus earum majores et suaviores; atque sapore, odore, colore, et figura differentes a specie sua: et multos ex iis ita præparamus, ut ad usus medicinales valeant. Habemus etiam modos, per quos plantas complures, per solas terræ mixturas, absque semine, exsurgere, et crescere, faciamus: atque etiam novas et incognitas plantas educimus, a vulgaribus differentes, atque plantas ex una specie in aliam transmutamus.

“ Habemus etiam septa, et vivaria, pro bestiis et avibus omnigenis: quibus, non tam propter novitatem et raritatem, quam ad dissectiones et experi-

menta anatomica, utimur, ut ab iis, quid fieri possit circa corpus humanum, lucem accipiamus. In quibus mirabiles multos effectus reperimus, veluti vitæ in iis continuationem, licet nonnullæ partes, quas vos pro vitalibus habetis, perierint, aut extractæ fuerint; resuscitationem nonnullarum, quæ specie tenus mortuæ erant, et similia. Experimentum etiam sumimus super illas venenorum omnium, et antidotorum, et aliorum medicamentorum, tam chirurgicorum, quam medicinalium, ut corpori humano melius caveamus. Arte etiam reddimus alias majores, et proceriores, quam pro natura sua; e contra, alias nanas facimus, et statura justa privamus: præterea alias feraciores, et partu numerosiores reddimus, quam natura earum fert; e contra, alias steriles, et generationi ineptas. Etiam colore, figura, et animositate, eas multis modis variamus. Procuramus etiam mixturas et copulationes animalium diversarum specierum, quæ novas species produxerunt, neque tamen eas steriles, prout communis fert opinio. Insuper, complura genera serpentium, vermium, muscarum, piscium, ex putrefactione producimur; quorum nonnullæ in perfectas species maturantur, sicut aves, aut bestię, aut alii pisces; et sexu discriminantur, et generant. Neque tamen casu hoc facimus, sed satis novimus ex quali materia quale animal sit producibile.

“ Habemus etiam piscinas particulares, ubi similia experimur in piscibus, quæ prius de bestiis, et avibus diximus.

“ Habemus etiam loca propria ad generationem ejusmodi vermium, et muscarum, quæ vobis incognitæ, et imprimis utiles sunt: quales sunt apud vos bombyces, et apes.

“ Non te remorabor commemorando quales habemus domus pro conficiendis, vino, siccera, cerevisia, et aliis potibus, aut pro panibus omnimodis conficiendis: aut culinas, in quibus conficiuntur et præparantur jura, cibi rari et inusitati, ad effectus speciales. Vina habemus ex uvis: potus item ex aliis succis fructuum, decoctionibus granorum, et radicum, et misturis mellis, sacchari, mannæ, fructuum multorum (sicut in uvis faciunt) passorum; etiam aut lacrymis arborum, et medullis arundinum. Potus autem isti sunt ætatum diversarum, nonnulli usque ad annum quadragesimum servati. Habemus etiam potus medicatos ex infusionibus et mixturis diversarum radicum, herbarum, aromatum, quin et additis quandoque carnibus, ovis, lacticiis, et aliis esculentis, ex quibus potibus nonnulli sunt instar cibi et potus conjunctim, adeo ut complures, præsertim ætate decrepita, ex illis solis vivant, cum exiguo, aut nullo usu cibi, aut panis. Atque ante omnia contendimus, ut potus tenuissimarum partium conficiamus, quo facilius in corpus se insinuent, sed absque omni mordacitate, acrimonia, aut corrosione: adeo ut nonnulli eorum, super dorsum manus impositi, post exiguum moram, insensibiliter ferme ad palmam penetrabunt; qui tamen linguam, aut palatum, non mordebunt. Habemus etiam aquas, quas ita maturamus, ut nutritivæ plane fiant, et in potus excellentes evadant; unde complures alio potu uti nolint. Panes habemus ex diversis granis, radicibus, nucibus, et glandibus, aliquos etiam ex carnibus et pis-

cibus arefactis, cum fermentorum, et salitionum generibus variis, quorum alii mirum in modum appetitum excitant, alii ita nutritivi, ut ex iis solis, absque alio cibo, complures vivant, qui tamen longævi plerumque sunt. Cibos habemus, quos ita tundimus, inteneramus, et mortificamus, sed tamen absque aliquo gradu putredinis, ut calor stomachi debilis eos facile in chylum bonum vertat, non minus quam calor stomachi fortis operari possit in cibos communes. Genera quædam cibi, panis, et potus, habemus, quæ sumpta, diutius quam pro consueto, jejunium tolerare facient: alia item, quibus qui insuescunt, carne fiunt duriore, et solidiore, quam antea: tum et robur ipsorum ad motum quemlibet augetur et intenditur.

“Habemus etiam dispensatoria, vel officinas pharmacorum: in quibus facile est existimare, cum nos tanta copia et varietate plantarum, et animalium, præ vobis in Europa, abundamus (etenim satis novimus quid apud vos inveniatur) simplicia item, pharmaca, et ingredientia ad medicinas, tanto debere esse magis varia, et multiplicia. Ibi quoque pharmaca habemus ætatum diversarum, et fermentationis diuturnæ. Quantum vero ad medicinarum præparaciones, non solum distillationes omnigenas exquisitas, et separationes habemus, præcipue autem per calores lenes, et percolaciones, per diversa lintea, lanea, ligna, imo et substantias solidiores, sed multo magis componendi modos excellentes, per quos compositorum incorporationem talem assequimur, ut videantur ferme simplicia naturalia.

“Habemus etiam artes complures mechanicas, vobis incognitas, et materias per eas confectas, veluti papyros, lintea, serica, textilia, consuta ex plumis elegantissime splendoris mirabilis, tincturas et infectiones colorum pulcherrimas, et alia complura. Quin et officinas etiam aliquarum artium prædictarum, tam earum, quæ in usum communem receptæ non sunt, quam earum quæ sunt. Etenim scire debes ex iis quæ jam recensui, complura per universum regnum in usu esse, quamvis, si ab inventione nostra fluxerint, eorum quandoque exemplaria, tanquam primigenia, et optime elaborata, in domo nostra retinemus.

“Habemus etiam fornaces valde diversas, quæque gradus calorum diversos exhibent et servant, caloribus scilicet acris et celeris, robusti et pertinacis, lenis et moderati, sufflati, tranquillii, humidi, sicci, et similibus. Sed ante omnia calores ministramus ad imitationem caloris solis, et celestium, qui pertransunt inæqualitates multiplices, et veluti orbes, progressus, et periodos, per quas opera mirabilia educimus. Necnon habemus imitationes caloris fisorum; et ventrium animalium, atque sanguinis et corporum ipsorum: fœnorum, et herbarum dum humidæ sunt congestarum et conclusarum; calcium vivarum, et rerum aliarum. Item habemus instrumenta, quæ calorem excitant per motum tantum: atque insuper loca ad insolationes fortes, et rursus loca subterranea, quæ vel natura, vel arte, calores excitant. Hos calores diversos exhibemus, prout natura operationis, quam designamus, postulat.

“Habemus etiam domus perspectivæ, ubi experimenta exhibemus omnium luminum et radiationum; omnium quoque colorum; atque ex corporibus dia-

phanis et incoloratis representamus colores singulos, non in forma iridum gliscentes, (ut fit in gemmis, et prismatibus,) sed per se, simplices et constantes. Præterea exhibemus omnem radorum multiplicationem, adeo ut lumen ejaculemur ad distantias magnas; illique eam virtutem, et fortitudinem indimus, ut per hujusmodi lumen cerni possint lineæ et puncta tenuissima. Exhibemus omne genus luminum tinctorum, et coloratorum, atque omnes elusiones et deceptiones visus, in figuris, magnitudinibus, motibus, coloribus; omnes demonstrationes umbrarum, et imaginum in aëre volitantium. Invenimus quoque media complura, apud vos ignota, luminis originalis producendi ex diversis corporibus. Rursus, artificia invenimus, per quæ objecta valde remota in oculos incurrant, veluti, in cælo, et aliis locis remotis. Imo etiam quæ prope sunt tanquam ex longinquo ostendimus, et quæ ex longinquo tanquam prope, fictas ad libitum exhibentes distantias. Præterea habemus oculorum adminicula, quæ bis oculis vestris, et speculis, usu longe præstant. Habemus etiam artificia, et perspicilla, quibus corpora minuta et pusilla distincte et perfecte cernimus; veluti membra, et colores, muscarum exiguarum, et vermium; grana et glacies in gemmis alias non visibiles; plurima in urinis, et sanguine, alias item non visibilia. Porro exhibemus artificiales irides, halones, circulos, vibrationes, et trepidaciones luminis. Denique exhibemus omnes modos reflexionis, refractionis, et conduplicationis objectorum.

“Habemus etiam gemmas omnium generum, multasque earum pulcherrimas, et vobis incognitas: item crystallas, et vitra diversorum generum, inter ea autem quædam ex metallis vitrificatis, et nonnullis materiis aliis præter eas, ex quibus apud nos vitra conficiuntur. Tum complura etiam fossilia, quæ vos non habetis. Magnetes item virtutis prodigiosæ, et lapides alios raros, tam naturales, quam artificiales.

“Habemus etiam domos sonorum, ubi experimur et demonstramus sonos omnes, eorumque generationes. Habemus harmonias, quæ apud vos in usu non sunt, miscentes non tantum beta illud acutum et molle, ut vos, sed quadrantes sonorum, et sonos tremulos aliquos dulcissimos. Habemus instrumenta complura musica, quæ vobis nondum innotuerunt, aliqua eorum melodiam exhibentia suaviorem, quam vestra. Campanas quoque et tintinnabula soni jucundissimi. Exhibemus sonos exiles tanquam magnos: et graves similiter tanquam extenuatos, et acutos. Dein fingimus trepidaciones plurimas ex sonis, qui in ortu suo primo integri sunt. Exhibemus atque imitamur sonos omnes articulatos, et literas, item voces, et cantus, quadrupedum, et avium. Habemus quoque adminicula auditus, quæ, auribus apposita, majorem in modum sensum ipsum, et sonorum delationem, promovent. Habemus vocum reflexiones (quas echo dicitis) complures mirabiles, et artificiales, vocem non tantum multipliciter repercutientes et jactantes, sed earum alias vocem augentes, alias extenuantes: nonnullas autem earum vocem articulatam reddentes differentem ab originali. Habemus, ultimo, modos deferendi sonos in tubis, et concavis aliis, ad magnam distantiam, atque in lineis tortuosis.

“Habemus etiam domus suffituum et odorum, ubi

et experimenta saporum adjungimus. Odores ibi (quod mirum videri possit) multiplicamus et fortificamus. Imitamur odores naturales, efficientes ut odores omnigeni ex aliis mixturis exsperant, quam ex genuinis. Similiter etiam saporum imitamur, ita ut gustum, quamvis accuratum, plane fallant. In domo hac continetur insuper confectionarium, ubi conficimus bellaria, placentas, et hujusmodi alia, tam humida, quam sicca: imo et condimus ea cum rebus aliis dulcibus gratissimis, præter saccharum, et mel. Vina ibi conficimus jucundissima, lacticia, jura, salsamenta, et acetaria, grata certe ad gustum, et vobis minime in usu.

"Habemus etiam domus machinarum, ubi præsto sunt machinæ, et organa, ad omnia genera motuum. Ibi tentamus celeriores educere motus, quam apud vos ullos habetis, sive ex sclopetis vestris minoribus, sive alia quacunquè machina. Tentamus item motus reddere faciliores, et intensiores, eos multiplicando per rotas, et modos alios. Tum motus educimus fortiores et potentiores, quam vos habetis, in majoribus vestris bombardis, et basilicis quibuscunque. Exhibemus tormenta bellica, et machinas, omnis generis: novas misturas pulveris pyrii: ignes Græcos in aqua ardentis, et inextinguibiles: ignes missiles in omni varietate, tam ad voluptatem, quam ad usum. Imitamur ibi avium volatus; gradus quosdam habemus et commoditates vecturæ per aërem, instar animalium alatorum. Naves habemus, et scaphas, quæ subter aquas navigare possint, et pelagi furores melius perferre: cingula etiam ad natandum, et suffulcimenta. Habemus horologia complura exquisita, et alios motus aëris et aquarum, in orbem, et per vices, revertentes; item motus nonnullos perpetuos. Imitamur motus animalium in simulachris eorum: veluti in simulachris hominum, quadrupedum, avium, piscium, et serpentum. Alios denique habemus motus, æqualitate insignes, et subtilitate.

"Habemus etiam domum mathematicam, ubi instrumenta omnia, tam geometrica, quam astronomica, exquisitissima representantur.

"Habemus etiam domum præstigiariam, ubi omnimodas præstigiis, imposturas, et illusiones, et earum fallacias, exhibemus. Facile autem credetis, nos, qui tot habemus vere naturalia, quæ admirationem moveant, posse etiam infinita hominum sensibus imponere; si ea in miraculum ornare, et exaltare vellemus. Verum nos omnem imposturam, et mendacium, odio habemus. Quinetiam sociis omnibus domus nostræ, sub pœna ignominie et mulctæ, severe interdiximus, ne quid ex naturalibus, artificioso apparatu ementitum ostentent; sed purum solum, et ab omni furore, et affectatione miraculi, immune.

"Atque hæc sunt, filii, domus Salomonis divitiæ.

"QUANTUM ad functiones et munera sociorum nostrorum; duodecim habemus, qui in regiones externas navigant, sub aliarum nationum nomine, (nostram enim terram non revelamus,) qui libros, materias, et exemplaria experimentorum ad nos perferunt. Hos Mercatores lucis vocamus.

"Tres habemus, qui experimenta, quæcunque in libris inveniuntur, colligunt. Hos Depredatores vocamus.

"Tres habemus, qui experimenta artium omnium mechanicarum; atque etiam scientiarum liberalium, insuper et practicarum omnium, quæ in artem non coaluerunt, colligunt. Hos Venatores appellamus.

"Tres habemus, qui ad nova experimenta se accingunt, prout ipsis expedire visum fuerit. Hos Fossores, sive Operatores in mineris, vocamus.

"Tres habemus, qui experimenta reliquorum supradictorum in titulos, et tabulas, digerunt, ut intellectus in ea melius agere possit, ad eliciendas ex iis observationes, et axiomata. Hos Divisores vocamus.

"Tres habemus, qui ad hoc ordinantur, ut in experimenta sociorum suorum introspiciant, et ex iis extrahant, et comminiscantur inventa, quæ ad usum vitæ, et practicam spectent, nec non quæ inserviant scientiis, non solum quoad opera, sed etiam ad liquidas causarum demonstrationes, modos eliciendi naturales divinationes, atque facilem et manifestam informationem, quæ sint in corporibus singulis partes latentes, quæ virtutes? Hos Euergetas appellamus.

"Tum vero post multos sociorum universorum conventus et consultationes, qui labores et collectiones priores penitus introspiciunt, et quasi ruminant, tres habemus, quibus curæ est ex iis, quæ jam sub oculis sunt, nova experimenta, lucis sublimioris, atque in naturam altius penetrantia, excitare, et dirigere. Hos Lampadas vocamus.

"Tres habemus, qui experimenta, ita injuncta et mandata, re exsequuntur, eorumque successus referunt. Hos Insitores vocamus.

"Postremo, tres habemus, qui inventiones et revelationes priores in natura, per experimenta, in observationes majores, axiomata, et aphorismos, erigunt, et promovent; quod faciunt nonnisi consultatione et colloquio prius habitis cum sociis universis. Hos Interpretes naturæ appellamus.

"Habemus etiam (ut res ipsa postulat) novitios quosdam, et tirones, ut successio hominum, ad experimenta et axiomata designatorum, non intercidat; præter famulos multos et ministros, tam viros, quam mulieres: hoc etiam apud nos in more est, ut accurate deliberemus, quæ ex inventis et experimentis nostris in lucem eductis, vulgari conveniat, quæ autem minime. Quinetiam jurejurando nos omnes astringimus ad ea celanda, quæ celari decrevimus: etsi nonnulla ex iis, cum consensu, interdum regi, aut senatui, revelemus, alia autem omnino intra notitiam nostram cohibemus.

"QUANTUM ad ordinationes, et ritus nostros: habemus porticus duas spatiosas, et pulchras. In quarum una ordine collocamus exemplaria rariorum omnium et præstantiorum inventionum; in altera autem, statuas inventorum insigniorum. Ibi statuam videre est Columbi vestri, qui primus Indias occidentales aperuit. Itidem fabricatoris primi navium. Item monachi vestri, qui primus tormenta invenit ignea, et pulverem pyrium. Item inventoris musicæ. Item inventoris literarum. Item inventoris imprimendi typis. Item inventoris phænomenorum astronomiæ. Item inventoris operandi in metallis. Item inventoris vitri. Item inventoris filii bombycini. Item inventoris vini. Item inventoris segetum et panis. Item inventoris sacchari. Atque inventores

hosce omnes apud nos servamus ex traditione magis certa et fideli, quam apud vos habetur. Deinde habemus status inventorum complurium insigniorum ex nostris, qui res, et opera nobilia invenerunt: quæ cum ipsi non videritis, descriptiones eorum facere nimis longum esset; tum in iisdem recte intelligendis proclive erit errare. Etenim inventori rei cujusque dignioris statuam mox erigimus, eique honorarium satis liberale elargimur. Statuarum istarum aliæ ex ære sunt: aliæ ex marmore, et lapide lydio; aliæ ex cedro, et aliis lignis quibusdam pretiosis, inauratis, et adornatis; ex ferro aliæ; aliæ ex argento; quædam ex auro.

“Habemus etiam hymnos quosdam, et liturgiæ formas, quas quotidie cantamus, et recitamus; quibus laudes, ac jubilæa, et gratiarum actiones resonamus Deo, propter mirabilia opera sua: precum item formulas quasdam, quibus auxilium et benedictionem ejus imploramus, ut labores nostros dirigere et illuminare dignetur, atque in bonos usus et sanctos convertere.

“Postremo, apud nos in usu est præcipuas in

regno urbes subinde adire, et visitare, in quibus (prout occasio se offert) talia inventa utilia revelamus, qualia nobis visum fuerit. Prædicimus etiam, antequam adveniant (id quod ad naturales divinationes pertinet) morbos epidemicos, pestes, animalium noxiorum examina, famem, tempestates et procellas, terræ-motus, inundationes aquarum, cometas, anni temperaturam, et alia: quinetiam consilia super rebus hisce damus, et quid populo facere conveniat ad præventiones et remedia hujusmodi malorum.”

Cumque hæc dixisset, se in pedes erexit: ego autem, ut edoctus fueram, in genua procubui, unde dextram capiti meo imponens, dixit: “Benedicat tibi Deus, fili mi; huic itidem relationi, quam feci. Deus benedicat. Licentiam tibi concedo in bonum gentium aliarum eandem evulgandi; siquidem nos hic in sinu Dei vivimus; natio aliis penitus incognita.” Hæc locutus discessit: assignaverat autem bis mille circiter aureos, muneris loco, mihi et sociis meis numerandos. Largitores enim magni sunt, ubicunque venerint, &c.

[Reliqua perficere non vacabat.]

## IMAGO CIVILIS

# JULII CÆSARIS.

JULIUS CÆSAR a principio fortuna exercita usus est, quod ei in bonum vertit; hoc enim illi fastum detraxit, nervos intendit. Animus ei inerat studio et affectu turbidus: iudicio et intellectu admodum serenus: hocque indicat facilis illa sui explicatio, tum in rebus gerendis, tum in sermone. Nemo enim, aut celerius decernebat, aut magis perspicue loquebatur: nil impeditum, nil involutum quis notaret. Voluntate autem et appetitu is erat, qui nunquam partis acquiescebat, sed ad ulteriora semper tendebat: ita tamen ut non immaturo fastidio, sed legitimis spatiis, transitus actionum gubernaret: semper enim perfectissimas clausulas actionibus imponebat. Itaque ille, qui post tot victorias et tantam partem securitatem, reliquias belli civilis in Hispania non contempsit, sed præsens subegit; post extremum illud demum bellum civile confectum, et omnia undique pacata, expeditionem in Parthos continuo moliebatur. Erat proculdubio summa animi magnitudine, sed ea, quæ magis amplitudinem propriam, quam merita in commune, spiraret. Prorsus enim omnia ad se referebat, atque ipse sibi erat fidissimum omnium actionum suarum centrum: quod maximam ei et perpetuam fere felicitatem peperit. Non enim patria, non religio, non officia, non necessitudines, non amicitia, destinata ejus remorabantur, vel in ordinem redigebant. Nec magnopere versus in æternitatem erat; ut qui nec statum rerum stabiliret, nec quidquam egregium, vel mole vel instituto, fundaret vel conderet; sed veluti ad se cuncta retulit. Sic etiam ad sua tempora cogitationum

finis recepit. Nominis tantum celebritate frui voluit, quod etiam sua id nonnihil interesse putaret. Ac in propriis certe votis magis potentia, quam dignitati, studebat; dignitatem enim et famam non propter se, sed ut instrumenta potentia, colebat. Itaque veluti naturali impetu, non morata aliqua disciplina ductus, rerum potiri volebat; iisque magis uti, quam dignus videri: quod ei apud populum, cui nulla inerat dignitas, gratiosum erat: apud nobiles et proceres, qui et suam dignitatem retinere volebant, id obtinuit nomen, ut cupidus et audax videretur. Neque multum sane a vero aberrarunt, cum natura audacissimus esset, nec verecundiam unquam, nisi ex composito, indueret. Atque nihilo secius ita ista efficta erat audacia, ut eum nec temeritatis argueret, nec fastidio homines enecaret, nec naturam ejus suspectam faceret; sed ex morum simplicitate quadam et fiducia, ac nobilitate generis, ortum habuisse putaretur: atque in cæteris quoque rebus omnibus id obtinuit, ut minime callidus aut veterator haberetur, sed apertus et verax. Cumque summus simulationis et dissimulationis artifex esset, totusque ex artibus compositus, ut nihil naturæ suæ reliquum esset, nisi quod ars probavisset; tamen nil artificii, nil affectionis appareret, sed natura et ingenio suo frui, eaque sequi existimaretur. Neque tamen minoribus et vilioribus artificiis et cautelis omnino obnoxius erat, quibus homines rerum imperiti, et qui non propriis viribus, sed alienis facultatibus subnixi, ad auctoritatem suam tuendam uti necesse habent; utpote qui omnium actionum humanarum

peritissimus esset, atque cuncta paulo majora ipse per se, non per alios transigeret. Invidiam autem extinguere optime norat; idque vel dignitatis jactura consequi non alienum a rationibus suis duxit; veramque potentiam amplexus, omnem illam inanem speciem et tumidum apparatus potentiae, æquo animo, per totum fere vitæ cursum, declinavit et transmisit: donec tandem, sive satiatus potentia, sive adulationibus corruptus, etiam insignia potentiae, nomen regium et diadema, concupivit; quod in perniciem ejus vertit. Regnare autem jam usque a juventute meditatus est; idque ei exemplum Syllæ, affinitas Marii, æmulatio Pompeii, corruptelæ et perturbatio temporum facile suggerebant. Viam autem sibi ad regnum miro ordine sternebat: primum per potentiam popularem et seditiosam; deinde per potentiam militarem et imperatoriam. Nam initio sibi erant frangendæ senatus opes et auctoritas, qua salva nemini ad immodica et extraordinaria imperia aditus erat. Tum demum evertenda erat Crassi et Pompeii potentia, quod nisi armis fieri non poterat. Itaque (ut faber fortunæ suæ peritissimus) primam structuram per largitiones, per judiciorum corruptelas, per renovationem memoriæ C. Marii, et partium ejus, (cum plerique senatorum et nobilium e Syllana factione essent,) per leges agrarias, per seditiosos tribunos quos immittebat, per Catilinæ et conjuratorum insanias, quibus occulto favebat, per exilium Ciceronis, in cujus causa senatus auctoritas vertebatur, ac complures hujusmodi artes, attollebat et evehebat: sed maxime omnium per Crassi et Pompeii et inter se et secum conjunctionem absolvebat. Qua parte absoluta, ad alteram continuo partem accingebatur, factus proconsul Galliarum in quinquennium, rursusque in alterum quinquennium: atque armis, legionibus, et bellicosa et opulenta provincia potens et Italiæ imminens. Neque enim eum latebat, postquam se armis et militari potentia firmasset, nec Crassum nec Pompeium sibi parem futurum; cum alter divitiis, alter famæ et nomini confideret; alter ætate, alter auctoritate senesceret; neuter veris et vigentibus præsiidiis niteretur. Quæ omnia ei ex voto cessere; præsertim cum ipse singulos senatores et magistratus, et denique omnes, qui aliquid poterant, ita privatis beneficiis devinctos et obstrictos haberet, ut securus esset de aliqua conspiratione vel consensu adversus suos conatus ineundis, antequam aperte rempublicam invaderet. Quod cum et semper destinasset, et aliquando tandem faceret, tamen personam suam non deponebat; sed ita se gerebat, ut æquitate postulatorum, et simulatione pacis, et successibus suis moderandis, invidiam in adversas partes torqueret; seque incolumitatis suæ gratia ad bellum necessarium coactum præ se ferret. Cujus simulationis vanitas manifesto deprehensa est, postquam, confectis bellis civilibus, regiam potestatem adeptus, omnibusque æmulis, qui aliquam ei sollicitudinem injicere possent, e medio sublatis, tamen de reddenda republica ne

semel quidem cogitavit, neque hoc saltem fingere aut prætexere dignaretur. Quod liquido declarat cupiditatem et propositum regni adipiscendi ei et semper fuisse, et ad extremum patuisse. Neque enim occasionem aliquam arripuit, sed ipse occasiones excitavit et efformavit. In bellicis autem rebus maxime ejus virtus enituit, quæ tantum valuit, ut exercitum non tantum duceret, sed et effingeret. Neque enim major ei scientia affuit in rebus gerendis, quam in animis tractandis: neque id vulgari aliqua disciplina, quæ obsequium assuefaceret ad mandata, aut pudorem incuteret, aut severitatem usurparet; sed quæ miris modis ardorem et alacritatem adderet, et victoriam fere præriperet: quæque militem erga ipsum plus conciliare, quam liberæ republicæ conducebat. Cum autem in omni genere belli versatus esset, cumque artes civiles cum bellicis conjungeret, nil tam improvisum ei accidebat, ad quod remedium paratum non haberet; et nil tam adversum, ex quo non utilitatem aliquam derivaret. Personæ autem suæ debitas partes attribuit; ut qui sedens in prætorio in magnis præliis omnia per nuncios administraret. Ex quo duplicem fructum capiebat; ut et in discrimen rarius se committeret, atque ut cum res inclinare cœpissent, prælium per ipsius præsentiam, veluti nova auxilia, instauraretur. In omni autem apparatu et conatu bellico non tantum ad exempla res gerebat, sed nova et accommodata summa ratione comminiscabatur. Amicitias satis constanter et singulari cum beneficentia et indulgentia coluit. Amicorum tamen hujusmodi delectum fecit, ut facile appareret, eum inquirere ut instrumenti, non impedimenti, loco amicitia eorum esset. Cum autem et natura et instituto ferretur ad hoc, ut non eminens inter magnos, sed imperens inter obsequentes esset, amicos sibi adjunxit humiles, sed industrios, quibus ipse omnia esset. Hinc illud, "Ita vivente Cæsare moriar;" et cætera id genus. Nobilium autem et æqualium suorum amicitias ex usu suo asciebat: ex intimis autem neminem fere admittebat, nisi qui ex se omnia speraret. Quin et literis et doctrina mediocriter excultus fuit, sed ea, quæ ad civilem usum aliquid conferret. Nam et in historia versatus erat, et verborum pondera et acumina mire callebat; et cum multa felicitatis suæ tribueret, peritus astrorum videri voluit. Eloquentia autem ei nativa et pura erat. In voluptates propensus ac effusus erat, quod ei apud initia sua loco simulationis erat: nemo enim periculum ab hujusmodi ingenio metuebat: voluptates autem suas ita moderabatur, ut nihil utilitati aut negotiorum summæ officerent, et animo potius vigorem, quam languorem, tribuerent. In mensa sobrius, circa libidines incuriosus, in ludis lætus et magnificus. Talis cum esset, id ad extremum ei exitio fuit, quod ad principia sua incremento fuerat; id est, studium popularitatis. Nil enim tam populare est, quam ignoscere inimicis: qua sive virtute, sive arte, ille periit.

## IMAGO CIVILIS AUGUSTI CÆSARIS.

AUGUSTO CÆSARI, si cui mortalium, magnitudo animi inerat inturbida, serena, et ordinata: idque indicant res illæ omnium maximæ, quas ab ineunte adolescentia gessit. Nam qui ingenio commotiores sunt, ii fere adolescentias per varios errores transigunt, ac sub mediam ætatem demum se ostendunt: quibus autem natura est composita et placida, ii prima etiam ætate florere possunt. Atque cum animi dotes, sicut et bona corporis, sanitate quadam, pulchritudine, et viribus contineantur et absolvantur, fuit certe avunculo Julio viribus animi impar, pulchritudine et sanitate superior. Ille enim inquietus et incompositus, (ut sunt fere ii qui comitali morbo tentantur,) se ad fines suos nihilominus summa ra-

tionem expediebat; sed ipsos fines minime ordinaverat, sed impetu infinito, et ultra mortale appetens, ferebatur ad ulteriora: hic autem sobrius, et mortalitatis memor, etiam fines suos ordine admirabili descriptos et libratos habuisse visus est. Primum enim, rerum potire volebat; deinde, id assequi, ut dignus eo fastigio existimaretur: dein etiam frui summa fortuna humanum esse ducebat: ad extremum, addere se rebus, et imaginem et virtutem sui principatus seculis post se futuris imprimere et inferre meditabatur. Itaque prima ætate potentiæ, media dignitati, vergente voluptatibus, senectute memoriæ et posteritati, serviebat.

## IN FELICEM MEMORIAM

## ELIZABETHÆ ANGLIÆ REGINÆ.

ELIZABETHA et natura et fortuna mirabilis inter fœminas, memorabilis inter principes, fuit. Neque hæc res indicium monachi alicujus aut hujusmodi censoris umbratilis desiderat: nam isti homines, stylo acres, iudicio impares, et partis suæ memores, rerum minus fideles testes sunt. Ad principes viros pertinet hæc cognitio, atque ad eos, qui imperiorum gubernacula tractarunt, et rerum civilium ardua, et arcana norunt. Rarum in omni est memoria mulibre imperium: rarior in eo felicitas; rarissima cum felicitate diuturnitas. Illa vero quadragesimum quartum regni sui annum complevit; neque tamen felicitati suæ superstes fuit. De hac felicitate pauca dicere institui, neque in laudes excurrere: nam laudem homines tribuunt, felicitatem Deus.

Primum in parte felicitatis pono, quod ad imperatorum fastigium a privata fortuna evecta sit. Si quidem hoc in moribus et opinionibus hominum penitus insedit, ut quæ præter spem et exspectationem veniunt, majori felicitati deputentur. Sed non hoc est quod volo; illud intueor, principes, qui in domo regnatrice, et ad spem successionis non dubiam nutriti sunt, ab educationis indulgentia et licentia depravatos, plerumque et minus capaces et minus moderatos evadere. Itaque optimos et excellentissimos reges reperias, quos utraque fortuna erudit: talis apud nos fuit Henricus septimus, et apud Gallos Ludovicus duodecimus; qui recenti memoria, et eodem fere tempore, non tantum a privata, sed etiam ab adversa et exercita fortuna, regnum acceperunt, atque (ille prudentia, hic iustitia) floruerunt. Similis fuit et hujusce principis ratio; cujus initia et spes variavit fortuna, ut in principatu ad extremum erga illam constans et æquabilis esset. Nam Elizabetha natalibus suis successioni destinata, deinde

exhæredata, tum posthabita fuit; eadem, regno fratris, fortuna magis propitia et serena, regno sororis magis turbida et ancipiti usa est. Neque tamen ex vinculis subito in regnum assumpta est, ut ab infortunio exacerbata intumesceret; sed libertati restituta, et exspectatione aucta, tum demum regnum, sine tumultu aut competitorum, placide et felicissime obtinuit. Atque hæc ideo adducimus, ut appareat, divinam providentiam, optimam principem meditatam, per istiusmodi disciplinæ gradus eam præparasse et extulisse. Neque sane natalium dignitati calamitas matris obesse debet; cum præsertim satis constet, Henricum octavum prius amori novo, quam iræ adversus Annam, indulsisse; ejusque regis natura et ad amores, et ad suspiciones propensissima, et in iisdem usque ad sanguinem præceps, posteritatis notam non effugiat. Adde, quod criminatione, vel personæ ipsius, ad quem referabatur, nomine, minus probabili et tenuissimis conjecturis innixa, circumventa erat; quod et fama, etiam tum, occulto, ut solet, murmure excepit, et Anna ipsa, celso animo et memorabili voce, sub tempus mortis suæ protestata est: nacta enim nuncium (ut existimabat) et fidum et benevolum, eadem hora, qua ad mortem se parabat, hujusmodi mandata ad regem perferenda dedit: "regem in ipsa novis honoribus cumulanda institutum suum optime servare et perpetuo tueri; cum illam primum, generosa stirpe ortam, sed nobilitatis titulis non insignitam, dignitate marchionissæ ornasset, deinde in regni et thori consortium accepisset; et postremo, quia non restabat terreni honoris gradus altior, innocentem ad coronam martyrii evehere voluisset." Atqui nuncius ille ad regem, alio amore flagrantem, hoc perferre non ausus est; sed fama veritatis vindex, ad posteros pertulit.

Atque non exigua pars felicitatis Elizabethæ, etiam mensura, ac veluti curriculum ipsum regiminis sui nobis visum est: non tantum quia diuturnam, sed quia spatium illud ætatis suæ occupavit, quod rerum moderamini, et habenis regni flectendis et moliendis, aptissimum esset. Annos enim viginti quinque (qua ætate curatura finitur) nata, cum regnare inciperet, ad septuagesimum ætatis annum imperium produxit. Itaque, nec pupillæ detrimenta et aliena arbitria; nec rursus exactæ et ægræ senectutis incommoda experta est. Senectus autem, etiam privatis, miseriarum satis; sed regibus, præter communia ætatis mala, adhuc status sui declinationes et inglorios exitus afferre solet. Nemo enim fere in regno ad multam et invalidam senectutem pertingit, quin aliquam imperii et existimationis diminutionem patiatur: cujus rei exemplum maxime eminent in Philippo secundo rege Hispaniarum, principe potentissimo et imperandi peritissimo; qui extremis suis temporibus, et fessa ætate, hoc quod diximus penitus sensit: ideoque prudentissimo consilio se rerum conditioni submitit, territoriis in Galliis acquisitis se ipse mulctavit, pacem ibidem firmavit, alibi tentavit ut res compositas atque integra omnia posteris relinqueret. Contra, Elizabethæ fortuna tam constans et valida fuit, ut nec ulla rerum declinatio vergentem certe, sed tamen adhuc vigentem, ætatem sequeretur: atque insuper, in signum felicitatis suæ certissimum, non prius diem obierit, quam de defectione in Hibernia prospero prælii eventu decretum esset; ne gloria ejus aliqua ex parte deformata et imperfecta videretur. Et etiam illud cogitandum censeo, in quali populo imperium tenuerit: si enim in Palmyrenis, aut Asia imbelli et molli regnum sortita esset, minus mirandum fuisset; cum effœminato populo fœmina princeps competeret: verum in Anglia, natione ferocissima et bellicosissima, omnia ex nutu fœminæ moveri et cohiberi potuisse, summam merito admirationem habet.

Neque hæc inclinatio populi sui, belli cupida, et pacem ægre tolerans, obfuit, quo minus perpetuis suis temporibus pacem coleret et teneret. Atque hanc ejus voluntatem cum successu conjunctam inter maximas ejus laudes pono. Hoc enim ætati suæ felix, hoc sexui decorum, hoc conscientiæ salutare fuit. Tentata paulisper circa decimum regni sui annum in partibus borealibus rerum commotio, sed statim sopita et exstincta est. Reliqui anni interna pace, eaque segura atque alta, florere. Pacem autem florentissimam judico, duabus de causis; quæ ad meritum pacis nihil faciunt, ad gloriam maxime: una, quod vicinorum calamitatibus, veluti flammis lucentibus, agis fiebat conspicua et illustrata: altera, quod commodis pacis armorum honor non defuit; cum celebritatem nominis Anglici in armis et re militari per multa decora non solum retineret, sed etiam augetet. Nam et auxilia in Belgium, Galliam, et Scotiam missa; et navales expeditiones susceptæ in Indias; atque ex illis nonnullæ per universi globi terrarum ambitum factæ; et classes in Lusitaniam, et ad oras Hispaniæ infestandas submissæ; et rebelles in Hibernia sæpius concisi et domiti, nihil aut de virtute bellica gentis nostræ remitti, aut de ejuadem fama et honore deperire, sinebant.

Aderat etiam gloriæ meritum, quod et regibus vicinis tempestivis ab ipsa auxiliis regnum conservatum sit; et populis supplicibus, pessimo principum consilio ministrorum suorum crudelitati, et plebis furori, et omni laniæ et vastitati relictis et fere devotis, levamentum malorum datum est; per quod res eorum adhuc steteret. Nec minus consilia, quam auxilia, benefica et salutaris princeps fuit: ut quæ regem Hispaniarum toties delenienda in subditos suos in Belgio ira, et illis suo imperio sub tolerabili aliqua conditione restituendis, interpellavit: et reges Galliæ perpetuis et repetitis monitis de edictis suis, pacem spontentibus, observandis, maxima fide sollicitavit. Non negaverim consilio ejus successum defuisse: neque enim prius illud sivit fatum Europæ commune; ne forte ambitio Hispaniæ, veluti carceribus liberata, in regnorum et rerum publicarum orbis Christiani detrimentum (ut tunc res erant) se effunderet: hoc etiam posterius non sivit sanguis tot innocentium, cum uxoribus et liberis, ad focos et cubilia sua per infimam plebis fœcem, ut belluas quasdam publica auctoritate et animatas, et armatas, et missas, effusus; qui ut regnum, tam nefario scelere obligatum, mutuis cædibus et contradicationibus expiaretur, in ultionem posebat. Illa tamen utcunque officium fœderatæ et prudentis, et benevolæ, præstitit.

Alia etiam subest causa, cur pacem ab Elizabetha cultam et conservatam admiremur: ea nimirum, quod non a temporum inclinatione, sed ab ejus prudentia et rebus bene ordinatis, pax ista profecta sit. Nam cum et interna factione ob causam religionis laboraret, et hujus regni robor et præsidium universæ Europæ instar propugnaculi esset adversus regis Hispaniæ illis temporibus formidabilem et exundantem ambitionem et potentiam, belli materia non defuit; verum ipsa et copiis et consiliis superfluit. Istud eventus docuit maxime memorabilis inter res gestas nostri seculi universas, si felicitatem spectes. Nam cum classis Hispanica, tanto rerum tumore et totius Europæ terrore et expectatione, et tanta victoriæ fiducia, freta nostra sulcaret, nec naviculam aliquam in mari accepit, nec villulam aliquam incendio vastavit, nec littus omnino attingit: sed prælio fusa, misera fuga et crebris naufragiis dissipata est, atque pax Anglico solo et finibus immota, et inconcussa mansit.

Nec minus felix in conjuratorum insidiis devitandis, quam in copiis hostilibus devincendis, et propulsandis, fuit: non paucæ enim contra vitam ejus conspirationes factæ felicissime et patefactæ et disturbatæ sunt: neque ex eo vita ejus magis trepida aut anxia; non stipatorum numerus auctus; non tempus intra palatium actum et rarus in publicum processus; sed segura et fidens, et, potius liberationis a periculo, quam periculi ipsius memor, nihil de consuetudine sua pristina vivendi mutavit.

Etiam illud notatu dignum videtur, qualia tempora fuerint in quibus floruit. Sunt enim quedam secula tam barbara et rerum nescia, ut homines, tanquam animalium greges, imperio coërcere nil magnum fuerit. Hæc autem princeps in tempora eruditissima et excultissima incidit; in quibus emnere et excellere non absque maximis ingenii doti-

bus et singulari virtutis temperamento dabatur. Etiam imperia feminarum nuptiis fere obscurantur, laudesque et acta in maritis transeunt: illis autem, quæ innuptæ degunt, propria et integra gloria manet. In illam vero hoc magis cadit, quod nullis imperii adminiculis, nisi quæ ipsa sibi comparaverat, fulciebatur: non frater uterinus aderat, non patruus, non alius quispiam familia et stirpe regia, qui particeps ei curarum et dominationis subsidium esset. Sed et eos, quos ipsa ad honores evexerat, ita et cohibuit, et commiscuit, ut singulis maximam complacendi sollicitudinem injiceret; atque ipsa semper sui juris esset. Orba sane fuit, nec stirpem ex se reliquit: quod etiam felicissimis contigit, Alexandro Magno, Julio Cæsari, Trajano, aliis: et semper varie jactatum, et in contrarias partes trahi et disputari solet; cum alii hoc in diminutionem felicitatis accipiant, ne forte homines supra mortalem conditionem bearentur, si et in individuo, et in specie propagatione, felices essent; alii autem in cumulum felicitatis rem vertant, quod ea demum felicitas completa videatur, in quam fortunæ nil amplius liceat; quod, si posterius sint, fieri non potest.

Aderant ei et externa; statura procera; corporis decora compages; summa dignitas oris cum suavitate; valetudo maxime prospera. Superest et illud, quod, ad extremum valens et vicens, nec fortunæ commutationes nec senectutis mala experta, eam, quam tantopere sibi votis precari solebat Augustus Cæsar, euthanasiam facili et leni obitu sortita sit. Quod etiam de Antonino Pio, imperatore optimo, celebratur; cujus mors somni alicujus suavis et placida imaginem habebat. Similiter et in Elizabethæ morbo nil atrox, nil ominosum, nil ab humana natura alienum erat. Non desiderio vitæ, non morbi impatientia, non doloris cruciatibus torquebatur: nullum aderat symptoma dirum aut fœdum; sed omnia ejus generis erant, ut naturæ fragilitatem potius, quam corruptionem aut dedecus, ostenderent. Paucos enim ante obitum dies, ex corporis nimia siccitate, et curis, quæ regni culmen sequuntur, attenuata, nec unquam mero aut uberiore diætâ irrigata, nervorum rigore percussa, vocem tamen, (quod fieri non solet in ejusmodi morbo,) et mentem, et motum, licet tardiores et hebetiores, retinuit. Atque is personæ ejus status paucis diebus tantum duravit; ut non tanquam actus vitæ novissimus, sed tanquam primus gradus ad mortem fuerit: nam imminutis facultatibus in vita diu manere, miserum habetur; sed a sensu paulatim sopito ad mortem properare, placida et clemens vitæ clausula est.

Addo et illud in felicitatis ejus cumulum insignem; quod non tantum nomine proprio, sed et ministrorum status virtute, felicissima fuit.

Tales enim viros nacta est, quales fortasse hæc insula ante eum diem non peperit. Deus autem, regibus favens, etiam spiritus ministrorum excitat et ornât.

Restant felicitates posthumæ duæ, iis quæ vivam comitabantur fere celsiores et augustiores: una successoris, altera memoriæ. Nam successorem sortita est eum, qui licet et mascula virtute et prole, et nova imperii accessione fastigium ejus excedat et obumbret; tamen et nomini et honoribus ejus faveat,

et actis ejus quandam perpetuitatem donet: cum nec ex personarum delectu, nec ex institutorum ordine, quicquam magnopere mutaverit: adeo ut raro filius parenti, tanto silentio, atque tam exigua mutatione et perturbatione successerit. Memoria autem ejus, ita et in ore hominum, et in animis viget, ut, per mortem extincta invidia, atque incensa fama, felicitas memoriæ cum felicitate vitæ quodammodo certet. Nam si qua ex studio partium et dissensione religionis vagatur fama factiosa, (quæ tamen ipsa jam timida videtur, et consensu victa,) ea et sincera non est, et perennis esse non potest. Atque ob eam causam præcipue hæc, qualia sunt, de felicitate ejus et divini favoris notis, collegi; ut malevolus aliquis tantis Dei benedictionibus suas maledictiones inserere vereatur. Siquis autem ad hæc, ut ille ad Cæsarem, "Quæ miremur, habemus: sed quæ laudemus, expectamus:" sane existimo veram admirationem quandam laudis excessum esse. Neque ea, quam descripsimus, felicitas ulli evenire potest, nisi qui et a divina gratia eximie sustineatur atque foveatur; ac etiam moribus et virtute hanc fortunam sibi aliqua ex parte finxerit. Sed tamen visum est pauca admodum, quæ ad mores pertinent, adungere, in iis solummodo, quæ iniquorum sermonibus maxime aditum et fomitem præbere videntur.

Fuit Elizabetha, in religione pia et moderata; et constans, ac novitatis inimica. Atque pietatis indicia, licet in factis et rebus, quas gessit, maxime elucescant; tamen et in vitæ ratione et consuetudine familiari adumbrata sunt. Liturgiis et divinis officiis, aut sacello solenniore, aut interiore, raro abfuit. In Scripturis et patrum scriptis (præcipue beati Augustini) legendis, multum versata est. Preces quasdam ipsa ex occasione et re nata composuit. In Dei mentionem vel communi sermone incidens, fere semper Creatoris nomen addidit; et oculos et vultum ad humilitatem et reverentiam quandam composuit, quod et ipse sæpe notavi. Quod autem quidam vulgaverunt, eam minime mortalitatis memorem fuisse, adeo ut nec de senectute, nec de morte, mentionem æquo animo ferret, id falsissimum fuit; cum ipsa sæpissime, multis ante mortem annis, magna comitate, se vetulam diceret; et de inscriptione sepulchri, quod sibi maxime placeret, sermones haberet; cum diceret, sibi gloriam et splendidos titulos minime cordi esse; sed lineam memoriæ unam aut alteram, quæ nomen ejus tantum, et virginatatem, et tempus regni, et religionis instaurationem, et pacis conservationem, brevi verborum compendio, significaret. Verum est, cum, ætate florenti et liberis procreandis habili, de successore declarando interpellaretur, respondiisse, "Se linteum sepulchrale sibi vivæ ante oculos obtendi nullo modo passuram." Attamen, non multis ante mortem annis, cum cogitanda esset, ac, ut verisimile est, de mortalitate sua meditaretur, ut quidam ex intimis sermonem intulisset, quod munera, et loca multa et magna in republica nimium diu vacarent, commotior et assurgens, "Se certo scire suum locum ne tantillum temporis vacaturum," dixit.

Quod ad moderationem in religione attinet, hæere videbimur, propter legum in subditos religionis pontificiæ latarum severitatem: sed ea proferemus, quæ

nobis et certo nota et diligenter notata sunt. Certissimum est, hunc fuisse istius principis animi sensum, ut vim conscientiæ adhibere nollet; sed rursus, statum regni sui prætextu conscientiæ et religionis in discrimen venire non permetteret. Ex hoc fonte, primum duarum religionum libertatem et tolerationem auctoritate publica in populo animoso et feroce, et ab animorum contentione ad manus et arma facile veniente, admittere, certissimam perniciem iudicavit. Etiam in novitate regni, cum omnia suspecta essent, ex præsulibus ecclesiæ quosdam magis turbidi et factiosi ingenii, auctoritate legis accedente, sub custodia libera habuit: reliquis utriusque ordinis, non acri aliqua inquisitione molesta, sed benigna conniventia, præsidio fuit. Hic primus rerum status. Neque de hac clementia, licet excommunicatione Pii quinti provocata, (quæ et indignationem addere, et occasionem præbere novi instituti potuit,) quicquam fere mutavit; sed natura sua uti perseveravit. Nam, prudentissima fœmina et magnanima, huiusmodi terrorum sonitu nil admodum commota est; securâ de populi sui fide et amore, et de factionis pontificiæ intra regnum ad nocendum virium tenuitate, non accedente hoste externo. At sub vicesimum tertium regni sui annum, rerum commutatio facta est. Atque hæc temporis distinctio, non commode ficta, sed in publicis actis expressa, ac veluti in ære incisa est. Neque enim ante annum eum gravior aliqua pœna per leges prius sancitas subditis pontificiæ religionis incubuit. Verum sub hoc tempus, ambitiosum et vastum Hispaniæ consilium de hoc regno subjugando paulatim detegi cœpit: hujus pars magna fuit, ut omnibus modis intra regni viscera factio a statu aliena, et rerum novarum cupida, excitaretur, quæ hosti invadenti adhæreret. Ea ex dissentione religionis sperabatur; itaque huic omni opera incumbendum stantebant, et, pullulantibus tunc seminariis, sacerdotes in regnum immissi, qui studium religionis Romanæ excitarent et spargerent, vim excommunicationis Romanæ in fide subditorum solvenda docerent et inculcarent, et animos hominum novarum rerum expectatione erigerent et præpararent.

Circa idem tempus, et Hibernia apertis armis tentabatur; et nomen et regimen Elizabethæ variis et sceleratis libellis proscindebatur: denique insolitus erat rerum tumor, prænuncius majoris motus. Neque sane dixerim singulos sacerdotes in participationem consilii assumptos, aut quid ageretur conscios, sed tantummodo prava alienæ malitiæ instrumenta fuisse. Sed tamen hoc verum est, et multis confessionibus testatum, omnes fere sacerdotes, qui ab eo, quem diximus, anno usque ad tricesimum Elizabethæ annum (quo consilium Hispaniæ, et pontificum, per memorabilem illum et classis et terrestrium copiarum apparatus executioni mandatum erat) in hoc regnum immissi erant, habuisse in mandatis inter functionis officia hoc insuper, ut, "Non posse hæc diutius stare: novam rerum faciem et conversionem non ita multo post conspicuam fore; curæ esse et pontifici et principibus catholicis rem Anglicam, modo ipsi sibi non desint," insinuant. Etiam ex sacerdotibus nonnulli rebus et machinationibus, quæ ad status labefactionem et subversionem

pertinebant, manifeste se immiscerant; et, quod maxime movit, per literas ex multis partibus interceptas consilii hujus et negotii ratio patefacta est; in quibus scriptum erat, "Vigilantiam regiæ et concilii sui circa catholicos elusum iri; illam enim ad hoc tantum intentam esse, ne quod caput in persona alicujus nobilis aut viri primarii catholicorum factioni se attolleret: at consilium jam tale adhiberi, ut per homines privatos atque ex inferiori nota, neque eos inter se conspirantes et conscios, per secreta confessionum omnia disponerentur et præpararentur." Atque hæc tum artes adhibebantur, huiusmodi hominibus (quod etiam nuper in casu non dissimili videlicet) usitate et familiares. Hac tanta periculorum tempestate lex quædam necessitatis imposita est Elizabethæ, ut eam partem subditorum, quæ a se alienata, et per huiusmodi venena facta erat quasi insanabilis, atque interim ob vitam privatam a publicis muneribus et expensis immunem dicesceret, gravioribus legum vinculis constringeret. Atque ingravescente malo, cum origo ejus sacerdotibus seminariorum deputaretur, qui in exteris partibus nutriti, et exterorum principum, hujus regni ex professo hostium, opibus et eleemosynis sustentati essent; et in locis versati, ubi ne nomen quidem ipsum Elizabethæ, nisi ut hæreticæ, excommunicatæ, et diris devotæ, audiebatur; quique etiam non ipsi criminibus majestatis imbuti, at eorum, qui huiusmodi sceleribus operam dedissent, intimi agnoscerentur; quique suis artibus et venenis ipsam catholicorum massam, antea magis dulcem et innoxiam, depravassent, et novo veluti fermento et perniciosa malignitate infecissent; non aliud inventum est remedium, quam ut huiusmodi homines ab omni in hoc regnum aditu sub pœna capitis prohiberentur: quod tandem vicesimo septimo regni sui anno factum est. Neque ita multo post eventus ipse, cum tanta tempestate hoc regnum adorta esset et totis viribus incubuisset, horum hominum invidiam et odium quicquam leniebat, sed potius auxit; ac si omnem charitatem patriæ exuissent. Ac postea sane, licet metus ab Hispania (qui hujus severitatis stimulus erat) consedisset aut remitteretur; tamen cum et memoria præteriti temporis in animis et sensibus hominum alte infixâ maneret, et leges semel factas, aut abrogare inconstans, aut negligere dissolutum videretur: ipsa rerum vis Elizabetham traxit, ut ad priorem rerum statum, qui ante vicesimum tertium regni sui annum erat, revertere sibi integrum non esset. Huc accessit quorundam in fasci commodis augendis industria: et ministrorum justitiæ, qui non aliam patriæ salutem, quam quæ legibus continetur, introspicere aut intueri consueverunt, sollicitudo; quæ quidem executionem legum posebant et urgebant. Ipsa tamen (in naturæ suæ specimen manifestum) ita legum mucronem contudit, ut pauci pro numero sacerdotes capitali supplicio plecterentur. Neque hæc defensionis loco dicta sunt, qua res ista non egent: cum et salus regni in hoc verteretur, et universæ istius severitatis ratio et modus longe infra sanguinaria, et inter Christianos vix nominanda, et que potius ab arrogantiâ atque malitiâ quam a necessitate profecta, pontificiorum exempla steterunt. Sed ejus, quod asseruimus, memores, eam in casu

religionis moderatam fuisse, et variationem, quæ fuit, non in natura sua, sed in temporibus exstitisse, demonstrasse nos existimamus.

De constantia autem Elizabethæ in religione ac ejus cultu, maximum argumentum est, quod religionem pontificiam, regno sororis auctoritate publica et multa cura impense et stabilitam et altas jam radices agentem, atque omnium, qui in magistratibus et cum potestate erant, consensu et studio firmatam; tamen quandoquidem nec verbo Dei, nec primitivæ puritati, nec conscientiæ suæ consentanea esset, maximo animo et paucissimis adjumentis convulsit et abrogavit. Neque id præceps aut acri impetu, sed prudenter et tempestive fecit. Idque, tum ex aliis multis rebus, tum ex responso quodam suo per occasionem facto conjicere licet. Nam primis regni diebus, cum in omen et gratulationem novi principatus vincti (ut moris est) solverentur, accessit ad eam, ad sacellum tum pergentem, aulicus quidam, qui ex natura et consuetudine jocandi, licentiam quandam sibi assumpserat: isque, sive ex motu proprio, sive a quodam prudentiore immissus, libellum supplicem ei porrexit, et in magna frequentia clara voce addidit, "Restare adhuc quatuor aut quinque vinctos, idque immerito; illis se libertatem ut reliquis petere; eos esse quatuor Evangelistas, atque etiam apostolum Paulum, qui diu ignota lingua, tanquam carcere, conclusi, inter populum conversari non possent." Cui illa prudentissime, "Sciscitandum adhuc melius ab ipsis esse, utrum liberari vellent, necne." Atque ita improvisæ quæstioni suspenso responso occurrit; veluti omnia integra sibi servans. Neque tamen timide et per vices hæc instillavit; sed ordine gravi et maturo, habito inter partes colloquio, et peractis regni comitiis: tum demum, idque intra orbem unius anni vertentis, ita omnia, quæ ad ecclesiam pertinebant, ordinavit et stabilivit, ut ne punctum quidem ab illis ad extremum vitæ diem recedi pateretur. Quin et singulis fere regni comitiis, ne quid in ecclesiæ disciplina aut ritibus innovaretur, publice monuit. Atque de religione hactenus.

Quod si quis ex tristioribus, leviora illa exaggeret; quod coli, ambiri, quin et amoris nomine se celebrari et extolli sinebat, atque volebat: eaque ultra sortem

ætatis continuabat: hæc tamen si mollius accipias, admiratione et ipsa carere non possunt; cum talia sint fere, qualia in fabulosis narrationibus inveniantur; de regina quadam in insulis beatis ejusque aula atque institutis, quæ amoris administrationem recipiat, sed lasciviam prohibeat: sin severius, habent et illa admirationem, eamque vel maximam, quod hujusmodi deliciæ, non multum famæ, nil prorsus majestati ejus officerent; nec imperium relaxarent, nec impedimento notabili rebus et negotiis gerendis essent. Hujusmodi enim res se cum publica fortuna commiscere haud raro solent. Verum, ut sermones nostros claudamus: fuit certe ista princeps bona et morata; etiam talis videri voluit: vitia odebat, et se bonis artibus clarescere cupiebat. Sane ad mentionem morum illius in mentem mihi venit quod dicam. Cum scribi ad legatum suum jussisset de quibusdam mandatis, ad reginam matrem Valesiorum separatim perferendis: atque qui ab epistolis erat clausulam quandam inseruisset, ut legatus diceret, tanquam ad favorem aucupandum, "Esse nimirum ipsas duas scæminas principes, a quibus, in usu rerum et imperandi virtute et artibus, non minoram quam a summo viris, expectarentur;" comparisonem non tulit, sed deleri jussit; "Seque artes longe dissimiles et instituta diversa ad imperandum afferre," dixit. Delectabatur etiam haud parum, si quis forte hujusmodi sermonem intulisset: "Eam, etiamsi in privata et mediocri fortuna ævum traduxisset, tamen non absque aliqua excellentiæ nota apud homines victuram fuisse;" adeo nihil a fortuna sua ad virtutis laudem mutuare, aut transferre volebat. Verum si in ejus laudes, sive morales sive politicas, ingrederer, aut in communes quasdam virtutum notas et commemorationes incidendum est, quod tam rara principe minus dignum; aut si propriam ipsius lucem et gratiam conciliare velim, in vitæ ejus historiam prolabendum, quod et majus otium et venam uberius desiderat. Ego enim hæc paucis, ut potui. Sed revera dicendum est; non alium verum hujus scæminæ laudatorem inveniri posse, quam tempus: quod cum tam diu jam volvitur, nihil simile, in hoc sexu, quoad rerum civilium administrationem peperit.

IN

## HENRICUM PRINCIPEM WALLIÆ

## ELOGIUM

FRANCISCI BACONI.

HENRICUS\* primogenitus Regis Magnæ Britanniae, Princeps Walliæ, antea spe beatus, nunc memoria felix, diem suum obiit 6. Novemb. anno 1612. Is magno totius regni luctu et desiderio extinctus est, utpote adolescens, qui animos hominum nec offendisset nec satiasset. Excitaverat autem propter bonam indolem multiplices apud plurimos omnium ordinum spes, nec ob brevitatem vitæ frustraverat. Illud imprimis accessit, quod in causa religionis firmus vulgo habebatur: prudentioribus quoque hoc animo penitus insederat, adversus insidias conjurationum (cui malo ætas nostra vix remedium reperit) patri eum instar præsidii et scuti fuisse, adeo ut et religionis et regis apud populum amor in eum redundaret, et in æstimationem jacturæ merito annumeraretur. Erat corpore validus et erectus, statura mediocri, decora membrorum compage, incessu regio, facie oblonga et in maciem inclinante, habitu plenior, vultu composito, oculorum motu magis sedato quam forti. Inerant quoque et in fronte severitatis signa, et in ore nonnihil fastus. Sed tamen si quis ultra exteriora illa penetraverat, et eum obsequio debito et sermone tempestivo deliniverat, utebatur eo benigno et facili, ut alius longe videretur colloquio quam aspectu, talisque prorsus erat, qui famam sui excitaret moribus dissimilem. Laudis et gloriæ fuit procul dubio appetens, et ad omnem speciem poni et auram decoris commovebatur; quod adolescenti pro virtutibus est. Nam et arma ei in honore erant ac viri militares; quin et ipse quiddam bellicum spirabat; et magnificentiae operum (licet pecuniæ alioquin satis parcus) deditus erat: amator insuper antiquitatis et artium. Literis quoque plus honoris attribuit quam temporis. In moribus ejus nihil laudandum magis fuit, quam quod in omni genere officiorum probe institutus credebatur et congruus: filius Regi patri mire obsequens, etiam regnum multo cultu demerebat, erga fratrem indulgens; sororem vero unice amabat, quam etiam (quantum potuit virilis forma ad eximiam virginalem pulchritudinem collata) referebat. Etiam magistri et educatores pueritiæ ejus (quod raro fieri solet) magna in gratia apud eum manserant. Sermone vero obsequii idem exactor et memor. Denique in quoti-

diano vitæ genere, et assignatione horarum ad singula vitæ munera, magis quam pro ætate constans atque ordinatus. Affectus ei inerant non nimium vehementes, et potius æquales quam magni. Etenim de rebus amatoriis mirum in illa ætate silentium, ut prorsus lubricum illud adolescentiæ suæ tempus in tanta fortuna, et valetudine satis prospera, absque aliqua insigni nota amorum transigeret. Nemo reperiebatur in aula ejus apud eum præpotens, aut in animo ejus validus; quin et studia ipsa, quibus capiebatur maxime, potius tempora patiebantur quam excessus, et magis repetita erant per vices, quam quod exstaret aliquod unum, quod reliqua superaret et compesceret, sive ea moderatio fuit, sive in natura non admodum præcoci, sed lente maturescente, non cernebantur adhuc quæ prævalitura erant. Ingenio certe pollebat, eratque et curiosus satis et capax, sed sermone tardior et tanquam impeditus: tamen si quis diligenter observaverat ea, quæ ab eo proferebantur, sive quæstionis vim obtinebant, sive sententiæ, ad rem omnino erant, et captum non vulgarem arguebant; ut in illa loquendi tarditate et raritate judicium ejus magis suspensum videretur et anxium, quam infirmum aut hebes. Interim audiendi miris modis patiens, etiam in negotiis, quæ in longitudinem porrigebantur; idque cum attentione et sine tædio, ut raro animo peregrinaretur aut fessa mente aliud ageret, sed ad ea, quæ dicebantur aut agebantur, animum adverteret atque applicaret; quod magnam ei (si vita suppetiisset) prudentiam spondebat. Certe in illius principis natura plurima erant obscura, neque judicio cujuscumque patefacienda, sed tempore, quod ei præreptum est. Attamen quæ apparebant, optima erant, quod famæ satis est. Mortuus est ætatis suæ anno decimo nono ex febris contumaci, quæ ubique a magnis et insularis fere insolitis siccitatibus ac fervoribus orta per ætatem populariter grassabatur, sed raro funere; dein sub autumnum erat facta lethalior. Addidit fama atrocior (ut ille ait) erga dominantium exitus suspicionem veneni.† Sed cum nulla ejus rei exstarent indicia, præsertim in ventriculo, quod præcipue a veneno pati solet, is sermo cito evanuit.

† Tacit. *Annal.* L. iv. 11.

## MEDITATIONES SACRÆ.

## DE OPERIBUS DEI ET HOMINIS.

VIDIT Deus omnia, quæ fecerant manus ejus, et erant bona nimis: homo autem conversus, ut videret opera, quæ fecerunt manus ejus, invenit quod omnia erant vanitas et vexatio spiritus.

Quare si opera Dei operaberis, sudor tuus ut unguentum aromatum, et feriatio tua ut sabbatum Dei. Laborabis in sudore bonæ conscientiæ, et feriabere in otio suavissimæ contemplationis. Si autem post magnalia hominum persequeris, erit tibi in operando stimulus et angustia, et in recordando fastidium et exprobratio. Et merito tibi evenit, o homo, ut cum tu, qui es opus Dei, non retribuas et beneplacitiam, etiam opera tua reddant tibi fructum similem amaritudinis.

## DE MIRACULIS SERVATORIS.

“ Bene omnia fecit.”

VERUS plausus: Deus, cum universa crearet, vidit quod singula, et omnia erant bona nimis: Deus Verbum in miraculis, quæ edidit (omne autem miraculum est nova creatio, et non ex lege primæ creationis) nil facere voluit, quod non gratiam et beneficentiam omnino spiraret. Moses edidit miracula, et profligavit Ægyptios pestibus multis; Elias edidit, et occlusit cælum ne plueret super terram; et rursus eduxit de cælo ignem Dei super duces et cohortes; Elizæus edidit, et evocavit ursas e deserto, quæ laniarent impuberes; Petrus Ananiam sacrilegum hypocritam morte, Paulus Elymam magum cæcitate percussit: sed nihil hujusmodi fecit Jesus. Descendit super eum Spiritus in forma columbæ, de quo dixit, “ Nescitis cujus spiritus sitis.” Spiritus Jesu spiritus columbinus: fuerunt illi servi Dei tanquam boves Dei triturantes granum, et conculcantes paleam; sed Jesus agnus Dei sine ira et judiciiis. Omnia ejus miracula circa corpus humanum, et doctrina ejus circa animam humanam. Indiget corpus hominis alimento, defensione ab externis, et cura. Ille multitudinem piscium in retibus congregavit, ut uberiorem victum hominibus præberet: ille alimentum aquæ in dignius alimentum vini ad exhilarandum cor hominis convertit: ille ficum, quod officio suo, ad quod destinatum fuit, ad cibum hominis videlicet, non fungeretur, areferi jussit: ille penuriam piscium et panum ad alendum exercitum populi dilatavit: ille ventos, quod navigantibus minarentur, corripuit: ille claudis motum, cæcis lumen, mutis sermonem, languidis sanitatem, leprosis carnem mundam, dæmoniis animum integrum, mortuis vitam restituit. Nullum miraculum judicii, omnia beneficentiæ, et circa corpus humanum; nam circa divitias non est dignatus edere miracula, nisi hoc unicum, ut tributum daretur Cæsari.

## DE COLUMBINA INNOCENTIA ET SERPENTINA PRUDENTIA.

“ Non accipit stultus verba prudentiæ, nisi ea dixeris quæ versantur in corde ejus.”

JUDICIO hominis depravato et corrupto omnis, quæ adhibetur, eruditio et persuasio irrita est, et despectui, quæ non ducit exordium a detectione et representatione malæ complexionis animi sanandi; quemadmodum inutiliter adhibetur medicina non pertentato vulnere. Nam homines malitiosi, qui nihil sani cogitant, præoccupant hoc sibi, ut putent bonitatem ex simplicitate morum, ac inscitia quadam, et imperitia rerum humanarum gigni. Quare nisi perspexerint ea quæ versantur in corde suo, id est, penitissimas latebras malitiæ suæ perlustratas esse ei, qui suasum molitur, deridiculo habent verba prudentiæ; itaque ei, qui ad bonitatem aspirat (non solitariam et particularem, sed seminalem et genitivam, quæ alios trahat), debent esse omnino nota, quæ ille vocat “ profunda Satanæ; ” ut loquatur cum auctoritate et insinuatione vera. Hinc est illud, “ Omnia probate, quod bonum est tenete; ” inducens electionem judiciosam ex generali minatione. Ex eodem fonte est illud: “ Estote prudentes sicut serpentes, innocentes sicut columbæ. ” Non est dens serpentis, nec venenum, nec aculeus, quæ non probata debeant esse; nec pollutionem quis timeat, nam et sol ingreditur latrinas, nec inquinatur; nec quis se Deum tentare credat, nam ex præcepto est, et sufficiens est Deus ut vos immaculatos custodiat.

## DE EXALTATIONE CHARITATIS.

“ Si gavisus sum ad ruinam ejus qui oderat me, et exaltavi quod invenisset eum malum.”

DETESTATIO Job: amicos redamare, est charitas publicanorum ex fœdere utilitatis; versus inimicos autem bene animatos esse, est ex apicibus juris Christiani, et imitatio divinitatis. Rursus tamen hujus charitatis complures sunt gradus, quorum primus est inimicis respicientibus ignoscere; ac hujus quidem charitatis etiam apud generosas feras umbra quædam et imago reperitur; nam et leones in se submittentis et prosternentes non ulterius sævire perhibentur. Secundus gradus est inimicis ignoscere, licet sint duriores, et absque reconciliationum piaculis. Tertius gradus est non tantum veniam et gratiam inimicis largiri, sed etiam merita et beneficia in eos conferre. Sed habent hi gradus, aut habere possunt, nescio quid potius ex ostentatione, aut saltem animi magnitudine, quam ex charitate pura. Nam cum quis virtutem ex se emanare et effluere sentit, fieri potest ut is efferatur, et potius virtutis suæ fructu, quam salute et bono proximi,

delectetur. Sed si aliunde malum aliquod inimicum tuum deprehendat, et tu in interioribus cellulis cordis graveris et angustieris, nec, quasi dies ultionis et vindictæ tuæ advenisset, læteris; hoc ego fastigium et exaltationem charitatis esse pono.

#### DE MENSURA CURARUM.

“ Sufficit diei malitia sua.”

MODUS esse in curis humanis debet, alioqui et inutiles sunt, ut quæ animum opprimant, et iudicium confundant; et profanæ, ut quæ sapientiam animum, qui perpetuitatem quandam in rebus mundanis sibi spondeat. Hodierni enim debemus esse ob brevitatem ævi, et non crastini, sed, ut ille ait, “ carpentes diem, erunt enim futura præsentia vice sua;” quare sufficit sollicitudo præsentium. Neque tamen curæ moderatæ, sive sint œconomicæ, sive publicæ, sive rerum mandatarum, notantur. Sed hic duplex est excessus. Primus, cum curarum series in longitudinem nimiam et tempora remotiora extendimus, ac si providentiam divinam apparatu nostro ligare possemus; quod semper etiam apud ethnicos infaustum et insolens fuit. Fere enim qui fortunæ multum tribuerunt, et ad occasiones præsentis alacres et præsto fuerunt, felicitate magna uti sunt. Qui autem, altum sapientes, omnia curata et meditata habere confisi sunt, infortunata subierunt. Secundus excessus est, cum in curis immoramur diutius quam opus est ad justam deliberationem et ad decretum faciendum. Quis enim nostrum est, qui tantum curet, quantum sufficit ut se explicet, vel sese explicare non posse iudicet, et non eadem sæpe retractet, et in eodem cogitationum circuitu inutiliter hæreat, et denique evanescat? Quod genus curarum et divinis et humanis rationibus adversissimum est.

#### DE SPE TERRESTRI.

“ Melior est oculatorum visio, quam animi progressio.”

SENSUS purus in singula meliorem reddit conditionem et politiam mentis, quam istæ imaginationes et progressionem animi. Natura enim animi humanitatem in ingeniis gravissimis est, ut a sensu singulorum statim progrediatur et saliat, et omnia augeret fore talia, quale illud est quod præsentem sensum incutit: si boni est sensus, facilis est ad spem indefinitam; si mali est sensus, ad metum: unde illud, “ Fallitur augurio spes bona sæpe suo;” et contra illud, “ Pessimus in dubiis augur.” Sed tamen timoris est aliquis fructus; præparat enim tolerantiam, et acuit industriam:

“ — Non ulla laborum,  
 () virgo, nova mi facies inopinave surgit:  
 Omnia præcepti, atque animo mecum ante peregi.  
 VIRG. Æn. vi. 103.

Spes vero inutile quiddam videtur. Quorsum enim ista anticipatio boni? Attende, si minus eveniat bonum quam speres, bonum licet sit, tamen quia minus sit, videtur damnum potius quam lucrum, ob excessum spei. Si par et tantum sit, et eventus sit spei æqualis, tamen flos boni per spem decerpitur, et videtur fere obsoletum, et fastidio magis finitimum.

Si major sit successus spe, videtur aliquid lucri factum; verum est: sed annon melius fuisset sortem lucrificasse nihil sperando, quam usuram nimis sperando? Atque in rebus secundis ita operatur spes; in malis autem robor verum animi solvit. Nam neque semper spei materia suppetit, et destitutione aliqua vel minima spei universa fere firmitudo animi corrui; et minorem efficit dignitatem mentis, cum mala toleramus alienatione quadam et errore mentis, non fortitudine et iudicio. Quare satis leviter finire poëtæ spem antidotum humanorum morborum esse, quod dolores eorum mitiget, cum sit revera incensio potius, et exasperatio, quæ eos multiplicari et recrudescere faciat. Nihilominus fit ut plerique hominum imaginationibus spei et progressionibus istis mentis omnino se dedant, ingrati in præterita, obliiti fere præsentium, semper juvenes, tantum futuris immineant. “ Vidi universos ambulantes sub sole cum adolescente secundo, qui consurget post eum; quod pessimus morbus est, et status mentis insanissimus.” Quæras fortasse annon melius sit, cum res in dubia expectatione positæ sint, bene divinare, et potius sperare quam diffidere, cum spes majorem tranquillitatem animi conciliet. Ego sane in omni mora et expectatione tranquillum et non fluctuantem animi statum, ex bona mentis politia et compositione, summum humanæ vitæ firmamentum iudico: sed eam tranquillitatem, quæ ex spe pendet, ut levem et infirmam recuso. Non quia non conveniat tam bona, quam mala, ex sana et sobria conjectura prævidere et præsupponere, ut actiones ad probabilitatem eventuum magis accommodemus; modo sit hoc officium intellectus ac iudicii cum justa inclinatione affectus. Sed quem ita spes coercuit, ut cum, ex vigilantibus et firmo mentis discursu meliora, ut magis probabilia, sibi prædixerit, non in ipsa boni anticipationem immoratus sit, et huiusmodi cogitationi, ut somnio placido, indulserit? Atque hoc est quod reddit animum levem, tumidum, inæqualem, peregrinantem; quare omnis spes in futuram vitam cælestem consumenda est. Hic autem quanto prior sit præsentium sensus absque infectione et tinctura imaginationis, tanto prudenter et melior anima. Vitæ summa brevis spem nos vetat inchoare longam.

#### DE HYPOCRITIS.

“ Misericordiam volo, et non sacrificium.”

OMNIS jactatio hypocritarum est in operibus primæ tabulæ legis, quæ est de venerationibus Deo debitis. Ratio duplex est, tum quod huiusmodi opera majorem habent pompam sanctitatis, tum quod cupiditatibus eorum minus adversentur. Itaque redargutio hypocritarum est, ut ab operibus sacrificii remittantur ad opera misericordiæ: unde illud, “ Religio munda et immaculata apud Deum et patrem hæc est, visitare pupillos et viduas in tribulatione eorum;” et illud, “ Qui non diligit fratrem suum, quem vidit; Deum, quem non vidit, quomodo potest diligere?” Quidam autem altioris et inflatioris hypocritarum, seipsos decipientes, et existimantes se acriore cum Deo conversatione dignos, officia charitatis in proximum ut minora negligunt. Qui error monasticæ vitæ non principium quidem dedit, (nam

initia bona fuerunt,) sed excessum addidit. Recte enim dictum est, "Orandi munus magnum esse munus in ecclesia;" et ex usu ecclesiæ est, ut sint cœtus hominum, a mundanis curis soluti, qui assiduè et devotis precibus Deum pro ecclesiæ statu sollicitent. Sed huic ordinationi illa hypocrisis finitima est; nec universa institutio reprobatur, sed spiritus illi se effertentes cohibentur: nam et Enoch, qui ambulavit cum Deo, prophetizavit, ut est apud Judam; atque fructu suæ prophetiæ ecclesiam donavit. Et Johannes Baptista, quem principem quidam vitæ monasticæ volunt, multo ministerio functus est, tum prophetizationis, tum baptismationis. Nam ad alios istos in Deum officiosos refertur illa interrogatio, "Si juste egeris, quid donabis Deo, aut quid de manu tua accipiet?" Quare opera misericordiæ sunt opera discretionis hypocritarum. Contra autem fit cum hæreticis; nam ut hypocritæ simulata sua sanctitate versus Deum injurias suas versus homines obducunt; ita hæretici moralitate quadam versus homines blasphemias suas contra Deum insinuant.

## DE IMPOSTORIBUS.

"Sive mente excedimus, Deo: sive sobrii sumus, vobis."

VERA est ista effigies, et verum temperamentum viri, cui religio penitus in præcordiis insedit, et veri operarii Dei. Conversatio ei quæ cum Deo est, plena excessus, et zeli, et extasis. Hinc gemitus ineffabiles et exultationes, et raptus spiritus, et agones. At quæ cum hominibus est, plena mansuetudinis, et sobrietatis, et morigerationis; hinc "omnia omnibus factus sum," et hujusmodi. Contra fit in hypocritis et impostoribus: ii enim in populo et ecclesia incendunt se et excedunt, et veluti sacris furoribus afflati omnia miscent. Si quis autem eorum solitudines, et separatas meditationes, et cum Deo conversationes introspectiat, deprehendat eas non tantum frigiditas et sine motu, sed plenas malitiæ et fermenti; sobrii Deo, mente excedentes populo.

## DE GENERIBUS IMPOSTURÆ.

"Devita prophanas vocum novitates, et oppositiones falsi nominis scientiæ."

"Ineptas et aniles fabulas devita."

"Nemo vos decipiat in sublimitate sermonum."

TRES sunt sermones, et veluti styli imposturæ. Primum genus est eorum, qui statim ut aliquam materiam nacti sunt, artem conficiunt, vocabula artis imponunt, omnia in distinctiones redigunt, inde posita vel themata educunt, et ex quæstionibus et responsionibus oppositiones conficiunt: hinc scholasticorum quisquilis et turbæ. Secundum genus est eorum, qui vanitate ingenii, ut sacri quidam poetæ, omnem exemplorum varietatem ad mentes hominum tractandas confingunt: unde vitæ parum, et anti-quorum hæreticorum figmenta innumera. Tertium genus eorum, qui mysteriis et grandiloquiis, allegoriis et allusionibus omnia implent: quod genus mysticum et gnosticum complures hæretici sibi delegerunt. Primum genus sensum et captum hominis illaqueat, secundum allicit, tertium stupefacit; seducunt vero omnia.

## DE ATHEISMO.

"Dixit insipiens in corde suo, Non est Deus."

PRIMUM, "dixit in corde," non ait, "cogitavit in corde;" hoc est, non tam ita sentit penitus, sed vult hoc credere: quoniam expedire sibi videt, ut non sit Deus, omni ratione sibi hoc suadere, et in animum inducere conatur: et tanquam thema aliquid vel positum vel placitum asserere et adstruere et firmare studet. Manet tamen ille igniculus luminis primi, quo divinitatem agnosimus, quem prorsus extinguere, et stimulum illum ex corde evellere frustra nititur. Quare ex malitia voluntatis suæ, et non ex nativo sensu et judicio, hoc supponit, ut ait comicus poëta, "Tunc animus meus accessit ad meam sententiam," quasi ipse alter esset ab animo suo. Itaque atheista magis dixit in corde, quam sentit in corde, quod non sit Deus. Secundo, dixit in corde, non ore locutus est; sed notandum est hoc metu legis et famæ fieri, nam, ut ait ille, "Negare deos difficile est in concione populi, sed in concessu familiari expeditum." Nam si hoc vinculum tollatur e medio, non est hæresis, quæ majore studio se pandere, et spargere, et multiplicare nitatur, quam atheismus. Nec videas eos, qui in hanc mentis insaniam immersi sunt aliud fere spirare, et importune inculcare, quam verba atheismi; ut in Lucretio Epicureo, qui fere suam in religionem invectivam singulis aliis subjectis intercalarem facit. Ratio videtur esse, quod atheista, cum sibi non satis acquiescat, æstuans, nec sibi satis credens, et crebra suæ opinionis deliquia in interioribus patiens, ab aliorum assensu refocillari cupit. Nam recte dictum est: "Qui alteri opinionem approbare sedulo cupit, ipse diffidit." Tertio, insipiens est, qui hoc in corde dixit; quod verissimum est, non tantum quod divina non sapiat, sed etiam secundum hominem. Primo enim ingenia, quæ sunt in atheismum proniora, videas fere levia, et dicacia, et audacula, et insolentia: ejus denique compositionis, quæ prudentiæ et gravitati morum adversissima est. Secundo, inter viros politicoes, qui altioris ingenii et latioris cordis fuerunt, religionem non arte quadam ad populum adhibuerunt, sed interiore dogmate coluere, ut qui providentiæ et fortunæ plurimum tribuerint. Contra, qui artibus suis et industriis, et causis proximis, et apparentibus omnia ascripserunt, et, ut ait propheta, "retibus suis immolarunt," pusilli fuerunt politici, et circumforanei, et magnitudinis actionum incapaces. Tertio, in physicis et illud affirmo, parum philosophiæ naturalis, et in ea progressum liminarem ad atheismum opiniones inclinare: contra, multum philosophiæ naturalis, et progressum in ea penetrantem, ad religionem animos circumferre. Quare atheismus stultitiæ et incitiæ ubique convictus esse videtur, ut merito sit dictum insipientium, "Non est Deus."

## DE HÆRESIBUS.

"Erratis, nescientes Scripturas, neque potestatem Dei."

CANON iste mater omnium canonum adversus hæreses. Duplex erroris causa, ignoratio voluntatis Dei, et ignoratio vel levior contemplatio potestatis

Dei. Voluntas Dei revelatur magis per Scripturas, "Scrutamini;" potestas magis per creaturas, "Contemplamini." Ita asserenda plenitudo potestatis Dei, ne maculemus voluntatem. Ita asserenda bonitas voluntatis, ne minuamus potestatem. Itaque religio vera sita est in mediocritate inter superstitionem cum hæresibus superstitionis ex una parte, et atheismum cum hæresibus prophanis ex altera. Superstitio repudiata luce Scripturarum, seque deditur traditionibus pravis vel apocryphis, et novis revelationibus, vel falsis interpretationibus Scripturarum, multa de voluntate Dei fingit et somniat, a Scripturis devia et aliena. Atheismus autem et theomachia contra potestatem Dei insurgit et tumultuatur, verbo Dei non credens, quod voluntatem ejus revelat, ob incredulitatem potestatis ejus, cui omnia sunt possibilia. Hæresis autem, quæ ex isto fonte emanant, graviore videntur cæteris. Nam et in politis atrocius est potestatem et majestatem minuere, quam famam principis notare. Hæresium autem, quæ potestatem Dei minuunt, præter atheismum purum tres sunt gradus, habentque unum et idem mysterium (nam omnis antichristianismus operatur in mysterio, id est, sub imagine boni,) hoc ipsum, ut voluntatem Dei ab omni aspersione malitiæ liberent. Primus gradus est eorum, qui duo principia constituunt paria, ac inter se pugnantia et contraria, unum boni, alterum mali. Secundus gradus est eorum, quibus nimium læsa videtur majestas Dei in constituendo adversus eum principio affirmativo et activo: quare exturbata tali audacia, nihilominus inducunt contra Deum principium negativum et privativum. Nam volunt esse opus ipsius materiæ et creaturæ internum et nativum et substantivum, ut ex se vergat et relabatur ad confusionem et ad nihilum; nescientes ejusdem esse omnipotentis ex aliquo nihil facere, cujus ex nihilo aliquid. Ter-

tius gradus est eorum, qui arcant et restringunt opinionem priorem tantum ad actiones humanas, quæ participant ex peccato, quas volunt substantive, absque nexu aliquo causarum, ex interna voluntate et arbitrio humano pendere, statuuntque latiores terminos scientiæ Dei quam potestatis, vel potius ejus partis potestatis Dei, (nam et ipsa scientia potestas est,) qua scit, quam ejus qua movet et agit: ut præsciat, quædam otiose, quæ non prædestinet et præordinet. Et non absimile est figmento, quod Epicurus introduxit in Democritismum, ut fatum tolleret, et fortunæ locum daret, declinationem videlicet atomi, quod semper a prudentioribus inamissimum commentum habitum est. Sed quidquid a Deo non pendet, ut auctore et principio, per nexus et gradus subordinatos, id loco Dei erit, et novum principium, et deaster quidam. Quare merito illa opinio respuitur, ut læsio et diminutio majestatis et potestatis Dei. Et tamen admodum recte dicitur, quod "Deus non sit auctor mali," non quia non auctor, sed quia non mali.

#### DE ECCLESIA ET SCRIPTURIS.

"Proteges eos in tabernaculo tuo a contradictione linguarum."

CONTRADICTIONES linguarum ubique occurrunt extra tabernaculum Dei. Quare quocumque te verteris, exitum controversiarum non reperies nisi huc te receperis. Dices, verum est, nempe in unitatem ecclesie. Sed advertite. Erat in tabernaculo arca, et in arca testimonium vel tabulæ legis. Quid mihi narras corticem tabernaculi, sine nucleo testimonii? Tabernaculum ad custodiendum et tradendum testimonium erat ordinatum. Eodem modo et ecclesie custodia et traditio per manus Scripturarum demandata est, sed anima tabernaculi est testimonium.

## EPISTOLÆ.

### I. EPISTOLA AD FULGENTIUM.

REVERENDISSIME P. FULGENTI,

FATEOR me literarum tibi debitorem esse: suberat excusatio justa nimis; implicatus enim fueram gravissimo morbo, a quo necdum liberatus sum. Volo reverentiæ tuæ nota esse consilia mea de scriptis meis, quæ meditor et molior: non perficiendi spe, sed desiderio experiundi; et quia posteritati (secula enim ista requirunt) inservio. Optimum autem putavi ea omnia, in Latinam linguam traducta, in tomos dividere. Primus tomus constat ex libris "De Augmentis Scientiarum:" qui tamen, ut nosti, jam perfectus et editus est, et partitiones scientiarum complectitur; quæ est "Instaurationis meæ" pars prima. Deberat sequi "Novum Organum;" inter-

posui tamen scripta mea moralia et politica, quia magis erant in promptu. Hæc sunt: primo, "Historia Regni Henrici Septimi Regis Angliæ;" deinde sequetur libellus ille, quem vestra lingua "Saggi morali" appellastis. Verum illi libro nomen gravius impono, scilicet ut inscribatur, "Sermones Fideles, sive Interiora Rerum." Erunt autem sermones isti, et numero aucti, et tractatu multum amplificati. Item continebit tomus iste libellum "De Sapientia Veterum:" atque hic tomus (ut diximus) interjectus est, et non ex ordine "Instaurationis." Tum demum sequetur "Organum Novum;" cui secunda pars adhuc adjicienda est, quam tamen animo jam complexus et metitus sum. Atque hoc modo secunda pars "Instaurationis" absolvetur. Quod ad tertiam partem "Instaurationis" attinet, historiam scilicet naturalem, opus illud est plane regium aut papale,

aut alicujus collegii aut ordinis; neque privata industria pro merito perfici potest. At portiones illæ, quas jam in lucem edidi, "De Ventis, De Vita et Morte," non sunt historia pura, propter axiomata et observationes majores interpositas; sed genus scripti commixtum ex historia naturali et machina intellectus rudi et imperfecta; quæ est, "Instaurationis" pars quarta. Itaque succedet illa ipsa quarta pars, et multa exempla machinæ continebit magis exacta, et ad inductivas regulas magis applicata. Quinto sequetur iste liber, quem "Prodrum Philosophiæ Secundæ" inscripsimus; qui inventa nostra circa nova axiomata ab experimentis ipsis excitata continebit; ut tanquam columnæ jacentes sustollantur: quem posuimus "Instaurationis" partem quintam. Postremo superest philosophia ipsa secunda, quæ est "Instaurationis" pars sexta; de qua spem omnino abjecimus: sed a seculis et posteritate fortasse pullulabit. Attamen, in prodromis (iis dico tantum, quæ ad universalialia naturæ fere pertingunt) non levia jacta erunt hujus rei fundamenta. Conamur (ut vides) tenues grandia: in eo tantum spem ponentes, quod videntur ista a Dei providentia et immenso bonitate profecta. Primo, propter ardorem et constantiam mentis nostræ, quæ in hoc instituto non consenuit, nec tanto temporis spatio refrixit. Equidem memini me quadraginta abhinc annis juvenile opusculum circa has res confecisse, quod, magna prorsus fiducia et magnifico titulo, "Temporis partum maximum" inscripsi. Secundo, quod propter infinitam utilitatem Dei opt. max. auctoramento gaudere videatur.

Commendatum, rogo, me habeat reverentia vestra illustrissimo viro domino Molines, cujus suavissimis et prudentissimis literis quam primum, si Deus volet, rescribam. Vale, P. reverendissime.

Reverentiæ tuæ amicus addictissimus,

FR. ST. ALBAN.

## II. RESCRIPTUM PROCURATORIS REGIS PRIMARI, AD ACADEMIAM CANTABRIGIENSEM, QUANDO IN SANCTIUS REGIS CONCILIIUM COOPTATUS FUIT.

GRATÆ mihi fuere literæ vestræ, atque gratulationem vestram ipse mihi gratulor. Rem ipsam ita mihi honori et voluptati fore duco, si in hac mente maneam, ut publicis utilitatibus, studio indefesso et perpetuis curis et puro affectu, inserviam. Inter partes autem reipublicæ nulla animo meo carior est, quam academiæ et literæ: idque et vita mea antea declarat et scripta. Itaque quicquid mihi accesserit, id etiam vobis accessisse existimare potestis. Neque vero patrocinium meum vobis sublatum aut diminutum esse credere debetis: nam et ea pars patroni, quæ ad consilium in causis adhibendum spectat, integra manet; atque etiam (si quid gravius acciderit) ipsum perorandi munus (licentia regis obenta) relictum est; quodque juris patrocinio deerit, id auctiore potestate compensabitur. Mihi in votis est, ut quemadmodum a privatorum et clientelarum negotiis ad gubernacula reipublicæ transla-

tus jam sum; ita et postremæ ætatis meæ pars (si vita suppetit) etiam a publicis curis ad otium et literas devehî possit. Quin etiam sæpius subito illa cogitatio, ut etiam in tot et tantis negotiis, tamen singulis annis aliquos dies apud vos deponam; ut ex majore vestrarum rerum notitia vestris utilitatibus melius consulere possim.

Amicus vester maxime fidelis et benevolus,

FR. BACON.

5 Julii, 1616.

## III. FRANCISCUS BARO DE VERULAMIO, VICECOMES SANCTI ALBANI, ALMÆ MATRI INCLYTÆ ACADEMIÆ CANTABRIGIENSI SALUTEM.

DEBITA filii, qualia possum, persolvo. Quod vero facio, idem et vos hortor; ut augmentis scientiarum strenue incumbatis, et in animi modestia libertatem ingenii retineatis, neque talentum a veteribus concrediditum in sudario reponatis. Affuerit proculdubio et affulserit divini luminis gratia, si, humiliata et submissa religioni philosophia, clavibus sensus legitime et dextre utamini, et, amoto omni contradictionis studio, quisque cum alio, ac si ipse secum, disputet. Valet.

## IV. INCLYTÆ ACADEMIÆ OXONIENSIS.

CUM almæ matri meæ inclytæ academiæ Cantabrigiensi scripserim, deessem sane officio, si simile amoris pignus sorori ejus non deferrem. Sicut autem eos hortatus sum, ita et vos hortor, ut scientiarum augmentis strenue incumbatis, et veterum labores neque nihil neque omnia esse putetis; sed vires etiam proprias modeste perpendentes, subinde tamen experiamini: omnia cedent quam optime, si arma non alii in alios vertatis, sed junctis copiis in naturam rerum impressionem faciatis; sufficit quippe illa honori et victoriæ. Valet.

## V. RESCRIPTUM ACADEMIÆ OXONIENSIS FRANCISCO BACONO.

PRÆNOBILIS ET (QUOD IN NOBILITATE PENE MIRACULUM EST) SCIENTISSIME VICECOMES!

NIHIL concinnius tribuere amplitudo vestra, nihil gratius accipere potuit academia quam scientias: scientias, quas prius inopes, exiguas, incultas miserat, accepit tandem nitidas, proceras, ingenii tui copiis (quibus unice augeri poterant) uberrime dotatas. Grande ducit munus illud sibi a peregrino (si tamen peregrinus sit, tam prope consanguineus) auctius redire, quod filiis suis instar patrimonii impendit; et libenter agnoscit hic nasci Musas, alibi tamen quam domi suæ crescere. Creverunt quidem, et sub calamo tuo, qui, tanquam strenuus literarum Alcides, columnas tuas, mundo immobiles, propria manu in orbe scientiarum, plus

ultra statuisti. Euge exercitatisimum athletam, qui in aliorum patrocinandis virtutibus occupatissimus, alios; in scriptis propriis teipsum superasti: quippe in illo honorum tuorum fastigio, viros tantum literatos promovisti, nunc tandem (O dulce prodigium!) etiam et literas. Onerat clientes beneficii hujus augustior munificentia; cujus in accipiendo honor apud nos manet, in fruendo emolumentum transit usque in posteros. Quin ergo si gratiarum talioni impares sumus, juncto robore alterius seculi nepotes succurrant, qui reliquum illud, quod tibi non possunt, saltem nomini tuo persolvent. Felices illi, nos tamen quam longe feliciores, quibus honorifice conscriptam tua manu epistolam, quibus oculatissima lectitandi præcepta, et studiorum concordiam, in fronte voluminis demandasti: quasi parum esset Musas de tua penu locupletare, nisi ostenderes quo modo et ipsæ discerent. Solenniori itaque osculo acerrimum iudicii tui depositum excepit frequentissimus purpuratorum senatus; exceperunt pariter minoris ordinis gentes; et quod omnes in publico librorum thesaurario, in memoria singuli deposuerunt.

Dominationis vestræ studiosissima,

ACADEMIA OXONIENSIS.

E domo nostra Congregationis  
20 Decem. 1623.

VI. FRANCISCUS BARO DE VERULAMIO,  
VICECOMES SANCTI ALBANI, PERCELEBRI  
COLLEGIO SANCTÆ ET INDIVIDUÆ TRINI-  
TATIS IN CANTABRIGIA SALUTEM.

Res omnes earumque progressus initiis suis debentur. Itaque cum initia scientiarum e fontibus

vestris hauserim, incrementa ipsarum vobis rependenda existimavi. Spero itidem fore, ut hæc nostra apud vos, tanquam in solo nativo, felicius succrescant. Quamobrem et vos hortor, ut salva animi modestia, et erga veteres reverentia, ipsi quoque scientiarum augmentis non desitis: verum ut post volumina sacra verbi Dei et Scripturarum, secundo loco volumen illud magnum operum Dei et creaturarum, strenue et præ omnibus libris (qui pro commentariis tantum haberi debent) evolvat. Valete.

VII. ALMÆ MATRI ACADEMIÆ CANTABRIGIENSIS.

Cum vester filius sim et alumnus, voluptati mihi erit, partum \* meum nuper editum vobis in gremium dare: aliter enim velut pro exposito eum haberem. Nec vos moveat, quod via nova sit: necesse est enim talia per ætatum et seculorum circuitus evenire. Antiquis tamen suis constat honos; ingenii scilicet: nam fides verbo Dei et experientiæ tantum debetur. Scientias autem ad experientiam retrahere non conceditur: at easdem ab experientia de integro excitare, operosum certe, sed pervium. Deus vobis, et studiis vestris faveat.

Filius vester amantissimus,

FRANC. VERULAM, CANCEL.

Ex ædibus Eborac. Oct. 3, 1620.

\* Viz. Novum Organum.

FINIS.

# INDEX

## TO THE ENGLISH PART.

- ABATOR**, who is so called, i. 576, how and when he may become lawful owner of another's lands, *ib.*
- Abbot**, George, archbishop of Canterbury, ii. 170.
- "**Abecedarium Naturæ**," i. 180.
- Abettor**, several ways of becoming so, i. 675.
- Abilities**, natural, like plants, want pruning, i. 301.
- Abjuration**, in what cases a man shall be obliged to abjure the realm, i. 646, several cases thereof, with the proceedings relating to them, *ib.*
- Absolution**, whether that in our liturgy is not improper, i. 356, is of two sorts only, *ib.*
- "**Absque impetitione vasti**," the sense and meaning of this clause cleared up, and stated by the words themselves, by reason, by authorities, by removing contrary authorities, by practice, i. 620—623, it gives no grant of property, 621, how this clause came first to be used, 621, 622.
- Academics**, acknowledged by all sects to be the best, i. 255.
- Acceleration of time in works of nature**, i. 119, in clarification of liquor, *ib.* in several maturations, 120, as of fruits, *ib.* of drinks, *ib.* of metals, 121. Acceleration of putrefaction, 122. Acceleration of birth, 124, of growth or stature, *ib.* three means of it, 124, 125. Acceleration of germination, 131, by three means, namely, mending the nourishment, *ib.* comforting the spirits of the plant, *ib.* making way for the easy coming to the nourishment, *ib.* Several pregnant instances thereof, 132. Acceleration of clarification in wine, 173.
- Accessory**, how one man may become so to the act of another done by his order, i. 562.
- Aches in men's bodies** foreshow rain and frost, i. 178.
- Acquests**, new ones, more burden than strength, i. 756.
- Act**, not to be confounded with the execution of the act, nor the entire act with the last part of it, instances, i. 548, 549.
- Act of parliament**, a rule to be observed where that is donor, i. 610, five acts relating to the distinction of the body natural and politic of the king explained, 662, 663, *et seq.* of l Jac. I. relating to the punishment of witchcraft, 676.
- Acting in song graceful**, i. 292.
- Active men**, wherein preferred to virtuous, i. 300.
- Actium**, battle of, decided the empire of the world, i. 286.
- Administration**, how a property in goods, &c. may be gained by letters thereof, i. 587, what bishop shall have the power of granting them in disputable cases, *ib.* two cases in the deaths of executors and administrators where the ordinary shall administer, 588.
- Administrators**, their office and authority in some particulars, i. 587, in what cases the ordinary is to commit administration, 588, they must execute their authority jointly, *ib.* may retain, *ib.*
- Admiralty**, how to be ordered after the union, i. 458, 459.
- Adrian VI.** i. 319.
- Adrian the emperor**, i. 323, mortally envied in others the qualities he excelled in, 267, instances of his misplaced bounty and expense, 671.
- Adversity**, i. 264, resembles miracles in its command over nature, *ib.* fortitude its proper virtue, *ib.*
- Advice**, how to be given and taken, i. 301.
- Advice to Sir George Villiers**, i. 508. Vide Villiers.
- Advocates**, i. 305, surprising that their confidence should prevail with judges, *ib.* what is due to and from them, *ib.*
- Advowsons**, cases relating thereto explained, i. 548, 558, 560.
- Ægypt** hath little rain, i. 170. **Ægyptian** conserving bodies, 171, their mummies, *ib.*
- Æneas Sylvius**, his remark on the conduct of the popes and lawyers, i. 320, says, that had not christianity been supported by miracles, it ought to be received for its honesty, *ib.*
- Æquinoctial** more tolerable for heat than the torrid zone, i. 130, three causes thereof, *ib.*
- Æsop**, his fable of the frogs in a great drought, i. 256, of the cat and the fox, *ib.* of the fainting man and death, 257.
- Æthiopes**, fleshy and plump, why, i. 130.
- Ætites**, or eagle-stone, i. 104.
- Ætna** compensateth the adjacent countries for the damages it doth, i. 149.
- Ætna and Vesuvius**, why they shoot forth no water, i. 173.
- Affection of tyranny over men's understandings and beliefs**, i. 201.
- Affections of beasts** impressed upon inanimate things, i. 198, three affections which tie subjects to sovereigns, 794, no heat of affection without idleness, 532.
- Affidavits in chancery**, in what cases not to be allowed, i. 720, 721.
- Africa**, why so fruitful of monsters, i. 137, the people there never stir out after the first showers, 176.
- Αγάπη**, is always rightly translated "charity" in the Rheimish version, i. 536.
- Agaric** works most on phlegm, i. 145, a spongy excrescence on the roots of trees, 150, 153, a putrefaction, 150.
- Agathocles**, i. 314.
- Age**. See Youth.
- Age of discretion**, at what time allowed to be by our law, ii. 75.
- Age**, its excellency in four things, i. 319, its inconveniences and difficulties with regard to action, 295.
- Agesilaus**, i. 314.
- Agrippa** raised by Augustus, i. 282.
- Agues** proceed mostly from obstruction of the humours, i. 122.
- Aid**, a certain sum of money so called, its uses, i. 578.
- Air** turned into water, i. 86, by four several ways, 87, instances tending thereto, 94, converted into a dense body, a rarity in nature, 86, increases in weight, and yields nourishment, *ib.* hath an antipathy with tangible bodies, 94, converted into water by repercussion from hard bodies, *ib.* Air turned into water by the same means as ice, *ib.* meddles little with the moisture of oil, 96, elision of air a term of ignorance, 101. Air condensed into weight, 86, 167. Air pent the cause of sounds, 100, 101, eruptions thereof cause sounds, 100. Air not always necessary to sounds, 102, 103, thickness of the air in night, contributes to the increasing and our better hearing of sounds, than in the day, as well as the general silence, 103. Air excluded in some bodies, prohibiteth

- putrefaction, 123, in some causeth it, *ib.* the causes of each, *ib.* Air compressed and blown, prohibiteth putrefaction, 124, congealing of air, 126. Airs wholesome, how found out, 172. the putrefaction of air to be discerned aforehand, 176. Air good to recover consumptions, 194. Air healthful within doors, how procured, 195.
- Air and fire foreshow winds, i. 177.
- Air, the causes of heat and cold in it, i. 185, hath some degree of light in it, *ib.*
- Air poisoned by art, i. 192, why the middle region of it coldest, 257.
- Albert Durer, i. 296.
- Alchemy, some remarks upon it, ii. 40.
- Alchemists censured, i. 121.
- Alcibiades, his advice to Pericles about giving in his accounts, i. 326, beautiful, 296.
- Alexander, why his body sweet, i. 83.
- Alexander's body preserved till Cæsar Augustus's time, i. 171, his character of Antipater, 323, of Hephæstion and Craterus, *ib.* censured by Augustus, *ib.* by Parmenio, *ib.* contemned by Diogenes, 325, would run with kings when advised by Philip to the Olympic games, 327, his saying to Callisthenes upon his two orations on the Macedonians, 667, a smart reply of his to Parmenio, 461.
- Alexander VI. sends the bishop of Concordia to mediate between the kings of England and France, i. 755, thanks Henry VII. for entering into a league in defence of Italy, 777.
- Alga marina applied to roots of plants furthers their growth, i. 135.
- Alien enemy, how considered by our laws, i. 654. Alien friend, how considered, 655. Littleton's definition of an alien, 661, how the several degrees of aliens are considered by our laws, 455.
- Alienation office, history of it, i. 588, the reason of its name, with its uses, 579, 589, the parts of each officer therein, 591, how its profits might increase without damage to the subject, 596, 597.
- Aliments changed, good, i. 93.
- Alkermes, i. 193.
- Allegiance, does not follow the law or kingdom, but the person of the king, i. 656, 661, is due to sovereigns by the law of nature, 654, statutes explained relating thereto, 656, is more ancient than any laws, 661, continueth after laws, *ib.* is in vigour even where laws are suspended, *ib.* must be independent, and not conditional, 668, oath of it altered, with disputes following thereupon between the reformed and papists, ii. 39.
- Allen, cardinal, is mentioned for the popedom, i. 396, a stage actor of the same name, with an epigram upon him, 107.
- Alleys close gravelled, what they bring forth, i. 146.
- Almonds, how used in clarifying the Nile water, i. 171.

- Amber formed from a soft substance, i. 95, its virtue, 98.
- "Ambiguitas patens," what is meant thereby in law, i. 570, how to be holpen, 570, 571. "Ambiguitas latens," what meant by it, *ib.* how to be holpen, *ib.* another sort of it, *ib.*
- Ambition, i. 292, to take a soldier without it, is to pull off his spurs, *ib.* the mischiefs of it, *ib.* the use of ambitious men, *ib.*
- Amendment of the law. See Law.
- America, a supposed prophecy of its discovery, i. 290.
- Amurca, what, i. 157.
- Anabaptists profess the doctrine of deposing kings, i. 694.
- Anacharsis, saying of his, i. 327.
- Anarchy in the spirits and humours, when, i. 128.
- Anaxagoras condemned to die by the Athenians, i. 327.
- Andes, mountains of, i. 306.
- Andrews, bishop, his account of Spalato, i. 320.
- Andrews, Dr. Lancelot, bishop of Ely, ii. 202, 216, knew early of the lord chancellor's being engaged in writing his "Novum Organum," 222.
- Angelo, Michael, the famous painter, i. 318.
- Anger, the impressions and various effects thereof, i. 164, causeth the eyes to look red, why, 286. Anger not to be extinguished, only confined, 305, compared by Seneca to ruin, which breaks itself on what it falls, 306, its great weakness, from the subjects in whom it most reigns, *ib.* remedies of it, *ib.*
- Animals and plants that put forth prickles, generally dry i. 199.
- Animate and inanimate bodies, wherein they differ, i. 150.
- Anne of Bullen, what she said at her death, i. 310.
- Anne, inheritress of the duchy of Britain, intended for Henry VII. i. 733, but married to Charles VIII. of France, *ib.*
- Annals, i. 31.
- Annesley, Sir Francis, secretary of Ireland, ii. 222.
- Annihilation, not possible in nature, i. 98.
- Annual herbs may be prolonged by seasonable cutting, i. 147.
- Annuity given "pro consilio impenso et impendendo," is not void, if the grantee is hindered from giving it by imprisonment, i. 548.
- Anointing of birds and beasts, whether it alters their colour, i. 96. Anointing the body a preservative of health, 167. Anointing of the weapons said to heal, 200.
- Answers insufficient, how to be punished in chancery, i. 720, in what case they must be direct, *ib.*
- Antalcidas the Spartan, i. 325, rebukes an Athenian, *ib.*
- Antigonus, i. 327.
- Antiochia, its wholesome air, whence, i. 193.
- Antipathy and sympathy, i. 96, 97, of plants, 137, 138, instances of antipathy in other kinds, 197, *et seq.*
- Antiquities, i. 29.
- Antisthenes' opinion what was most necessary, i. 325.
- Antonius, his genius weak before Augustus, i. 194, ambassadors of Asia Minor expostulate with him for imposing a double tax, 327, his character, 268, calls Brutus witch, 282.
- Ape, its nature, i. 193, virtue ascribed to the heart of an ape by the writers of natural magic, 198, 199.
- Apelles, i. 296.
- Apollonius of Tyana, i. 190, the ebbing and flowing of the sea, what according to him, *ib.* tells Vespasian that Nero let down the strings of government too low, or wound them up too high, 276, 322, tires Vespasian at Alexandria with his insipid speculations, 326, his affectation of retirement, 281.
- Apophthegms, an appendix of history, i. 32.
- Apophthegms, their use, i. 310.
- Apothecaries, how they clarify their syrups, i. 83, their pots, how resembling Socrates, i. 324.
- Apothecaries incorporated by patent, ii. 230, note.
- Appetite of continuation in liquid bodies, i. 85. Appetite of union in bodies, 117. Appetite in the stomach, 179, what qualities provoke it, *ib.*
- Apple, enclosed in wax for speedy ripening, i. 120, hanged in smoke, *ib.* covered in lime and ashes, *ib.* covered with crabs and onions, *ib.* Apple in hay and straw, *ib.* in a close box, 121. Apple rolled, *ib.* Apple in part cut, besmeared with sack, *ib.* rotten apples contiguous to sound ones, putrify them, 122.
- Apple-scions grafted on the stock of a colewort, i. 135.
- Apple-trees, some of them bring forth a sweet moss, i. 144.
- Aquafortis dissolving iron, i. 246.
- Aragon, kingdom of, is united with Castile, i. 465, is not naturalized, 466, causes of its revolt, 452.
- Archbishop of Vienna, his revelation to Lewis XI. i. 199.
- Archbishops, mischief teaches the use of, i. 347.
- Archidamus retorts upon Philip that his shadow was no longer than before his victory, i. 324.
- Architecture, i. 38.
- Arian heresy, the occasion thereof, i. 346.
- Aristander, the soothsayer, i. 291.
- Aristippus, his abject behaviour to Dionysius, i. 322, his

luxury, 324, insulted by the mariners for showing signs of fear in a tempest, 325, his censure of those who are attached to particular sciences, 327.

Aristotle mistakes the reason why the feathers of birds have more lively colours than the hairs of beasts, i. 83, his precept that wine be forborne in consumptions, 90, his reason why some plants are of greater age than animals, 91, his method of hardening bodies with close pores, 95, full of vain-glory, 303.

Arithmetic, i. 38.

Arms, the profession of them necessary to the grandeur of any state, i. 286.

Army, a project of reinforcing it in Ireland, without any expense, ii. 184.

Arraignment of Blunt, Davers, Davis, Merick, and Cuffe, all concerned in Lord Essex's treason; with their confessions, evidences against them, their defences, and answers thereto, i. 423.

Arrest, in what cases the constable has power to execute it, i. 649.

Arrows, with wooden heads sharpened, pierce wood sooner than with iron heads, why, i. 163.

Arsenic used as a preservative against the plague, i. 198.

Art of war, its progress, improvement, and change, i. 266.

Arts, History of, i. 28.

Arts of elegance, i. 41, intellectual arts, 46.

Arthur, prince, born, i. 736, married to Catherine, 782, 784, dies at Ludlow castle, 785, studious and learned beyond his years and the custom of princes, *ib.*

Artichokes, how made less prickly and more dainty, i. 135, 136. Artichoke only hath double leaves, one for the stalk, another for the fruit, 157.

Arundel, lord, some account of him, ii. 91.

Arundel, Thomas earl of, sworn of the council in Scotland, ii. 191, wishes lord viscount St. Alban well, ii. 260.

Ashes in a vessel will not admit equal quantity of water, as in the vessel empty, i. 88. Ashes an excellent compost, 149.

Asp causeth easy death, i. 154.

Assassin, this word derived from the name of a Saracen prince, i. 694.

Assassins, i. 293.

Assimilation in bodies inanimate, i. 96.

Astriction prohibiteth putrefaction, i. 123, of the nature of cold, *ib.*

Astringents, a catalogue of them, i. 251.

Astronomers, some in Italy condemned, ii. 93.

Astronomy, i. 38.

Atheism, i. 273, rather in the lip than the heart, *ib.* the causes of it, 274. Atheists contemplative, rare, *ib.*

Athens, their manner of executing capital offenders, i. 154, there wise men propose and fools dispose, 327, their wars, 286.

Athletics, i. 44.

Atlantis, New, i. 202, described, 207, *et seq.* swallowed up by an earthquake, as the Egyptian priest told Solon, 306.

Atoms, how supported by Democritus, i. 97.

Aton, in Scotland, its castle taken by the earl of Surry, i. 776.

Attainder, cases relating thereto explained, i. 549, 559, what sort of them shall give the escheat to the king, 577, and what to the lord, 580, by judgment, 577, by verdict or confession, 580, by outlawry, *ib.* taken often by prayer of clergy, *ib.* forfeiteth all the person was possessed of at the time of the offence, *ib.* there can be no restitution of blood after it, but by act of parliament, with other consequences thereof, *ib.* if a person guilty of it shall purchase, it shall be to the king's use, unless he be pardoned, *ib.* cases relating to a person guilty of it, and his children, *ib.* the clause of forfeiture of goods thereby, found in no private act till Edward IV.'s reign, 603.

Attainders of the adherents of Henry VII. reversed, i. 734.

Attainders of his enemies, 735.

Attention without too much labour stillteth the spirits, i. 163.

Attorney-general used not to be a privy counsellor, i. 666, did not then deal in causes between party and party, *ib.*

Attraction by similitude of substance, i. 162, catalogue of attractive bodies, 249.

Attornment, what it is, i. 583, must be had to the grant of

a reversion, *ib.* in what cases a tenant is obliged to attorne, *ib.*

Audacity and confidence, the great effects owing to them, i. 194.

Audibles mingle in the medium, which visibles do not, i. 111, the cause thereof, *ib.* several consents of audibles and visibles, 114, several dissents of them, 115. Audibles and visibles do not destroy or hinder one another, 114. Audibles carried in arcuate lines, visibles in straight ones, 111, 115.

Audley, lord, heads the Cornish rebels, i. 774, his character, *ib.* taken, 775, beheaded on Tower-hill, *ib.*

Augustus Cæsar, i. 314, his wonder at Alexander, 323, indignation against his posterity, calling them imposthumes and not seed, 326, died in a compliment, 262, his attachment to Agrippa, 282, of a reposed nature from his youth, 295, commended as a great lawgiver, 544, 671.

Auterlony's books of 200*l.* land in charge in fee simple, stayed at the seal, and why, ii. 106.

Authority strengtheneth imagination, i. 196, its power and influence, *ib.* followeth old men, and popularity youth, 295.

Authors, dead, sometimes best, i. 521.

*Autre capacité et autre droit*, their difference shown, i. 627.

Auxiliary forces, i. 754, aids of the same nation on both sides, *ib.*

Avernus, lake of, i. 92.

Aviaries, which recommended, i. 300.

Axioms to be extracted, i. 157.

Aylesbury, Thomas, ii. 236, secretary to the marquis of Buckingham as lord high admiral, *ib.*

## B

BABYLON, its walls cemented by naphtha, i. 246.

Bacon, Sir Nicholas, a short account of him, i. 395, bishop of Ross's saying of him, *ib.* was lord keeper of the great seal, 312, 313, 317, 318, an old arrear demanded of him, ii. 259, indebted to the crown, 263.

Bacon, Mr. Antony, i. 316, ii. 27, our author's dedication to him, i. 260.

Bacon, Sir Francis, made attorney-general, i. 317, his conversation with Gondomar when advanced to the great seal, *ib.* his apology for any imputations concerning lord Essex, 433, his services to lord Essex, 434, two points wherein they always differed, 435, a coldness of behaviour grows between them, 436, his advice to the queen about calling home lord Essex from Ireland, 435, his advice to lord Essex when he came from Ireland without leave from the queen, *ib.* endeavours to reconcile the queen to lord Essex, 436, 437, desires the queen to be left out in Essex's cause, 437, writes an account by the queen's order, of the proceedings relating to Essex, 440, is censured by some for his proceedings in the Charter-house affair, but unjustly, ii. 107, he praises the king's bounty to him, 129, complains to the king of his poverty, *ib.* expostulates roughly with Buckingham about neglecting him, 131, does the same with treasurer Marlborough, 134, begs of the king a remission of his sentence, and the return of his favour, 136, promises bishop Williams to bequeath his writings to him, 135, his last will, 273, is charged with bribery. See Bribery.

Bacon, Sir Francis, offends queen Elizabeth by his speeches in parliament, ii. 141, speeches drawn up by him for the earl of Essex's device, 148, *et seq.* arrested at the suit of a goldsmith, 154, substance of a letter written by him to the queen for the earl of Essex, *ib.* insulted by the attorney-general Coke, 155, arrested again, 156, desires to be knighted, *ib.* going to marry an alderman's daughter, *ib.* note †, his letter to Isaac Casaubon, 157, writes to the king on the death of the earl of Salisbury, lord treasurer, *ib.* his letter to the king touching his majesty's estate in general, 159, on the order of baronets, 161, his charge against Mr. Whitelocke, *ib.* letter to the king on the death of the lord chief justice Fleming, 163, his letters to Mr. John Murray, 163, supplement to his speech against Owen, 166, thanks to Sir George Villiers for a message to him of a promise of the chancellor's place, 169, questions legal for the judges in the case of the earl and countess of Somerset, 171, his heads of the charge against

## I and J.

- JAIL**, a most pernicious smell, and next to the plague, i. 192, judges and others died by that pernicious infection, *ib.*
- James I.** compares his speech to a mirror, i. 310, compares himself and parliament to husband and wife, where jealousy is pernicious, *ib.* desires that country gentlemen should not live long in London, 330, is calumniated by Mr. Oliver St. John, in some papers, 691, 692, a short character of him, 691, his great clemency, 693, his book to his son, touching the office of a king, commended, 713, his book very seasonably wrote, ii. 29 note \*, commendation of his reign in several instances, i. 680, a farther account of the king, ii. 29, erects a monument to queen Elizabeth, 33, farther commendation of his reign, 109, he moderates in the dispute between the bishops and dissenters, at Hampton-court, 34, he keeps the fifth of August as a holy-day, on account of his delivery from Gowry's conspiracy, 106, is censured by Le Clerc for neglecting to take care of lord Bacon, while he preferred other worthless persons, 130 note †, apprehensive of being taxed by the earl of Somerset, on his trial, 171 note †, his apostiles on the heads of the charge against the earl of Somerset, 172, inquires into the poisoning of Sir Thomas Overbury, 175, goes to Scotland, 185 note †, holds a parliament in Scotland, 189, his answer to a letter of the lord keeper, 192, angry with his lordship and the attorney-general, 194, 195, promises to forgive his lordship, 196, his remark on lord Bacon's "Novum Organum," 222 note §, looks over the manuscript of his lordship's history of the reign of king Henry VII. 233, memorial of lord Bacon's access to his majesty, 247, letters to him from lord viscount St. Alban, 265, his letter to the judges of England about Sir Edward Coke's Reports in prejudice of his prerogative, 272.
- James III.** of Scotland, slain at Bannocksburn, i. 750.
- James IV.** wholly at the devotion of France, i. 757, married to Margaret, eldest daughter of Henry VII. 785.
- Jason** of Thessaly, i. 326.
- Jasper**, earl of Pembroke, uncle to Henry VII. i. 734, made duke of Bedford at the coronation, *ib.* commands the army against the lord Lovel, 736, made general again, 740, for the French expedition, 759.
- Jaundice**, whence the difficulty of curing it proceeds, i. 201.
- Idolatry**, degrees of it, i. 524, doth not dissolve government, 527.
- Idols**, four sorts of, i. 227.
- Jest**, what matters ought to be privileged from it, i. 288.
- Jest**: goods taken in jest, and sold in a market, may give a property, i. 586.
- Jesuits' precept**, i. 279.
- Jewel**, bishop of Salisbury, his death, with an idle report relating to his last words, i. 397.
- Jews-ear**, its strange property and use, i. 145, a putrefaction, 159.
- Ignorant man**, or coward, ought not to be a judge, i. 305.
- Image**, whether it might be seen without seeing the glass, i. 170.
- Image of God**, i. 527.
- Imagination**, the force of it, i. 174. Imagination exalted, 190, force of it upon the body of the imagination, by inspiring industry, *ib.* three cautions about the same, 191, worketh most upon weak persons, 190. Imagination, the kinds of it, 195, the force of it upon another body, *ib.* several instances of it, *ib. et in seq.* an instance thereof by a pair of cards, *ib.* three means to impose a thought, *ib.* designations for trial of the operations in this kind, 196, to work by one that hath a good opinion of you, *ib.* to work by many, *ib.* means to preserve imagination in the strength, *ib.* it worketh more at some times than others, *ib.* it hath most force upon the lightest motions, 197, effect of the senses, 174. Imagination imitating the imitations of nature, 112.
- Imbezelling of the king's plate**, &c. strictly to be punished, i. 676.
- Imitation in men and other creatures**, a thing to be wondered at, i. 112, several motions in men of imitation, 118. Imitation a globe of precepts, i. 269.
- Impeachment** must be upon oath and presentment, i. 673. "Impetatio," what is meant by it, i. 621, is distinguished from "impedimentum," *ib.*
- Impostors and pirates** not to be protected, i. 765.
- Imposture** by counterfeiting the distance of voices, i. 113.
- Impotency of men towards their wives** procured in Zant and Gascony, i. 188, 197.
- Impressible and not impressible**, i. 182.
- Impression**, doctrine of, i. 41.
- Imprisonment upon contempt of orders in chancery**, when to be discharged, i. 721.
- Impropriations** should be returned to the church, i. 359, the impossibility of it, *ib.* should contribute largely to the relief of the clergy, *ib.* the value of them in the nation is above ten subsidies, *ib.*
- Improvement**, reasons why men do not improve more in many things, ii. 46.
- Impulsion and percussion of bodies**, i. 170. Impulsion of a body unequal, *ib.*
- Inanimate and animate**, wherein they differ, i. 150.
- Incense** thought to dispose to devotion by the operation of the smell, i. 193.
- Inceptions**, i. 259.
- Incorporating or drowning of metals**, i. 175.
- Incorporating of iron and stone**, i. 240, of silver and tin, 241.
- Incubus**, its cause and cure, i. 198.
- Indian earth**, brought over, hath produced Indian plants, i. 146.
- Indian fig**, its surprising way of growing, i. 151, its leaves of great dimensions without stalks, *ib.* the Indian custom of quietly burning themselves, 293, had something like ordnance in the time of Alexander, 307.
- Indictment**, ancient forms thereof not to be altered, i. 395.
- Induration, or lapidification of bodies**, i. 95, by cold, *ib.* by heat, *ib.* by assimilation, 96, by snow or ice, 94, by metalline water, *ib.* in some natural spring-waters, 95, of metals, by heating and quenching, *ib.* by fire, *ib.* by decoctions within water, the water not touching, *ib.* induration by sympathy, 182.
- Industry**, what we reap from it makes the fruition more pleasant, i. 259.
- Infant in the womb** subject to the mother's imagination, i. 195, suffering from the mother's diet, 196.
- Infantry**, the principal strength of an army, i. 751.
- Infectious diseases**, i. 118, less generally precede the greater, 176, received many ways, 190.
- Influences of the moon**, i. 188.
- Influences of the heavenly bodies**, i. 179, 191.
- Informers**, i. 481.
- Infusion maketh liquors thicker**, but decoction clearer, whence, i. 119.
- Infusions in liquors**, i. 84, a short stay best, *ib.* Infusions to be iterated, *ib.* useful for medicinal operations, *ib.* trial, which parts issue soonest, which slowest, 85, evaporations of the finer spirits sometimes useful, *ib.*
- Infusions in air**, i. 85, the several odours issue at several times, *ib.*
- Infusions in earth**, the effects of it, i. 128, cautions to be used in it, *ib.* several instances thereof, *ib.*
- Ingram**, Sir Arthur, ii. 236, 242, 243, 248.
- Inheritance by fee-simple** binds the heir with all binding acts of his ancestors, i. 577, the nature of one opened and explained, 616. Inheritance movable, *ib.* perpetuity is of the essence of inheritance, 617, what things belong to the owner of inheritance, and what to any particular tenant, in letting estates, *ib.* what things are not inheritance as soon as severed, *ib.* is well distinguished by particular estates by our laws, *ib.*
- Injunctions** for staying of suits, in what cases to be granted, i. 718, are to be enrolled, 721, some rules in granting them, 710.
- Injury**, several degrees thereof as held by our laws, i. 682.
- Innocent VIII. pope**, i. 794, 758.
- Innovations**, i. 280, what sort are to be condemned, 511, 668, faulty to condemn all sorts in church matters, 351, objection that there would be no end when once they were begun, answered, 352.
- Inns**, letter to lord Villiers about them, ii. 88.
- Inquination, or inconcoction**, i. 180.

- Inquisition touching the compounding of metals, i. 240, touching the separation of metals and minerals, 244.
- Inrolment of apprentices, a certificate relating to them, ii. 100.
- Inscriptions upon fruits, i. 140.
- "Insecta," i. 160, held by physicians to clarify the blood, *ib.* the name communicated to all creatures bred of putrefaction, *ib.* the difference of them according to the several matters they are bred of, *ib.* several properties in them, 161, they have voluntary motion, *ib.* other senses besides taste, *ib.*
- Instructions to great officers, like garments, grow loose in the wearing, i. 311.
- Intellectual powers, a discourse concerning the helps which might be given them, ii. 46, some further indigested collections relating thereto, 47.
- Intestate, how his goods were formerly disposed of who died, i. 587.
- Intrails of beasts, whether more nourishing than the outward flesh, i. 89.
- Invasion, procured by any from foreign enemies, how to be punished, i. 675.
- Invasive war, not made by the first blow, but by the first provocation, i. 743.
- Invectives designed often against the prince, though pretended only against his ministers, i. 393, instance of this in queen Elizabeth and lord Burleigh, *ib.*
- Invention, art of, i. 46.
- Inventors, a catalogue of them, i. 215.
- Invincible Armada, a minute account of it, i. 538, 539.
- Invisibles in bodies ought to be better inquired, because they govern nature principally, i. 97.
- Joan, queen of Castile, distracted on the death of Philip her husband, i. 790.
- Job's afflictions more laboured in description than Solomon's felicities, i. 264.
- John, earl of Lincoln, i. 739. See Lincoln.
- John of Austria buries his reputation, i. 537.
- Johnson, Dr. his three material things in sickness, i. 320.
- Joints in some plants, i. 148, their cause, *ib.*
- Jones, Dr. Thomas, archbishop of Dublin, letter to him from the lord chancellor Bacon, ii. 204.
- Jones, Sir William, made lord chief justice of Ireland, i. 714, ii. 204, speech to him thereupon, i. 714, four examples proposed to his imitation, *ib.* directions what he is chiefly to regard in the affairs of that nation, *ib.* letter to him from the lord chancellor Bacon, ii. 204.
- Joseph, Michael, the Cornish blacksmith, i. 773, executed, 775.
- Jovianianus, emperor, his death, i. 192.
- Journals, i. 31.
- Joy gives vigour in the eyes, and sometimes tears, i. 164, sudden joy, the impressions thereof have caused present death, *ib.*
- Iphicrates, the Athenian, says there is no sure league but incapacity to hurt, i. 315, 383, 534.
- Ireland affected the house of York, i. 737, proclaims Lambert Simnel, 738, how they receive Perkin from Portugal, 762, twice attacked by the Spaniards, 536, 537. D'Aquila says the devil reserved this kingdom for himself when he proffered Christ all the world, 541.
- Ireland not well with England, i. 442, account of it in the beginning of its reduction, 714, directions to Sir William Jones in the managing that work, *ib.* rebellion there caused by the king of Spain, 392, considerations proposed to king James I. about the plantation of it, 470, the great excellency, in several instances, of such a work, 470, 471, plantation of it would prevent seditions here, by employing a vast surcharge of people therein, 471, and would discharge all hostile attempts upon the place, *ib.* it would bring great profit and strength to the crown of England, *ib.* a short character of it and the inhabitants, *ib.* concerning the means of accomplishing the plantation of it, *ib.* this work to be urged on from parliament and pulpit, 472, men of estate the fittest persons to be engaged in this work, *ib.* they are to be spurred on by pleasure, honour, and profit, *ib.* the charge of it must not lie wholly on the undertakers, *ib.* a commission necessary for it, 473, their buildings to be in towns, and not scattered up and down upon each portion, with reasons for it, *ib.* undertakers hereof to be restrained alienating or demising any part, 474, charges of this plantation should be considered first by experienced men, *ib.* considerations touching the reducing thereof to peace and government, ii. 23, all relics of the war there to be extinguished, *ib.* the hearts of the people to be won over, and by what methods, *ib.* occasion of new troubles to be removed, 24, farther considerations touching the management of the plantations and buildings there, 24, 25, safety of it recommended, 257.
- Irish rebel, his petition to be hanged in a with, i. 293.
- Iron, hot, sounds less than cold, i. 105. Iron sharpens iron, how applied, 303.
- Iron instruments hurtful for wounds, i. 173, whether it can be incorporated with flint, 240, may be dissolved by common water, if calcified with sulphur, 246.
- Isabella, queen, what she said of good forms, i. 302, see 758, an honour to her sex and times, dies, 788. See Ferdinando.
- Islanders' bodies, i. 128.
- Isocrates long-lived, i. 194.
- Israel and Judah united under David, i. 452, they again separate, and so continue, *ib.*
- Italy, the state of affairs there considered, i. 392.
- Judges of assize, their origin, i. 574, they succeed the ancient judges in eyre, *ib.*
- Judges of the circuits sit by five commissions, which are reckoned up, with the authority they each give, i. 574.
- Judges of gaol delivery, their manner of proceeding, i. 574, several excellent rules relating to the duty of judges, 716, some directions to them in their circuits, 712, 713, the portraiture and duty of a good judge, 716, the nature of their authority, 647.
- Judges to interpret, not make or give law, i. 304, should be more learned than witty, 304, their office extends to their parties, advocates, clerks, and sovereign, *ib.* four branches of their office. 305, essential qualifications of judges, 304.
- Judgment of the last day, i. 339, no change of things after that, *ib.*
- Judicature, i. 304, sour and bitter, *ib.*
- Jugglers, i. 139, their binding in the imagination, and enforcing a thought, i. 195.
- Juices of fruit, fit for drinks, i. 153, unfit for them, *ib.* the cause of each, *ib.*
- Julius III. i. 318.
- Julius II. summons Henry VII. to the holy war, i. 783.
- Jura, how many kinds thereof among the Romans, i. 452.
- Jurisdictions of courts without jarring, i. 512.
- "Juris placita, et juris regulæ," their difference, i. 559, the "Juris regulæ" are never to be violated, 560, the "placita" are to be often, *ib.*
- Jury, may supply the defect of evidence out of their own knowledge, but are not compellable thereto, i. 553, the care of our laws about them, 606, of the verge, their duty, 673.
- "Jus connubii, civitatis, suffragii, et petitionis," how these correspond to our freedoms, i. 452.
- "Jus in re, et jus in rem," the difference between them stated, i. 596.
- Justice, king James's administration of it commended, i. 691, employs the three other cardinal virtues in her service, 695, lord Bacon's saying upon the perverting of it, ii. 73.
- Justices of assize, their authority lessened by the court of common pleas, i. 574.
- Justices in eyre, dealt in private matters only, i. 574, their authority translated to justices of assize, *ib.*
- Justices of the peace, their origin, i. 573, they succeed the conservators, and are delegated to the chancellor, *ib.* their authority, *ib.* are to attend the judges in their county, 575, 576, their office farther declared, 651, itinerants in Wales, their jurisdiction, 650, of the quorum, who are so, 651, how called so, *ib.* are appointed by the lord keeper, *ib.*
- Justinian, by commissioners forms the civil law, i. 668, his saying upon that work, 671.
- Justs and tourneys, i. 292.
- Ivy growing out of a stag's horn, scarce credible, i. 144.

## K

- KATHARINE**, daughter of Edward IV. married to William Courtney, earl of Devonshire, i. 787.
- Katharine** of Spain, her marriage to prince Arthur, i. 782, made in blood. *ib.* fourth daughter of Ferdinando, king of Spain, i. 784.
- Kelly**, the alchemist, i. 320.
- Kemp**, Mr. Robert, a letter from Mr. Bacon to him, ii. 142.
- Kendal**, prior of St. John's, i. 772.
- Kermes**, i. 198.
- Kernels** of grapes applied to the roots of vines, make them more early and prosperous, i. 88. Kernels put into a squill come up earlier, 185, some fruits come up more happily from the kernel than the graft, *ib.* Kernels of apples will produce coleworts, i. 136.
- Kildare**, deputy of Ireland, i. 767, seized, acquitted, and replaced, *ib.*
- Killigrew**, Sir Robert, ii. 216.
- Killigrew**, Sir Henry, ii. 147.
- Killing** of others, the several degrees and manners of it, with the punishment due to each, i. 684.
- King**, a description of one, i. 207, 208.
- King**, an essay of one, i. 308. God doth most for kings, and they least for him, *ib.* the fountain of honour, which should not run with a waste pipe, *ib.* a prodigal one next a tyrant, *ib.* ought to have five things under his special care, *ib.* have few things to desire, and many to fear, 275, with whom they have to deal, 276, the value they set upon friendship, 282, should not side with factions, 302, his proper title in our laws, 654, ought to be called natural liege sovereign, in opposition to rightful or lawful sovereign, *ib.* his natural politic capacity should not be confounded, 662, his natural person, different from those of his subjects, *ib.* privileges belonging to his person and crown, *ib.* offences committed against his person, how punishable, 675. King takes to him and his heirs, and not to his successors, 662, his natural person operates not only on his wife, &c. but also on his subjects, *ib.* five acts of parliament explained, relating to a distinction that homage followeth the crown, rather than the person of the king, *ib.* perilous consequences of this distinction, 663, precedents examined relating to the same, 664, how often he has other dominions united by descent of blood, *ib.* when he obtains a country by war, to which he hath right by birth, he holdeth it by this latter, *ib.* his person represented in three things, 675, the great heinousness of conspiring against their lives, 694, his sovereignty to be held sacred, 487. James I. the sum of his charge to Sir Francis Bacon, upon delivery of the great seal to him, 709. Enumeration of those kings whose reigns have been most happy, 379, why they administer by their judges, when they themselves are supreme judges, 354. Kings are distinguished in hell, by Menippus in Lucian, only by their louder cries, &c. 335. There are four ways by which the death of the king is said to be compassed, *ib.* 51.
- Kingdoms**, the foundations of them are of two sorts, i. 470.
- King's bench**, first instituted by William the Conqueror, i. 573, its jurisdiction, *ib.* dealt formerly in crown matters, *ib.*
- Kinsale** taken by the English, i. 540.
- Kirkham**, Mr. ii. 217.
- Kighthood**, a new order to be erected upon the union of England and Scotland, i. 456, to be conferred with some difference and precedence upon the planting of Ireland, 472.
- Knights of the bath**, i. 765.
- Knight's service**, "in capite," first instituted, what reservations the Conqueror kept to himself in the institution of this tenure, i. 578, tenants by this service vowed homage and fealty to the king, *ib.* every heir succeeding his ancestors, paid one year's profit of the land to the king, *ib.* it is a tenure "de persona regis," *ib.* tenures held this way cannot be alienated by the tenant without licence of the king, 579, a tenant to a lord by it, why first instituted, *ib.* a tenant to a lord by this service, is not such of the person of the lord, but of his manor, *ib.*
- Knights of the shire** were required to be "milites gladio cincti," i. 624.

- Knowd**, his confession relating to Essex's treason, i. 411, 412.
- Knowledge**, human, general distribution of, i. 25, 26, 27.
- Knowledge**, its limits and ends, i. 218, impediments, 221.
- Knowledge**, when indigested, i. 180, discourse in praise of it, 216.
- Knowledge** ought to be purged of two things, ii. 2.

## L

- LACEDÆMONIANS**, i. 321, 322, besieged by the Athenians, 323, causes of their wars, 286.
- Laces**, i. 518.
- Lake**, Sir Thomas some account of him, ii. 57 note 5, secretary of state, ii. 170, 178, sworn of the council of Scotland, 191.
- Lake**, lady, her submission, ii. 216.
- Lambert Simnel**, the impostor. See Simnel.
- Lamia**, the courtesan, i. 315.
- Lamps** of sundry sorts, i. 127, burn a long time in tombs, *ib.*
- Land**, the value of it sunk by usury, i. 291.
- Lands**, all in England were in the hands of the Conqueror, except religious and church lands, and what belonged to the men of Kent, i. 576, left by the sea are the king's, *ib.* are all holden of the crown, 577, in what cases only a man is attained, to lose them, 580, that are entailed, escheat to the king by treason, *ib.* when forfeited to the lord, and when to the crown, *ib.* not passed from one to another upon payment of money, unless there be a deed indented and inrolled, 584, how many ways conveyed, 583, settle according to the intent of the parties upon fines, feoffments, recoveries, *ib.* held in "capite" or "socage," can be devised only two parts of the whole, 585, the rest descends to the heir, and for what uses, *ib.* the whole may be conveyed by act, executed in the lifetime of the party, *ib.* entailed, are reckoned part of the third, *ib.* how a supply is to be made, when the heir has not the full thirds, *ib.* the power of the testator in this case, *ib.* 586, no lands are charged by way of tribute, but all by way of tenure, 624, were by the common law formerly not devisable, 602.
- Language**: the being of one language a mark of union, i. 529.
- Langhony**, prior of, made chancellor of Ireland, i. 767.
- Lard** put to waste taketh away warts, i. 200.
- Larry**, Monsieur De, his history commended, ii. 33 note 1.
- Lassitude**, why remedied by anointing, and warm water, i. 166.
- Lasting trees and herbs**, i. 147, designation to make plants more lasting than ordinary, *ib.*
- Late flowers and plants**, i. 147.
- Latimer**, bishop, his way to enrich the king, i. 326.
- Latimer**, notes on his case, ii. 233.
- Laud**, Dr. his saying of hypocrites, i. 316.
- Laughing**, a continued expulsion of the breath, i. 164, is always preceded by a conceit of something ridiculous, *ib.* whence its several effects proceed, 165.
- Lawgivers** much commended, i. 670, 672, were long after kings, 654.
- Laws** like cobwebs, i. 327, tortured, the worst of tortures, 304, of Henry VII. 748, 750, breaches of the law of nature and nations, 527, of England, second to none in the christian world, 511.
- Laws**, penal, Sir Stephen Proctor's project relating to them, i. 480, *et seq.*
- Laws** of England, a proposal for amending them, i. 666, commended, 667, are made up of customs of several nations, *ib.* are not to be altered as to the matter, so much as the manner of them, *ib.* the dignity of such a performance, *ib.* and the convenience of it, *ib.* the inconveniences of our laws, *ib.* what sort of them want most amending, 668, a good direction concerning any doubts that happen in the law, *ib.* whether the form of statute or common law be best, *ib.* the advantage of good laws, 671, ours commended as to the matter of them, 672, the civilians' saying, that law intends no wrong, 561, the use of law, which consists in three things chiefly—to secure men's persons from death and violence, to dispose the property of their goods and lands, and for the preservation of their good names from shame and infamy,

- 570, very much favour life, liberty, and dower, 606, 660, what effects they have upon the king, 654, they operate in foreign parts, 656, are not superinduced upon any country by conquest, 669, all national ones that abridge the law of nature, are to be construed strictly, 661, of England and Scotland are diverse and several, this is urged as an objection against the naturalization of the Scots, and answered, 660, are rather "figura reipublicæ," than "forma," 468, our common laws are not in force in Guernsey and Jersey, *ib.* statute ones are not in force in Ireland, *ib.* do not alter the nature of climates, 464, the wisdom of them in the distribution of benefits and protections suitable to the conditions of persons, *ib.* a review of our laws much recommended, 468, those of Scotland have the same ground as of England, *ib.* in general, may be divided into three kinds, 452, how they are to be ordered upon the union of England and Scotland, 457, 458, are divided into criminal and civil, *ib.* criminal ones are divided into capital and penal, *ib.* were well maintained by king James, 692, the rigour of them complained of by foreigners, relating to traffic, i. 477, of nations, not to be violated by wars, 376, of God, obscurely known by the light of nature, but more fully discovered by revelation, 388. See Case.
- Law-suits, most frequent in times of peace, with the reason of it, i. 545.
- Lawyers and popes, i. 320, the study of lawyers' cases recommended, 302. Lawyers and clergymen more obsequious to their prince in employments, 794, civil lawyers should not be discountenanced, i. 518.
- Lead will multiply and grow, i. 175, an observation on mixing it with silver, *ib.* 243.
- Leagues within the state pernicious to monarchies, i. 302. League with the Hollanders for mutual strength, 516.
- Learning long upon any part, why it causeth numbness, i. 166.
- Leaping helped by weights in the hands, i. 161.
- Learning, objections against it considered, i. 2—7, its diseases, 9, the dignity of learning, 13, public obstacles to it, 23, 24.
- Learning, concerning the advancement thereof in the universities, i. 495, &c.
- Leases for years, how made, i. 581, they go to the executors, *ib.* are forfeited by attainder, in treason, felony, præmunire, killing himself, for flying, for standing out against being tried by the country, by conviction of felony, petty larceny, going beyond sea without licence, *ib.* &c.
- Leases for lives, how made, i. 581, in what cases forfeitable, and to whom they are so, *ib.*
- Leaves nourish not, i. 89, 136, 152, how enlarged, 137, the cause why they nourish not, 152, 153.
- Leaves three cubits long and two broad, i. 151, plants without leaves, i. 171.
- Lectures for philosophy, two erected in perpetuum of two hundred pounds per annum, by our author, at the universities, *ib.* 135.
- Lee, employed between Essex and Tyrone, i. 411, his confession relating to Essex's treason, 412.
- Lee, notes on his case, *ib.* 232.

- Manufactures foreign, should be prohibited where the materials are superfluities, *i.* 787, our own should be encouraged, 517. Manufactures of old generally wrought by slaves, 266.
- March, towards the end, the best discoverer of summer sickness, *i.* 176.
- Marchers, lordships, abolished by statute of 27 Henry VIII. *i.* 692, court of marches maintained its jurisdiction, *ib.* what meant by the word marches, *ib.* is as old as Edward IVth's time, *ib.* the extent of it, *ib.* &c. the intention of the king in the election of it, *ib.* the sense of the word marches settled by several arguments, and its authority justified, 692, 693, arguments to prove that it signifies lordships marchers, *ib.* a confutation of those arguments, 694, different significations of marches with the arguments in defence of them, 693, the whole debate upon this matter summed up, 696, *et seq.* statute of 34 of Henry VIII. relating to the marches explained, 696, Marches distinguished from lordships marchers, 698, several arguments collected together on this head, which were unanswered, *ib.*
- Marchio, a marquis, whence derived, *i.* 631.
- Margaret, lady, *i.* 736, second sister of Edward IV. and dowager of Charles the Hardy, duke of Burgundy, 739, had the spirit of a man, and the malice of a woman, *ib.* raises the ghost of the second son of Edward IV. 760, reflected on by Dr. Warham, 764, not mentioned in the account of Perkin's examination, 780.
- Margaret, eldest daughter of Henry VII. married to James IV. of Scotland, *i.* 785, her line succeeds to the crown, 796.
- Maritime countries need not fear a surcharge of people, *i.* 468.
- Markham, Gervase, Esq. his quarrel with lord Darcy, *ii.* 183, note †.
- Marlborough, lord, made treasurer, *ii.* 134.
- Marle, why esteemed the best compost, *i.* 149.
- Marriage recommended, *i.* 210, the laws and conditions of marriage, 211.
- Marriage and single life, *i.* 211. Marriage despised by the Turks, 266.
- Marriage by the book, and not by the sword, *i.* 755, between the crowns of England and Scotland, how caused, 776.
- Marriage of wards, a political reservation of William the Conqueror, *i.* 573.
- Marrow more nourishing than fat, *i.* 89, of two kinds, 168.
- Marshal's office, what it is, *i.* 650.
- Marshalsea first erected, *i.* 671, its design, jurisdiction, and extent thereof, *ib.*
- Mart, letters thereof, how vain and dangerous a remedy of the Spanish grievances, *i.* 477.
- Martin, Richard, Esq. his letter to Sir Francis Bacon, *ii.* 179, account of him, *ib.* note †.
- Martin, lady, widow of Sir Richard Martin, her cause recommended to the lord chancellor by the marquis of Buckingham, *ii.* 228.
- Martyrdom, miraculous because it exceeds the power of human nature, *i.* 307.
- Mary, second daughter of Henry VII. *i.* 789, married to Charles, prince of Castile, afterwards Charles V. 792.
- Mary, queen, a conspiracy against her to kill her by a burning-glass, *i.* 101.
- Masques, *i.* 292.
- Massacre in Paris, *i.* 263, 312.
- Mathematics, *i.* 38.
- Matrimony, what tempers best disposed for it, *i.* 266.
- Matthew, Mr. some account of him, *ii.* 29.
- Matthew, Dr. Tobie, archbishop of York, *ii.* 187, 268.
- Matthew, Tobie, acts the part of the squire in the earl of Essex's device, *ii.* 148, note, letter to Sir Francis Bacon, 170, account of him, *ib.* note \*, letters to Sir Francis Bacon, 147, 148, 205, 206, 211, 218, 220, he advertises his lordship of a design of the Roman catholics, 246, a good friend of lord viscount St. Alban, 253, letter to him

- from that lord, 258—255, arrives at Madrid, 253, a petition of lord viscount St. Alban put into his hands, 261, letters to him from lord viscount St. Alban, 267, his letter to that lord, 268.
- Maturation**, i. 120, of drinks, *ib.* 180, of fruits, 120, 121, 184. Maturation or digestion, how best promoted by heat, 120, 121.
- Maule, Patrick**, ii. 201, 225.
- Maximilian**, king of the Romans, i. 742, 743, unstable and necessitous, 745, encouraged by Henry VII. to proceed to a match with Ann, heir of Britany, 752, and married to her by proxy, *ib.* but when defeated, his behaviour, 756, disappoints king Henry VII. 759, his league with Henry VII. 768.
- Maxims in law**, several advantages of a collection of them, i. 543, the method followed by our author in this collection, which is set down, and explained by instances; doubtful cases in them cleared up, where they take place, and in what cases they fail, 548—570.
- Maxwell, James**, wishes lord viscount St. Alban well, ii. 260.
- Maxwell, Robert**, ii. 208.
- May**, Sir Humphry, chancellor of the duchy of Lancaster, ii. 223, letters to him from the lord Bacon, 230, 261.
- Mayor and companies of London** receive Henry VII. at Shoreditch, i. 733, meet pope Alexander's nuncio at London Bridge, 777.
- Meats** inducing satiety, i. 119.
- Meautys, Thomas**, brought to kiss the king's hand, ii. 233, letters to the lord St. Alban, 237, 238, 242, 244, 246, 248.
- Mecenas**, his advice to Augustus touching Agrippa, i. 282.
- Mechanics**, i. 29.
- Mediator**, the necessity thereof, i. 337, the mystery of this dispensation, *ib.*
- Mediciable herbs**, i. 139, soporiferous medicines, 198.
- Medicine**, i. 41.
- Medicines** changed, helpful, i. 93.
- Medicines** which affect the bladder, i. 96, 97. **Medicines** condensing which relieve the spirits, 167.
- Megrimis**, whence, i. 166.
- Melancholy**, preservative against it, i. 250.
- Melancholy persons** dispose the company to the like, i. 194.
- Melloration of fruits, trees, and plants**, i. 133, *et seq.*
- Melo-cotones**, i. 134, grow best without grafting, 135, the cause thereof, *ib.*
- Melting of metals**, observations thereon, i. 244.
- Memory**, the art of, i. 46, 196, persons better places than words, *ib.* Memory, how strengthened, 198.
- Men**, are all by nature naturalized towards one another, i. 661.
- Mendoza**, i. 326.
- Menstruums**, i. 245.
- Merchandises**, an argument proving the king's right of impositions on them, i. 489.
- Merchandising**, how to be ordered after the union of England and Scotland, i. 459.
- Merchants**, their importance, i. 276, how they convey blessings to any country, 294, promoted by Henry VII. 747, 772, &c. negotiations about them directed by queen Elizabeth, 515.
- Merchants**, several errors in their complaints about trade, i. 475, &c. the hardships of those who trade to Spain and the Levant, *ib.* they ought not to urge to a direct war upon account of their particular sufferings by the enemy, 476, their injuries further shown to be not so great as represented, *ib.* a report of the earl of Salisbury and earl of Northampton's speeches concerning their petition upon the Spanish grievances, 474—480, are divided into two sorts, 475, several considerations relating to them, *ib.* &c.
- Mercurial and sulphureous bodies**, i. 125.
- Mercy and justice** the two supports of the crown, i. 511, 513.
- Merick, Sir Gilly**, the effect of what passed at his arraignment, i. 423.
- Meroë**, the metropolis of Æthiopia, i. 180.
- Messages of the king**, whether to be received from the body of the council, or from the king's person only, i. 487, how far the authority of the king is concerned in this question, 488, how far the house of commons is concerned in it also, *ib.* from the king to the commons are to be received by their speaker, *ib.*
- Metals**, the colours they give in dissolution, i. 117, the causes thereof, *ib.*
- Metals and plants**, wherein they differ, i. 150, growing of metals, 175, drowning of metals, *ib.* refining of metals not sufficiently attended to, 182. Metalline vapours hurtful to the brain, 192.
- Metals**, an inquisition touching the compounding of them, i. 240, for magnificence and delicacy, 241, drowning of metals, *ib.* separation of them, 244, variation of them, 245, all metals may be dissolved, 246, often fired and quenched grow churlish, and will sooner break than bow, 778. Bell-metal, how compounded, 244, sprouting of metals, 245, tinging of metal, *ib.* volatility of metals, its degrees, *ib.* fixation of metals, *ib.*
- Metaphysics**, i. 37.
- Metellus** opposes Cæsar, i. 324.
- Methusalem water**, i. 250, 251.
- Meverel**, his answer touching-minerals, i. 243.
- Mildew** on corn from closeness of air, i. 139, 156, but seldom comes on hills and champaign grounds, *ib.*
- Military men**, when dangerous to a state, i. 273, 277, love danger better than labour, 236, had greater encouragement from the ancients than the moderns, 287, how improved here, 751.
- Military men**, how to be punished if they go abroad without proper leave, i. 675.
- Military puissance** consists of men, money, and confederates, i. 542.
- Milk**, warm from the cow, a great nourisher, i. 90, a remedy in consumptions, *ib.* how to be used, *ib.* cow's milk better than ass's or woman's milk, *ib.* Milk in beasts how to be increased, 172. Milk used for clarification of liquors, 120, 121, good to steep divers seeds in, 136, preserving of milk, 129. Milk in plants, 153.
- Minced meat** a great nourisher, i. 90, how to be used, *ib.*
- Mind**, cultivation of, i. 56, 66.
- Minerals**, i. 162, 242, should be industriously followed, 517.
- Minerals**, questions and solutions about incorporating them, i. 242.
- Mines**, a law case relating to them between lessor and lessee, i. 619, are part of an inheritance, 616.
- Ministers**, are the eyes, ears, and hands of kings, i. 509.

- Powders and liquors, their incorporation, i. 118.
- Powder-treason surpasses all the barbarities of the heathens, ii. 263.
- Power sought by the loss of liberty, i. 268. Power absolute and cannot conclude itself, 769.
- Poyning, Sir Edward, sent with a navy in aid of Flanders, i. 758, takes Sluice and Bruges, *ib.* sent to the archduke Philip to dismiss Perkin, 764, sent to Ireland with a martial commission above the deputy, the earl of Kildare, 767, his famous law, 767, 463.

- Præmunire**, cases thereof, i. 645, the proceedings, trial, punishment, &c. therein, *ib.*
- Prætors of Rome**, great affinity between their office and our chancellor's, i. 709.
- Praise**, the reflection of virtue, i. 303. Praise in excess raises envy, contradiction, &c. *ib.*
- Prayer of the clergy**, benefit thereof in cases of felony, i. 580, the book of Common Prayer how to be respected, 674, is compared with preaching, 355, a set thereof commended, *ib.* of what it ought to consist, *ib.* of lord Bacon's, 339, for a student, 341, for an author, *ib.* one made by Bacon when chancellor, 340.
- Preachers**, unfit ones not to be allowed, i. 357, if wanting, what remedies must be sought for, 357, not sufficient for every parish, 359, stipends allotted for some in Lancashire, *ib.*
- Precedents**, instances of the great reverence paid to them, i. 640.
- Precious stones** comfort the spirits, i. 197.
- Precipitation of metals**, what, i. 246.
- Prelates**, when dangerous, i. 276.
- Preparation of saffron**, i. 250, of garlic, *ib.* of damask roses for smell, *ib.*
- Prerogative of the king in parliaments**, i. 646, in matters of war and peace, *ib.* in matters of money, *ib.* in trade and traffic, *ib.* in his subjects' persons, *ib.* of the king and law, not to be considered separately, 715, of the king, incommunicable, 647, &c. what persons they ought to be who have this power committed to them, 647, such authority delegated is derogatory to the king, *ib.* and also very dangerous, 648. See Magistrate.
- Προβόρυπος**, is always distinguished from *λεπίς*, i. 356.
- Presence**, the advantage of a good one, i. 319.
- Preservation of bodies from corruption**, i. 98. Preservation of fruits in syrups, 152, also in powders, *ib.* when to gather fruits for preservation, *ib.* also in bottles in a well, *ib.* Preserving grapes long, *ib.* another way thereof, 155.
- Preservation is the chief law of nature**, i. 441.
- Pressure**, what motion it causes in bodies, i. 83.
- Pretext never wanting to power**, i. 746.
- Prætorian courts**, i. 533.
- Prickles of trees, shrubs, and animals**, i. 199.
- Priest, christian**, i. 205.
- Priest**, the word to be changed to minister in our liturgy, i. 356.
- Princes leaning to party**, like a boat overset by uneven weight on one side, i. 271, advice to them, 273, resemble the heavenly bodies, 277.
- Princes cannot perpetuate their memory better than by making good laws**, as is shown by comparison with their other works, and by examples, i. 670, 671, should take care to preserve each other's life and reputation, even in times of hostility, 376.
- Principiation of metals**, i. 244, whether any such thing or no, *ib.* none such as sal, sulphur, and mercury, *ib.*
- Privileged officers**, an interruption to justice as much as privileged places, i. 787. Privileges of members of parliament, when burthensome, 513.
- Privy counsellor's duty**, i. 514. Privy council how to be chosen, *ib.*
- Privy counsellor**, conspiring against his life how to be punished, i. 675.
- Probus**, did himself hurt by a speech, i. 273.
- Procession**, a pleasant observation upon one, i. 330.
- Proclamation of king James before the book of Common Prayer**, i. 511.
- Proclamation drawn for his first coming in**, i. 443, touching his style, 445.
- Proclamation for a parliament**, a draught of one, ii. 118.
- Procreations by copulation and by putrefaction**, i. 189, the cause of each, *ib.*
- Profanations**, how to be punished, i. 674.
- Prognostics for plenty or scarcity**, i. 157, of pestilential years, 159, 166, 176, 177, and cold and long winters, 177, by birds, 178, of a hot and dry summer, 177, by the birds also, *ib.* of winds, 178, of great tempests, 177, of rain, 178, from living creatures, *ib.* from water-fowls and land-fowls, from fishes, *ib.* from beasts, *ib.* from herbs, *ib.* from aches in men's bodies, *ib.* from worms and vermin, *ib.* from the sweating of solid bodies, *ib.*
- Prolonging life**, i. 89. what state of life conduceth most to its prolongation, 117, precepts for the prolongation of life, 252.
- Prometheus**, an emblem of human nature, i. 264, 273.
- Promises of God**, concerning the redemption of man, manifested many ways, i. 338.
- Property in lands**, how gained, i. 576, by entry how gained, *ib.* by descent how gained, *ib.* by escheat how gained, 577, by conveyance how gained, 583, several ways of gaining it in goods and chattels, 586, three arguments of property, 618.
- Prophecies**, exclusive of revelation and heathen oracles, i. 290, whence they derive their credit, 291.
- Prophecies**, spreaders thereof how to be punished, i. 675.
- Propheying**, what it was, i. 357, much commended, *ib.*
- Proprieties**, secret, i. 96, 97, 201.
- Proserpina**, her fable, i. 97.
- Prosperity**, temperance its proper virtue, i. 264.
- Protagoras**, i. 194.
- Prothonotary**, his office, i. 650.
- Proud persons**, how they bear misfortunes, i. 259.
- Prudence**, doctrine of, i. 290.
- Psalm 1st**, translated, i. 603, the 12th, *ib.* the 90th, 361, the 104th, *ib.* the 126th, 362, the 137th, *ib.* the 149th, 363.
- Public good** always most regarded by nature, i. 449, 450.
- Puckering**, Sir John, lord keeper of the great seal, letter to him from Mr. Francis Bacon, ii. 141.
- Puebla**, Dr. ambassador lieger from Spain, i. 788.
- Pugna per provocationem**, what it was, i. 681, instances thereof, *ib.*
- Pupils**, the prætorian power over them, i. 485.
- Purchasers**, very much favoured by our laws, i. 606.
- Purging medicines** having their virtue in a fine spirit, endure not boiling, i. 84, their unpleasant taste how remedied, *ib.* several ways of the operations of purging medicines, 88, proceed from the quantity or quality of the medicines, *ib.* they work upon the humours, *ib.* medicines that purge by stool, and that purge by urine, 89, their several causes, *ib.* work in these ways as they are given in quantity, *ib.* what weather best for purging, 92, preparations before purging, *ib.* want of preparative, what hurt it doth, both in purging and after purging, *ib.*
- Puritans**, ii. 258.
- Pursevants**, their business how to be managed, ii. 111.
- Purveyance** justly due to the crown, i. 520, and yet frequently abused, *ib.*
- Purveyors**, a speech concerning their abuses, i. 447, complaints about them, *ib.* their abuses enumerated, 448, instances of their frequent breaches of the law, *ib.*
- Putrefaction**, its inception hath in it a maturation, i. 120.
- Putrefaction**, the acceleration of it, 122, the cause of putrefaction, *ib.* Putrefaction, whence, *ib.* ten means of inducing putrefaction, *ib.* 123, prohibiting putrefaction, 123, 171, ten means of prohibiting it, 123, 124, inceptions of putrefaction, 125, 153, putrefactions for the most part smell ill, whence, 179. Putrefaction hath affinity with plants, 150. Putrefaction, from what causes it cometh, 179, 180. Putrefaction, the subtilist of all motions, 159. Putrefaction induced by the moonbeams, 88, doth not rise to its height at once, 176. Putrefactions of living creatures have caused plagues, 192.
- Putrified bodies** most odious to a creature of the same kind, i. 199.
- Pye**, Sir Robert, letter to him from lord viscount St. Alban, ii. 262.
- Pyrrhus** had his teeth undivided, i. 168, his ambition, 315.
- Pythagoras**, his philosophy full of superstition, i. 190, visited Hiero, 325, his parable, 282.

## Q

- QUARRIES** that grow hard, i. 182.
- Quarter sessions** to be held by justices, i. 573.
- Questions touching minerals**, i. 242, unexpected surprise, 279, the use and advantage of asking questions, 288.
- Questions** about the lawfulness of a war for the propagating of religion, 529.
- Quicksilver** heated and pent in, hath the same force with gunpowder, i. 87, the coldest of metals, because the fullest of spirits, 93, will not bear the fire, 122.

Quicksilver will conserve bodies, and harden them, i. 175.  
 Quicksilver fixed to the hardness of lead, i. 182, 241, how  
 gilders guard against the ill effects of it, 192, a preserva-  
 tive against the plague, 198.  
 Quintus, his saying touching the state of Peloponnesus,  
 i. 466.  
 Quintus Pius, the victory of Lepanto owing to him, i. 199.

## R

RABBINS, i. 295.  
 Rabelais, i. 313.  
 Racking of wine or beer, i. 119.  
 Rain in Egypt scarce, i. 170, the cause thereof, *ib.* several  
 prognostics of rain, 178.  
 Rainbow, the sweetness of its odour, i. 178.  
 Raleigh, Sir Walter, a design to murder him by Sir  
 Christopher Blunt, i. 416, compared the ladies of the  
 queen's bed-chamber to witches, which have power to  
 do hurt, but no good, 313, retort upon, 316, resentment  
 against him by the Spanish ambassador, ii. 206, letter  
 from the lord chancellor to the king, concerning the  
 manner of proceeding against him, 207, declaration of  
 his demeanour and carriage, 208.  
 Rams' skins good to be applied to wounds, i. 158.  
 Ramsay, David, ii. 221.  
 Rates, they should be easy to the undertakers for planting  
 Ireland, i. 472.  
 Ravenstein, lord, rebels against Maximilian, i. 752, 758,  
 carries on a piratical war, *ib.*  
 Ravishment of women, how to be punished, i. 676.  
 Reading, how to be regulated, i. 301.  
 Realm, the state of it how many ways endangered, and  
 what punishments are due thereupon, i. 675.  
 Rebel and enemy distinguished, i. 465.  
 Rebellion, how punishable, i. 675, several raised in Ireland  
 by the king of Spain, 392, in the north, to what it was  
 owing, *ib.* how a subject may be guilty of it by taking up  
 arms, 421, what consequences the law draws from it,  
 421, 422.  
 Receipts how to be managed after the union of England  
 and Scotland, i. 458.  
 Receptacle for converts to the reformed religion, recom-  
 mended, i. 496.  
 Recoveries, what they are, i. 583, they bar entails, &c. *ib.*  
 other effects thereof, *ib.* methods of proceeding therein,  
*ib.* why first introduced, *ib.*  
 Recusants, how to be punished, i. 674, magistrates, who  
 are so, how to be dealt with in Ireland, ii. 84.  
 Red within, some few fruits, i. 141.  
 Red juice in plants, i. 154.  
 Reed or cane, a watery plant, i. 155.  
 Referees, the meaning of that word, ii. 229, note †.  
 References in chancery, when they may be made, i. 719.  
 Referendaries, i. 301.  
 Refining of metals insufficient, i. 182, how to multiply the  
 heat, or open the body in refining, i. 244.

 flexion of species visible, *ib.*  
 Reformation of religion under queen Elizabeth, i. 381, the  
 benefits thereof, *ib.*  
 Refraction causeth the species visible to appear bigger, i.  
 170, other observations about refractions, *ib.*  
 Registers in chancery, their office, and orders relating to  
 it, i. 718.  
 Relief, a sum of 5*l.* so called, to be paid by every tenant by  
 knight's service to his lord, i. 579, of tenant in socage,  
 what, *ib.*  
 Religion, unity in it, i. 262, the chief band of society, *ib.*  
 Lucretius's exclamation against it, 263, the best reason  
 of state, 308, of our church commended, 510.  
 Religion, how careful king James was of it, i. 713, the care  
 of it recommended to the judges of the circuits, *ib.* our  
 author disapproves of the exercise of divers religions,  
 382, every man's conscience should be let alone in the  
 quiet belief of his own, *ib.* concerning the disputes about  
 it in England, *ib.* two rules of proceeding with men in  
 religious matters, where conscience is pleaded, 387, con-  
 cerning the propagation thereof, 496, not to be scoffed  
 at, 344. Religious sects, 307.

Remainder and reversion, the difference between them, i.  
 582, the former cannot be limited upon an estate in fee-  
 simple, *ib.* its significance in the statute of uses, 609, 610.  
 Remains, medical, i. 250.  
 Remembrancer of the lord treasurer in the exchequer, i.  
 585.  
 Remembrancer in chancery, a proper officer recommended,  
 ii. 115.  
 Remitter, what the law means thereby, i. 557, several cases  
 of it explained, *ib.*  
 Rents, case thereof considered, i. 610, concerning the ex-  
 ecution of them, *ib.*  
 Re-ordination of priests maintained by some, i. 347.  
 Repletion hindereth generation, i. 133, and stature, 143.  
 Reproofs from authority should not be taunting, i. 269.  
 Resemblances between the species of plants, i. 157, and  
 likewise among animals, *ib.*  
 Respiration of the world, what, according to Apollonius, i.  
 190.  
 Rest causeth putrefaction, i. 123.  
 Restitutions of metals and minerals, ii. 246.  
 Retardation of germination, i. 132.  
 Revelation of God's will by the Scriptures, i. 338, how  
 made before them, 339.  
 Revenge, wild justice, and ought to be weeded, i. 264, 392.  
 Revenge, i. 264, puts the law out of office, *ib.* can only  
 take place where there is no law to remedy, *ib.* public  
 revenges most fortunate, *ib.* mischiefs of allowing private  
 revenge, 679.  
 Revenue of the king, how to be managed and advanced, i.  
 715, ii. 113.  
 Revenues, sundry sorts of royal revenues, i. 588, of the  
 crown ought to be preserved, 520.  
 Reverence of one's self, a bridle of vice, i. 211.  
 Reversions cannot be granted by word, i. 582. See At-  
 tornment, Reverter.  
 Reverter, its meaning stated in the statute of uses, i. 608.  
 Review, bill of, in what cases to be admitted, or not, i. 716.  
 Revocation of uses, Sir John Stanhope's case relating  
 thereto discussed, i. 627.  
 Rheuma, how caused, i. 88, preservative against, 250.  
 Rhubarb contains parts of contrary operations, i. 84, 97.  
 Rhubarb infused for a short time best, 84, repeated, may  
 be as strong as scammony, *ib.* a benedict medicine, *ib.*  
 caution in the taking thereof, 88, its virtue, *ib.*  
 Rice, a nourishing meat, i. 90, the general food in  
 Turkey, *ib.*  
 Richard II. his deposition, i. 312.  
 Richard III. tyrant in title and regiment, i. 732, slain in  
 Bosworth-field, *ib.* slew with his own hands Henry VI.  
*ib.* and his two nephews, *ib.* thought to poison his wife,  
*ib.* attainted after his death, 735.  
 Richardson excuses himself from being speaker, i. 499.  
 Riches, wherein they resemble muck, i. 321.  
 Riches, the baggage of virtue, i. 239, have sold more men  
 than they have bought out, *ib.* unjust means of acquiring  
 them, 290, little riches more hard to be got than great,  
*ib.*  
 Riding, good for the head, i. 301.  
 Right side and left, senses alike strong on both sides, limbs  
 strongest on the right, i. 186, the cause of each, *ib.*  
 Rights are of two sorts, i. 598, according to the civilians,  
 of three sorts, 599, when two meet in one person there  
 is no confusion of them, but they remain in law distinct,  
 658, how this last rule is limited, *ib.*  
 Riots and violent assaults how to be punished, i. 676.  
 Rivers, the advantage of making them navigable, i. 517.  
 Robberies disguised, instances thereof, and how they are  
 to be punished, i. 676.  
 Rocks, springs chiefly generated there, i. 86.  
 Roman laws were collected by the decemvirs from the  
 Grecian ones, i. 668.  
 Romans, how they esteemed a goose's liver, i. 89, their  
 style in war and peace, 321, beat Philip of Macedon, *ib.*  
 open to receive strangers into their bosom, 285, made  
 wars for the liberty of Greece, 286, 528.  
 Rome, heathen, grew great by its reverence of the gods,  
 i. 274.  
 Rome, Virgil's prediction concerning the mixture of Trojans  
 and Italians therein, i. 451, its union with the Sabines,

- ib.* free in its naturalizations, *ib.* causes of its growth, *ib.* esteemed a valiant nation, 681, duels not used amongst them, *ib.* the emperors thereof used in their titles the additions of nations they had conquered, 447.

- Sicknesses of the summer and the winter, i. 128.
- Sighing and yawning, the breath drawn in by both, i. 158, 159.
- Sight, the object thereof, quicker than of hearing, i. 110.
- Sight, 185, 186, objects thereof cause great delights in the spirits, but no great offence, why, *ib.*
- Sigismund, prince of Transylvania, i. 523, heads three provinces which revolt in Turkey, 466.
- Silk worms, i. 161.
- Silver more easily made than gold, i. 121, 241, the Chinese intent upon making it, 121. Silver halpence, 260.
- Silver, certificate touching the scarcity of it at the mint, i. 492.
- Simcock, his deposition, ii. 172.
- Simnel, Lambert, i. 736, his history in personating the 2nd son of Edward IV. *ib.* changes his scene, and personates Edward Plantagenet, 737, afterwards proclaimed at Dublin, 738, taken in the battle near Newark, 741, consigned to an office in the king's kitchen, *ib.* preferred to be his falconer, 741, 764.
- Simonds, William, 736 note \*, taken at the battle of Stokefield, 741, no more heard of, *ib.*
- Simonides, i. 325.
- Simple, special for medicine, i. 159, such as have subtle parts without acrimony, *ib.* many creatures bred of putrefaction, are such, *ib.* also putrefactions of plants, *ib.*
- Simulation and dissimulation, i. 264, a weak kind of policy, *ib.* and differs from judgment, *ib.* three degrees of it, 265, its advantages, *ib.* the case of dissembling knowledge, 283.
- Sinews, why much affected with cold, i. 159.
- Single life, the causes of it, i. 266, recommended to churchmen, *ib.* most charitable, and yet most cruel, *ib.*
- Singularities in several plants, i. 157.
- Sinking of bodies, its cause, i. 172.
- Sitting healthful, why, i. 166.
- Six clerks, concerning the grant of their office, ii. 104.
- Sixtus V. how the son of an illustrious house, i. 317, a tale of his reception in the other world, 318.
- Skipwith, Henry, his cause in chancery recommended by the earl of Buckingham, i. 186.
- Skull, of one entire bone, i. 168.
- Slander, how to be punished, i. 570, 571.
- Sleep, a great nourisher, i. 91. Sleep promotes sweat, and stays other evacuations of the body, 163. Sleep, why hindered by cold in the feet, 168, furthered by some kind of noises, *ib.* nourisheth in many beasts and birds, *ib.* creatures that sleep all winter, i. 189.
- Sleeping plants, i. 151.
- Smells and odours, i. 129, best at some distance as well as sound, why, *ib.* best where the body is crushed, *ib.* not so in flowers crushed, *ib.* best in flowers whose leaves smell not, *ib.* Smells sweet, 178, have all a corporeal substance, 179. Smells fetid, *ib.* Smells of the jail very pernicious, 102. Smells that are most dangerous, *ib.*
- Smith, Sir Thomas, his case in Essex's treason, i. 440.
- Smith, Sir Thomas, sent ambassador to Russia, ii. 186 note \*.
- Smoke preserveth flesh, i. 124.
- Snake's-skin worn for health, i. 198.
- Sneezing ceaseth hiccup, i. 159, why induced by looking against the sun, *ib.* caused by tickling the nose, 170.
- Snow, why colder than water, i. 93.
- Snow-water unwholesome, i. 129. Snow causes fruitfulness, whence, 156, 157, puts forth plants and breeds worms, 146, 160, 161.
- Snow, good to be applied to a mortified part, whence, i. 173.
- Socage, tenures so called, what, and how instituted, i. 578, &c. reserved by the lord, 579.
- Socotra, that island famous for the sanguis draconis, i. 154.
- Socrates, what he said of the oracle of Delphos, i. 315, his sentiments of the writings of Heraclitus, *ib.* compared to the apothecaries' pots containing precious drugs, i. 324.
- Soft bodies, i. 181, their cause, *ib.* are of two sorts, *ib.*
- Soldiers, want of provision for them, when disbanded, complained of, i. 386.
- Soles of the feet have a sympathy with the head, i. 97.
- Solicitor and attorney-general, &c. their consequence, i. 512.
- Solid bodies sweating, foreshow rain, i. 178.
- Solitude, what the delight in it implies, i. 281.
- Solomon, his saying of riches, i. 289.

Why no mention of this gent?

- Solomon's house modelled in New Atlantis, i. 202, 205, 247, instituted for the study of the works and creatures of God, 206, the true state of it, 212, the several employments and offices in it, 215.
- Solon compares the people to the sea, i. 315, wept for his son's death, 322, his saying to Croesus, 324, what remarkable in his laws, 671.
- Somerset, Robert Car, earl of, letter from him to Sir Thomas Overbury, ii. 163, questions of Sir Francis Bacon relating to his case, 171, heads of the charge against him, 172, charged with treasons and plots with Spain, 173, delivered out of the Tower, 238, pardoned, and to be allowed to sit in parliament, 264.
- Somerset, countess of, charge against her for poisoning of Overbury, i. 699, a charge against the earl for the same fact, 704, he is criminally in love with the countess of Essex, 706, his behaviour at and after the time of Overbury's being poisoned, 707, some farther account of his treason, ii. 66, some things relating to his examination, *ib.* several cases put to the king about his trial, confession, &c. 69, concerning his arraignment and examination, 70. See Overbury.
- Somerset, countess of, questions to the judges relating to her case, ii. 171. Dr. Whiting ordered to preach before her, 173, charge prepared by Francis Bacon against her, in case she pleaded guilty, 174, delivered out of the Tower, 238.
- Soot, a good compost, i. 131, 149.
- Soporiferous medicines, i. 198.
- Sorrel, i. 157, the root thereof sometimes three cubits deep, *ib.*
- Sovereign. See King.
- Soul of man was first breathed into him by God, i. 338, of good men how disposed of after death, 339, of idiots and wise men the same, 335.
- Soul: doctrine of the human soul, i. 44.
- Soul of the world, i. 190.
- Sounds musical and immusical, i. 98.
- Sounds, why more apt to procure sleep than tones, i. 99, nature of sounds not sufficiently inquired, 100, motions, great, in nature without sounds, *ib.* nullity and entity of sounds, *ib.* swiftness of motion may make sounds inaudible, *ib.* Sound not an elision of the air, 101, the reasons thereof, 102. Sounds not produced without some local motion of the medium, *ib.* yet distinction to be made betwixt the motion of the air and the sounds themselves, *ib.* great sounds without great motions in the air, from other bodies, *ib.* have rarified the air much, *ib.* have caused deafness, *ib.* enclosure of sounds preserveth them, *ib.* Sounds partly enclosed, and partly in open air, *ib.* better heard from without than within, *ib.* a semiconcave will convey sound better than open air, *ib.* any long pole will do the like, *ib.* trial to be made in a crooked concave, 103. Sounds may be created without air, *ib.* difference of sounds in different vessels filled with water, *ib.* Sound within a flame, *ib.* Sound upon a barrel emptier or fuller, *ib.* Sound not created betwixt the bow and the string, but betwixt the string and the air, *ib.* the majoration of sounds, 104, soft bodies damp sounds, 105, mixture of sounds, 104, 105, magnitude of sounds, 103, in a trunk, *ib.* in a hunter's horn bigger at the lower end, *ib.* in a vault under the earth, *ib.* in hawk's bells, rather than upon a piece of brass in the open air, *ib.* in a drum, *ib.* farther heard by night than by day, why, *ib.* increased by the concurrent reflection, *ib.* increased by the sound-board in instruments, *ib.* 104, in an Irish harp, 104, in a virginal the lid shut, *ib.* in a concave within a wall, *ib.* in a bow-string, the horn of the bow laid to the ear, *ib.* the like in a rod of iron or brass, *ib.* the like conveyed by a pillar of wood from an upper chamber to a lower, *ib.* the like from the bottom of a well, *ib.* five ways of majoration of sounds, *ib.* exility of sounds through any porous bodies, *ib.* through water, *ib.* strings stopped short, *ib.* damping of sounds with a soft body, 105, iron hot not so sounding as cold, *ib.* water warm not so sounding in the fall, as cold, *ib.* loudness and softness of sound differ from magnitude and exility, *ib.* loudness of sounds, whence, *ib.* communication of sounds, *ib.* inequality of sounds, *ib.* 106, unequal sounds ingrate, 106, grateful sounds, *ib.* musical, and immusical, at pleasure, only in men and birds, *ib.* humming of bees, an unequal sound, *ib.* metals quenched give a hissing sound, *ib.* base and treble sounds, *ib.* two causes of treble in strings, *ib.* proportion of the air percussed in treble and base, 107, trial hereof to be made in the winding up of a string, *ib.* difference of sounds from the distances of frets, *ib.* in the bores of wind instruments, *ib.* interior and exterior sounds, *ib.* their difference, *ib.* several kinds of each, *ib.* interior sounds rather a concussion than a section of the air, *ib.* sounds by suction, 108, articulation of sounds, *ib.* articulate sounds in every part of the air, *ib.* winds hinder not the articulation, *ib.* distance hindereth, *ib.* speaking under water hindereth it not, *ib.* articulation requireth a mediocrity of sound, *ib.* confounded in a room over an arched vault, *ib.* motions of the instruments of speech towards the forming of letters, *ib.* instruments of voice, which they are, *ib.* inarticulate voices and inanimate sounds, have a similitude with divers letters, *ib.* motions of sounds, 109, they move in round, *ib.* may move in an arched line, *ib.* supposed that sounds move better downwards than upwards, *ib.* trial of it, *ib.* lasting of sounds, *ib.* sounds continue not, but renew, *ib.* great sounds heard at far distance, *ib.* not in the instant of the sound, but long after, *ib.* object of sight quicker than sound, 110, sounds vanish by degrees, which the objects of sight do not, whence, *ib.* passage of sounds through other bodies, *ib.* the body intercepting must not be very thick, *ib.* the spirits of the body intercepting, whether they cooperate in the sound, *ib.* sound not heard in a long downright arch, *ib.* passeth easily through foraminous bodies, *ib.* whether diminished in the passage through small crannies, *ib.* medium of sounds, *ib.* air the best medium, *ib.* thin air not so good as thick air, *ib.* whether flame a fit medium, *ib.* whether other liquors beside water, *ib.* figures of pipes on concaves that conduce to the difference of sounds, *ib.* several trials of them, 111, mixture of sounds, *ib.* audibles mingle in the medium, which visibles do not, *ib.* the cause thereof, *ib.* mixture without distinction makes the best harmony, *ib.* qualities in the air have no operation upon sounds, *ib.* sounds in the air alter one another, *ib.* two sounds of like loudness will not be heard as far again as one, why, *ib.* melioration of sounds, *ib.* polished bodies creating sounds meliorate them, *ib.* wet on the inside of a pipe doth the like, 112, frosty weather causeth the same, *ib.* mingling of open air with pent air, doth the same, *ib.* from a body equal sounds better, *ib.* intension of the sense of hearing meliorateth them, *ib.* imitation of sounds, *ib.* the wonder thereof in children and birds, *ib.* reflexion of sounds, 113, its several kinds, *ib.* no refraction in sounds observed, 114, sympathy and antipathy of sounds, 115, 116, concords and discords in music are sympathies and antipathies of sounds, 116, strings that best agree in consort, *ib.* strings tuned to an unison or diapason show a sympathy, *ib.* sympathy conceived to cause no report, *ib.* experiment of sympathy to be transferred to wind-instruments, *ib.* essence of sounds spiritual, *ib.* sounds not impressions of the air, *ib.* causes of the sudden generation and perishing of sounds, 117, conclusion touching sounds, *ib.*
- Sour things, why they provoke appetite, i. 178.
- Souring of liquors in the sun, i. 189.
- Sourness in fruits and liquors, its cause, i. 185.
- Southampton, his confession of Essex's design, i. 412, is made general of the horse in Ireland by Essex, contrary to the queen's command, 413, his trial, with lord Essex's, 419, his defence, 420, an answer to his defence, 421, he is found guilty of treason, 422, his examinations and confessions at and after arraignment, 431, some further account of him, ii. 29.
- South winds dispose men's bodies to heaviness, i. 128, south winds hurtful to fruit blossoming, 156, south winds without rain breed pestilence, with rain not, whence, 179, on the sea-coast not so, *ib.*
- South-east sun better than the south-west for ripening fruit, i. 131.
- Spain, its subjection formerly to several kingdoms, i. 465, union of its kingdoms, 450, sets fire to its Indian fleet, 442, success of our English arms against them, *ib.* a report of their injuries to us, as represented by the mer-

- chants, 474, some extenuations of their injuries to us, 476, concerning the trade thither, *ib.* we are not to transport any commodities of the Low Countries thither, *ib.* its state considered, 382, its enterprise upon England, with the Invincible Armada, and the ignoble return, 384, is not to be feared by us, *ib.* king thereof compared with Philip of Macedon, 388, aims at universal monarchy, *ib.* his ambition, how crossed, 389, the designs thereof upon several nations, *ib.* is hindered in his intended conquests, by the wars in the Low Countries, *ib.* their proceedings with several other states, 390, their ill treatment of our merchants, 392, they lay aside thoughts of meddling with England, and attack France, 398, the intentions of the king against queen Elizabeth, *ib.* he designs to poison her, *ib.* a match proposed with Spain, but king James is advised against it, unless all his council agree in it, ii. 98, 94.
- Spain has but two enemies, all the world and its own ministers, i. 543.
- Spain, notes of a speech concerning a war with Spain, i. 530, considerations of a war with it, 532.
- Spalato, archbishop of, bishop Andrews' opinion of, i. 320.
- Spaniards and Spartans of small despatch, i. 281. Spaniards seem wiser than they are, *ib.* the wonder how they hold such large dominions with so few natural Spaniards, 285, have had a veteran army for sixscore years, 286, no such giants as some think, 532, accessions to their monarchy recounted, 535, twice invaded England and Ireland, 536, no overmatch for England, 537, Armada intended for an utter conquest, 538.
- Spanish Montera, i. 211.
- Sparkling woods by sudden breaking, i. 155.

- Vitriol aptest to sprout with moisture, i. 150.
- Vivification, i. 122, the several things required to vivification, 160, 161, the process of it, *ib.* 189.
- Ulcer in the leg harder to cure than in the head, the cause, i. 173, difference of curing them in a Frenchman and an Englishman, *ib.*
- Ulster, earldom of, to be added to our prince's titles upon the planting of Ireland, i. 472.
- Ulysses, a good husband, i. 266.
- Unbarked branch of a tree being set, hath grown, i. 155, barked will not, *ib.*
- Undertakers, a set of men so called in parliament, 12 James I. i. 497, the pernicious effects of such a project, *ib.* how far such a thing might be justifiable, and how far faulty, 498, some means to put a stop to their scheme, 499, for the plantation of Ireland, should not be obliged to execute in person, 473
- Unguentum tell, or the weapon anointed, i. 201.
- Union, the force thereof in natural bodies, i. 96, appetite of union in natural bodies, 117, appeareth in three kinds of bodies, *ib.* certificate of the commissioners authorized to treat of a union between England and Scotland, 459.
- Union, reasons for the union of laws between England and Scotland, i. 468, of sovereignty, should be confirmed by that of naturalization, 465, between the Romans and Latins, *ib.* ought not to precede naturalization, 468, a discourse concerning the union of England and Scotland, 449, two kinds of policy used in the uniting of kingdoms, 451, of Judah, and Israel, 452, articles relating to the union of the two nations, 433, of England and Scotland
- how far to be proceeded in, 454, in what points they were esteemed as united, but not perfectly in any of them, *ib.* of England and Scotland, how far imperfect with regard to sovereignty, to subjection, religion, language, and confederacies, 455, the force thereof, 450, the several manners thereof, 451, the several parts of which this union of kingdoms consists, 452.
- Union of kingdoms stirs up wars, i. 307, with Scotland hath taken away all occasions of breach between the two nations, 516.
- United provinces are received into protection by queen Elizabeth, i. 392, are very convenient to be annexed to the crown of England, *ib.* are included in the articles of peace between England and Spain, 393.
- Unities called heavenly, i. 343.
- Unity in religion, i. 262. Unity and uniformity, 263.
- Unity, breach thereof how to be punished, i. 674, in worship, necessary to that of faith, 343, what its true bonds are, *ib.*
- Universities, an exercise of learning recommended to be used in them, i. 357.
- Unlawful acts, all preparations towards them punishable as misdemeanors, though they are never performed, i. 685.
- Unlawful lust, like a furnace, i. 211.
- Untruths, whether all are unlawful, i. 350.
- Voice, the shrillness thereof, in whom especially, i. 106, why changed at years of puberty, *ib.* labour and intention conduceth much to imitate voices, 113, imitation of voices as if they were distant, *ib.*
- Voyages for discovering arts and sciences, manufactures, and inventions, i. 208.
- Urban, a pope of that name, instituted the croisado, i. 525.
- Urine, the whey of blood, i. 90.
- Urine in quantity a great hinderer of nourishment, i. 90, why cold separates it, 122.
- Urswick, chaplain of Henry VII. sent to Charles VIII. i. 744, made almoner, 759, sent with the order of the garter, &c. 760. Vide 773.
- Usage often overrules the express letter of a statute, instances of which are given, i. 639.
- Use, what it is, i. 584, is settled by statute the 27th of Henry VIII. *ib.* lands how conveyed thereby, with the circumstances necessary thereto, *ib.* reasons on the statute of uses, 597, exposition of it, 598, the nature and definition of a use, *ib.* what it is not, 599, what it is, *ib.* its parts and properties, *ib.* Glanville's mistake about uses, 600, its nature farther explained in four points, *ib.* was once thought to be not deviseable, 601, limitation thereof disapproved, 602, in the civil law, what most resembles uses, *ib.* compared with copyholders, in what respects, *ib.* how they came first to be practised, *ib.* their commencement and proceeding, according to common and statute law, *ib.* the practice of them not very ancient, 603, the word use found in no statute till 7th of Richard II. *ib.* three points to be noted concerning uses in the common law, *ib.* concerning the raising, preserving, spreading, transferring, interrupting, &c. of uses, 600, 611, the statute of uses commended, 605, the time of it, *ib.* the title of it, *ib.* the precedent of it, *ib.* the preamble of it, *ib.* the inconveniences redressed by this statute, *ib.* &c. who most favoured by it, 606, how respectful to the king, *ib.* the remedy intended to be given by this statute, 607, two false opinions concerning the statute answered, *ib.* an account of the statute itself, and explanation of its terms, and what things are thereby excluded, 607, 608, an error corrected, that uses might be raised by agreement, 608, difference between a use in remainder and reverter, *ib.* what provisos made by this statute, 610, what persons may be seised to a use, and what not, 611, must ever be in a person certain, 612, in what cases the same persons may be both seised to the use and cestuy que use too, 613, what persons may limit and declare a use, 614. See Case.
- Usurious selling of commodities to those who wanted money, and so were forced to sell them back again at disproportionate rates, the draught of an act against this practice, i. 640.
- Usury, i. 294.
- Usury the certainest and worst means of gain, i. 290,

several strictures against it, 294, discourages and impoverishes the merchants, who are the vena porta of wealth, *ib.* intercepts both merchandise and purchase, *ib.* advantages, *ib.* a bastard and barren employment, 747, 749.

Vulcan's halting, a resemblance of flame, i. 87.

## W

WADE, lieutenant of the Tower, is displaced, in order to effect the poisoning of Overbury, i. 707.

Wake, Isaac, letter to him from the lord chancellor Bacon, ii. 206.

Waking: birds kept waking to increase their attention, i. 112.

Wales, mead used in, i. 182.

Walking up hill and down, i. 166.

Walls of brick more wholesome than those of stone, i. 194.

Walter, Sir John, ii. 229.

War, an invasive one with Spain much desired, i. 442, and peace, right of declaring them solely in the king, 478, many instances of this right given, *ib.* the answers of several kings to petitions, wherein this right was concerned, *ib.* inconvenience of debating this right in parliament, 479, the advantages of war in some cases, 386, the commons, out of modesty, refuse Richard II. to take into consideration matters relating thereto, as not belonging to them, 478, matters relating to it should be kept secret, *ib.* parliaments have sometimes been made acquainted therewith, and why, 479, they are the highest trials of right, 376.

War with Spain, consideration concerning it, i. 532, changes in wars, 307, art of war improved, *ib.* war to maintain itself, 756, just cause, sufficient forces, prudent designs, necessary to a war, 532, not confined to the place of the quarrel, 533, why always a just cause of war against the Turk, 534. War, defensive, what, 533, 536. Wars with subjects, like an angry suit for a man's own, 523. Wars foreign and civil, 515.

War, when lawful, 276.

War: notes of a speech concerning a war with Spain, i. 530.

War, incited by music, i. 100.

War, holy, i. 522, for the propagation of the faith, whether lawful or obligatory, 525, several questions touching the lawfulness, 526.

Warbeck, Perkin, his adventures, i. 761, the supposed godson of Edward IV. *ib.* called Peter, whence Peterkin, Osbeck, *ib.* closetted by the lady Margaret, *ib.* his letters to the earls of Desmond and Kildare upon his landing at Cork, 762, invited into France by Charles VIII. *ib.* generally believed to be the duke of York, *ib.* his friends and favourers, *ib.* discouraged at the beheading of his friends and the defection of Clifford, 767, lands at Sandwich in Kent, 768, goes into Scotland, on the advice of Charles and Maximilian, 770, his address to the king of Scots, *ib.* he is married by that king's approbation to the lady Catherine Gordon, his near kinswoman, 771, his declaration to the people of England, *ib.* abandoned by Scotland, 777, sails into Ireland, *ib.* his cabinet council there, *ib.* lands in Cornwall with about sevenscore men, 778, publishes an invective proclamation against the king in style of Richard IV. *ib.* besieges Exeter, though without artillery, *ib.* raises the siege and flies, 778, surrenders himself out of sanctuary, on promise of life, 779, his former false honours plentifully repaid with scorn, *ib.* the account of his examination, 780, makes his escape, and gets into the priory of Shene, 781, set in the stocks twice, where he reads his confession, and then sent to the Tower, *ib.* where he seduces the earl of Warwick into a plot against the lieutenant, *ib.* arraigned for treasons committed since his coming into this kingdom, condemned, and executed at Tyburn, 782.

Wards, commission in Ireland, its vast advance in one year, ii. 106, a speech to obtain leave of the king to treat of a composition with him for them, i. 484.

Wards, a frame of declaration for the master of the wards at his first sitting, i. 485, directions for the master of the wards to observe for his majesty's better service, and the general good, 486.

Warham, Sir William, L.L.D. sent to the arch-duke Philip against Perkin, i. 764, his speech, *ib.* master of the rolls and commissioner for trade, 772.

Warlike people, their importance, i. 284, profession of arms necessary to a warlike nation, 286. England warlike, 751.

Warlike nations most liberal of naturalization, i. 661.

Warm water sounds less than cold, i. 105, whether good for plants, 135, makes a fruit with little or no core, 142.

Warmth a special means to make ground fruitful, i. 149.

Warren, his declaration about some affairs in Essex's treason, i. 425.

Warts, how cured, i. 153, 200.

Warwick, earl of, i. 737. See Plantagenet.

Waste, case of impeachment of waste, i. 616, &c. very difficult to resolve this case, *ib.*

Water, salt, how made fresh, i. 82, foul, how clarified, 83, how separated from wine, *ib.* turned into ice, by snow, nitre, and salt, 86.

Water thickened in a cave, i. 94, changed suddenly into air, 96, more difficult to turn water into oil, than silver into gold, 125, choice of waters, by weight, 129, by boiling, *ib.* by longest lasting unputrified, *ib.* by making drinks stronger, *ib.* by bearing soap, *ib.* judged of by the places where they are congregated, 130, by the soil, *ib.* Waters sweet not to be trusted, *ib.* Well-water, *ib.* whether water putteth forth herbs without roots, 146, water alone will cause plants to sprout, *ib.* well-water warmer in winter than summer, 187, water rising in a basin by means of flame, *ib.* hot water and fire heat differently, i. 158, water cooleth air, and moisteneth it not, 185.

Water may be the medium of sound, i. 174, watry moisture induceth putrefaction, 122, turning watry substances into oily, a great work in nature, 125, for instances thereof, *ib.* wrought by digestion, *ib.* watering of grounds a great help to fruitfulness, 149, cautions therein, *ib.* means to water them, *ib.*

Water-cresses, i. 125.

Water-fowls flocking to the shore portend rain, i. 178.

Waving, how a property in goods may be got thereby, i. 586.

Wealth of England under queen Elizabeth, i. 380.

Wealth of Spain, whence, i. 531.

Wealth, excess of, hurtful to a state, and to private persons, i. 506.

Wealth, in whose custody it is of most advantage to a state, i. 506, 507, inconveniences of its being lodged in few hands, 507.

Weapon anointed, i. 200, 201, weapons and ammunition of all sorts should be stored up, 516.

Weapons of war, i. 307.

Weight of the dissolution of iron in aqua-fortis, i. 173.

Weight, how it causes separation of bodies, i. 84, weight in air and water, 174.

Weights and measures, prerogative of the king relating thereto, i. 478.

Wentworth, Sir John, his cause recommended to the lord chancellor by the marquis of Buckingham, i. 210.

West Indies, concerning the trade thither, i. 476, France and Portugal debarred trading thither, *ib.* trade thither carried on by the English, *ib.* it ought to be free, 393.

West Indies, the gold and silver drawn by Spain from thence, how consumed by king Philip, i. 369.

Weston, his confession of Overbury's death, his trial and condemnation, i. 696, ii. 176.

Weston, Sir Richard, chancellor of the exchequer, letter to him from lord viscount St. Alban, ii. 260.

Weymouth, king of Castile puts in there, i. 789.

Wheat set, i. 134.

Whispering place, i. 104, you cannot make a tone, or sing in whispering, 107.

White, a penurious colour, i. 96, 141, in flowers, commonly more inodorate than other colours, whence, 141. White more delicate in berries, whence, *ib.* not so commonly in fruits, whence, *ib.*

White gunpowder, i. 101.

Whitehead favoured by queen Elizabeth, i. 316.

Whiteness, directions for inquiring into its nature, i. 225.

White rose, the clearness of that title, i. 732.

- White, Richard, ii. 211.
- White Locke, James, charge against him by Sir Francis Bacon, ii. 161, some account of him, note †, set at liberty, 161 note \*.
- Whiting, Dr. John, ii. 173.
- Wholesome seats, i. 172, trial for them, 177, moist air not good, *ib.* inequality of air naught, *ib.*
- Wife, excused by law, if she acts in obedience to her husband in felony, i. 554, but not in treason, and why, *ib.* loseth no dowry, though the husband be attainted of felony, 580.
- Wife and children hostages to Fortune, i. 266, reckoned only as bills of charges by some, *ib.* Wives good and bad, *ib.* are mistresses, companions, nurses, *ib.* Wives of kings, 276.
- Wilbraham, Sir Roger, ii. 176.
- Wildfires, why water will not quench them, i. 173.
- Wild herbs show the nature of the ground, i. 155.
- Wilford, Ralph, counterfeit earl of Warwick, i. 782.
- Will, conveyance of lands thereby, i. 584, the want of this before 32 Henry VIII. was justly thought to be a defect of the common law, *ib.* what shifts people were forced to make before this method, 585, the inconveniences therefrom of putting lands into use, as they then did, *ib.* the method of preventing this by several statutes, *ib.* how lands are to be disposed of by will, by statute of 27 Henry VIII. *ib.* what limitations several lands are under in this way of disposing, *ib.* what it is to have one proved, 587, how a man's goods were formerly disposed of when he died without a will, *ib.* what bishop shall have the right of proving them how determined, *ib.*
- Will of man, branches of knowledge which refer to it. i. 56.
- William I. declines the title of Conqueror in the beginning of his reign, i. 732, and claims by the will of Edward the Confessor, *ib.*
- William, duke of Mantua, i. 365.  
duke of Bavaria, i. 367.  
duke of Lunenburg, i. 367.  
duke of Juliers, Cleve, and Bergen, i. 368.  
landgrave of Hesse, i. 368.
- Williams, Dr. John, bishop of Lincoln, and lord keeper, receives many applications from the marquis of Buckingham relating to causes in his court, ii. 186 note ††, his letter to lord Bacon, 235, letter to him from lord Bacon, 245, his letter to lord Bacon, 249
- Williams, Mr. licence granted to him, ii. 212.
- Williams, Sir Roger, ii. 148 note.
- Williams, John, discovered to be author of a libel against king James I. ii. 164 note †, executed, *ib.*
- Willoughby, Sir Robert, sent to sheriff Hutton, i. 733, conveys Edward Plantagenet, and shuts him up in the Tower, *ib.* created lord Brook, 735.
- Winch, Sir Humphry, commended, i. 714.
- Windham, Sir John, beheaded by Henry VII. i. 787.
- Winding trees, i. 143.
- Winds vary sounds, i. 114.
- Winds, southern, dispose men's bodies to heaviness, i. 128.
- Winds, southern, without rain feverish, 178. Winds gathered for freshness, 172, breathing out of the earth, 177, prognostics of winds from animals, 178.
- Windsor treaty, with the king of Castile, i. 790.
- Wine and water separated by weight, i. 84, trial thereof in two glasses, *ib.* when it will operate and when not, *ib.* spirit of wine burned, 126, mingled with wax, the operation of it, *ib.*
- Wine, whether separated from water by passing through ivy-wood, i. 83. Wine burnt inflameth less, because the finer spirit is evaporated, 85. Wine sparingly to be used in consumptions, 90, retards the germination of seeds, 131, said by the ancients to make the plane-tree fruitful, 152. Wine best in a dry vintage, 156, new wine let down into the sea presently made potable, 158, for what bodies good, and for what hurtful, 165, how to correct the Greek wines, that they may not fume or inebriate, 173. Wine for the spirits, 250, against melancholy, *ib.* Wine in which gold is quenched, recommended, 252. Wines and woads not to be imported but upon English bottoms, 751.
- Winter and summer sicknesses, i. 128, warm winters destroy trees, 156, signs of a cold winter, 166, 177.
- Winter sleepers, i. 180.
- Winwood, Sir Ralph, reflected on by the lord keeper Bacon, ii. 193 note †, dies, 200 note †.
- Wisdom for a man's self, or self-cunning, not to be over-indulged, i. 280, suits better with princes than private persons, *ib.* no prime officers to be chosen of this character, *ib.* the self-cunning often unfortunate, *ib.*
- Wise men learn more by fools, than fools by wise men, i. 328, difference between a wise and cunning man, 278, such as are wise only in appearance, 281.
- Wit, we should distinguish between the saltness and the bitterness of it, i. 288.
- Witches and conjurers are guilty of felony, i. 644, how to be punished, 674.
- Witches said to eat man's flesh greedily, i. 184, their confessions not rashly to be credited, 190, 191, of what kind, 191, work by imagination, 196, ointments said to be used by them, 196.
- Witnesses, how to be examined in chancery, i. 720.
- Woad, the sowing of it recommended, i. 517.
- Wolf's guts applied to the belly, their virtue, i. 198.
- Wolsey, Thomas, employed to conclude a match for Henry VII. with Margaret, duchess dowager of Savoy, i. 791. was then the king's chaplain, *ib.* his remarkable saying, ii. 234.
- Woman's milk, why only good for infants, i. 90.
- Women making an ill choice generally maintain their conduct, i. 258, 266, made capital to carry them away forcibly, 748, advanced by their husbands, should not alien, 769, the regiment of them considered, 528.
- Wonder, the impressions thereof, i. 164, in wonder the spirits fly not as in fear, but settle, *ib.*
- Wood shining in the dark, i. 124, bathed in hot ashes becometh flexible, 181.
- Wood's declaration relating to Essex's treason, i. 412, 425.
- Woodbine, i. 139, 157.
- Woods, especially of ship-timber, the planting and preserving them recommended, i. 517.
- Woodseare, found only on hot herbs, i. 139.
- Woodvile, lord, uncle to the queen of Henry VII. i. 745, governor of the Isle of Wight, *ib.* against the king's commandment raises 400 men, and passes to the assistance of the duke of Britany, *ib.* slain fighting valiantly for the Britains, 747.
- Wool attractive of water through a vessel, i. 94.
- Worcester, earl of, his declaration concerning Essex's treason, i. 428.
- Words are to be understood so as to work somewhat, and not to be idle and frivolous, i. 551, this explained by example, *ib.* if any ambiguity and uncertainty be in them in pleadings, the plea shall be strictly against him that pleads, 552, are so taken in law, as no material part of the parties' intent perish, 629, rules for the exposition of them, 631, of reproach and contumely frequent among the Greeks and Romans, 682.
- World supposed by some to be a living creature, i. 190.
- Worms foretell rain, i. 178.
- Worsley, William, a Dominican, and dean of Paul's, not tried for Perkin's treason, i. 765.
- Wotton, Sir Henry, his sentiment how contemptible critics were, i. 327.
- Wounds cured by skins of beasts newly pulled off, and whites of eggs, i. 157, 158. Wounds made with brass easier to cure than with iron, 173.
- Wrecks, statute relating thereto explained, i. 559, how property is gained in goods shipwrecked, 566, what is properly a wreck, 567.
- Wrists have a sympathy with the head and other parts, i. 97.
- Writs original, no certain beginning of them, i. 590. Writs of covenant, and of entry, 592. Writ of certiorari in the exchequer, 593.
- Writs which are not to pass without warrant from the chancellor, i. 721.
- Wyche, Mr. ii. 206, 220.

XENOPHON commends the nurture of the Persian children for feeding on cardamon, i. 125, observes the Medes painted their eyes, 167.

Xerxes, how driven out of Greece by a rumour, i. 309.  
Ximenes, cardinal, calls the smoke of the fire-arms his incense, i. 326.

## Y

YAWNING hindereth hearing, because the membrane is extended, i. 116, it is a motion of imitation, 118, in yawning dangerous to pick the ear, 158.

Years steril, cause corn to degenerate, i. 142. Years pestilential, 166. See Pestilential.

Yellow colour in herbs, i. 141, less succulent, and generally stand to the north, *ib.*

Yelverton, Sir Henry, solicitor-general, ii. 188, his letter to lord keeper Bacon, 194, letter to him from the lord chancellor Bacon, 201, passes a strange book to one Hall for making denizens, 209, exhibits an information against the Dutch merchants, for transporting gold, 209, 214, reflected on by the lord chancellor, 223, notes of the lord chancellor's speech in his cause in the star-chamber, 224, prosecution of him in that court, *ib.* his case, 224, 227.

Yolk of the egg conduceth little to the generation of the bird, only to the nourishment, i. 96.

York, house of, the indubitate heirs of the crown, i. 782, the people's affection to it, 787.

Young trees, which bear best, i. 158, have more watery juices, and less concocted, *ib.*

Younger brothers seldom fortunate where the elder are disinherited, i. 266.

Youth and age, i. 295. Youth seldom passed to the best advantage, *ib.* Youth and age, their advantages and disadvantages, *ib.* the difference between the errors of young men and old, *ib.* a mixture of old and young recommended in business, *ib.* Young men more moral than old, *ib.*

Youth, in the youth of a state arms flourish, i. 308.

## Z

ZANT, i. 188, 197.

Zelim, the first of the Ottomans who shaved his beard, i. 320. Nova Zembla, i. 189, 192, 238.

Zones torrid, less tolerable for heats than the equinoctial, three causes thereof, i. 130.

# INDEX

## TO THE LATIN PART.

- AARON orator, ii. 372.  
 Abecedarium naturæ, ii. 300, ejus norma, 511, *ib.*  
 Abel et Cain imago duarum vitarum, ii. 301.  
 In Aber Barry murmur flatuum in clivo quodam sub terra auditur, ii. 524.  
 Abies dat picem, ii. 461.  
 Abramus piscis, ii. 568.  
 Abstergentia et purgantia, ii. 585.  
 Absumptio humidæ, ii. 494, 499, 564.  
 Absynthium stomacho utile, ii. 588. Infusio ejus in cerisia præcipitur, *ib.*  
 Academiæ, ii. 310.  
 Academicorum secta, ii. 576.  
 Academia nova, ii. 442.  
 Academicarum arctior conjunctio valde utilis, ii. 310.  
 Academiæ mores progressui scientiarum obstant, ii. 285.  
 Academici et sceptici philosophi scientiæ certitudinem abstulerunt, ii. 300, 357.  
 Acatalepsiæ opinio, ii. 357. Acatalepsia Platonis, ii. 440.  
 Accensio luminis naturalis, ii. 681.  
 Accentus verborum et pronuntiatio, ii. 367.  
 Accidentales generationes ventorum, ii. 525.  
 Accipiter ad annos quadraginta vivit, ii. 567.  
 Accumulatio nimia legum, ii. 422.  
 Acedo sive acrimonia potus, putrefactionis genus, ii. 591.  
 Acetum, turbulinem compescere perhibetur, ii. 528.  
 Acerbitas legum, ii. 418.  
 Acheloi et Herculis certamen; ad belli expeditiones hæc fabula pertinet, ii. 716.  
 Acida generationi succi rosædii opposita, ii. 587, 600.  
 Acosta de fluxu et refluxu maris, ii. 479. Non satis constat sibi de assecchia ventis, qui spirant ad Peruviam et litora maris australis, 521. Ejus observatio de Plata et Potosa, 524.  
 Acoustica, ii. 380.  
 Acria ad palatum vitanda, ii. 581.  
 Acroamaticum sive enigmaticum, dicendi genus dehonestatum, ii. 370.  
 Actæonis fabula curiositatem illicitam coercere excogitata, ii. 710.  
 Actiaca pugna, ii. 417.  
 Actiones theatrales maxime utiles, ii. 322. Actionis theatralis usus multiplex, 367.  
 Actiones præsentis nosse plurimum prodest, ii. 408.  
 Actiones ad amplificandas literas circa tria versantur objecta, ii. 309. Actio naturalis, 487.  
 Actorum solennitates, ii. 318.  
 Acuminatum fortius penetrat quam obtusum, ii. 373.  
 Acus nauticæ inventio, ii. 451, 643. Motus ejus convenit cum cælestibus, 451. Ejus versorium, 481.  
 Adamas præcellit auro, ii. 375.  
 Additamenta quinque utilia historiæ naturali, ii. 507, 508.  
 Aditus facilis et vultus comis, ii. 399.  
 Admiratio proprie quid, ii. 292. Est semen scientiæ, *ib.*  
 Admiratio proles est raritatis, 476. Admiratio Deum spectat, scientia creaturas, 292.  
 Adolescentes spe beati, ii. 388.  
 Adonidis Hercules statuum vidit, 297.  
 Adrianus omnis secreti investigator inexplebilis, ii. 304.  
 Adulatio literarum dignitati nocet, ii. 296. Ejus turpitudine, *ib.* Magis ex more, quam malitia, 384. Auctupii genus, *ib.*  
 Advocatum quid commendat, ii. 345. Eorum perorationes, 424.  
 Edificii partes efformare aliud, aliud compaginare, ii. 392.  
 Ægyptus septem annos fertiles, totidem steriles, habuit, ii. 398.

Axiomatum iniquitas corrigenda, ii. 315. Varia, 330. Diversis scientiis applicantur, *ib.* Qualia adhuc nemo composuit, 331. De axiomatico constituendo, 451. Axiomatum genera, 458.

## B

BACCHI generatio, quid hac fabula voluerunt veteres, ii. 328, 716.

Bacon (Rogerus) laudatus, ii. 685.

Baconi institutum in conscribenda sua Hist. Nat. ii. 512. et seq. Monitum ejus de sua historia naturali et experimentalis, 515. Adolescens fuit Pictavii in Gallia, 596. Ejus indoles naturalis, 687. Ejus genus et educatio, *ib.* Cogitationes de interpretatione naturæ, 636, et seq. Epistolæ, 750, et seq.

Bacula, lignea cineribus sub calidis flectantur ad arbitrium, ii. 547. incurva in contrarium flectimus, 396, lignea flexionem patiuntur per vim, 551.

Balnearum vasta moles, ii. 568.

Balbus, ii. 310.

Balneæ artificialia commendantur, ii. 348. Calida naturalia, 460.

Balneæ calida, ii. 462.

Balneæ ex lacte exhibentur in marasmis, &c. 569, 570. Balneæ perpetua, 578.

Balneæ, ii. 576, 584, 585, 592. Sanguinolenta, 592. Sicca superolefacta, mortem properant, 594. Calida cum frictionibus, 596.

Balneæ raro usurpanda, ii. 584.

Balneæ quæ utilia, ii. 586. Tres debent habere proprietates ad malacissanda corpora, 592. Ex sanguine infantium sanare lepram receptum est, *ib.* Quadruplex operatio comitari debet, *ib.*

Balneatio pedum cerebro utilis, ii. 589. Quomodo instituenda, *ib.*

Balneationum alimentatio, ii. 600.

Balneum Mariæ, ii. 500.

Balsamorum medicinx culpabiles, ii. 577.

Barbara et civilia tempora comparantur, ii. 574. Barbara, in, nobiles ex usu ambre longævi, 580.

Barbariæ montium vitia, ii. 584.

Barbarossa senex puerulos stomacho applicabat ad fomenta, ii. 593.

Basilicæ aspectu necat, si primus quempiam conspexerit, ii. 393.

Bella Romanorum quomodo gesta, ii. 327. Quale genus belli eligendum, *ib.* De genere belli eligendo præcepta, 326. Moderna in tenebris geruntur, 418. Ob vindictam justam fere felicia, 327. Non levi de causa suscipienda, *ib.*

Belli causæ, ii. 327, 417, &c. Propagatio legis et sectæ, *ib.* Injurix illatæ, *ib.* Auxilia sociis mittenda alacriter, 417. Sit causa justa bellorum, 327. In bello maxime prodest celeritas, *ib.* Et consiliorum occultatio,

*id.* Providentia a Pallade, *id.* Ejus nervus an sit pecunia, 415.  
**Bellum** procellæ, cum nebula, instar columnæ, se sustinente, ii. 526.  
**Bellum** Peloponnesi, ii. 318.  
**Bellum** adversus Brutum et Cassium vindicavit mortem Cæsaris: Severi mortem Pertinacis: Bruti Lucretiæ mortem vindicavit, ii. 327. Britannicum a Carolo VIII. Galliæ rege, gestum, *id.*  
**Bellum** civile instar caloris febrilis, ii. 417.  
**Benedictio** Judæ et Isacharis, ii. 416.  
**Berecynthia**, ii. 331.  
**Bernardinus** Telesius, ii. 352.  
**Betel** radix narcotica, ii. 579.  
**Bethlehem** hospitium, in eo phrenetici plures longævi, ii. 574.  
**Bezoar** lapis, ejus usus in medicina, ii. 589.  
**Biantis** præceptum, 413.  
**Bibere** calidum, mirandum quod ablit in desuetudinem, ii. 588.  
**Bills** functio ad longævitatē, ii. 589.  
**Bibliothecæ**, earum usus, ii. 309. Immensa librorum varietas in iis, 445.  
**Bicolores** flammæ, ii. 483.  
**Blæsus** præfectus, ii. 387.  
**Bombarda**, utrum sonus in ea diminui possit, ii. 607.  
**Bombycini** filii inventio, ii. 451.  
**Bona** corporis humani quatuor, ii. 345. Boni et mali colores, 373, etc. Boni genera et gradus, 388.  
**Bona** animi et corporis raro in homine conveniunt, ii. 397.  
**Boni** exemplar, ii. 388. Positivi natura optime descripta, *id.* Etiam comparati, *id.*  
**Bonorum** animi et corporis relatio, ii. 397. Ex quibus seorsum constat, *id.* Bonorum fama efflorescit, 401.  
**Bonum** individuale, ii. 389.  
**Bonum** activum individuale differt a bono communione, ii. 391. Commune, quantum prævaleat individuali, *id.* Communione sive officii, 392. Individuale vel activum vel passivum, 390. Boni activi præminentia, *id.* Perfectivum, *id.* Conservativum, *id.*  
**Bonum** e mala causa, de opiatis dictum, ii. 579.  
**Boreas** diel assecla, ii. 521. Serenus apud nos, 522. Celus et spirans ex alto, 520, 522. A mari suspectus, a terra serenus, *id.* Boreas sæpe oritur priori tempestate manente, *id.* Si noctu oriatur raro ultra triduum durat, *id.* Borea flante, sæpe contrarii ventii simul spirant, *id.* Nocet phthisicis, 523.  
**Borgias** vitam sacerdotalem ejuravit, ii. 410. Indignus principatu et sacerdotio, *id.*  
**Borgiæ** de expeditione Gallorum in Italiam dictum, ii. 435, 671.  
**Botrus** contra botrum citius maturescit, ii. 358.  
**Bovis** ætas extenditur ad sexdecim annos, ii. 567. Boum laboribus exhaustorum restitutio, 593. Bos sub eviscerationem mugiens, 595.  
**Branchiæ**, organa respirationis in piscibus, ii. 568, 594.  
**Brasilia**, ii. 575.  
**Brasilienses** admodum longævi, ii. 584.  
**Briareus**, ii. 384.  
**Britannia**, ii. 575.  
**Britannia** potentia navali præcellit, ii. 418.  
**Britones** giasto corpora pingentes, longæviores, ii. 584.  
**Brixa** inter tropicos constanter et luculenter spirat, ii. 520. Quare, *id.* Extra tropicos quasi imperceptibiliter spirat, *id.* Non Eurus integer, sed Euro-aquilo, *id.*  
**Brodium** matutinum prodest cerebro, ii. 590.  
**Brutorum** animæ, ii. 351. Ex elementorum matricibus ortæ, *id.*  
**Bruta** syllogizantia, ii. 479. Eorum solertia, *id.*  
**Brutus**, Junius, vindicavit mortem Lucretiæ, ii. 327.  
**Bruti** animadversio severa in filios, ii. 393. Ejus dictum quod sub exitu profudit, 414.  
**Brutus** et Cassius, ii. 393.  
**Bruti** soror Junia, et Cassii uxor, ii. 571.  
**Buccinator** pugnam non init, ii. 342.  
**Bufo**, in ejus capite lapis generatus, ii. 614.  
**Bulla** fertur ad bullam aquæ, ii. 508.  
**Burgundus** quidam, principis Arausionensis interfecto, ii. 343. Tolerantia ejus, *id.*  
**Butyrum** saluum et vetus, usus ejus apud Hibernos, ii. 584.

## C

**CADAVERA** imbalsamata, ii. 566. Cadaveri tales insunt spiritus, quales corpori vivo, 597.  
**Cæcias** fœneratoribus comparatur, ii. 523. Nubes ad se trahit, *id.* Participat ex borea, *id.*  
**Cæsar**, consilium ejus de republica instauranda, ii. 294. Epistola ejus ad Oppium et Balbum, 310.  
**Cæsar**, ii. 396. Ejus modestia in titulo Commentariorum, 318. Apophthegmata, 321. Quinq̄ue amanuensibus simul dictare potuit, 343. Ad gubernatorem navis, 377. Eum Cicero laudat coram, 392. Si bello succubuisset Cæsar odiosior fuisset Catalina, ex mente Machiavelli, 396. Insolentiæ profans notatur, 407. Causis agendis valedixit cum multis eloquentia claros vidisset, 410. In amicis diligendius notandus, *id.* Ejus Commentaria, 305. Libri de analogia, 305, 367.  
**Cæsaris**, C. Julii, imago civilis, ii. 739.  
**Calcearius** Aristotelis, ii. 360.  
**Calendare** vitrum, ii. 463, 472.  
**Calendarium** dubitationum et falsitatum desideratur, ii. 337.  
**Calidi** natura ex instantiis, ii. 460.  
**Calidiora** climata producent ingenia acutiora, ii. 375.  
**Calida** condensant spiritus per fugam, ii. 579. Sunt spirituosæ, 580. Non sedant spiritus, 581. Calida bibere utile, 588. Calida natura, noxia capiti, 589. Calidi haustus ante cibum adhibendus, 590.  
**Caliditas** vaporum mala, ii. 589.  
**Calidorum** acrimonia, ii. 463. Tabula graduum in calido, ii. 464.  
**Calidum** sursum fertur citius quam deorsum, ii. 362.  
**Calliathenes**, ii. 304.  
**Calor** intenditur per reflectionem, ii. 461.  
**Calor** naturalis inest aëri abscesso, ii. 462. Etiam pellibus, *id.* Aromatibus, 463. Ejus diversitas in animalibus, 464. Calor cœlestium augetur tribus modis, 465. Ejus communicatio, 469. Motus expansivus, *id.* Caloris genera, 481. Caloris solis et ignis differentia, 468, 481. Est motus expansivus cohibitus, 470.  
**Calor** dilatat corpora, ii. 545, etc. Calor actualis, *id.* Calor naturalis, 561. Caloris proprium opus, 566. Calor spirituum in corpore humano, 581. Fabrilis et prædatorius, *id.* Calor omnis attenuat et humectat, 584. In distillando, medicamenti calor subsidet, 580. De calore intendendo præceptum, 591. Calor spiritus, 593, 591. Spiritus vitalis a calore insultum patiatur, 594. Calor sive vigor actionum naturalium, 598. Caloris et succi, in decursu ætatis, inclinatio et ordo, 596. Opera caloris, consumptio et reparatio, 601. Calor et frigus principia rerum ex mente quorundam, 694.  
**Caloris** solis et ignis differentia, ii. 695. Solaris caloris proprietates, 696. Calorum diversitas secundum Telesium, 695, 696. Calorem esse in omnibus entibus supponit Telesius, 697. Calor actione generat humidum, 698.  
**Calvities**, ii. 596.  
**Calumniandi** præfatio, laudes, ii. 374.  
**Calx** viva aqua conspersa concipit calorem, ii. 463.  
**Camelotum**, ii. 357.  
**Camelus**, animal longævum et macilentum, ii. 566.  
**Camillus** longævus, ii. 577.  
**Campanarum** sonitus tonitruæ et fulgura dissipat, ii. 528.  
**Campanarum** sonitus ante pluviam auditur magis ex longinquo, ii. 535.  
**Canada**, ii. 489.  
**Canales** spirituum vitalium, ii. 598.  
**Canariæ** insulæ, ii. 574.  
**Cancrorum** fluviatilium affinitas cum aliis, ii. 577, 588.  
**Candela** cerea extincta, ii. 543.  
**Candelæ** flamma compressa, extinguitur, ii. 594.  
**Candelarum** fila majora, ii. 565.  
**Candidiores** capillis, etc. minus vivaces, ii. 575.  
**Candor** pectoris, ii. 410.  
**Caniculæ**, nonnulli senes eas stomacho noctu applicant, ii. 593.  
**Canis** ætas, ii. 567. Animal calidissimum, 593. Novem septimanas gestat in utero, 567.

- Canities sera nihil ad longævitatē, ii. 575.  
 Ad Cantabrigiensem academiam epistolæ Baconi, 751.  
 Caphe Turcarum, ii. 579.  
 Caphura vel camphora, ii. 580.  
 Capillitium candidius in senectute nigrescit, ii. 578.  
 Capra animal scansorium, ii. 324.  
 Capri ætas, ii. 567.  
 Caput, sedes principalis spirituum animalium, ii. 569.  
 Capite moti, annosi, 574. Caput, pro analogia corporis minutius, optimum, 569, 576. Ejus unctio, 590. Ei nocent calida, *ib.*  
 Carbones clarius perlucentes ventum significant, ii. 535.  
 Carbones incensi quandoque mortem afferunt, ii. 594.  
 Cardanus novator, ii. 298, 640.  
 Cardinales, aut etiam semicardinales venti non sunt tam procellosi quam mediani, ii. 523.  
 Carduelis avis, ii. 568.  
 Caries pingulum, ii. 566.  
 Carmen quid sit, ii. 322. Carminum varia genera, 368. Vera narratio carmine, et ficta in oratione soluta conscribi potest, 322. Carmina facilius discuntur memoriter quam prosa, 473, 365.  
 Carminata lanae indumenta, ii. 585. Ex eorum floccis sacculus pro stomacho, 588.  
 Carneades ob eloquentiam Roma pulsus a Catone, ii. 292. In utramque partem extempore disserere potuit eleganter, 343. Vide 441.  
 Carneadis Cyrenæsi ætas, ii. 571. Philosophia, 576.  
 Carnes in nonnullis cellis citius putrefiunt, ii. 359.  
 Carnes minore mora saliantur hieme quam æstate, ii. 507. Quænam minus dissipabiles, 586. Omnes solidiores sale condiri debent, 591. Verberatæ antequam coquantur meliores, *ib.*  
 Carnes durant, ignem passæ, ii. 563. Carnium corporis ad longævitatē præsgia, 576. Carnium serpentum et cervorum medicinæ irridentur, 577. Carnes corporis frigore condensandæ, 586. Præparandæ antequam ignem patiantur, 590.  
 Carnositates, ii. 347.  
 Caroli quinti imperatoris dieterium, fortunam imitari mores mulierum, ii. 414.

Experimentum auri, ii. 492.  
Expurgationis succi veteris diæta, ii. 592.  
Ezekiel de Pharaone, ii. 407.

## F

FABER fortunæ, etc. ii. 407.  
Fabius Maximus reprehenditur a Machiavello, ii. 412.  
Fabi Maximi ætas, ii. 571.  
Fabrica partium, organum spiritus, ii. 602.  
Fabula galli Æsopici, ii. 308. Fabula perantiqua membrorum, de lite ventriculo intentata, 309. De philosopho stellis intuenti, 315. Æsopi, 322. Earum usus eximius, *ib.* Post literas sacras sunt antiquissimæ, 323. Fabula Panis, *ib.* Endymionis, 326. Persei fabula, *ib.* Bacchi, 328. De insulsæ mulieris gallina, 358. De duobus ranis in magna siccitate, 375. De feli et vulpe, 378. Basiliæ fabula, 393. Hircinis, 405. Fabulæ exemplorum supplementa, 406. Fabula decuplæ proportionis elementorum quoad raritatem, 436. Fabularum proci, magiæ et alchemiæ cultores, 475. Penthei et Orphei, 529.  
Fabulæ antiquorum significativæ, ii. 703. Earum usus duplex, 704. Explicatio, *ib.* et seq.  
Fabula Menenius Agrippa seditionem sedavit, ii. 322.  
Facilitas nimia credendi quantum nocuerit, ii. 298. Ejus antitheta, 382. Facilitas morum in iudice corruptela munerum perniciosior, 404.  
Facti quæstiones historiarum naturali adijciendæ, ii. 508.  
Factionum mos, totus in laude et vituperio, ii. 373.  
Factis non omnino fidendum, ii. 406.  
Facultates, quomodo sedes earum a Platone collocatæ, ii. 344.  
Falinus regis Artaxerxes legatus, ii. 306. Ludibrio habet Xenophontem, *ib.*  
Fallaciarum genus quomodo a Seneca comparatum, ii. 363.  
Fallaciæ sensuum quo remittendæ, ii. 486.  
Falsitatum et errorum calendariarum desideratur, ii. 337.  
Fama, causa impulsiva virtutis, ii. 376. Deterior iudex quam nuncia, 379. Saliva vulgi, *ib.* Bonorum et malorum qualis sit post obitum, 401. Omnis a domesticis manat, *ib.* Etiam verior, *ib.*  
Fama et existimatio æstus habent, ii. 412. Famam precipitantem arduum retrovertere, *ib.* Fama virtutis, 413. In familia discordi humilis quidam fit præpotens, ii. 400.  
Familiæ suæ perturbatores possidebant ventos, ii. 401.  
Famulitia inferiora festorum vigiliis comparantur, ii. 374.  
Famulitia et satellitia ad militarem potentiam conducunt, ii. 416.  
Fascinatio, ejus descriptio, ii. 352.  
Fasti et chronologiæ, ii. 318.  
Fastus mathematicorum, ii. 341.  
Fastus professorum impedit progressum scientiæ, ii. 637.  
Fata rerum quid, ii. 324. Fatis accedendum, 413.  
Fausæ, Constantini M. uxor, mors, ii. 594.  
Feles et ululæ cur noctu videant, ii. 354. Felium ætas et generatio, 567.  
Felicitas res inimitabilis, ii. 377. Signum favoris divini, *ib.* In quibus collocatur a philosophis, 389. A Socrate, 391.  
Felini sanguinis usus, ii. 592.  
Femora minus carnosæ, optima, ii. 576.  
Ferculorum multitudo culpanda, ii. 590. Et variatio, *ib.*  
FERNAMBURGI ædificatio, ii. 584.  
Ferrum, ii. 358.  
Ferrum ad austrum expositum citius rubiginem contrahit, ii. 562, 563.  
Ferule virgarum inteneratæ, ii. 565.  
Fervores magni post solstitium æstivale desinunt plerumque in tonitru, etc. ii. 534.  
Ficini consilium ad senes, ii. 583. Commentum ejus ad instaurationem virum in senibus, 592. Usum contubernii puëllaris exemplo Davidis laudat, 593.  
Fidei certæ quæ sunt, aut dubiæ, aut damnatæ, quomodo proponenda in historia naturali, ii. 507.  
Fiducia quomodo concilianda, ii. 387.  
Fides Abrahami, ii. 427.  
Filius magis referat avum vel proavum, quam patrem, ii. 293.  
Fines proferre reges penes est, ii. 418. De finibus proferendis, 415, etc.

Finissima bella detractanda, ii. 326, 327.  
Flabella ad faciendum ventum, 535, 536.  
Flagitiosi minus corrumpunt mores publicos, quam ex parte mali, ii. 294.  
Flamma aëre tenuior, ii. 542. Flammarum absumentium gradus, 565. Earum genera, 579. Flamma parva non æque prædatur ac magna, 562. Flammarum proprietates, 594. Ejus et spiritus vivi differentia, *ib.* Intra Flammam durat, 595. Ex spiritu vini mollissima, 599. Flamma ad flammam fertur, *ib.* Flammæ majores, 599. Flamma aër, spiritus, eorum natura, 602. Est substantia momentanea, *ib.* Continenter generatur et extinguitur, *ib.* An interceptat sonum, 604. Flamma sulphuris cœrulea est, 615. Purpurea, *ib.* Est pellucida, ut confirmatur experimento, 639. Est pyramidalis, et qua de causa, 661. Flammæ intra flammam bicolores, *ib.* Flammæ naturæ gradus, 664. Flamma non est aër incensus, *ib.* Innumeros recipit densitatis gradus, *ib.*  
Flammæ altitudo pendet a latitudine basis, ii. 482. Car pyramidalis, 483.  
Flammæ natura, ii. 362. Omnis calida, 462.  
Flammæ fatulentæ, ii. 482.  
Flatus calorem auget, ii. 466.  
Flatus repentini semper nubilo cœlo fiunt, ii. 526. Flatum in microcosmo cum ventis in mundo majore convenientia, 536.  
Flos lactis, ii. 362. Flos lactis et vini fœces, 496. Cervisæ, 495.  
Floridæ littora, ii. 480, 489.  
Florum insitio, ii. 357.  
Fluiditas et consistentia, ii. 472.  
Fluida corpora, ii. 624.  
Fluminum consideratio quoad bonitatem aëris, ii. 589.  
Fluor metallorum, ii. 485.  
Fluxus et refluxus maris, ii. 479, 627. Non ex ebullitione aquarum, 629. Ex qua causa sit, *ib.* Solvuntur varia ejus phenomena, 631. Unde reciprocatio ejus sexbaria, 632.  
Focus S. Ermi, ii. 462. Quo nomine antiquitas insigniatur, *ib.*  
Fodiendæ terræ cur vinum generosum infundendum, ii. 569.  
Fœdus animæ et corporis, ii. 343. In duas partes distribui potest, *ib.*  
Fœmina, cujus unicæ in Scripturis commemorata ætas, ii. 570. Fœminæ teneriores magis conferunt ad alendum fœtum, 575.  
Fœneratores comparantur Cæcis vento, ii. 523.  
Folia fructus muniunt, ne patiantur a sole aut vento, ii. 339.  
Folia ex arboribus citius decidunt a parte austri, ii. 322. Ludentia sine aura ventos adesse nunciunt, 535.  
Folietani, ii. 502.  
Fontes justitiam non turbandi, ii. 405. Fontes juris, 418.  
Foliorum contractio, ii. 566. Decidendum in sylvis tempore autumnali usus, ut et aliarum herbarum similiter, 581.  
Folles Æoli utres sunt, ii. 535.  
Fomenta ex corporibus vivis utilia, ii. 593.  
Fomites ventorum sunt loca ubi magna copia vaporum, ii. 529. Fomites spiritus, 602.  
Forma materiæ primæ assimilatur vesti Cupidinis, ii. 691.  
Formæ essentialis inveniri possunt, ii. 338. Sunt verum objectum scientiæ, *ib.* Commenta sunt animi humani, 437.  
Forma calidi, ii. 467, 468. Luminis, 467. Caloris, 470. Formarum sive differentiarum essentialium inventio, ii. 457. De forma calidi vindemiatio prima, 468. Formæ copulatæ ubi et quomodo tractandæ, 467.  
Formica in electro, ii. 597.  
Formicæ prudentia, ii. 356. Se tuetur, at hortis nocet, 407.  
Formicarium artium liber, ii. 366.  
Formidinis et spei affectus alios omnes coërcet, ii. 395.  
Formularum minorum collectio desideratur, ii. 385.  
Formulæ agendi circa judicium, ii. 425.  
Fortitudo a dominatu fortunæ nos liberat, ii. 381.  
Fortitudinis et multitudinis impares congressus, ii. 415.  
Fortuna subita animum plerumque enervat, ii. 394. Et in ejus statu quam incremento modus facilis adhibetur, 394, 395. Virtutis et benemerendi organum, 406

- Sponte in gremium infuit, 413. Ad fortunæ ardua jugis et irrequieta anhelatio, 414. Ejus doctrina et speculatio, 408.
- Fortunæ faber amusse sua perite utatur, ii. 412. Ejus fabula desideratur, 407. Ejus nervus sunt vires animi. 12. Quisque suæ fortunæ faber, 407. Quomodo id fiat, *ib.* Viri egregii sponte fortunæ renunciant, 408. Ad fortunam comparandam tam gravia requiruntur, quam ad virtutem, 407.
- Fortuna imitatur mores mulierum, ii. 414.
- Fossilia, ii. 562.

 Turpillianus, ii. 409.  
 Turtures, ac columbæ, vita breves, ii. 568.  
 Typhon, ii. 325.  
 Typhones majores raro fiunt, ii. 526.  
 Typhonis fabula explicata, ii. 705. Dira ejus descriptio, *ib.*  
 Typographia, ii. 426.  
 Tyrannides debellandæ, ii. 327.  
 Tyrannis pessima, lex in equuleo, ii. 385.  
 Tyrannum an liceat occidere, ii. 393.

## U

ULCERA, ii. 347.  
 Ulula, ii. 567.  
 Ulysses vetulam prætulit immortalitati, ii. 308.  
 Umbra super album congregatur, ii. 359.  
 Unctio, ii. 584, 585. Corpus intenerat, 592. Ad longævitatatem confert, *ib.* Ejus alimentatio, *ib.*  
 Undulatio aëris differt ab undulatione aquarum, ii. 529.  
 Unguenta vitæ producendæ conferunt, ii. 576. Rosmarinus, mastiche, etc. quasi unguenta stomachi, 588. Unguentorum usus, 350.  
 Unio rosarum, ii. 319. Et regnorum, *ib.* Unio, et lævor corporis desiccatur, 564.  
 Urbanitas et morum elegantia quando in subsidium peti debeat, ii. 399. Vestis est animi, *ib.* Ne in affectationem transeat, *ib.*  
 Urbes munitæ quid sint absque gente forti, ii. 415.  
 Urina solvitur a frigore, ii. 415.  
 Urinatores anhelitum mirifice cohibent, ii. 350. Quomodo

sub aquis diutius manere possint, 496. Urinatoris dolium ad aërem suppeditandum, 557. Urinatores anhelitum retinent decuplo, quam alii, temporis spatio, 594.  
 Urali in utero gestatio festina, ii. 566. Ursus dormitor magnus, *ib.* Vita brevis, *ib.*  
 Urticatio corporis, an bona, ii. 590. Ex mente Cardani utilis, *ib.*  
 Usus et naturam et artem vincit, ii. 356. Usus rationis humanæ in spiritualibus multiplex, 428.  
 Utres in fundo aquarum, ii. 498.  
 Uvæ quomodo melius conserventur, ii. 565.  
 Uxores et liberi, ii. 379.

## V

VACILLATIO judiciorum unde, ii. 425.  
 Vacuum, ii. 440. An, et qualis detur, 497.  
 Vacuum cava rerum tangibilium non recipiant, ii. 597. An detur, 654. Vacuum Heronis, 621. In regionibus ætheriis, *ib.* Vacuum coærvatatum et commistum, *ib.* An detur vacuum in spatiis interstellaribus, 654. Inventores opinionis de vacuo quinam, 655.  
 Vænales magistratus, ii. 294, 295.  
 Valentinus Borgia e sacerdote miles, ii. 410.  
 Valeriani imperatoris ætas, ii. 572.  
 Valerius Maximus, laus ejus, ii. 343.  
 Valerius Corvinus centenarius, ii. 570.  
 Valetudo, ii. 378. Valetudinis cura empiricis non tradenda, 293.  
 Valor verus circa vires alicujus imperii, est res maxime errori obnoxia, ii. 415.  
 Vana gloria ingentem scientiis calamitatem attulit, ii. 388.  
 Vanitas vanitatum, ii. 414.  
 Vapores et halitus, cur et quousque feruntur in altum, ii. 362.  
 Vaporum vis in excitandis ventis, ii. 527. Vapores corfoventes, 589. Vapor in distillando surgit, medicamenti calor subsidet, 580. Venenatus mortem infert, 594. Vapores immediate operantur in spiritibus, 580. Odori, 589. Eorum operatio in condensandis et refrigerandis spiritibus, 580. Qualis, 583. Vaporum via ad spiritus brevis, 601. Vaporum copia, patria ventorum, 529. In vaporibus copia et qualitas spectanda, 527.  
 Variatio experimenti, ii. 357.  
 Varietas facierum et verborum, ii. 346. Varietatis amor, 390. Varietas mentis et manus, 433.  
 Varietas spirituum in animatis variatio est, non confusio, ii. 599. Medicamentorum varietas ignorantie filia, 590.  
 Varro optimus antiquarius, ii. 294.  
 Varronis de stella Veneris narratio, ii. 658.  
 Vasa, in quibus esculenta reponuntur, interdum tempestates prænuunciant, ii. 535.  
 Vaticanium sacerdotis Ægyptii de Græcis, ii. 441.  
 Vegetabilia cordialia, ii. 577.  
 Vegetatio plantarum, ii. 487, 495.  
 Vela flante vento laterali, rigidius in adversum venti extenduntur, ii. 532. Decem impendent navibus Britannicis, 530. Longitudo in molendinis etiam facit ad motum, 533. Velorum in navi enumeratio, dispositio, 530. Velorum dispositio in vento recto quænam felicissima, 531. In velo triangulari tumor fit minor quam in quadrangulari, *ib.* In velis ab infra mali rostri major est tumor quam in ceteris, *ib.*  
 Velleius Epicureus qualis, ii. 300.  
 Velleius, inepta ejus interrogatio, ii. 364.  
 Vena frontis quando incidenda, ii. 359.  
 Venatio Vanis, ii. 357. Sive literata experientia, *ib.*  
 Venatorum deus, ii. 325. Mos, 395.  
 Veneni operatio, ii. 594.  
 Venerem opia excitant, ii. 579. Usus et abstinencia, 582.  
 Veneti complures longævii, ii. 574.  
 Venter, planus nec prominens, longævitatatis signum, ii. 576.  
 Venti recti et obliqui in navigatione, ii. 531. Fiunt quatuor modis per impulsionem simplicem, 536. Quot modis sedantur venti, *ib.* Inventum de sedandis et excitandis ventis desideratur, 537. Venti intra tropicos, 630. Ventorum historia, 517. Primariæ creaturæ non sunt, nec ex operibus sex dierum, *ib.* Ventorum nomina: vel sunt generales, vel statii, vel asseciæ, vel liberi, *ib.*

- Venti anniversarii, *ib.* Origines locales, 524. Generationes accidentales, 517. Venti extraordinarii, 526. Ventorum limites, 518. Successiones, *ib.* Confacientia ad ventos, et excitantia, et sedantia ipsos, 526. Motus diversi, 518. Potestates, 519. Prognostica, *ib.* Imitamenta, *ib.* Nomina, *ib.* Cardinales, Semi-cardinales, Mediani; Mediani majores, minores, *ib.* Liberi, *ib.* Generales, *ib.* Stati, 520. Ornithii sive aviarii, 521. Aseclæ, *ib.* Liberi magis hiemis quam æstatis aseclæ; maxime autumnii et veris, *ib.* Stati cum aseclis non confundendi, *ib.* Ventorum qualitates et potestates, 522. Differentiæ radicales, *ib.* Tribus temporibus frumento et segetibus nocent, 523. Ab occidente spirantes sunt vehementiores quam ab oriente, 523. Cardinalium, Semicardinalium, et Medianorum potestates, *ib.* Frigidi, qui, *ib.* Venti naturas suas quinque modis nanciscuntur, *ib.* Omnes habent potestatem desiccandi, *ib.* Aërem purgant, *ib.* Originem habent a sole, et aquæ aut plus gubernant temperaturas regionum quam ipse sol, *ib.* Sunt tanquam inundationes et fluctus magni aëris, *ib.* Origines locales sunt arduæ inquisitionis, 524. Ventorum particularium matrices unde petendæ, *ib.* Mille modis fiunt, 523. Tanquam mercatores vaporum sunt, 524. Ventorum quasi thesauri, *ib.* Ortu exigui, progressu, humorum more, inualescunt, *ib.* Venti inferiore generati aëre, supergenerationes appellantur, 525. Antequam venti desuper descendentes percipiuntur, sylvarum murmur increbrescit, *ib.* Ventorum quedam prognostica, 523. Ventorum causæ a veteribus confuse traditæ, 526. Venti vaporarii, 529. Eorum efficiens sol, *ib.* Ex resolutionibus nivium, *ib.* Sedantur quinque modis, *ib.* Ventorum altitudo, 528. Procellosi non extenduntur per larga spatia, *ib.* Duratio, *ib.* Successiones, *ib.* Conflictus, 530. Motus ventorum unde excitatur, *ib.* Præcipue ex nova accessione aëris, *ib.* Directio motus ventorum fit a fomite, 520. Motus ventorum in navibus, 530. In machinis humanis, 532. In molendinis quomodo fit, *ib.* Experimentum de eo augendo, *ib.* Venti ex nitro facti, 536. Motus ventorum et aquarum inter se comparantur, *ib.* Terra magis desiccatur ex ventis martiis, quam sole, 564.
- Ventosæ, *ii.* 624.
- Ventositas, in nitro, *ii.* 580.
- Ventriculi os claudentia, *ii.* 582. Ori ejus cura adhibenda, 583.
- Ver pluviosum ætatem serenam præmonstrat, *ii.* 595.
- Vera fama a domesticis manat, *ii.* 401.
- Vera philosophiæ divisio, *ii.* 459. Veri et boni sympathia, 354.
- Verba, *ii.* 297. Eorum memoria servanda, 351. Notionum tesseræ sunt, 433, 356. Ad paucas literas alphabeti reducenda, 346. Redargutio et cautio circa usum verborum, 363. Verba vestigia rationis sunt, 367. Pleurumque ex vulgi captu, 364. Cogitationum tesseræ, 366. Verba legis, 385. Verba non vultu destruenda, 399. Verbo Dei fidei habere tenemur, etiam reluctantæ ratione, 427. Verba ex captu vulgi imponuntur, 434. Et vim faciunt intellectui, *ib.* Verba meretricia quomodo reprehendantur, 408. Verborum significatio in lege, 424. Verborum vaga et male terminata natura intellectui illudit, 639.
- Verbosæ leges, *ii.* 423.
- Verecundi diu vivunt, *ii.* 582.
- Veritas et bonitas sicut sigillum et impressio, *ii.* 307. Veritatis vehiculum sæpe jocus, 383. Ad inveniendam veritatem duæ viæ, 434. Unde petenda, *ib.* Veritas temporis filia, 644.
